Problem: Build failure without the channel feature.  
Solution: Add #ifdef  
Files: src/vim9compile.c

Patch 8.2.0339

Problem: Vim9: function return type may depend on arguments.  
Solution: Instead of a fixed return type use a function to figure out the return type.  
Files: src/evalfunc.c, src/proto/evalfunc.pro, src/vim9compile.c, src/evalbuffer.c, src/proto/evalbuffer.pro, src/testdir/test\_vim9\_script.vim

Patch 8.2.0340

Problem: Vim9: function and partial types not tested.  
Solution: Support more for partial, add tests.  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0341

Problem: Using ":for" in Vim9 script gives an error.  
Solution: Pass the LET\_NO\_COMMAND flag. (closes #5715)  
Files: src/eval.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0342

Problem: Some code in ex\_getln.c not covered by tests.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5717)  
Files: src/testdir/test\_cmdline.vim, src/testdir/test\_ex\_mode.vim, src/testdir/test\_history.vim, src/testdir/test\_iminsert.vim

Patch 8.2.0343

Problem: Vim9: using wrong instruction, limited test coverage.  
Solution: Use ISN\_PUSHJOB. Add a few more tests.  
Files: src/vim9compile.c, src/vim9execute.c, src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.0344

Problem: ":def" not skipped properly.  
Solution: Add CMD\_def to list of commands the require evaluation even when not being executed.  
Files: src/ex\_docmd.c

Patch 8.2.0345

Problem: Compiler warning when building without the float feature.  
Solution: Add #ifdef. (John Marriott)  
Files: src/evalfunc.c

Patch 8.2.0346

Problem: Vim9: finding common list type not tested.  
Solution: Add more tests. Fix listing function. Fix overwriting type.  
Files: src/vim9compile.c, src/userfunc.c,  
src/testdir/test\_vim9\_script.vim, src/testdir/runtest.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.0347

Problem: Various code not covered by tests.  
Solution: Add more test coverage. (Yegappan Lakshmanan, closes #5720)  
Files: src/testdir/gen\_opt\_test.vim, src/testdir/test86.in,  
src/testdir/test\_cmdline.vim, src/testdir/test\_digraph.vim,  
src/testdir/test\_ex\_mode.vim, src/testdir/test\_history.vim

#### Patch 8.2.0348

Problem: Vim9: not all code tested.  
Solution: Add a few more tests. fix using "b:" in literal dictionary.  
Files: src/testdir/test\_vim9\_expr.vim, src/vim9compile.c,  
src/proto/vim9compile.pro, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0349

Problem: Vim9: constant expression not well tested.  
Solution: Add tests for "if" with constant expression.  
Files: src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0350

Problem: Vim9: expression tests don't use recognized constants.  
Solution: Recognize "true" and "false" as constants. Make skipping work for  
assignment and expression evaluation.  
Files: src/vim9compile.c

#### Patch 8.2.0351

Problem: Terminal in popup test is still a bit flaky.  
Solution: Clear and redraw before opening the popup.  
Files: src/testdir/test\_terminal.vim

#### Patch 8.2.0352

Problem: FreeBSD: test for sourcing utf-8 is skipped.  
Solution: Run the matchadd\_conceal test separately to avoid that setting  
'term' to "ansi" causes problems for other tests. (Ozaki Kiichi,  
closes #5721)  
Files: src/testdir/Make\_all.mak, src/testdir/test\_alot\_utf8.vim,  
src/testdir/test\_source\_utf8.vim

#### Patch 8.2.0353

Problem: Vim9: while loop not tested.  
Solution: Add test with "while", "break" and "continue"  
Files: src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0354

Problem: Python 3.9 does not define \_Py\_DEC\_REFTOTAL. (Zdenek Dohnal)  
Solution: Remove it, it was only for debugging.  
Files: src/if\_python3.c

#### Patch 8.2.0355

Problem: Vim9: str\_val is confusing, it's a number  
Solution: Rename to stnr\_val.  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c

Patch 8.2.0356

Problem: MS-Windows: feedkeys() with VIMDLL cannot handle CSI correctly.  
Solution: Modify mch\_inchar() to encode CSI bytes. (Ozaki Kiichi, Ken Takata, closes #5726)  
Files: src/getchar.c, src/os\_win32.c, src/testdir/test\_popupwin.vim

Patch 8.2.0357

Problem: Cannot delete a text property matching both id and type. (Axel Forsman)  
Solution: Add the "both" argument.  
Files: src/textprop.c, runtime/doc/textprop.txt, src/testdir/test\_textprop.vim

Patch 8.2.0358

Problem: Insufficient testing for indent.c.  
Solution: Add indent tests. (Yegappan Lakshmanan, closes #5736)  
Files: src/testdir/Make\_all.mak, src/testdir/test\_ex\_mode.vim, src/testdir/test\_expand\_func.vim, src/testdir/test\_indent.vim, src/testdir/test\_lispwords.vim, src/testdir/test\_smartindent.vim, src/testdir/test\_vartabs.vim

Patch 8.2.0359

Problem: popup\_atcursor() may hang. (Yasuhiro Matsumoto)  
Solution: Take the decoration into account. (closes #5728)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim

Patch 8.2.0360

Problem: Yaml files are only recognized by the file extension.  
Solution: Check for a line starting with "%YAML". (Jason Franklin)  
Files: runtime/scripts.vim, src/testdir/test\_filetype.vim

Patch 8.2.0361

Problem: Internal error when using "0" for a callback.  
Solution: Give a normal error. (closes #5743)  
Files: src/evalvars.c, src/testdir/test\_timers.vim

Patch 8.2.0362

Problem: MS-Windows: channel test fails if grep is not available.  
Solution: Use another command. (Ken Takata, closes #5739)  
Files: src/testdir/test\_channel.vim

Patch 8.2.0363

Problem: Some Normal mode commands not tested.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5746)  
Files: src/testdir/test\_cindent.vim, src/testdir/test\_cmdline.vim, src/testdir/test\_edit.vim, src/testdir/test\_indent.vim, src/testdir/test\_normal.vim, src/testdir/test\_prompt\_buffer.vim, src/testdir/test\_virtualedit.vim, src/testdir/test\_visual.vim

Patch 8.2.0364

Problem: Printf test failing on Haiku.  
Solution: Make a difference between int and short. (Dominique Pellé, closes #5749)  
Files: src/message.c

#### Patch 8.2.0365

Problem: Tag kind can't be a multibyte character. (Marcin Szamotulski)  
Solution: Recognize multibyte character. (closes #5724)  
Files: src/tag.c, src/testdir/test\_taglist.vim

#### Patch 8.2.0366

Problem: Hardcopy command not tested enough.  
Solution: Add tests for printing. (Dominique Pellé, closes #5748)  
Files: src/testdir/test\_hardcopy.vim

#### Patch 8.2.0367

Problem: Can use :pedit in a popup window.  
Solution: Disallow it.  
Files: src/ex\_docmd.c, src/testdir/test\_popupwin.vim

#### Patch 8.2.0368

Problem: Vim9: import that redefines local variable does not fail.  
Solution: Check for already defined symbols.  
Files: src/vim9script.c, src/proto/vim9script.pro, src/vim9compile.c, src/proto/vim9compile.pro, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0369

Problem: Various Normal mode commands not fully tested.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5751)  
Files: src/testdir/test\_arglist.vim, src/testdir/test\_changelist.vim, src/testdir/test\_charsearch.vim, src/testdir/test\_cmdline.vim, src/testdir/test\_edit.vim, src/testdir/test\_ex\_mode.vim, src/testdir/test\_excmd.vim, src/testdir/test\_gf.vim, src/testdir/test\_iminsert.vim, src/testdir/test\_increment.vim, src/testdir/test\_marks.vim, src/testdir/test\_normal.vim, src/testdir/test\_prompt\_buffer.vim, src/testdir/test\_put.vim, src/testdir/test\_registers.vim, src/testdir/test\_tagjump.vim, src/testdir/test\_visual.vim

#### Patch 8.2.0370

Problem: The typebuf\_was\_filled flag is sometimes not reset, which may cause a hang.  
Solution: Make sure typebuf\_was\_filled is reset when the typeahead buffer is empty.  
Files: src/edit.c, src/getchar.c,

#### Patch 8.2.0371

Problem: Crash with combination of terminal popup and autocmd.  
Solution: Disallow closing a popup that is the current window. Add a check that the current buffer is valid. (closes #5754)  
Files: src/macros.h, src/buffer.c, src/popupwin.c, src/terminal.c, src/testdir/test\_terminal.vim

#### Patch 8.2.0372

Problem: Prop\_find() may not find text property at start of the line.  
Solution: Adjust the loop to find properties. (Axel Forsman, closes #5761, closes #5663)  
Files: src/textprop.c, src/testdir/test\_textprop.vim

#### Patch 8.2.0373

Problem: Type of term\_sendkeys() is unknown.  
Solution: Just return zero. (closes #5762)  
Files: src/terminal.c, src/testdir/test\_terminal.vim

#### Patch 8.2.0374

Problem: Using wrong printf directive for jump location.  
Solution: Change "%lld" to "%d". (James McCoy, closes #5773)  
Files: src/vim9execute.c

#### Patch 8.2.0375

Problem: Coverity warning for not using return value.  
Solution: Move error message to separate function.  
Files: src/popupwin.c

#### Patch 8.2.0376

Problem: Nasty callback test fails on some systems.  
Solution: Increase the sleep time.  
Files: src/testdir/test\_terminal.vim

#### Patch 8.2.0377

Problem: No CI test for a big-endian system.  
Solution: Test with s390x. (James McCoy, closes #5772)  
Files: .travis.yml

#### Patch 8.2.0378

Problem: prop\_find() does not find all props.  
Solution: Check being in the start line. (Axel Forsman, closes #5776)  
Files: src/textprop.c, src/testdir/test\_textprop.vim

#### Patch 8.2.0379

Problem: Gcc warns for ambiguous else.  
Solution: Add braces. (Dominique Pellé, closes #5778)  
Files: src/textprop.c

#### Patch 8.2.0380

Problem: Tiny popup when creating a terminal popup without minwidth.  
Solution: Use a default minimum size of 5 lines of 20 characters.  
Files: src/popupwin.c, src/testdir/test\_terminal.vim, src/testdir/dumps/Test\_terminal\_popup\_m1.dump

#### Patch 8.2.0381

Problem: Using freed memory with :lvimgrep and autocommand. (extracted from POC by Dominique Pellé)  
Solution: Avoid deleting a dummy buffer used in a window. (closes #5777)  
Files: src/quickfix.c, src/testdir/test\_quickfix.vim

#### Patch 8.2.0382

Problem: Some tests fail when run under valgrind.

Solution: Increase timeouts.  
Files: src/testdir/test\_autocmd.vim, src/testdir/test\_debugger.vim,  
src/testdir/test\_channel.vim, src/testdir/test\_ins\_complete.vim,  
src/testdir/test\_terminal.vim,  
src/testdir/dumps/Test\_terminal\_popup\_1.dump,  
src/testdir/dumps/Test\_terminal\_popup\_2.dump,  
src/testdir/dumps/Test\_terminal\_popup\_3.dump,  
src/testdir/dumps/Test\_terminal\_popup\_5.dump,  
src/testdir/dumps/Test\_terminal\_popup\_6.dump,  
src/testdir/dumps/Test\_terminal\_popup\_7.dump,  
src/testdir/dumps/Test\_terminal\_popup\_8.dump,  
src/testdir/dumps/Test\_terminal\_popup\_m1.dump

#### Patch 8.2.0383

Problem: Wrong feature check causes test not to be run.  
Solution: Use CheckFunction instead of CheckFeature. (Ozaki Kiichi,  
closes #5781)  
Files: src/testdir/test\_channel.vim

#### Patch 8.2.0384

Problem: Travis CI has warnings.  
Solution: Avoid warnings, clean up the config. (Ozaki Kiichi, closes #5779)  
Files: .travis.yml

#### Patch 8.2.0385

Problem: Menu functionality insufficiently tested.  
Solution: Add tests. Add menu\_info(). (Yegappan Lakshmanan, closes #5760)  
Files: runtime/doc/eval.txt, runtime/doc/gui.txt, runtime/doc/usr\_41.txt,  
src/evalfunc.c, src/menu.c, src/proto/menu.pro,  
src/testdir/test\_menu.vim, src/testdir/test\_popup.vim,  
src/testdir/test\_termcodes.vim

#### Patch 8.2.0386 (after 8.2.0385)

Problem: Part from unfinished patch got included.  
Solution: Undo that part.  
Files: src/evalfunc.c

#### Patch 8.2.0387

Problem: Error for possible NULL argument to qsort().  
Solution: Don't call qsort() when there is nothing to sort. (Dominique  
Pellé, closes #5780)  
Files: src/spellsuggest.c

#### Patch 8.2.0388

Problem: Printmbcharset option not tested.  
Solution: Add a test. Enable PostScript for AppVeyor build. (Dominique  
Pellé, closes #5783)  
Files: appveyor.yml, src/testdir/test\_hardcopy.vim

#### Patch 8.2.0389

Problem: Delayed redraw when shifting text from Insert mode.  
Solution: Use msg\_attr\_keep() instead of msg(). (closes #5782)  
Files: src/ops.c

Patch 8.2.0390

Problem: Terminal postponed scrollbar test is flaky.  
Solution: Add delay in between sending keys. Rename dump files.  
Files: src/testdir/test\_terminal.vim,  
src/testdir/dumps/Test\_terminal\_01.dump,  
src/testdir/dumps/Test\_terminal\_02.dump,  
src/testdir/dumps/Test\_terminal\_03.dump,  
src/testdir/dumps/Test\_terminal\_scrollback\_1.dump,  
src/testdir/dumps/Test\_terminal\_scrollback\_2.dump,  
src/testdir/dumps/Test\_terminal\_scrollback\_3.dump

Patch 8.2.0391 (after 8.2.0377)

Problem: CI test coverage dropped.  
Solution: Set \$DISPLAY also for non-GUI builds. (James McCoy, closes #5788)  
Files: .travis.yml

Patch 8.2.0392

Problem: Coverity warns for using array index out of range.  
Solution: Add extra "if" to avoid warning.  
Files: src/menu.c

Patch 8.2.0393

Problem: Coverity warns for not using return value.  
Solution: Add (void).  
Files: src/popupmenu.c

Patch 8.2.0394

Problem: Coverity complains about using NULL pointer.  
Solution: Use empty string when option value is NULL.  
Files: src/optionstr.c

Patch 8.2.0395

Problem: Build fails with FEAT\_EVAL but without FEAT\_MENU.  
Solution: Add #ifdef. (John Marriott)  
Files: src/evalfunc.c

Patch 8.2.0396

Problem: Cmdexpand.c insufficiently tested.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5789)  
Files: src/testdir/test\_cmdline.vim, src/testdir/test\_taglist.vim,  
src/testdir/test\_terminal.vim, src/testdir/test\_usercommands.vim

Patch 8.2.0397

Problem: Delayed screen update when using undo from Insert mode.  
Solution: Update w\_topleft and cursor shape before sleeping. (closes #5790)  
Files: src/normal.c

Patch 8.2.0398

Problem: Profile test fails when two functions take same time.  
Solution: Add a short sleep in once function. (closes #5797)  
Files: src/testdir/test\_profile.vim

Patch 8.2.0399

Problem: Various memory leaks.

Solution: Avoid the leaks. (Ozaki Kiichi, closes #5803)  
Files: src/ex\_docmd.c, src/ex\_getln.c, src/menu.c, src/message.c,  
src/scriptfile.c, src/userfunc.c

#### Patch 8.2.0400

Problem: Not all tests using a terminal are in the list of flaky tests.  
Solution: Introduce the test\_is\_flaky flag.  
Files: src/testdir/runtest.vim, src/testdir/term\_util.vim,  
src/testdir/screendump.vim, src/testdir/test\_autocmd.vim

#### Patch 8.2.0401

Problem: Not enough test coverage for evalvars.c.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5804)  
Files: src/testdir/test\_cmdline.vim, src/testdir/test\_const.vim,  
src/testdir/test\_diffmode.vim, src/testdir/test\_excmd.vim,  
src/testdir/test\_functions.vim, src/testdir/test\_let.vim,  
src/testdir/test\_listdict.vim, src/testdir/test\_spell.vim,  
src/testdir/test\_unlet.vim, src/testdir/test\_user\_func.vim,  
src/testdir/test\_vimscript.vim

#### Patch 8.2.0402 (after 8.2.0401)

Problem: Setting local instead of global flag.  
Solution: Prepend "g:" to "test\_is\_flaky".  
Files: src/testdir/term\_util.vim, src/testdir/screendump.vim,  
src/testdir/test\_autocmd.vim

#### Patch 8.2.0403

Problem: When **'buftype'** is "nofile" there is no overwrite check.  
Solution: Also check for existing file when **'buftype'** is set.  
(closes #5807)  
Files: src/ex\_cmds.c, src/testdir/test\_options.vim

#### Patch 8.2.0404

Problem: Writefile() error does not give a hint.  
Solution: Add remark about first argument.  
Files: src/filepath.c, src/testdir/test\_writefile.vim

#### Patch 8.2.0405

Problem: MSVC: build fails with some combination of features.  
Solution: Enable CHANNEL if TERMINAL is enabled. (Mike Williams)  
Files: src/Make\_mvc.mak

#### Patch 8.2.0406

Problem: FileReadCmd event not well tested.  
Solution: Add a test.  
Files: src/testdir/test\_autocmd.vim

#### Patch 8.2.0407

Problem: No early check if :find and :sfind have an argument.  
Solution: Add EX\_NEEDARG.  
Files: src/ex\_cmds.h, src/testdir/test\_findfile.vim,  
src/testdir/test\_find\_complete.vim

#### Patch 8.2.0408

Problem: Delete() commented out for testing.  
Solution: Undo commenting-out.  
Files: src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.0409

Problem: Search test leaves file behind.  
Solution: Delete the file. Also use Check commands.  
Files: src/testdir/test\_search.vim

Patch 8.2.0410

Problem: Channel test fails too often on slow Mac.  
Solution: Increase waiting time to 10 seconds.  
Files: src/testdir/test\_channel.vim

Patch 8.2.0411

Problem: Mac: breakcheck is using a value from the stone ages.  
Solution: Delete BREAKCHECK\_SKIP from the Mac header file. (Ben Jackson)  
Files: src/os\_mac.h

Patch 8.2.0412

Problem: MS-Windows: cannot use vimtutor from the start menu.  
Solution: Better check for writable directory. Use the right path for the executable. (Wu Yongwei, closes #5774, closes #5756)  
Files: vimtutor.bat

Patch 8.2.0413

Problem: Buffer menu does not handle special buffers properly.  
Solution: Keep a dictionary with buffer names to reliably keep track of entries.  
Also trigger BufFilePre and BufFilePost for command-line and terminal buffers when the name changes.  
Files: src/testdir/test\_alot.vim, src/testdir/Make\_all.mak, runtime/menu.vim, src/ex\_getln.c, src/terminal.c, src/testdir/test\_menu.vim

Patch 8.2.0414

Problem: Channel connect\_waittime() test is flaky.  
Solution: Set the test\_is\_flaky flag. Use test\_is\_flaky for more tests.  
Files: src/testdir/test\_channel.vim, src/testdir/test\_terminal.vim, src/testdir/runtest.vim

Patch 8.2.0415

Problem: BsdL filetype is not detected.  
Solution: Add an entry in the filetype list. (Daniel Kho, closes #5810)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.0416

Problem: Test leaves file behind.  
Solution: Delete the file.  
Files: src/testdir/test\_indent.vim

Patch 8.2.0417

Problem: Travis CI config can be improved.  
Solution: Remove COVERAGE variable. Add load-snd-dummy script. add "-i NONE"

to avoid messages about viminfo. (Ozaki Kiichi, closes #5813)  
Files: .travis.yml, ci/load-snd-dummy.sh

#### Patch 8.2.0418

Problem: Code in eval.c not sufficiently covered by tests.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5815)  
Files: src/testdir/test\_blob.vim, src/testdir/test\_channel.vim,  
src/testdir/test\_cmdline.vim, src/testdir/test\_eval\_stuff.vim,  
src/testdir/test\_expr.vim, src/testdir/test\_functions.vim,  
src/testdir/test\_job\_fails.vim, src/testdir/test\_lambda.vim,  
src/testdir/test\_let.vim, src/testdir/test\_listdict.vim,  
src/testdir/test\_marks.vim, src/testdir/test\_method.vim,  
src/testdir/test\_normal.vim, src/testdir/test\_unlet.vim,  
src/testdir/test\_usercommands.vim, src/testdir/test\_vimscript.vim,  
src/testdir/test\_window\_cmd.vim

#### Patch 8.2.0419

Problem: Various memory leaks in Vim9 script code.  
Solution: Fix the leaks. (Ozaki Kiichi, closes #5814)  
Files: src/proto/vim9compile.pro, src/scriptfile.c, src/structs.h,  
src/testdir/test\_vim9\_script.vim, src/vim9.h, src/vim9compile.c,  
src/vim9execute.c, src/vim9script.c

#### Patch 8.2.0420

Problem: Vim9: cannot interrupt a loop with **CTRL-C**.  
Solution: Check for **CTRL-C** once in a while. Doesn't fully work yet.  
Files: src/misc1.c, src/proto/misc1.pro,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0421

Problem: Interrupting with **CTRL-C** does not always work.  
Solution: Recognize **CTRL-C** while modifyOtherKeys is set.  
Files: src/ui.c, src/testdir/test\_vim9\_script.vim, src/evalfunc.c

#### Patch 8.2.0422

Problem: Crash when passing popup window to win\_splitmove(). (john Devin)  
Solution: Disallow moving a popup window. (closes #5816)  
Files: src/testdir/test\_popupwin.vim, src/evalwindow.c

#### Patch 8.2.0423

Problem: In some environments a few tests are expected to fail.  
Solution: Add \$TEST\_MAY\_FAIL to list tests that should not cause make to fail.  
Files: src/testdir/runtest.vim

#### Patch 8.2.0424

Problem: Checking for wrong return value. (Tom)  
Solution: Invert the check and fix the test.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0425

Problem: Code for modeless selection not sufficiently tested.  
Solution: Add tests. Move mouse code functionality to a common script file.  
(Yegappan Lakshmanan, closes #5821)

Files: src/testdir/Make\_all.mak, src/testdir/gen\_opt\_test.vim,  
src/testdir/mouse.vim, src/testdir/test\_edit.vim,  
src/testdir/test\_global.vim, src/testdir/test\_modeless.vim,  
src/testdir/test\_normal.vim, src/testdir/test\_selectmode.vim,  
src/testdir/test\_termcodes.vim, src/testdir/test\_visual.vim,  
src/ui.c

#### Patch 8.2.0426

Problem: Some errors were not tested for.  
Solution: Add tests. (Dominique Pellé, closes #5824)  
Files: src/testdir/test\_buffer.vim, src/testdir/test\_options.vim,  
src/testdir/test\_tcl.vim, src/testdir/test\_terminal.vim,  
src/testdir/test\_window\_cmd.vim

#### Patch 8.2.0427

Problem: It is not possible to check for a typo in a feature name.  
Solution: Add an extra argument to has().  
Files: runtime/doc/eval.txt, src/evalfunc.c, src/testdir/check.vim,  
src/testdir/test\_functions.vim

#### Patch 8.2.0428

Problem: Buffer name may leak.  
Solution: Free the buffer name before overwriting it.  
Files: src/terminal.c

#### Patch 8.2.0429

Problem: No warning when test checks for option that never exists.  
Solution: In tests check that the option can exist.  
Files: src/testdir/check.vim

#### Patch 8.2.0430

Problem: Window creation failure not properly tested.  
Solution: Improve the test. (Yegappan Lakshmanan, closes #5826)  
Files: src/testdir/test\_cmdline.vim, src/testdir/test\_window\_cmd.vim

#### Patch 8.2.0431

Problem: Some compilers don't support using \e for Esc. (Yegappan  
Lakshmanan)  
Solution: use \033 instead.  
Files: src/ui.c

#### Patch 8.2.0432

Problem: A few tests fail in a huge terminal.  
Solution: Make the tests pass. (Dominique Pellé, closes #5829)  
Files: src/testdir/test\_autocmd.vim, src/testdir/test\_options.vim,  
src/testdir/test\_termcodes.vim, src/testdir/test\_terminal.vim,  
src/testdir/test\_window\_cmd.vim

#### Patch 8.2.0433

Problem: INT signal not properly tested.  
Solution: Add a test. Also clean up some unnecessary lines. (Dominique  
Pellé, closes #5828)  
Files: src/testdir/test\_display.vim, src/testdir/test\_ex\_mode.vim,  
src/testdir/test\_excmd.vim, src/testdir/test\_messages.vim,

src/testdir/test\_signals.vim

Patch 8.2.0434

Problem: MS-Windows with VTP: Normal color not working.  
Solution: After changing the Normal color update the VTP console color.  
(Nobuhiro Takasaki, closes #5836)  
Files: src/highlight.c

Patch 8.2.0435

Problem: Channel contents might be freed twice.  
Solution: Call either channel\_free\_channel() or channel\_free(), not both.  
(Nobuhiro Takasaki, closes #5835)  
Files: src/channel.c

Patch 8.2.0436

Problem: No warnings for incorrect printf arguments.  
Solution: Fix attribute in declaration. Fix uncovered mistakes. (Dominique Pellé, closes #5834)  
Files: src/proto.h, src/eval.c, src/ops.c, src/spellfile.c,  
src/vim9compile.c, src/vim9execute.c, src/viminfo.c, src/gui.c

Patch 8.2.0437

Problem: MS-Windows installer contains old stuff.  
Solution: Rely on Windows NT. (Ken Takata, closes #5832)  
Files: src/dosinst.c

Patch 8.2.0438

Problem: Terminal noblock test is very flaky on BSD.  
Solution: Change WaitFor() to WaitForAssert() to be able to see why it failed. Add a short wait in between sending keys.  
Files: src/testdir/test\_terminal.vim

Patch 8.2.0439

Problem: :disassemble has minor flaws.  
Solution: Format the code. Use (int) instead of (char) for %c.  
(also by James McCoy, closes #5831)  
Files: src/vim9execute.c

Patch 8.2.0440

Problem: Terminal noblock test is still very flaky on BSD.  
Solution: Increase the waiting time.  
Files: src/testdir/test\_terminal.vim

Patch 8.2.0441

Problem: Terminal noblock test is still failing on BSD.  
Solution: Reduce the amount of text.  
Files: src/testdir/test\_terminal.vim

Patch 8.2.0442

Problem: Channel contents might be used after being freed.  
Solution: Reset the job channel before freeing the channel.  
Files: src/channel.c

Patch 8.2.0443

Problem: Clipboard code is spread out.  
Solution: Move clipboard code to its own file. (Yegappan Lakshmanan, closes #5827)  
Files: Filelist, src/Make\_cyg\_ming.mak, src/Make\_morph.mak, src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/README.md, src/clipboard.c, src/ops.c, src/proto.h, src/proto/clipboard.pro, src/proto/ops.pro, src/proto/register.pro, src/proto/ui.pro, src/register.c, src/ui.c

#### Patch 8.2.0444

Problem: Swap file test fails on some systems.  
Solution: Preserve the swap file. Send NL terminated keys.  
Files: src/testdir/test\_swap.vim

#### Patch 8.2.0445

Problem: Png and xpm files not in MS-Windows zip file.  
Solution: Move files to shared between Unix and Windows target.  
Files: Filelist

#### Patch 8.2.0446

Problem: Listener with undo of deleting all lines not tested.  
Solution: Add a test.  
Files: src/testdir/test\_listener.vim

#### Patch 8.2.0447

Problem: Terminal scroll tests fails on some systems.  
Solution: Remove the fixed 100msec wait for Win32. Add a loop to wait until scrolling has finished. (James McCoy, closes #5842)  
Files: src/testdir/test\_terminal.vim

#### Patch 8.2.0448

Problem: Various functions not properly tested.  
Solution: Add more tests, especially for failures. (Yegappan Lakshmanan, closes #5843)  
Files: runtime/doc/eval.txt, src/testdir/test\_blob.vim, src/testdir/test\_breakindent.vim, src/testdir/test\_charsearch.vim, src/testdir/test\_clientserver.vim, src/testdir/test\_cmdline.vim, src/testdir/test\_exists.vim, src/testdir/test\_expand\_func.vim, src/testdir/test\_expr.vim, src/testdir/test\_file\_perm.vim, src/testdir/test\_functions.vim, src/testdir/test\_gui.vim, src/testdir/test\_listdict.vim, src/testdir/test\_marks.vim, src/testdir/test\_partial.vim, src/testdir/test\_registers.vim, src/testdir/test\_search.vim, src/testdir/test\_spell.vim, src/testdir/test\_substitute.vim, src/testdir/test\_syn\_attr.vim, src/testdir/test\_syntax.vim, src/testdir/test\_taglist.vim, src/testdir/test\_utf8.vim, src/testdir/test\_vartabs.vim, src/testdir/test\_window\_cmd.vim

#### Patch 8.2.0449

Problem: Vim9: crash if return type is invalid. (Yegappan Lakshmanan)  
Solution: Always return some type, not NULL.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0450

Problem: Not enough testing for restricted mode and function calls.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5847)  
Files: src/testdir/test\_method.vim, src/testdir/test\_restricted.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.0451

Problem: Win32: double-width character displayed incorrectly.  
Solution: First move the cursor to the first column. (Nobuhiro Takasaki,  
closes #5848)  
Files: src/os\_win32.c

Patch 8.2.0452

Problem: channel\_parse\_messages() fails when called recursively.  
Solution: Return for a recursive call. (closes #5835)  
Files: src/channel.c

Patch 8.2.0453

Problem: Trailing space in job\_start() command causes empty argument.  
Solution: Ignore trailing space. (closes #5851)  
Files: src/misc2.c, src/testdir/test\_channel.vim

Patch 8.2.0454

Problem: Some tests fail when the system is slow.  
Solution: Make the run number global, use in the test to increase the  
waiting time. (closes #5841)  
Files: src/testdir/runtest.vim, src/testdir/test\_functions.vim

Patch 8.2.0455

Problem: Cannot set the highlight group for a specific terminal.  
Solution: Add the "highlight" option to term\_start(). (closes #5818)  
Files: src/terminal.c, src/structs.h, src/channel.c,  
src/testdir/test\_terminal.vim, runtime/doc/terminal.txt,  
src/testdir/dumps/Test\_terminal\_popup\_Terminal.dump,  
src/testdir/dumps/Test\_terminal\_popup\_MyTermCol.dump

Patch 8.2.0456

Problem: Test\_confirm\_cmd is flaky.  
Solution: Add a term\_wait() call. (closes #5854)  
Files: src/testdir/test\_excmd.vim

Patch 8.2.0457

Problem: Test\_quotestar() often fails when run under valgrind.  
Solution: Wait longer for the GUI to start.  
Files: src/testdir/test\_quotestar.vim

Patch 8.2.0458

Problem: Missing feature check in test function.  
Solution: Add check commands.  
Files: src/testdir/test\_excmd.vim

Patch 8.2.0459

Problem: Cannot check if a function name is correct.  
Solution: Add "?funcname" to exists().  
Files: runtime/doc/eval.txt, src/evalfunc.c, src/testdir/test\_exists.vim,

src/testdir/check.vim

Patch 8.2.0460 (after 8.2.0459)

Problem: Build failure because of wrong feature name.  
Solution: Correct feature name.  
Files: src/evalfunc.c

Patch 8.2.0461

Problem: Confirm test fails on amd64 system. (Alimar Riesebieter)  
Solution: Add an extra WaitForAssert(). (Dominique Pellé)  
Files: src/testdir/test\_excmod.vim

Patch 8.2.0462

Problem: Previewwindow test fails on some systems. (James McCoy)  
Solution: Wait a bit after sending the "o". (closes #5849)  
Files: src/testdir/test\_popup.vim,  
src/testdir/dumps/Test\_popup\_and\_previewwindow\_01.dump

Patch 8.2.0463

Problem: Build error without float and channel feature. (John Marriott)  
Solution: Define return types always.  
Files: src/globals.h, src/evalfunc.c

Patch 8.2.0464

Problem: Typos and other small problems.  
Solution: Fix the typos. Add missing files to the distribution.  
Files: Filelist, src/buffer.c, src/drawline.c, src/gui\_gtk\_x11.c,  
src/os\_unixx.h, src/proto/popupwin.pro

Patch 8.2.0465

Problem: Vim9: dead code and wrong return type.  
Solution: Remove dead code. Fix return type. Add more tests.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0466 (after 8.2.0452)

Problem: Not parsing messages recursively breaks the govim plugin.  
Solution: When called recursively do handle messages but do not close channels.  
Files: src/channel.c

Patch 8.2.0467

Problem: Vim9: some errors are not tested  
Solution: Add more tests. Fix that Vim9 script flag is not reset.  
Files: src/vim9compile.c, src/scriptfile.c, src/dict.c,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.0468

Problem: GUI: pixel dust with some fonts and characters.  
Solution: Always redraw the character before the cursor. (Nir Lichtman,  
closes #5549, closes #5856)  
Files: src/gui.c, src/proto/gui.pro, src/screen.c

Patch 8.2.0469

Problem: Vim9: no error for missing ] after list.

Solution: Add error message. Add more tests.  
Files: src/globals.h, src/list.c, src/userfunc.c,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_lambda.vim

Patch 8.2.0470

Problem: Test\_confirm\_cmd\_cancel() can fail on a slow system.  
Solution: Use WaitForAssert(). (Ozaki Kiichi, closes #5861)  
Files: src/testdir/test\_excmod.vim

Patch 8.2.0471

Problem: Missing change to compile\_list().  
Solution: Add error message.  
Files: src/vim9compile.c

Patch 8.2.0472

Problem: Terminal highlight name is set twice, leaking memory.  
Solution: Delete one.  
Files: src/terminal.c

Patch 8.2.0473

Problem: Variables declared in an outer scope.  
Solution: Declare variables only in the scope where they are used.  
Files: src/evalvars.c

Patch 8.2.0474 (after 8.2.0403)

Problem: Cannot use :write when using a plugin with BufWriteCmd.  
Solution: Reset BF\_NOTEDITED after BufWriteCmd. (closes #5807)  
Files: src/fileio.c, src/testdir/test\_autocmd.vim

Patch 8.2.0475

Problem: Channel out\_cb test still fails sometimes on Mac.  
Solution: Use an even longer timeout.  
Files: src/testdir/test\_channel.vim

Patch 8.2.0476

Problem: Terminal nasty callback test fails sometimes.  
Solution: use term\_wait() instead of a sleep. (Yee Cheng Chin, closes #5865)  
Files: src/testdir/test\_terminal.vim

Patch 8.2.0477

Problem: Vim9: error messages not tested.  
Solution: Add more tests.  
Files: src/testdir/test\_vim9\_expr.vim, src/vim9execute.c

Patch 8.2.0478

Problem: New buffers are not added to the Buffers menu.  
Solution: Turn number into string. (Yee Cheng Chin, closes #5864)  
Files: runtime/menu.vim, src/testdir/test\_menu.vim

Patch 8.2.0479

Problem: Unloading shared libraries on exit has no purpose.  
Solution: Do not unload shared libraries on exit.  
Files: src/if\_lua.c, src/if\_perl.xs, src/if\_python.c, src/if\_python3.c,  
src/if\_ruby.c, src/if\_tcl.c

Patch 8.2.0480

Problem: Vim9: some code is not tested.  
Solution: Add more tests.  
Files: src/testdir/test\_vim9\_expr.vim, src/vim9compile.c

Patch 8.2.0481

Problem: Travis is still using trusty.  
Solution: Adjust config to use bionic. (Ozaki Kiichi, closes #5868)  
Files: .travis.yml, src/testdir/lsan-suppress.txt

Patch 8.2.0482

Problem: Channel and sandbox code not sufficiently tested.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5855)  
Files: src/option.h, src/testdir/test\_channel.vim,  
src/testdir/test\_clientserver.vim, src/testdir/test\_cmdline.vim,  
src/testdir/test\_edit.vim, src/testdir/test\_excmd.vim,  
src/testdir/test\_normal.vim, src/testdir/test\_prompt\_buffer.vim,  
src/testdir/test\_restricted.vim, src/testdir/test\_smartindent.vim,  
src/testdir/test\_substitute.vim, src/testdir/test\_terminal.vim,  
src/testdir/test\_textformat.vim, src/testdir/test\_visual.vim

Patch 8.2.0483

Problem: Vim9: "let x = x + 1" does not give an error.  
Solution: Hide the variable when compiling the expression.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.0484

Problem: Vim9: some error messages not tested.  
Solution: Add more tests.  
Files: src/testdir/test\_vim9\_expr.vim

Patch 8.2.0485 (after 8.2.0483)

Problem: Vim9 script test fails.  
Solution: Stricter condition for adding new local variable.  
Files: Stricter condition for adding new local variable.

Patch 8.2.0486

Problem: Vim9: some code and error messages not tested.  
Solution: Add more tests.  
Files: src/vim9compile.c, src/evalvars.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.0487

Problem: Vim9: compiling not sufficiently tested.  
Solution: Add more tests. Fix bug with PCALL.  
Files: src/vim9compile.c, src/vim9execute.c, src/vim9.h,  
src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.0488

Problem: Vim9: Compiling can break when using a lambda inside :def.  
Solution: Do not keep a pointer to the dfunc\_T for longer time.  
Files: src/vim9compile.c, src/vim9.h

Patch 8.2.0489

Problem: Vim9: memory leaks.  
Solution: Free memory in the right place. Add hints for using asan.  
Files: src/vim9compile.c, src/testdir/lsan-suppress.txt, src/Makefile

Patch 8.2.0490

Problem: Win32: VTP doesn't respect **'restorescreen'**.  
Solution: Use escape codes to switch to alternate screen. (Nobuhiro Takasaki, closes #5872)  
Files: src/os\_win32.c

Patch 8.2.0491

Problem: Cannot recognize a `<script>` mapping using maparg().  
Solution: Add the "script" key. (closes #5873)  
Files: src/map.c, runtime/doc/eval.txt, src/testdir/test\_maparg.vim

Patch 8.2.0492

Problem: Vim9: some error messages not tested.  
Solution: Add more tests. Remove dead code. Fix uncovered bugs.  
Files: src/vim9compile.c, src/vim9execute.c, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.0493

Problem: Vim9: some error messages not tested.  
Solution: Add more tests. Fix uncovered bugs.  
Files: src/vim9compile.c, src/vim9execute.c, src/testing.c, src/eval.c, src/proto/testing.pro, src/evalfunc.c, runtime/doc/eval.txt, runtime/doc/testing.txt, src/testdir/test\_vim9\_script.vim

Patch 8.2.0494

Problem: Vim9: asan error.  
Solution: Only get the type when there is one.  
Files: src/vim9compile.c

Patch 8.2.0495

Problem: Vim9: some code not tested.  
Solution: Add more tests. Support more const expressions.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0496

Problem: Vim9: disassemble test fails.  
Solution: Separate test cases with recognized constant expressions.  
Files: src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.0497

Problem: Too verbose output from the asan build in Travis.  
Solution: Filter out suppression messages. (Ozaki Kiichi, closes #5874)  
Files: .travis.yml

Patch 8.2.0498

Problem: Coverity complains about uninitialized field.  
Solution: Initialize the whole typval\_T.  
Files: src/vim9compile.c

Patch 8.2.0499

Problem: Calling a lambda is slower than evaluating a string.  
Solution: Make calling a lambda faster. (Ken Takata, closes #5727)  
Files: src/userfunc.c

Patch 8.2.0500

Problem: Using the same loop in many places.  
Solution: Define more FOR\_ALL macros. (Yegappan Lakshmanan, closes #5339)  
Files: src/arglist.c, src/autocmd.c, src/buffer.c, src/change.c,  
src/channel.c, src/cmdexpand.c, src/diff.c, src/eval.c,  
src/evalbuffer.c, src/evalfunc.c, src/evalvars.c,  
src/evalwindow.c, src/ex\_cmds2.c, src/filepath.c, src/globals.h,  
src/gui.c, src/if\_py\_both.h, src/if\_ruby.c, src/insexpand.c,  
src/list.c, src/misc2.c, src/netbeans.c, src/popupwin.c,  
src/quickfix.c, src/screen.c, src/sign.c, src/spell.c,  
src/spellfile.c, src/spellsuggest.c, src/tag.c, src/terminal.c,  
src/userfunc.c, src/window.c

Patch 8.2.0501

Problem: Vim9: script test fails when channel feature is missing.  
Solution: Add a has() condition.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.0502

Problem: Vim9: some code is not tested.  
Solution: Add more tests. Fix uncovered problems.  
Files: src/vim9compile.c, src/regexp.c, src/proto/regexp.pro,  
src/cmdexpand.c, src/ex\_cmds.c, src/ex\_docmd.c, src/ex\_eval.c,  
src/ex\_getln.c, src/highlight.c, src/search.c, src/syntax.c,  
src/tag.c, src/userfunc.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.0503

Problem: Vim9: some code is not tested.  
Solution: Add tests. Fix uncovered problems.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0504

Problem: Vim9: leaking scope memory when compilation fails.  
Solution: Cleanup the scope list.  
Files: src/vim9compile.c

Patch 8.2.0505

Problem: term\_gettty() not sufficiently tested.  
Solution: Add more asserts. (Dominique Pellé, closes #5877)  
Files: src/testdir/test\_terminal.vim

Patch 8.2.0506

Problem: Coverity complains about ignoring return value.  
Solution: Add (void).  
Files: src/userfunc.c

Patch 8.2.0507 (after 8.2.0472)

Problem: Getbufvar() may get the wrong dictionary. (David le Blanc)  
Solution: Check for empty name. (closes #5878)  
Files: src/evalvars.c, src/testdir/test\_functions.vim

#### Patch 8.2.0508

Problem: Vim9: func and partial types not done yet  
Solution: Fill in details about func declaration, drop a separate partial declaration.  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/globals.h, src/structs.h, src/evalfunc.c, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.0509

Problem: various code is not properly tested.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5871)  
Files: src/main.c, src/testdir/check.vim, src/testdir/shared.vim, src/testdir/term\_util.vim, src/testdir/test\_clientserver.vim, src/testdir/test\_ex\_mode.vim, src/testdir/test\_expand.vim, src/testdir/test\_functions.vim, src/testdir/test\_options.vim, src/testdir/test\_startup.vim, src/testdir/test\_textformat.vim, src/testdir/test\_trycatch.vim, src/testdir/test\_viminfo.vim

#### Patch 8.2.0510

Problem: Coverity complains about using uninitialized variable.  
Solution: Assign a value to "scol". Move code inside NULL check.  
Files: src/beval.c, src/popupwin.c

#### Patch 8.2.0511

Problem: Cscope code not fully tested.  
Solution: Add more test cases. (Dominique Pellé, closes #5886)  
Files: src/testdir/test\_cscope.vim

#### Patch 8.2.0512

Problem: Vim9: no optional arguments in func type.  
Solution: Check for question mark after type. Find function reference without function().  
Files: src/vim9compile.c, src/vim9execute.c, src/structs.h, src/globals.h, src/vim.h, src/vim9.h, src/userfunc.c, src/testdir/Make\_all.mak, src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.0513

Problem: Reading past allocated memory when using varargs.  
Solution: Fix copying function argument types.  
Files: src/vim9compile.c

#### Patch 8.2.0514

Problem: Several global functions are used in only one file.  
Solution: Make the functions static. (Yegappan Lakshmanan, closes #5884)  
Files: src/drawscreen.c, src/evalvars.c, src/getchar.c, src/list.c, src/proto/drawscreen.pro, src/proto/evalvars.pro, src/proto/getchar.pro, src/proto/list.pro, src/proto/version.pro,

src/version.c

Patch 8.2.0515

Problem: Some compilers cannot add to "void \*".  
Solution: Cast to "char \*".  
Files: src/vim9compile.c

Patch 8.2.0516

Problem: Client-server code is spread out.  
Solution: Move client-server code to a new file. (Yegappan Lakshmanan, closes #5885)  
Files: Filelist, src/Make\_cyg\_ming.mak, src/Make\_morph.mak, src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/README.md, src/clientserver.c, src/evalfunc.c, src/main.c, src/proto.h, src/proto/clientserver.pro, src/proto/main.pro

Patch 8.2.0517

Problem: Vim9: cannot separate "func" and "func(): void".  
Solution: Use VAR\_ANY for "any" and VAR\_UNKNOWN for "no type".  
Files: src/structs.h, src/globals.h, src/eval.c, src/evalfunc.c, src/evalvars.c, src/testing.c, src/vim9compile.c, src/vim9execute.c, src/viminfo.c, src/if\_py\_both.h, src/json.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.0518

Problem: A terminal falls back to setting \$TERM to "xterm".  
Solution: Use "xterm-color" if more than 16 colors are supported and "xterm-256color" if at least 256 colors are supported. (closes #5887)  
Files: src/os\_unix.c

Patch 8.2.0519

Problem: Vim9: return type not properly checked.  
Solution: Check type properly, also at runtime.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.0520

Problem: Tests are not listed in sorted order.  
Solution: Move test\_ex\_mode. (Doug Richardson, closes #5889)  
Files: src/testdir/Make\_all.mak

Patch 8.2.0521

Problem: Crash when reading a blob fails.  
Solution: Avoid keeping a pointer to a freed blob object. (Dominique Pellé, closes #5890) Adjust error messages.  
Files: src/filepath.c, src/testdir/test\_blob.vim

Patch 8.2.0522

Problem: Several errors are not tested for.  
Solution: Add tests. (Yegappan Lakshmanan, closes #5892)  
Files: src/testdir/test\_autocmd.vim, src/testdir/test\_clientserver.vim, src/testdir/test\_digraph.vim, src/testdir/test\_expand.vim, src/testdir/test\_expr.vim, src/testdir/test\_functions.vim, src/testdir/test\_gui.vim, src/testdir/test\_highlight.vim,

src/testdir/test\_ins\_complete.vim, src/testdir/test\_lambda.vim,  
src/testdir/test\_listdict.vim, src/testdir/test\_normal.vim,

#### Patch 8.2.0523

Problem: Loops are repeated.  
Solution: Use FOR\_ALL\_ macros. (Yegappan Lakshmanan, closes #5882)  
Files: src/buffer.c, src/drawscreen.c, src/evalfunc.c, src/evalwindow.c,  
src/globals.h, src/gui\_athena.c, src/gui\_gtk.c, src/gui\_motif.c,  
src/gui\_w32.c, src/list.c, src/menu.c, src/popupmenu.c,  
src/popupwin.c, src/quickfix.c, src/syntax.c, src/time.c,  
src/userfunc.c, src/vim9compile.c

#### Patch 8.2.0524

Problem: Win32: searching for file matches is slow.  
Solution: Instead of making another round to find any short filename, check  
for the short name right away. Avoid using an ordinary file like a  
directory. (Nir Lichtman, closes #5883)  
Files: src/filepath.c

#### Patch 8.2.0525 (after 8.2.0524)

Problem: Win32: typo in assignment and misplaced paren.  
Solution: Fix the syntax.  
Files: src/filepath.c

#### Patch 8.2.0526

Problem: Gcc 9 complains about empty statement.  
Solution: Add {}. (Dominique Pellé, closes #5894)  
Files: src/evalfunc.c

#### Patch 8.2.0527

Problem: Vim9: function types insufficiently tested.  
Solution: Add more tests. Fix white space check. Add "test\_vim9" target.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim, src/Makefile,  
src/testdir/Makefile, src/testdir/Make\_all.mak

#### Patch 8.2.0528

Problem: Vim9: function arguments insufficiently tested.  
Solution: Check types. Add more tests. Fix function with varargs only.  
Files: src/vim9compile.c, src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.0529

Problem: Vim9: function argument with default not checked.  
Solution: Check type of argument with default value.  
Files: src/vim9compile.c, src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.0530

Problem: Test crashes on s390. (James McCoy)  
Solution: Explicitly define an 8 big signed type. (closes #5897)  
Files: src/structs.h

Patch 8.2.0531

Problem: Various errors not tested.  
Solution: Add tests. (Yegappan Lakshmanan, closes #5895)  
Files: src/testdir/test\_search.vim, src/testdir/test\_source.vim,  
src/testdir/test\_syntax.vim, src/testdir/test\_user\_func.vim,  
src/testdir/test\_vimscript.vim

Patch 8.2.0532

Problem: Cannot use simplify() as a method.  
Solution: Add FEARG\_1. (closes #5896)  
Files: runtime/doc/eval.txt, src/evalfunc.c,  
src/testdir/test\_functions.vim

Patch 8.2.0533

Problem: Tests using term\_wait() can still be flaky.  
Solution: Increase the wait time when rerunning a test. (James McCoy,  
closes #5899) Halve the initial times to make tests run faster  
when there is no rerun.  
Files: src/testdir/term\_util.vim, src/testdir/test\_arglist.vim,  
src/testdir/test\_autocmd.vim, src/testdir/test\_balloon.vim,  
src/testdir/test\_bufline.vim, src/testdir/test\_channel.vim,  
src/testdir/test\_cmdline.vim, src/testdir/test\_conceal.vim,  
src/testdir/test\_cursorline.vim, src/testdir/test\_debugger.vim,  
src/testdir/test\_diffmode.vim, src/testdir/test\_display.vim,  
src/testdir/test\_functions.vim, src/testdir/test\_highlight.vim,  
src/testdir/test\_ins\_complete.vim, src/testdir/test\_mapping.vim,

src/testdir/test\_messages.vim, src/testdir/test\_number.vim,  
src/testdir/test\_popup.vim, src/testdir/test\_popupwin.vim,  
src/testdir/test\_profile.vim, src/testdir/test\_search.vim,  
src/testdir/test\_search\_stat.vim, src/testdir/test\_startup.vim,  
src/testdir/test\_startup\_utf8.vim,  
src/testdir/test\_statusline.vim, src/testdir/test\_suspend.vim,  
src/testdir/test\_swap.vim, src/testdir/test\_tagjump.vim,  
src/testdir/test\_terminal.vim, src/testdir/test\_terminal\_fail.vim,  
src/testdir/test\_timers.vim, src/testdir/test\_vimscript.vim

Patch 8.2.0534

Problem: Client-server test fails under valgrind.  
Solution: Use WaitForAssert().  
Files: src/testdir/test\_clientserver.vim

Patch 8.2.0535

Problem: Regexp patterns not fully tested.  
Solution: Add more regexp tests and others. (Yegappan Lakshmanan,  
closes #5901)  
Files: src/testdir/test\_marks.vim, src/testdir/test\_options.vim,  
src/testdir/test\_regexp\_latin.vim, src/testdir/test\_search.vim

Patch 8.2.0536

Problem: Vim9: some compilation code not tested.  
Solution: Add more test cases.  
Files: src/evalvars.c, src/proto/evalvars.pro, src/vim9compile.c,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.0537

Problem: Vim9: no check for sandbox when setting v:var.  
Solution: Check for sandbox.  
Files: src/evalvars.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0538

Problem: Vim9: VAR\_PARTIAL is not used during compilation.  
Solution: Remove VAR\_PARTIAL.  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c

Patch 8.2.0539

Problem: Comparing two NULL list fails.  
Solution: Change the order of comparing two lists.  
Files: src/list.c, src/testdir/test\_assert.vim

Patch 8.2.0540

Problem: Regexp and other code not tested.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5904)  
Files: src/testdir/test\_backspace\_opt.vim, src/testdir/test\_expr.vim,  
src/testdir/test\_increment.vim, src/testdir/test\_normal.vim,  
src/testdir/test\_options.vim, src/testdir/test\_regexp\_latin.vim,  
src/testdir/test\_search.vim, src/testdir/test\_substitute.vim,  
src/testdir/test\_terminal.vim, src/testdir/test\_virtualedit.vim

Patch 8.2.0541

Problem: Travis CI does not give compiler warnings.  
Solution: Add flags for warnings. Fix uncovered problems. (Ozaki Kiichi,  
closes #5898)  
Files: .travis.yml, ci/config.mk.clang.sed, ci/config.mk.gcc.sed,  
ci/config.mk.sed, src/if\_perl.xs, src/if\_ruby.c,  
src/libvterm/t/harness.c

Patch 8.2.0542

Problem: No test for E386.  
Solution: Add a test. (Dominique Pellé, closes #5911)  
Files: src/testdir/test\_search.vim

Patch 8.2.0543

Problem: Vim9: function with varargs does not work properly.  
Solution: Improve function type spec and add tests. Fix bugs.  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/vim9execute.c,  
src/structs.h, src/testdir/test\_vim9\_func.vim

Patch 8.2.0544

Problem: Memory leak in search test.  
Solution: Free msgbuf. (Dominique Pellé, closes #5912)  
Files: src/search.c

Patch 8.2.0545

Problem: Unused arguments ignored in non-standard way.  
Solution: Add UNUSED instead of (void).  
Files: src/libvterm/t/harness.c

Patch 8.2.0546

Problem: Vim9: varargs implementation is inefficient.  
Solution: Create list without moving the arguments.  
Files: src/vim9compile.c, src/vim9execute.c

Patch 8.2.0547

Problem: Win32: restoring screen not always done right.  
Solution: Use a more appropriate method. (Nobuhiro Takasaki, closes #5909)  
Files: src/os\_win32.c

Patch 8.2.0548

Problem: Vim9: not all possible func type errors tested.  
Solution: Add more tests.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.0549

Problem: User systemd files not recognized.  
Solution: Add filetype patterns. (Kevin Locke, closes #5914)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.0550

Problem: Some changes in the libvterm upstream code.  
Solution: Include some changes.  
Files: src/libvterm/t/harness.c

Patch 8.2.0551

Problem: Not all code for options is tested.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5913)  
Files: src/testdir/test\_options.vim, src/testdir/test\_python3.vim,  
src/testdir/test\_undo.vim, src/testdir/test\_vimscript.vim

Patch 8.2.0552

Problem: Vim9: some errors not covered by tests.  
Solution: Add more tests. Check Funcref argument types.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.0553 (after 8.2.0550)

Problem: Error for unused argument.  
Solution: Add UNUSED.  
Files: src/libvterm/t/harness.c

Patch 8.2.0554

Problem: The GUI doesn't set t\_Co.  
Solution: In the GUI set t\_Co to 256 \* 256 \* 256. (closes #5903)  
Files: src/term.c, src/proto/term.pro, src/gui.c,  
src/testdir/test\_gui.vim

Patch 8.2.0555

Problem: Vim9: line continuation is not always needed.  
Solution: Recognize continuation lines automatically in list and dict.  
Files: runtime/doc/vim9.txt, src/vim9compile.c,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.0556

Problem: Vim9: memory leak when finding common type.  
Solution: Store allocated memory in type growarray.  
Files: src/vim9compile.c

#### Patch 8.2.0557

Problem: No IPv6 support for channels.  
Solution: Add IPv6 support. (Ozaki Kiichi, closes #5893)  
Files: .travis.yml, runtime/doc/channel.txt, runtime/doc/various.txt, src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/auto/configure, src/channel.c, src/config.h.in, src/configure.ac, src/evalfunc.c, src/proto/channel.pro, src/testdir/check.vim, src/testdir/runtest.vim, src/testdir/test\_cdo.vim, src/testdir/test\_channel.py, src/testdir/test\_channel.vim, src/testdir/test\_channel\_6.py, src/testdir/test\_escaped\_glob.vim, src/testdir/test\_getcwd.vim, src/testdir/test\_hide.vim

#### Patch 8.2.0558

Problem: Vim9: dict code not covered by tests.  
Solution: Remove dead code, adjust test case.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.0559

Problem: Clearing a struct is verbose.  
Solution: Define and use CLEAR\_FIELD() and CLEAR\_POINTER().  
Files: src/vim.h, src/blowfish.c, src/channel.c, src/charset.c, src/clipboard.c, src/diff.c, src/eval.c, src/evalfunc.c, src/ex\_cmds2.c, src/ex\_docmd.c, src/ex\_getln.c, src/findfile.c, src/gui\_gtk\_f.c, src/gui\_mac.c, src/gui\_motif.c, src/gui\_w32.c, src/gui\_x11.c, src/hardcopy.c, src/hashtab.c, src/highlight.c, src/if\_mzsch.c, src/insexpand.c, src/kword\_test.c, src/list.c, src/main.c, src/map.c, src/memfile.c, src/message\_test.c, src/misc1.c, src/netbeans.c, src/normal.c, src/ops.c, src/option.c, src/os\_mswin.c, src/os\_win32.c, src/popupmenu.c, src/quickfix.c, src/regexp.c, src/regexp\_bt.c, src/regexp\_nfa.c, src/search.c, src/sign.c, src/spell.c, src/spellfile.c, src/spellsuggest.c, src/syntax.c, src/tag.c, src/terminal.c, src/time.c, src/undo.c, src/userfunc.c, src/vim9compile.c, src/vim9execute.c, src/if\_py\_both.h

#### Patch 8.2.0560

Problem: Compiler warning in tiny build.  
Solution: Move declaration inside #ifdef. (Dominique Pellé, closes #5915)  
Files: src/ex\_docmd.c

#### Patch 8.2.0561

Problem: Vim9: cannot split function call in multiple lines.  
Solution: Find more arguments in following lines.  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0562

Problem: Vim9: cannot split an expression into multiple lines.  
Solution: Continue in next line after an operator.  
Files: runtime/doc/vim9.txt, src/macros.h, src/vim9compile.c,

src/testdir/test\_vim9\_expr.vim

Patch 8.2.0563

Problem: Vim9: cannot split a function line.  
Solution: Continue in next line so long as the function isn't done.  
Files: runtime/doc/vim9.txt, src/userfunc.c, src/proto/userfunc.pro,  
src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.0564

Problem: Vim9: calling a def function from non-vim9 may fail.  
Solution: Convert varargs to a list.  
Files: src/testdir/test\_vim9\_func.vim, src/vim9execute.c

Patch 8.2.0565

Problem: Vim9: tests contain superfluous line continuation.  
Solution: Remove line continuation no longer needed. Skip empty lines.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.0566

Problem: Vim9: variable can be used uninitialized.  
Solution: Jump to after where variable is used.  
Files: src/vim9execute.c

Patch 8.2.0567

Problem: Vim9: cannot put comments halfway expressions.  
Solution: Support # comments in many places.  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/userfunc.c,  
src/ex\_docmd.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.0568

Problem: The man filetype plugin overwrites the unnamed register.  
Solution: Use the black hole register. (Jason Franklin)  
Files: runtime/ftplugin/man.vim, src/testdir/test\_man.vim

Patch 8.2.0569

Problem: Build failure with tiny version.  
Solution: Add #ifdef.  
Files: src/ex\_docmd.c

Patch 8.2.0570

Problem: Vim9: no error when omitting type from argument.  
Solution: Enforce specifying argument types.  
Files: src/userfunc.c, src/ex\_eval.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.0571

Problem: Double free when passing invalid argument to job\_start().  
Solution: Clear the argument when freed. (Masato Nishihata, closes #5926)  
Files: src/misc2.c, src/testdir/test\_channel.vim

Patch 8.2.0572 (after 8.2.0571)

Problem: Using two lines for free and reset.  
Solution: Use VIM\_CLEAR() instead. (Yegappan Lakshmanan)  
Files: src/misc2.c

#### Patch 8.2.0573

Problem: using :version twice leaks memory  
Solution: Only initialize variables once. (Dominique Pellé, closes #5917)  
Files: src/testdir/Make\_all.mak, src/testdir/test\_alot.vim,  
src/testdir/test\_version.vim, src/version.c, src/globals.h

#### Patch 8.2.0574

Problem: Ipv6 feature not shown in :version output.  
Solution: Add ipv6 in :version output. (Ozaki Kiichi, closes #5924)  
Files: runtime/doc/eval.txt, src/version.c

#### Patch 8.2.0575

Problem: :digraph! not tested.  
Solution: Add a test. (Dominique Pellé, closes #5925)  
Files: src/testdir/test\_digraph.vim

#### Patch 8.2.0576

Problem: Some errors are not covered by tests.  
Solution: Add a few more tests. (Dominique Pellé, closes #5920)  
Files: src/testdir/test\_buffer.vim, src/testdir/test\_digraph.vim,  
src/testdir/test\_expr.vim, src/testdir/test\_messages.vim

#### Patch 8.2.0577

Problem: Not all modifiers supported for :options.  
Solution: Use all cmdmod.split flags. (closes #4401)  
Files: src/usercmd.c, src/proto/usercmd.pro, src/scriptfile.c,  
src/testdir/test\_options.vim, src/testdir/test\_usercommands.vim

#### Patch 8.2.0578

Problem: Heredoc for interfaces does not support "trim".  
Solution: Update the script heredoc support to be same as the :let command.  
(Yegappan Lakshmanan, closes #5916)  
Files: runtime/doc/if\_lua.txt, runtime/doc/if\_mzsch.txt,  
runtime/doc/if\_perl.txt, runtime/doc/if\_pyth.txt,  
runtime/doc/if\_ruby.txt, runtime/doc/if\_tcl.txt, src/evalvars.c,  
src/ex\_getln.c, src/proto/evalvars.pro, src/testdir/test86.in,  
src/testdir/test87.in, src/testdir/test\_lua.vim,  
src/testdir/test\_perl.vim, src/testdir/test\_python2.vim,  
src/testdir/test\_python3.vim, src/testdir/test\_pyx2.vim,  
src/testdir/test\_pyx3.vim, src/testdir/test\_ruby.vim,  
src/testdir/test\_tcl.vim, src/userfunc.c, src/vim9compile.c

#### Patch 8.2.0579

Problem: Coverity warns for unused value.  
Solution: Change order and use "else if".  
Files: src/os\_unix.c

#### Patch 8.2.0580

Problem: Window size wrong if 'ea' is off and 'splitright' is on and  
splitting then closing a window.

Solution: Put abandoned window space in the right place. (Mark Waggoner)  
Files: src/testdir/test\_winbuf\_close.vim, src/window.c

Patch 8.2.0581 (after 8.2.0547)

Problem: Win32 console: the cursor position is always top-left.  
Solution: Revert the patch for restoring screen.  
Files: src/os\_win32.c

Patch 8.2.0582

Problem: Color ramp test does not show text colors.  
Solution: Add a row of 16 text colors and 16 bold text colors.  
Files: src/testdir/color\_ramp.vim

Patch 8.2.0583

Problem: Vim9: # comment not recognized in :def function.  
Solution: Recognize and skip # comment.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0584

Problem: Viminfo file uses obsolete function file\_readable().  
Solution: Use filereadable(). (closes #5934)  
Files: src/session.c

Patch 8.2.0585

Problem: Vim9: # comment not recognized after :vim9script.  
Solution: Check script type. Make comment after ":echo" work. And in several other places.  
Files: src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/eval.c, src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0586

Problem: Vim9: # comment not sufficiently tested  
Solution: Check for preceding white space.  
Files: src/eval.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0587

Problem: Compiler warning for unused variable.  
Solution: Add UNUSED.  
Files: src/ex\_docmd.c

Patch 8.2.0588

Problem: Putty does not use "sgr" **'ttymouse'** by default.  
Solution: Make "sgr" the default for Putty. (Christian Brabandt, closes #5942)  
Files: src/term.c

Patch 8.2.0589

Problem: .bsd file type not recognized.  
Solution: Recognize .bsd as BSDL. (Daniel Kho, closes #5945)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.0590

Problem: No **'backspace'** value allows ignoring the insertion point.  
Solution: Add the "nostop" and 3 values. (Christian Brabandt, closes #5940)

Files: runtime/doc/options.txt, src/edit.c, src/option.c, src/option.h,  
src/optionstr.c, src/testdir/gen\_opt\_test.vim,  
src/testdir/test\_backspace\_opt.vim

Patch 8.2.0591

Problem: MS-Windows: should always support IPv6  
Solution: Add build flag. (Ozaki Kiichi, closes #5944)  
Files: src/Make\_cyg\_ming.mak, src/Make\_mvc.mak

Patch 8.2.0592

Problem: MS-Windows with VTP: cursor is not made invisible.  
Solution: Output the code to make the cursor visible or invisible. (Nobuhiro  
Takasaki, closes #5941)  
Files: src/os\_win32.c

Patch 8.2.0593

Problem: Finding a user command is not optimal.  
Solution: Start further down in the list of commands.  
Files: src/ex\_cmds.h, src/ex\_docmd.c

Patch 8.2.0594

Problem: MS-Windows: cannot build with WINVER set to 0x0501.  
Solution: Only use inet\_ntop() when available. (Ozaki Kiichi, closes #5946)  
Files: src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/auto/configure,  
src/channel.c, src/config.h.in, src/configure.ac

Patch 8.2.0595

Problem: Vim9: not all commands using ends\_excmd() tested.  
Solution: Find # comment after regular commands. Add more tests. Report  
error for where it was caused.  
Files: src/ex\_docmd.c, src/vim9compile.c, src/vim9execute.c, src/usercmd.c,  
src/evalfunc.c, src/userfunc.c, src/proto/userfunc.pro,  
src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.0596

Problem: Crash in test49.  
Solution: Check the right pointer.  
Files: src/userfunc.c, src/testdir/test\_eval.ok

Patch 8.2.0597

Problem: Test\_eval is old style.  
Solution: Change some tests to a new style test.  
Files: src/testdir/test\_eval.in, src/testdir/test\_eval.ok,  
src/testdir/test\_eval\_stuff.vim

Patch 8.2.0598

Problem: Test\_eval\_stuff fails in normal terminal.  
Solution: Close the new window.  
Files: src/testdir/test\_eval\_stuff.vim

Patch 8.2.0599

Problem: Netbeans interface insufficiently tested.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5921)

Files: runtime/doc/netbeans.txt, src/netbeans.c, src/os\_win32.c,  
src/testdir/runtest.vim, src/testdir/test\_netbeans.py,  
src/testdir/test\_netbeans.vim

#### Patch 8.2.0600

Problem: Vim9: cannot read or write w:, t: and b: variables.  
Solution: Implement load and store for w:, t: and b: variables.  
(closes #5950)

Files: src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_script.vim,  
src/vim9.h, src/vim9compile.c, src/vim9execute.c

#### Patch 8.2.0601

Problem: Vim9: :unlet is not compiled.  
Solution: Implement :unlet instruction and check for errors.

Files: src/vim9compile.c, src/proto/vim9compile.pro, src/vim9.h,  
src/vim9execute.c, src/evalvars.c, src/proto/evalvars.pro,  
src/eval.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.0602

Problem: :unlet \$VAR does not work properly.  
Solution: Make ":lockvar \$VAR" fail. Check the "skip" flag.

Files: src/evalvars.c, src/globals.h, src/testdir/test\_vimscript.vim

#### Patch 8.2.0603

Problem: Configure does not detect moonjit.  
Solution: Add check for moonjit. (Shlomi Fish, closes #5947)

Files: src/configure.ac, src/auto/configure

#### Patch 8.2.0604

Problem: :startinsert in a terminal window used later.  
Solution: Ignore :startinsert in a terminal window. (closes #5952)

Files: src/ex\_docmd.c, src/testdir/test\_terminal.vim

#### Patch 8.2.0605

Problem: Vim9: cannot unlet an environment variable.  
Solution: Implement unlet for \$VAR.

Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.0606

Problem: Several syntax HL errors not checked.  
Solution: Add tests. (Yegappan Lakshmanan, closes #5954)

Files: src/testdir/test\_syntax.vim

#### Patch 8.2.0607

Problem: Gcc warns for using uninitialized variable. (John Marriott)  
Solution: Set name\_end also for environment variables.

Files: src/evalvars.c

#### Patch 8.2.0608

Problem: Warning from clang when building message test.

Solution: Use a void pointer. (Dominique Pellé, closes #5958)  
Files: src/message\_test.c

#### Patch 8.2.0609

Problem: Configure does not detect moonjit correctly.  
Solution: Double the brackets. (Ozaki Kiichi)  
Files: src/configure.ac, src/auto/configure

#### Patch 8.2.0610

Problem: Some tests are still old style.  
Solution: Convert to new style tests. (Yegappan Lakshmanan, closes #5957)  
Files: src/testdir/test\_blob.vim, src/testdir/test\_cursor\_func.vim,  
src/testdir/test\_eval.in, src/testdir/test\_eval.ok,  
src/testdir/test\_eval\_func.vim, src/testdir/test\_eval\_stuff.vim,  
src/testdir/test\_expr.vim, src/testdir/test\_filter\_map.vim,  
src/testdir/test\_functions.vim, src/testdir/test\_listdict.vim,  
src/testdir/test\_sort.vim, src/testdir/test\_syntax.vim,  
src/testdir/test\_utf8.vim, src/testdir/test\_vimscript.vim

#### Patch 8.2.0611

Problem: Vim9: no check for space before #comment.  
Solution: Add space checks.  
Files: src/eval.c, src/evalvars.c, src/ex\_docmd.c,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0612

Problem: Vim9: no check for space before #comment.  
Solution: Add space checks.  
Files: src/ex\_eval.c, src/ex\_cmds.c, src/regexp.c, src/proto/regexp.pro,  
src/gui.c, src/highlight.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_sort.vim

#### Patch 8.2.0613

Problem: Vim9: no check for space before #comment.  
Solution: Add space checks.  
Files: src/highlight.c, src/menu.c, src/syntax.c,  
src/testdir/test\_vim9\_script.vim,  
runtime/lang/menu\_de\_de.latin1.vim

#### Patch 8.2.0614

Problem: Get ml\_get error when deleting a line in '**complefunc**'. (Yegappan Lakshmanan)  
Solution: Lock the text while evaluating '**complefunc**'.  
Files: src/insexpand.c, src/globals.h, src/edit.c, src/ex\_getln.c,  
src/undo.c, src/testdir/test\_edit.vim, src/testdir/test\_excmd.vim,  
src/testdir/test\_gf.vim, src/testdir/test\_popup.vim,  
src/testdir/test\_ex\_mode.vim, runtime/doc/insert.txt

#### Patch 8.2.0615

Problem: Regexp benchmark test is old style.  
Solution: Make it a new style test. Fix using a NULL list. Add more tests. (Yegappan Lakshmanan, closes #5963)  
Files: src/evalbuffer.c, src/testdir/Make\_dos.mak,  
src/testdir/Make\_ming.mak, src/testdir/Makefile,

src/testdir/bench\_re\_freeze.in, src/testdir/bench\_re\_freeze.vim,  
src/testdir/test\_autocmd.vim, src/testdir/test\_bench\_regexp.vim,  
src/testdir/test\_blob.vim, src/testdir/test\_bufline.vim,  
src/testdir/test\_channel.vim, src/testdir/test\_cmdline.vim,  
src/testdir/test\_functions.vim, src/testdir/test\_ins\_complete.vim,  
src/testdir/test\_popupwin.vim, src/testdir/test\_prompt\_buffer.vim,  
src/testdir/test\_tagjump.vim, src/testdir/test\_window\_cmd.vim

#### Patch 8.2.0616

Problem: Build error when disabling the diff feature.  
Solution: Move parenthesis outside of #ifdef. (Tom Ryder)  
Files: src/drawline.c

#### Patch 8.2.0617

Problem: New error check triggers in Swedish menu.  
Solution: Insert backslash. (Mats Tegner, closes #5966)  
Files: runtime/lang/menu\_sv\_se.latin1.vim

#### Patch 8.2.0618

Problem: Echoing a null list results in no output. (Yegappan Lakshmanan)  
Solution: Return "[]" instead of NULL in echo\_string\_core().  
Files: src/eval.c, src/testdir/test\_messages.vim

#### Patch 8.2.0619

Problem: Null dict is not handled like an empty dict.  
Solution: Fix the code and add tests. (Yegappan Lakshmanan, closes #5968)  
Files: src/dict.c, src/eval.c, src/testdir/test\_blob.vim,  
src/testdir/test\_expr.vim, src/testdir/test\_filter\_map.vim,  
src/testdir/test\_let.vim, src/testdir/test\_listdict.vim,  
src/testdir/test\_search.vim, src/testdir/test\_unlet.vim,  
src/testdir/test\_usercommands.vim, src/testdir/test\_vimscript.vim

#### Patch 8.2.0620

Problem: Error in menu translations.  
Solution: Insert a backslash before a space.  
Files: runtime/lang/menu\_it\_it.latin1.vim,  
runtime/lang/menu\_chinese\_gb.936.vim

#### Patch 8.2.0621

Problem: After running tests asan files may remain.  
Solution: Clean up asan files with "make testclean".  
Files: src/testdir/Makefile, src/Makefile

#### Patch 8.2.0622

Problem: Haiku: GUI does not compile.  
Solution: Various fixes. (Emir Sari, closes #5961)  
Files: Filelist, README.md, READMEdir/README\_haiku.txt,  
runtime/doc/os\_haiku.txt, src/Makefile, src/beval.h,  
src/gui\_haiku.cc, src/proto/gui\_haiku.pro

#### Patch 8.2.0623

Problem: Typo in test comment. (Christ van Willegen)  
Solution: Avoid mixing up a data structure with a body part.  
Files: src/testdir/test\_listdict.vim

Patch 8.2.0624

Problem: Vim9: no check for space before #comment.  
Solution: Add space checks. Fix :throw with double quoted string.  
Files: src/usercmd.c, src/userfunc.c, src/vim9compile.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.0625

Problem: Vim9: confusing error when calling unknown function.  
Solution: Give error while compiling.  
Files: src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.0626

Problem: Vim9: wrong syntax of function in Vim9 script.  
Solution: Give error for missing space. Implement :echomsg and :echoerr.  
(closes #5670)  
Files: src/vim9compile.c, src/vim9execute.c, src/vim9.h, src/userfunc.c,  
src/eval.c, src/globals.h, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.0627

Problem: Vim9: error message does not work. (Yegappan Lakshmanan)  
Solution: Swap lines.  
Files: src/userfunc.c

Patch 8.2.0628

Problem: Error in menu translations.  
Solution: Insert a backslash before a space in one more file. (Shun Bai,  
Emir Sarı)  
Files: runtime/lang/menu\_zh\_cn.utf-8.vim,  
runtime/lang/menu\_ca\_es.latin1.vim,  
runtime/lang/menu\_cs\_cz.iso\_8859-2.vim,  
runtime/lang/menu\_cs\_cz.utf-8.vim,  
runtime/lang/menu\_czech\_czech\_republic.1250.vim,  
runtime/lang/menu\_czech\_czech\_republic.ascii.vim,  
runtime/lang/menu\_da.utf-8.vim,  
runtime/lang/menu\_fi\_fi.latin1.vim,  
runtime/lang/menu\_hu\_hu.iso\_8859-2.vim,  
runtime/lang/menu\_hu\_hu.utf-8.vim,  
runtime/lang/menu\_is\_is.latin1.vim,  
runtime/lang/menu\_no\_no.latin1.vim, runtime/lang/menu\_pt\_br.vim,  
runtime/lang/menu\_pt\_pt.vim,  
runtime/lang/menu\_sk\_sk.iso\_8859-2.vim,  
runtime/lang/menu\_sl\_si.latin2.vim,  
runtime/lang/menu\_slovak\_slovak\_republic.1250.vim,  
runtime/lang/menu\_tr\_tr.cp1254.vim,  
runtime/lang/menu\_tr\_tr.iso\_8859-9.vim,  
runtime/lang/menu\_tr\_tr.utf-8.vim, runtime/lang/menu\_vi\_vn.vim

Patch 8.2.0629

Problem: Setting a boolean option to v:false does not work.  
Solution: Do not use the string representation of the value. (Christian

Brabandt, closes #5974)  
Files: src/evalvars.c, src/testdir/test\_options.vim

Patch 8.2.0630

Problem: "make tags" does not cover Haiku GUI file.  
Solution: Add \*.cc files.  
Files: src/Make\_all.mak

Patch 8.2.0631

Problem: Haiku file formatted with wrong tabstop.  
Solution: Use normal tabstop. Fix white space.  
Files: src/gui\_haiku.cc

Patch 8.2.0632

Problem: Crash when using Haiku.  
Solution: Lock the screen. (closes #5975, closes #5973)  
Files: src/screen.c

Patch 8.2.0633

Problem: Crash when using null partial in filter().  
Solution: Fix crash. Add more tests. (Yegappan Lakshmanan, closes #5976)  
Files: src/eval.c, src/testdir/test\_blob.vim,  
src/testdir/test\_channel.vim, src/testdir/test\_eval\_stuff.vim,  
src/testdir/test\_execute\_func.vim, src/testdir/test\_expr.vim,  
src/testdir/test\_filter\_map.vim, src/testdir/test\_fold.vim,  
src/testdir/test\_functions.vim, src/testdir/test\_let.vim,  
src/testdir/test\_listdict.vim, src/testdir/test\_partial.vim,  
src/testdir/test\_usercommands.vim

Patch 8.2.0634

Problem: Crash with null partial and blob.  
Solution: Check for NULL pointer. Add more tests. (Yegappan Lakshmanan, closes #5984)  
Files: src/eval.c, src/list.c, src/testdir/test\_blob.vim,  
src/testdir/test\_bufwintabinfo.vim, src/testdir/test\_cd.vim,  
src/testdir/test\_channel.vim, src/testdir/test\_cursor\_func.vim,  
src/testdir/test\_eval\_stuff.vim, src/testdir/test\_expr.vim,  
src/testdir/test\_filter\_map.vim, src/testdir/test\_fnamemodify.vim,  
src/testdir/test\_functions.vim, src/testdir/test\_getvar.vim,  
src/testdir/test\_listdict.vim, src/testdir/test\_messages.vim,  
src/testdir/test\_partial.vim, src/testdir/test\_quickfix.vim,  
src/testdir/test\_tabpage.vim, src/testdir/test\_vimscript.vim,  
src/testdir/test\_window\_cmd.vim, src/testdir/test\_window\_id.vim,  
src/testdir/test\_writefile.vim

Patch 8.2.0635

Problem: When using 256 colors DarkYellow does not show expected color.  
Solution: Use color 3 instead of 130. (Romain Lafourcade, closes #5985)  
Files: src/highlight.c

Patch 8.2.0636

Problem: :messages does not show the maintainer when \$LANG is unset.  
Solution: Call get\_mess\_lang() if available. (closes #5978)  
Files: src/message.c

Patch 8.2.0637

Problem: Incsearch highlighting does not work for ":sort!".  
Solution: Skip over the exclamation point. (closes #5983)  
Files: src/ex\_getln.c, src/testdir/test\_search.vim,  
src/testdir/dumps/Test\_incsearch\_sort\_02.dump

Patch 8.2.0638

Problem: MS-Windows: messages test fails.  
Solution: Clear environment variables.  
Files: src/testdir/test\_messages.vim

Patch 8.2.0639

Problem: MS-Windows: messages test still fails.  
Solution: Filter out the maintainer message.  
Files: src/testdir/test\_messages.vim

Patch 8.2.0640

Problem: Vim9: expanding `=expr` does not work.  
Solution: Find wildcards in not compiled commands. Reorganize test files.  
Files: Filelist, src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/testdir/vim9.vim, src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_script.vim,  
src/testdir/Make\_all.mak

Patch 8.2.0641

Problem: Vim9: `=expr` not expanded in :hardcopy and "syntax include".  
Solution: Add the EX\_EXPAND flag. Expend "syntax include".  
Files: src/ex\_cmds.h, src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_cmd.vim

Patch 8.2.0642

Problem: Vim9: using invalid index.  
Solution: Check index for being valid. Fix memory leak.  
Files: src/vim9compile.c, src/clientserver.c

Patch 8.2.0643 (after 8.2.0635)

Problem: Terminal uses brown instead of dark yellow. (Romain Lafourcade)  
Solution: Use color index 3 instead of 130. (closes #5993)  
Files: src/terminal.c

Patch 8.2.0644

Problem: Insufficient testing for invalid function arguments.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5988)  
Files: runtime/doc/eval.txt, src/testdir/test\_buflines.vim,  
src/testdir/test\_channel.vim, src/testdir/test\_clientserver.vim,  
src/testdir/test\_expr.vim, src/testdir/test\_functions.vim,  
src/testdir/test\_listener.vim, src/testdir/test\_match.vim,  
src/testdir/test\_menu.vim, src/testdir/test\_quickfix.vim,  
src/testdir/test\_registers.vim, src/testdir/test\_reftime.vim,  
src/testdir/test\_terminal.vim, src/testdir/test\_textprop.vim,  
src/testdir/test\_window\_cmd.vim, src/testdir/test\_window\_id.vim,  
src/testdir/test\_writefile.vim

Patch 8.2.0645

Problem: MS-Windows terminal: **CTRL-C** does not get to child job.  
Solution: Remove CREATE\_NEW\_PROCESS\_GROUP from CreateProcessW(). (Nobuhiro Takasaki, closes #5987)  
Files: src/terminal.c

Patch 8.2.0646

Problem: t\_Co uses the value of \$COLORS in the GUI. (Masato Nishihata)  
Solution: Ignore \$COLORS for the GUI. (closes #5992)  
Files: src/os\_unix.c, src/term.c

Patch 8.2.0647

Problem: MS-Windows: repeat count for events was not used.  
Solution: Check the repeat count. (Nobuhiro Takasaki, closes #5989)  
Files: src/os\_win32.c

Patch 8.2.0648

Problem: Semicolon search does not work in first line.  
Solution: Allow the cursor to be in line zero. (Christian Brabandt, closes #5996)  
Files: src/ex\_docmd.c, src/testdir/test\_cmdline.vim

Patch 8.2.0649

Problem: Undo problem when an InsertLeave autocommand resets undo. (Kutsan Kaplan)  
Solution: Do not create a new undo block when leaving Insert mode.  
Files: src/edit.c, src/testdir/test\_edit.vim

Patch 8.2.0650

Problem: Vim9: script function can be deleted.  
Solution: Disallow deleting script function. Delete functions when sourcing a script again.  
Files: src/userfunc.c, src/proto/userfunc.pro, src/evalfunc.c, src/vim9compile.c, src/vim9execute.c, src/vim9script.c, src/scriptfile.c, src/testing.c, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.0651

Problem: Old style benchmark test still in list of distributed files.  
Solution: Remove the files from the list.  
Files: Filelist

Patch 8.2.0652 (after 8.2.0650)

Problem: Compiler warning for char conversion.  
Solution: Use unsigned char buffer.  
Files: src/userfunc.c

Patch 8.2.0653 (after 8.2.0650)

Problem: using uninitialized pointer.  
Solution: Move assignment up. (John Marriott)  
Files: src/userfunc.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0654

Problem: Building with Python fails.  
Solution: Add missing argument.  
Files: src/if\_py\_both.h

#### Patch 8.2.0655

Problem: Search code not sufficiently tested.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #5999)  
Files: src/testdir/test\_charsearch.vim, src/testdir/test\_gn.vim,  
src/testdir/test\_goto.vim, src/testdir/test\_ins\_complete.vim,  
src/testdir/test\_normal.vim, src/testdir/test\_search.vim,  
src/testdir/test\_textformat.vim, src/testdir/test\_textobjects.vim,  
src/testdir/test\_visual.vim

#### Patch 8.2.0656

Problem: MS-Windows: redrawing right screen edge may not be needed.  
Solution: Check the build version. (Nobuhiro Takasaki, closes #6002)  
Files: src/drawscreen.c, src/os\_win32.c, src/proto/os\_win32.pro

#### Patch 8.2.0657

Problem: Vim9: no check if called variable is a FuncRef.  
Solution: Add a type check.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.0658 (after 8.2.0646)

Problem: HP-UX build fails when setenv() is not defined.  
Solution: Change "colors" to "t\_colors". (John Marriott)  
Files: src/os\_unix.c

#### Patch 8.2.0659

Problem: Vim9: no test for equal func type.  
Solution: Add a test. Improve type check.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.0660

Problem: The search.c file is a bit big.  
Solution: Split off the text object code to a separate file. (Yegappan Lakshmanan, closes #6007)  
Files: Filelist, src/Make\_cyg\_ming.mak, src/Make\_morph.mak,  
src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/README.md,  
src/proto.h, src/proto/search.pro, src/proto/textobject.pro,  
src/search.c, src/textobject.c

#### Patch 8.2.0661

Problem: Eval test is still old style.  
Solution: Change into new style tests. (Yegappan Lakshmanan, closes #6009)  
Files: src/Makefile, src/testdir/Make\_all.mak, src/testdir/Make\_vms.mms,  
src/testdir/test\_eval.in, src/testdir/test\_eval.ok,  
src/testdir/test\_eval\_stuff.vim

#### Patch 8.2.0662

Problem: Cannot use input() in a channel callback.  
Solution: Reset vgetc\_busy. (closes #6010)  
Files: src/globals.h, src/ex\_getln.c, src/evalfunc.c,

src/testdir/test\_channel.vim

Patch 8.2.0663

Problem: Not all systemd temp files are recognized.  
Solution: Add two more patterns. (Jamie Macdonald, closes #6003)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.0664

Problem: Included undesired changes in Makefile.  
Solution: Revert the changes.  
Files: src/Makefile

Patch 8.2.0665

Problem: Wrongly assuming Python executable is called "python".  
Solution: Use detected python command. (Ken Takata, closes #6016)  
Also use CheckFunction if possible.  
Files: src/testdir/test\_terminal.vim, src/testdir/check.vim

Patch 8.2.0666

Problem: Ruby test fails on MS-Windows.  
Solution: Remove the "maintainer" line. (Ken Takata, closes #6015)  
Files: src/testdir/shared.vim, src/testdir/test\_messages.vim,  
src/testdir/test\_ruby.vim

Patch 8.2.0667

Problem: Cannot install Haiku version from source.  
Solution: Update Makefile and rdef file. (Emir Sari, closes #6013)  
Files: Filelist, READMEdir/README\_haiku.txt, runtime/doc/os\_haiku.txt,  
src/Makefile, src/os\_haiku.rdef.in, src/os\_haiku.rdef

Patch 8.2.0668

Problem: Compiler warning for int/size\_t usage.  
Solution: Change "int" to "size\_t". (Mike Williams)  
Files: src/vim9execute.c

Patch 8.2.0669

Problem: MS-Windows: display in VTP is a bit slow.  
Solution: Optimize the code. (Nobuhiro Takasaki, closes #6014)  
Files: src/os\_win32.c, src/screen.c

Patch 8.2.0670

Problem: Cannot change window when evaluating **'completefunc'**.  
Solution: Make a difference between not changing text or buffers and also not changing window.  
Files: src/ex\_getln.c, src/beval.c, src/change.c, src/edit.c, src/eval.c,  
src/ex\_docmd.c, src/insexpand.c, src/globals.h, src/indent.c,  
src/map.c, src/window.c, src/proto/ex\_getln.pro, src/register.c,  
src/undo.c, src/testdir/test\_edit.vim,  
src/testdir/test\_ins\_complete.vim, src/testdir/test\_popup.vim

Patch 8.2.0671

Problem: Haiku: compiler warnings.  
Solution: Avoid the warnings. Drop display\_errors() copy. (Emir Sari, closes #6018)

Files: .gitignore, src/gui.c, src/gui\_haiku.cc

Patch 8.2.0672

Problem: Heredoc in scripts does not accept lower case marker.  
Solution: Allow lower case only in non-Vim scripts. (Ken Takata, closes #6019)

Files: src/evalvars.c, src/testdir/test\_lua.vim,  
src/testdir/test\_perl.vim, src/testdir/test\_python2.vim,  
src/testdir/test\_python3.vim, src/testdir/test\_pyx2.vim,  
src/testdir/test\_pyx3.vim, src/testdir/test\_ruby.vim

Patch 8.2.0673

Problem: Cannot build Haiku in shadow directory.  
Solution: Add symlink. (Ozaki Kiichi, closes #6023)  
Files: src/Makefile

Patch 8.2.0674

Problem: Some source files are too big.  
Solution: Move text formatting functions to a new file. (Yegappan Lakshmanan, closes #6021)  
Files: Filelist, src/Make\_cyg\_ming.mak, src/Make\_morph.mak,  
src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/README.md,  
src/edit.c, src/getchar.c, src/ops.c, src/option.c, src/proto.h,  
src/proto/edit.pro, src/proto/getchar.pro, src/proto/ops.pro,  
src/proto/option.pro, src/proto/textformat.pro, src/textformat.c

Patch 8.2.0675

Problem: Vim9: no support for closures.  
Solution: Do not re-use stack entries.  
Files: src/vim9compile.c, src/ex\_docmd.c, src/proto/ex\_docmd.pro,  
src/evalvars.c, src/proto/evalvars.pro

Patch 8.2.0676

Problem: Pattern in list of distributed files does not match.  
Solution: Drop "testdir/test\_[a-z]\*.ok". Add CI sed files.  
Files: Filelist

Patch 8.2.0677

Problem: Vim9: no support for closures.  
Solution: Find variables in the outer function scope, so long as the scope exists.  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/userfunc.c,  
src/vim9execute.c, src/structs.h, src/vim9.h,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.0678

Problem: Rare crash for popup menu.  
Solution: Check for NULL pointer. (Nobuhiro Takasaki, closes #6027)  
Files: src/popupmenu.c

Patch 8.2.0679

Problem: Vim9: incomplete support for closures.  
Solution: At the end of a function copy arguments and local variables if they are still used by a referenced closure.

Files: src/structs.h, src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.0680

Problem: PTYGROUP and PTYMODE are unused.  
Solution: Remove from autoconf. (closes #6024)  
Files: src/configure.ac, src/auto/configure, src/config.h.in

Patch 8.2.0681

Problem: Pattern for **'hlsearch'** highlighting may leak. (Dominique Pellé)  
Solution: Call end\_search\_hl() to make sure the previous pattern is freed.  
(closes #6028)  
Files: src/screen.c

Patch 8.2.0682

Problem: Vim9: parsing function argument type can get stuck.  
Solution: Bail out when not making progress.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.0683

Problem: Vim9: parsing type does not always work.  
Solution: Handle func type without return value. Test more closures.  
Fix type check offset. Fix garbage collection.  
Files: src/vim9compile.c, src/vim9execute.c, src/proto/vim9execute.pro,  
src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.0684

Problem: Vim9: memory leak when using lambda.  
Solution: Move the funccal context to the partial. Free the function when  
exiting.  
Files: src/vim9.h, src/structs.h, src/vim9execute.c, src/userfunc.c,  
src/eval.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.0685 (after 8.2.0684)

Problem: Build failure.  
Solution: Include missing changes.  
Files: src/vim9compile.c

Patch 8.2.0686

Problem: Formatoptions not sufficiently tested.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #6031)  
Files: src/testdir/test\_normal.vim, src/testdir/test\_textformat.vim

Patch 8.2.0687

Problem: Some tests do not work on FreeBSD.  
Solution: Enable modeline. Use WaitFor() in more cases. (Ozaki Kiichi,  
closes #6036)  
Files: src/testdir/test\_quickfix.vim, src/testdir/test\_terminal.vim

Patch 8.2.0688

Problem: Output clobbered if setting **'verbose'** to see shell commands.  
Solution: Only output "Searching for" when **'verbose'** is 11 or higher.  
Files: src/scriptfile.c, runtime/doc/options.txt

Patch 8.2.0689

Problem: When using getaddrinfo() the error message is unclear.  
Solution: Use gai\_strerror() to get the message. (Ozaki Kiichi, closes #6034)  
Files: src/channel.c

Patch 8.2.0690

Problem: Line number of option set by modeline is wrong.  
Solution: Do not double the line number. (Ozaki Kiichi, closes #6035)  
Files: src/option.c, src/testdir/test\_modeline.vim

Patch 8.2.0691

Problem: Startup test fails.  
Solution: Adjust expected output from -V2 argument.  
Files: src/testdir/test\_startup.vim

Patch 8.2.0692

Problem: Startup test fails on MS-Windows.  
Solution: Allow for any path.  
Files: src/testdir/test\_startup.vim

Patch 8.2.0693

Problem: Closure using argument not tested.  
Solution: Add a test, make it work.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.0694

Problem: Haiku: channel and terminal do not work.  
Solution: Close files when the job has finished. (Ozaki Kiichi, closes #6039)  
Files: src/channel.c, src/getchar.c, src/gui\_haiku.cc, src/misc1.c

Patch 8.2.0695

Problem: Vim9: cannot define a function inside a function.  
Solution: Initial support for :def inside :def.  
Files: src/userfunc.c, src/proto/userfunc.pro, src/vim9compile.c, src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.0696

Problem: Vim9: nested function does not work properly  
Solution: Create a function reference. Check argument count.  
Files: src/vim9compile.c, src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.0697

Problem: Vim9: memory leak when using nested function.  
Solution: Unreference function when deleting instructions. Adjust reference count for local variables.  
Files: src/vim9compile.c, src/vim9execute.c

Patch 8.2.0698

Problem: Insert mode completion not fully tested.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #6041)  
Files: src/testdir/test\_edit.vim, src/testdir/test\_ins\_complete.vim,

src/testdir/test\_textformat.vim

Patch 8.2.0699

Problem: Vim9: not all errors tested.  
Solution: Add test for deleted function. Bail out on first error.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_expr.vim, src/testdir/vim9.vim

Patch 8.2.0700

Problem: Vim9: converting error message to exception not tested.  
Solution: Test exception from error. Do not continue after :echoerr.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0701

Problem: Vim9 test fails without job feature.  
Solution: Add feature check.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.0702

Problem: Running channel tests may leave running process behind.  
Solution: Make Python client exit when running into EOF. (Kurtis Rader,  
part of #6046)  
Files: src/testdir/test\_channel\_pipe.py

Patch 8.2.0703

Problem: Vim9: closure cannot store value in outer context.  
Solution: Make storing value in outer context work. Make :disassemble  
accept a function reference.  
Files: src/vim9compile.c, src/vim9execute.c, src/vim9.h, src/eval.c,  
src/structs.h, src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.0704

Problem: Vim9: memory leak in disassemble test.  
Solution: Decrement refcount when creating funccal.  
Files: src/vim9execute.c

Patch 8.2.0705

Problem: Indent tests don't run on CI for FreeBSD.  
Solution: Set modeline. (Ozaki Kiichi, closes #6048)  
Files: .cirrus.yml, runtime/indent/testdir/runtest.vim

Patch 8.2.0706

Problem: Vim9: using assert\_fails() causes function to finish.  
Solution: Check did\_emsg instead of called\_emsg.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.0707

Problem: Vim9 function test fails.  
Solution: Adjust expected error code.  
Files: src/testdir/test\_vim9\_func.vim

Patch 8.2.0708

Problem: Vim9: constant expressions are not simplified.  
Solution: Simplify string concatenation.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.0709

Problem: MS-Windows: compiler warning for int vs size\_t.  
Solution: Add type cast. (Mike Williams)  
Files: src/channel.c

Patch 8.2.0710

Problem: Netbeans test sometimes fails.  
Solution: Mark any test using an external command as flaky.  
Files: src/testdir/shared.vim

Patch 8.2.0711

Problem: With a long running Vim the temp directory might be cleared on some systems.  
Solution: Lock the temp directory. (closes #6044)  
Files: src/config.h.in, src/configure.ac, src/auto/configure,  
src/fileio.c, src/globals.h, src/os\_unix.h

Patch 8.2.0712

Problem: Various code not fully tested.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #6049)  
Files: src/testdir/test\_functions.vim, src/testdir/test\_options.vim,  
src/testdir/test\_system.vim, src/testdir/test\_termcodes.vim

Patch 8.2.0713

Problem: The pam\_environment file is not recognized.  
Solution: Add a filetype pattern for pamenv. (closes #6051)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.0714

Problem: Vim9: handling constant expression does not scale.  
Solution: Use another solution, passing typval\_T.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.0715

Problem: Vim9: leaking memory.  
Solution: Free strings after concatenating them.  
Files: src/vim9compile.c

Patch 8.2.0716

Problem: Vim9: another memory leak.  
Solution: Clear typval when failing.  
Files: src/vim9compile.c

Patch 8.2.0717

Problem: Vim9: postponed constant expressions does not scale.  
Solution: Add a structure to pass around postponed constants.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.0718

Problem: Gcc warning for returning pointer to local variable. (John Marriott)  
Solution: Return another pointer.  
Files: src/evalvars.c

Patch 8.2.0719

Problem: Vim9: more expressions can be evaluated at compile time  
Solution: Recognize has('name').  
Files: src/vim9compile.c, src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.0720

Problem: Occasional exit when encountering an X error. (Manfred Lotz)  
Solution: On an X error do not exit, do preserve files.  
Files: src/os\_unix.c

Patch 8.2.0721

Problem: Vim9: leaking memory when skipping.  
Solution: Disable skipping in generate\_ppconst().  
Files: src/vim9compile.c

Patch 8.2.0722

Problem: Vim9: not handling constant expression for elseif.  
Solution: Use postponed constants. Delete the code for evaluating a constant expression.  
Files: src/vim9compile.c

Patch 8.2.0723

Problem: Vim9: nested constant expression not evaluated compile time.  
Solution: Use compile\_expr1() for parenthesis.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.0724

Problem: Vim9: appending to buffer/window/tab variable not tested  
Solution: Add a test.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.0725

Problem: Vim9: cannot call a function declared later in Vim9 script.  
Solution: Make two passes through the script file.  
Files: src/scriptfile.c, src/proto/scriptfile.pro, src/vim9script.c,  
src/vim9compile.c, src/vim9execute.c, src/proto/vim9compile.pro,  
src/userfunc.c, src/proto/userfunc.pro, src/evalvars.c,  
src/proto/evalvars.pro, src/vim.h,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.0726

Problem: Vim9: leaking memory when calling not compiled :def function.  
Solution: Check if function is compiled earlier.  
Files: src/vim9execute.c

Patch 8.2.0727

Problem: MS-Windows: new gcc compiler does not support scanf format.  
Solution: Use "%ll" instead of "%I". (Ken Takata)

Files: src/vim.h

Patch 8.2.0728

Problem: Messages about a deadly signal are not left aligned.  
Solution: Output a CR before the NL. (Dominique Pellé, #6055)  
Files: src/misc1.c, src/os\_unix.c

Patch 8.2.0729

Problem: Vim9: When reloading a script variables are not cleared.  
Solution: When sourcing a script again clear all script-local variables.  
Files: src/dict.c, src/proto/dict.pro, src/scriptfile.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.0730

Problem: Vim9: Assignment to dict member does not work.  
Solution: Parse dict assignment. Implement getting dict member.  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c, src/globals.h,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.0731

Problem: Vim9: parsing declarations continues after :finish.  
Solution: Bail out when encountering :finish.  
Files: src/vim9script.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0732

Problem: Vim9: storing value in dict messes up stack.  
Solution: Correct item count of stack.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.0733

Problem: Vim9: assigning to dict or list argument does not work.  
Solution: Recognize an argument as assignment target.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.0734

Problem: Vim9: leaking memory when using :finish.  
Solution: Do not check for next line in third pass.  
Files: src/scriptfile.c

Patch 8.2.0735

Problem: Vim9: using uninitialized memory.  
Solution: Clear the arg\_lvar field.  
Files: src/vim9compile.c

Patch 8.2.0736

Problem: Some files not recognized as pamenv.  
Solution: Add pam\_inv.conf. (closes #6065)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.0737

Problem: When shell doesn't support **CTRL-Z** Vim still handles it.  
Solution: Ignore the STOP signal if it was ignored on startup.  
(Kurtis Rader, closes #5990, closes #6058)

Files: src/os\_unix.c

Patch 8.2.0738

Problem: Mouse handling in a terminal window not well tested.  
Solution: Add tests. (Yegappan Lakshmanan, closes #6052)  
Files: src/testdir/term\_util.vim, src/testdir/test\_gui.vim,  
src/testdir/test\_modeless.vim, src/testdir/test\_terminal.vim

Patch 8.2.0739

Problem: Incomplete profiling when exiting because of a deadly signal.  
Solution: Call \_\_gcov\_flush() if available.  
Files: src/os\_unix.c, src/Makefile, .travis.yml

Patch 8.2.0740

Problem: Minor message mistakes.  
Solution: Change vim to Vim and other fixes.  
Files: src/if\_py\_both.h, src/if\_tcl.c, src/main.c

Patch 8.2.0741

Problem: Python tests fail because of changed message.  
Solution: Adjust the expected messages (Dominique Pellé, closes #6066)  
Files: src/testdir/test86.ok, src/testdir/test87.ok

Patch 8.2.0742

Problem: Handling of a TERM signal not tested.  
Solution: Add a test for SIGTERM. (Dominique Pellé, closes #6055)  
Files: src/testdir/test\_signals.vim

Patch 8.2.0743

Problem: Can move to another buffer from a terminal in popup window.  
Solution: Do not allow "gf" or editing a file. (closes #6072)  
Files: src/normal.c, src/ex\_cmds.c, src/testdir/test\_popupwin.vim

Patch 8.2.0744

Problem: The name vim is not capitalized in a message.  
Solution: Use "Vim" instead of "vim".  
Files: src/main.c

Patch 8.2.0745

Problem: Crash on exit when not all popups are closed.  
Solution: Close popups when freeing all memory. Disable checking for popup when editing a file for now.  
Files: src/misc2.c, src/ex\_cmds.c

Patch 8.2.0746

Problem: popup\_clear() hangs when a popup can't be closed.  
Solution: Bail out when a popup can't be closed.  
Files: src/popupwin.c, src/proto/popupwin.pro

Patch 8.2.0747

Problem: Cannot forcefully close all popups.  
Solution: Add the "force" argument to popup\_clear(). Use it after running a test. Put back the check for a popup when editing a file.  
Files: runtime/doc/popup.txt, src/evalfunc.c, src/popupwin.c,

src/proto/popupwin.pro, src/tag.c, src/window.c, src/misc2.c,  
src/ex\_cmds.c, src/channel.c, src/testdir/runtest.vim,  
src/testdir/test\_terminal.vim

#### Patch 8.2.0748

Problem: Cannot get a list of all popups.  
Solution: Add popup\_list(). Use it in the test runner.  
Files: runtime/doc/eval.txt, runtime/doc/popup.txt, src/popupwin.c,  
src/proto/popupwin.pro, src/evalfunc.c,  
src/testdir/test\_popupwin.vim, src/testdir/runtest.vim

#### Patch 8.2.0749

Problem: TERM signal test fails on FreeBSD.  
Solution: Do not check the messages, they may appear anywhere. (Dominique Pellé, closes #6075)  
Files: src/testdir/test\_signals.vim

#### Patch 8.2.0750

Problem: Netbeans test is a bit flaky.  
Solution: Allow for standard sign to be defined. Use WaitForAssert().  
Files: src/testdir/test\_netbeans.vim

#### Patch 8.2.0751

Problem: Vim9: performance can be improved.  
Solution: Don't call break. Inline check for list materialize. Make an inline version of ga\_grow().  
Files: src/macros.h, src/evalfunc.c, src/misc2.c,  
src/proto/misc2.pro, src/channel.c, src/eval.c, src/evalbuffer.c,  
src/evalvars.c, src/filepath.c, src/highlight.c, src/insexpand.c,  
src/json.c, src/list.c, src/popupmenu.c, src/popupwin.c,  
src/userfunc.c, src/if\_py\_both.h

#### Patch 8.2.0752

Problem: Terminal in popup window test is a bit flaky.  
Solution: Wait for shell job status to be "run". Mark as flaky test.  
Files: src/testdir/test\_popupwin.vim

#### Patch 8.2.0753

Problem: Vim9: expressions are evaluated in the discovery phase.  
Solution: Bail out if an expression is not a constant. Require a type for declared constants.  
Files: src/vim.h, src/evalvars.c, src/eval.c, src/ex\_eval.c,  
src/evalfunc.c, src/userfunc.c, src/dict.c, src/list.c,  
src/vim9compile.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.0754

Problem: Vim9: No test for forward declaration.  
Solution: Add a test.  
Files: src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0755

Problem: Vim9: No error when variable initializer is not a constant.  
Solution: Return FAIL when trying to get a variable value. Do not execute a

script when an error is detected in the first or second phase.  
Files: src/eval.c, src/vim9script.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0756 (after 8.2.0249)

Problem: MS-Windows: still a compiler warning.  
Solution: Move flag to another place in the Makefile. (Ken Takata, closes #6083)  
Files: src/Make\_mvc.mak

Patch 8.2.0757

Problem: Vim9: no test for MEMBER instruction.  
Solution: Add a test. Make matches stricter.  
Files: src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.0758

Problem: Vim9: no test for STORELIST and STOREDICT.  
Solution: Add a test. Make matches stricter.  
Files: src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.0759 (after 8.2.0751)

Problem: Vim9: missing changes for performance improvements  
Solution: Use GA\_GROW(). Don't call breakcheck so often.  
Files: src/vim9execute.c

Patch 8.2.0760

Problem: Vim9: dict member errors not tested.  
Solution: Delete unreachable error. Add tests.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.0761

Problem: Vim9: instructions not tested  
Solution: Use a variable instead of a constant.  
Files: src/testdir/test\_vim9\_expr.vim

Patch 8.2.0762

Problem: Buffer is not considered modified after setting crypt key.  
Solution: Set the modified flag. (Christian Brabandt, closes #6082)  
Files: src/optionstr.c, src/testdir/test\_crypt.vim

Patch 8.2.0763

Problem: GUI test fails without the terminal feature.  
Solution: Check the terminal feature is supported. (Ken Takata, closes #6084)  
Files: src/testdir/test\_gui.vim

Patch 8.2.0764

Problem: Vim9: assigning to option not fully tested.  
Solution: Add more test cases. Allow using any type for assignment.  
Files: src/vim9compile.c, src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0765

Problem: In the GUI can't use all the modifiers. (Andri Möll)  
Solution: Do not apply Alt/Meta early, do it later like with the terminal.

Avoid the Motif test from crashing.  
Files: src/gui\_gtk\_x11.c, src/gui\_x11.c, src/gui\_mac.c, src/gui\_w32.c, src/gui\_motif.c

Patch 8.2.0766

Problem: Display error when using **'number'** and **'breakindent'**.  
Solution: Adjust extra spaces in the first row. (Ken Takata, closes #6089, closes #5986)  
Files: src/drawline.c, src/testdir/test\_breakindent.vim

Patch 8.2.0767

Problem: ModifyOtherKeys active when using a shell command in autocmd.  
Solution: Output T\_CTE when going to cooked mode. (closes 5617)  
Files: src/term.c

Patch 8.2.0768

Problem: Vim9: memory leak in script test.  
Solution: Clear typval before giving an error message.  
Files: src/vim9execute.c

Patch 8.2.0769

Problem: VimLeavePre not triggered when Vim is terminated.  
Solution: Unblock autocommands.  
Files: src/main.c, src/testdir/test\_signals.vim

Patch 8.2.0770

Problem: Cannot map **CTRL-B** when using the GUI.  
Solution: Reset the CTRL modifier when used. (closes #6092)  
Files: src/gui\_gtk\_x11.c

Patch 8.2.0771

Problem: Vim9: cannot call a compiled closure from not compiled code.  
Solution: Pass funcexe to call\_user\_func().  
Files: src/userfunc.c, src/vim9execute.c, src/proto/vim9execute.pro, src/eval.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.0772

Problem: Vim9: some variable initializations not tested.  
Solution: Add a few more tests  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.0773

Problem: Switching to raw mode every time ":" is used.  
Solution: When executing a shell set cur\_tm mode to TMODE\_UNKNOWN, so that the next time TMODE\_RAW is used it is set, but not every time.  
Files: src/term.h, src/os\_unix.c, src/term.c, src/os\_amiga.c, src/os\_win32.c

Patch 8.2.0774

Problem: t\_TI and t\_TE are output when using **'visualbell'**. (Dominique Pellé)  
Solution: Do not change the terminal mode for a short sleep. Do not output t\_TI and t\_TE when switching to/from TMODE\_SLEEP. Make tm mode an enum.

Files: src/os\_unix.c, src/proto/os\_unix.pro, src/os\_amiga.c,  
src/proto/os\_amiga.pro, src/os\_mswin.c, src/proto/os\_mswin.pro,  
src/os\_vms.c, src/proto/os\_vms.pro, src/os\_win32.c,  
src/proto/os\_win32.pro, src/term.c, src/term.h, src/globals.h

Patch 8.2.0775

Problem: Not easy to call a Vim function from Lua.  
Solution: Add vim.call() and vim.fn(). (Prabir Shrestha, closes #6063)  
Files: runtime/doc/if\_lua.txt, src/if\_lua.c, src/testdir/test\_lua.vim

Patch 8.2.0776

Problem: Libvterm code lags behind the upstream version.  
Solution: Include revision 719.  
Files: Filelist, src/libvterm/README, src/libvterm/Makefile,  
src/libvterm/find-wide-chars.pl, src/libvterm/src/fullwidth.inc,  
src/libvterm/src/unicode.c

Patch 8.2.0777 (after 8.2.0776)

Problem: Terminal test fails.  
Solution: Adjust character position for double-wide characters.  
Files: src/testdir/test\_terminal.vim

Patch 8.2.0778

Problem: Libvterm code lags behind the upstream version.  
Solution: Include revisions 720 - 723.  
Files: src/libvterm/t/10state\_putglyph.test, src/libvterm/Makefile,  
src/libvterm/t/run-test.pl, src/libvterm/src/state.c,  
src/libvterm/t/92lp1805050.test

Patch 8.2.0779

Problem: Tmode\_T not used everywhere.  
Solution: Also use tmode\_T for settmode().  
Files: src/term.c, src/proto/term.pro

Patch 8.2.0780

Problem: Libvterm code lags behind the upstream version.  
Solution: Include revisions 724 - 726.  
Files: Filelist, src/libvterm/t/40screen\_ascii.test,  
src/libvterm/t/60screen\_ascii.test,  
src/libvterm/t/41screen\_unicode.test,  
src/libvterm/t/61screen\_unicode.test,  
src/libvterm/t/42screen\_damage.test,  
src/libvterm/t/62screen\_damage.test,  
src/libvterm/t/43screen\_resize.test,  
src/libvterm/t/63screen\_resize.test,  
src/libvterm/t/44screen\_pen.test,  
src/libvterm/t/64screen\_pen.test,  
src/libvterm/t/45screen\_protect.test,  
src/libvterm/t/65screen\_protect.test,  
src/libvterm/t/46screen\_extent.test,  
src/libvterm/t/66screen\_extent.test,  
src/libvterm/t/47screen\_dbl\_wh.test,  
src/libvterm/t/67screen\_dbl\_wh.test,  
src/libvterm/t/48screen\_termprops.test,

src/libvterm/t/68screen\_termprops.test, src/libvterm/t/30pen.test,  
src/libvterm/t/30state\_pen.test, src/libvterm/t/92lp1805050.test,  
src/libvterm/t/31state\_rep.test, src/libvterm/doc/seqs.txt

Patch 8.2.0781 (after 8.2.0775)

Problem: Compiler warning for not using value in Lua.

Solution: Add "(void)".

Files: src/if\_lua.c

Patch 8.2.0782

Problem: Cannot build with Lua on MS-Windows.

Solution: Add DLL symbol for luaL\_Loadstring. (Ken Takata)

Files: src/if\_lua.c

Patch 8.2.0783

Problem: Libvterm code lags behind the upstream version.

Solution: Include revisions 728 - 729.

Files: src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/Makefile,  
src/libvterm/src/keyboard.c, src/libvterm/t/25state\_input.test,  
src/libvterm/t/harness.c, src/libvterm/src/vterm.c,  
src/libvterm/src/vterm\_internal.h,  
src/libvterm/t/26state\_query.test

Patch 8.2.0784

Problem: Libvterm code lags behind the upstream version.

Solution: Include revisions 730 - 733.

Files: src/libvterm/src/vterm.c, src/libvterm/src/state.c,  
src/libvterm/include/vterm.h, src/libvterm/src/vterm\_internal.h,  
src/libvterm/t/harness.c

Patch 8.2.0785

Problem: Libvterm code lags behind the upstream version.

Solution: Include revisions 734 - 740.

Files: src/libvterm/include/vterm.h, src/libvterm/src/pen.c,  
src/libvterm/src/vterm.c, src/libvterm/doc/seqs.txt,  
src/libvterm/t/30state\_pen.test, src/libvterm/t/run-test.pl,  
src/libvterm/Makefile, src/libvterm/CONTRIBUTING

Patch 8.2.0786

Problem: Channel test is flaky on FreeBSD.

Solution: Set the socket TCP\_NODELAY option. Adjust expected line count in netbeans test. (Ozaki Kiichi, closes #6097)

Files: src/testdir/test\_channel.py, src/testdir/test\_netbeans.vim

Patch 8.2.0787

Problem: Libvterm code lags behind the upstream version.

Solution: Include revisions 741 - 742.

Files: Filelist, src/libvterm/src/screen.c

Patch 8.2.0788

Problem: Memory leak in libvterm.

Solution: free tmpbuffer.

Files: src/libvterm/src/vterm.c

Patch 8.2.0789

Problem: Vim9: expression testing lost coverage using constants.  
Solution: Use a few variables instead of constants.  
Files: src/testdir/test\_vim9\_expr.vim

Patch 8.2.0790

Problem: Vim9: list index not well tested.  
Solution: Add a few more tests.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.0791

Problem: A second popup window with terminal causes trouble.  
Solution: Disallow opening a second terminal-popup window. (closes #6101, closes #6103) Avoid defaulting to an invalid line number.  
Files: runtime/doc/popup.txt, src/popupwin.c, src/ex\_docmd.c, src/testdir/test\_popupwin.vim, src/testdir/test\_terminal.vim

Patch 8.2.0792

Problem: Build failure with small features.  
Solution: Add #ifdef.  
Files: src/popupwin.c

Patch 8.2.0793

Problem: MS-Windows: cannot build GUI with small features. (Michael Soyka)  
Solution: Add #ifdef around use of windowsVersion. (Ken Takata)  
Files: src/os\_win32.c

Patch 8.2.0794

Problem: Libvterm code lags behind the upstream version.  
Solution: Include revisions 743 - 747.  
Files: src/libvterm/src/state.c, src/libvterm/src/screen.c, src/libvterm/src/vterm\_internal.h, src/libvterm/include/vterm.h, src/libvterm/t/67screen\_dbl\_wh.test, src/libvterm/t/run-test.pl

Patch 8.2.0795

Problem: Libvterm code lags behind the upstream version.  
Solution: Include revisions 748 - 754.  
Files: src/libvterm/include/vterm.h, src/libvterm/src/screen.c, src/libvterm/src/state.c, src/libvterm/t/32state\_flow.test, src/libvterm/t/60screen\_ascii.test, src/libvterm/t/62screen\_damage.test, src/libvterm/t/63screen\_resize.test, src/libvterm/t/harness.c, src/libvterm/t/run-test.pl

Patch 8.2.0796

Problem: MS-Windows: compiler can't handle C99 construct in libvterm.  
Solution: Change to C90 construct.  
Files: src/libvterm/src/state.c

Patch 8.2.0797

Problem: MS-Windows: compiler still can't handle C99 construct.  
Solution: Change to C90 construct. (Dominique Pellé, closes #6106)  
Files: src/libvterm/src/state.c

Patch 8.2.0798

Problem: Libvterm code lags behind the upstream version.  
Solution: Include revisions 755 - 758.  
Files: src/libvterm/t/run-test.pl, src/libvterm/src/screen.c,  
src/libvterm/t/harness.c, src/libvterm/include/vterm.h,  
src/libvterm/src/parser.c, src/libvterm/src/state.c,  
src/libvterm/src/vterm.c, src/libvterm/src/vterm\_internal.h,  
src/libvterm/t/02parser.test,  
src/libvterm/t/18state\_termprops.test,  
src/libvterm/t/29state\_fallback.test,  
src/libvterm/t/68screen\_termprops.test, src/terminal.c

Patch 8.2.0799

Problem: Build fails if snprintf is not available.  
Solution: Use vim\_snprintf().  
Files: src/libvterm/src/state.c

Patch 8.2.0800

Problem: Errors from failing test are unclear.  
Solution: Include text where parsing failed.  
Files: src/json.c, src/testdir/test\_json.vim

Patch 8.2.0801

Problem: Terminal test fails on Mac.  
Solution: Concatenate OSC pieces.  
Files: src/terminal.c

Patch 8.2.0802

Problem: Libvterm code lags behind the upstream version.  
Solution: Include revisions 759 - 762.  
Files: src/terminal.c, src/libvterm/doc/seqs.txt,  
src/libvterm/include/vterm.h, src/libvterm/src/pen.c,  
src/libvterm/src/screen.c, src/libvterm/src/state.c,  
src/libvterm/src/vterm.c, src/libvterm/src/vterm\_internal.h,  
src/libvterm/t/harness.c, src/libvterm/t/12state\_scroll.test

Patch 8.2.0803

Problem: Libvterm code lags behind the upstream version.  
Solution: Include revisions 764 - 767  
Files: src/Makefile, src/libvterm/src/parser.c,  
src/libvterm/src/vterm\_internal.h, src/libvterm/t/02parser.test,  
src/libvterm/t/run-test.pl, src/libvterm/find-wide-chars.pl,  
src/libvterm/src/fullwidth.inc

Patch 8.2.0804

Problem: Libvterm code lags behind the upstream version.  
Solution: Include revision 727, but add the index instead of switching  
between RGB and indexed.  
Files: src/terminal.c, src/term.c, src/libvterm/include/vterm.h,  
src/libvterm/src/pen.c, src/libvterm/src/screen.c,  
src/libvterm/src/vterm\_internal.h,  
src/libvterm/t/30state\_pen.test,  
src/libvterm/t/harness.c, src/libvterm/src/state.c,  
src/libvterm/t/26state\_query.test,

src/libvterm/t/64screen\_pen.test

Patch 8.2.0805

Problem: Terminal key codes test fails on some systems.  
Solution: Skip keypad 3 and 9. (Yegappan Lakshmanan, closes #6070)  
Files: src/testdir/test\_terminal.vim

Patch 8.2.0806

Problem: using "func!" after vim9script gives confusing error.  
Solution: Give E477. (closes #6107)  
Files: src/vim9script.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.0807

Problem: Cannot easily restore a mapping.  
Solution: Add mapset().  
Files: runtime/doc/eval.txt, src/map.c, src/proto/map.pro, src/evalfunc.c  
src/testdir/test\_maparg.vim

Patch 8.2.0808

Problem: Not enough testing for the terminal window.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #6069) Fix memory leak.  
Files: src/testdir/test\_gui.vim, src/testdir/test\_terminal.vim, src/terminal.c

Patch 8.2.0809

Problem: Build failure with small features. (Tony Mechelynck)  
Solution: Move "expr" inside #ifdef.  
Files: src/map.c

Patch 8.2.0810

Problem: Error when appending "tagfile" to **'wildoptions'**.  
Solution: use flags P\_ONECOMMA and P\_NODUP. (Dmitri Vereshchagin, closes #6105)  
Files: src/optiondefs.h, src/testdir/test\_options.vim

Patch 8.2.0811

Problem: Terminal keycode test is flaky.  
Solution: Use WaitForAssert()  
Files: src/testdir/test\_terminal.vim

Patch 8.2.0812

Problem: mapset() does not properly handle <> notation.  
Solution: Convert <> codes. (closes #6116)  
Files: src/map.c, src/testdir/test\_maparg.vim

Patch 8.2.0813

Problem: libvterm code is slightly different from upstream.  
Solution: Use upstream text to avoid future merge problems. Mainly comment style changes.  
Files: src/libvterm/include/vterm.h, src/libvterm/src/rect.h, src/libvterm/src/utf8.h, src/libvterm/src/vterm\_internal.h, src/libvterm/src/encoding.c, src/libvterm/src/keyboard.c, src/libvterm/src/mouse.c, src/libvterm/src/parser.c,

src/libvterm/src/pen.c, src/libvterm/src/screen.c,  
src/libvterm/src/state.c, src/libvterm/src/unicode.c,  
src/libvterm/src/vterm.c

Patch 8.2.0814

Problem: Clang warning for implicit conversion.  
Solution: Add type cast. (Dominique Pellé, closes #6124)  
Files: src/evalfunc.c

Patch 8.2.0815

Problem: maparg() does not provide enough information for mapset().  
Solution: Add "lhsraw" and "lhsrawalt" items. Drop "simplified"  
Files: src/map.c, runtime/doc/eval.txt, src/testdir/test\_maparg.vim

Patch 8.2.0816

Problem: Terminal test fails when compiled with Athena.  
Solution: Do give an error when the GUI is not running. (hint by Dominique Pellé, closes #5928, closes #6132)  
Files: src/globals.h, src/gui.c, src/term.c, src/channel.c,  
src/testdir/test\_terminal.vim

Patch 8.2.0817

Problem: Not enough memory allocated when converting string with special character.  
Solution: Reserve space for modifier code. (closes #6130)  
Files: src/eval.c, src/testdir/test\_functions.vim

Patch 8.2.0818

Problem: Vim9: using a discovery phase doesn't work well.  
Solution: Remove the discovery phase, instead compile a function only when it is used. Add :defcompile to compile def functions earlier.  
Files: runtime/doc/vim9.txt, src/vim9script.c, src/structs.h,  
src/userfunc.c, src/proto/userfunc.pro, src/eval.c,  
src/evalvars.c, src/proto/evalvars.pro, src/vim9compile.c,  
src/proto/vim9compile.pro, src/vim9execute.c, src/ex\_cmds.h,  
src/ex\_docmd.c, src/ex\_cmdidxs.h, src/vim.h, src/testdir/vim9.vim,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.0819

Problem: Compiler warning for unused variable.  
Solution: Remove the variable.  
Files: src/evalvars.c

Patch 8.2.0820

Problem: Vim9: function type isn't set until compiled.  
Solution: Set function type early.  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/userfunc.c,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.0821

Problem: Vim9: memory leak in expr test.  
Solution: Do not decrement the length of the list of functions if the current function is not at the end.

Files: src/vim9compile.c

Patch 8.2.0822

Problem: Vim9: code left over from discovery phase.

Solution: Remove the dead code.

Files: src/scriptfile.c, src/proto/scriptfile.pro, src/ex\_cmds.h,  
src/evalvars.c, src/proto/evalvars.pro, src/ex\_docmd.c

Patch 8.2.0823

Problem: Vim9: script reload test is disabled.

Solution: Compile a function in the context of the script where it was defined. Set execution stack for compiled function. Add a test that an error is reported for the right file/function.

Files: src/vim9compile.c, src/vim9execute.c, src/scriptfile.c,  
src/proto/scriptfile.pro, src/userfunc.c, src/globals.h,  
src/structs.h, src/ex\_docmd.c, src/ex\_eval.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.0824 (after 8.2.0817)

Problem: Still not enough memory allocated when converting string with special character.

Solution: Reserve space for expanding K\_SPECIAL. (closes #6130)

Files: src/eval.c, src/testdir/test\_functions.vim

Patch 8.2.0825

Problem: def\_function() may return pointer that was freed.

Solution: Set "fp" to NULL after freeing it.

Files: src/userfunc.c

Patch 8.2.0826

Problem: Vim9: crash in :defcompile.

Solution: Restart the loop after a call to compile\_def\_function() caused the hash table to resize.

Files: src/userfunc.c

Patch 8.2.0827

Problem: Vim9: crash in :defcompile.

Solution: Fix off-by-one error.

Files: src/userfunc.c

Patch 8.2.0828

Problem: Travis: regexp pattern doesn't work everywhere.

Solution: Use [:blank:] instead of \b. (Ozaki Kiichi, closes #6146)

Files: .travis.yml, ci/config.mk.clang.sed, ci/config.mk.gcc.sed,  
ci/config.mk.sed, src/if\_ruby.c

Patch 8.2.0829

Problem: filter() may give misleading error message.

Solution: Also mention Blob as an allowed argument.

Files: src/list.c, src/testdir/test\_filter\_map.vim

Patch 8.2.0830

Problem: Motif: can't map "!". (Ben Jackson)

Solution: Remove the shift modifier if it's already included in the key.

(closes #6147)  
Files: src/gui\_x11.c

Patch 8.2.0831

Problem: Compiler warnings for integer sizes.  
Solution: Add type casts. (Mike Williams)  
Files: src/libvterm/src/pen.c, src/terminal.c

Patch 8.2.0832

Problem: Compiler warning for uninitialized variable. (Tony Mechelynck)  
Solution: Add initial value.  
Files: src/map.c

Patch 8.2.0833

Problem: Mapping <C-bslash> doesn't work in the GUI.  
Solution: Reset seenModifyOtherKeys when starting the GUI. (closes #6150)  
Files: src/gui.c

Patch 8.2.0834

Problem: :drop command in terminal popup causes problems.  
Solution: Check for using a popup window. (closes #6151)  
Files: src/ex\_cmds.c, src/testdir/test\_popupwin.vim

Patch 8.2.0835

Problem: Motif: mapping <C-bslash> still doesn't work.  
Solution: Accept CSI for K\_SPECIAL. Do not apply CTRL to the character early. (closes #6150)  
Files: src/getchar.c, src/gui\_x11.c

Patch 8.2.0836

Problem: Not all :cdo output is visible.  
Solution: Reset 'shortmess' temporarily. (Yegappan Lakshmanan, closes #6155)  
Files: src/ex\_cmds2.c, src/testdir/test\_cdo.vim

Patch 8.2.0837

Problem: Compiler warning for value set but not used.  
Solution: Move variable inside #ifdef.  
Files: src/channel.c

Patch 8.2.0838

Problem: MS-Windows: compiler warning for uninitialized variables.  
Solution: Initialize variables.  
Files: src/screen.c

Patch 8.2.0839

Problem: Dropping modifier when putting a character back in typeahead.  
Solution: Add modifier to ins\_char\_typebuf(). (closes #6158)  
Files: src/getchar.c, src/proto/getchar.pro, src/message.c, src/normal.c, src/terminal.c, src/globals.h, src/testdir/test\_messages.vim

Patch 8.2.0840

Problem: Search match count wrong when only match is in fold.  
Solution: Update search stats when in a closed fold. (Christian Brabandt, closes #6160, closes #6152)

Files: src/search.c, src/testdir/dumps/Test\_searchstat\_3.dump,  
src/testdir/test\_search\_stat.vim

Patch 8.2.0841

Problem: **'verbose'** value 16 causes duplicate output.  
Solution: Combine levels 15 and 16 into one message. (Christian Brabandt,  
closes #6153)  
Files: runtime/doc/options.txt, src/ex\_docmd.c

Patch 8.2.0842 (after 8.2.0837)

Problem: MS-Windows: channel tests fail.  
Solution: Adjust #ifdefs. (closes #6162)  
Files: src/channel.c

Patch 8.2.0843

Problem: Filetype elm not detected.  
Solution: Recognize \*.elm files. (closes #6157)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.0844

Problem: Text properties crossing lines not handled correctly.  
Solution: When saving for undo include an extra line when needed and do not  
adjust properties when undoing. (Axel Forsman, closes #5875)  
Files: src/memline.c, src/proto/memline.pro, src/undo.c, src/structs.h

Patch 8.2.0845

Problem: Text properties crossing lines not handled correctly.  
Solution: When joining lines merge text properties if possible.  
(Axel Forsman, closes #5839, closes #5683)  
Files: src/testdir/test\_textprop.vim, src/memline.c, src/ops.c,  
src/proto/textprop.pro, src/textprop.c,  
src/testdir/dumps/Test\_textprop\_01.dump

Patch 8.2.0846

Problem: Build failure with small features.  
Solution: Add #ifdef.  
Files: src/undo.c

Patch 8.2.0847

Problem: Typval related code is spread out.  
Solution: Move code to new typval.c file. (Yegappan Lakshmanan, closes #6093)  
Files: Filelist, src/Make\_cyg\_ming.mak, src/Make\_morph.mak,  
src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/README.md,  
src/eval.c, src/evalfunc.c, src/globals.h, src/proto.h,  
src/proto/eval.pro, src/proto/evalfunc.pro, src/proto/typval.pro,  
src/typval.c

Patch 8.2.0848

Problem: MS-Windows: the Windows terminal code has some flaws.  
Solution: Do not redraw the right edge of the screen. Remove the background  
color trick. Flush the screen output buffer often. (Nobuhiro  
Takasaki, #5546)  
Files: src/os\_win32.c, src/proto/os\_win32.pro, src/term.c

Patch 8.2.0849

Problem: BeOS code is not maintained and probably unused.  
Solution: Remove the BeOS code. (Emir Sarı, closes #5817)  
Files: Filelist, src/Makefile, src/configure.ac, src/auto/configure, src/evalfunc.c, src/normal.c, src/os\_beos.c, src/os\_beos.h, src/os\_beos.rsrc, src/os\_unix.c, src/proto.h, src/proto/os\_beos.pro, src/pty.c, src/screen.c, src/term.c, src/testdir/test\_functions.vim, src/ui.c, src/vim.h

Patch 8.2.0850

Problem: MS-Windows: exepath() works differently from cmd.exe.  
Solution: Make exepath() work better on MS-Windows. (closes #6115)  
Files: runtime/doc/eval.txt, src/os\_win32.c, src/testdir/test\_functions.vim

Patch 8.2.0851 (after 8.2.0833)

Problem: Can't distinguish <M-a> from accented "a" in the GUI.  
Solution: Use another way to make mapping <C-bslash> work. (closes #6163)  
Files: src/gui.c, src/gui\_gtk\_x11.c, src/getchar.c

Patch 8.2.0852

Problem: Cannot map CTRL-S on some systems.  
Solution: Do not use CTRL-S for flow control.  
Files: src/os\_unix.c

Patch 8.2.0853

Problem: ml\_delete() often called with FALSE argument.  
Solution: Use ml\_delete\_flags(x, ML\_DEL\_MESSAGE) when argument is TRUE.  
Files: src/buffer.c, src/change.c, src/diff.c, src/evalbuffer.c, src/ex\_cmds.c, src/ex\_docmd.c, src/fileio.c, src/if\_lua.c, src/if\_mzsch.c, src/if\_ruby.c, src/if\_tcl.c, src/normal.c, src/popupmenu.c, src/popupwin.c, src/quickfix.c, src/spell.c, src/terminal.c, src/if\_perl.xs, src/if\_py\_both.h, src/memline.c, src/proto/memline.pro

Patch 8.2.0854

Problem: Xxd cannot show offset as a decimal number.  
Solution: Add the "-d" flag. (Aapo Rantalainen, closes #5616)  
Files: src/testdir/test\_xxd.vim, src/xxd/xxd.c

Patch 8.2.0855

Problem: GUI tests fail because the test doesn't use a modifier.  
Solution: Add "{xxx}" to be able to encode a modifier.  
Files: runtime/doc/eval.txt, src/typval.c, src/misc2.c, src/vim.h, src/proto/misc2.pro, src/gui\_mac.c, src/option.c, src/highlight.c, src/term.c, src/testdir/test\_backspace\_opt.vim, src/testdir/test\_mapping.vim, src/testdir/test\_messages.vim

Patch 8.2.0856 (after 8.2.0852)

Problem: CTRL-S stops output.  
Solution: Invert the IXON flag. (closes #6166)  
Files: src/os\_unix.c

Patch 8.2.0857

Problem: GTK cell height can be a pixel too much.  
Solution: Subtract 3 instead of 1 when rounding. (closes #6168)  
Files: src/gui\_gtk\_x11.c

#### Patch 8.2.0858

Problem: Not easy to require Lua modules.  
Solution: Improve use of Lua path. (Prabir Shrestha, closes #6098)  
Files: Filelist, src/if\_lua.c, src/optionstr.c, src/proto/if\_lua.pro,  
src/testdir/test\_lua.vim,  
src/testdir/testluaplugin/luaplugin/hello.lua,  
src/testdir/testluaplugin/luaplugin/init.lua

#### Patch 8.2.0859

Problem: No Turkish translation of the manual.  
Solution: Add Turkish translations. (Emir Sarı, closes #5641)  
Files: Filelist, runtime/doc/Makefile, runtime/doc/evim-tr.1,  
runtime/doc/evim-tr.UTF-8.1, runtime/doc/vim-tr.1,  
runtime/doc/vim-tr.UTF-8.1, runtime/doc/vimdiff-tr.1,  
runtime/doc/vimdiff-tr.UTF-8.1, runtime/doc/vimtutor-tr.1,  
runtime/doc/vimtutor-tr.UTF-8.1, src/Makefile

#### Patch 8.2.0860

Problem: Cannot use **CTRL-A** and **CTRL-X** on unsigned numbers.  
Solution: Add "unsigned" to '**nrformats**'. (Naruhiko Nishino, closes #6144)  
Files: runtime/doc/options.txt, src/ops.c, src/optionstr.c,  
src/testdir/test\_increment.vim

#### Patch 8.2.0861

Problem: Cannot easily get all the current marks.  
Solution: Add getmarklist(). (Yegappan Lakshmanan, closes #6032)  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c,  
src/mark.c, src/proto/mark.pro, src/testdir/test\_marks.vim

#### Patch 8.2.0862

Problem: ":term ++curwin" makes the current buffer hidden. (Harm te Hennepe)  
Solution: Do not hide the current buffer. (closes #6170)  
Files: src/terminal.c, src/testdir/test\_terminal.vim

#### Patch 8.2.0863

Problem: Cannot set a separate color for underline/undercurl.  
Solution: Add the t\_AU and t\_8u termcap codes. (Timur Celik, closes #6011)  
Files: runtime/doc/syntax.txt, runtime/doc/term.txt, src/globals.h,  
src/highlight.c, src/optiondefs.h, src/proto/term.pro,  
src/screen.c, src/structs.h, src/term.c, src/term.h,  
src/testdir/test\_options.vim

#### Patch 8.2.0864

Problem: Pragmas are indented all the way to the left.  
Solution: Add an option to indent pragmas like normal code. (Max Rumpf, closes #5468)  
Files: runtime/doc/indent.txt, src/cindent.c, src/structs.h,  
src/testdir/test\_cindent.vim

Patch 8.2.0865

Problem: Syntax foldlevel is taken from the start of the line.  
Solution: Add ":syn foldlevel" to be able to use the minimal foldlevel in the line. (Brad King, closes #6087)  
Files: runtime/doc/syntax.txt, src/structs.h, src/syntax.c, src/testdir/test\_syntax.vim

Patch 8.2.0866

Problem: Not enough tests for buffer writing.  
Solution: Add more tests. Use CheckRunVimInTerminal in more places. (Yegappan Lakshmanan, closes #6167)  
Files: src/testdir/test\_arglist.vim, src/testdir/test\_match.vim, src/testdir/test\_messages.vim, src/testdir/test\_netbeans.py, src/testdir/test\_netbeans.vim, src/testdir/test\_search.vim, src/testdir/test\_signals.vim, src/testdir/test\_signs.vim, src/testdir/test\_startup.vim, src/testdir/test\_startup\_utf8.vim, src/testdir/test\_syntax.vim, src/testdir/test\_tabpage.vim, src/testdir/test\_timers.vim, src/testdir/test\_vimscript.vim, src/testdir/test\_writefile.vim

Patch 8.2.0867

Problem: Using {\xxx} for encoding a modifier is not nice.  
Solution: Use \<xxx> instead, since it's the same as \<xxx> but producing a different code.  
Files: runtime/doc/eval.txt, src/typval.c, src/misc2.c, src/vim.h, src/testdir/test\_backspace\_opt.vim, src/testdir/test\_mapping.vim, src/testdir/test\_messages.vim

Patch 8.2.0868

Problem: trim() always trims both ends.  
Solution: Add an argument to only trim the beginning or end. (Yegappan Lakshmanan, closes #6126)  
Files: runtime/doc/eval.txt, src/evalfunc.c, src/testdir/test\_functions.vim

Patch 8.2.0869

Problem: It is not possible to customize the quickfix window contents.  
Solution: Add '**quickfixtextfunc**'. (Yegappan Lakshmanan, closes #5465)  
Files: runtime/doc/eval.txt, runtime/doc/options.txt, runtime/doc/quickfix.txt, src/option.h, src/optiondefs.h, src/quickfix.c, src/testdir/test\_quickfix.vim

Patch 8.2.0870

Problem: MS-Windows: Control keys don't work in the GUI.  
Solution: Don't set seenModifyOtherKeys for now. (Yasuhiro Matsumoto, closes #6175)  
Files: src/gui.c

Patch 8.2.0871

Problem: Cannot use getmarklist() as a method.  
Solution: Make getmarklist() work as a method. Add one to the column number to match getpos(). (Yegappan Lakshmanan, closes #6176)  
Files: runtime/doc/eval.txt, src/evalfunc.c, src/mark.c, src/testdir/test\_marks.vim

Patch 8.2.0872

Problem: XIM code is mixed with multibyte code.  
Solution: Move the XIM code to a separate file. (Yegappan Lakshmanan, closes #6177)  
Files: Filelist, src/Make\_cyg\_ming.mak, src/Make\_morph.mak, src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/gui\_xim.c, src/mbyte.c, src/proto.h, src/proto/gui\_xim.pro, src/proto/mbyte.pro

Patch 8.2.0873

Problem: A .jl file can be sawfish (lisp) or Julia.  
Solution: Do not recognize \*.jl as lisp, since it might be Julia. (closes #6178)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.0874

Problem: Signals test is a bit flaky.  
Solution: Flush the XautoOut file. Delete files that may be left behind from a failure. (Dominique Pellé, closes #6179)  
Files: src/testdir/test\_signals.vim

Patch 8.2.0875

Problem: Getting attributes for directory entries is slow.  
Solution: Add readdirex(). (Ken Takata, closes #5619)  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c, src/fileio.c, src/filepath.c, src/proto/fileio.pro, src/proto/filepath.pro, src/testdir/test\_functions.vim

Patch 8.2.0876

Problem: :pwd does not give a hint about the scope of the directory  
Solution: Make ":verbose pwd" show the scope. (Takuya Fujiwara, closes #5469)  
Files: runtime/doc/editing.txt, src/ex\_docmd.c, src/testdir/test\_cd.vim

Patch 8.2.0877

Problem: Cannot get the search statistics.  
Solution: Add the searchcount() function. (Fujiwara Takuya, closes #4446)  
Files: runtime/doc/eval.txt, src/evalfunc.c, src/macros.h, src/proto/search.pro, src/search.c, src/testdir/test\_search\_stat.vim

Patch 8.2.0878

Problem: No reduce() function.  
Solution: Add a reduce() function. (closes #5481)  
Files: runtime/doc/eval.txt, src/evalfunc.c, src/globals.h, src/list.c, src/proto/list.pro, src/testdir/test\_listdict.vim

Patch 8.2.0879

Problem: Compiler warning for unused function argument.  
Solution: Add UNUSED.  
Files: src/search.c

Patch 8.2.0880 (after 8.2.0877)

Problem: Leaking memory when using searchcount().

Solution: Free the last used search pattern.  
Files: src/search.c

Patch 8.2.0881

Problem: Compiler warning for argument type.  
Solution: Add type cast. (Mike Williams)  
Files: src/ops.c

Patch 8.2.0882

Problem: Leaking memory when using reduce().  
Solution: Free the intermediate value.  
Files: src/list.c

Patch 8.2.0883

Problem: Memory leak in test 49.  
Solution: Free "sfile" from the exception.  
Files: src/ex\_docmd.c

Patch 8.2.0884

Problem: Searchcount() test fails on slower systems.  
Solution: Set a longer timeout.  
Files: src/search.c, src/testdir/test\_search\_stat.vim

Patch 8.2.0885

Problem: "make shadow" does not link new lua test dir.  
Solution: Also link testdir/testluaplugin. (Elimar Riesebieter)  
Files: src/Makefile

Patch 8.2.0886

Problem: Cannot use octal numbers in scriptversion 4.  
Solution: Add the "0o" notation. (Ken Takata, closes #5304)  
Files: runtime/doc/eval.txt, src/charset.c, src/evalfunc.c,  
src/testdir/test\_eval\_stuff.vim, src/testdir/test\_functions.vim,  
src/vim.h

Patch 8.2.0887

Problem: Searchcount().exact\_match is 1 right after a match.  
Solution: Use LT\_POS() instead of LTREQ\_POS(). (closes #6189)  
Files: src/search.c, src/testdir/test\_search\_stat.vim

Patch 8.2.0888

Problem: Readdirx() returns size -2 for a directory.  
Solution: Add missing "else". (Ken Takata, closes #6185)  
Files: src/fileio.c, src/testdir/test\_functions.vim

Patch 8.2.0889

Problem: Using old style comments.  
Solution: Use // comments. (Yegappan Lakshmanan, closes #6190)  
Files: src/gui\_xim.c

Patch 8.2.0890

Problem: No color in terminal window when 'termguicolors' is set.  
Solution: Clear the underline color. (closes #6186)  
Files: src/highlight.c

Patch 8.2.0891

Problem: Clang warns for invalid conversion.  
Solution: Use zero instead of INVALIDCOLOR.  
Files: src/highlight.c

Patch 8.2.0892

Problem: Ubsan warns for undefined behavior.  
Solution: Use unsigned instead of signed variable. (Dominique Pellé,  
closes #6193)  
Files: src/regexp\_nfa.c

Patch 8.2.0893

Problem: Assert\_equalfile() does not take a third argument.  
Solution: Implement the third argument. (Gary Johnson)  
Files: runtime/doc/eval.txt, runtime/doc/testing.txt, src/evalfunc.c,  
src/testdir/test\_assert.vim, src/testing.c

Patch 8.2.0894

Problem: :mkspell can take very long if the word count is high.  
Solution: Use long to avoid negative numbers. Increase the limits by 20% if  
the compression did not have effect.  
Files: src/spellfile.c

Patch 8.2.0895

Problem: :mkspell output does not mention the tree type.  
Solution: Back out increasing the limits, it has no effect. Mention the  
tree being compressed. Only give a message once per second.  
Files: src/spellfile.c

Patch 8.2.0896

Problem: Crash when calling searchcount() with a string.  
Solution: Check the argument is a dict. (closes #6192)  
Files: src/search.c, src/testdir/test\_search\_stat.vim

Patch 8.2.0897

Problem: List of functions in patched version is outdated.  
Solution: Update the function lists only.  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt

Patch 8.2.0898

Problem: Missing help for a function goes unnoticed.  
Solution: Add a test. (Gary Johnson)  
Files: src/testdir/test\_function\_lists.vim, src/testdir/Make\_all.mak

Patch 8.2.0899

Problem: Assert\_equalfile() does not give a hint about the difference.  
Solution: Display the last seen text.  
Files: src/testing.c, src/testdir/test\_assert.vim

Patch 8.2.0900

Problem: Function list test fails on MS-Windows.  
Solution: Make sure the fileformat is "unix"  
Files: src/testdir/test\_function\_lists.vim

Patch 8.2.0901

Problem: Formatting CJK text isn't optimal.  
Solution: Properly break CJK lines. (closes #3875)  
Files: runtime/doc/change.txt, src/mbyte.c, src/ops.c, src/option.h,  
src/proto/mbyte.pro, src/testdir/Make\_all.mak, src/textformat.c,  
src/testdir/test\_cjk\_linebreak.vim

Patch 8.2.0902

Problem: Using searchcount() in '**statusline**' causes an error.  
Solution: Avoid saving/restoring the search pattern recursively.  
(closes #6194)  
Files: src/search.c, src/testdir/test\_search\_stat.vim,  
src/testdir/dumps/Test\_searchstat\_4.dump

Patch 8.2.0903

Problem: comparing WINVER does not work correctly.  
Solution: Use arithmetic expansion. (Ozaki Kiichi, closes #6197)  
Files: src/Make\_cyg\_ming.mak

Patch 8.2.0904

Problem: Assuming modifyOtherKeys for rhs of mapping.  
Solution: Ignore seenModifyOtherKeys for mapped characters. (closes #6200)  
Files: src/getchar.c, src/testdir/test\_gui.vim

Patch 8.2.0905

Problem: Test coverage could be better.  
Solution: Add a couple of tests. (Dominique Pellé, closes #6202)  
Files: src/testdir/test\_cmdline.vim, src/testdir/test\_ga.vim

Patch 8.2.0906

Problem: When setting '**termguicolors**' SpellBad is no longer red.  
Solution: Only use the RGB guisp color for cterm when using the "underline"  
or "undercurl" attributes to avoid the background color to be  
cleared. Also make t\_8u empty when the termresponse indicates a  
real xterm. (closes #6207)  
Files: src/highlight.c, src/term.c

Patch 8.2.0907

Problem: When using :global clipboard isn't set correctly.  
Solution: Set "clip\_unnamed\_saved" instead of "clip\_unnamed". (Christian  
Brabandt, closes #6203, closes #6198)  
Files: src/clipboard.c, src/testdir/test\_global.vim

Patch 8.2.0908

Problem: Crash when changing the function table while listing it.  
Solution: Bail out when the function table changes. (closes #6209)  
Files: src/userfunc.c, src/testdir/test\_timers.vim

Patch 8.2.0909

Problem: Cannot go back to the previous local directory.  
Solution: Add "tcd -" and "lcd -". (Yegappan Lakshmanan, closes #4362)  
Files: runtime/doc/editing.txt, src/filepath.c, src/ex\_docmd.c,  
src/structs.h, src/testdir/test\_cd.vim, src/window.c

Patch 8.2.0910

Problem: Vim is not reproducibly buildable.  
Solution: Use the \$SOURCE\_DATE\_EPOCH environment variable in configure.  
(James McCoy, closes #513) Give a warning about using it.  
Files: src/config.h.in, src/config.mk.in, src/configure.ac,  
src/auto/configure, src/version.c, src/Makefile

Patch 8.2.0911

Problem: Crash when opening a buffer for the cmdline window fails. (Chris Barber)  
Solution: Check do\_ecmd() succeeds. Reset got\_int if "q" was used at the more prompt. (closes #6211)  
Files: src/ex\_getln.c, src/testdir/test\_cmdline.vim,  
src/testdir/dumps/Test\_cmdwin\_interrupted.dump

Patch 8.2.0912

Problem: A few test cases for CJK formatting are disabled.  
Solution: Fix the tests and enable them. (closes #6212)  
Files: src/testdir/test\_cjk\_linebreak.vim

Patch 8.2.0913

Problem: Code for resetting v:register is duplicated.  
Solution: Add reset\_reg\_var().  
Files: src/evalvars.c, src/proto/evalvars.pro, src/main.c, src/normal.c

Patch 8.2.0914

Problem: MS-Windows: cannot specify a "modified by" text.  
Solution: Add MODIFIED\_BY in the MSVC build file. (Chen Lei, closes #1275)  
Files: src/Make\_mvc.mak

Patch 8.2.0915

Problem: Search() cannot skip over matches like searchpair() can.  
Solution: Add an optional "skip" argument. (Christian Brabandt, closes #861)  
Files: runtime/doc/eval.txt, src/evalfunc.c, src/testdir/test\_syntax.vim,  
src/structs.h, src/evalvars.c, src/proto/evalvars.pro

Patch 8.2.0916

Problem: Mapping with partly modifyOtherKeys code does not work.  
Solution: If there is no mapping with a separate modifier include the modifier in the key and then try mapping again. (closes #6200)  
Files: src/getchar.c, src/proto/getchar.pro, src/edit.c, src/term.c,  
src/proto/term.pro, src/testdir/test\_termcodes.vim

Patch 8.2.0917

Problem: Quickfix entries do not support a "note" type.  
Solution: Add support for "note". (partly by Yegappan Lakshmanan, closes #5527, closes #6216)  
Files: runtime/doc/quickfix.txt, src/quickfix.c,  
src/testdir/test\_quickfix.vim

Patch 8.2.0918

Problem: Duplicate code for evaluating expression argument.  
Solution: Merge the code and make the use more flexible.

Files: src/evalfunc.c, src/eval.c, src/proto/eval.pro, src/evalvars.c,  
src/proto/evalvars.pro, src/structs.h

Patch 8.2.0919

Problem: Merging modifier for modifyOtherKeys is done twice.  
Solution: Remove the merging done in vgetc().  
Files: src/getchar.c, src/ex\_getln.c

Patch 8.2.0920

Problem: Writing viminfo fails with a circular reference.  
Solution: Use copyID to detect the cycle. (closes #6217)  
Files: src/testdir/test\_viminfo.vim, src/viminfo.c

Patch 8.2.0921

Problem: **CTRL-W** T in cmdline window causes trouble.  
Solution: Disallow **CTRL-W** T in the cmdline window. Add more tests.  
(Naruhiko Nishino, closes #6219)  
Files: src/testdir/test\_cmdline.vim, src/window.c

Patch 8.2.0922

Problem: Search test fails.  
Solution: Remove failure tests for calls that no longer fail.  
Files: src/testdir/test\_search.vim

Patch 8.2.0923

Problem: Cmdline test is slow.  
Solution: Use WaitForAssert().  
Files: src/testdir/test\_cmdline.vim

Patch 8.2.0924

Problem: Cannot save and restore a register properly.  
Solution: Add getreginfo() and make setreg() accept a dictionary. (Andy  
Massimino, closes #3370)  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c,  
src/proto/register.pro, src/register.c,  
src/testdir/test\_eval\_stuff.vim, src/testdir/test\_registers.vim

Patch 8.2.0925

Problem: Getcompletion() does not return command line arguments.  
Solution: Add the "cmdline" option. (Shougo, closes #1140)  
Files: runtime/doc/eval.txt, src/cmdexpand.c,  
src/testdir/test\_cmdline.vim

Patch 8.2.0926

Problem: Cmdline test fails on Appveyor.  
Solution: Add CR to the commands. (Naruhiko Nishino, closes #6220)  
Files: src/testdir/test\_cmdline.vim

Patch 8.2.0927

Problem: Some sshconfig and ssdconfig files are not recognized.  
Solution: Add filetype patterns.  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.0928

Problem: Many type casts are used for vim\_strnsave().  
Solution: Make the length argument size\_t instead of int. (Ken Takata, closes #5633) Remove some type casts.  
Files: src/misc2.c, src/proto/misc2.pro, src/autocmd.c, src/channel.c, src/cmdexpand.c, src/dict.c, src/diff.c, src/digraph.c, src/eval.c, src/evalfunc.c, src/highlight.c, src/syntax.c

#### Patch 8.2.0929

Problem: v:register is not cleared after an operator was executed.  
Solution: Clear v:register after finishing an operator (Andy Massimino, closes #5305)  
Files: src/normal.c, src/testdir/test\_registers.vim

#### Patch 8.2.0930

Problem: Script filetype detection trips over env -S argument.  
Solution: Remove "-S" and "--ignore-environment". (closes #5013)  
Add tests.  
Files: runtime/scripts.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.0931

Problem: Some remarks about BeOS remain.  
Solution: Remove BeOS remarks from the help and other files. (Emir Sarı, closes #6221)  
Files: READMEdir/README\_extra.txt, runtime/doc/options.txt, runtime/doc/os\_beos.txt, runtime/doc/os\_vms.txt, runtime/doc/vi\_diff.txt, src/INSTALL

#### Patch 8.2.0932

Problem: Misspelling spelllang.  
Solution: Add an "l". (Dominique Pellé)  
Files: src/optionstr.c, src/proto/spell.pro, src/spell.c

#### Patch 8.2.0933

Problem: **'quickfixtextfunc'** does not get window ID of location list.  
Solution: Add "winid" to the dict argument. (Yegappan Lakshmanan, closes #6222)  
Files: runtime/doc/quickfix.txt, src/quickfix.c, src/testdir/test\_quickfix.vim

#### Patch 8.2.0934

Problem: Running lhelgrep twice in a help window doesn't jump to the help topic.  
Solution: Check whether any window with the location list is present. (Yegappan Lakshmanan, closes #6215)  
Files: src/quickfix.c, src/testdir/test\_quickfix.vim

#### Patch 8.2.0935

Problem: Flattening a list with existing code is slow.  
Solution: Add flatten(). (Mopp, closes #3676)  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c, src/list.c, src/proto/list.pro, src/testdir/Make\_all.mak, src/testdir/test\_flatten.vim

#### Patch 8.2.0936

Problem: Some terminals misinterpret the code for getting cursor style.  
Solution: Send a sequence to the terminal and check the result. (IWAMOTO Kouichi, closes #2126) Merged with current code.  
Files: src/main.c, src/term.c, src/proto/term.pro,  
src/testdir/term\_util.vim, src/testdir/test\_quickfix.vim,  
src/testdir/test\_terminal.vim, src/testdir/test\_startup\_utf8.vim,  
src/testdir/dumps/Test\_balloon\_eval\_term\_01.dump,  
src/testdir/dumps/Test\_balloon\_eval\_term\_01a.dump,  
src/testdir/dumps/Test\_balloon\_eval\_term\_02.dump,  
src/testdir/dumps/Test\_terminal\_all\_ansi\_colors.dump

#### Patch 8.2.0937

Problem: Asan failure in the flatten() test.  
Solution: Free the flattened list.  
Files: src/list.c

#### Patch 8.2.0938

Problem: NFA regexp uses tolower() to compare ignore-case. (Thayne McCombs)  
Solution: Use utf\_fold() when possible. (ref. neovim #12456)  
Files: src/macros.h, src/diff.c, src/regexp\_nfa.c,  
src/testdir/test\_regexp\_utf8.vim

#### Patch 8.2.0939

Problem: checking for term escape sequences is long and confusing  
Solution: Refactor code into separate functions.  
Files: src/term.c

#### Patch 8.2.0940 (after 8.2.0939)

Problem: Build failure with tiny features.  
Solution: Add #ifdef. Add UNUSED. A bit more cleaning up.  
Files: src/term.c

#### Patch 8.2.0941

Problem: Detecting terminal properties is unstructured.  
Solution: Add a table with terminal properties. Set properties when a terminal is detected.  
Files: src/term.c

#### Patch 8.2.0942

Problem: Expanding to local dir after homedir keeps "~/".  
Solution: Adjust modify\_fname(). (Christian Brabandt, closes #6205, closes #5979)  
Files: src/filepath.c, src/testdir/test\_fnamemodify.vim

#### Patch 8.2.0943

Problem: Displaying ^M or ^J depends on current buffer.  
Solution: Pass the displayed buffer to transchar(). (closes #6225)  
Files: src/drawline.c, src/charset.c, src/proto/charset.pro,  
src/ex\_cmds.c, src/gui\_beval.c, src/message.c,  
src/testdir/test\_display.vim,  
src/testdir/dumps/Test\_display\_unprintable\_01.dump,  
src/testdir/dumps/Test\_display\_unprintable\_02.dump

#### Patch 8.2.0944

Problem: Xxd test leaves file behind.  
Solution: Delete the file "XXDfile". (Christian Brabandt, closes #6228)  
Files: src/testdir/test\_xxd.vim

Patch 8.2.0945

Problem: Cannot use "z=" when 'spell' is off.  
Solution: Make "z=" work even when 'spell' is off. (Christian Brabandt, Gary Johnson, closes #6227)  
Files: runtime/doc/eval.txt, src/evalfunc.c, src/spell.c, src/spellsuggest.c, src/testdir/test\_spell.vim, src/globals.h

Patch 8.2.0946

Problem: Cannot use "q" to cancel a number prompt.  
Solution: Recognize "q" instead of ignoring it.  
Files: src/misc1.c, src/testdir/test\_functions.vim

Patch 8.2.0947

Problem: Readdirx() doesn't handle broken link properly.  
Solution: Small fixes to readdirx(). (Christian Brabandt, closes #6226, closes #6213)  
Files: src/fileio.c, src/testdir/test\_functions.vim

Patch 8.2.0948

Problem: Spell test fails.  
Solution: Adjust expected text of the prompt.  
Files: src/testdir/test\_spell.vim

Patch 8.2.0949

Problem: Strptime() does not use DST.  
Solution: Set the tm\_isdst field to -1. (Tomáš Janoušek, closes #6230)  
Files: src/time.c, src/testdir/test\_functions.vim

Patch 8.2.0950

Problem: Tagjump test fails.  
Solution: Adjust expected text of the prompt.  
Files: src/testdir/test\_tagjump.vim

Patch 8.2.0951

Problem: Search stat test has leftover from debugging.  
Solution: Remove line that writes a file. (Christian Brabandt, closes #6224)  
Files: src/testdir/test\_search\_stat.vim

Patch 8.2.0952

Problem: No simple way to interrupt Vim.  
Solution: Add the SigUSR1 autocommand, triggered by SIGUSR1. (Jacob Hayes, closes #1718)  
Files: runtime/doc/autocmd.txt, src/vim.h, src/autocmd.c, src/getchar.c, src/globals.h, src/os\_unix.c, src/testdir/test\_autocmd.vim

Patch 8.2.0953

Problem: Spell checking doesn't work for CamelCased words.  
Solution: Add the "camel" value in the new option 'spelloptions'. (closes #1235)  
Files: runtime/doc/options.txt, runtime/doc/spell.txt, src/optiondefs.h,

src/option.h, src/option.c, src/buffer.c, src/optionstr.c,  
src/testdir/gen\_opt\_test.vim, src/testdir/test\_spell.vim

Patch 8.2.0954

Problem: Not all desktop files are recognized.  
Solution: Add the \*.directory pattern. (Eisuke Kawashima, closes #3317)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.0955 (after 8.2.0953)

Problem: Build fails.  
Solution: Add missing struct change.  
Files: src/structs.h

Patch 8.2.0956 (after 8.2.0953)

Problem: Spell test fails.  
Solution: Add missing change the spell checking.  
Files: src/spell.c

Patch 8.2.0957

Problem: Compiler warning for uninitialized variable. (Tony Mechelynck)  
Solution: Initialize one variable.  
Files: src/spell.c

Patch 8.2.0958

Problem: Not sufficient testing for buffer writing.  
Solution: Add a few tests. (Yegappan Lakshmanan, closes #6238)  
Files: src/testdir/test\_backup.vim, src/testdir/test\_writefile.vim

Patch 8.2.0959

Problem: Using **'quickfixtextfunc'** is a bit slow.  
Solution: Process a list of entries. (Yegappan Lakshmanan, closes #6234)  
Files: runtime/doc/quickfix.txt, src/quickfix.c,  
src/testdir/test\_quickfix.vim

Patch 8.2.0960

Problem: Cannot use :import in legacy Vim script.  
Solution: Support :import in any Vim script.  
Files: src/vim9script.c, src/evalvars.c, src/userfunc.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.0961

Problem: MS-Windows: no completion for locales.  
Solution: Use the directories in \$VIMRUNTIME/lang to complete locales.  
(Christian Brabandt, closes 36248)  
Files: src/cmdexpand.c, src/ex\_cmds2.c, src/testdir/test\_cmdline.vim

Patch 8.2.0962

Problem: Terminal test sometimes hangs on Travis.  
Solution: Do show output for this test temporarily.  
Files: src/testdir/Makefile

Patch 8.2.0963

Problem: Number increment/decrement does not work with **'virtualedit'**.  
Solution: Handle coladd changing. (Christian Brabandt, closes #6240,

closes #923)  
Files: runtime/doc/options.txt, runtime/doc/various.txt, src/ops.c,  
src/testdir/test\_increment.vim

#### Patch 8.2.0964

Problem: TextYankPost does not provide info about Visual selection.  
Solution: Add the **'visual'** key in v:event. (closes #6249)  
Files: runtime/doc/autocmd.txt, src/register.c,  
src/testdir/test\_autocmd.vim

#### Patch 8.2.0965

Problem: Has\_funcundefined() is not used.  
Solution: Delete the function. (Dominique Pellé, closes #6242)  
Files: src/autocmd.c, src/proto/autocmd.pro

#### Patch 8.2.0966

Problem: **'shortmess'** flag "n" not used in two places.  
Solution: Make use of the "n" flag consistent. (Nick Jensen, closes #6245,  
closes #6244)  
Files: src/bufwrite.c, src/proto/bufwrite.pro, src/buffer.c,  
src/fileio.c, src/testdir/dumps/Test\_popup\_textprop\_corn\_5.dump,  
src/testdir/dumps/Test\_start\_with\_tabs.dump

#### Patch 8.2.0967

Problem: Unnecessary type casts for vim\_strnsave().  
Solution: Remove the type casts.  
Files: src/evalvars.c, src/ex\_cmds.c, src/ex\_eval.c, src/fileio.c,  
src/filepath.c, src/findfile.c, src/highlight.c, src/if\_ruby.c,  
src/insexpand.c, src/json.c, src/mark.c, src/memline.c,  
src/menu.c, src/misc1.c, src/ops.c, src/os\_win32.c, src/regexp.c,  
src/regexp\_bt.c, src/regexp\_nfa.c, src/register.c, src/search.c,  
src/sign.c, src/syntax.c, src/term.c, src/terminal.c, src/undo.c,  
src/usercmd.c, src/userfunc.c, src/vim9compile.c, src/if\_perl.xs

#### Patch 8.2.0968

Problem: No proper testing of the **'coptions'** flags.  
Solution: Add tests. (Yegappan Lakshmanan, closes #6251)  
Files: src/testdir/Make\_all.mak, src/testdir/test\_coptions.vim,  
src/testdir/test\_edit.vim, src/testdir/test\_normal.vim

#### Patch 8.2.0969

Problem: Assert\_equal() output for dicts is hard to figure out.  
Solution: Only show the different items.  
Files: src/testing.c, src/testdir/test\_assert.vim

#### Patch 8.2.0970

Problem: Terminal properties are not available in Vim script.  
Solution: Add the terminalprops() function.  
Files: src/term.c, src/proto/term.pro, src/evalfunc.c, src/main.c,  
src/testing.c, src/globals.h, src/testdir/test\_termcodes.vim,  
runtime/doc/usr\_41.txt, runtime/doc/eval.txt,  
runtime/doc/testing.txt

#### Patch 8.2.0971

Problem: Build with tiny features fails.  
Solution: Add #ifdef.  
Files: src/term.c

#### Patch 8.2.0972

Problem: Vim9 script variable declarations need a type.  
Solution: Make "let var: type" declare a script-local variable.  
Files: src/evalvars.c, src/vim9script.c, src/proto/vim9script.pro,  
src/globals.h, src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0973

Problem: Vim9: type is not checked when assigning to a script variable.  
Solution: Check the type.  
Files: src/evalvars.c, src/vim9script.c, src/proto/vim9script.pro,  
src/vim9compile.c, src/proto/vim9compile.pro,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0974

Problem: Vim9: memory leak when script var has wrong type.  
Solution: Free the variable name.  
Files: src/vim9script.vim

#### Patch 8.2.0975

Problem: Vim9: script variable does not accept optional s: prefix.  
Solution: Adjust the accepted syntax.  
Files: src/vim9script.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0976

Problem: Some '**cptions**' not tested.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #6253)  
Files: src/testdir/test\_cd.vim, src/testdir/test\_charsearch.vim,  
src/testdir/test\_cptions.vim, src/testdir/test\_normal.vim

#### Patch 8.2.0977

Problem: t\_8u is made empty for the wrong terminals. (Dominique Pelle)  
Solution: Invert the check for TPR\_YES. (closes #6254)  
Files: src/term.c, src/testdir/test\_termcodes.vim

#### Patch 8.2.0978

Problem: Leaking memory in termcodes test.  
Solution: Set t\_8u with set\_option\_value().  
Files: src/term.c

#### Patch 8.2.0979

Problem: A couple of screendump tests fail.  
Solution: Do not redraw when clearing t\_8u.  
Files: src/term.c

#### Patch 8.2.0980

Problem: Raku file extension not recognized. (Steven Penny)  
Solution: Recognize .raku and .rakumod. (closes #6255)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.0981

Problem: Vim9: cannot compile "[var, var] = list".  
Solution: Implement list assignment.  
Files: src/vim9compile.c, src/vim9.h, src/vim9execute.c, src/evalvars.c,  
src/proto/evalvars.pro, src/eval.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0982

Problem: Insufficient testing for reading/writing files.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #6257)  
Add "ui\_delay" to test\_override() and use it for the **CTRL-O** test.  
Files: src/testing.c, src/globals.h, src/ui.c, runtime/doc/testing.txt,  
src/testdir/test\_autocmd.vim, src/testdir/test\_edit.vim,  
src/testdir/test\_filechanged.vim, src/testdir/test\_writefile.vim

#### Patch 8.2.0983

Problem: SConstruct file type not recognized.  
Solution: Use python for SConstruct files. (Roland Hieber)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.0984

Problem: Not using previous window when closing a shell popup window.  
Solution: Use "prevwin" if it was set. (closes #6267)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim

#### Patch 8.2.0985

Problem: Simplify() does not remove slashes from "///path".  
Solution: Reduce > 2 slashes to one. (closes #6263)  
Files: src/findfile.c, src/testdir/test\_functions.vim

#### Patch 8.2.0986 (after 8.2.0985)

Problem: MS-Windows: functions test fails.  
Solution: Only simplify ///path on Unix.  
Files: src/testdir/test\_functions.vim

#### Patch 8.2.0987

Problem: Vim9: cannot assign to [var; var].  
Solution: Assign rest of items to a list.  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c, src/list.c,  
src/proto/list.pro, src/eval.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.0988

Problem: Getting directory contents is always case sorted.  
Solution: Add sort options and v:collate. (Christian Brabandt, closes #6229)  
Files: runtime/doc/eval.txt, runtime/doc/mlang.txt, src/auto/configure,  
src/cmdexpand.c, src/config.h.in, src/configure.ac,  
src/evalfunc.c, src/evalvars.c, src/ex\_cmds2.c, src/fileio.c,  
src/filepath.c, src/globals.h, src/proto/fileio.pro,  
src/testdir/test\_cmdline.vim, src/testdir/test\_functions.vim,  
src/vim.h

#### Patch 8.2.0989

Problem: Crash after resizing a terminal window. (August Masquelier)  
Solution: Add check for valid row in libvterm. (closes #6273)  
Files: src/libvterm/src/state.c, src/libvterm/src/screen.c

Patch 8.2.0990 (after 8.2.0988)

Problem: Using duplicate error number.  
Solution: Use an unused error number. Add a test for it.  
Files: src/globals.h, src/testdir/test\_functions.vim

Patch 8.2.0991

Problem: Cannot get window type for autocmd and preview window.  
Solution: Add types to win\_gettype(). (Yegappan Lakshmanan, closes #6277)  
Files: runtime/doc/eval.txt, src/evalwindow.c,  
src/testdir/test\_autocmd.vim, src/testdir/test\_preview.vim

Patch 8.2.0992

Problem: Vim9: crash when using :import in the Vim command.  
Solution: Give an error when using :import outside of a script.  
(closes #6271)  
Files: src/vim9script.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/term\_util.vim

Patch 8.2.0993

Problem: Vim9 script test fails with normal features.  
Solution: Use :func instead of :def for now.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.0994

Problem: Vim9: missing function causes compilation error.  
Solution: Call test function indirectly.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.0995

Problem: Insufficient testing for the readdir() sort option.  
Solution: Add a few more tests. (Christian Brabandt, closes #6278)  
Files: src/testdir/test\_functions.vim

Patch 8.2.0996

Problem: Using "aucmdwin" in win\_gettype() is not ideal.  
Solution: Rename to "autocmd".  
Files: runtime/doc/eval.txt, src/evalwindow.c,  
src/testdir/test\_autocmd.vim

Patch 8.2.0997

Problem: Cannot execute a register containing line continuation.  
Solution: Concatenate lines where needed. (Yegappan Lakshmanan,  
closes #6272)  
Files: runtime/doc/repeat.txt, src/register.c,  
src/testdir/test\_registers.vim

Patch 8.2.0998

Problem: Not all tag code is tested.  
Solution: Add a few more test cases. (Yegappan Lakshmanan, closes #6284)  
Files: src/testdir/test\_tagjump.vim

Patch 8.2.0999

Problem: Moving to next sentence gets stuck on quote.  
Solution: When moving to the next sentence doesn't result in moving, advance

a character and try again. (closes #6291)  
Files: src/textobject.c, src/testdir/test\_textobjects.vim

Patch 8.2.1000  
Problem: Get error when leaving Ex mode with :visual and a CmdLineEnter autocommand was used.  
Solution: Reset ex\_pressedreturn. (closes #6293)  
Files: src/ex\_docmd.c, src/testdir/test\_ex\_mode.vim

Patch 8.2.1001  
Problem: Vim9: crash with nested "if" and assignment.  
Solution: Skip more of the assignment. Do not set ctx\_skip when code is reachable.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1002  
Problem: Test may fail when run directly.  
Solution: Check if g:run\_nr exists. (Christian Brabandt, closes #6285)  
Files: src/testdir/term\_util.vim

Patch 8.2.1003  
Problem: Vim9: return type of sort() is too generic.  
Solution: Get type from the first argument. (closes #6292)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1004  
Problem: Line numbers below filler lines not always updated.  
Solution: Don't break out of the win\_line() loop too early. (Christian Brabandt, closes #6294, closes #6138)  
Files: src/drawline.c, src/testdir/dumps/Test\_diff\_rnu\_01.dump, src/testdir/dumps/Test\_diff\_rnu\_02.dump, src/testdir/dumps/Test\_diff\_rnu\_03.dump, src/testdir/test\_diffmode.vim

Patch 8.2.1005  
Problem: Vim9: using TRUE/FALSE/MAYBE for ctx\_skip is confusing.  
Solution: Use an enum value.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.1006  
Problem: Vim9: require unnecessary return statement.  
Solution: Improve the use of the had\_return flag. (closes #6270)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_disassemble.vim, src/testdir/test\_vim9\_func.vim

Patch 8.2.1007  
Problem: Completion doesn't work after ":r ++arg !".  
Solution: Skip over "++arg". (Christian Brabandt, closes #6275, closes #6258)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

Patch 8.2.1008  
Problem: Vim9: no test for disassembling newly added instructions.  
Solution: Add a function and check disassembly.

Files: src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.1009  
Problem: Vim9: some failures not checked for.  
Solution: Add test cases. Remove unused code.  
Files: src/testdir/test\_vim9\_script.vim, src/vim9execute.c

Patch 8.2.1010  
Problem: Build failure in libvterm with debug enabled. (John Little)  
Solution: Use "->" instead of ".".  
Files: src/libvterm/src/state.c

Patch 8.2.1011  
Problem: Vim9: some code not tested.  
Solution: Add a few more test cases. Reorder checks for clearer error.  
Remove unreachable code.  
Files: src/evalvars.c, src/vim9script.c, src/vim9execute.c,  
src/proto/vim9script.pro, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.1012  
Problem: Vim9: cannot declare single character script variables.  
Solution: Don't see "b:", "s:", etc. as namespace. Fix item size of  
sn\_var\_vals.  
Files: src/vim9script.c, src/scriptfile.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.1013  
Problem: Channel tests can be a bit flaky.  
Solution: Set the g:test\_is\_flaky flag in SetUp().  
Files: src/testdir/test\_channel.vim

Patch 8.2.1014  
Problem: Using "name" for a string result is confusing.  
Solution: Rename to "end".  
Files: src/typval.c

Patch 8.2.1015  
Problem: Popup filter gets key with modifier prepended when using  
modifyOtherKeys.  
Solution: Remove the shift modifier when it is included in the key, also  
when the Alt or Meta modifier is used.  
Files: src/term.c, src/misc2.c, src/testdir/test\_popupwin.vim

Patch 8.2.1016  
Problem: Vim9: test fails when channel feature is missing.  
Solution: Process an :if command when skipping  
Files: src/vim9compile.c

Patch 8.2.1017  
Problem: Appveyor output doesn't show MinGW console features.  
Solution: List the features of the console build.  
Files: ci/appveyor.bat

Patch 8.2.1018

Problem: Typo in enum value. (James McCoy)  
Solution: Fix the typo.  
Files: src/vim9compile.c

Patch 8.2.1019

Problem: Mapping <M-S-a> does not work in the GUI.  
Solution: Move the logic to remove the shift modifier to may\_remove\_shift\_modifier() and also use it in the GUI.  
Files: src/gui\_gtk\_x11.c, src/misc2.c, src/proto/misc2.pro, src/term.c

Patch 8.2.1020

Problem: Popupwin test fails in the GUI.  
Solution: Send GUI byte sequence for <C-S-a>.  
Files: src/testdir/test\_popupwin.vim

Patch 8.2.1021

Problem: Ruby interface not tested enough.  
Solution: Add a couple more tests. (Dominique Pellé, closes #6301)  
Files: src/testdir/test\_ruby.vim

Patch 8.2.1022

Problem: Various parts of code not covered by tests.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #6300)  
Files: src/testdir/test\_blob.vim, src/testdir/test\_coptions.vim, src/testdir/test\_digraph.vim, src/testdir/test\_edit.vim, src/testdir/test\_iminsert.vim, src/testdir/test\_paste.vim, src/testdir/test\_prompt\_buffer.vim, src/testdir/test\_selectmode.vim, src/testdir/test\_tabpage.vim, src/testdir/test\_tagjump.vim, src/testdir/test\_textformat.vim, src/testdir/test\_viminfo.vim, src/testdir/test\_virtualedit.vim, src/testdir/test\_visual.vim

Patch 8.2.1023

Problem: Vim9: redefining a function uses a new index every time.  
Solution: When redefining a function clear the contents and re-use the index.  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/userfunc.c, src/structs.h, src/eval.c, src/evalvars.c, src/vim9execute.c

Patch 8.2.1024

Problem: Vim9: no error for using "let g:var = val".  
Solution: Add an error.  
Files: src/evalvars.c, src/globals.h, src/structs.h, src/vim9compile.c, src/scriptfile.c, src/userfunc.c, src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_disassemble.vim, src/testdir/test\_vim9\_func.vim

Patch 8.2.1025

Problem: Tabpage menu and tabline not sufficiently tested.  
Solution: Add tests. (Yegappan Lakshmanan, closes #6307)  
Files: src/testdir/test\_digraph.vim, src/testdir/test\_tabpage.vim

Patch 8.2.1026

Problem: Vim9: cannot break the line after "->".  
Solution: Check for a continuation line after "->", "[" and ".". Ignore trailing white space.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1027

Problem: GUI: multibyte characters do not work in a terminal.  
Solution: Do not assume a key is one byte. (closes #6304)  
Files: src/gui\_gtk\_x11.c, src/gui\_x11.c

#### Patch 8.2.1028

Problem: Vim9: no error for declaring buffer, window, etc. variable.  
Solution: Give an error. Unify the error messages.  
Files: src/evalvars.c, src/globals.h, src/vim9compile.c, src/proto/vim9compile.pro, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1029

Problem: Vim9: cannot chain function calls with -> at line start.  
Solution: Peek ahead for a following line starting with "->". (closes #6306)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1030

Problem: Reducing size of a terminal window may cause a crash.  
Solution: Make sure the row and column don't become negative. (closes #6273)  
Files: src/libvterm/src/state.c, src/libvterm/src/screen.c

#### Patch 8.2.1031

Problem: Build failure with Perl5.32.  
Solution: Define a few more functions. (Felix Yan, closes #6310)  
Files: src/if\_perl.xs

#### Patch 8.2.1032

Problem: Error message for declaring a variable cannot be translated.  
Solution: Enclose in \_(). Make environment variable a separate message.  
Files: src/globals.h, src/vim9compile.c

#### Patch 8.2.1033

Problem: Not easy to read the test time in the test output.  
Solution: Align the times. Make slow tests bold.  
Files: src/testdir/runtest.vim

#### Patch 8.2.1034

Problem: Compiler warning for uninitialized variables.  
Solution: Add initializations. (John Marriott)  
Files: src/vim9compile.c

#### Patch 8.2.1035

Problem: setreg() does not always clear the register.  
Solution: Clear the register if the dict argument is empty. (Andy Massimino, closes #3370)  
Files: src/evalfunc.c, src/testdir/test\_registers.vim

#### Patch 8.2.1036

Problem: Popupwin test fails sometimes.  
Solution: Use WaitForAssert() instead of a sleep.  
Files: src/testdir/test\_popupwin.vim

#### Patch 8.2.1037

Problem: Vim9: crash when using line continuation inside :def.  
Solution: Check for no more lines available.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1038

Problem: Popupwin test fails.  
Solution: Fix WaitForAssert() argument.  
Files: src/testdir/test\_popupwin.vim

#### Patch 8.2.1039

Problem: Cannot put NUL byte on clipboard.  
Solution: Use the text length. (Christian Brabandt, closes #6312, closes #6149)  
Files: src/winclip.c, src/testdir/test\_registers.vim

#### Patch 8.2.1040

Problem: Not enough testing for movement commands.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #6313)  
Files: src/testdir/test\_cursor\_func.vim, src/testdir/test\_functions.vim, src/testdir/test\_gf.vim, src/testdir/test\_normal.vim, src/testdir/test\_options.vim, src/testdir/test\_quickfix.vim

#### Patch 8.2.1041

Problem: Test summary is missing executed count.  
Solution: Adjust pattern used for counting.  
Files: src/testdir/summarize.vim

#### Patch 8.2.1042

Problem: Vim9: cannot put an operator on the next line.  
Solution: Require a colon before a range to see if that causes problems.  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/ex\_docmd.c, src/globals.h, src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1043

Problem: %a item in 'statusline' not tested.  
Solution: Add a test. (Dominique Pellé, closes #6318)  
Files: src/testdir/test\_statusline.vim

#### Patch 8.2.1044

Problem: Not all systemd file types are recognized.  
Solution: Match several more files. (Guido Cella, closes #6319)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.1045

Problem: Vim9: line break before operator does not work.  
Solution: Peek the next line for an operator.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1046

Problem: Insufficient tests for src/buffer.c.  
Solution: Add more tests. Move comments related tests to a separate file.  
(Yegappan Lakshmanan, closes #6325)  
Files: src/testdir/Make\_all.mak, src/testdir/test\_buffer.vim,  
src/testdir/test\_cmdline.vim, src/testdir/test\_comments.vim,  
src/testdir/test\_normal.vim, src/testdir/test\_textformat.vim

Patch 8.2.1047

Problem: Vim9: script cannot use line continuation like in a :def function.  
Solution: Pass the getline function pointer to the eval() functions. Use it  
for addition and multiplication operators.  
Files: src/vim.h, src/structs.h, src/globals.h, src/ex\_eval.c,  
src/eval.c, src/proto/eval.pro, src/dict.c, src/evalfunc.c,  
src/evalvars.c, src/list.c, src/userfunc.c, src/scriptfile.c,  
src/proto/scriptfile.pro, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1048 (after 8.2.1047)

Problem: Build failure without the eval feature.  
Solution: Add dummy typedef.  
Files: src/structs.h

Patch 8.2.1049 (after 8.2.1047)

Problem: Vim9: leaking memory when using continuation line.  
Solution: Keep a pointer to the continuation line in evalarg\_T. Centralize  
checking for a next command.  
Files: src/structs.h, src/eval.c, src/proto/eval.pro, src/beval.c,  
src/buffer.c, src/clientserver.c, src/evalvars.c, src/ex\_docmd.c,  
src/ex\_eval.c, src/filepath.c, src/findfile.c, src/fold.c,  
src/globals.h, src/if\_ole.cpp, src/if\_perl.xs, src/if\_tcl.c,

src/screen.c, src/userfunc.c

Patch 8.2.1050 (after 8.2.1049)

Problem: Missing change in struct.  
Solution: Add missing change.  
Files: src/ex\_cmds.h

Patch 8.2.1051

Problem: Crash when changing a list while using reduce() on it.  
Solution: Lock the list. (closes #6330)  
Files: src/list.c, src/testdir/test\_listdict.vim

Patch 8.2.1052

Problem: Build failure with older compilers.  
Solution: Move declaration to start of block.  
Files: src/eval.c

Patch 8.2.1053

Problem: Insufficient testing for **'statusline'** and **'tabline'**.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #6333)  
Files: src/testdir/test\_autocmd.vim, src/testdir/test\_statusline.vim,  
src/testdir/test\_tabline.vim

Patch 8.2.1054

Problem: Not so easy to pass a lua function to Vim.  
Solution: Convert a Lua function and closure to a Vim funcref. (Prabir Shrestha, closes #6246)  
Files: runtime/doc/if\_lua.txt, src/if\_lua.c, src/proto/userfunc.pro, src/structs.h, src/testdir/test\_lua.vim, src/userfunc.c

Patch 8.2.1055

Problem: No filetype set for pacman config files.  
Solution: Recognize pacman.conf and \*.hook. (Guido Cella, closes #6335)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.1056

Problem: Wrong display when mixing match conceal and syntax conceal.  
Solution: Adjust how conceal flags are used. (closes #6327, closes #6303)  
Files: src/drawline.c, src/highlight.c, src/testdir/test\_matchadd\_conceal.vim

Patch 8.2.1057 (after 8.2.1054)

Problem: Cannot build with dynamic Lua.  
Solution: Add dll variables.  
Files: src/if\_lua.c

Patch 8.2.1058

Problem: Multiline conceal causes display errors.  
Solution: Do not allow conceal cross over EOL. (closes #6326, closes #4854, closes #6302)  
Files: src/drawline.c, src/testdir/test\_conceal.vim, src/testdir/test\_diffmode.vim

Patch 8.2.1059

Problem: Crash when using :tabonly in an autocommand. (Yegappan Lakshmanan)  
Solution: Do not allow the autocommand window to be closed.  
Files: src/ex\_docmd.c, src/window.c, src/globals.h, src/testdir/test\_autocmd.vim

Patch 8.2.1060

Problem: Not all elinks files are recognized.  
Solution: Just check for "elinks.conf". (Guido Cella, closes #6337)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.1061

Problem: Insufficient testing for src/window.c.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #6345)  
Files: src/testdir/test\_excmd.vim, src/testdir/test\_gf.vim, src/testdir/test\_options.vim, src/testdir/test\_popupwin.vim, src/testdir/test\_quickfix.vim, src/testdir/test\_tabpage.vim, src/testdir/test\_tagjump.vim, src/testdir/test\_window\_cmd.vim, src/window.c

Patch 8.2.1062

Problem: Vim9: no line break allowed inside "cond ? val1 : val2".  
Solution: Check for operator after line break.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1063

Problem: Vim9: no line break allowed before || or &&  
Solution: Check for operator after line break.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1064

Problem: Vim9: no line break allowed before comparators.  
Solution: Check for comparator after line break.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1065

Problem: Vim9: no line break allowed inside a list.  
Solution: Handle line break inside a list in Vim9 script.  
Files: src/eval.c, src/proto/eval.pro, src/list.c, src/proto/list.pro,  
src/vim9compile.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_arglist.vim

Patch 8.2.1066

Problem: Lua arrays are zero based.  
Solution: Make Lua arrays one based. (Prabir Shrestha, closes #6347)  
**Note:** this is not backwards compatible.  
Files: runtime/doc/if\_lua.txt, src/if\_lua.c, src/testdir/test\_lua.vim

Patch 8.2.1067

Problem: Expression "!expr->func()" does not work.  
Solution: Apply plus and minus earlier. (closes #6348)  
Files: src/eval.c, src/proto/eval.pro, src/evalvars.c, src/userfunc.c,  
src/testdir/test\_expr.vim, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1068

Problem: Vim9: no line break allowed inside a dict.  
Solution: Handle line break inside a dict in Vim9 script.  
Files: src/eval.c, src/dict.c, src/proto/dict.pro,  
src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1069

Problem: Vim9: fail to check for white space in list.  
Solution: Add check for white space.  
Files: src/list.c

Patch 8.2.1070

Problem: Vim9: leaking memory when lacking white space in dict.  
Solution: Clear the typval.  
Files: src/dict.c

Patch 8.2.1071

Problem: Vim9: no line break allowed inside a lambda.  
Solution: Handle line break inside a lambda in Vim9 script.  
Files: src/eval.c, src/proto/eval.pro, src/evalvars.c, src/userfunc.c,  
src/proto/userfunc.pro, src/popupwin.c, src/vim9compile.c,  
src/ex\_eval.c, src/globals.h, src/structs.h,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.1072

Problem: Missing libvterm test.  
Solution: Sync with libvterm revision 768.  
Files: src/libvterm/src/state.c, src/libvterm/t/63screen\_resize.test

Patch 8.2.1073

Problem: Vim9: no line break allowed in () expression.  
Solution: Skip a line break.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1074

Problem: Vim9: no line break allowed after some operators.  
Solution: Skip a line break after the operator. Add eval\_may\_get\_next\_line() to simplify checking for a line break.  
Files: src/eval.c, src/proto/eval.pro, src/dict.c, src/list.c, src/userfunc.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1075

Problem: Vim9: no line break allowed in :echo expression.  
Solution: Skip linebreak.  
Files: src/eval.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1076

Problem: Vim9: no line break allowed in :if expression.  
Solution: Skip linebreak.  
Files: src/eval.c, src/proto/eval.pro, src/evalvars.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1077

Problem: No enough test coverage for highlighting.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #6351)  
Files: runtime/doc/syntax.txt, src/testdir/test\_cmdline.vim, src/testdir/test\_highlight.vim, src/testdir/test\_match.vim

Patch 8.2.1078

Problem: Highlight and match functionality together in one file.  
Solution: Move match functionality to a separate file. (Yegappan Lakshmanan, closes #6352)  
Files: Filelist, src/Make\_cyg\_ming.mak, src/Make\_morph.mak, src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/README.md, src/highlight.c, src/match.c, src/proto.h, src/proto/highlight.pro, src/proto/match.pro

Patch 8.2.1079

Problem: Vim9: no line break allowed in a while loop.  
Solution: Update stored loop lines when finding line breaks.  
Files: src/structs.h, src/globals.h, src/eval.c, src/evalvars.c, src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1080

Problem: Vim9: no line break allowed in a for loop.  
Solution: Skip line breaks in for command.  
Files: src/eval.c, src/ex\_eval.c, src/proto/eval.pro, src/userfunc.c,

src/structs.h, src/globals.h, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1081

Problem: Lua: cannot use table.insert() and table.remove().  
Solution: Add the list functions. (Prabir Shrestha, closes #6353)  
Files: runtime/doc/if\_lua.txt, src/if\_lua.c, src/testdir/test\_lua.vim

Patch 8.2.1082

Problem: Coverity complains about ignoring dict\_add() return value.  
Solution: Add (void).  
Files: src/evalfunc.c

Patch 8.2.1083

Problem: Crash when using reduce() on a NULL list.  
Solution: Only access the list when not NULL.  
Files: src/list.c, src/testdir/test\_listdict.vim

Patch 8.2.1084

Problem: Lua: registering function has useless code.  
Solution: Remove clearing grow arrays.  
Files: src/userfunc.c

Patch 8.2.1085

Problem: Coverity complains about ignoring dict\_add() return value.  
Solution: Add (void).  
Files: src/register.c

Patch 8.2.1086

Problem: Possibly using freed memory when text properties used when changing indent of a line.  
Solution: Compute the offset before calling ml\_replace().  
Files: src/indent.c

Patch 8.2.1087

Problem: Possible memory leak when file expansion fails.  
Solution: Clear the grow array when returning FAIL. Use an error message instead of an empty string.  
Files: src/filepath.c

Patch 8.2.1088

Problem: A very long translation might cause a buffer overflow.  
Solution: Truncate the message if needed.  
Files: src/fileio.c

Patch 8.2.1089

Problem: Coverity warns for pointer computation.  
Solution: Avoid computing a pointer to invalid memory.  
Files: src/spellfile.c

Patch 8.2.1090

Problem: May use NULL pointer when skipping over name.  
Solution: Always set ll\_name\_end.  
Files: src/eval.c

Patch 8.2.1091

Problem: No check if opening a pty works.  
Solution: Check for invalid file descriptor.  
Files: src/os\_unix.c

Patch 8.2.1092

Problem: Not checking if saving for undo succeeds.  
Solution: Bail out if u\_savesub() returns FAIL.  
Files: src/textprop.c

Patch 8.2.1093

Problem: Python: double free when adding item to dict fails.  
Solution: Remove vim\_free() call.  
Files: src/if\_py\_both.h

Patch 8.2.1094

Problem: Dead code in libvterm.  
Solution: Remove condition that is always true.  
Files: src/libvterm/src/pen.c

Patch 8.2.1095

Problem: May use pointer after freeing it when text properties are used.  
Solution: Update redo buffer before calling ml\_replace().  
Files: src/spellsuggest.c

Patch 8.2.1096

Problem: Vim9: return type of getqflist() is wrong.  
Solution: Let the return type depend on the arguments. Also for getloclist(). (closes #6357)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1097

Problem: Highlight code not sufficiently tested.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #6359)  
Files: src/testdir/test\_filter\_cmd.vim, src/testdir/test\_highlight.vim

Patch 8.2.1098

Problem: Vim9: cannot use line break in :throw argument.  
Solution: Check for line break.  
Files: src/eval.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1099

Problem: Vim9: cannot use line break in :cexpr argument.  
Solution: Check for line break.  
Files: src/eval.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1100

Problem: Vim9: cannot use line break in :execute, :echomsg and :echoerr argument.  
Solution: Check for line break.  
Files: src/eval.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1101

Problem: No error when using wrong arguments for setqflist() or

setloclist().  
Solution: Check for the error.  
Files: src/quickfix.c, src/testdir/test\_quickfix.vim

#### Patch 8.2.1102

Problem: Coverity gets confused by an unnecessary NULL check.  
Solution: Remove the check for NULL.  
Files: src/quickfix.c

#### Patch 8.2.1103

Problem: Coverity reports an unnecessary NULL check.  
Solution: Remove the check for NULL.  
Files: src/eval.c

#### Patch 8.2.1104

Problem: Coverity warns for possible NULL pointer use.  
Solution: Check "pbyts" is not NULL.  
Files: src/spellsuggest.c

#### Patch 8.2.1105

Problem: Insufficient test coverage for Lua.  
Solution: Add tests. (Yegappan Lakshmanan, closes #6368) Fix uncovered memory leak. Avoid unnecessary copy/free.  
Files: src/if\_lua.c, src/testdir/test\_lua.vim

#### Patch 8.2.1106

Problem: Crash when trying to use s: variable in typed command.  
Solution: Don't use the script index when not set. (Ken Takata, closes #6366)  
Files: src/vim9compile.c, src/testdir/test\_vimscript.vim

#### Patch 8.2.1107

Problem: **'imactivatefunc'** and **'imstatusfunc'** are not used in the GUI.  
Solution: Adjust the #ifdefs. (closes #6367)  
Files: runtime/doc/options.txt, src/gui\_xim.c, src/testdir/test\_iminsert.vim

#### Patch 8.2.1108

Problem: Mouse left-right scroll is not supported in terminal window.  
Solution: Implement mouse codes 6 and 7. (Trygve Aaberge, closes #6363)  
Files: src/libvterm/src/mouse.c, src/mouse.c, src/terminal.c, src/testdir/mouse.vim, src/testdir/test\_termcodes.vim

#### Patch 8.2.1109 (after 8.2.1106)

Problem: Still crashing when using s:variable.  
Solution: Remove assignment. (Ken Takata)  
Files: src/vim9compile.c

#### Patch 8.2.1110

Problem: Vim9: line continuation does not work in function arguments.  
Solution: Pass "evalarg" to get\_func\_tv(). Fix seeing double quoted string as comment.  
Files: src/userfunc.c, src/proto/userfunc.pro, src/eval.c, src/ex\_eval.c, src/list.c, src/dict.c, src/proto/eval.pro,

src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim

Patch 8.2.1111

Problem: Inconsistent naming of get\_list\_tv() and eval\_dict().  
Solution: Rename get\_list\_tv() to eval\_list(). Similarly for eval\_number(), eval\_string(), eval\_lit\_string() and a few others.  
Files: src/eval.c, src/list.c, src/proto/list.pro, src/vim9compile.c, src/typval.c, src/proto/typval.pro, src/vim9script.c, src/evalfunc.c, src/evalvars.c, src/proto/evalvars.pro, src/vim9execute.c

Patch 8.2.1112

Problem: Vim9: no line continuation allowed in method call.  
Solution: Handle line continuation in expression before method call.  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_cmd.vim, src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1113

Problem: No test for verbose output of :call.  
Solution: Add a test.  
Files: src/testdir/test\_user\_func.vim

Patch 8.2.1114

Problem: Terminal test sometimes times out.  
Solution: Split the test in two parts.  
Files: src/testdir/Makefile, src/testdir/Make\_all.mak, src/testdir/term\_util.vim, src/testdir/test\_terminal.vim, src/testdir/test\_terminal2.vim

Patch 8.2.1115

Problem: Iminsert test fails when compiled with VIMDLL.  
Solution: Change condition. (Ken Takata, closes #6376)  
Files: src/testdir/test\_iminsert.vim

Patch 8.2.1116

Problem: Vim9: parsing command checks for list twice.  
Solution: Adjust how a command is parsed.  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1117

Problem: Coverity warns for using uninitialized field.  
Solution: Initialize v\_lock.  
Files: src/if\_lua.c

Patch 8.2.1118

Problem: Condition can never be true, dead code.  
Solution: Remove the dead code.  
Files: src/move.c

Patch 8.2.1119

Problem: Configure fails with Xcode 12 beta.  
Solution: use "return" instead of "exit()". (Nico Weber, closes #6381)  
Files: src/configure.ac, src/auto/configure

Patch 8.2.1120

Problem: Python code not tested properly.  
Solution: Add more tests and convert old-style test into new-style test.  
(Yegappan Lakshmanan, closes #6370)  
Files: src/Makefile, src/testdir/Make\_all.mak, src/testdir/Make\_vms.mms,  
src/testdir/test86.in, src/testdir/test86.ok,  
src/testdir/test\_python2.vim

Patch 8.2.1121

Problem: Command completion not working after ++arg.  
Solution: Move skipping up. (Christian Brabandt, closes #6382)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

Patch 8.2.1122

Problem: Vim9: line continuation in dict member not recognized.  
Solution: Check for line continuation.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1123

Problem: Python 3 test is old style.  
Solution: Turn into new style test. (Yegappan Lakshmanan, closes #6385)  
Files: src/Makefile, src/testdir/Make\_all.mak, src/testdir/Make\_vms.mms,  
src/testdir/test87.in, src/testdir/test87.ok,  
src/testdir/test\_python2.vim, src/testdir/test\_python3.vim

Patch 8.2.1124

Problem: Vim9: no line break allowed in :import command.  
Solution: Skip over line breaks.  
Files: src/vim9script.c, src/proto/vim9script.pro, src/vim9compile.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.1125

Problem: Vim9: double quote can be a string or a comment.  
Solution: Only support comments starting with # to avoid confusion.  
Files: src/eval.c, src/proto/eval.pro, src/dict.c, src/list.c,  
src/vim9script.c

Patch 8.2.1126

Problem: Vim9: using :copen causes an error.  
Solution: Add flag LET\_NO\_COMMAND in set\_var().  
Files: src/evalvars.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1127

Problem: Vim9: getting a dict member may not work.  
Solution: Clear the dict only after copying the item. (closes #6390)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1128

Problem: The write message mentions characters, but it's actually bytes.  
Solution: Change "C" to "B" and "characters" to "bytes".  
Files: runtime/doc/options.txt, src/fileio.c,  
src/testdir/test\_cscope.vim, src/testdir/test\_netbeans.vim,  
src/testdir/dumps/Test\_diff\_syntax\_1.dump,

src/testdir/dumps/Test\_long\_file\_name\_1.dump,  
src/testdir/dumps/Test\_display\_unprintable\_01.dump,  
src/testdir/dumps/Test\_tselect\_1.dump

Patch 8.2.1129

Problem: Vim9: bar not recognized after not compiled command.  
Solution: Check for bar for commands where this is possible. (closes #6391)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1130

Problem: Vim9: bar not recognized after function call  
Solution: Skip whitespace. (closes #6391)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1131

Problem: Vim9: error message for returning a value in a function that does not return anything is not clear.  
Solution: Add a specific message.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1132

Problem: Vim9: return type of repeat() is not specific enough.  
Solution: Return the type of the first argument. (closes #6395)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1133

Problem: Vim9: return type of add() is not specific enough.  
Solution: Return the type of the first argument. (closes #6395)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1134

Problem: Vim9: getting a list member may not work.  
Solution: Clear the list only after copying the item. (closes #6393)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1135

Problem: Vim9: getting a dict member may not work.  
Solution: Clear the dict only after copying the item.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1136

Problem: Vim9: return type of argv() is always any.  
Solution: Use list<string> if there is no argument.  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1137

Problem: Vim9: modifiers not cleared after compiling function.  
Solution: Clear command modifiers. (closes #6396)  
Files: src/vim9compile.c, src/ex\_docmd.c, src/proto/ex\_docmd.pro,  
src/testdir/test\_vim9\_func.vim,  
src/testdir/dumps/Test\_vim9\_silent\_echo.dump

Patch 8.2.1138

Problem: Vim9: return type of copy() and deepcopy() is any.

Solution: Use type of the argument.  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1139 (after 8.2.1137)  
Problem: Vim9: test for silent echo fails in some environments.  
Solution: Use :function instead of :def.  
Files: src/testdir/test\_vim9\_func.vim

Patch 8.2.1140  
Problem: Vim9: return type of extend() is any.  
Solution: Use type of the argument.  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1141  
Problem: Vim9: return type of filter() is any.  
Solution: Use type of the argument.  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1142  
Problem: Vim9: return type of insert() is any.  
Solution: Use type of the first argument.  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1143  
Problem: Vim9: return type of remove() is any.  
Solution: Use the member type of the first argument, if known.  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1144  
Problem: Vim9: return type of reverse() is any.  
Solution: Use the type of the first argument.  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1145  
Problem: Vim9: "for" only accepts a list at compile time.  
Solution: Also accept a list at runtime.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.1146  
Problem: Not enough testing for Python.  
Solution: Add more tests. Fix uncovered problems. (Yegappan Lakshmanan,  
closes #6392)  
Files: src/if\_py\_both.h, src/if\_python3.c, src/testdir/shared.vim,  
src/testdir/test\_python2.vim, src/testdir/test\_python3.vim

Patch 8.2.1147  
Problem: :confirm may happen in cooked mode. (Jason Franklin)  
Solution: Switch to raw mode before prompting. (Brandon Pfeifer)  
Files: src/message.c, src/testdir/test\_excmod.vim

Patch 8.2.1148  
Problem: Warning for using int instead of size\_t.  
Solution: Change "len" argument to size\_t. (Mike Williams)

Files: src/vim9compile.c, src/proto/vim9compile.pro, src/vim9script.c

Patch 8.2.1149

Problem: Vim9: :eval command not handled properly.

Solution: Compile the :eval command. (closes #6408)

Files: src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1150

Problem: ml\_get error when using Python. (Yegappan Lakshmanan)

Solution: Check the line number is not out of range. Call "Check" with "fromObj" instead of "from".

Files: src/if\_py\_both.h, src/testdir/test\_python2.vim, src/testdir/test\_python3.vim

Patch 8.2.1151

Problem: Insufficient test coverage for Python.

Solution: Add more test cases. (Yegappan Lakshmanan, closes #6415)

Files: src/testdir/test\_python2.vim, src/testdir/test\_python3.vim

Patch 8.2.1152

Problem: Vim9: function reference is missing script prefix.

Solution: Use the actual function name instead of the name searched for in the script context. (closes #6412)

Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1153

Problem: Vim9: script test fails on some systems.

Solution: Return proper value from Compare().

Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.1154

Problem: Vim9: crash when using imported function.

Solution: Check for a function type. Set the script context when calling a function. (closes #6412)

Files: src/evalvars.c, src/scriptfile.c, src/proto/scriptfile.pro, src/vim9execute.c, src/structs.h, src/testdir/test\_vim9\_script.vim

Patch 8.2.1155

Problem: Vim9: cannot handle line break inside lambda.

Solution: Pass the compilation context through. (closes #6407, closes #6409)

Files: src/structs.h, src/vim9compile.c, src/proto/vim9compile.pro, src/eval.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1156

Problem: Vim9: No error for invalid command in compiled function.

Solution: Handle CMD\_SIZE.

Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1157

Problem: Vim9: dict.name is not recognized as an expression.

Solution: Recognize ".name". (closes #6418)

Files: src/ex\_docmd.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1158 (after 8.2.1155)

Problem: Build error.  
Solution: Add missing change to globals.  
Files: src/globals.h

Patch 8.2.1159

Problem: Vim9: no error for missing space after a comma.  
Solution: Check for white space.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.1160

Problem: Vim9: memory leak in allocated types.  
Solution: Free the type pointers.  
Files: src/vim9script.c, src/userfunc.c, src/vim9compile.c,  
src/proto/vim9compile.pro

Patch 8.2.1161

Problem: Vim9: using freed memory.  
Solution: Put pointer back in evalarg instead of freeing it.  
Files: src/userfunc.c, src/vim9compile.c, src/eval.c, src/proto/eval.pro,  
src/structs.h

Patch 8.2.1162

Problem: Crash when using a lambda.  
Solution: Check for evalarg to be NULL.  
Files: src/userfunc.c

Patch 8.2.1163 (after 8.2.1161)

Problem: Build error.  
Solution: Add missing change to globals.  
Files: src/globals.h

Patch 8.2.1164

Problem: Text cleared by checking terminal properties not redrawn. (Alexey Radkov)  
Solution: Mark the screen characters as invalid. (closes #6422)  
Files: src/screen.c, src/proto/screen.pro, src/term.c

Patch 8.2.1165

Problem: Insufficient testing for the Tcl interface.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #6423)  
Files: src/testdir/test\_tcl.vim

Patch 8.2.1166

Problem: Once mouse move events are enabled getchar() returns them.  
Solution: Ignore K\_MOUSEMOVE in getchar(). (closes #6424)  
Files: runtime/doc/eval.txt, src/getchar.c

Patch 8.2.1167

Problem: Vim9: builtin function method call only supports first argument.  
Solution: Shift arguments when needed. (closes #6305, closes #6419)  
Files: src/evalfunc.c, src/vim9compile.c, src/vim9execute.c,  
src/vim9.h, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.1168

Problem: Wrong method argument for appendbuflineline().  
Solution: Use FEARG\_3.  
Files: src/evalfunc.c

Patch 8.2.1169

Problem: Write NUL past allocated space using corrupted spell file.  
(Markus Vervier)  
Solution: Init "c" every time.  
Files: src/spellfile.c

Patch 8.2.1170

Problem: Cursor off by one with block paste while '**virtualedit**' is "all".  
Solution: Adjust condition. (Hugo Gualandi, closes #6430)  
Files: src/register.c, src/testdir/test\_registers.vim

Patch 8.2.1171

Problem: Possible crash when out of memory.  
Solution: Check for NULL pointer. (Dominique Pellé, closes #6432)  
Files: src/syntax.c

Patch 8.2.1172

Problem: Error messages when doing "make clean" in the runtime/doc or  
src/tee directories.  
Solution: Use "rm -f".  
Files: runtime/doc/Makefile, src/tee/Makefile

Patch 8.2.1173

Problem: Tee doesn't build on some systems.  
Solution: Include header files. (Dominique Pelle, closes #6431)  
Files: src/tee/tee.c

Patch 8.2.1174

Problem: No test for the "recording @x" message.  
Solution: Add a test. (Dominique Pellé, closes #6427)  
Files: src/testdir/test\_registers.vim

Patch 8.2.1175

Problem: Vim9: Cannot split a line before ".member".  
Solution: Check for ".member" after line break.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1176

Problem: Vim9: not enough type checking in Vim9 script.  
Solution: Use same type checking as in a :def function.  
Files: src/vim9compile.c, src/proto/vim9compile.pro,  
src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1177

Problem: Terminal2 test sometimes hangs in the GUI.  
Solution: Move some tests to other files to further locate the problem.  
Set the GUI to a fixed screen size.  
Files: src/testdir/test\_terminal.vim, src/testdir/test\_terminal2.vim,

src/testdir/test\_terminal3.vim, src/testdir/Make\_all.mak,  
src/testdir/runtest.vim

Patch 8.2.1178

Problem: Vim9: filter function recognized as command modifier, leading to a crash.

Solution: Clear cmdmod after freeing items. Do not recognize a command modifier followed by non-white space. (closes #6434)

Files: src/ex\_docmd.c, src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1179

Problem: Test\_termwinscroll() sometimes hangs in the GUI.

Solution: Skip the test in the GUI.

Files: src/testdir/test\_terminal2.vim

Patch 8.2.1180

Problem: Build failure in small version.

Solution: Add #ifdef.

Files: src/ex\_docmd.c

Patch 8.2.1181

Problem: Json code not fully tested.

Solution: Add more test coverage. (Dominique Pellé, closes #6433)

Files: src/testdir/test\_json.vim

Patch 8.2.1182

Problem: Vim9: no check for whitespace after comma in lambda.

Solution: Give error if white space is missing.

Files: src/userfunc.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.1183

Problem: assert\_fails() checks the last error message.

Solution: Check the first error, it is more relevant. Fix all the tests that rely on the old behavior.

Files: runtime/doc/testing.txt, src/message.c, src/globals.h,  
src/testing.c, src/testdir/test\_autocmd.vim,  
src/testdir/test\_buffer.vim, src/testdir/test\_cd.vim,  
src/testdir/test\_channel.vim, src/testdir/test\_clientserver.vim,  
src/testdir/test\_cmdline.vim, src/testdir/test\_coptions.vim,  
src/testdir/test\_cscope.vim, src/if\_cscope.c,  
src/testdir/test\_excmd.vim, src/evalvars.c,  
src/testdir/test\_expr.vim, src/testdir/test\_functions.vim,  
src/testdir/test\_json.vim, src/testdir/test\_let.vim,  
src/testdir/test\_listdict.vim, src/testdir/test\_listener.vim,  
src/testdir/test\_match.vim, src/testdir/test\_menu.vim,  
src/testdir/test\_method.vim, src/testdir/test\_normal.vim,  
src/testdir/test\_popup.vim, src/testdir/test\_python2.vim,  
src/testdir/test\_python3.vim, src/testdir/test\_quickfix.vim,  
src/testdir/test\_random.vim, src/testdir/test\_search.vim,  
src/testdir/test\_signs.vim, src/testdir/test\_spell.vim,  
src/testdir/test\_substitute.vim, src/testdir/test\_syntax.vim,  
src/testdir/test\_tagjump.vim, src/testdir/test\_taglist.vim,  
src/testdir/test\_terminal.vim, src/testdir/test\_textprop.vim,

src/testdir/test\_trycatch.vim,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_func.vim, src/vim9compile.c,  
src/testdir/test\_vim9\_script.vim, src/testdir/test\_viminfo.vim,  
src/testdir/test\_winbuf\_close.vim,  
src/testdir/test\_window\_cmd.vim, src/testdir/test\_writefile.vim,  
src/testdir/test\_regexp\_latin.vim, src/testdir/test\_utf8.vim,  
src/testdir/test\_global.vim, src/testdir/test\_tagfunc.vim

Patch 8.2.1184 (after 8.2.1183)

Problem: Some tests fail.

Solution: Adjust tests for different assert\_fails() behavior. Remove unused variable.

Files: src/testdir/test\_assert.vim, src/testdir/test\_eval\_stuff.vim,  
src/evalvars.c

Patch 8.2.1185 (after 8.2.1183)

Problem: Some other tests fail.

Solution: Adjust tests for different assert\_fails() behavior.

Files: src/testdir/test\_lua.vim, src/testdir/test\_tcl.vim

Patch 8.2.1186

Problem: With SGR mouse codes balloon doesn't show up after click.

Solution: Add the MOUSE\_RELEASE bits to mouse\_code.

Files: src/mouse.c

Patch 8.2.1187

Problem: Terminal2 test sometimes hangs in the GUI on Travis.

Solution: Disable Test\_zz2\_terminal\_guioptions\_bang() for now.

Files: src/testdir/test\_terminal2.vim

Patch 8.2.1188

Problem: Memory leak with invalid json input.

Solution: Free all keys at the end. (Dominique Pellé, closes #6443,  
closes #6442)

Files: src/json.c, src/testdir/test\_json.vim

Patch 8.2.1189

Problem: Vim9: line continuation in lambda doesn't always work.

Solution: Do not use a local evalarg unless there isn't one. (closes #6439)

Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1190

Problem: Vim9: checking for Vim9 syntax is spread out.

Solution: Use in\_vim9script().

Files: src/vim9script.c, src/dict.c, src/eval.c, src/evalvars.c,  
src/ex\_docmd.c, src/list.c, src/scriptfile.c, src/userfunc.c

Patch 8.2.1191

Problem: Vim9: crash when function calls itself.

Solution: Add status UF\_COMPILING. (closes #6441)

Files: src/structs.h, src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1192

Problem: Lua test fails with older Lua version.  
Solution: Adjust expected error messages. (closes #6444)  
Files: src/testdir/test\_lua.vim

#### Patch 8.2.1193

Problem: Terminal window not redrawn when dragging a popup window over it.  
Solution: Redraw terminal window. (fixes #6438)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_term\_01.dump,  
src/testdir/dumps/Test\_popupwin\_term\_02.dump

#### Patch 8.2.1194

Problem: Test failure because shell prompt differs.  
Solution: Set the shell prompt.  
Files: src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_term\_01.dump,  
src/testdir/dumps/Test\_popupwin\_term\_02.dump

#### Patch 8.2.1195

Problem: Clientserver test fails on MS-Windows.  
Solution: Expect a different error message.  
Files: src/testdir/test\_clientserver.vim

#### Patch 8.2.1196

Problem: Build failure with normal features.  
Solution: Add #ifdef.  
Files: src/popupwin.c

#### Patch 8.2.1197

Problem: Clientserver test still fails on MS-Windows.  
Solution: Expect a different error message.  
Files: src/testdir/test\_clientserver.vim

#### Patch 8.2.1198

Problem: Terminal2 test sometimes hangs in the GUI on Travis.  
Solution: Move test function to terminal3 to see if the problem moves too.  
Files: src/testdir/test\_terminal2.vim, src/testdir/test\_terminal3.vim

#### Patch 8.2.1199

Problem: Not all assert functions are fully tested.  
Solution: Test more assert functions.  
Files: src/testing.c, src/testdir/test\_assert.vim

#### Patch 8.2.1200

Problem: Vim9: cannot disassemble a lambda function.  
Solution: Recognize "<lambda>123" as a function name.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.1201

Problem: Vim9: crash when passing number as dict key.  
Solution: Check key type to be string. (closes #6449)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1202

Problem: Vim9: crash when calling a closure from a builtin function.  
Solution: Use the current execution context. (closes #6441)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1203

Problem: Unused assignments in expression evaluation.  
Solution: Move declarations and assignments to inner blocks where possible.  
Files: src/eval.c

#### Patch 8.2.1204

Problem: Vim9: true and false not recognized in Vim9 script.  
Solution: Recognize true and false.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1205

Problem: Vim9: && and || work differently when not compiled.  
Solution: Keep the value.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1206

Problem: Vim9: crash in expr test when run in the GUI.  
Solution: Temporarily comment out two test lines.  
Files: src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1207

Problem: Vim9: crash in expr test when run in the GUI.  
Solution: Break out of loop over hashtab also when function got removed and added.  
Files: src/userfunc.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1208

Problem: Build failure.  
Solution: Add missing change.  
Files: src/structs.h

#### Patch 8.2.1209

Problem: Vim9: test failure.  
Solution: Add missing changes to hashtab.  
Files: src/hashtab.c

#### Patch 8.2.1210

Problem: Using ht\_used when looping through a hashtab is less reliable.  
Solution: Use ht\_changed in a few more places.  
Files: src/userfunc.c, src/if\_py\_both.h

#### Patch 8.2.1211 (after 8.2.1118)

Problem: Removed more than dead code.  
Solution: Put back the decrement.  
Files: src/move.c, src/testdir/test\_diffmode.vim

#### Patch 8.2.1212

Problem: Cannot build with Lua 5.4.  
Solution: Use luaL\_typeerror instead defining it. (closes #6454)  
Files: src/if\_lua.c

Patch 8.2.1213

Problem: Mouse codes not tested sufficiently.  
Solution: Add more tests for mouse codes. (closes #6436)  
Files: src/testdir/test\_termcodes.vim

Patch 8.2.1214

Problem: MS-Windows: default \_vimrc not correct in silent install mode.  
Solution: Add the LoadDefaultVimrc macro. (Ken Takata, closes #6451)  
Files: nsis/gvim.nsi

Patch 8.2.1215

Problem: Atari MiNT support is outdated.  
Solution: Nobody responded this code is still useful, so let's delete it.  
Files: Filelist, src/os\_mint.h, src/vim.h, src/Make\_mint.mak,  
src/digraph.c, src/fileio.c, src/memfile.c, src/os\_unix.c,  
src/term.c, READMEdir/README\_extra.txt, runtime/doc/os\_mint.txt,  
src/INSTALL

Patch 8.2.1216

Problem: Startup test fails.  
Solution: Adjust expected values for deleted lines.  
Files: src/testdir/test\_startup.vim

Patch 8.2.1217

Problem: Startup test depends on random source file.  
Solution: Write a test file to find quickfix errors in.  
Files: src/testdir/test\_startup.vim

Patch 8.2.1218

Problem: Vim9: cannot use **'text'**->func().  
Solution: Recognize string at start of command.  
Files: src/vim9compile.c, src/ex\_docmd.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1219

Problem: Symlink not followed if dirname ends in //.  
Solution: Resolve symlink earlier. (Tomáš Janoušek, closes #6454)  
Files: src/memline.c, src/testdir/test\_swap.vim

Patch 8.2.1220

Problem: memory access error when dragging a popup window over a buffer with folding.  
Solution: Avoid going over the end of the cache. (closes #6438)  
Files: src/mouse.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_term\_01.dump,  
src/testdir/dumps/Test\_popupwin\_term\_02.dump,  
src/testdir/dumps/Test\_popupwin\_term\_03.dump,  
src/testdir/dumps/Test\_popupwin\_term\_04.dump

Patch 8.2.1221

Problem: Memory leak when updating popup window.  
Solution: Clear search highlighting.  
Files: src/popupwin.c

Patch 8.2.1222

Problem: When using valgrind a Vim command started by a test uses the same log file name which gets overwritten.  
Solution: Fix regexp to rename the log file.  
Files: src/testdir/shared.vim

Patch 8.2.1223

Problem: Vim9: invalid type error for function default value.  
Solution: Use right argument index. (closes #6458)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1224

Problem: Vim9: arguments from partial are not used.  
Solution: Put the partial arguments on the stack. (closes #6460)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1225

Problem: Linker errors when building with dynamic Python 3.9.  
Solution: Add #defined items. (closes #6461)  
Files: src/if\_python3.c

Patch 8.2.1226

Problem: MS-Windows: windows positioning wrong when the taskbar is placed at the top or left of the screen.  
Solution: Use GetWindowRect and MoveWindow APIs. (Yukihiro Nakadaira, Ken Takata, closes #6455)  
Files: src/gui\_w32.c

Patch 8.2.1227

Problem: Vim9: allowing both quoted and # comments is confusing.  
Solution: Only support # comments in Vim9 script.  
Files: runtime/doc/vim9.txt, src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/vim9compile.c, src/testdir/test\_vim9\_disassemble.vim, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.1228

Problem: Scrollbars not flush against the window edges when maximised.  
Solution: Add padding. (Ken Takata, closes #5602, closes #6466)  
Files: src/gui.c, src/gui\_athena.c, src/gui\_gtk.c, src/gui\_haiku.cc, src/gui\_mac.c, src/gui\_motif.c, src/gui\_photon.c, src/gui\_w32.c, src/proto/gui\_athena.pro, src/proto/gui\_gtk.pro, src/proto/gui\_haiku.pro, src/proto/gui\_mac.pro, src/proto/gui\_motif.pro, src/proto/gui\_photon.pro, src/proto/gui\_w32.pro

Patch 8.2.1229

Problem: Build error without the eval feature.  
Solution: Declare starts\_with\_colon. Make function local.  
Files: src/ex\_docmd.c, src/proto/ex\_docmd.pro

Patch 8.2.1230

Problem: Vim9: list index error not caught by try/catch.  
Solution: Do not bail out if an error is inside try/catch. (closes #6462)

Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1231

Problem: MS-Windows: GUI code can be cleaned up.  
Solution: Do a bit of cleaning up. (Ken Takata, closes #6465)  
Files: src/gui\_w32.c, src/proto/gui\_w32.pro

Patch 8.2.1232

Problem: MS-Windows GUI: Snap cancelled by split command.  
Solution: Do not cancel Snap when splitting a window. (Ken Takata, closes #6467)  
Files: src/gui\_w32.c

Patch 8.2.1233

Problem: Vim9: various errors not caught by try/catch.  
Solution: Do not bail out if an error is inside try/catch.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1234

Problem: Lua build problem with old compiler.  
Solution: Move declarations to start of the block. (Taro Muraoka, closes #6477)  
Files: src/if\_lua.c

Patch 8.2.1235

Problem: Not all mouse codes covered by tests.  
Solution: Add more tests for the mouse. (Yegappan Lakshmanan, closes #6472)  
Files: src/testdir/mouse.vim, src/testdir/test\_termcodes.vim

Patch 8.2.1236

Problem: Vim9: a few errors not caught by try/catch.  
Solution: Do not bail out if an error is inside try/catch. Fix that a not matching catch doesn't jump to :endtry.  
Files: src/vim9compile.c, src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1237

Problem: Changing **'completepopup'** after opening a popup has no effect. (Jay Sitter)  
Solution: Close the popup when the options are changed. (closes #6471)  
Files: runtime/doc/options.txt, src/popupwin.c, src/proto/popupwin.pro, src/optionstr.c, src/testdir/test\_popupwin.vim, src/testdir/dumps/Test\_popupwin\_infopopup\_8.dump

Patch 8.2.1238

Problem: Vim9: a few remaining errors not caught by try/catch.  
Solution: Do not bail out if an error is inside try/catch.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1239

Problem: "maxwidth" in **'completepopup'** not obeyed. (Jay Sitter)  
Solution: Add separate field for value from option. (closes #6470)  
Files: src/structs.h, src/popupwin.c, src/popupmenu.c, src/testdir/dumps/Test\_popupwin\_infopopup\_9.dump

Patch 8.2.1240

Problem: GUI tests sometimes fail because of translations.  
Solution: Reload the menus without translation. (Taro Muraoka, closes #6486)  
Files: src/testdir/runtest.vim

Patch 8.2.1241

Problem: Cannot use getbufinfo() as a method.  
Solution: Support using getbufinfo() as a method. (closes #6458)  
Files: runtime/doc/eval.txt, src/evalfunc.c,  
src/testdir/test\_bufwintabinfo.vim

Patch 8.2.1242

Problem: Vim9: no error if calling a function with wrong argument type.  
Solution: Check types of arguments. (closes #6469)  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/vim9execute.c,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.1243

Problem: Vim9: cannot have a comment or empty line halfway a list at script level.  
Solution: Skip more than one line if needed.  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/eval.c,  
src/scriptfile.c

Patch 8.2.1244

Problem: Vim9: in lambda index assumes a list.  
Solution: Use the value type to decide about list or dict. (closes #6479)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1245

Problem: Build failure in tiny version.  
Solution: Add #ifdef.  
Files: src/scriptfile.c

Patch 8.2.1246

Problem: Vim9: comment after assignment doesn't work.  
Solution: Skip over white space. (closes #6481)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1247

Problem: Vim9: cannot index a character in a string.  
Solution: Add ISN\_STRINDEX instruction. (closes #6478)  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.1248

Problem: Netbeans test is flaky in the GUI.  
Solution: Filter out geometry messages. (Taro Muraoka, closes #6487)  
Files: src/testdir/test\_netbeans.vim

Patch 8.2.1249

Problem: Vim9: disassemble test fails.  
Solution: Change INDEX to LISTINDEX. Add test for STRINDEX.

Files: src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.1250

Problem: Vim9: cannot use the g:, b:, t: and w: namespaces.

Solution: Add instructions to push a dict for the namespaces. (closes #6480)

Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.1251

Problem: Vim9: warning for pointer usage, test failure undetected.

Solution: Fix pointer indirection. Give error when executing function failed for any reason. Fix instruction names.

Files: src/vim9execute.c, src/userfunc.c, src/proto/userfunc.pro

Patch 8.2.1252

Problem: ":marks" may show '<' and '>' mixed up.

Solution: Show the mark position as where '<' and '>' would jump.

Files: src/mark.c, src/testdir/test\_marks.vim

Patch 8.2.1253

Problem: CTRL-K in Insert mode gets <CursorHold> inserted. (Roland Puntaier)

Solution: Do not reset did\_cursorhold, restore it. (closes #6447)

Files: src/normal.c

Patch 8.2.1254

Problem: MS-Windows: regexp test may fail if 'iskeyword' set wrongly.

Solution: Override the 'iskeyword' value. (Taro Muraoka, closes #6502)

Files: src/testdir/test\_regexp\_utf8.vim

Patch 8.2.1255

Problem: Cannot use a lambda with quickfix functions.

Solution: Add support for lambda. (Yegappan Lakshmanan, closes #6499)

Files: runtime/doc/eval.txt, runtime/doc/options.txt,  
runtime/doc/quickfix.txt, src/channel.c, src/evalvars.c,  
src/optionstr.c, src/proto/evalvars.pro, src/proto/quickfix.pro,  
src/quickfix.c, src/testdir/test\_quickfix.vim

Patch 8.2.1256

Problem: Vim9: type wrong after getting dict item in lambda.

Solution: Set the type to "any" after enforcing dict type. (closes #6491)

Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1257

Problem: Vim9: list unpack doesn't work at the script level.

Solution: Detect unpack assignment better. (closes #6494)

Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1258 (after 8.2.1253)

Problem: CursorHold does not work well.a (Shane-XB-Qian)

Solution: Only restore did\_cursorhold when using :normal.

Files: src/normal.c

Patch 8.2.1259

Problem: Empty group in **'tabline'** may cause using an invalid pointer.  
Solution: Set the group start position. (closes #6505)  
Files: src/buffer.c, src/testdir/test\_tabline.vim

Patch 8.2.1260

Problem: There is no good test for CursorHold.  
Solution: Add a test. Remove duplicated test. (Yegappan Lakshmanan, closes #6503)  
Files: src/testdir/test\_autocmd.vim, src/testdir/test\_buffer.vim, src/testdir/test\_normal.vim

Patch 8.2.1261

Problem: Vim9: common type of function not tested.  
Solution: Add a test. Fix uncovered problems.  
Files: src/vim9compile.c, src/vim9execute.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1262

Problem: src/ex\_cmds.c file is too big.  
Solution: Move help related code to src/help.c. (Yegappan Lakshmanan, closes #6506)  
Files: Filelist, src/Make\_cyg\_ming.mak, src/Make\_morph.mak, src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/README.md, src/cmdexpand.c, src/ex\_cmds.c, src/help.c, src/proto.h, src/proto/ex\_cmds.pro, src/proto/help.pro

Patch 8.2.1263

Problem: Vim9: comparators use **'ignorecase'** in Vim9 script.  
Solution: Ignore **'ignorecase'**. Use true and false instead of 1 and 0. (closes #6497)  
Files: src/eval.c, src/typval.c, src/vim9execute.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1264

Problem: Terminal getwinpos() test is a bit flaky.  
Solution: Call getwinpos() a bit later.  
Files: src/testdir/test\_terminal3.vim

Patch 8.2.1265

Problem: Crash with EXITFREE when split() fails.  
Solution: Restore **'coptions'**.  
Files: src/evalfunc.c

Patch 8.2.1266 (after 8.2.1262)

Problem: Makefile preference were accidentally included.  
Solution: Revert the Makefile changes.  
Files: src/Makefile

Patch 8.2.1267

Problem: MS-Windows: tests may fail due to \$PROMPT value.  
Solution: Set \$PROMPT for testing. (Taro Muraoka, closes #6510)  
Files: src/testdir/runtest/vim

Patch 8.2.1268

Problem: Vim9: no error for using double quote comment after :func or :def.  
Solution: Only accept double quote when not in Vim9 script and not after :def. (closes #6483)  
Files: src/userfunc.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1269

Problem: Language and locale code spread out.  
Solution: Move relevant code to src/locale.c. (Yegappan Lakshmanan, closes #6509)  
Files: Filelist, src/Make\_cyg\_ming.mak, src/Make\_morph.mak, src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/README.md, src/ex\_cmds2.c, src/locale.c, src/main.c, src/proto.h, src/proto/ex\_cmds2.pro, src/proto/locale.pro

Patch 8.2.1270

Problem: Vim9: not skipping over function type declaration with only a return type.  
Solution: Skip over the return type. (issue #6507)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1271

Problem: Vim9: Error for Funcref function argument type.  
Solution: Find the actual function type if possible. (issue #6507)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1272

Problem: Vim9: type not checked if declaration also assigns value.  
Solution: Check the type. (issue #6507)  
Files: src/eval.c, src/vim9compile.c, src/proto/vim9compile.pro, src/vim9script.c, src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1273

Problem: MS-Windows: terminal test may leave file behind.  
Solution: Wait a moment for process to end before deleting the file. (Taro Muraoka, closes #6513)  
Files: src/testdir/test\_terminal.vim

Patch 8.2.1274

Problem: Vim9: no error for missing white space in assignment at script level.  
Solution: Check for white space. (closes #6495)  
Files: src/eval.c, src/evalvars.c, src/testdir/test\_vim9\_script.vim, src/testdir/test\_let.vim

Patch 8.2.1275

Problem: Vim9: compiler warning for buffer size.  
Solution: Change the offset from 10 to 15. (Dominique Pellé, closes #6518)  
Files: src/vim9script.c

Patch 8.2.1276

Problem: MS-Windows: system test may fail if more.exe is installed.  
Solution: Explicitly use more.com. (Taro Muraoka, Ken Takata, closes #6517)

Files: src/testdir/test\_system.vim

Patch 8.2.1277

Problem: Tests on Travis do not run with EXITFREE.

Solution: Add EXITFREE to all builds to uncover any mistakes.

Files: .travis.yml

Patch 8.2.1278

Problem: Vim9: line break after "->" only allowed in :def function.

Solution: Only allow line break after "->". (closes #6492)

Files: src/vim9compile.c, src/globals.h, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1279

Problem: Some tests on Travis have EXITFREE duplicated.

Solution: Remove EXITFREE from shadowopt. Add "shadow" to job name.

Files: .travis.yml

Patch 8.2.1280

Problem: Ex command error cannot contain an argument.

Solution: Add ex\_errmsg() and translate earlier. Use e\_trailing\_arg where possible.

Files: src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/buffer.c, src/ex\_eval.c, src/match.c, src/testdir/test\_tabpage.vim

Patch 8.2.1281

Problem: The "trailing characters" error can be hard to understand.

Solution: Add the trailing characters to the message.

Files: src/cmdhist.c, src/eval.c, src/evalfunc.c, src/evalvars.c, src/ex\_cmds.c, src/ex\_docmd.c, src/ex\_eval.c, src/json.c, src/menu.c, src/quickfix.c, src/sign.c, src/userfunc.c

Patch 8.2.1282

Problem: Vim9: crash when using CheckScriptFailure() in Test\_vim9script\_call\_fail\_decl().

Solution: Do not decrement the def\_functions len unless the function was newly added.

Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1283

Problem: Vim9: error for misplaced -> lacks argument.

Solution: Use the pointer before it was advanced.

Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1284

Problem: Vim9: skipping over type includes following white space, leading to an error for missing white space.

Solution: Do not skip over white space after the type.

Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1285

Problem: Vim9: argument types are not checked on assignment.

Solution: Check function argument types. (issue #6507)

Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1286

Problem: Vim9: No error when using a type on a window variable  
Solution: Recognize the syntax and give an error. (closes #6521)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1287

Problem: Vim9: crash when using an imported function.  
Solution: Add the function type to the imported entry. (closes #6522)  
Files: src/vim9script.c, src/vim9compile.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.1288

Problem: Vim9: cannot use mark in range.  
Solution: Use the flag that a colon was seen. (closes #6528)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1289

Problem: Crash when using a custom completion function.  
Solution: Initialize all of the expand\_T. (closes #6532)  
Files: src/cmdexpand.c

Patch 8.2.1290

Problem: Vim9: cannot replace a global function.  
Solution: Allow for "!" on a global function. (closes #6524) Also fix that  
:delfunc on a :def function only made it empty.  
Files: src/userfunc.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1291

Problem: Vim9: type of varargs items is not checked.  
Solution: Check the list item types. (closes #6523)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1292

Problem: AIDL filetype not recognized.  
Solution: Add filetype detection. (Dominique Pellé, closes #6533)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.1293

Problem: Vim9: :execute mixes up () expression and function call.  
Solution: Do not skip white space when looking for the "(" . (closes #6531)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1294

Problem: Vim9: error when using vim9script in TextYankPost.  
Solution: Use EX\_LOCKOK instead of the EX\_CMDWIN flag for command that can  
be used when text is locked. (closes #6529)  
Files: src/ex\_cmds.h, src/ex\_docmd.c

Patch 8.2.1295

Problem: Tests 44 and 99 are old style.  
Solution: Convert to new style tests. (Yegappan Lakshmanan, closes #6536)  
Files: src/Makefile, src/testdir/Make\_all.mak, src/testdir/Make\_vms.mms,  
src/testdir/test44.in, src/testdir/test44.ok,  
src/testdir/test99.in, src/testdir/test99.ok,

src/testdir/test\_regexp\_utf8.vim

Patch 8.2.1296

Problem: Some part of using **'smartcase'** was not tested.  
Solution: Add more tests. (Dominique Pellé, closes #6538)  
Files: src/testdir/test\_search.vim

Patch 8.2.1297

Problem: When a test fails it's often not easy to see what the call stack is.  
Solution: Add more entries from the call stack in the exception message.  
Files: runtime/doc/cmdline.txt, src/scriptfile.c,  
src/proto/scriptfile.pro, src/debugger.c, src/ex\_docmd.c,  
src/ex\_eval.c, src/message.c, src/testing.c,  
src/testdir/test\_expand\_func.vim

Patch 8.2.1298

Problem: Compiler warning for unused argument in small version.  
Solution: Add UNUSED.  
Files: src/scriptfile.c

Patch 8.2.1299

Problem: Compiler warning for using size\_t for int and void pointer.  
Solution: Add type casts.  
Files: src/scriptfile.c

Patch 8.2.1300

Problem: Vim9: optional argument type not parsed properly.  
Solution: Skip over the "?". (issue #6507)  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/evalvars.c,  
src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1301

Problem: Vim9: varargs argument type not parsed properly.  
Solution: Skip over the "...". (issue #6507)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1302

Problem: Vim9: varargs arg after optional arg does not work  
Solution: Check for the "...". (issue #6507)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1303

Problem: Calling popup\_setoptions() resets **'signcolumn'**.  
Solution: Only set **'signcolumn'** when creating the popup. (closes #6542)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim

Patch 8.2.1304

Problem: Debug backtrace isn't tested much.  
Solution: Add more specific tests. (Ben Jackson, closes #6540)  
Files: src/testdir/runtest.vim, src/testdir/test\_debugger.vim

Patch 8.2.1305

Problem: Some tests are still old style.

Solution: Convert tests 52 and 70 to new style. (Yegappan Lakshmanan, closes #6544) Fix error in FinishTesting().  
Files: src/testdir/runtest.vim, src/Makefile, src/testdir/Make\_all.mak, src/testdir/Make\_amiga.mak, src/testdir/Make\_vms.mms, src/testdir/test52.in, src/testdir/test52.ok, src/testdir/test70.in, src/testdir/test70.ok, src/testdir/test\_mzscheme.vim, src/testdir/test\_writefile.vim

#### Patch 8.2.1306

Problem: Checking for first character of dict key is inconsistent.  
Solution: Add eval\_isdictc(). (closes #6546)  
Files: src/eval.c, src/proto/eval.pro, src/vim9compile.c, src/testdir/test\_listdict.vim, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_let.vim

#### Patch 8.2.1307

Problem: popup window width does not include number, fold of sign column width.  
Solution: Take number, fold and sign column with into account.  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim, src/testdir/dumps/Test\_popupwin\_sign\_2.dump

#### Patch 8.2.1308

Problem: Vim9: accidentally using "x" causes Vim to exit.  
Solution: Disallow using ":x" or "xit" in Vim9 script. (closes #6399)  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/vim9script.c, src/proto/vim9script.pro, src/ex\_docmd.c, src/ex\_cmds.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1309

Problem: Build failure with tiny version.  
Solution: Add #ifdef.  
Files: src/ex\_cmds.c, src/ex\_docmd.c

#### Patch 8.2.1310

Problem: Configure with Xcode 12 fails to check for tgetent.  
Solution: Declare tgetent(). (Ozaki Kiichi, closes #6558)  
Files: src/configure.ac, src/auto/configure

#### Patch 8.2.1311

Problem: Test failures with legacy Vim script.  
Solution: Actually check for Vim9 script.  
Files: src/vim9script.c

#### Patch 8.2.1312

Problem: MS-Windows: terminal test may fail if dir.exe exists.  
Solution: Use dir.com. (Ken Takata, closes #6557)  
Files: src/testdir/test\_terminal3.vim

#### Patch 8.2.1313

Problem: Vim9 script: cannot assign to environment variable.  
Solution: Recognize environment variable assignment. (closes #6548) Also options and registers.  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1314

Problem: Vim9: rule for comment after :function is confusing.  
Solution: Allow double quoted comment after :function in vim9script.  
(closes #6556)  
Files: src/userfunc.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1315

Problem: MS-Windows: test log contains escape sequences.  
Solution: Do not use t\_md and t\_me but ANSI escape sequences. (Ken Takata,  
closes #6559)  
Files: src/testdir/runtest.vim

Patch 8.2.1316

Problem: Test 42 is still old style.  
Solution: Turn it into a new style test. (Yegappan Lakshmanan, closes #6561)  
Files: src/Makefile, src/testdir/Make\_all.mak, src/testdir/Make\_dos.mak,  
src/testdir/Make\_ming.mak, src/testdir/Make\_vms.mms,  
src/testdir/test42.in, src/testdir/test42.ok,  
src/testdir/test\_writefile.vim

Patch 8.2.1317

Problem: MS-Windows tests on AppVeyor are slow.  
Solution: Use GitHub Actions. (Ken Takata, closes #6569)  
Files: Filelist, .github/workflows/ci-windows.yaml, appveyor.yml,  
ci/appveyor.bat

Patch 8.2.1318

Problem: No status badge for Github CI.  
Solution: Add a badge.  
Files: README.md

Patch 8.2.1319

Problem: Status badge for Github CI has wrong link.  
Solution: Rename and use the right link  
Files: README.md, .github/workflows/ci-windows.yaml

Patch 8.2.1320

Problem: Vim9: cannot declare some single letter variables.  
Solution: Do not recognize a colon for a namespace for single letter  
variables. (closes #6547)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1321

Problem: GitHub CI also runs on tag push.  
Solution: Skip CI on push. (Ken Takata, closes #6571)  
Files: .github/workflows/ci-windows.yaml

Patch 8.2.1322

Problem: Vim9: method on double quoted string doesn't work.  
Solution: Recognize double quoted string. (closes #6562)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.1323

Problem: Vim9: invalid operators only rejected in :def function.  
Solution: Also reject them at script level. (closes #6564)  
Files: src/eval.c, src/vim9compile.c, src/proto/vim9compile.pro,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.1324

Problem: Vim9: line break after "=" does not work.  
Solution: Also allow for NUL after "=". (closes #6549)  
Files: src/evalvars.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1325

Problem: Vim9: using Vim9 script for autoload not tested.  
Solution: Add a test. Update help.  
Files: runtime/doc/vim9.txt, src/testdir/test\_autoload.vim,  
src/testdir/sautest/autoload/auto9.vim

Patch 8.2.1326

Problem: Vim9: skipping over white space after list.  
Solution: Do not skip white space, a following [] would be misinterpreted.  
(closes #6552) Fix a few side effects.  
Files: src/list.c, src/dict.c, src/eval.c, src/userfunc.c,  
src/testdir/test\_functions.vim, src/testdir/test\_gn.vim,  
src/testdir/test\_popupwin.vim, src/testdir/test\_tabpage.vim,  
src/testdir/test\_textprop.vim, src/testdir/test\_textobjects.vim

Patch 8.2.1327

Problem: Mac: configure can't find Tcl libraries.  
Solution: Adjust configure check. (closes #6575)  
Files: src/configure.ac, src/auto/configure

Patch 8.2.1328

Problem: No space allowed before comma in list.  
Solution: Legacy Vim script allows it. (closes #6577)  
Files: src/dict.c, src/list.c, src/testdir/test\_listdict.vim

Patch 8.2.1329

Problem: Vim9: cannot define global function inside :def function.  
Solution: Assign to global variable instead of local. (closes #6584)  
Files: src/vim9compile.c, src/userfunc.c, src/proto/userfunc.pro,  
src/vim9.h, src/vim9execute.c, src/structs.h,  
src/misc2.c, src/proto/misc2.pro, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.1330

Problem: Github workflow takes longer than needed.  
Solution: Do two test runs in parallel instead of sequentially. (Ken Takata,  
closes #6579)  
Files: .github/workflows/ci-windows.yaml

Patch 8.2.1331

Problem: Vim9: :echo with two lists doesn't work.  
Solution: Do not skip white space before []. (closes #6552)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1332

Problem: Vim9: memory leak when using nested global function.  
Solution: Delete the function when deleting the instruction. Disable test that still causes a leak.  
Files: src/vim9compile.c, src/userfunc.c, src/proto/userfunc.pro, src/testdir/test\_vim9\_func.vim

Patch 8.2.1333

Problem: Vim9: memory leak when using nested global function.  
Solution: Swap from and to when copying the lines.  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1334

Problem: Github workflow timeout needs tuning  
Solution: Use a 10 minute timeout. Fail when timing out. (Ken Takata, closes #6590)  
Files: .github/workflows/ci-windows.yaml

Patch 8.2.1335

Problem: **CTRL-C** in the GUI doesn't interrupt. (Sergey Vlasov)  
Solution: Recognize "C" with CTRL modifier as **CTRL-C**. (issue #6565)  
Files: src/gui.c, src/proto/gui.pro, src/gui\_gtk\_x11.c, src/gui\_x11.c, src/gui\_photon.c

Patch 8.2.1336 (after 8.2.1335)

Problem: Build failure on non-Unix systems.  
Solution: Add #ifdef.  
Files: src/gui.c

Patch 8.2.1337

Problem: Vim9: cannot use empty key in dict assignment.  
Solution: Allow empty key. (closes #6591)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1338

Problem: Vim9: assigning to script-local variable doesn't check type.  
Solution: Use the type. (issue #6591)  
Files: src/vim9compile.c, src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1339

Problem: Vim9: assigning to global dict variable doesn't work.  
Solution: Guess variable type based in index type. (issue #6591)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1340

Problem: Some tests fail on Cirrus CI and/or with FreeBSD.  
Solution: Make **'backupskip'** empty. Do not run tests as root. Check for directory when using viminfo. (Ozaki Kiichi, closes #6596)  
Files: .cirrus.yml, src/testdir/test\_backup.vim, src/testdir/test\_edit.vim, src/testdir/test\_viminfo.vim, src/testdir/test\_writefile.vim, src/viminfo.c

Patch 8.2.1341

Problem: Build failures.  
Solution: Add missing error message.  
Files: src/globals.h

Patch 8.2.1342

Problem: Vim9: accidentally using "x" gives a confusing error.  
Solution: Disallow using ":t" in Vim9 script. (issue #6399)  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/vim9script.c,  
src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1343

Problem: Vim9: cannot find global function when using g: when local  
function with the same name exists.  
Solution: Find global function when using g:.  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1344

Problem: Vim9: No test for trying to redefine global function.  
Solution: Add a test.  
Files: src/testdir/test\_vim9\_func.vim

Patch 8.2.1345

Problem: Redraw error when using visual block and scroll.  
Solution: Add check for w\_topline. (closes #6597)  
Files: src/drawscreen.c, src/testdir/test\_display.vim,  
src/testdir/dumps/Test\_display\_visual\_block\_scroll.dump

Patch 8.2.1346

Problem: Small build fails.  
Solution: Add #ifdef.  
Files: src/ex\_docmd.c

Patch 8.2.1347

Problem: Cannot easily get the script ID.  
Solution: Support expand('<SID>').  
Files: runtime/doc/map.txt, src/ex\_docmd.c,  
src/testdir/test\_expand\_func.vim

Patch 8.2.1348

Problem: Build failure without the eval feature.  
Solution: Add #ifdef.  
Files: src/ex\_docmd.c

Patch 8.2.1349

Problem: Vim9: can define a function with the name of an import.  
Solution: Disallow using an existing name. (closes #6585)  
Files: src/userfunc.c, src/vim9compile.c, src/globals.h,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.1350

Problem: Vim9: no test for error message when redefining function.  
Solution: Add a test.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.1351

Problem: Vim9: no proper error if using namespace for nested function.  
Solution: Specifically check for a namespace. (closes #6582)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1352

Problem: Vim9: no error for shadowing a script-local function by a nested function.  
Solution: Check for script-local function. (closes #6586)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1353

Problem: Crash when drawing double-wide character in terminal window.  
(Masato Nishihata)  
Solution: Check getcell() returning NULL. (issue #6141)  
Files: src/libvterm/src/screen.c, src/testdir/test\_terminal.vim

Patch 8.2.1354

Problem: Test 59 is old style.  
Solution: Convert into a new style test. (Yegappan Lakshmanan, closes #6604)  
Files: runtime/doc/eval.txt, src/Makefile, src/testdir/Make\_all.mak,  
src/testdir/Make\_vms.mms, src/testdir/test59.in,  
src/testdir/test59.ok, src/testdir/test\_spell\_utf8.vim

Patch 8.2.1355

Problem: Vim9: no error using :let for options and registers.  
Solution: Give an error. (closes #6568)  
Files: src/evalvars.c, src/vim9compile.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.1356

Problem: Vim9: cannot get the percent register.  
Solution: Check for readable registers instead of writable. (closes #6566)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1357

Problem: Vim9: cannot assign to / register.  
Solution: Adjust check for assignment. (issue #6566)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.1358

Problem: Vim9: test fails with +dnd is not available.  
Solution: Add condition.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.1359

Problem: Vim9: cannot assign to / register in Vim9 script.  
Solution: Adjust check for assignment in Vim9 script. (closes #6567)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1360

Problem: Stray error for white space after expression.

Solution: Ignore trailing white space. (closes #6608)  
Files: src/eval.c, src/testdir/test\_filter\_map.vim

#### Patch 8.2.1361

Problem: Error for white space after expression in assignment.  
Solution: Skip over white space. (closes #6617)  
Files: src/eval.c, src/testdir/test\_expr.vim

#### Patch 8.2.1362

Problem: Last entry of ":set term=xxx" overwritten by error message when '**cmdheight**' is two or more. (Tony Mechelynck)  
Solution: Output extra line breaks.  
Files: src/term.c, src/testdir/test\_termcodes.vim

#### Patch 8.2.1363

Problem: Test trying to run terminal when it is not supported.  
Solution: Check if Vim can be run in a terminal.  
Files: src/testdir/test\_termcodes.vim

#### Patch 8.2.1364

Problem: Invalid memory access when searching for raw string.  
Solution: Check for delimiter match before following quote. (closes #6578)  
Files: src/search.c

#### Patch 8.2.1365

Problem: Vim9: no error for missing white space around operator.  
Solution: Check for white space. (closes #6618)  
Files: src/eval.c, src/vim9compile.c, src/proto/vim9compile.pro,  
src/evalvars.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1366

Problem: Test 49 is old style.  
Solution: Convert several tests to new style. (Yegappan Lakshmanan, closes #6629)  
Files: src/testdir/script\_util.vim, src/testdir/test49.ok,  
src/testdir/test49.vim, src/testdir/test\_vimscript.vim

#### Patch 8.2.1367

Problem: Vim9: no error for missing white space around operator.  
Solution: Check for white space around \*, / and %.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1368

Problem: Vim9: no error for missing white space around operator.  
Solution: Check for white space around <, !=, etc.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1369

Problem: MS-Windows: autocommand test sometimes fails.  
Solution: Do not rely on the cat command.  
Files: src/testdir/test\_autocmd.vim

#### Patch 8.2.1370

Problem: MS-Windows: warning for using fstat() with stat\_T.  
Solution: use \_fstat64() if available. (Naruhiko Nishino, closes #6625)  
Files: src/macros.h

#### Patch 8.2.1371

Problem: Vim9: no error for missing white space around operator.  
Solution: Check for white space around && and ||.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1372

Problem: Vim9: no error for missing white space around operator.  
Solution: Check for white space around ? and :.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1373

Problem: Vim9: no error for assigning to non-existing script var.  
Solution: Check that in Vim9 script the variable was defined. (closes #6630)  
Files: src/vim9compile.c, src/userfunc.c, src/structs.h,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1374

Problem: Vim9: error for assigning empty list to script variable.  
Solution: Use t\_unknown for empty list member. (closes #6595)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1375

Problem: Vim9: method name with digit not accepted.  
Solution: Use eval\_isnamec() instead of eval\_isnamec1(). (closes #6613)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1376

Problem: Vim9: expression mapping causes error for using :import.  
Solution: Add EX\_LOCK\_OK to :import and :export. (closes #6606)  
Files: src/ex\_cmds.h, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1377

Problem: Triggering the ATTENTION prompt causes typeahead to be messed up.  
Solution: Increment tb\_change\_cnt. (closes #6541)  
Files: src/getchar.c

#### Patch 8.2.1378

Problem: Cannot put space between function name and paren.  
Solution: Allow this for backwards compatibility.  
Files: src/eval.c, src/testdir/test\_expr.vim,  
src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1379

Problem: Curly braces expression ending in " }" does not work.  
Solution: Skip over white space when checking for "}". (closes #6634)  
Files: src/dict.c, src/testdir/test\_eval\_stuff.vim

#### Patch 8.2.1380

Problem: Vim9: return type of getreg() is always a string.  
Solution: Use list of strings when there are three arguments. (closes #6633)

Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1381

Problem: MS-Windows: crash with Python 3.5 when stdin is redirected.  
Solution: Reconnect stdin. (Yasuhiro Matsumoto, Ken Takata, closes #6641)  
Files: src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/if\_python3.c

Patch 8.2.1382

Problem: Vim9: using :import in filetype plugin gives an error.  
Solution: Allow commands with the EX\_LOCK\_OK flag. (closes #6636)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1383

Problem: Test 49 is old style.  
Solution: Convert test cases to new style. (Yegappan Lakshmanan, closes #6638)  
Files: src/testdir/test49.ok, src/testdir/test49.vim, src/testdir/test\_vimscript.vim

Patch 8.2.1384

Problem: No ATTENTION prompt for :vimgrep first match file.  
Solution: When there is an existing swap file do not keep the dummy buffer. (closes #6649)  
Files: src/quickfix.c, src/testdir/runtest.vim, src/testdir/test\_quickfix.vim

Patch 8.2.1385

Problem: No testing on ARM.  
Solution: Add a test on Travis for ARM. (Ozaki Kiichi, closes #6615)  
Files: .travis.yml

Patch 8.2.1386

Problem: Backslash not removed after space in option with space in 'isfname'.  
Solution: Do remove backslash before space, also when it is in 'isfname'. (Yasuhiro Matsumoto, closes #6651)  
Files: src/option.c, src/testdir/test\_options.vim

Patch 8.2.1387

Problem: Vim9: cannot assign to single letter variable with type.  
Solution: Exclude the colon from the variable name. (closes #6647)  
Files: src/eval.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1388

Problem: Vim9: += only works for numbers.  
Solution: Use += as concatenate for a list. (closes #6646)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1389

Problem: File missing from the distribution.  
Solution: Add script\_util.vim to the list of distributed files.  
Files: Filelist

Patch 8.2.1390

Problem: Vim9: type error after storing an option value.  
Solution: Drop the type after a STOREOPT instruction. (closes #6632)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1391

Problem: Vim9: no error for shadowing a script function.  
Solution: Check for already defined items. (closes #6652)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1392

Problem: Vim9: error line number incorrect after skipping over comment lines.  
Solution: Insert empty lines for skipped lines.  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1393

Problem: Insufficient testing for script debugging.  
Solution: Add more tests. (Ben Jackson)  
Files: src/testdir/test\_debugger.vim

#### Patch 8.2.1394

Problem: Vim9: compiling a function interferes with command modifiers.  
Solution: Save and restore command modifiers. (closes #6658)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1395

Problem: Vim9: no error if declaring a funcref with a lower case letter.  
Solution: Check the name after the type is inferred. Fix confusing name.  
Files: src/vim9compile.c, src/dict.c, src/eval.c, src/evalvars.c,  
src/proto/evalvars.pro, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1396

Problem: Vim9: no error for unexpectedly returning a value.  
Solution: Only set the return type for lambda's. Make using function type in a function reference work.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1397

Problem: Vim9: return type of maparg() not adjusted for fourth argument.  
Solution: Check if fourth argument is present. (closes #6645)  
Files: src/evalfunc.c, src/testdir/test\_maparg.vim

#### Patch 8.2.1398

Problem: Autoload script sourced twice if sourced directly.  
Solution: Do not source an autoload script again. (issue #6644)  
Files: src/scriptfile.c, src/testdir/sautest/autoload/sourced.vim

#### Patch 8.2.1399

Problem: Vim9: may find imported item in wrong script.  
Solution: When looking up script-local function use the embedded script ID. (issue #6644)  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/userfunc.c,

src/testdir/test\_vim9\_script.vim

Patch 8.2.1400

Problem: Vim9: test does not delete written files.  
Solution: Correct file names.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.1401

Problem: Cannot jump to the last used tabpage.  
Solution: Add g<Tab> and tabpagr('#'). (Yegappan Lakshmanan, closes #6661, neovim #11626)  
Files: runtime/doc/eval.txt, runtime/doc/index.txt,  
runtime/doc/tabpage.txt, src/evalwindow.c, src/globals.h,  
src/normal.c, src/proto/window.pro, src/testdir/test\_tabpage.vim,  
src/window.c

Patch 8.2.1402

Problem: s390x tests always fail.  
Solution: Temporarily disable s390x tests.  
Files: .travis.yml

Patch 8.2.1403

Problem: Vim9: Vim highlighting fails in cmdline window if it uses Vim9 commands.  
Solution: Allow using :vim9script, :import and :export while in the cmdline window. (closes #6656)  
Files: src/ex\_cmds.h, src/testdir/test\_vim9\_script.vim

Patch 8.2.1404

Problem: Vim9: script test fails in the GUI.  
Solution: Use another key to map. Improve cleanup.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.1405

Problem: Vim9: vim9compile.c is getting too big.  
Solution: Split off type code to vim9type.c.  
Files: Filelist, src/vim9compile.c, src/proto/vim9compile.pro,  
src/vim9type.c, src/proto/vim9type.pro, src/proto.h,  
src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/Makefile

Patch 8.2.1406

Problem: Popupwindow lacks scrollbar if no "maxheight" is used.  
Solution: Compute the max height depending on the position. (closes #6664)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_toohigh\_1.dump,  
src/testdir/dumps/Test\_popupwin\_toohigh\_2.dump

Patch 8.2.1407

Problem: Vim9: type of list and dict only depends on first item.  
Solution: Use all items to decide about the type.  
Files: src/vim9compile.c, src/vim9type.c, src/proto/vim9type.pro,  
src/testdir/test\_vim9\_expr.vim, runtime/doc/vim9.txt

Patch 8.2.1408

Problem: Vim9: type casting not supported.  
Solution: Introduce type casting.  
Files: runtime/doc/vim9.txt, src/vim9compile.c,  
src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.1409

Problem: Npmrc and php.ini filetypes not recognized.  
Solution: Add filetype detection. (Doug Kearns)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.1410

Problem: Adding compiler plugin requires test change.  
Solution: Include compiler plugin and adjust test.  
Files: src/testdir/test\_compiler.vim, runtime/compiler/xo.vim

#### Patch 8.2.1411

Problem: when splitting a window localdir is copied but prevdir is not.  
Solution: Also copy prevdir. (closes #6667)  
Files: src/window.c, src/testdir/test\_cd.vim

#### Patch 8.2.1412

Problem: Vim: not operator does not result in boolean.  
Solution: Make type depend on operator. (issue 6678) Fix using "false" and "true" in Vim9 script.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1413 (after 8.2.1401)

Problem: Previous tab page not usable from an Ex command.  
Solution: Add the "#" argument for :tabnext et al. (Yegappan Lakshmanan, closes #6677)  
Files: runtime/doc/tabpage.txt, src/ex\_docmd.c, src/window.c,  
src/testdir/test\_tabpage.vim

#### Patch 8.2.1414

Problem: Popupwindow missing last couple of lines when cursor is in the first line.  
Solution: Compute the max height also when top aligned. (closes #6664)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_toohigh\_3.dump,  
src/testdir/dumps/Test\_popupwin\_nospace.dump

#### Patch 8.2.1415

Problem: Closing a popup window with **CTRL-C** interrupts 'statusline' if it calls a function.  
Solution: Reset got\_int while redrawing. (closes #6675)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_ctrl\_c.dump

#### Patch 8.2.1416

Problem: Vim9: boolean evaluation does not work as intended.  
Solution: Use tv2bool() in Vim9 script. (closes #6681)  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim, src/testdir/vim9.vim

Patch 8.2.1417

Problem: Test 49 is old style.  
Solution: Convert more parts to new style test. (Yegappan Lakshmanan, closes #6682)  
Files: src/testdir/test49.ok, src/testdir/test49.vim, src/testdir/test\_vimscript.vim

Patch 8.2.1418

Problem: Vim9: invalid error for missing white space after function.  
Solution: Do not skip over white space. (closes #6679)  
Files: src/userfunc.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1419

Problem: Vim9: not operator applied too early.  
Solution: Implement the "numeric\_only" argument. (closes #6680)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1420

Problem: Test 49 is old style.  
Solution: Convert remaining parts to new style. Remove obsolete items. (Yegappan Lakshmanan, closes #6683)  
Files: Filelist, runtime/doc/testing.txt, src/Make\_mvc.mak, src/Makefile, src/testdir/Make\_all.mak, src/testdir/Make\_amiga.mak, src/testdir/Make\_dos.mak, src/testdir/Make\_ming.mak, src/testdir/Make\_vms.mms, src/testdir/Makefile, src/testdir/README.txt, src/testdir/test49.in, src/testdir/test49.ok, src/testdir/test49.vim, src/testdir/test\_quickfix.vim, src/testdir/test\_vimscript.vim

Patch 8.2.1421

Problem: Vim9: handling "+" and "-" before number differs from Vim script.  
Solution: Use the same sequence of commands.  
Files: src/vim9compile.c

Patch 8.2.1422

Problem: The Mac GUI implementation is outdated and probably doesn't even work.  
Solution: Remove the Mac GUI code. The MacVim project provides the supported Vim GUI version.  
Files: Filelist, src/gui\_mac.c, src/proto/gui\_mac.pro, src/proto.h, src/Makefile, src/configure.ac, src/auto/configure, src/evalfunc.c, src/fileio.c, src/gui.c, src/if\_mzsch.c, src/main.c, src/misc2.c, src/mouse.c, src/os\_mac\_conv.c, src/os\_unix.c, src/feature.h, src/globals.h, src/gui.h, src/option.h, src/optiondefs.h, src/os\_mac.h, src/structs.h, src/vim.h, src/INSTALLmac.txt

Patch 8.2.1423

Problem: Vim9: find global function when looking for script-local.  
Solution: Don't strip prefix if name starts with "s:". (closes #6688)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1424 (after 8.2.1422)

Problem: Mac build fails.

Solution: Adjust configure to not fall back to Athena. Adjust some other files.  
Files: src/configure.ac, src/auto/configure, src/os\_macosx.m, src/version.c

#### Patch 8.2.1425

Problem: Vim9: cannot use call() without :call.  
Solution: Do not skip over "call(". (closes #6689)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1426

Problem: Vim9: cannot call autoload function in :def function.  
Solution: Load the autoload script. (closes #6690)  
Files: src/vim9execute.c, src/vim9compile.c, src/scriptfile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1427

Problem: Vim9: cannot use a range with marks in :def function.  
Solution: Parse range after colon. (closes #6686)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.1428

Problem: Vim9: :def function does not abort on nested function error.  
Solution: Check whether an error message was given. (closes #6691)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1429

Problem: Vim9: no error for missing white after : in dict.  
Solution: Check for white space. (closes #6671) Also check that there is no white before the :.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1430

Problem: Vim9: error for missing comma instead of extra white space.  
Solution: Check if comma can be found after white space. (closes #6668)  
Also check for extra white space in literal dict. (closes #6670)  
Files: src/list.c, src/dict.c, src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1431

Problem: Vim9: no error for white space before comma in dict.  
Solution: Check for extra white space. (closes #6674)  
Files: src/vim9compile.c, src/dict.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1432

Problem: Various inconsistencies in test files.  
Solution: Add modelines where they were missing. Use Check commands instead of silently skipping over tests. Adjust indents and comments. (Ken Takata, closes #6695)  
Files: src/testdir/test\_arglist.vim, src/testdir/test\_assert.vim, src/testdir/test\_autochdir.vim, src/testdir/test\_autocmd.vim, src/testdir/test\_autoload.vim, src/testdir/test\_balloon.vim, src/testdir/test\_balloon\_gui.vim, src/testdir/test\_behave.vim,

#### Patch 8.2.1433

Problem: Vim9: cannot mingle comments in multi-line lambda.  
Solution: Skip over NULL lines. (closes #6694)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1434

Problem: Vim9: crash when lambda uses outer function argument.  
Solution: Set the flag that the outer context is used.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1435

Problem: Vim9: always converting to string for "." leads to mistakes.  
Solution: Only automatically convert simple types.  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/vim9.h,  
src/vim9execute.c, src/proto/vim9execute.pro, src/eval.c,  
src/evalfunc.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.1436

Problem: Function implementing :substitute has unexpected name.  
Solution: Rename from do\_sub() to ex\_substitute().  
Files: src/ex\_cmds.c, src/proto/ex\_cmds.pro, src/ex\_docmd.c,  
src/ex\_cmds.h

Patch 8.2.1437

Problem: Vim9: **'statusline'** is evaluated using Vim9 script syntax.  
Solution: Always use legacy script syntax.  
Files: src/eval.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1438

Problem: Missing tests for interrupting script execution from debugger.  
Solution: Add tests. (Yegappan Lakshmanan, closes #6697)  
Files: src/testdir/test\_debugger.vim

Patch 8.2.1439

Problem: Tiny and small builds have no test coverage.  
Solution: Restore tests that do not depend on the +eval feature.  
(Ken Takata, closes #6696)  
Files: .travis.yml, Filelist, Makefile, runtime/doc/testing.txt,  
src/Make\_mvc.mak, src/Makefile, src/testdir/Make\_all.mak,  
src/testdir/Make\_amiga.mak, src/testdir/Make\_dos.mak,  
src/testdir/Make\_ming.mak, src/testdir/Make\_vms.mms,  
src/testdir/Makefile, src/testdir/runtest.vim,  
src/testdir/test1.in, src/testdir/test1.ok, src/testdir/test20.in,  
src/testdir/test20.ok, src/testdir/test21.in,  
src/testdir/test21.ok, src/testdir/test22.in,  
src/testdir/test22.ok, src/testdir/test23.in,  
src/testdir/test23.ok, src/testdir/test24.in,  
src/testdir/test24.ok, src/testdir/test25.in,  
src/testdir/test25.ok, src/testdir/test26.in,  
src/testdir/test26.ok, src/testdir/test27.in,  
src/testdir/test27.ok, src/testdir/test\_options.vim

Patch 8.2.1440

Problem: Debugger code insufficiently tested.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #6700)  
Files: src/testdir/test\_debugger.vim, src/testdir/test\_vimscript.vim

Patch 8.2.1441

Problem: Running tests in tiny version gives error for summarize.vim.  
Solution: Set **'coptions'** to allow for line continuation. Restore  
redirecting test output to /dev/null.  
Files: src/testdir/summarize.vim, src/testdir/Makefile

Patch 8.2.1442

Problem: Outdated references to the Mac Carbon GUI.  
Solution: Remove or update references. (Yee Cheng Chin, closes #6703)  
Files: READMEdir/README\_extra.txt, src/Makefile, src/configure.ac,  
src/auto/configure, src/gui\_haiku.cc, src/os\_macosx.m,  
src/testdir/test\_iminsert.vim, src/vim.h

Patch 8.2.1443

Problem: Vim9: crash when interrupting a nested :def function.  
Solution: Push a dummy return value onto the stack. (closes #6701)  
Files: src/vim9execute.c

Patch 8.2.1444

Problem: Error messages are spread out and names can be confusing.  
Solution: Start moving error messages to a separate file and use clear names.  
Files: Filelist, src/vim.h, src/globals.h, src/errors.h, src/Makefile, src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/Make\_vms.mms, src/dict.c, src/evalvars.c, src/ex\_docmd.c, src/list.c, src/userfunc.c, src/vim9compile.c, src/vim9execute.c, src/vim9script.c, src/vim9type.c

#### Patch 8.2.1445

Problem: Vim9: function expanded name is cleared when sourcing a script again.  
Solution: Only clear the expanded name when deleting the function. (closes #6707)  
Files: src/userfunc.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1446

Problem: Vim9: line number in error message is not correct.  
Solution: Set SOURCING\_LNUM before calling emsg(). (closes #6708)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1447

Problem: Vim9: return type of keys() is list<any>.  
Solution: Should be list<string>. (closes #6711)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1448

Problem: Test 77a for VMS depends on small.vim which does not exist.  
Solution: Use the 'silent while 0' trick. (issue #6696)  
Files: src/testdir/test77a.in

#### Patch 8.2.1449

Problem: Some test makefiles delete files that are not generated.  
Solution: Remove the deletion commands.  
Files: src/testdir/Make\_dos.mak, src/testdir/Make\_ming.mak, src/testdir/Make\_amiga.mak, src/testdir/Make\_vms.mms

#### Patch 8.2.1450

Problem: Vim9: no check that script-local items don't become global.  
Solution: Add a test.  
Files: src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1451

Problem: Vim9: list type at script level only uses first item.  
Solution: Use all members, like in a compiled function. (closes #6712)  
Also for dictionary.  
Files: src/vim9type.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1452

Problem: Vim9: dead code in to\_name\_end().  
Solution: Remove check for lambda and dict, it won't be used.  
Files: src/vim9compile.c

#### Patch 8.2.1453

Problem: Vim9: failure to compile lambda not tested.  
Solution: Add a test case.  
Files: src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1454

Problem: Vim9: failure invoking lambda with wrong arguments.  
Solution: Handle invalid arguments. Add a test.  
Files: src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1455

Problem: Vim9: crash when using typecast before constant.  
Solution: Generate constant before checking type. Add tests.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1456

Problem: MS-Windows: test files are not deleted.  
Solution: use "del" instead of \$(DEL).  
Files: src/testdir/Make\_dos.mak

#### Patch 8.2.1457

Problem: Vim9: the output of :disassemble cannot be interrupted.  
Solution: Check got\_int. (closes #6715)  
Files: src/vim9execute.c

#### Patch 8.2.1458

Problem: .gawk files not recognized.  
Solution: Recognize .gawk files. (Doug Kearns)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.1459

Problem: Vim9: declaring a script variable at the script level does not infer the type.  
Solution: Get the type from the value. (closes #6716)  
Files: src/evalvars.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1460

Problem: Error messages are spread out.  
Solution: Move more messages into errors.h.  
Files: src/errors.h, src/globals.h, src/vim9compile.c, src/vim9execute.c,  
src/vim9script.c, src/vim9type.c, src/scriptfile.c, src/ex\_cmds.c,  
src/ex\_docmd.c, src/match.c, src/eval.c, src/evalvars.c,  
src/userfunc.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1461

Problem: Vim9: string indexes are counted in bytes.  
Solution: Use character indexes. (closes #6574)  
Files: runtime/doc/eval.txt, src/eval.c, src/proto/eval.pro,  
src/vim9execute.c, src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1462

Problem: Vim9: string slice not supported yet.

Solution: Add support for string slicing.  
Files: src/errors.h, src/vim9compile.c, src/vim9.h, src/vim9execute.c, src/eval.c, src/proto/eval.pro, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.1463

Problem: Vim9: list slice not supported yet.  
Solution: Add support for list slicing.  
Files: src/vim9compile.c, src/vim9.h, src/vim9execute.c, src/eval.c, src/list.c, src/proto/list.pro, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.1464

Problem: Vim9: build warning for unused variable.  
Solution: Delete the variable declaration.  
Files: src/vim9execute.c

#### Patch 8.2.1465

Problem: Vim9: subscript not handled properly.  
Solution: Adjust error message. Remove dead code. Disallow string to number conversion in scripts.  
Files: src/errors.h, src/vim9compile.c, src/vim9execute.c, src/eval.c, src/typval.c, src/list.c, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1466

Problem: Vim9: cannot index or slice a variable with type "any".  
Solution: Add runtime index and slice.  
Files: src/eval.c, src/proto/eval.pro, src/vim9compile.c, src/vim9execute.c, src/vim9.h, src/errors.h, src/list.c, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_disassemble.vim, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1467

Problem: Vim9: :echomsg doesn't like a dict argument.  
Solution: Convert arguments like in legacy script. (closes #6717)  
Files: src/vim9compile.c, src/vim9execute.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1468

Problem: Vim9: invalid error for missing white space.  
Solution: Don't skip over white space after index. (closes #6718)  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1469

Problem: Vim9: cannot assign string to string option.  
Solution: Change checks for option value. (closes #6720)  
Files: src/evalvars.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1470

Problem: Errors in spell file not tested.  
Solution: Add test for spell file errors. (Yegappan Lakshmanan, closes #6721)

Files: src/testdir/test\_spellfile.vim

Patch 8.2.1471

Problem: :const only locks the variable, not the value.

Solution: Lock the value as ":lockvar 1 var" would do. (closes #6719)

Files: src/evalvars.c, src/testdir/test\_const.vim

Patch 8.2.1472

Problem: ":argdel" does not work like "::.argdel" as documented. (Alexey Demin)

Solution: Make ":argdel" work like "::.argdel". (closes #6727)  
Also fix giving the error "% more files to edit".

Files: src/arglist.c, src/ex\_docmd.c, src/testdir/test\_arglist.vim

Patch 8.2.1473

Problem: Items in a list given to :const can still be modified.

Solution: Work like ":lockvar! name" but don't lock referenced items.  
Make locking a blob work.

Files: runtime/doc/eval.txt, src/evalvars.c, src/eval.c,  
src/testdir/test\_const.vim

Patch 8.2.1474

Problem: /usr/lib/udev/rules.d not recognized as udevrules.

Solution: Adjust match pattern. (Haochen Tong, closes 36722)

Files: runtime/autoload/dist/ft.vim, src/testdir/test\_filetype.vim

Patch 8.2.1475

Problem: Vim9: can't use v:true for option flags.

Solution: Add tv\_get\_bool\_chk(). (closes #6725)

Files: src/typval.c, src/proto/typval.pro, src/channel.c

Patch 8.2.1476 (after 8.2.1474)

Problem: Filetype test fails on MS-Windows.

Solution: Remove "^" from pattern.

Files: runtime/autoload/dist/ft.vim

Patch 8.2.1477

Problem: Vim9: error when using bufnr('%').

Solution: Don't give an error for using a string argument. (closes #6723)

Files: src/evalbuffer.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1478

Problem: Vim9: cannot use "true" for some popup options.

Solution: Add dict\_get\_bool(). (closes #6725)

Files: src/dict.c, src/proto/dict.pro, src/popupwin.c

Patch 8.2.1479

Problem: Vim9: error for list index uses wrong line number.

Solution: Set source line number. (closes #6724) Add a way to assert the  
line number of the error with assert\_fails().

Files: runtime/doc/testing.txt, src/vim9execute.c, src/testing.c,  
src/evalfunc.c, src/message.c, src/globals.h, src/testdir/vim9.vim,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.1480

Problem: Vim9: skip expression in search() gives error.  
Solution: use tv\_get\_bool() eval\_expr\_to\_bool(). (closes #6729)  
Files: src/eval.c, src/typval.c, src/proto/typval.pro,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.1481

Problem: Vim9: line number reported with error may be wrong.  
Solution: Check line number in tests.  
Files: src/testdir/test\_vim9\_expr.vim, src/testdir/vim9.vim,  
src/vim9execute.c

Patch 8.2.1482

Problem: Vim9: crash when using a nested lambda.  
Solution: Do not clear the growarray when not evaluating. Correct pointer  
when getting the next line. (closes #6731)  
Files: src/eval.c, src/scriptfile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1483

Problem: Vim9: error for using special as number when returning "false"  
from a popup filter.  
Solution: Use tv\_get\_bool(). (closes #6733)  
Files: src/popupwin.c

Patch 8.2.1484

Problem: Flaky failure in assert\_fails().  
Solution: Only used fourth argument if there is a third argument.  
Files: src/testing.c

Patch 8.2.1485

Problem: Vim9: readdirex() expression doesn't accept bool.  
Solution: Accept both -1 and bool. (closes #6737)  
Files: src/filepath.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1486

Problem: Vim9: readdir() expression doesn't accept bool.  
Solution: Merge with code for readdirex(). (closes #6737)  
Files: src/filepath.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1487

Problem: Travis: installing snd-dummy is not always useful.  
Solution: Only install snd-dummy on amd64. (Ozaki Kiichi, closes #6738)  
Files: .travis.yml, ci/load-snd-dummy.sh

Patch 8.2.1488

Problem: Text does not scroll when inserting above first line.  
Solution: Adjust off-by-one error. (Ken Takata, closes #6739)  
Files: src/drawscreen.c, src/testdir/test\_display.vim,  
src/testdir/dumps/Test\_display\_scroll\_at\_topline.dump

Patch 8.2.1489

Problem: Vim9: error when setting an option with setbufvar().  
Solution: Do not get a number from a string value. (closes #6740)  
Files: src/evalvars.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1490

Problem: Vim9: using /= with float and number doesn't work.  
Solution: Better support assignment with operator. (closes #6742)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1491

Problem: Vim9: crash when compiling heredoc lines start with comment.  
Solution: Skip over NULL pointers. Do not remove comment and empty lines when fetching function lines. (closes #6743)  
Files: src/vim9compile.c, src/scriptfile.c, src/proto/scriptfile.pro, src/structs.h, src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/ex\_cmds.h, src/autocmd.c, src/proto/autocmd.pro, src/ex\_getln.c, src/proto/ex\_getln.pro, src/userfunc.c, src/proto/userfunc.pro, src/evalfunc.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1492

Problem: Build failures.  
Solution: Move typedef out of #ifdef. Adjust argument types. Discover America.  
Files: src/structs.h, src/ex\_docmd.c

Patch 8.2.1493

Problem: Not enough test coverage for the spell file handling.  
Solution: Add spell file tests. (Yegappan Lakshmanan, closes #6728)  
Files: src/spellfile.c, src/testdir/test\_spellfile.vim

Patch 8.2.1494

Problem: Missing change to calling eval\_getline().  
Solution: Change last argument.  
Files: src/eval.c

Patch 8.2.1495

Problem: "make clean" may delete too many files.  
Solution: Do not delete \$APPDIR. (closes #6751)  
Files: src/Makefile

Patch 8.2.1496

Problem: Vim9: cannot use " #" in a mapping.  
Solution: Do not remove a comment with the EX\_NOTRLCOM flag. (closes #6746)  
Files: src/ex\_docmd.c, src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1497

Problem: CursorHold test is flaky. (Jakub Kądziołka)  
Solution: Use WaitForAssert() (closes #6754)  
Files: src/testdir/test\_autocmd.vim

Patch 8.2.1498

Problem: On slow systems tests can be flaky.  
Solution: Use TermWait() instead of term-wait(). (Yegappan Lakshmanan, closes #6756)  
Files: src/testdir/test\_digraph.vim, src/testdir/test\_display.vim, src/testdir/test\_popupwin.vim, src/testdir/test\_termcodes.vim,

src/testdir/test\_terminal.vim, src/testdir/test\_terminal3.vim,  
src/testdir/test\_writefile.vim

Patch 8.2.1499

Problem: Vim9: error when using "\$" with col().  
Solution: Reorder getting the column value. (closes #6744)  
Files: src/eval.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1500

Problem: Vim9: error when using address without a command.  
Solution: Execute the range itself. (closes #6747)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1501

Problem: Vim9: concatenating to constant reverses order.  
Solution: Generate constant before option, register and environment  
variable. (closes #6757)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1502

Problem: Vim9: can use += with a :let command at script level.  
Solution: Give an error.  
Files: src/evalvars.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.1503

Problem: Vim9: error for an autocmd defined in a :def function in legacy  
Vim script.  
Solution: Don't check the variable type. (closes #6758)  
Files: src/vim9script.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1504

Problem: Vim9: white space checks are only done for a :def function.  
Solution: Also do checks at the script level. Adjust the name of a few  
error messages.  
Files: src/userfunc.c, src/errors.h, src/dict.c, src/list.c,  
src/vim9compile.c, src/vim9script.c, src/vim9type.c,  
src/evalvars.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/vim9.vim

Patch 8.2.1505

Problem: Not all file read and writecode is tested.  
Solution: Add a few tests. (Dominique Pellé, closes #6764)  
Files: src/testdir/test\_eval\_stuff.vim, src/testdir/test\_fnamemodify.vim,  
src/testdir/test\_functions.vim

Patch 8.2.1506

Problem: Vim9: no error when using a number other than 0 or 1 as bool.  
Solution: Check the number is 0 or 1.  
Files: src/errors.h, src/typval.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1507

Problem: Using malloc() directly.  
Solution: Use ALLOC\_ONE(). Remove superfluous typecast. (Hussam al-Homsi,

closes #6768)  
Files:          src/eval.c, src/memline.c, src/vimrun.c

#### Patch 8.2.1508

Problem:      Not all debugger commands covered by tests.  
Solution:     Add tests for going up/down in the stack. (Ben Jackson,  
                  closes #6765)  
Files:         src/testdir/test\_debugger.vim

#### Patch 8.2.1509

Problem:      Vertical separator is cleared when dragging a popup window using a  
                  multi-byte character for the border.  
Solution:      Only clear the character before the window if it is using a  
                  multi-byte character. (closes #6766)  
Files:         src/screen.c

#### Patch 8.2.1510

Problem:      Using "var" in a :def function may refer to a legacy Vim script  
                  variable.  
Solution:      Require using "s:" to refer to a legacy Vim script variable.  
                  (closes #6771)  
Files:         src/vim9compile.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1511

Problem:      Putting a string in Visual block mode ignores multi-byte  
                  characters.  
Solution:      Adjust the column for Visual block mode. (closes #6767)  
Files:         src/register.c, src/testdir/test\_visual.vim

#### Patch 8.2.1512

Problem:      Failure after ternary expression fails.  
Solution:      Restore eval\_flags. (Yasuhiro Matsumoto, closes #6776)  
Files:         src/eval.c, src/testdir/test\_vimscript.vim,  
                  src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1513

Problem:      Cannot interrupt shell used for filename expansion. (Dominique  
                  Pellé)  
Solution:      Do set tmode in mch\_delay(). (closes #6770)  
Files:         src/vim.h, src/os\_unix.c, src/proto/os\_unix.pro, src/term.c,  
                  src/channel.c, src/if\_cscope.c, src/os\_amiga.c, src/ui.c,  
                  src/proto/os\_amiga.pro, src/os\_win32.c, src/proto/os\_win32.pro

#### Patch 8.2.1514

Problem:      Multibyte vertical separator is cleared when dragging a popup  
                  window using a multi-byte character for the border.  
Solution:      Only clear the character before the window if it is double width.  
                  (closes #6766)  
Files:         src/screen.c

#### Patch 8.2.1515

Problem:      Vim9: can create s:var in legacy script but cannot unlet.  
Solution:      Allow :unlet for legacy script var.  
Files:         src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1516

Problem: Vim9: error for :exe has wrong line number.  
Solution: Set line number before calling do\_cmdline\_cmd(). (closes #6774)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1517

Problem: Cannot easily get the character under the cursor.  
Solution: Add the {chars} argument to strpart().  
Files: runtime/doc/eval.txt, src/evalfunc.c,  
src/testdir/test\_functions.vim

Patch 8.2.1518

Problem: Vim9: cannot assign to local option.  
Solution: Skip over "&l:" and "&g:". (closes #6749)  
Files: src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/testdir/vim9.vim,  
src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1519

Problem: Vim9: Ex command default range is not set.  
Solution: When range is not given use default. (closes #6779)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1520

Problem: Vim9: **CTRL-]** used in :def function does not work.  
Solution: Omit count or prepend colon. (closes #6769)  
Files: src/normal.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1521

Problem: Reading past end of buffer when reading spellfile. (Yegappan Lakshmanan)  
Solution: Store the byte length and check for it.  
Files: src/spellfile.c, src/spell.h

Patch 8.2.1522

Problem: Not enough test coverage for the spell file handling.  
Solution: Add spell file tests. (Yegappan Lakshmanan, closes #6763)  
Files: src/testdir/test\_spellfile.vim

Patch 8.2.1523

Problem: Still not enough test coverage for the spell file handling.  
Solution: Add spell file tests. (Yegappan Lakshmanan, closes #6790)  
Files: src/testdir/test\_spellfile.vim

Patch 8.2.1524

Problem: No longer get an error for string concatenation with float. (Tsuyoshi Cho)  
Solution: Only convert float for Vim9 script. (closes #6787)  
Files: src/eval.c, src/testdir/test\_eval\_stuff.vim

Patch 8.2.1525

Problem: Messages from tests were not always displayed.  
Solution: Always show messages, the timing is always useful. (Ken Takata, closes #6792)

Files: src/testdir/Make\_dos.mak, src/testdir/Make\_ming.mak,  
src/testdir/Makefile

Patch 8.2.1526

Problem: Line in testdir Makefile got commented out. (Christian Brabandt)  
Solution: Revert.  
Files: src/testdir/Makefile

Patch 8.2.1527

Problem: Vim9: cannot use a function name as a function reference at script  
level.  
Solution: Check if a name is a function name. (closes #6789)  
Files: src/evalvars.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.1528

Problem: Vim9: :endif not found after "if false".  
Solution: When skipping still check for a following command. (closes #6797)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1529

Problem: Vim9: :elseif may be compiled when not needed.  
Solution: Do evaluate the :elseif expression.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1530

Problem: Vim9: test fails on MS-Windows.  
Solution: Skip Ex command inside "if false".  
Files: src/vim9compile.c

Patch 8.2.1531

Problem: Vim9: test still fails on MS-Windows.  
Solution: When skipping expect function to be NULL.  
Files: src/vim9compile.c

Patch 8.2.1532

Problem: Compiler warning for conversion of size\_t to long.  
Solution: Add type cast.  
Files: src/eval.c

Patch 8.2.1533

Problem: Vim9: error when passing getreginfo() result to setreg().  
Solution: Use dict\_get\_bool() for "isunnamed". (closes #6784)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1534

Problem: Vim9: type error for argument type is not at call position.  
Solution: Set the context and stack after checking the arguments.  
(issue #6785)  
Files: src/userfunc.c, src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1535

Problem: It is not possible to specify cell widths of characters.  
Solution: Add setcellwidths().

Files: runtime/doc/eval.txt, runtime/doc/options.txt,  
runtime/doc/usr\_41.txt, src/evalfunc.c, src/mbyte.c,  
src/proto/mbyte.pro, src/errors.h, src/testdir/test\_utf8.vim

#### Patch 8.2.1536

Problem: Cannot get the class of a character; emoji widths are wrong in some environments.

Solution: Add charclass(). Update some emoji widths. Add script to check emoji widths.

Files: Filelist, runtime/doc/eval.txt, runtime/doc/usr\_41.txt,  
src/evalfunc.c, src/mbyte.c, src/proto/mbyte.pro,  
src/testdir/emoji\_list.vim, src/testdir/test\_functions.vim

#### Patch 8.2.1537

Problem: Memory access error when using setcellwidths().

Solution: Use array and pointers correctly.

Files: src/mbyte.c, src/errors.h, src/testdir/test\_utf8.vim

#### Patch 8.2.1538

Problem: Python: iteration over vim objects fails to keep reference.

Solution: Keep a reference for the object. (Paul Ollis, closes #6803, closes #6806)

Files: src/if\_py\_both.h, src/testdir/test\_python3.vim

#### Patch 8.2.1539

Problem: Using invalid script ID causes a crash.

Solution: Check the script ID to be valid. (closes #6804)

Files: src/globals.h, src/evalvars.c, src/profiler.c, src/scriptfile.c,  
src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1540

Problem: The user cannot try out emoji character widths.

Solution: Move the emoji script to the runtime/tools directory.

Files: Filelist, src/testdir/emoji\_list.vim, runtime/tools/emoji\_list.vim

#### Patch 8.2.1541

Problem: Vim9: cannot find function reference for s:Func.

Solution: Recognize <SNR> prefix. (closes #6805)

Files: src/userfunc.c, src/vim9execute.c,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1542

Problem: Vim9: test with invalid SID does not work in the GUI.

Solution: Skip the test in the GUI.

Files: src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1543

Problem: Vim9: test with invalid SID is skipped in the GUI.

Solution: Read the **CTRL-C** that feedkeys() put in typeahead.

Files: src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1544

Problem: Cannot translate messages in a Vim script.

Solution: Add gettext(). Try it out for a few messages in the options

Files: window.  
Filelist, src/po/Makefile, src/po/README.txt, runtime/optwin.vim,  
src/evalfunc.c, src/po/tojavascript.vim, src/po/fixfilenames.vim,  
runtime/doc/eval.txt, runtime/doc/usr\_41.txt

#### Patch 8.2.1545

Problem: ch\_logfile() is unclear about closing when forking.  
Solution: Adjust the log messages.  
Files: src/channel.c, src/os\_unix.c

#### Patch 8.2.1546

Problem: Build rule for Vim.app is unused.  
Solution: Delete the related build rules.  
Files: src/Makefile

#### Patch 8.2.1547

Problem: Various comment problems.  
Solution: Update comments.  
Files: src/arglist.c, src/map.c, src/mbyte.c, src/tag.c, src/undo.c,  
src/testdir/README.txt, src/testdir/test\_put.vim,  
src/libvterm/README

#### Patch 8.2.1548

Problem: Cannot move position of "%%" in message translations. (Emir Sarı)  
Solution: Improve the check script.  
Files: src/po/check.vim

#### Patch 8.2.1549

Problem: The "r" command fails for keys with modifiers if 'esckeys' is off  
and modifyOtherKeys is used. (Lauri Tirkkonen)  
Solution: Temporarily disable bracketed paste and modifyOtherKeys if  
'esckeys' is off. (closes #6809)  
Files: src/normal.c

#### Patch 8.2.1550

Problem: Vim9: bufname('%') gives an error.  
Solution: Only give an error for wrong argument type. (closes #6807)  
Files: src/evalbuffer.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1551

Problem: Vim9: error for argument type does not mention the number.  
Solution: Pass the argument number to where the error is given.  
Files: src/vim9type.c, src/proto/vim9type.pro, src/vim9compile.c,  
src/vim9execute.c, src/vim9script.c, src/eval.c,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1552

Problem: Warnings from asan with clang-11. (James McCoy)  
Solution: Avoid using a NULL pointer. (issue #6811)  
Files: src/fold.c

#### Patch 8.2.1553 (after 8.2.1552)

Problem: Crash in edit test.  
Solution: Avoid using invalid pointer.

Files: src/fold.c

Patch 8.2.1554

Problem: Crash in normal test.

Solution: Skip adjusting marks if there are no folds.

Files: src/fold.c

Patch 8.2.1555

Problem: Not all tests are executed on Github Actions.

Solution: Copy "src" to "src2" earlier. Recognize "src2" in a couple more places. Add two tests to the list of flaky tests. (Ken Takata, closes #6798)

Files: .github/workflows/ci-windows.yaml, src/testdir/runtest.vim, src/testdir/test\_python2.vim, src/testdir/test\_python3.vim

Patch 8.2.1556

Problem: Cursorline highlighting always overrules sign highlighting.

Solution: Combine the highlighting, use the priority to decide how. (closes #6812)

Files: runtime/doc/sign.txt, src/structs.h, src/drawline.c, runtime/pack/dist/opt/termdebug/plugin/termdebug.vim, src/testdir/test\_signs.vim, src/testdir/dumps/Test\_sign\_cursor\_5.dump, src/testdir/dumps/Test\_sign\_cursor\_6.dump

Patch 8.2.1557

Problem: Crash in :vimgrep when started as "vim -n". (Raul Segura)

Solution: Check mfp pointer. (Yegappan Lakshmanan, closes #6827)

Files: src/quickfix.c, src/testdir/test\_quickfix.vim

Patch 8.2.1558

Problem: Signs test fails.

Solution: Add missing change to sign.c.

Files: src/sign.c

Patch 8.2.1559

Problem: s390x tests work again.

Solution: re-enable s390x tests. (James McCoy, closes #6829)

Files: .travis.yml

Patch 8.2.1560

Problem: Using NULL pointers in some code. (James McCoy)

Solution: Avoid adding to a NULL pointer. Use byte as unsigned.

Files: src/fold.c, src/eval.c, src/spellsuggest.c, src/spellfile.c, src/vim9compile.c

Patch 8.2.1561

Problem: Using NULL pointers in fold code.

Solution: Avoid using a NULL pointer. (Dominique Pellé, closes #6831, closes #6831)

Files: src/fold.c

Patch 8.2.1562

Problem: Vim9: error when using "%" where a buffer is expected.

Solution: Add tv\_get\_buf\_from\_arg(). (closes #6814)  
Files: src/typval.c, src/proto/typval.pro, src/evalbuffer.c,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1563

Problem: Vim9: error when using '%' with setbufvar() or getbufvar().  
Solution: Use tv\_get\_buf\_from\_arg(). (closes #6816)  
Files: src/evalvars.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1564

Problem: A few remaining errors from ubsan.  
Solution: Avoid the warnings. (Dominique Pellé, closes #6837)  
Files: src/spellfile.c, src/spellsuggest.c, src/viminfo.c

#### Patch 8.2.1565

Problem: Spellfile test sometimes fails.  
Solution: Check running into the end of the file.  
Files: src/spellfile.c

#### Patch 8.2.1566

Problem: Not all Bazel files are recognized.  
Solution: Add \*.bazel and \*.BUILD. (closes #6836)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.1567

Problem: No example to use ubsan with clang.  
Solution: Add example commands. (Dominique Pellé, issue #6811)  
Files: src/Makefile

#### Patch 8.2.1568

Problem: prop\_find() skips properties in the same line if "skipstart" is used.  
Solution: Use "continue" instead of "break". (closes #6840)  
Files: src/textprop.c, src/testdir/test\_textprop.vim

#### Patch 8.2.1569

Problem: Vim9: fixes for functions not tested; failure in getchangelist().  
Solution: Add tests. (closes #6813, closes #6815, closes #6817)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1570

Problem: Configure check for dirfd() does not work on HP-UX. (Michael Osipov)  
Solution: Use AC\_TRY\_LINK instead of AC\_TRY\_COMPILE. (closes #6838)  
Files: src/configure.ac, src/auto/configure, src/fileio.c, src/globals.h

#### Patch 8.2.1571

Problem: Vim9: count() third argument cannot be "true".  
Solution: Use tv\_get\_bool\_chk(). (closes #6818)  
Files: src/typval.c, src/list.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1572

Problem: Vim9: expand() does not take "true" as argument.  
Solution: Use tv\_get\_bool\_chk(). (closes #6819)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1573

Problem: Vim9: getreg() does not take "true" as argument.  
Solution: Use tv\_get\_bool\_chk(). (closes #6820)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1574

Problem: Vim9: glob() does not take "true" as argument.  
Solution: Use tv\_get\_bool\_chk(). (closes #6821)  
Files: src/filepath.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1575

Problem: Vim9: globpath() does not take "true" as argument.  
Solution: Use tv\_get\_bool\_chk(). (closes #6821)  
Files: src/filepath.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1576

Problem: Vim9: index() does not take "true" as argument.  
Solution: Use tv\_get\_bool\_chk(). (closes #6823)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1577

Problem: Vim9: hasmapto(), mapcheck() and maparg() do not take "true" as argument.  
Solution: Use tv\_get\_bool(). (closes #6822, closes #6824)  
Files: src/evalfunc.c, src/map.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1578

Problem: Vim9: popup\_clear() does not take "true" as argument.  
Solution: Use tv\_get\_bool(). (closes #6826)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim

Patch 8.2.1579

Problem: Reports from asan are not optimal.  
Solution: Use clang with ubsan. (James McCoy, closes #6811)  
Files: .travis.yml

Patch 8.2.1580

Problem: Wildmenu does not work properly.  
Solution: Do not call may\_do\_incsearch\_highlighting() if completion is in progress.  
Files: src/ex\_getln.c, src/testdir/test\_cmdline.vim,  
src/testdir/dumps/Test\_wildmenu\_1.dump,  
src/testdir/dumps/Test\_wildmenu\_2.dump,  
src/testdir/dumps/Test\_wildmenu\_3.dump,  
src/testdir/dumps/Test\_wildmenu\_4.dump

Patch 8.2.1581

Problem: Using line() for global popup window doesn't work.  
Solution: Set tabpage to "curtab". (closes #6847)  
Files: src/evalwindow.c, src/testdir/test\_popupwin.vim

Patch 8.2.1582

Problem: The channel log does not show typed text.

Solution: Add raw typed text to the log file.  
Files: src/ui.c, src/os\_win32.c

#### Patch 8.2.1583

Problem: MS-Windows: cannot easily measure code coverage.  
Solution: Add the COVERAGE option. (Ken Takata, closes #6842)  
Files: src/Make\_cyg\_ming.mak

#### Patch 8.2.1584

Problem: Vim9: cannot use "true" for "skipstart" in prop\_find().  
Solution: Use dict\_get\_bool() instead of tv\_get\_number(). (closes #6852)  
Files: src/textprop.c, src/testdir/test\_textprop.vim

#### Patch 8.2.1585

Problem: Messages in errors.h not translated, xgettext on MS-Windows not fully supported.  
Solution: Add errors.h to list of input files. Update MS-Windows makefiles to improve message translations. (Ken Takata, closes #6858)  
Files: src/po/Make\_cyg.mak, src/po/Make\_ming.mak, src/po/Make\_mvc.mak, src/po/Makefile, src/po/README.txt, src/po/fixfilenames.vim

#### Patch 8.2.1586

Problem: :resize command not fully tested.  
Solution: Add a couple of tests. (Dominique Pellé, closes #6857)  
Files: src/testdir/test\_window\_cmd.vim

#### Patch 8.2.1587

Problem: Loop for handling keys for the command line is too long.  
Solution: Move wild menu handling to separate functions. (Yegappan Lakshmanan, closes #6856)  
Files: src/cmdexpand.c, src/proto/cmdexpand.pro, src/ex\_getln.c

#### Patch 8.2.1588

Problem: Cannot read back the prompt of a prompt buffer.  
Solution: Add prompt\_getprompt(). (Ben Jackson, closes #6851)  
Files: runtime/doc/channel.txt, runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/channel.c, src/edit.c, src/evalfunc.c, src/proto/channel.pro, src/proto/edit.pro, src/testdir/test\_prompt\_buffer.vim

#### Patch 8.2.1589

Problem: Term\_start() options for size are overruled by **'termwinsize'**. (Sergey Vlasov)  
Solution: Set **'termwinsize'** to the specified size.  
Files: src/terminal.c, src/testdir/test\_terminal2.vim, src/testdir/term\_util.vim

#### Patch 8.2.1590

Problem: Vim9: bufnr() doesn't take "true" argument.  
Solution: use tv\_get\_bool\_chk(). (closes #6863)  
Files: src/evalbuffer.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1591

Problem: Using winheight('.') in tests works but is wrong.

Solution: Use winheight(0). (issue #6863)  
Files: src/testdir/test\_functions.vim, src/testdir/test\_quickfix.vim

#### Patch 8.2.1592

Problem: Vim9: passing "true" to char2nr() fails.  
Solution: Use tv\_get\_bool\_chk(). (closes #6865)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1593

Problem: Tests do not check the error number properly.  
Solution: Add a colon after the error number. (closes #6869)  
Files: src/testdir/test\_assert.vim, src/testdir/test\_autocmd.vim,  
src/testdir/test\_backspace\_opt.vim, src/testdir/test\_channel.vim,  
src/testdir/test\_clientserver.vim, src/testdir/test\_cmdline.vim,  
src/testdir/test\_const.vim, src/testdir/test\_cscope.vim,  
src/testdir/test\_eval\_stuff.vim, src/testdir/test\_functions.vim,  
src/testdir/test\_global.vim, src/testdir/test\_gui.vim,  
src/testdir/test\_hlsearch.vim, src/testdir/test\_lambda.vim,  
src/testdir/test\_let.vim, src/testdir/test\_listdict.vim,  
src/testdir/test\_move.vim, src/testdir/test\_normal.vim,  
src/testdir/test\_popupwin.vim, src/testdir/test\_put.vim,  
src/testdir/test\_quickfix.vim, src/testdir/test\_rename.vim,  
src/testdir/test\_search.vim, src/testdir/test\_signs.vim,  
src/testdir/test\_substitute.vim, src/testdir/test\_syntax.vim,  
src/testdir/test\_tagfunc.vim, src/testdir/test\_tagjump.vim,  
src/testdir/test\_taglist.vim, src/testdir/test\_terminal.vim,  
src/testdir/test\_terminal2.vim, src/testdir/test\_textprop.vim,  
src/testdir/test\_timers.vim, src/testdir/test\_true\_false.vim,  
src/testdir/test\_user\_func.vim, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_script.vim, src/testdir/test\_vimscript.vim,  
src/testdir/test\_winbar.vim, src/testdir/test\_winbuf\_close.vim,  
src/testdir/test\_window\_cmd.vim, src/testdir/test\_writefile.vim

#### Patch 8.2.1594

Problem: Pull requests on github do not notify a maintainer.  
Solution: Add a CODEOWNERS file with a few initial entries.  
Files: Filelist, .github/CODEOWNERS

#### Patch 8.2.1595

Problem: Cannot easily see what Vim sends to the terminal.  
Solution: Write output to the channel log if it contains terminal control sequences. Avoid warnings for tputs() argument.  
Files: src/term.c, src/globals.h, src/edit.c, src/normal.c, src/optionstr.c

#### Patch 8.2.1596

Problem: Using win\_screenpos('.') in tests works but is wrong.  
Solution: Use win\_screenpos(0).  
Files: src/testdir/test\_terminal3.vim

#### Patch 8.2.1597

Problem: The channel source file is too big.  
Solution: Move job related code to a new source file.  
Files: Filelist, src/Makefile, src/Make\_mvc.mak, src/Make\_cyg\_ming.mak,

src/channel.c, src/proto/channel.pro, src/job.c,  
src/proto/job.pro, src/proto.h, src/edit.c, src/proto/edit.pro,  
src/globals.h, src/configure.ac, src/auto/configure

Patch 8.2.1598

Problem: Starting a hidden terminal resizes the current window.  
Solution: Do not resize the current window for a hidden terminal.  
(closes #6872)  
Files: src/terminal.c, src/testdir/test\_terminal2.vim

Patch 8.2.1599

Problem: Missing line end when skipping a long line with :cgetfile.  
Solution: Fix off-by-one error. (closes #6870)  
Files: src/quickfix.c, src/testdir/test\_quickfix.vim

Patch 8.2.1600

Problem: Vim9: cannot use "true" with deepcopy().  
Solution: Use tv\_get\_bool\_chk(). (closes #6867)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_listdict.vim

Patch 8.2.1601

Problem: Vim9: cannot use "true" with garbagecollect().  
Solution: Use tv\_get\_bool(). (closes #6871)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1602

Problem: Vim9: cannot use "true" with getbufinfo().  
Solution: Use dict\_get\_bool(). (closes #6873)  
Files: src/evalbuffer.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1603

Problem: Vim9: cannot use "true" with getchar().  
Solution: use tv\_get\_bool\_chk(). (closes #6874)  
Files: src/getchar.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1604

Problem: Vim9: cannot use "true" with getcompletion().  
Solution: use tv\_get\_bool\_chk(). (closes #6875)  
Files: src/cmdexpand.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1605

Problem: Default maintainer on github is wrong.  
Solution: Use Bram's account.  
Files: .github/CODEOWNERS

Patch 8.2.1606

Problem: Vim9: cannot use "true" with has().  
Solution: Use tv\_get\_bool(). (closes #6876)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1607

Problem: Vim9: getchar() test fails on MS-Windows.  
Solution: First consume any available input.

Files: src/testdir/test\_vim9\_func.vim

Patch 8.2.1608

Problem: Vim9: getchar() test fails with GUI.  
Solution: Avoid that getchar(0) gets stuck on K\_IGNORE.  
Files: src/getchar.c

Patch 8.2.1609

Problem: Vim9: test fails when build without +channel.  
Solution: Add check for +channel. (closes #6879)  
Files: src/testdir/test\_vim9\_expr.vim

Patch 8.2.1610

Problem: Vim9: cannot pass "true" to list2str() and str2list().  
Solution: Use tv\_get\_bool\_chk(). (closes #6877)  
Files: src/evalfunc.c, src/list.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1611

Problem: Vim9: cannot pass "true" to nr2char().  
Solution: use tv\_get\_bool\_chk(). (closes #6878)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1612

Problem: Vim9: cannot pass "true" to prop\_remove().  
Solution: Use dict\_get\_bool(). (closes #6853)  
Files: src/textprop.c, src/testdir/test\_textprop.vim

Patch 8.2.1613

Problem: Vim9: cannot pass "true" to prop\_type\_add().  
Solution: Use tv\_get\_bool(). (closes #6850)  
Files: src/textprop.c, src/testdir/test\_textprop.vim

Patch 8.2.1614

Problem: Vim9: cannot pass "true" to searchcount().  
Solution: Use tv\_get\_bool\_chk(). (closes #6854)  
Files: src/search.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1615

Problem: Vim9: cannot pass "true" to searchdecl().  
Solution: use tv\_get\_bool\_chk(). (closes #6881)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1616

Problem: Vim9: cannot pass "true" to synID().  
Solution: Use tv\_get\_bool\_chk(). (closes #6860)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1617

Problem: Vim9: cannot pass "true" to win\_splitmove().  
Solution: Use dict\_get\_bool(). (closes #6862) Alphabetize test functions.  
Files: src/evalwindow.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1618

Problem: Vim9: cannot pass "true" to setloclist().

Solution: Use dict\_get\_bool(). (closes #6882)  
Files: src/quickfix.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1619

Problem: Vim9: cannot pass "true" to spellsuggest().  
Solution: Use tv\_get\_bool\_chk(). (closes #6883)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1620

Problem: searchcount() test fails.  
Solution: Restore default flag value.  
Files: src/search.c

#### Patch 8.2.1621

Problem: Crash when using submatch(0, 1) in substitute().  
Solution: Increment reference count. (closes #6887)  
Files: src/regexp.c, src/testdir/test\_substitute.vim

#### Patch 8.2.1622

Problem: Loop to handle keys for the command line is too long.  
Solution: Move code to functions. (Yegappan Lakshmanan, closes #6880)  
Files: src/ex\_getln.c

#### Patch 8.2.1623

Problem: Vim9: using :call where it is not needed.  
Solution: Remove :call. (closes #6892)  
Files: src/testdir/test\_maparg.vim, src/testdir/test\_textprop.vim,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1624

Problem: Vim9: cannot pass "true" to split(), str2nr() and strchr().  
Solution: Use tv\_get\_bool\_chk(). (closes #6884, closes #6885, closes #6886)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1625

Problem: Compiler warning for use of fptr\_T.  
Solution: Make the type less strict.  
Files: src/regexp.c

#### Patch 8.2.1626

Problem: Test for strchr() fails with different error number.  
Solution: Adjust the error number.  
Files: src/testdir/test\_utf8.vim

#### Patch 8.2.1627

Problem: Vim9: cannot pass "true" to submatch(), term\_gettty() and term\_start()  
Solution: Use tv\_get\_bool\_chk(). (closes #6888, closes #6890, closes #6889)  
Files: src/evalfunc.c, src/terminal.c, src/job.c,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1628

Problem: Vim9: cannot pass "true" to timer\_paused().  
Solution: Use tv\_get\_bool(). (closes #6891)  
Files: src/time.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1629

Problem: Test fails without terminal feature.  
Solution: Check for terminal feature.  
Files: src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1630

Problem: Terminal test fails.  
Solution: Correct argument to term\_start(). Correct error number.  
Files: src/testdir/test\_terminal.vim, src/testdir/test\_terminal2.vim

#### Patch 8.2.1631

Problem: test\_fails() does not check the context of the line number.  
Solution: Use another argument to specify the context of the line number.  
Files: runtime/doc/testing.txt, runtime/doc/eval.txt,  
src/testdir/test\_vim9\_func.vim, src/testing.c, src/globals.h,  
src/evalfunc.c, src/message.c

#### Patch 8.2.1632

Problem: Not checking the context of test\_fails().  
Solution: Add the line number and context arguments. Give error if  
assert\_fails() argument types are wrong.  
Files: src/testing.c, src/errors.h, src/testdir/test\_assert.vim,  
src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1633

Problem: Some error messages are internal but do not use iemsg().  
Solution: Use iemsg(). (Dominique Pellé, closes #6894)  
Files: src/regexp.c, src/regexp\_bt.c, src/regexp\_nfa.c

#### Patch 8.2.1634

Problem: Loop to handle keys for the command line is too long.  
Solution: Move a few more parts to separate functions. (Yegappan Lakshmanan,  
closes #6895)  
Files: src/ex\_getln.c, src/testdir/test\_cmdline.vim

#### Patch 8.2.1635

Problem: No digraph for 0x2022 BULLET.  
Solution: Use "oo". (Hans Ginzel, closes #6904)  
Files: src/digraph.c, runtime/doc/digraph.txt

#### Patch 8.2.1636

Problem: Get stuck if a popup filter causes an error.  
Solution: Check whether the function can be called and does not cause an  
error. (closes #6902)  
Files: src/structs.h, src/popupwin.c, src/testdir/test\_popupwin.vim  
src/testdir/dumps/Test\_popupwin\_wrong\_name.dump,  
src/testdir/dumps/Test\_popupwin\_three\_errors\_1.dump,  
src/testdir/dumps/Test\_popupwin\_three\_errors\_2.dump

#### Patch 8.2.1637

Problem: Vim9: :put ={expr} does not work inside :def function.  
Solution: Add ISN\_PUT. (closes #6397)  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c, src/register.c,  
src/proto/register.pro, src/edit.c, src/ex\_docmd.c, src/mouse.c,  
src/normal.c, src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.1638

Problem: Leaking memory when popup filter function can't be called.  
Solution: Don't return too soon.  
Files: src/popupwin.c

#### Patch 8.2.1639

Problem: Options window cannot be translated.  
Solution: Get the translation for "local to" texts once and use them in many  
places. Fix that **'whichwrap'** is not a local option. (issue #6800)  
Files: runtime/optwin.vim

#### Patch 8.2.1640

Problem: Amiga: missing header for getgrgid().  
Solution: Add the grp.h header. (Ola Söder, closes #6906)  
Files: src/os\_amiga.h

#### Patch 8.2.1641

Problem: Vim9: cannot use 0 or 1 where a bool is expected.  
Solution: Allow using 0 and 1 for a bool type. (closes #6903)  
Files: src/vim9compile.c, src/vim9type.c, src/proto/vim9type.pro,  
src/structs.h, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1642

Problem: Options test fails.  
Solution: Correct call to OptionG().  
Files: runtime/optwin.vim

#### Patch 8.2.1643

Problem: Vim9: :defcompile compiles dead functions.  
Solution: Skip over dead functions.  
Files: src/userfunc.c

#### Patch 8.2.1644

Problem: Vim9: cannot assign 1 and 0 to bool at script level.  
Solution: Add the TTFLAG\_BOOL\_OK flag to the type. Fix name of test  
function.  
Files: src/vim9type.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/vim9.vim, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1645

Problem: GTK3: icons become broken images when resized.  
Solution: Use gtk\_image\_new\_from\_icon\_name(). (closes #6916)  
Fix compiler warnings.  
Files: src/gui\_gtk\_x11.c

#### Patch 8.2.1646

Problem: Amiga: Unnecessary #include.

Solution: Remove the #include. (Ola Söder, closes #6908)  
Files: src/version.c

Patch 8.2.1647

Problem: Vim9: result of expression with && and || cannot be assigned to a bool variable.

Solution: Add the TTFLAG\_BOOL\_OK flag and convert the value if needed.

Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.1648

Problem: Amiga: no common build file for Amiga (-like) systems.

Solution: Turn Make\_morph.mak into Make\_ami.mak. (Ola Söder, closes #6805)

Files: Filelist, src/Make\_ami.mak, src/Make\_morph.mak, src/INSTALLami.txt

Patch 8.2.1649

Problem: GTK3: using old file chooser.

Solution: Use native file chooser on GTK 3.20 and above. (Yogeshwar Velingker, closes #6909)

Files: src/gui\_gtk.c

Patch 8.2.1650

Problem: Vim9: result of && and || expression cannot be assigned to a bool at the script level.

Solution: Add the VAR\_BOOL\_OK flag. Convert to bool when needed.

Files: src/structs.h, src/vim9type.c, src/proto/vim9type.pro,  
src/vim9script.c, src/evalvars.c, src/eval.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.1651

Problem: Spellfile code not completely tested.

Solution: Add a few more test cases. (Yegappan Lakshmanan, closes #6918)

Files: src/testdir/test\_spellfile.vim

Patch 8.2.1652

Problem: Cannot translate lines in the options window.

Solution: Use the AddOption() function to split descriptions where indicated by a line break. (issue #6800)

Files: runtime/optwin.vim

Patch 8.2.1653

Problem: Expand('<stack>') does not include the final line number.

Solution: Add the line number. (closes #6927)

Files: src/vim.h, src/scriptfile.c, src/proto/scriptfile.pro,  
src/debugger.c, src/ex\_docmd.c, src/ex\_eval.c, src/message.c,  
src/testing.c, src/testdir/test\_expand\_func.vim

Patch 8.2.1654

Problem: When job writes to hidden buffer current window has display errors. (Johnny McArthur)

Solution: Use aucmd\_prepbuf() instead of switch\_to\_win\_for\_buf().  
(closes #6925)

Files: src/channel.c

Patch 8.2.1655

Problem: Cannot build with Strawberry Perl 5.32.0.  
Solution: Use Perl\_sv\_2pvbyte\_flags. (closes #6921)  
Files: src/if\_perl.xs

Patch 8.2.1656

Problem: Vim9: callstack wrong if :def function calls :def function.  
Solution: Set the line number before calling. (closes #6914)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1657

Problem: Vim9: no proper error for nested ":def!".  
Solution: Check for "!". (closes #6920)  
Files: src/errors.h, src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1658

Problem: Expand('<stack>') has trailing "..".  
Solution: Remove the "..". (closes #6927)  
Files: src/scriptfile.c, src/testdir/test\_expand\_func.vim

Patch 8.2.1659

Problem: Spellfile code not completely tested.  
Solution: Add a few more test cases. (Yegappan Lakshmanan, closes #6929)  
Files: src/testdir/test\_spell.vim, src/testdir/test\_spellfile.vim

Patch 8.2.1660

Problem: Assert functions require passing expected result as the first argument, which isn't obvious.  
Solution: Use a method, as in "runtest()->assert\_equal(expected)".  
Files: src/testdir/test\_vim9\_func.vim

Patch 8.2.1661

Problem: Cannot connect to 127.0.0.1 for host with only IPv6 addresses.  
Solution: pass AI\_V4MAPPED flag to getaddrinfo. (Filipe Brandenburger, closes #6931)  
Files: src/channel.c

Patch 8.2.1662

Problem: :mksession does not restore shared terminal buffer properly.  
Solution: Keep a hashtab with terminal buffers. (Rob Pilling, closes #6930)  
Files: src/hashtab.c, src/proto/terminal.pro, src/session.c, src/terminal.c, src/testdir/test\_mksession.vim

Patch 8.2.1663

Problem: Options window entries cannot be translated.  
Solution: Use AddOption() for all explanations. (closes #6800)  
Files: runtime/optwin.vim

Patch 8.2.1664

Problem: Memory leak when using :mkview with a terminal buffer.  
Solution: Don't use a hashtab for :mkview. (Rob Pilling, closes #6935)  
Files: src/session.c, src/terminal.c, src/testdir/test\_mksession.vim

Patch 8.2.1665

Problem: Cannot do fuzzy string matching.  
Solution: Add matchfuzzy(). (Yegappan Lakshmanan, closes #6932)  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c,  
src/proto/search.pro, src/search.c, src/testdir/test\_functions.vim

#### Patch 8.2.1666

Problem: The initial value of '**backupskip**' can have duplicate items.  
Solution: Remove duplicates, like when it is set later. (Tom Ryder,  
closes #6940)  
Files: src/option.c, src/testdir/test\_options.vim

#### Patch 8.2.1667

Problem: Local function name cannot shadow a global function name.  
Solution: Ignore global functions when checking a script-local or scoped  
function name. (closes #6926)  
Files: src/vim9compile.c, src/userfunc.c, src/proto/userfunc.pro,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1668

Problem: Vim9: not accepting 0 or 1 as bool when type is any.  
Solution: Convert the type with the CHECKTYPE instruction. (closes #6913)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1669

Problem: Vim9: memory leak when storing a value fails.  
Solution: Free the value when not storing it.  
Files: src/evalvars.c

#### Patch 8.2.1670

Problem: A couple of gcc compiler warnings.  
Solution: Initialize local variables. (Dominique Pellé, closes #6944)  
Files: src/memline.c, src/option.c

#### Patch 8.2.1671

Problem: Vim9: stray error for missing white space.  
Solution: Do not skip over white space after member. (closes #6917)  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1672

Problem: v\_lock is used when it is not initialized. (Yegappan Lakshmanan)  
Solution: Initialize the typval in eval1().  
Files: src/eval.c

#### Patch 8.2.1673

Problem: complete\_info() selected index has an invalid value. (Ben Jackson)  
Solution: Set the index when there is only one match. (closes #6945)  
Add test for complete\_info().  
Files: src/insexpand.c, src/testdir/test\_ins\_complete.vim

#### Patch 8.2.1674

Problem: Vim9: internal error when using variable that was not set.  
Solution: Give a meaningful error. (closes #6937)  
Files: src/vim9script.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1675

Problem: MinGW: testdir makefile deletes non-existing file.  
Solution: Use another way to delete the output file if it already exists.  
(Michael Soyka)  
Files: src/testdir/Make\_ming.mak

Patch 8.2.1676

Problem: Compiler warnings for function typecast.  
Solution: Add an intermediate cast to "void \*".  
Files: src/os\_unix.c

Patch 8.2.1677

Problem: Memory access errors when calling setloclist() in an autocommand.  
Solution: Give an error if the list was changed unexpectedly. (closes #6946)  
Files: src/quickfix.c, src/testdir/test\_quickfix.vim

Patch 8.2.1678

Problem: Crash when using ":set" after ":ownsyntax". (Dhiraj Mishra)  
Solution: Make sure '**spelloptions**' is not NULL. (closes #6950)  
Files: src/syntax.c, src/testdir/test\_syntax.vim

Patch 8.2.1679

Problem: Vim9: ":\*" is not recognized as a range.  
Solution: Move recognizing "\*" into skip\_range(). (closes #6938)  
Files: src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/cmdexpand.c,  
src/ex\_getln.c, src/userfunc.c, src/vim9compile.c,  
src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1680

Problem: Vim9: line number for compare error is wrong.  
Solution: Set SOURCING\_LNUM. (closes #6936)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1681

Problem: Vim9: unnecessary :call commands in tests.  
Solution: Remove the commands. (issue #6936)  
Files: src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.1682

Problem: Vim9: const works in an unexpected way.  
Solution: ":const" only disallows changing the variable, not the value.  
Make "list[0] = 9" work at the script level.  
Files: src/vim9compile.c, src/evalvars.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1683

Problem: Vim9: assignment test fails.  
Solution: Include changes to find Ex command.  
Files: src/ex\_docmd.c

Patch 8.2.1684

Problem: "gF" does not use line number after file in Visual mode.  
Solution: Look for ":123" after the Visual area. (closes #6952)  
Files: src/findfile.c, src/testdir/test\_gf.vim

Patch 8.2.1685

Problem: Vim9: cannot declare a constant value.  
Solution: Introduce ":const!".  
Files: runtime/doc/vim9.txt, src/ex\_cmds.h, src/vim9compile.c,  
src/vim9.h, src/vim9execute.c, src/evalvars.c,  
src/proto/evalvars.pro, src/errors.h, src/vim.h, src/eval.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.1686

Problem: Vim9: "const!" not sufficiently tested.  
Solution: Add a few more test cases. Fix type checking.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1687

Problem: Vim9: out of bounds error.  
Solution: Check that cmdidx is not negative.  
Files: src/vim9compile.c

Patch 8.2.1688

Problem: Increment/decrement removes text property.  
Solution: Insert the new number before deleting the old one. (closes #6962)  
Files: src/ops.c, src/testdir/test\_textprop.vim

Patch 8.2.1689

Problem: **'colorcolumn'** doesn't show in indent.  
Solution: Also draw the column when draw\_state is WL\_BRI or WL\_SBR.  
(Alexey Demin, closes #6948, closes #6619)  
Files: src/drawline.c, src/testdir/dumps/Test\_colorcolumn\_2.dump,  
src/testdir/dumps/Test\_colorcolumn\_3.dump,  
src/testdir/test\_highlight.vim

Patch 8.2.1690

Problem: Text properties not adjusted for "I" in Visual block mode.  
Solution: Call inserted\_bytes(). (closes #6961)  
Files: src/ops.c, src/change.c, src/proto/change.pro,  
src/testdir/test\_textprop.vim

Patch 8.2.1691

Problem: Vim9: list<any> is not accepted where list<number> is expected.  
Solution: Add functions to allocate and free a type\_T, use it in  
ISN\_CHECKTYPE. (closes #6959)  
Files: src/vim9.h, src/globals.h, src/vim9compile.c, src/vim9execute.c,  
src/vim9type.c, src/proto/vim9type.pro, src/errors.h,  
src/evalfunc.c, src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.1692

Problem: Build fails because TTFLAG\_STATIC is missing.  
Solution: Include missing change.  
Files: src/structs.h

Patch 8.2.1693

Problem: "hi def" does not work for cleared highlight.

Solution: Check the "sg\_cleared" flag. (Maxim Kim, closes #6956, closes #4405)  
Files: src/highlight.c, src/testdir/test\_highlight.vim

Patch 8.2.1694

Problem: Compiler warning for loss if data.  
Solution: Add typecast.  
Files: src/ops.c

Patch 8.2.1695

Problem: Vim9: crash when using varargs type "any".  
Solution: Check if uf\_va\_type is &t\_any. (closes #6957)  
Files: src/vim9compile.c, src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1696

Problem: Unused (duplicate) macros.  
Solution: Remove the macros.  
Files: src/spell.c

Patch 8.2.1697

Problem: Inconsistent capitalization of error messages.  
Solution: Always start with a capital.  
Files: src/errors.h, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_script.vim, src/testdir/test\_assert.vim

Patch 8.2.1698

Problem: Cannot lock a variable in legacy Vim script like in Vim9.  
Solution: Make ":lockvar 0" work.  
Files: runtime/doc/eval.txt, src/evalvars.c, src/proto/evalvars.pro, src/dict.c, src/eval.c, src/list.c, src/typval.c, src/userfunc.c, src/testdir/test\_const.vim, src/testdir/test\_listdict.vim

Patch 8.2.1699

Problem: Build failure due to missing error message.  
Solution: Add error message.  
Files: src/errors.h

Patch 8.2.1700

Problem: Vim9: try/catch causes wrong value to be returned.  
Solution: Reset tcd\_return. (closes #6964)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1701

Problem: Vim9: sort("i") does not work.  
Solution: Don't try getting a number for a string argument. (closes #6958)  
Files: src/list.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1702

Problem: Crash when using undo after deleting folded lines.  
Solution: Check for NULL pointer. (closes #6968)  
Files: src/fold.c, src/testdir/test\_fold.vim

Patch 8.2.1703

Problem: ":highlight clear" does not restore default link.  
Solution: Remember the default link and restore it. (Antony Scriven, closes #6970, closes #4405)  
Files: runtime/doc/syntax.txt, src/highlight.c, src/testdir/test\_highlight.vim

Patch 8.2.1704

Problem: Vim9: crash in for loop when autoload script has an error.  
Solution: Reset suppress\_errthrow. Check for NULL list. (closes #6967)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1705

Problem: "verbose hi Name" reports incorrect info after ":hi clear".  
Solution: Store the script context. (Antony Scriven, closes #6975)  
Files: src/highlight.c, src/testdir/test\_highlight.vim

Patch 8.2.1706

Problem: Vim9: crash after running into the "Multiple closures" error.  
Solution: When a function fails still update any closures. (closes #6973)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1707

Problem: Small inconsistency in highlight test.  
Solution: Use one argument for :execute. (Antony Scriven, #6975)  
Files: src/testdir/test\_highlight.vim

Patch 8.2.1708

Problem: Vim9: error message for function has unprintable characters.  
Solution: use printable\_func\_name(). (closes #6965)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1709

Problem: Vim9: memory leak when using multiple closures.  
Solution: Free the partial.  
Files: src/vim9execute.c

Patch 8.2.1710

Problem: Vim9: list of list type can be wrong.  
Solution: Use VAR\_UNKNOWN for empty list. Recognize VAR\_UNKNOWN when looking for a common type. (closes #6979)  
Files: src/vim9type.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1711

Problem: Vim9: leaking memory when using partial.  
Solution: Do delete the function even when it was compiled.  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/userfunc.c, src/vim9execute.c

Patch 8.2.1712

Problem: Vim9: leaking memory when calling a lambda.  
Solution: Decrement function reference from ISN\_DCALL.  
Files: src/vim9compile.c, src/userfunc.c, src/proto/userfunc.pro

Patch 8.2.1713

Problem: Motif GUI: crash when setting menu colors. (Andrzej Bylicki)  
Solution: Add {} to make "n" incremented correctly. (closes #6989,  
closes #5948)  
Files: src/gui\_motif.c

Patch 8.2.1714

Problem: Text properties corrupted with substitute command. (Filipe  
Brandenburger)  
Solution: Get the changed line again after using u\_savesub(). (closes #6984)  
Files: src/textprop.c, src/testdir/test\_textprop.vim

Patch 8.2.1715

Problem: Motif GUI: commented out code missed {}.  
Solution: Add {} and reenable the code. (similar to #6989)  
Files: src/gui\_motif.c

Patch 8.2.1716

Problem: Options window has duplicate translations.  
Solution: Make one entry for "global or local to buffer". Fix wrong text.  
(closes #6983)  
Files: runtime/optwin.vim

Patch 8.2.1717

Problem: MS-Windows installer doesn't have Russian translations.  
Solution: Add Russian translations. (closes #6985)  
Files: nsis/gvim.nsi, nsis/lang/russian.nsi

Patch 8.2.1718

Problem: Vim9: :def function disallows "firstline" and "lastline" argument  
names for no good reason.  
Solution: Don't check the arguments for a :def function. (closes #6986)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1719

Problem: Vim9: no error if comma is missing in between arguments.  
Solution: Give an error message.  
Files: src/errors.h, src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1720

Problem: Vim9: memory leak with heredoc that isn't executed. (Dominique  
Pellé)  
Solution: Don't clear the list items. (closes #6991)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1721

Problem: MS-Windows installer doesn't work.  
Solution: Write "Russian" in ASCII. (closes #6995, see #6985).  
Files: nsis/lang/russian.nsi

Patch 8.2.1722

Problem: Vim9: cannot assign a lambda to a variable of type function.  
Solution: Allow for assigning a partial to a variable of type function.  
(Naruhiko Nishino, closes #6996)

Files: src/vim9type.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1723

Problem: Vim9: Variable argument name cannot start with underscore.

Solution: Use eval\_isnamec1(). (closes #6988)

Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1724

Problem: Vim9: assignment tests spread out.

Solution: Create new test file for assignment tests.

Files: src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_expr.vim,  
src/testdir/Make\_all.mak

#### Patch 8.2.1725

Problem: Not all Pascal files are recognized.

Solution: Add filetype patterns. (Doug Kearns)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.1726

Problem: Fuzzy matching only works on strings.

Solution: Support passing a dict. Add matchfuzzypos() to also get the match positions. (Yegappan Lakshmanan, closes #6947)

Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c,  
src/proto/search.pro, src/search.c, src/testdir/Make\_all.mak,  
src/testdir/test\_functions.vim, src/testdir/test\_matchfuzzy.vim

#### Patch 8.2.1727

Problem: A popup created with "cursorline" will ignore "firstline".

Solution: When both "cursorline" and "firstline" are present put the cursor on "firstline". (closes #7000) Add the "winid" argument to getcurpos().

Files: runtime/doc/eval.txt, src/evalfunc.c, src/popupwin.c,  
src/evalwindow.c, src/testdir/test\_popupwin.vim,  
src/testdir/test\_functions.vim

#### Patch 8.2.1728

Problem: Compiler warning for using uninitialized variable. (John Marriott)

Solution: Initialize "neighbor".

Files: src/search.c

#### Patch 8.2.1729

Problem: Endless loop when ":normal" feeds popup window filter.

Solution: Add the ex\_normal\_busy\_done flag.

Files: src/globals.h, src/getchar.c, src/evalfunc.c, src/ex\_docmd.c,  
src/menu.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_normal\_cmd.dump

#### Patch 8.2.1730

Problem: Vim9: cannot use member of unknown type.

Solution: When type is unknown use "any". (closes #6997)

Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.1731

Problem: Vim9: cannot use += to append to empty NULL list.  
Solution: Copy the list instead of extending it. (closes #6998)  
Files: src/eval.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.1732

Problem: Stuck when win\_execute() for a popup causes an error.  
Solution: Disable the filter callback on error. (issue #6999)  
Files: src/popupwin.c, src/testdir/term\_util.vim,  
src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_win\_execute.dump

#### Patch 8.2.1733

Problem: Vim9: memory leaks when using nested function.  
Solution: Free function when compilation fails.  
Files: src/vim9compile.c

#### Patch 8.2.1734

Problem: Vim9: cannot use a funcref for a closure twice.  
Solution: Instead of putting the funcref on the stack use a growarray on the execution context.  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.1735

Problem: Github actions appear to timeout too soon.  
Solution: use "timeout" instead of "ping".  
Files: .github/workflows/ci-windows.yaml

#### Patch 8.2.1736

Problem: Failure to compile a pattern not tested much.  
Solution: Add tests where a pattern fails to compile. (Yegappan Lakshmanan, closes #7004)  
Files: src/testdir/gen\_opt\_test.vim, src/testdir/test\_arglist.vim,  
src/testdir/test\_autocmd.vim, src/testdir/test\_buffer.vim,  
src/testdir/test\_checkpath.vim, src/testdir/test\_cmdline.vim,  
src/testdir/test\_debugger.vim, src/testdir/test\_functions.vim,  
src/testdir/test\_history.vim, src/testdir/test\_listdict.vim,  
src/testdir/test\_options.vim, src/testdir/test\_search\_stat.vim,  
src/testdir/test\_sort.vim, src/testdir/test\_substitute.vim,  
src/testdir/test\_syntax.vim, src/testdir/test\_tagjump.vim,  
src/testdir/test\_user\_func.vim

#### Patch 8.2.1737

Problem: Cursor line highlight in popup window is not always updated.  
Solution: Check if the cursor has moved. (closes #7010)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim  
src/testdir/dumps/Test\_popupwin\_win\_execute\_cursorline.dump

#### Patch 8.2.1738

Problem: Mac: str2float() recognizes comma instead of decimal point.  
Solution: Set LC\_NUMERIC to "C". (closes #7003)  
Files: src/os\_mac\_conv.c

Patch 8.2.1739

Problem: Vim9: crash when compiling a manually defined function. (Antony Scriven)  
Solution: Check that the script ID is positive. (closes #7012)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1740

Problem: Test fails without the terminal feature.  
Solution: Skip test if the terminal feature is not available.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.1741

Problem: pathshorten() only supports using one character.  
Solution: Add an argument to control the length. (closes #7006)  
Files: runtime/doc/eval.txt, src/evalfunc.c, src/filepath.c, src/proto/filepath.pro, src/testdir/test\_functions.vim

Patch 8.2.1742

Problem: Test still fails without the terminal feature.  
Solution: Put check for terminal feature in separate function.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.1743

Problem: Cannot build without the eval feature.  
Solution: Move shorten\_dir outside of #ifdef.  
Files: src/filepath.c

Patch 8.2.1744

Problem: Vim9: using ":const!" is weird.  
Solution: Use "var" - "final" - "const" like Dart. "let" still works for now.  
Files: runtime/doc/vim9.txt, src/ex\_cmds.h, src/errors.h, src/evalvars.c, src/proto/evalvars.pro, src/cmdexpand.c, src/eval.c, src/ex\_docmd.c, src/vim9compile.c, src/vim9execute.c, src/vim9script.c, src/vim.h, src/ex\_cmdidxs.h, src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.1745

Problem: Tiny version doesn't build.  
Solution: Add dummy ex\_var() function.  
Files: src/ex\_docmd.c

Patch 8.2.1746

Problem: Vim9: Cannot use "fina" for "finally". (Naruhiko Nishino)  
Solution: Specifically check for "fina". (closes #7020)  
Files: src/ex\_docmd.c, src/testdir/test\_trycatch.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.1747

Problem: Result of expand() unexpectedly depends on '**completeslash**'.  
Solution: Temporarily reset '**completeslash**'. (Yasuhiro Matsumoto, closes #7021)  
Files: src/evalfunc.c, src/testdir/test\_ins\_complete.vim

Patch 8.2.1748

Problem: Closing split window in other tab may cause a crash.  
Solution: Set tp\_curwin properly. (Rob Pilling, closes #7018)  
Files: src/window.c, src/testdir/test\_winbuf\_close.vim

Patch 8.2.1749

Problem: Vim9: crash when closure fails in nested function.  
Solution: Handle function returns before dereferencing remaining closures.  
(closes #7008)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1750

Problem: Setting firstline with popup\_setoptions() fails if cursorline is set.  
Solution: Use apply\_options(). Update the popup before applying "zz".  
(closes #7010)  
Files: src/popupwin.c, src/proto/popupwin.pro, src/move.c,  
src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_win\_execute\_cursorline.dump,  
src/testdir/dumps/Test\_popupwin\_set\_firstline\_1.dump,  
src/testdir/dumps/Test\_popupwin\_set\_firstline\_2.dump

Patch 8.2.1751

Problem: Using 2 where bool is expected may throw an error.  
Solution: Make this backwards compatible.  
Files: src/typval.c, src/evalfunc.c, src/testdir/test\_search.vim,  
src/testdir/test\_terminal2.vim

Patch 8.2.1752

Problem: GTK GUI: cannot map alt-? with <A-?>. (Ingo Karkat)  
Solution: Adjust the characters for which the shift modifier is removed.  
(closes #7016) Make Motif and Win32 use the same function as GTK.  
Files: src/misc2.c, src/gui\_x11.c, src/gui\_w32.c,  
src/testdir/test\_termcodes.vim

Patch 8.2.1753

Problem: Vim9: crash when using import at script level.  
Solution: Give a "not implemented yet" error. (closes #7026)  
Files: src/evalvars.c

Patch 8.2.1754

Problem: Completion with spell checking not tested.  
Solution: Add a test case. (Dominique Pellé, closes #7024)  
Files: src/testdir/test\_spell.vim

Patch 8.2.1755

Problem: Vim9: crash when using invalid heredoc marker. (Dhiraj Mishra)  
Solution: Check for NULL list. (closes #7027) Fix comment character.  
Files: src/vim9compile.c, src/evalvars.c,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.1756

Problem: Vim9: :let will soon be disallowed.  
Solution: Add v:disallow\_let temporarily. Fix tests.

Files: src/vim.h, src/errors.h, src/evalvars.c, src/vim9compile.c,  
src/userfunc.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1757

Problem: Mac: default locale is lacking the encoding.  
Solution: Add ".UTF-8 to the locale. (Yee Cheng Chin, closes #7022)  
Files: src/os\_mac\_conv.c, src/testdir/test\_envIRON.vim

Patch 8.2.1758

Problem: Vim9: type of unmaterialized list is wrong.  
Solution: Use list<number>.  
Files: src/vim9type.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1759

Problem: Vim9: Some tests are still using :let.  
Solution: Change more declarations to use :var.  
Files: src/testdir/test\_vim9\_expr.vim

Patch 8.2.1760

Problem: Vim9: crash when end marker is missing. (Dhiraj Mishra)  
Solution: Check for end of function lines. (closes #7031)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.1761

Problem: Vim9: Some tests are still using :let.  
Solution: Change more declarations to use :var.  
Files: src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.1762

Problem: When a timer uses :stopinsert Insert mode completion isn't  
stopped. (Stanley Chan)  
Solution: Call ins\_compl\_prep(ESC).  
Files: src/edit.c, src/testdir/test\_ins\_complete.vim,  
src/testdir/dumps/Test\_pum\_stopped\_by\_timer.dump

Patch 8.2.1763

Problem: Vim9: cannot use "true" for popup window scrollbar option.  
Solution: use dict\_get\_bool(). (closes #7029)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim

Patch 8.2.1764

Problem: Vim9: no error when assigning to script var with wrong type.  
Solution: Fix off-by-one error. (closes #7028)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.1765

Problem: Vim9: some tests use "var var".  
Solution: Use "var name". (closes #7032)  
Files: src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1766

Problem: Vim9: Some tests are still using :let.

Solution: Change the last few declarations to use :var.  
Files: src/testdir/runtest.vim, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_script.vim, src/testdir/test\_maparg.vim,  
src/testdir/test\_popupwin.vim, src/testdir/test\_textprop.vim

#### Patch 8.2.1767

Problem: Vim9: test fails with python support.  
Solution: Use "let" in legacy function.  
Files: src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1768

Problem: Cannot use the help menu from a terminal window.  
Solution: Add ":tlnoremenu" commands. (Yee Cheng Chin, closes #7023)  
Files: runtime/menu.vim, src/testdir/test\_gui.vim

#### Patch 8.2.1769

Problem: A popup filter interferes with using :normal to move the cursor in a popup.  
Solution: Do not invoke the filter when ex\_normal\_busy is set.  
Files: runtime/doc/popup.txt, src/getchar.c, src/evalfunc.c,  
src/ex\_docmd.c, src/menu.c, src/globals.h,  
src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_normal\_cmd.dump

#### Patch 8.2.1770

Problem: Invalid memory use when using SpellFileMissing autocmd.  
Solution: Add test case. (Dominique Pellé, closes #7036) Fix using a window that was closed.  
Files: src/spell.c, src/testdir/test\_spell.vim

#### Patch 8.2.1771

Problem: synIDattr() cannot get the value of ctermul.  
Solution: Add the "ul" value for "what". (closes #7037)  
Files: runtime/doc/eval.txt, src/highlight.c, src/evalfunc.c,  
src/testdir/test\_highlight.vim

#### Patch 8.2.1772

Problem: Cannot use **CTRL-W** <Down> to move out of a terminal window.  
Solution: Use special\_to\_buf() instead of mb\_char2bytes(). (closes #7045)  
Files: src/terminal.c, src/testdir/test\_terminal.vim

#### Patch 8.2.1773

Problem: Crash when calling mapset() with a list as first argument.  
Solution: Check for NULL. (closes #7040)  
Files: src/map.c, src/testdir/test\_maparg.vim

#### Patch 8.2.1774

Problem: GTK: hang when forced to exit.  
Solution: Do not clean up "mainwin" when really\_exiting is set.  
(Zdenek Dohnal, closes #7042)  
Files: src/gui\_gtk\_x11.c

Patch 8.2.1775

Problem: MS-Windows: adding a long quickfix list is slow.  
Solution: Shorten the buffer name only for the first entry. (Yegappan Lakshmanan, closes #7039, closes #7033)  
Files: src/quickfix.c, src/testdir/test\_quickfix.vim

Patch 8.2.1776

Problem: Filetype.vim may be loaded twice.  
Solution: Do "syntax on" after "filetype on". (Adam Stankiewicz, closes #7049)  
Files: runtime/defaults.vim

Patch 8.2.1777

Problem: Vim9: some assignment tests in the wrong file.  
Solution: Move assignment tests to test\_vim9\_assign.  
Files: src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.1778

Problem: Vim9: returning from a partial call clears outer context, causing a crash.  
Solution: Put the outer context in the stack frame. (closes #7044)  
Files: src/vim9execute.c, src/vim9.h, src/testdir/test\_vim9\_func.vim

Patch 8.2.1779

Problem: Some debian changelog files are not recognized.  
Solution: Add \*/debian/changelog. (Jason Franklin)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.1780

Problem: Statusline not updated when splitting windows.  
Solution: Call status\_redraw\_all(). (Jason Franklin, closes #5496)  
Files: src/window.c, src/testdir/test\_statusline.vim

Patch 8.2.1781

Problem: Writing to prompt buffer interferes with insert mode.  
Solution: Use win\_enter() instead of just setting "curwin". (Ben Jackson, closes #7035)  
Files: src/autocmd.c, src/testdir/test\_prompt\_buffer.vim

Patch 8.2.1782

Problem: Vim9: cannot pass boolean to mapset().  
Solution: Use get\_tv\_bool(). (closes #7041)  
Files: src/map.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1783 (after 8.2.1781)

Problem: Try-catch test fails.  
Solution: Don't call win\_enter(), only call entering\_window().  
Files: src/autocmd.c, src/window.c, src/proto/window.pro, src/testdir/runtest.vim

Patch 8.2.1784

Problem: commits are not scanned for security problems  
Solution: Enable Github code scanning. (Christian Brabandt, closes #7057)

Files: .github/workflows/codeql-analysis.yml

Patch 8.2.1785  
Problem: Compiler warning for strcpy() out of bounds. (Christian Brabandt)  
Solution: use memmove() instead.  
Files: src/dict.c

Patch 8.2.1786  
Problem: Various Normal mode commands not fully tested.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #7059)  
Files: src/testdir/test\_normal.vim, src/testdir/test\_regexp\_utf8.vim, src/testdir/test\_registers.vim, src/testdir/test\_spellfile.vim, src/testdir/test\_tagjump.vim, src/testdir/test\_visual.vim

Patch 8.2.1787  
Problem: Crash with 'incsearch' and very long line.  
Solution: Check whether regprog becomes NULL. (closes #7063)  
Files: src/search.c, src/testdir/test\_search.vim

Patch 8.2.1788  
Problem: Vim9: still allows :let for declarations.  
Solution: Make the default for v:disallow\_let one. It can still be set to zero to allow for using :let.  
Files: src/evalvars.c, src/testdir/runtest.vim

Patch 8.2.1789  
Problem: Vim9: crash with invalid list constant. (Dhiraj Mishra)  
Solution: Return FAIL when compiling the list fails. (closes #7066)  
Files: src/vim9compile.c, src/errors.h, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1790  
Problem: MS-Windows with Python: crash when executed from Vifm.  
Solution: Use NUL instead of CONIN. (Ken Takata, closes #7061, closes #7053)  
Files: src/if\_python3.c

Patch 8.2.1791  
Problem: Vim9: debugger test fails.  
Solution: Use "var" instead of "let".  
Files: src/testdir/test\_debugger.vim

Patch 8.2.1792  
Problem: Configure does not recognize Racket 6.1+.  
Solution: Add a check for "rktio". (closes #7062)  
Files: src/configure.ac, src/auto/configure

Patch 8.2.1793  
Problem: Not consistently giving the "is a directory" warning.  
Solution: Adjust check for illegal file name and directory. (Yasuhiro Matsumoto, closes #7067)  
Files: src/fileio.c, src/testdir/test\_edit.vim

Patch 8.2.1794  
Problem: No falsy Coalescing operator.  
Solution: Add the "??" operator. Fix mistake with function argument count.

Files: runtime/doc/eval.txt, src/eval.c, src/vim9compile.c,  
src/vim9type.c, src/testdir/test\_expr.vim,  
src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.1795

Problem: Vim9: operators && and || have a confusing result.  
Solution: Make the result a boolean.  
Files: runtime/doc/vim9.txt, src/eval.c, src/vim9compile.c,  
src/vim9execute.c, src/vim9type.c, src/structs.h, src/vim9.h,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.1796

Problem: Vim9: invalid memory access with weird function name. (Dhiraj Mishra)  
Solution: Check the name is valid. Add a test.  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1797

Problem: Vim9: some parts of the code not tested.  
Solution: Add a few tests.  
Files: src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1798

Problem: Vim9: ternary operator condition is too permissive.  
Solution: Use tv\_get\_bool\_chk().  
Files: runtime/doc/vim9.txt, src/eval.c, src/vim9compile.c,  
src/vim9execute.c, src/testdir/vim9.vim,  
src/testdir/test\_expr.vim, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_cmd.vim, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1799

Problem: Some Normal mode commands not fully tested.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #7073)  
Files: src/testdir/test\_gf.vim, src/testdir/test\_goto.vim,  
src/testdir/test\_normal.vim, src/testdir/test\_registers.vim,  
src/testdir/test\_startup.vim, src/testdir/test\_tabpage.vim,  
src/testdir/test\_visual.vim

#### Patch 8.2.1800

Problem: Vim9: memory leak if "if" condition is invalid.  
Solution: Free ppconst earlier.  
Files: src/vim9compile.c

#### Patch 8.2.1801

Problem: Undo file not found when using ":args" or ":next".  
Solution: Handle like editing another file. (closes #7072)  
Files: src/ex\_cmds.c, src/testdir/test\_undo.vim

#### Patch 8.2.1802

Problem: Vim9: crash with unterminated dict. (Dhiraj Mishra)  
Solution: Return empty string instead of NULL. (closes #7084)

Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1803

Problem: A few failures are not tested.

Solution: Test a few failures. (Dominique Pellé, closes #7075)

Files: src/testdir/test\_arglist.vim, src/testdir/test\_cmdline.vim,  
src/testdir/test\_json.vim, src/testdir/test\_listdict.vim

Patch 8.2.1804

Problem: resolve('/') returns an empty string.

Solution: Don't remove single slash. (closes #7074)

Files: src/filepath.c, src/testdir/test\_functions.vim

Patch 8.2.1805

Problem: Unix: terminal mode changed when using ":shell".

Solution: Avoid calling settmode() when not needed. (issue #7079)

Files: src/os\_unix.c

Patch 8.2.1806

Problem: MS-Windows with Python: Vim freezes after import command.

Solution: Use either "NUL" or "CONIN\$" when reopening stdin. (Yasuhiro  
Matsumoto, closes #7083)

Files: src/if\_python3.c

Patch 8.2.1807

Problem: Can use :help in a terminal popup window.

Solution: Give an error. (closes #7088)

Files: src/help.c, src/testdir/test\_popupwin.vim

Patch 8.2.1808

Problem: No test coverage for ":spelldump!".

Solution: Add a test. (Dominique Pellé, closes #7089)

Files: src/testdir/test\_spell.vim

Patch 8.2.1809

Problem: Mapping some keys with Ctrl does not work properly.

Solution: For terminal, GTK and Motif handle "@", "^" and "\_" codes.

Files: src/misc2.c, src/proto/misc2.pro, src/term.c, src/gui\_gtk\_x11.c,  
src/gui\_x11.c, src/testdir/test\_termcodes.vim

Patch 8.2.1810

Problem: Some code in normal.c not covered by tests.

Solution: Add normal mode tests. (Yegappan Lakshmanan, closes #7086)

Files: src/testdir/test\_charsearch.vim, src/testdir/test\_normal.vim

Patch 8.2.1811

Problem: Mapping Ctrl-key does not work for '{', '}' and '|'.

Solution: Remove the shift modifier. (closes #6457)

Files: runtime/doc/map.txt, src/misc2.c, src/testdir/test\_termcodes.vim

Patch 8.2.1812

Problem: Vim9: nested closure throws an internal error.

Solution: Do not skip a local variable with a partial. (closes #7065)

Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1813

Problem: Vim9: can assign wrong type to script dict. (Christian J. Robinson)  
Solution: Check the type if known.  
Files: src/structs.h, src/eval.c, src/vim9script.c,  
src/proto/vim9script.pro, src/proto/evalvars.pro,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.1814 (after 8.2.1813)

Problem: Missing change to remove "static".  
Solution: Add the change.  
Files: src/evalvars.c

Patch 8.2.1815

Problem: Vim9: memory leak when using function reference.  
Solution: Temporarily disable the test.  
Files: src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.1816

Problem: Vim9: another memory leak when using function reference.  
Solution: Temporarily disable the tests.  
Files: src/testdir/test\_vim9\_func.vim

Patch 8.2.1817

Problem: Vim9: wrong instruction when reusing a local variable spot.  
Solution: Clear a newly allocated local variable. (closes #7080)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1818

Problem: SE Linux: deprecation warning for security\_context\_t.  
Solution: Use "char \*" instead. (James McCoy, closes #7093)  
Files: src/os\_unix.c

Patch 8.2.1819

Problem: Vim9: Memory leak when using a closure.  
Solution: Compute the minimal refcount in the funcstack. Reenable disabled tests.  
Files: src/vim9execute.c, src/proto/vim9execute.pro, src/structs.h,  
src/eval.c, src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.1820

Problem: Vim9: crash when error happens in timer callback.  
Solution: Check that current\_exception is not NULL. (closes #7100)  
Files: src/ex\_docmd.c

Patch 8.2.1821

Problem: Vim9: concatenating to a NULL list doesn't work.  
Solution: Handle a NULL list like an empty list. (closes #7064)  
Files: src/list.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.1822 (after 8.2.1821)

Problem: List test doesn't fail.  
Solution: Adjust the test for NULL list handling.

Files: src/testdir/test\_listdict.vim

Patch 8.2.1823

Problem: "gN" does not select the matched string.  
Solution: Move the cursor to the start of the match.  
Files: src/search.c, src/testdir/test\_gn.vim

Patch 8.2.1824

Problem: Vim9: variables at the script level escape their scope.  
Solution: When leaving a scope remove variables declared in it.  
Files: src/structs.h, src/ex\_eval.c, src/evalvars.c,  
src/proto/evalvars.pro, src/testdir/test\_vim9\_script.vim

Patch 8.2.1825

Problem: Vim9: accessing freed memory.  
Solution: Clear sv\_name when the variable is deleted.  
Files: src/ex\_eval.c

Patch 8.2.1826

Problem: Vim9: cannot use a {} block at script level.  
Solution: Recognize a {} block.  
Files: src/ex\_docmd.c, src/ex\_cmds.h, src/ex\_cmdidxs.h, src/ex\_eval.c,  
src/structs.h, src/proto/ex\_eval.pro, src/errors.h,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.1827

Problem: Filetype detection does not test enough file names.  
Solution: Test more file names. (Adam Stankiewicz, closes #7099)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.1828

Problem: Build failure without the +eval feature.  
Solution: Add dummies for ex\_block and ex\_endblock.  
Files: src/ex\_docmd.c

Patch 8.2.1829

Problem: Warnings when executing Github actions.  
Solution: Use another method to set environment variables. (Ken Takata,  
closes #7107)  
Files: .github/workflows/ci-windows.yaml

Patch 8.2.1830

Problem: MS-Windows: Python3 issue with stdin.  
Solution: Check if stdin is readable. (Ken Takata, closes #7106)  
Files: src/if\_python3.c

Patch 8.2.1831

Problem: File missing from distribution.  
Solution: Add the github code analyses file.  
Files: Filelist

Patch 8.2.1832

Problem: readdirex() error is displayed as a message. (Yegappan Lakshmanan)  
Solution: Use semsg() instead of msg().

Files: src/fileio.c, src/testdir/test\_functions.vim

Patch 8.2.1833

Problem: When reading from stdin dup() is called twice.

Solution: Remove the dup() in main.c. (Ken Takata, closes #7110)

Files: src/main.c

Patch 8.2.1834

Problem: PyEval\_InitThreads() is deprecated in Python 3.9.

Solution: Do not call PyEval\_InitThreads in Python 3.9 and later. (Ken Takata, closes #7113) Avoid warnings for functions.

Files: src/if\_python3.c, src/if\_py\_both.h

Patch 8.2.1835

Problem: ":help ??" finds the "!!" tag.

Solution: Do not translate "?" into ".". (Naruhiko Nishino, closes #7114, closes #7115)

Files: src/help.c, src/testdir/test\_help\_tagjump.vim

Patch 8.2.1836

Problem: Autocmd test fails on pacifist systems.

Solution: Check that /bin/kill exists. (James McCoy, closes #7117) Tune the timing, make the autocmd test run faster.

Files: src/testdir/test\_autocmd.vim

Patch 8.2.1837

Problem: Using "gn" after "gN" does not work.

Solution: Extend the other end of the Visual area. (closes #7109)

Files: src/search.c, src/testdir/test\_gn.vim

Patch 8.2.1838

Problem: Vim9: cannot insert a comment line in an expression.

Solution: Skip comment lines at the script level. (closes #7111)

Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1839

Problem: Vim9: memory leaks reported in assign test.

Solution: Move the failing job\_start() call to separate test files, it causes false leakreports.

Files: src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_fails.vim, src/testdir/Make\_all.mak

Patch 8.2.1840

Problem: Vim9: error message is not clear about compilation error.

Solution: Say "compiling" instead of "processing".

Files: src/vim9compile.c, src/message.c, src/globals.h, src/testdir/test\_vim9\_func.vim

Patch 8.2.1841

Problem: Vim9: test for compilation error fails in normal build.

Solution: Invoke CheckRunVimInTerminal in a separate function.

Files: src/testdir/test\_vim9\_func.vim

Patch 8.2.1842

Problem: Crash when USE\_FNAME\_CASE is defined and using :browse.  
Solution: Don't use read-only memory for ".". (Yegappan Lakshmanan, closes #7123)  
Files: src/ex\_cmds.c, src/ex\_docmd.c, src/testdir/test\_edit.vim

#### Patch 8.2.1843

Problem: Netbeans: with huge buffer number memory allocation may fail.  
Solution: Check for size overflow.  
Files: src/netbeans.c

#### Patch 8.2.1844

Problem: Using "q" at the more prompt doesn't stop a long message.  
Solution: Check for "got\_int". (closes #7122)  
Files: src/message.c, src/testdir/test\_messages.vim, src/testdir/dumps/Test\_quit\_long\_message.dump

#### Patch 8.2.1845

Problem: Vim9: function defined in a block can't use variables defined in that block.  
Solution: First step: Make a second hashtable that holds all script variables, also block-local ones, with more information.  
Files: src/structs.h, src/evalvars.c, src/ex\_eval.c, src/vim9script.c, src/proto/vim9script.pro, src/scriptfile.c

#### Patch 8.2.1846

Problem: Vim9: variables declared in a local block are not found in when a function is compiled.  
Solution: Look for script variables in sn\_all\_vars.  
Files: src/structs.h, src/vim9compile.c, src/proto/vim9compile.pro, src/userfunc.c, src/proto/userfunc.pro, src/ex\_eval.c, src/vim9script.c, src/proto/vim9script.pro, src/vim9execute.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1847

Problem: Vim9: using negative value for unsigned type.  
Solution: Use zero instead of -1.  
Files: src/vim9compile.c

#### Patch 8.2.1848

Problem: Crash when passing a NULL string or list to popup\_settext().  
Solution: Check for NULL pointers. (closes #7132)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim

#### Patch 8.2.1849

Problem: Vim9: garbage collection frees block-local variables.  
Solution: Mark all script variables as used.  
Files: src/evalvars.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1850

Problem: "vat" does not select tags correctly over line break.  
Solution: Adjust the search pattern. (Aufar Gilbran, closes #7136)  
Files: src/textobject.c, src/testdir/test\_textobjects.vim

#### Patch 8.2.1851

Problem: Vim9: "!" followed by space incorrectly used.  
Solution: Skip over trailing spaces. (closes #7131)  
Files: src/eval.c, src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1852

Problem: map() returning zero for NULL list is unexpected.  
Solution: Return the empty list. (closes #7133)  
Files: src/list.c, src/testdir/test\_filter\_map.vim,  
src/testdir/test\_blob.vim

#### Patch 8.2.1853

Problem: "to\_f" is recognized at "topleft" modifier.  
Solution: Do not recognize modifier when "\_" follows. (closes #7019)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.1854

Problem: Vim9: crash when throwing exception for NULL string. (Dhiraj Mishra)  
Solution: Handle NULL string like empty string. (closes #7139)  
Files: src/vim9execute.c, src/errors.h, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1855

Problem: Vim9: get error message when nothing is wrong.  
Solution: Check called\_emsg instead of did\_emsg. (closes #7143)  
Files: src/vim9compile.c, src/vim9execute.c, src/errors.h

#### Patch 8.2.1856

Problem: "2resize" uses size of current window. (Daniel Steinberg)  
Solution: Use size of resized window. (Yasuhiro Matsumoto, closes #7152)  
Files: src/ex\_docmd.c, src/testdir/test\_window\_cmd.vim

#### Patch 8.2.1857

Problem: Vim9: using job\_status() on an unused var gives an error.  
Solution: Return "fail". (closes #7158)  
Files: src/job.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.1858

Problem: Vim9: filter functions return number instead of bool.  
Solution: Return v:true instead of one. (closes #7144)  
Files: src/popupwin.c, src/evalfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1859

Problem: Vim9: crash in unpack assignment.  
Solution: Make sure an error message is turned into an exception.  
(closes #7159)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.1860

Problem: Vim9: memory leak when throwing empty string.  
Solution: Free the empty string.  
Files: src/vim9execute.c

#### Patch 8.2.1861

Problem: Vim9: no specific error when parsing lambda fails.  
Solution: Also give syntax errors when not evaluating. (closes #7154)  
Files: src/dict.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1862

Problem: vim9: memory leak when compiling lambda fails.  
Solution: Call clear\_evalarg().  
Files: src/vim9compile.c

#### Patch 8.2.1863

Problem: Json code not sufficiently tested.  
Solution: Add more test cases. (Dominique Pellé, closes #7166)  
Files: src/testdir/test\_json.vim

#### Patch 8.2.1864

Problem: Vim9: no error for wrong list type.  
Solution: Add flag to indicate a constant. (closes #7160)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.1865

Problem: Vim9: add() does not check type of argument.  
Solution: Inline the add() call. (closes #7160)  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c, src/errors.h,  
src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.1866

Problem: Vim9: appending to pushed blob gives wrong result.  
Solution: Set ga\_maxlen when copying a blob.  
Files: src/blob.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1867

Problem: Vim9: argument to add() not checked for blob.  
Solution: Add the BLOBAPPEND instruction.  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c, src/errors.h,  
src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.1868

Problem: Vim9: no error for missing space after comma in dict.  
Solution: Check for white space. (closes #6672)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1869

Problem: Vim9: memory leak when using add().  
Solution: Free the added item.  
Files: src/vim9execute.c

#### Patch 8.2.1870

Problem: Vim9: no need to keep all script variables.  
Solution: Only keep script variables when a function was defined that could use them. Fix freeing static string on exit.  
Files: src/vim9script.c, src/proto/vim9script.pro, src/structs.h,  
src/ex\_eval.c, src/userfunc.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1871

Problem: Using %v in **'errorformat'** may fail before %Z.  
Solution: Set qf\_viscol only when qf\_col is set. (closes #7169)  
Files: src/quickfix.c, src/testdir/test\_quickfix.vim

Patch 8.2.1872

Problem: Matchfuzzy() does not prefer sequential matches.  
Solution: Give sequential matches a higher bonus. (Christian Brabandt, closes #7140)  
Files: src/search.c, src/testdir/test\_matchfuzzy.vim

Patch 8.2.1873

Problem: Vim9: missing white space when using <f-args>.  
Solution: Add spaces. (Christian J. Robinson)  
Files: src/usercmd.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1874

Problem: Can't do something just before leaving Insert mode.  
Solution: Add the InsertLeavePre autocommand event. (closes #7177)  
Files: runtime/doc/autocmd.txt, src/edit.c, src/vim.h, src/autocmd.c, src/testdir/test\_edit.vim

Patch 8.2.1875

Problem: Warning when building GTK gui.  
Solution: Add missing function parameter.  
Files: src/gui\_gtk\_f.c

Patch 8.2.1876

Problem: Vim9: argument types for builtin functions are not checked at compile time.  
Solution: Add an argument type checking mechanism. Implement type checks for one function.  
Files: src/evalfunc.c, src/proto/evalfunc.pro, src/vim9compile.c, src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_builtin.vim, src/testdir/Make\_all.mak

Patch 8.2.1877 (after 8.2.1876)

Problem: Test for function list fails.  
Solution: Move "obsolete" comments one line up.  
Files: src/evalfunc.c

Patch 8.2.1878

Problem: GTK: error for redefining function. (Tony Mechelynck)  
Solution: Remove "gtk\_" prefix from local functions and prepend "gui\_" to global functions.  
Files: src/gui\_gtk\_f.c, src/gui\_gtk\_f.h, src/gui\_gtk.c, src/gui\_gtk\_x11.c

Patch 8.2.1879

Problem: Vim9: argument types of insert() not checked when compiling.  
Solution: Add argument type checks for insert().  
Files: src/evalfunc.c, src/proto/evalfunc.pro, src/vim9compile.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.1880

Problem: Vim9: Asan complains about adding zero to NULL.  
Solution: Check for argument count first.  
Files: src/vim9compile.c

Patch 8.2.1881

Problem: Cannot build with GTK3.  
Solution: Adjust form functions.  
Files: src/gui\_gtk\_f.c

Patch 8.2.1882

Problem: Vim9: v:disable\_let is no longer needed.  
Solution: Remove v:disable\_let.  
Files: src/evalvars.c, src/vim.h, src/vim9compile.c

Patch 8.2.1883

Problem: Compiler warnings when using Python.  
Solution: Adjust PyCFunction to also have the second argument. Use "int" return type for some functions. Insert "(void \*)" to get rid of the remaining warnings.  
Files: src/if\_py\_both.h, src/if\_python.c, src/if\_python3.c

Patch 8.2.1884

Problem: Compiler warning for uninitialized variable. (John Marriott)  
Solution: Initialize with NULL.  
Files: src/vim9compile.c, src/evalfunc.c

Patch 8.2.1885

Problem: Filetype tests unnecessarily creates swap files.  
Solution: Disable 'swapfile'. (Ken Takata, closes #7183)  
Files: src/testdir/test\_filetype.vim

Patch 8.2.1886

Problem: Using ":silent!" in a popup filter has unexpected effect.  
Solution: Use did\_emsg instead of called\_emsg. (closes #7178)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim

Patch 8.2.1887

Problem: Github actions not optimally configured.  
Solution: Run CI on any pushed branches. Set fail-fast. (Ozaki Kiichi, closes #7184)  
Files: .github/workflows/ci-windows.yaml

Patch 8.2.1888

Problem: Vim9: Getbuflin(-1, 1, '\$') gives an error.  
Solution: Return an empty list. (closes #7180)  
Files: src/evalbuffer.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.1889

Problem: Vim9: erroneous error for missing white space after `{}`.  
Solution: Don't skip over white space after `{}`. (issue #7167)  
Files: src/dict.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.1890

Problem: Vim9: strange error for subtracting from a list.  
Solution: Check getting a number, not a string. (closes #7167)  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1891

Problem: Vim9: skipping over expression doesn't handle line breaks.  
Solution: Pass evalarg to skip\_expr(). (closes #7157)  
Files: src/vim9compile.c, src/eval.c, src/proto/eval.pro, src/ex\_docmd.c,  
src/misc1.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.1892

Problem: Valgrind warns for using uninitialized access in tests.  
Solution: Fix condition for breaking out of loop. (Dominique Pellé,  
closes #7187)  
Files: src/terminal.c

#### Patch 8.2.1893

Problem: Fuzzy matching does not support multiple words.  
Solution: Add support for matching white space separated words. (Yegappan  
Lakshmanan, closes #7163)  
Files: runtime/doc/eval.txt, src/search.c,  
src/testdir/test\_matchfuzzy.vim

#### Patch 8.2.1894

Problem: Vim9: command modifiers are not supported.  
Solution: Support "silent" and "silent!".  
Files: src/structs.h, src/vim9compile.c, src/vim9.h, src/vim9execute.c,  
src/evalvars.c, src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.1895 (after 8.2.1894)

Problem: Vim9: silent command modifier test fails.  
Solution: Add missing changes.  
Files: src/ex\_docmd.c

#### Patch 8.2.1896

Problem: Valgrind warns for using uninitialized memory.  
Solution: NUL terminate the SmcOpenConnection() error message. (Dominique  
Pellé, closes #7194)  
Files: src/os\_unix.c

#### Patch 8.2.1897

Problem: Command modifiers are saved and set inconsistently.  
Solution: Separate parsing and applying command modifiers. Save values in  
cmdmod\_T.  
Files: src/structs.h, src/ex\_docmd.c, src/proto/ex\_docmd.pro,  
src/ex\_cmds.h, src/vim9compile.c

#### Patch 8.2.1898

Problem: Command modifier parsing always uses global cmdmod.  
Solution: Pass in cmdmod\_T to use. Rename struct fields consistently.  
Files: src/structs.h, src/arglist.c, src/buffer.c, src/bufwrite.c,  
src/diff.c, src/change.c, src/cmdhist.c, src/edit.c,  
src/ex\_cmds.c, src/ex\_cmds2.c, src/ex\_docmd.c, src/ex\_getln.c,

src/fileio.c, src/filepath.c, src/gui.c, src/gui\_gtk\_x11.c,  
src/help.c, src/if\_cscope.c, src/indent.c, src/mark.c,  
src/memline.c, src/message.c, src/option.c, src/ops.c,  
src/os\_unix.c, src/quickfix.c, src/register.c, src/scriptfile.c,  
src/search.c, src/session.c, src/tag.c, src/terminal.c,  
src/textformat.c, src/usercmd.c, src/vim9compile.c, src/window.c,  
src/proto/ex\_docmd.pro

Patch 8.2.1899

Problem: Crash in out-of-memory situation.  
Solution: Bail out if shell\_name is NULL. (Dominique Pellé, closes #7196)  
Files: src/ex\_cmds.c

Patch 8.2.1900

Problem: Vim9: command modifiers do not work.  
Solution: Make most command modifiers work.  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/usercmd.c, src/proto/usercmd.pro, src/scriptfile.c,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.1901

Problem: Variable completion does not work in command line window.  
Solution: Use the "prevwin". (closes #7198)  
Files: src/evalvars.c, src/testdir/test\_ins\_complete.vim

Patch 8.2.1902

Problem: Default option values are changed when using :badd for an existing buffer.  
Solution: When calling buflist\_new() pass a zero line number. (closes #7195)  
Files: src/ex\_cmds.c, src/testdir/test\_buffer.vim

Patch 8.2.1903 (after 8.2.1902)

Problem: Buffer test fails with normal features.  
Solution: Use 'numberwidth' instead of 'conceallevel' in the test.  
Files: src/testdir/test\_buffer.vim

Patch 8.2.1904

Problem: Still using default option values after using ":badd +1".  
Solution: Find a window where options were set. Don't set the window when using ":badd".  
Files: src/buffer.c, src/ex\_cmds.c, src/vim.h,  
src/testdir/test\_buffer.vim

Patch 8.2.1905

Problem: The wininfo list may contain stale entries.  
Solution: When closing a window remove any other entry where the window pointer is NULL.  
Files: src/buffer.c, src/proto/buffer.pro, src/window.c

Patch 8.2.1906

Problem: Warning for signed/unsigned.  
Solution: Use size\_t instead of int. (Mike Williams)  
Files: src/proto/usercmd.pro, src/usercmd.c, src/vim9execute.c

Patch 8.2.1907

Problem: Complete\_info().selected may be wrong.  
Solution: Update cp\_number if it was never set. (issue #6945)  
Files: src/insexpand.c, src/testdir/test\_ins\_complete.vim

Patch 8.2.1908

Problem: Lua is initialized even when not used.  
Solution: Put lua\_init() after check for "eap->skip". (Christian Brabandt, closes #7191). Avoid compiler warnings.  
Files: src/if\_lua.c, src/testdir/test\_lua.vim

Patch 8.2.1909

Problem: Number of status line items is limited to 80.  
Solution: Dynamically allocate the arrays. (Rom Grk, closes #7181)  
Files: runtime/doc/options.txt, src/buffer.c, src/optionstr.c, src/proto/buffer.pro, src/screen.c, src/structs.h, src/testdir/test\_options.vim, src/testdir/test\_statusline.vim, src/vim.h

Patch 8.2.1910

Problem: Reading past the end of the command line.  
Solution: Check for NUL. (closes #7204)  
Files: src/ex\_docmd.c, src/testdir/test\_edit.vim

Patch 8.2.1911

Problem: Tiny build fails.  
Solution: Add #ifdef.  
Files: src/insexpand.c

Patch 8.2.1912

Problem: With Python 3.9 some tests fail.  
Solution: Take into account the different error message. (James McCoy, closes #7210)  
Files: src/testdir/test\_python3.vim

Patch 8.2.1913

Problem: GTK GUI: rounding for the cell height is too strict.  
Solution: Round up above 15/16 of a pixel. (closes #7203)  
Files: src/gui\_gtk\_x11.c

Patch 8.2.1914

Problem: Vim9: cannot put line break in expression for '=' register.  
Solution: Pass fgetline to set\_expr\_line(). (closes #7209)  
Files: src/register.c, src/proto/register.pro, src/ex\_docmd.c, src/eval.c, src/proto/eval.pro, src/misc2.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.1915

Problem: Vim9: error for wrong number of arguments is not useful.  
Solution: Mention whatever we have for the name. (closes #7208)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.1916

Problem: Vim9: function call is aborted even when "silent!" is used.

Solution: Use did\_emsg instead of called\_emsg. (closes #7213)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1917

Problem: No test for improved Man command.  
Solution: Test that shell arguments are properly escaped.  
Files: src/testdir/test\_man.vim

#### Patch 8.2.1918

Problem: Vim9: E1100 mentions :let.  
Solution: Mention "var". (closes #7207)  
Files: src/vim9script.c, src/errors.h

#### Patch 8.2.1919

Problem: Assert\_fails() setting emsg\_silent changes normal execution.  
Solution: Use a separate flag in\_assert\_fails.  
Files: src/testing.c, src/globals.h, src/buffer.c, src/change.c, src/fileio.c, src/insexpand.c, src/message.c, src/misc1.c, src/normal.c, src/screen.c, src/term.c, src/vim9execute.c, src/testdir/test\_vim9\_func.vim, src/testdir/gen\_opt\_test.vim, src/testdir/test\_autocmd.vim, src/testdir/test\_mapping.vim, src/testdir/test\_popup.vim, src/testdir/test\_terminal.vim

#### Patch 8.2.1920

Problem: Listlbr test fails when run after another test.  
Solution: Add test separately to list of test targets.  
Files: src/testdir/Make\_all.mak, src/testdir/test\_alot\_utf8.vim

#### Patch 8.2.1921

Problem: Fuzzy matching does not recognize path separators.  
Solution: Add a bonus for slash and backslash. (Yegappan Lakshmanan, closes #7225)  
Files: src/search.c, src/testdir/test\_matchfuzzy.vim

#### Patch 8.2.1922

Problem: Win32: scrolling doesn't work properly when part of window is off-screen.  
Solution: Fall back to GDI scrolling if part of the window is off-screen. Handle multi-monitor setup better. (Ken Takata, closes #7219)  
Files: src/gui\_w32.c

#### Patch 8.2.1923

Problem: Vim9: "filter" command modifier doesn't work.  
Solution: Check for space on char before argument. (closes #7216, closes #7222)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.1924

Problem: Vim9: crash when indexing dict with NULL key.  
Solution: Use empty string instead of NULL. (closes #7229) Make error message more useful for empty string.  
Files: src/vim9execute.c, src/globals.h, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1925 (after 8.2.1924)

Problem: List/dict test fails.  
Solution: Correct expected exception.  
File: src/testdir/test\_listdict.vim

#### Patch 8.2.1926

Problem: Cannot use a space in '**spellfile**'. (Filipe Brandenburger)  
Solution: Permit using a space. (closes #7230)  
Files: src/spell.c, src/testdir/gen\_opt\_test.vim

#### Patch 8.2.1927

Problem: Vim9: get unknown error with an error in a timer function.  
Solution: Use did\_emsg instead of called\_emsg. (closes #7231)  
Files: src/vim9compile.c, src/vim9execute.c

#### Patch 8.2.1928

Problem: Vim9: "silent!" not effective when list index is wrong.  
Solution: Ignore list index failure when emsg\_silent is set. (closes #7232)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.1929

Problem: MS-Windows: problem loading Perl 5.32.  
Solution: Define NO\_THREAD\_SAFE\_LOCALE. (Ken Takata, closes #7234)  
Files: src/if\_perl.xs

#### Patch 8.2.1930

Problem: Wrong input if removing shift results in special key code.  
Solution: Handle special key codes. (closes #7189)  
Files: src/term.c, src/testdir/test\_termcodes.vim

#### Patch 8.2.1931

Problem: Vim9: arguments of extend() not checked at compile time.  
Solution: Add argument type checking for extend().  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.1932

Problem: Compiler warnings when building with Athena GUI.  
Solution: Fix function signatures.  
Files: src/gui\_at\_fs.c

#### Patch 8.2.1933

Problem: Cannot sort using locale ordering.  
Solution: Add a flag for :sort and sort() to use the locale. (Dominique Pellé, closes #7237)  
Files: runtime/doc/change.txt, runtime/doc/eval.txt, src/ex\_cmds.c, src/list.c, src/testdir/test\_sort.vim

#### Patch 8.2.1934

Problem: Vim9: command modifiers in :def function not tested.  
Solution: Add tests. Fix using modifier before filter command.  
Files: src/ex\_docmd.c, src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.1935 (after 8.2.1933)

Problem: Sort test fails on Mac.  
Solution: Disable the sort test with locale on Mac.

Files: src/testdir/test\_sort.vim

Patch 8.2.1936

Problem: Session sets the local '**scrolloff**' value to the global value.  
Solution: Do not let restoring the global option value change the local value.

Files: src/session.c, src/testdir/test\_mksession.vim

Patch 8.2.1937

Problem: Vim9: test for confirm modifier fails in some situations.  
Solution: Add a short wait. Handle failure better.

Files: src/testdir/term\_util.vim, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1938

Problem: Wiping out a terminal buffer makes some tests fail.  
Solution: Do not wipe out the terminal buffer unless wanted.

Files: src/testdir/term\_util.vim, src/testdir/test\_terminal.vim,  
src/testdir/test\_terminal3.vim

Patch 8.2.1939

Problem: Invalid memory access in Ex mode with global command.  
Solution: Make sure the cursor is on a valid line. (closes #7238)

Files: src/move.c, src/testdir/test\_ex\_mode.vim

Patch 8.2.1940

Problem: Vim9: browse modifier test fails on Mac.  
Solution: Only test when the +browse feature is available.

Files: src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1941

Problem: Ex mode test fails on MS-Windows with GUI.  
Solution: Skip the test when using gvim.

Files: src/testdir/test\_ex\_mode.vim

Patch 8.2.1942

Problem: Insufficient test coverage for the Netbeans interface.  
Solution: Add more tests. Fix an uncovered bug. (Yegappan Lakshmanan,  
closes #7240)

Files: runtime/doc/netbeans.txt, src/mouse.c,  
src/testdir/test\_netbeans.py, src/testdir/test\_netbeans.vim,  
src/testdir/test\_quickfix.vim

Patch 8.2.1943

Problem: Vim9: wrong error message when colon is missing.  
Solution: Check for a missing colon. (issue #7239)

Files: src/ex\_docmd.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1944

Problem: Netbeans test is flaky.  
Solution: Add a short delay. (Yegappan Lakshmanan, closes #7246)

Files: src/testdir/test\_netbeans.vim

Patch 8.2.1945

Problem: Crash when passing NULL function to reduce().

Solution: Check for NULL pointer and give an error. (Dominique Pellé, closes #7243)  
Files: src/list.c, src/errors.h, src/testdir/test\_listdict.vim

#### Patch 8.2.1946

Problem: sort() with NULL string not tested.  
Solution: Add a test. use v:collate. (Dominique Pellé, closes #7247)  
Files: src/testdir/test\_sort.vim

#### Patch 8.2.1947

Problem: Crash when using "zj" without folds. (Sean Dewar)  
Solution: Check for at least one fold. (closes #7245)  
Files: src/fold.c, src/testdir/test\_fold.vim

#### Patch 8.2.1948

Problem: GUI: crash when handling message while closing a window. (Srinath Avadhanula)  
Solution: Don't handle message while closing a window. (closes #7250)  
Files: src/window.c, src/globals.h, src/getchar.c

#### Patch 8.2.1949

Problem: Vim9: using extend() on null dict is silently ignored.  
Solution: Give an error message. Initialize a dict variable with an empty dictionary. (closes #7251)  
Files: src/errors.h, src/list.c, src/evalvars.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.1950

Problem: Vim9: crash when compiling function fails when getting type.  
Solution: Handle NULL type. (closes #7253)  
Files: src/vim9type.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1951 (after 8.2.1949)

Problem: Test for list and dict fails.  
Solution: Adjust for using an empty list/dict for a null one.  
Files: src/testdir/test\_listdict.vim, src/testdir/test\_python2.vim, src/testdir/test\_python3.vim

#### Patch 8.2.1952

Problem: Vim9: crash when using a NULL dict key.  
Solution: Use a NULL dict key like an empty string. (closes #7249)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1953

Problem: Vim9: extra "unknown" error after other error.  
Solution: Restore did\_emsg count after EXEC instruction. (closes #7254)  
Improve error message from assert\_fails()  
Files: src/vim9execute.c, src/testing.c, src/testdir/test\_vim9\_script.vim, src/testdir/test\_assert.vim

#### Patch 8.2.1954

Problem: Vim9: not all command modifiers are tested.  
Solution: Add tests for "keep" modifiers. Fix that marks are lost even though ":lockmarks" is used.

Files: src/ex\_cmds.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1955

Problem: Vim9: not all command modifiers are tested.

Solution: Add tests for remaining modifiers.

Files: src/testdir/test\_vim9\_cmd.vim

Patch 8.2.1956

Problem: Vim9: cannot specify argument types for lambda.

Solution: Allow adding argument types. Check arguments when calling a function reference.

Files: src/userfunc.c, src/proto/userfunc.pro, src/vim9compile.c,  
src/eval.c, src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.1957

Problem: Diff and cursorcolumn highlighting don't mix.

Solution: Fix condition for what attribute to use. (Christian Brabandt, closes #7258, closes #7260)

Files: src/drawline.c, src/testdir/dumps/Test\_diff\_cuc\_01.dump,  
src/testdir/dumps/Test\_diff\_cuc\_02.dump,  
src/testdir/dumps/Test\_diff\_cuc\_03.dump,  
src/testdir/dumps/Test\_diff\_cuc\_04.dump,  
src/testdir/test\_diffmode.vim

Patch 8.2.1958 (after 8.2.1956)

Problem: Build failure with timers.

Solution: Add missing change.

Files: src/popupwin.c

Patch 8.2.1959

Problem: Crash when terminal buffer name is made empty. (Dhiraj Mishra)

Solution: Fall back to "[No Name]". (closes #7262)

Files: src/buffer.c, src/proto/buffer.pro, src/terminal.c,  
src/testdir/test\_terminal.vim

Patch 8.2.1960

Problem: Warning for uninitialized variable.

Solution: Initialize the variable.

Files: src/evalfunc.c

Patch 8.2.1961

Problem: Various comments can be improved.

Solution: Various comment adjustments.

Files: src/dict.c, src/structs.h, src/time.c, src/testdir/shared.vim,  
src/testdir/test\_netbeans.vim, src/gui\_motif.c

Patch 8.2.1962

Problem: Netbeans may access freed memory.

Solution: Check the buffer pointer is still valid. Add a test. (Yegappan Lakshmanan, closes #7248)

Files: src/netbeans.c, src/testdir/test\_netbeans.vim

Patch 8.2.1963

Problem: Crash when using a popup window with "latin1" encoding.  
Solution: Don't use ScreenLinesUC when enc\_utf8 is false. (closes #7241)  
Files: src/screen.c, src/terminal.c, src/testdir/test\_popupwin.vim

#### Patch 8.2.1964

Problem: Not all ConTeXt files are recognized.  
Solution: Add two patterns. (closes #7263)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.1965

Problem: Vim9: tests fail without the channel feature.  
Solution: Check if the channel feature is present. (Dominique Pellé, closes #7270)  
Files: src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1966

Problem: Popup becomes current window after closing a terminal window.  
Solution: When restoring the window after executing autocommands, check that the window ID is still the same. (Naruhiko Nishino, closes #7272)  
Files: src/autocmd.c, src/window.c, src/proto/window.pro, src/structs.h, src/testdir/test\_popupwin.vim

#### Patch 8.2.1967

Problem: The session file does not restore the alternate file.  
Solution: Add ":balt". Works like ":badd" and also sets the buffer as the alternate file. Use it in the session file. (closes #7269, closes #6714)  
Files: runtime/doc/windows.txt, src/ex\_cmds.h, src/ex\_cmdidxs.h, src/ex\_docmd.c, src/vim.h, src/ex\_cmds.c, src/session.c, src/testdir/test\_buffer.vim

#### Patch 8.2.1968

Problem: Vim9: has() assumes a feature does not change dynamically.  
Solution: Check whether a feature may change dynamically. (closes #7265)  
Files: src/vim9compile.c, src/evalfunc.c, src/proto/evalfunc.pro, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.1969

Problem: Vim9: map() may change the list or dict item type.  
Solution: Add mapnew().  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c, src/list.c, src/proto/list.pro, src/testdir/test\_filter\_map.vim

#### Patch 8.2.1970

Problem: It is easy to make mistakes when cleaning up swap files after the system crashed.  
Solution: Warn for the process still running after recovery. Do not automatically delete a swap file created on another system. (David Fries, closes #7273)  
Files: src/memline.c, src/testdir/test\_swap.vim

#### Patch 8.2.1971

Problem: Memory leak when map() fails.

Solution: Clear the typval.  
Files: src/list.c

#### Patch 8.2.1972

Problem: Crash when recreating nested fold.  
Solution: Check for empty growarray. (closes #7278)  
Files: src/fold.c, src/testdir/test\_fold.vim

#### Patch 8.2.1973

Problem: Finding a patch number can be a bit slow.  
Solution: Use binary search. (closes #7279)  
Files: src/version.c

#### Patch 8.2.1974

Problem: Vim9: test for has('gui\_running') fails with VIMDLL.  
Solution: Adjust the #ifdef. (Ken Takata, closes #7276)  
Files: src/evalfunc.c

#### Patch 8.2.1975

Problem: Win32: memory leak when encoding conversion fails.  
Solution: Free the allocated memory. (Ken Takata, closes #7277)  
Files: src/os\_win32.c

#### Patch 8.2.1976

Problem: Cannot backspace in prompt buffer after using cursor-left. (Maxim Kim)  
Solution: Ignore "arrow\_used" in a prompt buffer. (closes #7281)  
Files: src/edit.c, src/testdir/test\_prompt\_buffer.vim

#### Patch 8.2.1977

Problem: Vim9: error for using a string in a condition is confusing.  
Solution: Give a more specific error. Also adjust the compile time type checking for || and &&.  
Files: src/vim9compile.c, src/vim9execute.c, src/proto/vim9execute.pro, src/typval.c, src/errors.h, src/testdir/test\_vim9\_cmd.vim, src/testdir/test\_vim9\_disassemble.vim, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.1978

Problem: Making a mapping work in all modes is complicated.  
Solution: Add the <Cmd> special key. (Yegappan Lakshmanan, closes #7282, closes 4784, based on patch by Bjorn Linse)  
Files: runtime/doc/autocmd.txt, runtime/doc/eval.txt, runtime/doc/map.txt, src/edit.c, src/errors.h, src/ex\_docmd.c, src/ex\_getln.c, src/getchar.c, src/insexpand.c, src/keymap.h, src/map.c, src/misc2.c, src/normal.c, src/ops.c, src/proto/getchar.pro, src/screen.c, src/terminal.c, src/testdir/test\_mapping.vim

#### Patch 8.2.1979

Problem: "term\_opencmd" option of term\_start() is truncated. (Sergey Vlasov)  
Solution: Allocate the buffer to hold the command. (closes #7284)  
Files: src/terminal.c, src/testdir/test\_terminal.vim

Patch 8.2.1980

Problem: Vim9: some tests are not done at the script level.  
Solution: Use CheckDefAndScriptSuccess() in more places. Fix uncovered problems.  
Files: src/eval.c, src/list.c, src/scriptfile.c,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.1981

Problem: MinGW: parallel compilation might fail.  
Solution: Add dependencies on \$(OUTDIR). (Masamichi Abe, closes #7287)  
Files: src/Make\_cyg\_ming.mak

Patch 8.2.1982

Problem: Quickfix window not updated when adding invalid entries.  
Solution: Update the quickfix buffer properly. (Yegappan Lakshmanan, closes #7291, closes #7271)  
Files: src/quickfix.c, src/testdir/test\_quickfix.vim

Patch 8.2.1983

Problem: ml\_get error when using <Cmd> to open a terminal.  
Solution: If the window changed reset the incsearch state. (closes #7289)  
Files: src/ex\_getln.c, src/testdir/test\_terminal.vim,  
src/testdir/dumps/Test\_terminal\_from\_cmd.dump

Patch 8.2.1984

Problem: Cannot use :vimgrep in omni completion, causing C completion to fail.  
Solution: Add the EX\_LOCK\_OK flag to :vimgrep. (closes #7292)  
Files: src/ex\_cmds.h, src/testdir/test\_quickfix.vim

Patch 8.2.1985

Problem: Crash when closing terminal popup with <Cmd> mapping.  
Solution: Check b\_term is not NULL. (closes #7294)  
Files: src/terminal.c, src/testdir/test\_terminal.vim

Patch 8.2.1986

Problem: Expression test is flaky on Appveyor.  
Solution: Temporarily disable the test in MS-Windows.  
Files: src/testdir/test\_vim9\_expr.vim

Patch 8.2.1987

Problem: MS-Windows: Win32.mak is no longer needed.  
Solution: Do not include Win32.mak. (Jason McHugh, closes #7290)  
Files: src/Make\_mvc.mak, src/INSTALLpc.txt

Patch 8.2.1988

Problem: Still in Insert mode when opening terminal popup with a <Cmd> mapping in Insert mode.  
Solution: Exit Insert mode. (closes #7295)  
Files: src/edit.c, src/testdir/test\_terminal.vim

Patch 8.2.1989

Problem: Info popup triggers WinEnter and WinLeave autocommands.

Solution: Suppress autocommands for the info popup. (closes #7296)  
Files: src/popupmenu.c, src/testdir/test\_popupwin.vim

#### Patch 8.2.1990

Problem: Cursor position wrong in terminal popup with finished job.  
Solution: Only add the top and left offset when not done already.  
(closes #7298)  
Files: src/popupwin.c, src/structs.h, src/drawline.c, src/move.c,  
src/terminal.c, src/testdir/dumps/Test\_terminal\_popup\_m1.dump

#### Patch 8.2.1991

Problem: Coverity warns for not using the ga\_grow() return value.  
Solution: Bail out if ga\_grow() fails. (Yegappan Lakshmanan, closes #7303)  
Files: src/getchar.c

#### Patch 8.2.1992

Problem: Build fails with small features.  
Solution: Add #ifdef.  
Files: src/move.c

#### Patch 8.2.1993

Problem: Occasional failure of the netbeans test.  
Solution: Add "silent!". (Yegappan Lakshmanan, closes #7304)  
Files: src/testdir/test\_netbeans.vim

#### Patch 8.2.1994 (after 8.2.1981)

Problem: MS-Windows: MinGW always does a full build.  
Solution: Only check if \$OUTDIR exists. (Masamichi Abe, closes #7311)  
Files: src/Make\_cyg\_ming.mak

#### Patch 8.2.1995

Problem: The popup menu can cause too much redrawing.  
Solution: Reduce the length of the displayed text. (Yasuhiro Matsumoto,  
closes #7306)  
Files: src/popupmenu.c

#### Patch 8.2.1996

Problem: Vim9: invalid error for argument of extend().  
Solution: Check if the type could match. (closes #7299)  
Files: src/evalfunc.c, src/vim9compile.c, src/proto/vim9compile.pro,  
src/vim9type.c, src/proto/vim9type.pro,  
src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.1997

Problem: Window changes when using bufload() while in a terminal popup.  
Solution: When searching for a window by ID also find a popup window.  
(closes #7307)  
Files: src/window.c, src/testdir/test\_terminal.vim

#### Patch 8.2.1998

Problem: Terminal Cmd test sometimes fails to close popup.  
Solution: Add "term\_finish" option.  
Files: src/testdir/test\_terminal.vim

Patch 8.2.1999

Problem: Terminal popup test sometimes fails.  
Solution: Wait for the popup to close.  
Files: src/testdir/test\_terminal.vim

Patch 8.2.2000

Problem: Vim9: dict.key assignment not implemented yet.  
Solution: Implement dict.key assignment. (closes #7312)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2001

Problem: Vim9: :def function does not apply **'maxfuncdepth'**.  
Solution: Use **'maxfuncdepth'**. (issue #7313)  
Files: src/vim9execute.c, src/userfunc.c, src/proto/userfunc.pro,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.2002

Problem: Vim9: lambda argument shadowed by function name.  
Solution: Let function name be shadowed by lambda argument. (closes #7313)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2003

Problem: Build error with +conceal but without +popupwin.  
Solution: Add #ifdef. (Tom Ryder, closes #7316)  
Files: src/drawline.c

Patch 8.2.2004 (after 8.2.2002)

Problem: Compiler warning for uninitialized variable.  
Solution: Initialize "ufunc". (John Marriott)  
Files: src/vim9compile.c

Patch 8.2.2005

Problem: Redoing a mapping with <Cmd> doesn't work properly.  
Solution: Fill the redo buffer. Use "<SNR>" instead of a key code.  
(closes #7282)  
Files: src/ops.c, src/getchar.c, src/testdir/test\_mapping.vim

Patch 8.2.2006

Problem: .pbtxt files are not recognized.  
Solution: Recognize .pbtxt as protobuf text buffers. (closes #7326)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.2007

Problem: Test for insert mode in popup is not reliable.  
Solution: Wait for the popup to disappear. (Ozaki Kiichi, closes #7321)  
Files: src/testdir/test\_terminal.vim

Patch 8.2.2008

Problem: MS-Windows GUI: handling channel messages lags.  
Solution: Reduce the wait time from 100 to 10 msec. (closes #7097)  
Files: src/gui\_w32.c

Patch 8.2.2009

Problem: MS-Windows: setting \$LANG in gvimext only causes problems.

Solution: Do not set \$LANG. (Ken Takata, closes #7325)  
Files: src/GvimExt/gvimext.cpp

#### Patch 8.2.2010

Problem: Vim9: compiling fails for unreachable return statement.  
Solution: Fix it. (closes #7319)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2011

Problem: "syn sync" reports a very large number.  
Solution: Use "at the first line".  
Files: src/syntax.c, src/testdir/test\_syntax.vim

#### Patch 8.2.2012

Problem: Vim9: confusing error message when using bool wrongly.  
Solution: Mention "Bool" instead of "Special". (closes #7323)  
Files: src/typval.c, src/errors.h, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2013

Problem: Vim9: not skipping white space after unary minus.  
Solution: Skip whitespace. (closes #7324)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2014

Problem: Using **CTRL-O** in a prompt buffer moves cursor to start of the line.  
Solution: Do not move the cursor when restarting edit. (closes #7330)  
Files: src/job.c, src/testdir/test\_prompt\_buffer.vim

#### Patch 8.2.2015

Problem: Vim9: literal dict #{} is not like any other language.  
Solution: Support the JavaScript syntax.  
Files: runtime/doc/vim9.txt, src/vim9compile.c,  
src/proto/vim9compile.pro, src/errors.h,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2016

Problem: Swap file test is a little flaky.  
Solution: Don't set a byte to a fixed value, increment it.  
Files: src/testdir/test\_swap.vim

#### Patch 8.2.2017 (after 8.2.2015)

Problem: Missing part of the dict change.  
Solution: Also change the script level dict.  
Files: src/dict.c

#### Patch 8.2.2018

Problem: Vim9: script variable not found from lambda.  
Solution: In a lambda also check the script hashtab for a variable without a scope. (closes #7329)  
Files: src/evalvars.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2019 (after 8.2.2016)

Problem: Swap file test fails on MS-Windows.

Solution: Add four to the process ID. (Ken Takata, closes #7333)  
Files: src/testdir/test\_swap.vim

#### Patch 8.2.2020

Problem: Some compilers do not like the "namespace" argument.  
Solution: Rename to "use\_namespace". (closes #7332)  
Files: src/vim9compile.c, src/proto/vim9compile.pro

#### Patch 8.2.2021

Problem: Vim9: get E1099 when autocommand resets did\_emsg.  
Solution: Add did\_emsg\_cumul. (closes #7336)  
Files: src/globals.h, src/ex\_docmd.c, src/vim9execute.c,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2022

Problem: Vim9: star command recognized erroneously.  
Solution: Give an error for missing colon. (issue #7335)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2023

Problem: Vim: memory leak when :execute fails.  
Solution: Clear the growarray.  
Files: src/vim9execute.c

#### Patch 8.2.2024

Problem: Flicker when redrawing a popup with a title and border.  
Solution: Do not redraw the border where the title is displayed. (Naruhiko Nishino, closes #7334)  
Files: src/popupwin.c

#### Patch 8.2.2025

Problem: Amiga: Not all colors are used on OS4.  
Solution: Adjust the #ifdef to include \_\_amigaos4\_\_. (Ola Söder, closes #7328)  
Files: src/term.c

#### Patch 8.2.2026

Problem: Coverity warns for possibly using not NUL terminated string.  
Solution: Put a NUL in b0\_hname just in case.  
Files: src/memline.c

#### Patch 8.2.2027

Problem: Coverity warns for uninitialized field.  
Solution: Set "v\_lock".  
Files: src/list.c

#### Patch 8.2.2028

Problem: Coverity warns for using an uninitialized variable.  
Solution: Initialize to NULL.  
Files: src/eval.c

#### Patch 8.2.2029

Problem: Coverity warns for not checking return value.  
Solution: Check that u\_save\_cursor() returns OK.

Files: src/ops.c

#### Patch 8.2.2030

Problem: Some tests fail on Mac.

Solution: Avoid Mac test failures. Add additional test for wildmenu.  
(Yegappan Lakshmanan, closes #7341)

Files: src/testdir/runtest.vim, src/testdir/test\_cmdline.vim,  
src/testdir/test\_options.vim, src/testdir/test\_popupwin.vim

#### Patch 8.2.2031

Problem: Some tests fail when run under valgrind.

Solution: Avoid timing problems.

Files: src/testdir/test\_vim9\_func.vim, src/testdir/test\_channel.vim,  
src/testdir/test\_clientserver.vim, src/testdir/test\_debugger.vim,  
src/testdir/test\_quotestar.vim

#### Patch 8.2.2032

Problem: Cabalconfig and cabalproject filetypes not recognized.

Solution: Detect more cabal files. (Marcin Szamotulski, closes #7339)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.2033

Problem: Vim9: :def without argument gives compilation error.

Solution: Add the DEF instruction. (closes #7344)

Files: src/ex\_docmd.c, src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/userfunc.c, src/proto/userfunc.pro,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2034

Problem: Vim9: list unpack in for statement not compiled yet.

Solution: Compile list unpack. (closes #7345)

Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c, src/errors.h,  
src/eval.c, src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2035

Problem: MS-Windows: some tests may fail.

Solution: Avoid test failures. (Yegappan Lakshmanan, closes #7346)

Files: src/testdir/test\_channel.vim, src/testdir/test\_ex\_mode.vim,  
src/testdir/test\_functions.vim

#### Patch 8.2.2036

Problem: Current buffer is messed up if creating a new buffer for the  
quickfix window fails.

Solution: Check that creating the buffer succeeds. (closes #7352)

Files: src/quickfix.c, src/testdir/test\_quickfix.vim,  
src/testdir/dumps/Test\_quickfix\_window\_fails.dump

#### Patch 8.2.2037

Problem: Compiler test depends on list of compiler plugins.

Solution: Compare with the actual list of compiler plugins.

Files: src/testdir/test\_compiler.vim

Patch 8.2.2038

Problem: Compiler test fails on MS-Windows.  
Solution: Sort the found compiler plugin names.  
Files: src/testdir/test\_compiler.vim

Patch 8.2.2039

Problem: Viminfo is not written when creating a new file.  
Solution: Set "b\_marks\_read" in the new buffer. (Christian Brabandt, closes #7350)  
Files: src/bufwrite.c, src/testdir/test\_viminfo.vim

Patch 8.2.2040

Problem: Terminal buffer disappears even when 'bufhidden' is "hide". (Sergey Vlasov)  
Solution: Check 'bufhidden' when a terminal buffer becomes hidden. (closes #7358)  
Files: src/buffer.c, src/testdir/test\_terminal.vim

Patch 8.2.2041

Problem: Haskell filetype not optimally recognized.  
Solution: Recognize all \*.hsc files as Haskell. (Marcin Szamotulski, closes #7354)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.2042

Problem: Build failure with +profile but without +reltime.  
Solution: Adjust #ifdef. (Christian Brabandt, closes #7361)  
Files: src/syntax.c

Patch 8.2.2043

Problem: GTK3: white border around text stands out.  
Solution: Use current theme color. (closes #7357, issue #349)  
Files: src/gui\_gtk\_x11.c

Patch 8.2.2044

Problem: MS-Windows: swap file test sometimes fails.  
Solution: Use a more reliable way to change the process ID. When "timeout" fails use "ping" to wait up to ten minutes. (Ken Takata, closes #7365)  
Files: .github/workflows/ci-windows.yaml, src/testdir/test\_swap.vim

Patch 8.2.2045

Problem: Highlighting a character too much with incsearch.  
Solution: Check "search\_match\_endcol". (Christian Brabandt, closes #7360)  
Files: src/drawline.c, src/testdir/test\_search.vim, src/testdir/dumps/Test\_incsearch\_newline1.dump, src/testdir/dumps/Test\_incsearch\_newline2.dump, src/testdir/dumps/Test\_incsearch\_newline3.dump, src/testdir/dumps/Test\_incsearch\_newline4.dump, src/testdir/dumps/Test\_incsearch\_newline5.dump

Patch 8.2.2046

Problem: Some test failures don't give a clear error.  
Solution: Use assert\_match() and assert\_fails() instead of assert\_true().

(Ken Takata, closes #7368)  
Files: src/testdir/test\_autocmd.vim, src/testdir/test\_backspace\_opt.vim

#### Patch 8.2.2047

Problem: Amiga: FEAT\_ARP defined when it should not.  
Solution: Adjust #ifdef. (Ola Söder, closes #7370)  
Files: src/feature.h

#### Patch 8.2.2048

Problem: Amiga: obsolete code.  
Solution: Remove the unused lines. (Ola Söder, closes #7373)  
Files: src/gui.c

#### Patch 8.2.2049

Problem: Amiga: obsolete function.  
Solution: Remove the function. (Ola Söder, closes #7374)  
Files: src/memfile.c

#### Patch 8.2.2050

Problem: Search test contains unneeded sleeps.  
Solution: Rename the function, remove sleeps. (Christian Brabandt, closes #7369)  
Files: src/testdir/test\_search.vim

#### Patch 8.2.2051

Problem: Vim9: crash when aborting a user function call.  
Solution: Do not use the return value when aborting. (closes #7372)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2052

Problem: Vim9: "edit +4 fname" gives an error. (Naruhiko Nishino)  
Solution: Allow using a range in the +cmd argument. (closes #7364)  
Files: src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/vim.h, src/ex\_cmds.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2053

Problem: Vim9: lambda doesn't accept argument types.  
Solution: Optionally accept argument types at the script level.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2054

Problem: Amiga: FEAT\_ARP defined when it should not.  
Solution: Adjust "||" to "&&" in #ifdef. (Ola Söder, closes #7375)  
Files: src/feature.h

#### Patch 8.2.2055

Problem: MS-Windows: two Vim instances may use the same temp file.  
Solution: Use the process ID for the temp name. (Ken Takata, closes #7378)  
Files: src/fileio.c

#### Patch 8.2.2056

Problem: Configure fails when building with the "implicit-function-declaration" error enabled, specifically on Mac.  
Solution: Declare the functions like in the source code. (suggestion by

Clemens Lang, closes #7380)  
Files: src/configure.ac, src/auto/configure

#### Patch 8.2.2057

Problem: Getting the selection may trigger TextYankPost autocmd.  
Solution: Only trigger the autocommand when yanking in Vim, not for getting the selection. (closes #7367)  
Files: src/clipboard.c, src/normal.c, src/register.c, src/testdir/test\_autocmd.vim

#### Patch 8.2.2058

Problem: Using mkview/loadview changes the jumplist.  
Solution: Use ":keepjumps". Don't let ":badd" or ":balt" change the jumplist. (closes #7371)  
Files: src/session.c, src/ex\_docmd.c, src/testdir/test\_mksession.vim

#### Patch 8.2.2059

Problem: Amiga: can't find plugins.  
Solution: Do not use "\*" in the pattern. (Ola Söder, closes #7384)  
Files: src/main.c

#### Patch 8.2.2060

Problem: Check for features implemented with "if".  
Solution: Use the Check commands. (Ken Takata, closes #7383)  
Files: src/testdir/test\_autocmd.vim, src/testdir/test\_compiler.vim, src/testdir/test\_delete.vim, src/testdir/test\_diffmode.vim, src/testdir/test\_expr.vim, src/testdir/test\_fold.vim

#### Patch 8.2.2061

Problem: Vim9: E1030 error when using empty string for term\_sendkeys().  
Solution: Don't check for an invalid type unless the terminal can't be found. (closes #7382)  
Files: src/terminal.c, src/testdir/test\_termcodes.vim

#### Patch 8.2.2062

Problem: <Cmd> does not handle **CTRL-V**.  
Solution: Call get\_literal() after encountering **CTRL-V**. (closes #7387)  
Files: src/getchar.c, src/testdir/test\_mapping.vim

#### Patch 8.2.2063

Problem: Vim9: only one level of indexing supported.  
Solution: Handle more than one index in an assignment.  
Files: src/vim9compile.c, src/errors.h, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2064

Problem: terminal: cursor is on while redrawing, causing flicker.  
Solution: Switch the cursor off while redrawing. Always add the top and left offset to the cursor position when not done already. (closes #5943)  
Files: src/terminal.c, src/popupwin.c

#### Patch 8.2.2065

Problem: Using map() and filter() on a range() is inefficient.  
Solution: Do not materialize the range. (closes #7388)

Files: src/list.c, src/testdir/test\_functions.vim

Patch 8.2.2066

Problem: Vim9: assignment with += doesn't work.

Solution: Do not see the "+" as an addition operator.

Files: src/eval.c, src/ex\_docmd.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2067 (after 8.2.2064)

Problem: Cursor position in popup terminal is wrong.

Solution: Don't check the flags.

Files: src/terminal.c, src/testdir/test\_popupwin.vim

Patch 8.2.2068

Problem: Transparent syntax item uses start/end of containing region.

Solution: Do not change the startpos and endpos of a transparent region to that of its containing region. (Adrian Ghizaru, closes #7349, closes #7391)

Files: src/syntax.c, src/testdir/test\_syntax.vim

Patch 8.2.2069

Problem: The quickfix window is not updated after setqflist().

Solution: Update the quickfix buffer. (Yegappan Lakshmanan, closes #7390, closes #7385)

Files: src/quickfix.c, src/testdir/test\_quickfix.vim

Patch 8.2.2070

Problem: Can't get the exit value in VimLeave or VimLeavePre autocommands.

Solution: Add v:exiting like in Neovim. (Yegappan Lakshmanan, closes #7395)

Files: runtime/doc/autocmd.txt, runtime/doc/eval.txt, src/evalvars.c, src/main.c, src/testdir/test\_exit.vim, src/vim.h

Patch 8.2.2071

Problem: Vim9: list assign doesn't accept an empty remainder list.

Solution: Recognize list assignment with ";".

Files: src/ex\_docmd.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2072

Problem: Vim9: list assign not well tested.

Solution: Test with different destinations. Fix white space error.

Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2073

Problem: Vim9: for with unpack only works for local variables.

Solution: Recognize different destinations.

Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2074

Problem: Vim9: using :normal from Vim9 script can't handle range.

Solution: Execute a :normal command in legacy script context. (closes #7401)

Files: src/structs.h, src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2075

Problem: Error for const argument to mapnew().

Solution: Don't give an error. (closes #7400)

Files: src/list.c, src/testdir/test\_filter\_map.vim

Patch 8.2.2076

Problem: MS-Windows console: sometimes drops typed characters.  
Solution: Do not wait longer than 10 msec for input. (issue #7164)  
Files: src/os\_win32.c

Patch 8.2.2077

Problem: Build failure with small features.  
Solution: Add #ifdef.  
Files: src/structs.h, src/ex\_docmd.c

Patch 8.2.2078

Problem: Illegal memory access when using :print on invalid text. (Dhiraj Mishra)  
Solution: Check for more composing characters than supported. (closes #7399)  
Files: src/message.c, src/testdir/test\_utf8.vim

Patch 8.2.2079

Problem: Vim9: cannot put a linebreak before or after "in" of ":for".  
Solution: Skip over linebreak.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2080

Problem: Vim9: no proper error message for using s:var in for loop.  
Solution: Give a specific error.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2081

Problem: Vim9: cannot handle a linebreak after "=" in assignment.  
Solution: Skip over linebreak. (closes #7407)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.2082

Problem: Vim9: can still use the deprecated #{ } dict syntax.  
Solution: Remove support for #{ } in Vim9 script. (closes #7406, closes #7405)  
Files: src/dict.c, src/proto/dict.pro, src/eval.c, src/vim9compile.c,  
src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_script.vim, src/testdir/test\_popupwin.vim,  
src/testdir/test\_textprop.vim

Patch 8.2.2083

Problem: Vim9: crash when using ":silent!" and getting member fails.  
Solution: Jump to on\_fatal\_error. (closes #7412)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2084

Problem: **CTRL-V** U doesn't work to enter a Unicode character when modifyOtherKeys is effective. (Ken Takata)  
Solution: Add a flag to get\_literal() for the shift key. (closes #7413)

Files: src/edit.c, src/proto/edit.pro, src/ex\_getln.c, src/getchar.c,  
src/normal.c, src/testdir/test\_termcodes.vim

Patch 8.2.2085

Problem: Qt translation file is recognized as typescript.  
Solution: Check the first line for "<?xml". (closes #7418)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.2086

Problem: Libvterm tests are only run on Linux.  
Solution: Use static libraries. (Ozaki Kiichi, closes #7419)  
Files: .travis.yml, src/Makefile, src/libvterm/Makefile,  
src/libvterm/t/run-test.pl

Patch 8.2.2087

Problem: Vim9: memory leak when statement is truncated.  
Solution: Increment the number of local variables.  
Files: src/vim9compile.c

Patch 8.2.2088

Problem: Vim9: script test sometimes fails.  
Solution: Unlet variables.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.2089

Problem: Libvterm test fails to build on Mac.  
Solution: Adjust configure to remove a space between -L and the path that  
follows.  
Files: src/configure.ac, src/auto/configure

Patch 8.2.2090

Problem: Vim9: dict does not accept a key in quotes.  
Solution: Recognize a key in single or double quotes.  
Files: runtime/doc/vim9.txt, src/dict.c, src/proto/dict.pro,  
src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2091

Problem: MS-Windows: build warnings.  
Solution: Add a #pragma to suppress the deprecation warning. (Ken Takata)  
Avoid using a non-ASCII character. (closes #7421)  
Files: src/message.c, src/os\_win32.c

Patch 8.2.2092

Problem: Vim9: unpredictable errors for script tests.  
Solution: Use a different script file name for each run.  
Files: src/testdir/vim9.vim, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_func.vim, src/testdir/test\_quickfix.vim,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.2093

Problem: Vim9: script test sometimes fails.  
Solution: Do not find a script variable by its typval if the name was  
cleared.  
Files: src/vim9script.c

Patch 8.2.2094

Problem: When an expression fails getting the next command may be wrong.  
Solution: Do not check for a next command after :eval fails. (closes #7415)  
Files: src/eval.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2095

Problem: Vim9: crash when failed dict member is followed by concatenation.  
Solution: Remove the dict from the stack. (closes #7416)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2096

Problem: Vim9: command modifiers not restored after assignment.  
Solution: Jump to nextline instead of using continue.  
Files: src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.2097

Problem: Vim9: using :silent! when calling a function prevents aborting that function.  
Solution: Add emsg\_silent\_def and did\_emsg\_def.  
Files: src/globals.h, src/message.c, src/vim9execute.c,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.2098

Problem: Vim9: function argument of sort() and map() not tested.  
Solution: Add a couple of tests.  
Files: src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2099

Problem: Vim9: some checks are not tested.  
Solution: Add a few more tests. Give better error messages.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.2100

Problem: Insufficient testing for function range and dict.  
Solution: Add a few tests. (Dominique Pellé, closes #7428)  
Files: src/testdir/test\_functions.vim, src/testdir/test\_lambda.vim,  
src/testdir/test\_signals.vim, src/testdir/test\_user\_func.vim

Patch 8.2.2101

Problem: Vim9: memory leak when literal dict has an error and when an expression is not complete.  
Solution: Clear the typval and the growarray.  
Files: src/dict.c, src/vim9compile.c

Patch 8.2.2102

Problem: Vim9: not all error messages tested.  
Solution: Add a few test cases.  
Files: src/testdir/test\_vim9\_func.vim

Patch 8.2.2103

Problem: Vim9: unreachable code.

Solution: Remove the code to prepend s: to the variable name  
Files: src/vim9compile.c

Patch 8.2.2104

Problem: Build problem with Ruby 2.7.  
Solution: Adjust function declarations. (Ozaki Kiichi, closes #7430)  
Files: src/configure.ac, src/auto/configure, src/if\_ruby.c

Patch 8.2.2105

Problem: Sound test is a bit flaky.  
Solution: Use WaitForAssert(). (Dominique Pellé, closes #7429)  
Files: src/testdir/test\_sound.vim

Patch 8.2.2106

Problem: TOML files are not recognized.  
Solution: Match \*.toml. (issue #7432)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.2107

Problem: Vim9: some errors not tested.  
Solution: Add tests. Fix getting the right error.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.2108

Problem: Vim9: no test to check for :let error.  
Solution: Add a test. Rename tests from \_let\_ to \_var\_.  
Files: src/testdir/test\_vim9\_assign.vim

Patch 8.2.2109

Problem: "vim -" does not work well when modifyOtherKeys is enabled and a shell command is executed on startup.  
Solution: Only change modifyOtherKeys when executing a shell command in raw mode.  
Files: src/os\_unix.c

Patch 8.2.2110

Problem: Cannot use ":shell" when reading from stdin. (Gary Johnson)  
Solution: Revert patch 8.2.1833.  
Files: src/main.c

Patch 8.2.2111

Problem: GTK: Menu background is the same color as the main window.  
Solution: Fix white space around the text in another way. (closes #7437, closes #7427)  
Files: src/gui\_gtk\_x11.c

Patch 8.2.2112

Problem: Running tests may leave some files behind.  
Solution: Delete the right files. Fix a few typos. (Dominique Pellé, closes #7436)  
Files: src/testdir/test\_filetype.vim, src/testdir/test\_messages.vim,  
src/testdir/test\_mksession.vim

Patch 8.2.2113

Problem: MS-Windows GUI: crash after using ":set guifont=" four times.  
Solution: Check for NULL pointer. (Ken Takata, closes #7434)  
Files: src/gui\_dwrite.cpp, src/testdir/test\_gui.vim

Patch 8.2.2114

Problem: Vim9: unreachable code in assignment.  
Solution: Remove impossible condition and code.  
Files: src/vim9compile.c

Patch 8.2.2115

Problem: Vim9: some errors not tested for; dead code.  
Solution: Add a test. Remove dead code.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2116

Problem: MS-Windows GUI: test for 'guifont' is incomplete.  
Solution: Set 'renderoptions'. (Christian Brabandt)  
Files: src/testdir/test\_gui.vim

Patch 8.2.2117

Problem: Some functions use any value as a string.  
Solution: Check that the value is a non-empty string.  
Files: src/typval.c, src/proto/typval.pro, src/mbyte.c, src/filepath.c,  
src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2118

Problem: Dead code in the job support. (Dominique Pellé)  
Solution: Define USE\_ARGV before checking for it.  
Files: src/job.c

Patch 8.2.2119

Problem: GTK3: status line background color is wrong.  
Solution: Don't change the code for earlier GTK3 versions. (closes #7444)  
Files: src/gui\_gtk\_x11.c

Patch 8.2.2120

Problem: Not all Perl functionality is tested.  
Solution: Add a few more test cases. (Dominique Pellé, closes #7440)  
Files: src/testdir/test\_perl.vim

Patch 8.2.2121

Problem: Internal error when using \ze before \zs in a pattern.  
Solution: Check the end is never before the start. (closes #7442)  
Files: src/regexp\_bt.c, src/regexp\_nfa.c,  
src/testdir/test\_regexp\_latin.vim

Patch 8.2.2122

Problem: Vim9: crash when sourcing vim9script early.  
Solution: Use set\_option\_value() instead of setting p\_cpo directly.  
(closes #7441)  
Files: src/scriptfile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2123

Problem: After using a complete popup the buffer is listed. (Boris Staletic)  
Solution: Make the buffer unlisted.  
Files: src/popupmenu.c, src/testdir/test\_popupwin.vim

#### Patch 8.2.2124

Problem: Vim9: a range cannot be computed at runtime.  
Solution: Add the ISN\_RANGE instruction.  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2125 (after 8.2.2122)

Problem: Vim9: leaking memory.  
Solution: Free the saved 'cpo' value.  
Files: src/scriptfile.c

#### Patch 8.2.2126

Problem: Ruby: missing function prototype.  
Solution: Add the prototype.  
Files: src/if\_ruby.c

#### Patch 8.2.2127

Problem: Vim9: executing user command defined in Vim9 script not tested.  
Solution: Add a test.  
Files: src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2128

Problem: There is no way to do something on **CTRL-Z**.  
Solution: Add VimSuspend and VimResume autocommand events. (closes #7450)  
Files: runtime/doc/autocmd.txt, src/autocmd.c, src/ex\_docmd.c,  
src/normal.c, src/testdir/test\_suspend.vim, src/vim.h

#### Patch 8.2.2129

Problem: MS-Windows: Checking if a file name is absolute is slow.  
Solution: Do not use mch\_FullName(). (closes #7033)  
Files: src/os\_mswin.c

#### Patch 8.2.2130

Problem: Insert mode completion messages end up in message history.  
Solution: Set msg\_hist\_off. (closes #7452)  
Files: src/insexpand.c, src/testdir/test\_ins\_complete.vim

#### Patch 8.2.2131

Problem: Vim9: crash when lambda uses same var as assignment.  
Solution: Do not let lookup\_local change lv\_from\_outer, make a copy. (closes #7461)  
Files: src/vim9compile.c, src/ex\_docmd.c, src/proto/ex\_docmd.pro,  
src/evalvars.c, src/proto/evalvars.pro,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2132

Problem: Padding not drawn properly for popup window with title.  
Solution: Draw the padding below the title. (closes #7460)

Files: src/popupwin.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_longtitle\_3.dump,  
src/testdir/dumps/Test\_popupwin\_longtitle\_4.dump

#### Patch 8.2.2133

Problem: Vim9: checking for a non-empty string is too strict.  
Solution: Check for any string. (closes #7447)  
Files: src/typval.c, src/proto/typval.pro, src/errors.h, src/filepath.c,  
src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.2134

Problem: Vim9: get E1099 when autocmd triggered in builtin function.  
Solution: Check that did\_emsg increased instead of checking that it changed.  
(closes #7448)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2135

Problem: Vim9: #{ still seen as start of dict in some places.  
Solution: Remove check for { after #. (closes #7456)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2136

Problem: Vim9: Using uninitialized variable.  
Solution: Initialize "len" to zero. Clean up fnamemodify().  
Files: src/filepath.c

#### Patch 8.2.2137

Problem: Vim9: :echo and :execute give error for empty argument.  
Solution: Ignore an empty argument. (closes #7468)  
Files: src/vim9compile.c, src/errors.h, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2138

Problem: Vim9: "exit\_cb" causes Vim to exit.  
Solution: Require white space after a command in Vim9 script. (closes #7467)  
Also fix that Vim9 style heredoc was not always recognized.  
Files: src/ex\_cmds.h, src/ex\_docmd.c, src/errors.h, src/userfunc.c,  
src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_script.vim, src/testdir/test\_let.vim

#### Patch 8.2.2139

Problem: Vim9: unreachable code in assignment.  
Solution: Don't check "new\_local" when "has\_index" is set. Add test for  
wrong type of list index.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2140

Problem: Build failure with tiny features.  
Solution: Add #ifdef.  
Files: src/ex\_docmd.c

#### Patch 8.2.2141

Problem: A user command with try/catch may not catch an expression error.  
Solution: When an expression fails check for following "|". (closes #7469)

Files: src/eval.c, src/testdir/test\_trycatch.vim,  
src/testdir/test\_vimscript.vim

Patch 8.2.2142

Problem: Memory leak when heredoc is not terminated.  
Solution: Free heredoc\_trimmed.  
Files: src/userfunc.c

Patch 8.2.2143

Problem: Vim9: dead code in compiling :unlet.  
Solution: Don't check for "!" a second time.  
Files: src/vim9compile.c

Patch 8.2.2144

Problem: Vim9: some corner cases not tested.  
Solution: Add a few tests.  
Files: src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2145

Problem: Vim9: concatenating lists does not adjust type of result.  
Solution: When list member types differ use "any" member type.  
(closes #7473)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2146

Problem: Vim9: automatic conversion of number to string for dict key.  
Solution: Do not convert number to string. (closes #7474)  
Files: src/dict.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2147

Problem: Quickfix window title not updated in all tab pages.  
Solution: Update the quickfix window title in all tab pages. (Yegappan  
Lakshmanan, closes #7481, closes #7466)  
Files: src/quickfix.c, src/testdir/test\_quickfix.vim

Patch 8.2.2148

Problem: Vim9: crash when user command doesn't match.  
Solution: Adjust command index. (closes #7479)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2149

Problem: Popupwin test for latin1 sometimes fails.  
Solution: Wait for the script to finish.  
Files: src/testdir/test\_popupwin.vim

Patch 8.2.2150

Problem: Github actions CI isn't used for all available platforms.  
Solution: Update the github workflows. (Ozaki Kiichi, closes #7433)  
Files: .coveralls.yml, .github/workflows/ci-windows.yaml,  
.github/workflows/ci.yml, .travis.yml, README.md,  
ci/build-snd-dummy.sh, ci/setup-xvfb.sh

Patch 8.2.2151

Problem: \$dir not expanded when configure checks for moonjit.

Solution: Use double quotes instead of single quotes. (closes #7478)  
Files: src/configure.ac, src/auto/configure

#### Patch 8.2.2152

Problem: screenpos() does not include the WinBar offset.  
Solution: Use W\_WINROW() instead of directly using w\_window. (closes #7487)  
Files: src/move.c, src/testdir/test\_cursor\_func.vim

#### Patch 8.2.2153

Problem: Popupwin test for latin1 still fails sometimes.  
Solution: Wait for the "cat" command to finish.  
Files: src/testdir/test\_popupwin.vim

#### Patch 8.2.2154

Problem: Popupwin test for terminal buffer fails sometimes.  
Solution: Wait for the prompt to appear.  
Files: src/testdir/test\_popupwin.vim

#### Patch 8.2.2155

Problem: Warning from Github actions for code analysis.  
Solution: Remove the "git checkout HEAD^2" block.  
Files: .github/workflows/codeql-analysis.yml

#### Patch 8.2.2156

Problem: Github actions run on pushing a tag.  
Solution: Don't run CI on tag push. Omit coveralls on pull-request.  
(Ozaki Kiichi, closes #7489)  
Files: .github/workflows/ci.yml, .github/workflows/codeql-analysis.yml

#### Patch 8.2.2157

Problem: Vim9: can delete a Vim9 script variable from a function.  
Solution: Check the variable is defined in Vim9 script. (closes #7483)  
Files: src/evalvars.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2158

Problem: CI on cirrus times out, coveralls doesn't always run.  
Solution: Set timeout to 20 minutes. Adjust condition. (closes #7493)  
Files: .cirrus.yml, .github/workflows/ci.yml

#### Patch 8.2.2159

Problem: Vim9: when declaring a list it is not allocated yet, causing a following extend() to fail.  
Solution: When fetching a variable value for a list or dict that is null allocate the list or dict, so it can be used. (closes #7491)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2160

Problem: Various typos.  
Solution: Fix spelling mistakes. (closes #7494)  
Files: src/bufwrite.c, src/cindent.c, src/cmdexpand.c, src/eval.c, src/ex\_cmds.c, src/feature.h, src/getchar.c, src/gui\_haiku.cc, src/gui\_xmdlg.c, src/help.c, src/if\_ole.cpp, src/insexpand.c, src/list.c, src/map.c, src/memline.c, src/normal.c, src/os\_win32.c, src/search.c, src/term.c,

src/testdir/test\_arglist.vim, src/testdir/test\_autocmd.vim,  
src/testdir/test\_debugger.vim, src/testdir/test\_increment.vim,  
src/testdir/test\_menu.vim, src/testdir/test\_netbeans.vim,  
src/testdir/test\_popupwin.vim, src/testdir/test\_python2.vim,  
src/testdir/test\_python3.vim, src/testdir/test\_sort.vim,  
src/testdir/test\_terminal2.vim, src/testdir/test\_terminal3.vim,  
src/testdir/test\_vartabs.vim, src/testdir/test\_vimscript.vim,  
src/textprop.c, src/userfunc.c, src/vim9.h, src/vim9compile.c,  
src/vim9execute.c

#### Patch 8.2.2161

Problem: Arguments -T and -x not tested yet.  
Solution: Add a test. (Dominique Pellé, closes #7490)  
Files: src/testdir/test\_startup.vim

#### Patch 8.2.2162

Problem: Vim9: Cannot load or store autoload variables.  
Solution: Add ISN\_LOADAUTO and ISN\_STOREAUTO. (closes #7485)  
Files: src/vim9compile.c, src/vim9.h, src/vim9execute.c, src/dict.c,  
src/eval.c, src/evalvars.c, src/proto/evalvars.pro,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2163

Problem: Crash when discarded exception is the current exception.  
Solution: Compare the exception with current\_exception. (closes #7499)  
Files: src/ex\_eval.c

#### Patch 8.2.2164

Problem: Vim9: autoload function doesn't work in script that starts with  
an upper case letter.  
Solution: Check for the autoload character. (closes #7502)  
Files: src/userfunc.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2165

Problem: Vim9: assignment to dict member does not work.  
Solution: Fix recognizing dict member. (closes #7484)  
Files: src/ex\_docmd.c, src/eval.c, src/evalvars.c, src/vim.h

#### Patch 8.2.2166

Problem: Auto format doesn't work when deleting text.  
Solution: Make "x" trigger auto format. (closes #7504)  
Files: src/ops.c, src/testdir/test\_textformat.vim

#### Patch 8.2.2167

Problem: Vim9: assign test fails. (Elimar Riesebieter)  
Solution: Adjust the test for dict assignment.  
Files: src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2168

Problem: Vim9: error for assigning to dict of dict.  
Solution: Remember the destination type. (closes #7506)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2169

Problem: Vim9: test leaves file behind.  
Solution: Rename script files. (Dominique Pellé, closes #7511)  
Use try/finally.  
Files: src/testdir/test\_vim9\_script.vim, src/testdir/vim9.vim

Patch 8.2.2170

Problem: Vim9: a global function defined in a :def function fails if it uses the context.  
Solution: Create a partial to store the closure context. (see #7410)  
Files: src/userfunc.c, src/proto/userfunc.pro, src/vim9execute.c, src/structs.h, src/testdir/test\_vim9\_func.vim

Patch 8.2.2171

Problem: Valgrind warning for using uninitialized value.  
Solution: Do not use "startp" or "endp" unless there is a match.  
Files: src/regexp\_nfa.c

Patch 8.2.2172

Problem: Vim9: number of arguments is not always checked. (Yegappan Lakshmanan)  
Solution: Check number of arguments when calling function by name.  
Files: src/userfunc.c, src/proto/userfunc.pro, src/vim9execute.c, src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.2173

Problem: Vim9: get internal error when assigning to undefined variable.  
Solution: Add error message. (closes #7475)  
Files: src/vim9compile.c, src/vim9execute.c, src/errors.h, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2174

Problem: Mac version doesn't specify the CPU architecture.  
Solution: Add "arm64" or "x86\_64". (Yee Cheng Chin, closes #7519)  
Files: src/version.c

Patch 8.2.2175

Problem: Github actions: clang-11 handling suboptimal.  
Solution: Separate step of installing clang-11. Get ubuntu release name dynamically. (Ozaki Kiichi, closes #7514)  
Files: .github/workflows/ci.yml

Patch 8.2.2176

Problem: Crash with a sequence of fold commands.  
Solution: Bail out when there are no folds at all. Add a test (Dominique Pellé) (closes #7515)  
Files: src/fold.c, src/testdir/test\_fold.vim

Patch 8.2.2177

Problem: Pattern "^" does not match if the first character in the line is combining. (Rene Kita)  
Solution: Do accept a match at the start of the line. (closes #6963)  
Files: src/regexp\_nfa.c, src/testdir/test\_regexp\_utf8.vim

Patch 8.2.2178

Problem: Python 3: non-utf8 character cannot be handled.  
Solution: Change the string decode. (Björn Linse, closes #1053)  
Files: src/if\_py\_both.h, src/if\_python.c, src/if\_python3.c,  
src/testdir/test\_python3.vim, src/testdir/test\_python2.vim

Patch 8.2.2179

Problem: Vim9: crash when indexing a dict with a number.  
Solution: Add ISN\_STOREINDEX. (closes #7513)  
Files: src/vim9compile.c, src/vim9execute.c, src/vim9.h,  
src/errors.h, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.2180

Problem: Vim9: test for error after error is flaky.  
Solution: Wait for job to finish instead of a fixed delay.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.2181

Problem: Valgrind warnings for using uninitialized value.  
Solution: Do not use "start" or "end" unless there is a match.  
Files: src/regexp\_nfa.c, src/regexp\_bt.c

Patch 8.2.2182

Problem: Vim9: value of **'magic'** is still relevant.  
Solution: Always behave like **'magic'** is on in Vim9 script (closes #7509)  
Files: src/option.c, src/proto/option.pro, src/arglist.c, src/buffer.c,  
src/cmdexpand.c, src/ex\_cmds.c, src/ex\_docmd.c, src/ex\_getln.c,  
src/insexpand.c, src/normal.c, src/search.c, src/tag.c,  
src/structs.h, src/globals.h, src/ex\_cmds.h,  
src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2183

Problem: Vim9: value of **'edcompatible'** and **'gdefault'** are used.  
Solution: Ignore these deprecated options in Vim9 script. (closes #7508)  
Files: src/ex\_cmds.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2184

Problem: Vim9: no error when using "2" for a line number.  
Solution: Give an error message if the line number is invalid. (closes #7492)  
Files: src/typval.c, src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_cursor\_func.vim

Patch 8.2.2185

Problem: BufUnload is not triggered for the quickfix dummy buffer.  
Solution: Do trigger BufUnload. (Pontus Leitzler, closes #7518, closes #7517)  
Fix white space around "=".  
Files: src/quickfix.c, src/testdir/test\_autocmd.vim

Patch 8.2.2186

Problem: Vim9: error when using **'opfunc'**.  
Solution: Do not expect a return value from **'opfunc'**. (closes #7510)  
Files: src/eval.c, src/proto/eval.pro, src/ops.c,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.2187

Problem: Python 3 test fails sometimes. (Christian Brabandt)  
Solution: Accept two SystemError messages.  
Files: src/testdir/test\_python3.vim

Patch 8.2.2188

Problem: Vim9: crash when calling global function from :def function.  
Solution: Set the outer context. Define the partial for the context on the original function. Use a refcount to keep track of which ufunc is using a dfunc. (closes #7525)  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/vim9execute.c, src/proto/vim9execute.pro, src/userfunc.c, src/proto/userfunc.pro, src/structs.h, src/vim9.h, src/testdir/test\_vim9\_func.vim

Patch 8.2.2189

Problem: Cannot repeat a command that uses the small delete register.  
Solution: Store the register name instead of the contents. (Christian Brabandt, closes #7527)  
Files: src/ops.c, src/register.c, src/testdir/test\_registers.vim

Patch 8.2.2190

Problem: Vim9: crash when compiled with EXITFREE.  
Solution: Check that df\_ufunc is not NULL.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2191

Problem: Vim9: using wrong name with lambda in nested function.  
Solution: Copy the lambda name earlier. (closes #7525)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2192

Problem: Codecov on github actions fails.  
Solution: Revert to codecov script. (Ozaki Kiichi, closes #7529)  
Files: Filelist, .github/workflows/ci.yml

Patch 8.2.2193

Problem: Vim9: can change constant in :def function.  
Solution: Check if a variable is locked. (issue #7526)  
Files: src/evalvars.c, src/proto/evalvars.pro, src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2194

Problem: Vim9: cannot use :const or :final at the script level.  
Solution: Support using :const and :final. (closes #7526)  
Files: src/vim.h, src/evalvars.c, src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_func.vim

Patch 8.2.2195

Problem: Failing tests for :const.  
Solution: Add missing check for ASSIGN\_FINAL.  
Files: src/eval.c, src/evalvars.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2196

Problem: :version output has extra spaces in compile and link command.  
Solution: Adjust QUOTESED. (closes #7505)  
Files: src/configure.ac, src/auto/configure

#### Patch 8.2.2197

Problem: Assert arguments order reversed.  
Solution: Swap the arguments. (Christian Brabandt, closes #7531)  
Files: src/testdir/test\_registers.vim

#### Patch 8.2.2198

Problem: ml\_get error when resizing window and using text property.  
Solution: Validate botline of the right window. (closes #7528)  
Files: src/move.c, src/proto/move.pro, src/textprop.c,  
src/testdir/test\_textprop.vim

#### Patch 8.2.2199

Problem: First write after setting 'eol' does not have NL added. (Tomáš Janoušek)  
Solution: Only use b\_no\_eol\_lnum when doing a binary write. (closes #7535)  
Files: src/bufwrite.c, src/testdir/test\_writefile.vim

#### Patch 8.2.2200

Problem: Vim9: lambda without white space around -> is confusing.  
Solution: Require white space in a :def function. (issue #7503)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2201

Problem: Write file test fails on MS-Windows.  
Solution: Force edit after setting 'fileformat'.  
Files: src/testdir/test\_writefile.vim

#### Patch 8.2.2202

Problem: Write file test still fails on MS-Windows.  
Solution: Set fileformat with the :edit command  
Files: src/testdir/test\_writefile.vim

#### Patch 8.2.2203

Problem: Moodle gift files are not recognized.  
Solution: Add a filetype pattern. (Delim Temizer)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.2204

Problem: Vim9: using -> both for method and lambda is confusing.  
Solution: Use => for lambda in :def function.  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/userfunc.c,  
src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2205

Problem: Vim9: memory leak when parsing lambda fails.  
Solution: Clear growarrays.  
Files: src/userfunc.c

#### Patch 8.2.2206

Problem: :exe command line completion only works for first argument.  
Solution: Skip over text if more is following. (closes #7546)  
Files: src/eval.c, src/testdir/test\_cmdline.vim

#### Patch 8.2.2207

Problem: Illegal memory access if popup menu items are changed while the menu is visible. (Tomáš Janoušek)  
Solution: Make a copy of the text. (closes #7537)  
Files: src/popupmenu.c, src/testdir/test\_popup.vim, src/testdir/dumps/Test\_popup\_command\_04.dump, src/testdir/dumps/Test\_popup\_command\_05.dump

#### Patch 8.2.2208

Problem: Vim9: after reloading a script variable index may be invalid.  
Solution: When the sequence number doesn't match give an error for using a script-local variable from a compiled function. (closes #7547)  
Files: src/vim9.h, src/structs.h, src/errors.h, src/vim9compile.c, src/vim9execute.c, src/scriptfile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2209

Problem: Vim9: return type of => lambda not parsed.  
Solution: Parse and use the return type.  
Files: src/vim9compile.c, src/userfunc.c, src/vim9type.c, src/proto/vim9type.pro, src/vim9script.c, src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2210

Problem: Vim9: allocating a type to set TTFLAG\_BOOL\_OK.  
Solution: Add t\_number\_bool.  
Files: src/globals.h, src/vim9type.c, src/vim9compile.c

#### Patch 8.2.2211

Problem: MS-Windows: can't load Python dll if not in the path.  
Solution: Use the InstallPath registry entry. (Kelvin Lee, closes #7540)  
Files: src/if\_python3.c

#### Patch 8.2.2212

Problem: Vim9: lambda with => does not work at the script level.  
Solution: Make it work.  
Files: src/eval.c, src/vim9type.c, src/userfunc.c, src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2213

Problem: Checking white space around -> is not backwards compatible.  
Solution: Only check white space around =>.  
Files: src/userfunc.c

#### Patch 8.2.2214

Problem: ":e#" does not give a warning for missing white space.  
Solution: Adjust the check for white space. (closes #7545)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2215

Problem: Vim9: `=expr` not recognized in global command.  
Solution: Skip over pattern. (issue #7541)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2216

Problem: Vim9: range with missing colon can be hard to spot.  
Solution: Include the start of the range in the error. (closes #7543)  
Files: src/errors.h, src/ex\_docmd.c, src/vim9compile.c,  
src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2217

Problem: Vim9: command modifiers not restored in catch block.  
Solution: Restore command modifiers. (closes #7542)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2218

Problem: Vim9: failure if passing more arguments to a lambda than expected.  
Solution: Only put expected arguments on the stack. (closes #7548)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.2219

Problem: Vim9: method call with expression not supported.  
Solution: Implement expr->(expr)().  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2220

Problem: Vim9: memory leak when parsing nested parenthesis.  
Solution: Clear newargs.  
Files: src/userfunc.c

#### Patch 8.2.2221

Problem: If [<Down>](#) is mapped on the command line '**wildchar**' is inserted.  
Solution: Set KeyTyped when using '**wildchar**'. (closes #7552)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

#### Patch 8.2.2222

Problem: Vim9: cannot keep script variables when reloading.  
Solution: Add the "noclear" argument to :vim9script.  
Files: runtime/doc/vim9.txt, src/structs.h, src/scriptfile.c,  
src/vim9script.c, src/ex\_cmds.h, src/ex\_docmd.c,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2223

Problem: Vim9: Reloading marks a :def function as deleted.  
Solution: Clear the function contents but keep the index.  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/userfunc.c,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2224

Problem: Vim9: crash if script reloaded with different variable type.  
Solution: Check the type when accessing the variable.  
Files: src/vim9execute.c, src/vim9compile.c, src/vim9.h, src/vim9type.c,  
src/proto/vim9type.pro, src/errors.h, src/evalvars.c,  
src/vim9script.c, src/proto/vim9script.pro,

src/testdir/test\_vim9\_script.vim

Patch 8.2.2225

Problem: Vim9: error when using :import in legacy script twice.  
Solution: Make it possible to redefine an import when reloading.  
Files: src/vim9script.c, src/proto/vim9script.pro, src/structs.h,  
src/evalvars.c, src/vim9compile.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.2226

Problem: Vim9: script test fails.  
Solution: Add missing change.  
Files: src/scriptfile.c

Patch 8.2.2227

Problem: Vim9: recognizing lambda is too complicated.  
Solution: Call compile\_lambda() and check for NOTDONE.  
Files: src/vim9compile.c, src/userfunc.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2228

Problem: Vim9: cannot use ":e #" because # starts a comment.  
Solution: Support using %% instead of #.  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2229

Problem: build failure without the +eval feature.  
Solution: Add #ifdef.  
Files: src/ex\_docmd.c

Patch 8.2.2230

Problem: Vim9: insert completion runs into error.  
Solution: Insert colon before range. (closes #7556)  
Files: src/insexpand.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2231

Problem: When "--remote file" is used "file" is not reloaded.  
Solution: When a :drop command is used for a file that is already displayed  
in a window and it has not been changed, check if it needs to be  
reloaded. (closes #7560)  
Files: src/ex\_cmds.c, src/testdir/test\_clientserver.vim

Patch 8.2.2232

Problem: Compiler error for falling through into next case.  
Solution: Move FALLTHROUGH below the #endif  
Files: src/ex\_docmd.c

Patch 8.2.2233

Problem: Cannot convert a byte index into a character index.  
Solution: Add charidx(). (Yegappan Lakshmanan, closes #7561)  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c,  
src/testdir/test\_functions.vim

Patch 8.2.2234

Problem: Command line wildmenu test often fails with Unix GUI.

Solution: Skip the test where it is expected to fail.  
Files: src/testdir/test\_cmdline.vim

#### Patch 8.2.2235

Problem: Build failure with some Ruby versions.  
Solution: Adjust the code for Ruby 3.0. (Ozaki Kiichi, closes #7564)  
Files: ci/config.mk.clang.sed, src/if\_ruby.c

#### Patch 8.2.2236

Problem: **'scroll'** option can change when setting the statusline or tabline but the option context is not updated.  
Solution: Update the script context when the scroll option is changed as a side effect. (Christian Brabandt, closes #7533)  
Files: runtime/doc/options.txt, src/scriptfile.c, src/testdir/test\_options.vim, src/vim.h, src/window.c

#### Patch 8.2.2237

Problem: CI on Mac fails in sed command.  
Solution: Set LC\_ALL to "C". (Ozaki Kiichi, closes #7565)  
Files: .github/workflows/ci.yml

#### Patch 8.2.2238

Problem: Vim9: cannot load a Vim9 script without the +eval feature.  
Solution: Support Vim9 script syntax without the +eval feature.  
Files: src/ex\_docmd.c, src/vim9script.c, src/globals.h, src/main.c, src/autocmd.c, src/buffer.c, src/structs.h, src/menu.c, src/scriptfile.c, src/usercmd.c, src/proto.h, src/errors.h

#### Patch 8.2.2239

Problem: Vim9: concatenating lines with backslash is inconvenient.  
Solution: Support concatenating lines starting with '|', useful for :autocmd, :command, etc. (closes #6702)  
Files: runtime/doc/vim9.txt, src/scriptfile.c, src/vim9script.c, src/proto/vim9script.pro, src/vim9compile.c, src/proto/vim9compile.pro, src/userfunc.c, src/structs.h, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2240

Problem: Clientserver test fails if full path is used.  
Solution: Ignore the path preceding the file name.  
Files: src/testdir/test\_clientserver.vim

#### Patch 8.2.2241

Problem: Build with Ruby and clang may fail.  
Solution: Adjust configure and sed script. (Ozaki Kiichi, closes #7566)  
Files: ci/config.mk.clang.sed, src/auto/configure, src/configure.ac

#### Patch 8.2.2242

Problem: Vim9: line continuation with bar does not work at script level.  
Solution: Check for Vim9 script.  
Files: src/structs.h, src/ex\_docmd.c, src/userfunc.c, src/scriptfile.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2243

Problem: Crash when popup mask contains zeroes.  
Solution: Check boundaries properly. (closes #7569)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim

#### Patch 8.2.2244

Problem: Crash when making the window width of the not-current window negative.  
Solution: Make sure the window width is not negative. (closes #7568)  
Files: src/window.c, src/testdir/test\_window\_cmd.vim

#### Patch 8.2.2245

Problem: Vim9: return value of winrestcmd() cannot be executed.  
Solution: Put colons before each range. (closes #7571)  
Files: src/evalwindow.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.2246

Problem: Cursor keys not recognized at the hit-Enter prompt after executing an external command.  
Solution: Change the codes for the extra cursor keys. (closes #7562)  
Tune the delays to avoid test flakiness.  
Files: runtime/doc/term.txt, src/term.c, src/testdir/test\_terminal3.vim

#### Patch 8.2.2247

Problem: VMS: various smaller problems.  
Solution: Fix VMS building and other problems. (Zoltan Arpadffy)  
Files: src/term.c, src/gui\_gtk\_vms.h, src/os\_vms\_conf.h, src/gui\_x11.c, src/Make\_vms.mms, src/macros.h, src/gui.h, src/os\_unix.h

#### Patch 8.2.2248

Problem: ASAN error on exit with GUI.  
Solution: Check the window still has lines. (Christian Brabandt, closes #7573)  
Files: src/term.c

#### Patch 8.2.2249

Problem: Termcodes test is flaky when used over ssh with X forwarding.  
Solution: Set **'mousetime'** to a larger value. (Dominique Pellé, closes #7576, closes #7563)  
Files: src/testdir/test\_termcodes.vim

#### Patch 8.2.2250

Problem: Vim9: sublist is ambiguous.  
Solution: Require white space around the colon. (closes #7409)  
Files: src/vim9compile.c, src/eval.c, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2251

Problem: Test failures in legacy script.  
Solution: Check for Vim9 script.  
Files: src/eval.c

#### Patch 8.2.2252

Problem: Vim9: crash when using lambda without return type in dict.  
Solution: Without a return type use t\_unknown. (closes #7587)

Files: src/vim9type.c, src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2253

Problem: Vim9: expr test fails.  
Solution: Add missing assignment.  
Files: src/userfunc.c

#### Patch 8.2.2254

Problem: Vim9: bool option type is number.  
Solution: Have get\_option\_value() return a different value for bool and number options. (closes #7583)  
Files: src/option.h, src/option.c, src/proto/option.pro, src/evalvars.c, src/if\_mzsch.c, src/if\_ruby.c, src/spell.c, src/typval.c, src/vim9compile.c, src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2255 (after 8.2.2254)

Problem: Tcl test fails.  
Solution: Change option handling.  
Files: src/if\_tcl.c

#### Patch 8.2.2256

Problem: Vim9: cannot use function( after line break in :def function.  
Solution: Check for "(" after "function". (closes #7581)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2257

Problem: Vim9: using -> for lambda is ambiguous.  
Solution: Stop supporting ->, must use =>.  
Files: src/eval.c, src/vim9compile.c, src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_cmd.vim, src/testdir/test\_vim9\_disassemble.vim, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2258

Problem: Not all OCaml related files are detected.  
Solution: Update OCaml file type detection. (Markus Mottl, closes #7590)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.2259

Problem: Test\_Executable() fails when using chroot.  
Solution: Ignore the difference between "sbin" and "bin".  
Files: src/testdir/test\_functions.vim

#### Patch 8.2.2260

Problem: Window resize test fails in very wide terminal.  
Solution: Resize using the '**columns**' option. (Vladimir Lomov, closes #7592)  
Files: src/testdir/test\_window\_cmd.vim

#### Patch 8.2.2261

Problem: Vim9: boolean option gets string type.  
Solution: Check for VAR\_BOOL. (closes #7588)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2262

Problem: Vim9: converting bool to string prefixes v:.

Solution: Do not use the v: prefix.

Files: src/evalvars.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.2263

Problem: Vim9: compilation error with try-catch in skipped block.

Solution: Do not bail out when generate\_instr() returns NULL. (closes #7584)

Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2264

Problem: Vim9: no error for mismatched :endfunc or :enddef.

Solution: Check for the mismatch. (issue #7582)

Files: src/errors.h, src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2265

Problem: Error message for missing endfunc/enddef is last line.

Solution: Report the line where the function starts. (closes #7582)

Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2266

Problem: Vim9: it can be hard to see where white space is missing.

Solution: Mention the text where the error was seen. (closes #7580)

Files: src/errors.h, src/eval.c, src/evalvars.c, src/userfunc.c,  
src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2267

Problem: Vim9: cannot use unlet for a dict member.

Solution: Pass GLV\_NO\_DECL to get\_lval(). (closes #7585)

Files: src/evalvars.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2268

Problem: Vim9: list unpack seen as declaration.

Solution: Check for "var". (closes #7594)

Files: src/vim9compile.c, src/evalvars.c, src/eval.c, src/vim.h,  
src/vim9execute.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2269

Problem: Not all :hardcopy code covered by tests.

Solution: Test more combinations. (Dominique Pellé, closes #7595)

Files: src/testdir/test\_hardcopy.vim

Patch 8.2.2270

Problem: Warning for size\_t to int conversion. (Randall W. Morris)

Solution: Add a type cast.

Files: src/vim9execute.c

Patch 8.2.2271

Problem: ml\_get error when changing hidden buffer in Python.

Solution: Block updating folds. (closes #7598)

Files: src/evalbuffer.c, src/testdir/test\_python3.vim

Patch 8.2.2272

Problem: Vim9: extend() can violate the type of a variable.  
Solution: Add the type to the dictionary or list and check items against it.  
(closes #7593)  
Files: src/structs.h, src/evalvars.c, src/dict.c, src/list.c,  
src/vim9script.c, src/proto/vim9script.pro, src/vim9compile.c,  
src/vim9execute.c, src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.2273

Problem: Build failure.  
Solution: Add missing changes to header file.  
Files: src/vim9.h

Patch 8.2.2274

Problem: badge for Travis is outdated.  
Solution: Update badge for move from travis-ci.org to travis-ci.com.  
Files: README.md

Patch 8.2.2275

Problem: **CTRL-C** not recognized in Mintty.  
Solution: Recognize the modifyOtherKeys code ending in "u". (Christian  
Brabandt, closes #7575)  
Files: src/ui.c

Patch 8.2.2276

Problem: List of distributed files is outdated.  
Solution: Update the file list. Minor comment updates.  
Files: Filelist, src/clipboard.c, src/fileio.c, src/option.c,  
src/screen.c, src/testdir/test\_signals.vim,  
src/testdir/Make\_vms.mms

Patch 8.2.2277

Problem: Missing backslash.  
Solution: Add backslash.  
Files: Filelist

Patch 8.2.2278

Problem: Falling back to old regexp engine can some patterns.  
Solution: Do not fall back once [[:lower:]] or [[:upper:]] is used.  
(Christian Brabandt, closes #7572)  
Files: src/regexp.c, src/regexp\_nfa.c, src/testdir/test\_regexp\_utf8.vim

Patch 8.2.2279

Problem: Vim9: memory leak with catch in skipped block.  
Solution: Free the pattern if not used.  
Files: src/vim9compile.c

Patch 8.2.2280

Problem: Fuzzy matching doesn't give access to the scores.  
Solution: Return the scores with a third list. (Yegappan Lakshmanan,  
closes #7596)  
Files: runtime/doc/eval.txt, src/search.c,  
src/testdir/test\_matchfuzzy.vim

Patch 8.2.2281

Problem: Vim9: compiled "wincmd" cannot be followed by bar.  
Solution: Check for bar after "wincmd". (closes #7599)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2282

Problem: Length check mismatch with argument of strncmp(). (Christian Brabandt)  
Solution: Adjust length check.  
Files: src/ui.c

Patch 8.2.2283

Problem: Vim9: crash when lambda has fewer arguments than expected.  
Solution: Don't check arguments when already failed. (closes #7606)  
Files: src/vim9type.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2284

Problem: Vim9: cannot set an option to a boolean value.  
Solution: Check for VAR\_BOOL. (closes #7603)  
Files: src/evalvars.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2285

Problem: Vim9: cannot set an option to a false.  
Solution: For VAR\_BOOL use string "0". (closes #7603)  
Files: src/evalvars.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2286

Problem: Sort test fails when locale is Canadian English. (Neil H Watson)  
Solution: Expect a different sort order. (closes #7609)  
Files: src/testdir/test\_sort.vim

Patch 8.2.2287

Problem: Sort test fails when locale is French Canadian.  
Solution: Expect a different sort order. (Dominique Pellé, closes #7609)  
Files: src/testdir/test\_sort.vim

Patch 8.2.2288

Problem: Vim9: line break and comment not always skipped.  
Solution: Skip over white space and then line break more consistently. (closes #7610)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2289

Problem: Vim9: **'cpo'** can become empty.  
Solution: Use empty\_option instead of an empty string. Update quickfix buffer after restoring **'cpo'**. (closes #7608)  
Files: src/evalfunc.c, src/syntax.c, src/eval.c, src/quickfix.c, src/evalbuffer.c, src/ex\_eval.c, src/gui\_motif.c, src/map.c, src/testdir/test\_quickfix.vim

Patch 8.2.2290

Problem: Vim9: unlet of global variable cannot be compiled.  
Solution: Skip over variables that might be defined later. Give an error if

a subscript is found. (closes #7585)  
Files: src/eval.c, src/vim9compile.c, src/vim.h,  
src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2291

Problem: Vim9: cannot use "null" for v:null.  
Solution: Support "null" like "true" and "false". (closes #7495)  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/evalvars.c,  
src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2292

Problem: Vim: expr test fails.  
Solution: Add missing part of "null" support.  
Files: src/eval.c

#### Patch 8.2.2293

Problem: Build failure with Motif. (Tony Mechelynck)  
Solution: Use empty\_option instead of empty\_options.  
Files: src/gui\_motif.c

#### Patch 8.2.2294

Problem: VMS: a few remaining problems.  
Solution: Add VMS specific changes. Add Lua support. (Zoltan Arpadffy)  
Files: src/fileio.c, src/os\_vms\_conf.h, src/Make\_vms.mms, src/macros.h,  
src/os\_vms.c, src/vim9execute.c, src/gui\_xmew.c, src/os\_unix.h

#### Patch 8.2.2295

Problem: Incsearch does not detect empty pattern properly.  
Solution: Return magic state when skipping over a pattern. (Christian Brabandt, closes #7612, closes #6420)  
Files: src/ex\_cmds.c, src/ex\_docmd.c, src/ex\_getln.c, src/globals.h,  
src/option.c, src/tag.c, src/proto/regexp.pro, src/regexp.c,  
src/search.c, src/structs.h, src/vim9compile.c,  
src/testdir/dumps/Test\_incsearch\_sub\_01.dump,  
src/testdir/dumps/Test\_incsearch\_sub\_02.dump,  
src/testdir/test\_search.vim

#### Patch 8.2.2296

Problem: Cannot use **CTRL-N** and **CTRL-P** in a popup menu.  
Solution: Use **CTRL-N** like <Down> and **CTRL-P** like <Up>. (closes #7614)  
Files: runtime/doc/popup.txt, src/popupwin.c,  
src/testdir/test\_popupwin.vim

#### Patch 8.2.2297

Problem: Vim9: cannot set 'number' to a boolean value.  
Solution: Use tv\_get\_bool(). (closes #7615)  
Files: src/evalvars.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2298

Problem: Vim9: comment right after "(" of function not recognized.  
Solution: Do not skip over white space before calling get\_function\_args().  
(closes #7613)  
Files: src/userfunc.c, src/proto/userfunc.pro,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.2299

Problem: Vim9: invalid memory access making error message flaky.  
Solution: Do not check cmd\_argt for CMD\_USER. (issue #7467)  
Files: src/ex\_docmd.c, src/vim9execute.c, src/errors.h,  
src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2300

Problem: Vim9: wrong order on type stack when using dict.  
Solution: Generate constants before a dict. (closes #7619)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2301

Problem: Vim9: cannot unlet a dict or list item.  
Solution: Add ISN\_UNLETINDEX. Refactor assignment code to use for unlet.  
Files: src/vim9compile.c, src/vim9.h, src/vim9execute.c,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.2302

Problem: Vim9: using an option value may use uninitialized memory.  
Solution: Clear v\_lock. (closes #7620)  
Files: src/typval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2303

Problem: Vim9: backtick expansion doesn't work for :foldopen.  
Solution: Do recognize backtick expansion. (closes #7621)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2304

Problem: Vim9: no test for unletting an imported variable.  
Solution: Add a test. Fix line number in error.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2305

Problem: Vim9: "++var" and "--var" are silently accepted.  
Solution: Give an error message.  
Files: src/vim9compile.c, src/eval.c, src/proto/eval.pro,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.2306

Problem: Vim9: when using function reference type is not checked.  
Solution: When using a function reference lookup the type and check the  
argument types. (issue #7629)  
Files: src/userfunc.c, src/proto/userfunc.pro, src/eval.c, src/structs.h,  
src/vim9type.c, src/proto/vim9type.pro, src/vim9compile.c,  
src/vim9execute.c, src/evalvars.c, src/evalfunc.c,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.2307

Problem: A shell command in the vimrc causes terminal output.  
Solution: Do not call starttermcap() after a shell command if the termcap  
wasn't active before.  
Files: src/ex\_cmds.c

Patch 8.2.2308

Problem: Vim9: no error when assigning lambda to funcref without return value.

Solution: Default return value to "any". (closes #7629)

Files: src/userfunc.c, src/vim9compile.c,  
src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_func.vim

Patch 8.2.2309

Problem: 0o777 not recognized as octal.

Solution: Use vim\_isodigit(). (Ken Takata, closes #7633, closes #7631)

Files: src/charset.c, src/testdir/test\_eval\_stuff.vim

Patch 8.2.2310

Problem: Vim9: winsaveview() return type is too generic.

Solution: use dict<number> instead of dict<any>. (closes #7626)

Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2311

Problem: Vim9: cannot assign to a variable that shadows a command modifier.

Solution: Check for assignment after possible command modifier.  
(closes #7632)

Files: src/vim9compile.c, src/ex\_docmd.c,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.2312

Problem: Build failure with Ruby 3.0 and 32 bits.

Solution: Add #ifdef. (closes #7638)

Files: src/if\_ruby.c

Patch 8.2.2313

Problem: Vim9: using uninitialized field when parsing range. ":silent!" not respected when parsing range fails.

Solution: Initialize ea.skip. On pattern failure handle it like an error.  
(closes #7636)

Files: src/vim9execute.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2314

Problem: Vim9: returning zero takes two instructions.

Solution: Add ISN\_RETURN\_ZERO.

Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.2315

Problem: Vim9: "endif" as dict key misinterpreted as function end.

Solution: Check for following colon. (closes #7640)

Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2316

Problem: Vim9: cannot list a lambda function.

Solution: Support the <lambda>9 notation, like :disassemble. (closes #7634)

Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2317

Problem: Vim9: command modifier before list unpack doesn't work.

Solution: Only recognize "[" directly after the name. (closes #7641)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2318

Problem: Vim9: string and list index work differently.  
Solution: Make string index work like list index. (closes #7643)  
Files: src/eval.c, src/proto/eval.pro, src/vim9execute.c, src/list.c,  
src/proto/vim9execute.pro, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2319

Problem: "exptype\_T" can be read as "expected type".  
Solution: Rename to "exprtype\_T", expression type.  
Files: src/eval.c, src/typval.c, src/proto/typval.pro, src/vim9compile.c,  
src/proto/vim9compile.pro, src/vim9execute.c, src/structs.h,  
src/vim9.h

#### Patch 8.2.2320

Problem: Vim9: no error for comparing bool with string.  
Solution: Check for wrong types when comparing. (closes #7639)  
Files: src/typval.c, src/errors.h, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2321

Problem: Vim9: cannot nest closures.  
Solution: Add the nesting level to ISN\_LOADOUTER and ISN\_STOREOUTER.  
(closes #7150, closes #7635)  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c, src/structs.h,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2322

Problem: Vim9: closure nested limiting to one level.  
Solution: Add outer\_T. Also make STOREOUTER work.  
Files: src/vim9execute.c, src/vim9.h, src/structs.h,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2323

Problem: Vim9: error when inferring type from empty dict/list.  
Solution: When the member is t\_unknown use t\_any. (closes #7009)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2324

Problem: Not easy to get mark en cursor position by character count.  
Solution: Add functions that use character index. (Yegappan Lakshmanan,  
closes #7648)  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/eval.c,  
src/evalfunc.c, src/proto/eval.pro, src/tag.c,  
src/testdir/test\_cursor\_func.vim, src/typval.c

#### Patch 8.2.2325

Problem: Vim9: crash if map() changes the item type.  
Solution: Check that the item type is still OK. (closes #7652)  
Fix problem with mapnew() on range list.  
Files: src/evalfunc.c, src/proto/evalfunc.pro, src/vim9compile.c,  
src/list.c, src/testdir/test\_vim9\_builtin.vim,

src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim

Patch 8.2.2326

Problem: Build error with +eval feature but without +spell.  
Solution: Adjust #ifdef. (John Marriott)  
Files: src/mbyte.c

Patch 8.2.2327

Problem: Debugging code included.  
Solution: Remove the debugging code.  
Files: src/vim9execute.c

Patch 8.2.2328

Problem: Some test files may not be deleted.  
Solution: Add a delete() call, correct name. (Dominique Pellé, closes #7654)  
Files: src/testdir/test\_clientserver.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.2329

Problem: Not all ways Vim can be started are tested.  
Solution: Add a test for different program names. (Dominique Pellé,  
closes #7651)  
Files: src/testdir/test\_startup.vim

Patch 8.2.2330

Problem: Vim9: crash when using :throw in a not executed block.  
Solution: Don't generate the instruction when skipping. (closes #7659)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2331

Problem: Vim9: wrong error when modifying dict declared with :final.  
Solution: Do not check for writable variable when an index follows.  
(closes #7657)  
Files: src/vim9compile.c, src/structs.h, src/vim9script.c,  
src/proto/vim9script.pro, src/evalvars.c,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.2332

Problem: Vim9: missing :endif not reported when using :windo.  
Solution: Pass a getline function to do\_cmdline(). (closes #7650)  
Files: src/vim9execute.c, src/structs.h, src/scriptfile.c,  
src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2333

Problem: Vim9: warning for uninitialized variable. (Tony Mechelynck)  
Solution: Initialize "res".  
Files: src/vim9execute.c

Patch 8.2.2334

Problem: Pascal-like filetypes not always detected.  
Solution: Improved Puppet, InstantFPC and Pascal detection. (Doug Kearns,  
closes #7662)  
Files: runtime/autoload/dist/ft.vim, runtime/filetype.vim,  
runtime/scripts.vim, src/testdir/test\_filetype.vim

Patch 8.2.2335

Problem: Vim9: "silent return" does not restore command modifiers.  
Solution: Restore command modifiers before returning. (closes #7649)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.2336

Problem: Vim9: it is not possible to extend a dictionary with different item types.  
Solution: Add extendnew(). (closes #7666)  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c, src/list.c, src/proto/list.pro, src/testdir/test\_listdict.vim, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2337

Problem: Configure test for GTK only says "no". (Harm te Hennepe)  
Solution: Hint that a -def package is needed. (closes #5229)  
Files: src/configure.ac, src/auto/configure

Patch 8.2.2338

Problem: Vim9: no error if using job\_info() result wrongly.  
Solution: Adjust return type on number of arguments. (closes #7667)  
Files: src/evalfunc.c, src/globals.h, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2339

Problem: Cannot get the type of a value as a string.  
Solution: Add typename().  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c, src/vim9type.c, src/proto/vim9type.pro, src/testdir/test\_vimscript.vim, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2340

Problem: win\_execute() unexpectedly returns number zero when failing.  
Solution: Return an empty string. (closes #7665)  
Files: src/evalwindow.c, src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_execute\_func.vim

Patch 8.2.2341

Problem: Expression command line completion shows variables but not functions after "g:". (Gary Johnson)  
Solution: Prefix "g:" when needed to a global function.  
Files: src/evalfunc.c, src/evalvars.c, src/proto/evalvars.pro, src/testdir/test\_cmdline.vim

Patch 8.2.2342

Problem: "char" functions return the wrong column in Insert mode when the cursor is beyond the end of the line.  
Solution: Compute the column correctly. (Yegappan Lakshmanan, closes #7669)  
Files: src/eval.c, src/evalfunc.c, src/testdir/test\_cursor\_func.vim

Patch 8.2.2343

Problem: Vim9: return type of readfile() is any.  
Solution: Add readblob() so that readfile() can be expected to always return a list of strings. (closes #7671)

Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c,  
src/filepath.c, src/proto/filepath.pro,  
src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.2344

Problem: Using inclusive index for slice is not always desired.  
Solution: Add the slice() method, which has an exclusive index. (closes  
#7408)

Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c,  
src/eval.c, src/proto/eval.pro, src/vim9execute.c,  
src/proto/vim9execute.pro, src/list.c, src/proto/list.pro,  
src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.2345

Problem: No focus events in a terminal.  
Solution: Add the t\_fd and t\_fe termcap entries and implement detecting  
focus events. (Hayaki Saito, Magnus Groß, closes #7673,  
closes #609, closes #5526)

Files: runtime/doc/term.txt, src/optiondefs.h, src/term.c, src/term.h

#### Patch 8.2.2346

Problem: Codecov reports every little coverage drop.  
Solution: Tolerate a 0.05% drop. Hide the appveyor config file. (Ozaki  
Kiichi, closes #7678)

Files: .appveyor.yml, appveyor.yml, .codecov.yml

#### Patch 8.2.2347

Problem: Build failure without GUI.

Solution: Add #ifdef.

Files: src/term.c

#### Patch 8.2.2348 (after 8.2.2345)

Problem: No check for modified files after focus gained. (Mathias Stearn)

Solution: Call ui\_focus\_change().

Files: src/term.c, src/ui.c

#### Patch 8.2.2349

Problem: Vim9: cannot handle line break after parenthesis at line end.

Solution: Skip over line break. (closes #7677)

Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2350

Problem: Using "void" for no reason.

Solution: Use "char \*".

Files: src/ex\_docmd.c

#### Patch 8.2.2351

Problem: Vim9: error message for "throw" in function that was called with  
"silent!".

Solution: Do not throw the exception when not caught or displayed.  
(closes #7672)

Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2352

Problem: If the focus lost/gained escape sequence is received twice it is not ignored. (Christ van Willegen)  
Solution: Adjust the logic to ignore the escape code.  
Files: src/term.c

#### Patch 8.2.2353

Problem: Sparql files are not detected.  
Solution: Add the sparql filetype. (closes #7679)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.2354

Problem: Crash with a weird combination of autocommands.  
Solution: Increment b\_nwindows when needed. (closes #7674)  
Files: src/ex\_cmds.c, src/buffer.c, src/proto/buffer.pro, src/testdir/test\_autocmd.vim

#### Patch 8.2.2355

Problem: Stray test failure on Appveyor.  
Solution: Finish insert command.  
Files: src/testdir/test\_autocmd.vim

#### Patch 8.2.2356

Problem: Vim9: ":put =expr" does not handle a list properly.  
Solution: Use the same logic as eval\_to\_string\_eap(). (closes #7684)  
Files: src/vim9execute.c, src/eval.c, src/proto/eval.pro, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2357

Problem: Vim9: crash when parsing function return type fails.  
Solution: Bail out and set return type to "unknown". (closes #7685)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2358

Problem: Wrong #ifdef for use\_xterm\_like\_mouse().  
Solution: Use FEAT\_MOUSE\_XTERM.  
Files: src/term.c

#### Patch 8.2.2359

Problem: Strange test failure with MS-Windows.  
Solution: Skip the system() call for now.  
Files: src/testdir/test\_autocmd.vim

#### Patch 8.2.2360

Problem: Test leaves file behind.  
Solution: Delete the right file. (Dominique Pellé, closes #7689)  
Files: src/testdir/test\_filetype.vim

#### Patch 8.2.2361

Problem: Vim9: no highlight for "s//gc" when using 'opfunc'.  
Solution: Reset 'lazyredraw' temporarily. (closes #7687)  
Files: src/ex\_cmds.c

#### Patch 8.2.2362

Problem: Vim9: check of builtin function argument type is incomplete.

Solution: Use need\_type() instead of check\_arg\_type().  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/evalfunc.c,  
src/proto/evalfunc.pro, src/vim9type.c, src/proto/vim9type.pro,  
src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.2363

Problem: curpos() does not accept a string argument as before.  
solution: Make a string argument work again. (Yegappan Lakshmanan,  
closes #7690)  
Files: src/evalfunc.c, src/testdir/test\_cursor\_func.vim

#### Patch 8.2.2364

Problem: Vim9: line break in lambda accesses freed memory.  
Solution: Make a copy of the return type. (closes #7664)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2365

Problem: Vim9: no check for map() changing item type at script level.  
Solution: Check the new value type.  
Files: src/list.c, src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2366

Problem: When using ":sleep" the cursor is always displayed.  
Solution: Do not display the cursor when using ":sleep!". (Jeremy Lerner,  
closes #7688)  
Files: runtime/doc/index.txt, runtime/doc/various.txt, src/ex\_cmds.h,  
src/ex\_docmd.c, src/normal.c, src/proto/ex\_docmd.pro, src/term.c,  
src/testdir/Make\_all.mak, src/testdir/test\_sleep.vim

#### Patch 8.2.2367

Problem: Test failures on some less often used systems.  
Solution: Adjust printf formats and types. (James McCoy, closes #7691)  
Files: src/errors.h, src/evalfunc.c, src/list.c, src/vim9execute.c

#### Patch 8.2.2368

Problem: Insufficient tests for setting options.  
Solution: Add a few tests. (Dominique Pellé, closes #7695)  
Files: src/testdir/test\_options.vim

#### Patch 8.2.2369

Problem: Vim9: functions return true/false but can't be used as bool.  
Solution: Add ret\_number\_bool(). (closes #7693)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2370

Problem: Vim9: command fails in catch block.  
Solution: Reset force\_abort and need\_rethrow. (closes #7692)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2371

Problem: Vim9: crash when using types in :for with unpack.  
Solution: Check for skip\_var\_list() failing. Pass include\_type to

Files: skip\_var\_one(). Skip type when compiling. (closes #7694)  
src/vim9compile.c, src/evalvars.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.2372 (after 8.2.2371)

Problem: Confusing error message for wrong :let command.  
Solution: Only check for type in Vim9 script.  
Files: src/evalvars.c

Patch 8.2.2373

Problem: Vim9: list assignment only accepts a number index.  
Solution: Accept "any" and do a runtime type check. (closes #7694)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2374

Problem: Accessing uninitialized memory in test\_undo.  
Solution: Do not look in typebuf.tb\_buf if it is empty. (Dominique Pellé,  
closes #7697)  
Files: src/edit.c

Patch 8.2.2375

Problem: Test for RGB color skipped in the terminal.  
Solution: Run the GUI if possible.  
Files: src/testdir/test\_highlight.vim

Patch 8.2.2376

Problem: Vim9: crash when dividing by zero in compiled code using  
constants.  
Solution: Call num\_divide() and num\_modulus(). (closes #7704)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2377

Problem: Vim9: crash when using a range after another expression.  
Solution: Set the variable type to number. Fix using :put with a range and  
the "=" register. (closes #7706)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2378

Problem: Vim9: no error message for dividing by zero.  
Solution: Give an error message. (issue #7704)  
Files: src/errors.h, src/eval.c, src/vim9execute.c,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.2379

Problem: Finding spell suggestions twice if '**spellsuggest**' contains number.  
Solution: Only do internal suggestions once. (closes #7713)  
Files: src/spellsuggest.c

Patch 8.2.2380

Problem: Vim9: occasional crash when using try/catch and a timer.  
Solution: Save and restore "need\_rethrow" when invoking a timer callback.  
(closes #7708)  
Files: src/time.c

Patch 8.2.2381

Problem: Vim9: divide by zero does not abort expression execution.  
Solution: Use a "failed" flag. (issue #7704)  
Files: src/eval.c, src/proto/eval.pro, src/evalvars.c, src/vim9compile.c,  
src/testdir/vim9.vim, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2382 (after 8.2.2381)

Problem: Build failure.  
Solution: Add missing changes.  
Files: src/vim9execute.c

Patch 8.2.2383

Problem: Focus escape sequences are not named in ":set termcap" output.  
Solution: Add the names to the list. (closes #7718)  
Files: src/misc2.c

Patch 8.2.2384

Problem: Turtle filetype not recognized.  
Solution: Add a rule to detect turtle files. (closes #7722)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.2385

Problem: "gj" and "gk" do not work correctly when inside a fold.  
Solution: Move check for folding. (closes #7724, closes #4095)  
Files: src/normal.c, src/testdir/test\_fold.vim

Patch 8.2.2386

Problem: Vim9: crash when using ":silent! put".  
Solution: When ignoring an error for ":silent!" rewind the stack and skip ahead to restoring the cmdmod. (closes #7717)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2387

Problem: Runtime type check does not mention argument index.  
Solution: Add ct\_arg\_idx. (closes #7720)  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.2388

Problem: No easy way to get the maximum or minimum number value.  
Solution: Add v:numbermax and v:numbermin.  
Files: src/evalvars.c, src/vim.h, src/testdir/test\_eval\_stuff.vim,  
runtime/doc/eval.txt

Patch 8.2.2389

Problem: Test failure on a few systems.  
Solution: Avoid that "char" value is negative.  
Files: src/vim9compile.c, src/vim9execute.c, src/vim9.h

Patch 8.2.2390

Problem: Vim9: using positive offset is unexpected.  
Solution: Use int8\_T instead of char. (James McCoy)

Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c

Patch 8.2.2391

Problem: Memory leak when creating a global function with closure.  
Solution: Create a separate partial for every instantiated function.  
Files: src/userfunc.c, src/vim9execute.c

Patch 8.2.2392

Problem: Fennel filetype not recognized.  
Solution: Detect with pattern and hashbang. (Chinmay Dalal, closes #7729)  
Files: runtime/filetype.vim, runtime/scripts.vim,  
src/testdir/test\_filetype.vim

Patch 8.2.2393

Problem: Vim9: error message when script line starts with "[{".  
Solution: Do not give an error for checking for end of list.  
Files: src/dict.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2394

Problem: Vim9: min() and max() return type is "any".  
Solution: Use return type "number". (closes #7728)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2395

Problem: Vim9: error for wrong type may report wrong line number.  
Solution: Save and restore the line number when evaluating the expression.  
(closes #7727)  
Files: src/evalvars.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2396

Problem: Vim9: no white space allowed before "->".  
Solution: Allow for white space. (closes #7725)  
Files: src/ex\_docmd.c, src/eval.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2397

Problem: Vim9: "%%" not seen as alternate file name for commands with a  
buffer name argument.  
Solution: Recognize "%%" like "#". (closes #7732)  
Files: src/buffer.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2398 (after 8.2.2396)

Problem: Method test fails.  
Solution: Adjust test for allowed white space.  
Files: src/testdir/test\_method.vim

Patch 8.2.2399 (after 8.2.2385)

Problem: Fold test fails in wide terminal.  
Solution: Adjust the test. (Dominique Pelle, closes #7731, closes #7739)  
Files: src/testdir/test\_fold.vim

Patch 8.2.2400

Problem: Vim9: compiled functions are not profiled.  
Solution: Add initial changes to profile compiled functions. Fix that a  
script-local function was hard to debug.

Files: runtime/doc/repeat.txt, src/vim9.h, src/vim9compile.c, src/vim9execute.c, src/userfunc.c, src/proto/vim9compile.pro, src/structs.h, src/vim9type.c, src/debugger.c, src/ex\_cmds.h, src/ex\_docmd.c, src/profiler.c, src/proto/profiler.pro, src/testdir/test\_vim9\_disassemble.vim, src/testdir/test\_profile.vim

#### Patch 8.2.2401

Problem: Build fails without +profiling feature.

Solution: Add #ifdefs.

Files: src/vim9compile.c, src/vim9execute.c, src/vim9.h, src/structs.h, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2402

Problem: Some filetypes not detected.

Solution: Detect Ruby Signature and Puppet related files. (Doug Kearns)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.2403

Problem: Vim9: profiling if/elseif/endif not correct.

Solution: Add profile instructions. Fix that "elseif" was wrong.

Files: src/vim9compile.c, src/testdir/test\_profile.vim, src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2404

Problem: Vim9: profiling try/catch not correct.

Solution: Add profile instructions. Fix that "entry" did not rethrow an exception.

Files: src/vim9compile.c, src/vim9execute.c, src/testdir/test\_profile.vim

#### Patch 8.2.2405

Problem: Vim9: no need to allow white space before "(" for :def.

Solution: Give an error for stray white space. (issue #7734)

Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2406

Problem: Vim9: profiled :def function leaks memory.

Solution: Delete the profiled instructions.

Files: src/vim9compile.c

#### Patch 8.2.2407

Problem: Old jumplist code is never used.

Solution: Delete the dead code. (Yegappan Lakshmanan, closes #7740)

Files: src/mark.c

#### Patch 8.2.2408

Problem: MinGW: "--preprocessor" flag no longer supported.

Solution: Remove the flag, use the defaults. (Christopher Wellons, closes #7741)

Files: src/GvimExt/Make\_ming.mak, src/Make\_cyg\_ming.mak

#### Patch 8.2.2409

Problem: Vim9: profiling only works for one function.

Solution: Select the right instructions when calling and returning.  
(closes #7743)  
Files: src/vim9compile.c, src/vim9execute.c, src/vim9.h,  
src/testdir/test\_profile.vim

#### Patch 8.2.2410

Problem: Build failure without the +profiling feature.  
Solution: Add dummy argument to macro.  
Files: src/vim9.h

#### Patch 8.2.2411

Problem: Profile test fails on MS-Windows.  
Solution: Do the profiling in a separate Vim command.  
Files: src/testdir/test\_profile.vim

#### Patch 8.2.2412

Problem: Not all fields in "cstack" are initialized which might cause a crash.  
Solution: Use CLEAR\_FIELD().  
Files: src/ex\_docmd.c

#### Patch 8.2.2413

Problem: Crash when using :all while using a cmdline window. (Zdenek Dohnal)  
Solution: Disallow :all from the cmdline window.  
Files: src/arglist.c, src/ex\_getln.c, src/testdir/test\_arglist.vim

#### Patch 8.2.2414

Problem: Using freed memory when closing the cmdline window.  
Solution: Check the window is still valid.  
Files: src/ex\_getln.c

#### Patch 8.2.2415

Problem: No way to check for the cmdwin feature, cmdline\_hist is now always enabled.  
Solution: Add has('cmdwin') support. Skip arglist test on Windows temporarily.  
Files: runtime/doc/cmdline.txt, src/evalfunc.c,  
src/testdir/test\_autocmd.vim, src/testdir/test\_arglist.vim,  
src/testdir/test\_cmdline.vim, src/testdir/test\_ins\_complete.vim,  
src/testdir/test\_normal.vim, src/testdir/test\_tabpage.vim,  
src/testdir/test\_termcodes.vim, src/testdir/test\_window\_cmd.vim

#### Patch 8.2.2416

Problem: May get stuck in command line window state.  
Solution: Reset "cmdwin\_type" when editing buffer fails. Make arglist test pass on MS-Windows.  
Files: src/ex\_getln.c, src/testdir/test\_arglist.vim

#### Patch 8.2.2417

Problem: Condition stack values may be used when not set.  
Solution: Clear cs\_script\_var\_len and cs\_block\_id just in case they get used later. (issue #7733)  
Files: src/ex\_eval.c

Patch 8.2.2418

Problem: Color not changed if ModeMsg highlight is set in InsertEnter autocmd event. (Paul Swanson)  
Solution: Call highlight\_changed() after triggering InsertEnter. (closes #7751)  
Files: src/edit.c

Patch 8.2.2419

Problem: Autocmd test was failing on MS-Windows with GUI.  
Solution: Remove stray feedkeys().  
Files: src/testdir/test\_autocmd.vim

Patch 8.2.2420

Problem: Too many problems with using all autocommand events.  
Solution: Disallow defining an autocommand for all events.  
Files: src/autocmd.c, src/errors.h, src/testdir/test\_autocmd.vim, src/testdir/test\_quickfix.vim, src/testdir/test\_window\_cmd.vim

Patch 8.2.2421

Problem: Double free when using autocommand with "argdel". (Houyunsong)  
Solution: Add the arglist\_locked flag.  
Files: src/arglist.c, src/testdir/test\_autocmd.vim

Patch 8.2.2422

Problem: Crash when deleting with line number out of range. (Houyunsong)  
Solution: Avoid using a negative line number.  
Files: src/normal.c, src/testdir/test\_ex\_mode.vim

Patch 8.2.2423 (after 8.2.2422)

Problem: Missing error message.  
Solution: Add the error message.  
Files: src/errors.h

Patch 8.2.2424

Problem: Some tests are known to cause an error with ASAN.  
Solution: Add CheckNotAsan.  
Files: src/testdir/check.vim, src/testdir/test\_ins\_complete.vim, src/testdir/test\_memory\_usage.vim, src/testdir/test\_ex\_mode.vim

Patch 8.2.2425

Problem: Cursor on invalid line with range and :substitute.  
Solution: Do not move the cursor when skipping commands. (closes #3434)  
Files: src/ex\_cmds.c, src/testdir/test\_eval\_stuff.vim

Patch 8.2.2426

Problem: Allowing '**completefunc**' to switch windows causes trouble.  
Solution: use "textwinlock" instead of "textlock".  
Files: src/insexpand.c, src/testdir/test\_ins\_complete.vim, src/testdir/test\_popup.vim

Patch 8.2.2427

Problem: Can still switch windows for '**completefunc**'.  
Solution: Also disallow switching windows for other completions.  
Files: src/insexpand.c, src/testdir/test\_ins\_complete.vim,

src/testdir/test\_popup.vim

Patch 8.2.2428

Problem: FocusGained does not work when 'ttymouse' is empty.  
Solution: Don't use the short mouse code if there is a longer matching code.  
(closes #7755) Add a test.  
Files: src/term.c, src/testdir/test\_termcodes.vim

Patch 8.2.2429

Problem: :goto does not work correctly with text properties. (Sam McCall)  
Solution: Add a test. (Andrew Radev) Also use the text property size when  
computing the remaining offset. (closes #5930)  
Files: src/memline.c, src/testdir/test\_textprop.vim

Patch 8.2.2430

Problem: :vimgrep expands wildcards twice.  
Solution: Do not expand wildcards a second time.  
Files: src/quickfix.c, src/arglist.c, src/testdir/test\_quickfix.vim

Patch 8.2.2431

Problem: Warning for -fno-strength-reduce with Clang 11.  
Solution: Adjust check for clang version number.  
Files: src/configure.ac, src/auto/configure

Patch 8.2.2432

Problem: Libvterm tests are executed even when libtool doesn't work.  
Solution: Only run libvterm tests if /usr/bin/gcc exists.  
Files: src/Makefile

Patch 8.2.2433

Problem: Opening cmdline window gives error in BufLeave autocommand.  
Solution: Reset cmdwin\_type when triggering the autocommand.  
Files: src/ex\_cmds.c, src/testdir/test\_cmdline.vim

Patch 8.2.2434

Problem: Vim9: no error when compiling str2nr() with a number.  
Solution: Add argument type checks. (closes #7759)  
Files: src/evalfunc.c, src/typval.c, src/proto/typval.pro,  
src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2435

Problem: setline() gives an error for some types.  
Solution: Allow any type, convert each item to a string.  
Files: runtime/doc/eval.txt, src/evalbuffer.c, src/typval.c,  
src/proto/typval.pro, src/debugger.c, src/vim9execute.c,  
src/testdir/test\_buflines.vim, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2436

Problem: Vim9 script test is a bit flaky.  
Solution: Wait longer for exit callback.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.2437

Problem: Deprecation warnings with default configuration.

Solution: Add -Wno-deprecated-declarations.  
Files: src/configure.ac, src/auto/configure

#### Patch 8.2.2438

Problem: Out of bounds compiler warning.  
Solution: Increase the size of uf\_name.  
Files: src/structs.h

#### Patch 8.2.2439

Problem: Not easy to figure out what packages to get when installing Vim on a new Ubuntu system.  
Solution: Mention explicit commands that are easy to follow.  
Files: src/INSTALL

#### Patch 8.2.2440

Problem: Documentation based on patches is outdated.  
Solution: Add changes to documentation in a patch.  
Files: runtime/doc/arabic.txt, runtime/doc/autocmd.txt,  
runtime/doc/change.txt, runtime/doc/channel.txt,  
runtime/doc/cmdline.txt, runtime/doc/debugger.txt,

runtime/doc/windows.txt

Patch 8.2.2441

Problem: Vim9: extend() does not give an error for a type mismatch.  
Solution: Check the type of the second argument. (closes #7760)  
Files: src/list.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2442

Problem: Automatic GUI selection does not check for GTK 3.  
Solution: Make SKIP\_GTK3 empty for automatic GUI support. Set SKIP\_GTK3 to YES when checking for GTK2.  
Files: src/configure.ac, src/auto/configure

Patch 8.2.2443

Problem: Vim9: no compile time error for wrong str2float argument.  
Solution: Check argument type. (closes #7759)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2444

Problem: Vim9: compile error with combination of operator and list.  
Solution: Generate constants before parsing a list or dict. (closes #7757)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2445

Problem: Vim9: no proper error for lambda missing return type.  
Solution: Check for this error. (closes #7758)  
Files: src/errors.h, src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2446

Problem: Setting **'term'** empty has different error if compiled with GUI.  
Solution: Insert "else". (closes #7766)  
Files: src/optionstr.c, src/testdir/test\_options.vim

Patch 8.2.2447

Problem: **'foldlevel'** not applied to folds restored from session.  
Solution: Set **'foldlevel'** after creating the folds. (closes #7767)  
Files: src/fold.c, src/testdir/test\_mksession.vim

Patch 8.2.2448

Problem: Compilation error with Ruby 3.0.  
Solution: Adjust #ifdefs and declaration. (Ken Takata, closes #7761)  
Files: src/if\_ruby.c

Patch 8.2.2449

Problem: Vim9: flatten() always changes the list type.  
Solution: Disallow using flatten() and add flattennew().  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c,  
src/list.c, src/proto/list.pro, src/errors.h, src/vim9compile.c,  
src/testdir/test\_flatten.vim, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2450

Problem: MS-Windows: ADS was not preserved if **'backupcopy'** is "yes".  
Solution: Copy ADS before truncating the file. (Ken Takata, closes #7762)  
Files: src/bufwrite.c

Patch 8.2.2451

Problem: MS-Windows: Extended Attributes not preserved.  
Solution: Preserve Extended Attributes when writing a file. (Ken Takata,  
closes #7765)  
Files: src/os\_win32.c

Patch 8.2.2452

Problem: No completion for the **'filetype'** option.  
Solution: Add filetype completion. (Martin Tournoij, closes #7747)  
Files: src/option.c, src/optiondefs.h, src/testdir/test\_options.vim

Patch 8.2.2453

Problem: Vim9: a variable name with "->" in the next line doesn't work.  
Solution: Recognize a variable name by itself. (closes #7770)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2454

Problem: Leading space can not be made visible.  
Solution: Add "lead:" to **'listchars'**. (closes #7772)  
Files: runtime/doc/options.txt, src/drawline.c, src/globals.h,  
src/message.c, src/screen.c, src/testdir/test\_listchars.vim

Patch 8.2.2455

Problem: Vim9: key type that can be used for literal dict and indexing is  
inconsistent.  
Solution: Allow using number and bool as key for a literal dict. (#7771)  
Files: runtime/doc/vim9.txt, src/dict.c, src/eval.c, src/vim9compile.c,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.2456

Problem: Coverity warning for strcpy() into fixed size array.  
Solution: Add a type cast to hopefully silence the bogus warning.  
Files: src/userfunc.c

Patch 8.2.2457

Problem: Coverity warns for memory leak.  
Solution: Free memory when out of memory.  
Files: src/if\_cscope.c

Patch 8.2.2458

Problem: Coverity warns for :retab using freed memory.

Solution: Use the updated line pointer when moving text properties.  
Files: src/indent.c

Patch 8.2.2459

Problem: Coverity reports dead code.  
Solution: Remove the dead code.  
Files: src/eval.c

Patch 8.2.2460

Problem: Coverity warns for unused value.  
Solution: Do not reset the return value to OK.  
Files: src/vim9compile.c

Patch 8.2.2461

Problem: Coverity warns for unchecked return value.  
Solution: Add "(void)" to avoid the warning.  
Files: src/vim9execute.c

Patch 8.2.2462

Problem: Coverity warns for not checking for fseek() error.  
Solution: Give an error message if fseek() fails.  
Files: src/spellfile.c

Patch 8.2.2463

Problem: Using :arglocal in an autocommand may use freed memory.  
(houyunsong)  
Solution: Check if the arglist is locked.  
Files: src/arglist.c, src/testdir/test\_autocmd.vim

Patch 8.2.2464

Problem: Using freed memory if window closed in autocommand. (houyunsong)  
Solution: Check the window still exists.  
Files: src/ex\_cmds.c, src/testdir/test\_autocmd.vim

Patch 8.2.2465

Problem: Using freed memory in :psearch. (houyunsong)  
Solution: Check the current window is still valid. Fix flaky test.  
Files: src/search.c, src/testdir/test\_autocmd.vim

Patch 8.2.2466

Problem: Max() and min() can give many error messages.  
Solution: Bail out at the first error. (closes #1039, closes #7778)  
Files: src/evalfunc.c, src/testdir/test\_functions.vim

Patch 8.2.2467

Problem: Script generated by :mkview changes alternate file.  
Solution: Only write :balt in the session file. (Harish Rajagopal,  
closes #7779)  
Files: src/session.c, src/testdir/test\_mksession.vim

Patch 8.2.2468

Problem: Not easy to get the full command name from a shortened one.  
Solution: Add fullcommand(). (Martin Tournoij, closes #7777)  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c,

src/ex\_docmd.c, src/proto/evalfunc.pro,  
src/testdir/test\_cmdline.vim

Patch 8.2.2469

Problem: Confusing error if :wsize has a wrong argument.  
Solution: Quote the argument in the error. (closes #2523)  
Files: src/ex\_docmd.c, src/testdir/test\_excmd.vim

Patch 8.2.2470

Problem: Popup\_getoptions() does not get textprop from other tab.  
Solution: use win\_valid\_any\_tab(). (closes #7786)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim

Patch 8.2.2471

Problem: Popup\_setoptions() does not set textprop in other tab.  
Solution: use win\_valid\_any\_tab(). (closes #7788)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim

Patch 8.2.2472

Problem: Crash when using command line window in an autocommand.  
(houyunsong)  
Solution: Save and restore au\_new\_curbuf.  
Files: src/ex\_cmds.c, src/testdir/test\_autocmd.vim

Patch 8.2.2473

Problem: Crash when leaving command line window triggers autocommand.  
(houyunsong)  
Solution: Make sure not to close the current window or buffer.  
Files: src/ex\_getln.c, src/testdir/test\_autocmd.vim

Patch 8.2.2474

Problem: Using freed memory when window is closed by autocommand.  
(houyunsong)  
Solution: Check the window pointer is still valid.  
Files: src/quickfix.c, src/testdir/test\_autocmd.vim

Patch 8.2.2475

Problem: Autocommand tests hangs on MS-Windows.  
Solution: Skip one test.  
Files: src/testdir/test\_autocmd.vim

Patch 8.2.2476

Problem: Using freed memory when using an autocommand to split a window  
while a buffer is being closed.  
Solution: Disallow splitting when the buffer has b\_locked\_split set.  
Files: src/buffer.c, src/window.c, src/errors.h, src/structs.h,  
src/popupwin.c, src/testdir/test\_autocmd.vim

Patch 8.2.2477

Problem: Autocommand tests hang on MS-Windows.  
Solution: Skip a couple of tests. Fix file name.  
Files: src/testdir/test\_autocmd.vim

Patch 8.2.2478

Problem: MS-Windows: backup files for plugins are loaded.  
Solution: Do not use the alternate file name for files ending in "~".  
Files: src/filepath.c

#### Patch 8.2.2479

Problem: set/getbuflin test fails without the job feature.  
Solution: Check whether the job feature is supported. (Dominique Pellé,  
closes #7790)  
Files: src/testdir/test\_buflin.vim, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.2480

Problem: Vim9: some errors for white space do not show context.  
Solution: Include the text at the error.  
Files: src/errors.h, src/dict.c, src/list.c, src/userfunc.c,  
src/vim9compile.c, src/vim9script.c, src/vim9type.c

#### Patch 8.2.2481

Problem: Vim9: confusing error when variable arguments have a default  
value.  
Solution: Give a specific error message. (closes #7793)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2482

Problem: Build error.  
Solution: Add new error message.  
Files: src/errors.h

#### Patch 8.2.2483

Problem: Vim9: type error for malformed expression.  
Solution: Check for end of command before checking type. (closes #7795)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2484

Problem: Vim9: Cannot use a comment starting with #{ after an expression.  
Solution: Remove the check for "{" since #{ dictionaries are not supported.  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2485

Problem: When sourcing a script again the script version isn't reset.  
Solution: Set sn\_version to one when sourcing a script again. Clear  
sn\_save\_cpo properly. (closes #7608)  
Files: src/scriptfile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2486

Problem: Vim9: some errors for white space do not show context.  
Solution: Include the text at the error.  
Files: src/errors.h, src/dict.c, src/list.c, src/userfunc.c,  
src/vim9compile.c, src/vim9type.c

#### Patch 8.2.2487

Problem: Terminal shows garbage after double-wide character with a  
combining character. (Kyoichiro Yamada)  
Solution: Libvterm: do not add the width of the combining character to the  
glyph width. (closes #7801)

Files: src/libvterm/src/state.c, src/testdir/test\_terminal.vim,  
src/testdir/dumps/Test\_terminal\_combining.dump

#### Patch 8.2.2488

Problem: json\_encode() gives generic argument error.  
Solution: Mention the type that can't be encoded. (issue #7802)  
Files: src/json.c, src/errors.h, src/testdir/test\_json.vim

#### Patch 8.2.2489

Problem: current buffer is wrong after deletebuflin() fails to delete a  
line in another buffer.  
Solution: Restore the current buffer.  
Files: src/evalbuffer.c, src/testdir/test\_buflin.vim

#### Patch 8.2.2490

Problem: **'wrap'** option is always reset when starting diff mode.  
Solution: Add the "followwrap" item in **'diffopt'**. (Rick Howe, closes #7797)  
Files: runtime/doc/diff.txt, runtime/doc/options.txt, src/diff.c,  
src/testdir/test\_diffmode.vim

#### Patch 8.2.2491

Problem: Popup window for text property may show in first screen line.  
Solution: If the text position is invisible do not show the popup window.  
(closes #7807)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popup\_prop\_not\_visible\_01.dump,  
src/testdir/dumps/Test\_popup\_prop\_not\_visible\_02.dump,  
src/testdir/dumps/Test\_popup\_prop\_not\_visible\_03.dump

#### Patch 8.2.2492

Problem: Command line buffer name cannot be translated.  
Solution: Add \_(). (Gabriel Dupras, closes #7812)  
Files: src/ex\_getln.c

#### Patch 8.2.2493

Problem: Text property for text left of window shows up.  
Solution: Check if the text property ends before the current column.  
(closes #7806)  
Files: src/drawline.c, src/testdir/test\_textprop.vim,  
src/testdir/dumps/Test\_textprop\_nowrap\_01.dump,  
src/testdir/dumps/Test\_textprop\_nowrap\_02.dump

#### Patch 8.2.2494

Problem: ":rviminfo!" clears most of oldfiles.  
Solution: Add VIF\_ONLY\_CURBUF to read\_viminfo(). (closes #1781)  
Files: src/viminfo.c, src/vim.h

#### Patch 8.2.2495

Problem: Text jumps up and down when moving the cursor in a small window  
with wrapping text and **'scrolloff'** set.  
Solution: Adjust the computation of w\_skipcol. (partly by Ghjuvan Lacambre,  
closes #7813)  
Files: src/move.c, src/testdir/test\_breakindent.vim

Patch 8.2.2496 (after 8.2.2495)

Problem: Insufficient testing for text jumping fix.

Solution: Add another test case.

Files: src/testdir/test\_breakindent.vim

Patch 8.2.2497

Problem: No error when using more than one character for a register name.

Solution: In Vim9 script check for a single character string. (closes #7814)

Fix that VAR\_BOOL and VAR\_SPECIAL are not considered equal.

Files: src/errors.h, src/evalfunc.c, src/typval.c,  
src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2498

Problem: No test for what 8.2.2494 fixes.

Solution: Add a simple change to test the fix. (closes #7818)

Files: src/testdir/test\_viminfo.vim

Patch 8.2.2499

Problem: "vim -g --version" does not redirect output.

Solution: Reset gui.starting when showing version info. (closes #7815)

Files: src/main.c, src/testdir/test\_version.vim

Patch 8.2.2500 (after 8.2.2499)

Problem: Build fails without the GUI feature.

Solution: Add #ifdef.

Files: src/main.c

Patch 8.2.2501

Problem: Not always clear where an error is reported.

Solution: Add the where\_T structure and pass it around. (closes #7796)

Files: src/structs.h, src/vim9type.c, src/proto/vim9type.pro,  
src/errors.h, src/evalvars.c, src/proto/evalvars.pro, src/eval.c,  
src/proto/eval.pro, src/vim9execute.c, src/vim9script.c,  
src/proto/vim9script.pro, src/dict.c, src/list.c,  
src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2502

Problem: A few github actions are failing.

Solution: Install setuptools-rust. (closes #7823)

Files: .github/workflows/ci.yml

Patch 8.2.2503

Problem: Vim9: a caught error may leave something on the stack.

Solution: Drop items from the stack if needed. (closes #7826)

Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2504

Problem: Vim9: crash when using an argument from a closure.

Solution: Check if gen\_load\_outer is NULL. (closes #7821)

Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2505

Problem: Vim9: crash after defining function with invalid return type.

Solution: Clear function growarrays. Fix memory leak.

Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2506

Problem: Vim9: :continue does not work correctly in a :try block

Solution: Add the TRYCLEANUP instruction. (closes #7827)

Files: src/vim9compile.c, src/vim9execute.c, src/vim9.h,  
src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2507

Problem: Github build may fail if Ubuntu 20.04 is used. Installing rust is not needed.

Solution: Specify ubuntu-18.04 instead of latest. Update "pip" instead of installing rust. (Ozaki Kiichi, closes #7820)

Files: .github/workflows/ci.yml

#### Patch 8.2.2508

Problem: Cannot change the character displayed in non existing lines.

Solution: Add the "eob" item to 'fillchars'. (closes #7832, closes #3820)

Files: runtime/doc/options.txt, runtime/doc/todo.txt,  
runtime/doc/windows.txt, src/drawscreen.c, src/globals.h,  
src/optiondefs.h, src/screen.c, src/testdir/test\_display.vim

#### Patch 8.2.2509

Problem: Tests fail on s390 build.

Solution: Initialize trycmd\_T.

Files: src/vim9execute.c

#### Patch 8.2.2510

Problem: Internal error when popup with mask is zero height or width.

Solution: Bail out if width or height is zero. (closes #7831)

Files: src/popupwin.c, src/testdir/test\_popupwin.vim

#### Patch 8.2.2511

Problem: Vim9: cannot use Vim9 script syntax in some places.

Solution: Add the :vim9cmd command modifier. Incompatible: Makes ":vim9" mean ":vim9cmd" instead of ":vim9script".

Files: runtime/doc/vim9.txt, runtime/doc/repeat.txt, src/ex\_docmd.c,  
src/ex\_cmds.h, src/structs.h, src/ex\_cmdidxs.h, src/errors.h,  
src/testdir/test\_vim9\_cmd.vim, src/testdir/test\_cmdline.vim,  
src/testdir/dumps/Test\_wildmenu\_1.dump,  
src/testdir/dumps/Test\_wildmenu\_2.dump,  
src/testdir/dumps/Test\_wildmenu\_3.dump,  
src/testdir/dumps/Test\_wildmenu\_4.dump,  
src/testdir/test\_quickfix.vim

#### Patch 8.2.2512

Problem: Vim9: compiling error test sometimes fails.

Solution: use WaitForAssert() instead of sleeping for a bit. (Dominique Pellé, closes #7837)

Files: src/testdir/term\_util.vim, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2513 (after 8.2.2511)

Problem: Vim9: missing part of :vim9cmd change.  
Solution: Use command modifier in in\_vim9script().  
Files: src/vim9script.c

Patch 8.2.2514 (after 8.2.2511)

Problem: Vim9: build error in tiny version.  
Solution: Add #ifdef.  
Files: src/ex\_docmd.c

Patch 8.2.2515

Problem: Memory access error when truncating an empty message.  
Solution: Check for an empty string. (Dominique Pellé, closes #7841)  
Files: src/message.c, src/message\_test.c

Patch 8.2.2516

Problem: Test failure on s390. (analyses by James McCoy)  
Solution: Only set the try\_finally label when not skipping.  
Files: src/vim9compile.c

Patch 8.2.2517

Problem: Vim9: fix for s390 not tested on other systems.  
Solution: Add a test.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.2518

Problem: **'listchars'** should be window-local.  
Solution: Make **'listchars'** global-local. (Yegappan Lakshmanan, Marco Hinz, closes #5206, closes #7850)  
Files: runtime/doc/options.txt, src/buffer.c, src/charset.c, src/drawline.c, src/drawscreen.c, src/evalfunc.c, src/globals.h, src/indent.c, src/message.c, src/misc1.c, src/option.c, src/option.h, src/optiondefs.h, src/optionstr.c, src/proto/screen.pro, src/screen.c, src/structs.h, src/testdir/test\_listchars.vim, src/testdir/test\_listlbr.vim

Patch 8.2.2519

Problem: Vim9: no reason to keep strange Vi behavior.  
Solution: ":3" and ":3|" both go to line 3. ":|" does not print the line. (closes #7840)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2520

Problem: Missing tests for **'listchars'**.  
Solution: Add a few more checks. (Yegappan Lakshmanan, closes #7854)  
Files: src/testdir/test\_listchars.vim

Patch 8.2.2521

Problem: Some compilers can't handle pointer initialization. (John Marriott)  
Solution: Use a local struct and assign it afterwards.  
Files: src/screen.c

Patch 8.2.2522

Problem: Beancount filetype not recognized.

Solution: Add a detection rule. (Brian Ryall, closes #7859)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.2523

Problem: Svelte filetype not recognized.  
Solution: Add a detection rule. (Brian Ryall, closes #7858)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.2524

Problem: Cannot change the characters displayed in the foldcolumn.  
Solution: Add fields to '**fillchars**'. (Yegappan Lakshmanan, Matthieu Coudron, closes #7860)  
Files: runtime/doc/options.txt, src/globals.h, src/mouse.c, src/screen.c, src/testdir/test\_display.vim

#### Patch 8.2.2525

Problem: Vim9: only local variables checked for a name.  
Solution: Also check arguments and script variables. (closes #7838)  
Files: src/vim9compile.c, src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2526 (after 8.2.2525)

Problem: Build failure.  
Solution: Change lookup\_scriptvar() arguments.  
Files: src/evalvars.c, src/proto/evalvars.pro

#### Patch 8.2.2527

Problem: Vim9: lambda return type is not determined at script level.  
Solution: Compile the lambda to get the return type. (closes #7843)  
Files: src/eval.c, src/vim.h, src/vim9.h, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2528

Problem: Vim9: crash when compiling lambda fails.  
Solution: Bail out after compilation fails. (closes #7862)  
Files: src/eval.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2529

Problem: Vim9: Not possible to use legacy and Vim9 script in one file.  
Solution: Vim9: allow for "if false" before :vim9script. (closes #7851)  
Files: runtime/doc/vim9.txt, src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2530

Problem: Vim9: not enough testing for profiling.  
Solution: Add a test with nested functions and a lambda. Fix profiling for calling a compiled function.  
Files: src/profiler.c, src/proto/profiler.pro, src/userfunc.c, src/vim9execute.c, src/testdir/test\_profile.vim

#### Patch 8.2.2531

Problem: Vim9: the :k command is obscure.  
Solution: Disallow using :k, can use :mark instead. (closes #7874)  
Files: runtime/doc/vim9.txt, src/ex\_docmd.c, src/vim9script.c,

src/vim9compile.c, src/ex\_cmds.h, src/testdir/test\_vim9\_script.vim

Patch 8.2.2532

Problem: Vim9: confusing error if :k is used with a range.

Solution: Give an error about the range. (issue #7874)

Files: src/vim9script.c, src/vim9compile.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.2533

Problem: Vim9: cannot use a range with :unlet.

Solution: Implement ISN\_UNLETRANGE.

Files: src/errors.h, src/eval.c, src/evalvars.c, src/list.c,  
src/proto/evalvars.pro, src/proto/list.pro, src/vim9.h,  
src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.2534

Problem: Missing test coverage.

Solution: Improve test coverage for completion with different encodings,  
mapset(), and term function failures. (Dominique Pellé,  
closes #7877)

Files: src/testdir/test\_edit.vim, src/testdir/test\_maparg.vim,  
src/testdir/test\_terminal3.vim

Patch 8.2.2535

Problem: MS-Windows: cannot run all vim9 tests.

Solution: Make test\_vim9 target work.

Files: src/Make\_mvc.mak

Patch 8.2.2536

Problem: Coverity complains about unchecked return value.

Solution: Add (void).

Files: src/userfunc.c

Patch 8.2.2537

Problem: Vim9: crash when map() fails.

Solution: Clear typval before using it. (closes #7884)

Files: src/list.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2538

Problem: Crash when using Python list iterator.

Solution: Increment the list reference count. (closes #7886)

Files: src/if\_py\_both.h, src/testdir/test\_python3.vim

Patch 8.2.2539

Problem: Vim9: return from finally block causes a hang.

Solution: Store both the finally and endtry indexes. (closes #7885)

Files: src/vim9execute.c, src/vim9compile.c, src/vim9.h,  
src/testdir/test\_vim9\_script.vim,

Patch 8.2.2540

Problem: Vim9: no error for using script var name for argument.

Solution: Check for this error. (closes #7868)

Files: src/userfunc.c, src/vim9compile.c, src/proto/vim9compile.pro,

src/testdir/test\_vim9\_func.vim

Patch 8.2.2541

Problem: Popup\_create() does not allow boolean for "cursorline".  
Solution: Use dict\_get\_bool(). (issue #7869)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim

Patch 8.2.2542

Problem: Highlight of char beyond line end is not correct. (Chuan Wei Foo)  
Solution: Fix counting NUL as one cell. Draw one more character if the EOL is part of the match. (closes #7883)  
Files: src/match.c, src/testdir/test\_search.vim, src/testdir/dumps/Test\_hlsearch\_1.dump, src/testdir/dumps/Test\_hlsearch\_2.dump

Patch 8.2.2543

Problem: Vim9: a return inside try/catch does not restore exception state properly.  
Solution: When there is no ":finally" jump to ":endtry". (closes #7882)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2544

Problem: Vim9: error for argument when checking for lambda.  
Solution: Respect the skip flag. (closes #7887)  
Files: src/userfunc.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2545

Problem: Errors and crash when terminal window is zero height. (Leonid V. Fedorenchik)  
Solution: Do not resize when width or height is zero. (closes #7890)  
Files: src/terminal.c, src/testdir/test\_terminal.vim

Patch 8.2.2546

Problem: Typo in mouse key name.  
Solution: Fix the typo. (issue #4725)  
Files: src/misc2.c

Patch 8.2.2547

Problem: "%" command not accurate for big files.  
Solution: Make it more accurate for files up to 21M lines. (Dominique Pellé, closes #7889)  
Files: src/normal.c

Patch 8.2.2548

Problem: May get stuck in the cmdline window using :normal.  
Solution: Have nv\_esc() return K\_IGNORE.  
Files: src/normal.c

Patch 8.2.2549

Problem: Crash after using "g:" in a for loop.  
Solution: Increment the reference count. (closes #7892)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2550

Problem: Signal stack size is wrong with latest glibc 2.34.  
Solution: Use `sysconf(_SC_SIGSTKSZ)` if available. (Zdenek Dohnal, closes #7895)  
Files: `src/config.h.in`, `src/configure.ac`, `src/os_unix.c`,  
`src/auto/configure`

#### Patch 8.2.2551

Problem: MS-Windows: colors test file is not installed.  
Solution: Also copy `runtime/colors/tools`. (Ken Takata, closes #7902)  
Files: `nsis/gvim.nsi`

#### Patch 8.2.2552

Problem: Vim9: no reason to consider "`{{{{{{{{}}`" a command.  
Solution: Just use "`{`". (issue #7904)  
Files: `src/ex_cmds.h`

#### Patch 8.2.2553

Problem: Vim9: Cannot put "`|`" after "`{`".  
Solution: Add the `EX_TRLBAR` flag. (issue #7904)  
Files: `src/ex_cmds.h`, `src/ex_eval.c`

#### Patch 8.2.2554

Problem: Vim9: exporting a final is not tested.  
Solution: Add a test.  
Files: `src/testdir/test_vim9_script.vim`

#### Patch 8.2.2555

Problem: Vim9: missing test for 8.2.2553.  
Solution: Add a simple test.  
Files: `src/testdir/test_vim9_script.vim`

#### Patch 8.2.2556

Problem: Vim9: `:import` with "`as`" not fully supported.  
Solution: Implement "`as`" for more cases.  
Files: `src/vim9script.c`, `src/testdir/test_vim9_script.vim`

#### Patch 8.2.2557

Problem: Compiler warning for shadowed variable.  
Solution: Declare "`p`" only once.  
Files: `src/vim9script.c`

#### Patch 8.2.2558

Problem: No error if a lambda argument shadows a variable.  
Solution: Check that the argument name shadows a local, argument or script variable. (closes #7898)  
Files: `src/vim9compile.c`, `src/proto/vim9compile.pro`, `src/userfunc.c`,  
`src/vim9script.c`, `src/errors.h`, `src/testdir/test_vim9_func.vim`,  
`src/testdir/test_vim9_expr.vim`, `src/testdir/test_vim9_script.vim`

#### Patch 8.2.2559

Problem: MS-Windows: `guifont` test fails on Windows XP.  
Solution: Check `windowsversion()`.  
Files: `src/testdir/test_gui.vim`

Patch 8.2.2560

Problem: Setting **'winminheight'** does not take tabline into account.  
Solution: Subtract the tabline from the available height. (closes #7899)  
Files: src/window.c, src/testdir/test\_options.vim

Patch 8.2.2561

Problem: Not all textprop code is covered by tests.  
Solution: Add a few more test cases. (Dominique Pellé, closes #7908)  
Files: src/testdir/test\_textprop.vim

Patch 8.2.2562

Problem: GUI: star register changed when **'clipboard'** is "unnamedplus". (Ingo Karkat)  
Solution: Do not change the star register when **'clipboard'** contains "unnamedplus" and not "unnamed". (closes #1516)  
Files: src/register.c

Patch 8.2.2563

Problem: Cannot use multibyte characters for folding in **'fillchars'**.  
Solution: Port pull request 11568 to Vim. (Yegappan Lakshmanan, closes #7924)  
Files: src/drawline.c, src/drawscreen.c, src/macros.h, src/proto/screen.pro, src/screen.c, src/testdir/test\_fold.vim, src/testdir/test\_profile.vim

Patch 8.2.2564

Problem: Focus events end Insert mode if **'esckey'** is not set.  
Solution: Do not enable focus events when **'esckey'** is off. (closes #7926)  
Files: src/term.c

Patch 8.2.2565

Problem: Vim9: "..=" not always recognized.  
Solution: Do not consider "..=" to be string concatenation. (closes #7905)  
Files: src/eval.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2566

Problem: Vim9: Function name is not recognized.  
Solution: Change lookup\_scriptvar() to also find function names. (closes #7770)  
Files: src/vim9script.c, src/evalvars.c, src/proto/evalvars.pro, src/ex\_docmd.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2567

Problem: Vim9: no error if variable is defined for existing function.  
Solution: Check if name isn't already in use. (closes #7897)  
Files: src/evalvars.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2568

Problem: Second time a preview popup is opened highlight is not set. (Gabriel Dupras)  
Solution: Apply **'previewpopup'** after getting the file. (closes #7928)  
Files: src/tag.c, src/testdir/test\_popupwin.vim, src/testdir/dumps/Test\_popupwin\_previewpopup\_2.dump, src/testdir/dumps/Test\_popupwin\_previewpopup\_3.dump,

src/testdir/dumps/Test\_popupwin\_previewpopup\_4.dump,  
src/testdir/dumps/Test\_popupwin\_previewpopup\_5.dump

Patch 8.2.2569

Problem: **'fillchars'** "stl" and "stlnc" items must be single byte.  
Solution: Accept multi-byte characters. (Christian Wellenbrock, Yegappan Lakshmanan, closes #7927)  
Files: runtime/doc/options.txt, src/buffer.c, src/macros.h, src/screen.c,  
src/testdir/test\_fold.vim, src/testdir/test\_statusline.vim

Patch 8.2.2570

Problem: Tests fail when run as root.  
Solution: Add a comment mentioning the expected failure. (issue #7919)  
Files: src/testdir/test\_edit.vim, src/testdir/test\_excmd.vim,  
src/testdir/test\_help.vim, src/testdir/test\_writefile.vim

Patch 8.2.2571

Problem: Test may leave file behind.  
Solution: Delete the temporary file. Don't profile in the running Vim instance.  
Files: src/testdir/test\_quickfix.vim, src/testdir/test\_profile.vim

Patch 8.2.2572

Problem: Vim9: crash when getting the types for a legacy function.  
Solution: Initialize the type list growarray. (closes #7929)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2573

Problem: Vim9: using invalid pointer for error message.  
Solution: Use the right pointer. (closes #7921)  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2574

Problem: Vim9: crash when calling partial with wrong function.  
Solution: Check argument types of called function. (closes #7912)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2575

Problem: Vim9: a function name with "->" in the next line doesn't work.  
Solution: Recognize a function name by itself. (closes #7770)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2576

Problem: Vim9: defining a :func function checks for white space after a comma in the arguments.  
Solution: Only check for white space in a :def function. (closes #7930)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2577

Problem: Compiler warning for type conversion.  
Solution: Add a typecast. (Mike Williams)  
Files: src/drawline.c

Patch 8.2.2578

Problem: Lua cannot handle a passed in lambda.  
Solution: Handle VAR\_PARTIAL. (Prabir Shrestha, closes #7937, closes #7936)  
Files: src/if\_lua.c, src/testdir/test\_lua.vim

#### Patch 8.2.2579

Problem: Vim9: crash in garbagecollect after for loop.  
Solution: Do not set a reference in script item when the name was cleared.  
(closes #7935)  
Files: src/evalvars.c

#### Patch 8.2.2580

Problem: Vim9: checking vararg type is wrong when function is auto-loaded.  
Solution: Use the member type. (closes #7933)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2581

Problem: Vim9: sourcing Vim9 script triggers a redraw.  
Solution: Do not let setting/restoring **'cptions'** cause a redraw.  
(closes #7920)  
Files: src/vim.h, src/option.c, src/optionstr.c, src/scriptfile.c,  
src/vim9script.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/dumps/Test\_vim9\_no\_redraw.dump

#### Patch 8.2.2582 (after 8.2.2581)

Problem: Vim9: screendump test fails on MS-Windows.  
Solution: Use :function instead of :def.  
Files: src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2583

Problem: Vim9: cannot compare result of getenv() with null.  
Solution: Make the return type of getenv() "any". (closes #7943)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.2584

Problem: Vim9: type error for assigning the result of list concatenation to a list.  
Solution: Do not consider concatenation result in a constant. (closes #7942)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2585

Problem: Vim9: illegal memory access.  
Solution: Check byte right after "null", not one more.  
Files: src/vim9compile.c

#### Patch 8.2.2586

Problem: Process id may be invalid.  
Solution: Use sysinfo.uptime to check for recent reboot. (suggested by Hugo van der Sanden, closes #7947)  
Files: src/configure.ac, src/auto/configure, src/config.h.in,  
src/memline.c, src/testing.c, src/globals.h,  
src/testdir/test\_recover.vim

#### Patch 8.2.2587 (after 8.2.2586)

Problem: Recover test fails on FreeBSD.

Solution: Check for Linux.  
Files: src/testdir/check.vim, src/testdir/test\_recover.vim

Patch 8.2.2588 (after 8.2.2586)  
Problem: Build failure with tiny features.  
Solution: Add #ifdef. Run recover test separately.  
Files: src/memline.c, src/testdir/Make\_all.mak, src/testdir/test\_alot.vim

Patch 8.2.2589 (after 8.2.2586)  
Problem: Recover test hangs in the GUI.  
Solution: Add g:skipped\_reason to skip a \_nocatch\_ test.  
Files: src/testdir/runtest.vim, src/testdir/test\_recover.vim

Patch 8.2.2590  
Problem: Vim9: default argument value may cause internal error.  
Solution: Hide later function arguments when compiling the expression.  
(closes #7948)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2591  
Problem: Poke files are not recognized.  
Solution: Add a filetype entry. (Matt Ihlenfield)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.2592  
Problem: Code coverage could be improved.  
Solution: Add a few more tests. (Dominique Pellé, closes #7957)  
Files: src/testdir/test\_fileformat.vim, src/testdir/test\_normal.vim,  
src/testdir/test\_sleep.vim, src/testdir/test\_textformat.vim,  
src/testdir/test\_viminfo.vim

Patch 8.2.2593  
Problem: List of distributed files is incomplete.  
Solution: Add a file and rename another.  
Files: Filelist

Patch 8.2.2594  
Problem: Alternate buffer added to session file even when it's hidden.  
Solution: Check the **'buflisted'** option. (closes #7951)  
Files: src/session.c, src/testdir/test\_mksession.vim

Patch 8.2.2595  
Problem: Setting **'winminheight'** may cause **'lines'** to change.  
Solution: Also take minimal height of other tabpages into account. (#7899)  
Files: src/window.c, src/testdir/test\_options.vim

Patch 8.2.2596  
Problem: :doautocmd may confuse scripts listening to WinEnter.  
Solution: Do the current buffer last. (closes #7958)  
Files: src/autocmd.c, src/testdir/test\_autocmd.vim

Patch 8.2.2597  
Problem: Vim9: "import \* as" does not work at script level.  
Solution: Implement using an imported namespace.

Files: src/vim.h, src/eval.c, src/evalvars.c, src/proto/evalvars.pro,  
src/vim9execute.c, src/errors.h, src/vim9script.c,  
src/proto/vim9script.pro, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2598

Problem: Vim9: :open does not need to be supported.  
Solution: Do not support :open in Vim9 script.  
Files: src/ex\_docmd.c, src/vim9script.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2599 (after 8.2.2597)

Problem: Build failure.  
Solution: Add missing change.  
Files: src/vim9compile.c

#### Patch 8.2.2600

Problem: Vim9: crash when putting an unknown type in a dictionary.  
(Yegappan Lakshmanan)  
Solution: Handle a NULL type pointer.  
Files: src/vim9type.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.2601

Problem: Memory usage test often fails on FreeBSD.  
Solution: Increase multiplier for upper limit.  
Files: src/testdir/test\_memory\_usage.vim

#### Patch 8.2.2602

Problem: Vim9: continue doesn't work if :while is very first command.  
(Yegappan Lakshmanan)  
Solution: Add one to the continue instruction index.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2603

Problem: Vim9: no effect if user command is also a function.  
Solution: Check for paren following. (closes #7960)  
Files: src/evalvars.c, src/proto/evalvars.pro, src/ex\_docmd.c,  
src/proto/ex\_docmd.pro, src/vim9compile.c,  
src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2604

Problem: GUI-specific command line arguments not tested.  
Solution: Add tests for several arguments. (Dominique Pellé, closes #7962)  
Files: src/testdir/test\_startup.vim

#### Patch 8.2.2605

Problem: Vim9: string index and slice does not include composing chars.  
Solution: Include composing characters. (issue #6563)  
Files: runtime/doc/vim9.txt, src/vim9execute.c,  
src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2606

Problem: strchars() defaults to counting composing characters.  
Solution: Add strcharlen() which ignores composing characters.  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c,  
src/testdir/test\_utf8.vim

Patch 8.2.2607

Problem: strcharpart() cannot include composing characters.  
Solution: Add the `{skipcc}` argument.  
Files: runtime/doc/eval.txt, src/evalfunc.c,  
src/testdir/test\_expr\_utf8.vim

Patch 8.2.2608

Problem: Character input not fully tested.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #7963)  
Files: src/testdir/test\_functions.vim, src/testdir/test\_messages.vim,  
src/testdir/test\_paste.vim, src/testdir/test\_registers.vim,  
src/testdir/test\_undo.vim

Patch 8.2.2609

Problem: Test disabled on MS-Windows even though it should work.  
Solution: Restore the condition for skipping the test. (Ken Takata,  
closes #7970)  
Files: src/testdir/test\_startup.vim

Patch 8.2.2610

Problem: Mouse click test fails when using remote connection.  
Solution: Use a larger `'mousetime'`. (Dominique Pellé, closes #7968)  
Files: src/testdir/test\_selectmode.vim

Patch 8.2.2611

Problem: Conditions for startup tests are not exactly right.  
Solution: Check for type of GUI instead of MS-Windows. (Ozaki Kiichi,  
closes #7976)  
Files: src/main.c, src/testdir/check.vim, src/testdir/test\_startup.vim

Patch 8.2.2612

Problem: col('.') may get outdated column value.  
Solution: Add a [note](#) to the help how to make this work and add a test for  
it. (closes #7971)  
Files: runtime/doc/map.txt, src/testdir/test\_mapping.vim

Patch 8.2.2613 (after 8.2.2612)

Problem: New test throws exception.  
Solution: Adjust the function cleanup.  
Files: src/testdir/test\_mapping.vim

Patch 8.2.2614

Problem: Vim9: function is deleted while executing.  
Solution: increment the call count, when more than zero do not delete the  
function but mark it as dead. (closes #7977)  
Files: src/vim9execute.c, src/userfunc.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.2615 (after 8.2.2614)

Problem: Test is sourcing the wrong file.  
Solution: Correct the file name.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.2616

Problem: Vim9: if 'cpo' is changed in Vim9 script it may be restored.  
Solution: Apply the changes to 'cpo' to the restored value.  
Files: runtime/doc/vim9.txt, src/scriptfile.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.2617

Problem: Vim9: script variable in a block scope not found by a nested function.  
Solution: Copy the block scope IDs before compiling the function.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.2618

Problem: Vim9: cannot use a normal list name to store function refs.  
Solution: Allow a lower case name if it is indexed.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2619

Problem: Vim9: no test for return type of lambda.  
Solution: Add a test.  
Files: src/testdir/test\_vim9\_func.vim

Patch 8.2.2620

Problem: Vim9: Using #{ for a dictionary gives strange errors.  
Solution: Give an error when using #{ for a comment after a command.  
Files: src/vim9compile.c, src/vim9script.c, src/proto/vim9script.pro,  
src/errors.h, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.2621

Problem: typval2type() cannot handle recursive structures.  
Solution: Use copyID. (closes #7979)  
Files: src/list.c, src/vim9script.c, src/vim9type.c,  
src/proto/vim9type.pro, src/testdir/test\_vimscript.vim

Patch 8.2.2622

Problem: GTK: error when starting up and -geometry is given. (Dominique Pellé)  
Solution: Use another function to get the monitor if the window has not been created yet. (closes #7978)  
Files: src/gui\_gtk\_x11.c, src/proto/gui\_gtk\_x11.pro, src/gui\_beval.c,  
src/gui\_xim.c

Patch 8.2.2623

Problem: Some tests fail when run as root.  
Solution: Use CheckNotRoot.  
Files: src/testdir/test\_edit.vim, src/testdir/test\_excmd.vim,  
src/testdir/test\_help.vim, src/testdir/test\_writefile.vim

Patch 8.2.2624

Problem: Atom files not recognized.  
Solution: Recognize .atom as XML. (Kivin Locke, closes #7986)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.2625

Problem: Rss files not recognized.  
Solution: Recognize .rss as XML. (Kivin Locke, closes #7987)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.2626

Problem: GTK3: error when starting up and -geometry is given. (Dominique Pellé)  
Solution: Use another function to get the monitor if the window has not been created yet. (closes #7978)  
Files: src/gui\_gtk\_x11.c

Patch 8.2.2627

Problem: No need to check for BSD after checking for not root.  
Solution: Remove CheckNotBSD. (Ozaki Kiichi, closes #7989)  
Files: src/testdir/test\_excmd.vim, src/testdir/test\_help.vim, src/testdir/check.vim

Patch 8.2.2628

Problem: Vim9: #{ can still be used at the script level.  
Solution: Give an error for #{ like in a :def function.  
Files: src/eval.c, src/ex\_docmd.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2629

Problem: Vim9: error for #{{ is not desired.  
Solution: Adjust the checks. (closes #7990)  
Files: src/errors.h, src/vim9script.c, src/ex\_docmd.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2630

Problem: Hard to see where a test gets stuck.  
Solution: Print the executed test function. (Dominique Pellé, closes #7975)  
Files: src/testdir/Makefile

Patch 8.2.2631

Problem: Commands from winrestcmd() do not always work properly. (Leonid V. Fedorenchik)  
Solution: Repeat the size commands twice. (closes #7988)  
Files: src/evalwindow.c, src/testdir/test\_window\_cmd.vim

Patch 8.2.2632

Problem: Not all command line arguments are tested.  
Solution: Add tests for -D and -serverlist. (Dominique Pellé, closes #7992)  
Files: src/testdir/test\_clientserver.vim, src/testdir/test\_startup.vim

Patch 8.2.2633

Problem: Multi-byte 'fillchars' for folding do not show properly.  
Solution: Handle multi-byte characters correctly. (Yegappan Lakshmanan, closes #7983, closes #7955)  
Files: src/screen.c, src/testdir/test\_fold.vim

Patch 8.2.2634

Problem: 'tagfunc' does not indicate using a pattern.

Solution: Add the "r" flag. (Andy Massimino, closes #7982)  
Files: runtime/doc/tagsrch.txt, src/tag.c, src/testdir/test\_tagfunc.vim

#### Patch 8.2.2635

Problem: Vim9: cannot define an inline function.  
Solution: Make an inline function mostly work.  
Files: src/userfunc.c, src/errors.h, src/vim9compile.c, src/misc2.c,  
src/proto/vim9compile.pro, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2636 (after 8.2.2635)

Problem: Memory leak when compiling inline function.  
Solution: Free the prefetched line.  
Files: src/userfunc.c, src/vim9compile.c, src/structs.h, src/globals.h,  
src/eval.c

#### Patch 8.2.2637

Problem: prop\_remove() causes a redraw even when nothing changed.  
Solution: Only redraw if a property was removed. (Dominique Pellé)  
Files: src/textprop.c

#### Patch 8.2.2638

Problem: Cannot write a message to the terminal from the GUI.  
Solution: Add :echoconsole and use it in the test runner. (issue #7975)  
Files: runtime/doc/eval.txt, runtime/doc/index.txt, src/ex\_cmds.h,  
src/ex\_cmdidxs.h, src/eval.c, src/ui.c, src/proto/ui.pro,  
src/term.c, src/testdir/runtest.vim

#### Patch 8.2.2639 (after 8.2.2638)

Problem: Build failure when fsync() is not available.  
Solution: Add #ifdef.  
Files: src/ui.c

#### Patch 8.2.2640

Problem: screenstring() returns non-existing composing characters.  
Solution: Only use composing characters if there is a base character.  
Files: src/evalfunc.c, src/testdir/test\_listchars.vim

#### Patch 8.2.2641

Problem: Display test fails because of lacking redraw.  
Solution: Add a redraw command.  
Files: src/testdir/test\_display.vim

#### Patch 8.2.2642

Problem: Vim9: no clear error for wrong inline function.  
Solution: Check for something following the "{".  
Files: src/userfunc.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2643

Problem: Various code not covered by tests.  
Solution: Add a few more test. (Yegappan Lakshmanan, closes #7995)  
Files: src/testdir/test\_edit.vim, src/testdir/test\_functions.vim,  
src/testdir/test\_mapping.vim, src/testdir/test\_termcodes.vim,  
src/testdir/test\_undo.vim

Patch 8.2.2644

Problem: prop\_clear() causes a screen update even when nothing changed.  
Solution: Only redraw when a property was cleared. (Dominique Pellé)  
Files: src/textprop.c

Patch 8.2.2645

Problem: Using inline function is not properly tested.  
Solution: Add test cases, esp. for errors. Minor code improvements.  
Files: src/userfunc.c, src/errors.h, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.2646

Problem: Vim9: error for not using string doesn't mention argument.  
Solution: Add argument number.  
Files: src/filepath.c, src/typval.c, src/proto/typval.pro, src/errors.h,  
src/mbyte.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2647

Problem: Terminal test sometimes hangs.  
Solution: Wait for the shell to display a prompt.  
Files: src/testdir/test\_terminal.vim

Patch 8.2.2648

Problem: Terminal resize test sometimes hangs.  
Solution: Wait for the shell to display a prompt and other output.  
Files: src/testdir/test\_terminal2.vim

Patch 8.2.2649

Problem: Vim9: some wincmd arguments cause a white space error.  
Solution: Insert a space before the count. (closes #8001)  
Files: src/window.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2650

Problem: Vim9: command modifiers not handled in nested function.  
Solution: Keep function-local info in a structure and save it on the stack.  
Files: src/vim9execute.c, src/vim9.h, src/testdir/test\_vim9\_func.vim

Patch 8.2.2651

Problem: Vim9: restoring command modifiers happens after jump.  
Solution: Move the restore instruction to before the jump. (closes #8006)  
Also handle for and while.  
Files: src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.2652

Problem: Vim9: can use command modifier without an effect.  
Solution: Give an error for a misplaced command modifier. Fix error message  
number.  
Files: src/vim9compile.c, src/ex\_docmd.c, src/proto/ex\_docmd.pro,  
src/ex\_eval.c, src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.2653

Problem: Build failure.  
Solution: Add missing changes.  
Files: src/errors.h

#### Patch 8.2.2654

Problem: Vim9: getting a character from a string can be slow.  
Solution: Avoid a function call to get the character byte size. (#8000)  
Files: src/vim9execute.vim

#### Patch 8.2.2655

Problem: The `-w` command line argument doesn't work.  
Solution: Don't set `'window'` when set with the `-w` argument. (closes #8011)  
Files: src/term.c, src/testdir/test\_startup.vim

#### Patch 8.2.2656

Problem: Some command line arguments and regexp errors not tested.  
Solution: Add a few test cases. (Dominique Pellé, closes #8013)  
Files: src/testdir/test\_regexp\_latin.vim, src/testdir/test\_startup.vim

#### Patch 8.2.2657

Problem: Vim9: error message for declaring variable in for loop.  
Solution: Clear variables when entering block again. (closes #8012)  
Files: src/ex\_eval.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2658

Problem: `:for` cannot loop over a string.  
Solution: Accept a string argument and iterate over its characters.  
Files: runtime/doc/eval.txt, src/eval.c, src/vim9compile.c,  
src/vim9execute.c, src/errors.h, src/testdir/test\_vimscript.vim,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2659 (after 8.2.2658)

Problem: Eval test fails because for loop on string works.  
Solution: Check looping over function reference fails.  
Files: src/testdir/test\_eval\_stuff.vim

#### Patch 8.2.2660

Problem: Vim9: no error for declaration with trailing text.  
Solution: Give an error. (closes #8014)  
Files: src/evalvars.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2661

Problem: Leaking memory when looping over a string.  
Solution: Free the memory.  
Files: src/eval.c

#### Patch 8.2.2662

Problem: There is no way to avoid some escape sequences.  
Solution: Suppress escape sequences when the `--not-a-term` argument is used.  
(Gary Johnson)  
Files: src/main.c, src/os\_unix.c, src/testdir/test\_startup.vim

#### Patch 8.2.2663

Problem: Vim9: leaking memory when inline function has an error.  
Solution: Free the partially allocated function.  
Files: src/userfunc.c

#### Patch 8.2.2664

Problem: Vim9: not enough function arguments checked for string.  
Solution: Check in balloon functions. Refactor function arguments.  
Files: src/typval.c, src/proto/typval.pro, src/filepath.c,  
src/evalfunc.c, src/mbyte.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.2665 (after 8.2.2664)

Problem: Test failures.  
Solution: Check more specific feature. Add missing change.  
Files: src/testdir/test\_vim9\_builtin.vim, src/evalbuffer.c

#### Patch 8.2.2666

Problem: Vim9: not enough function arguments checked for string.  
Solution: Check in ch\_logfile(), char2nr() and others.  
Files: src/channel.c, src/evalfunc.c, src/filepath.c, src/eval.c,  
src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.2667

Problem: prop\_find() cannot find item matching both id and type.  
Solution: Add the "both" argument. (Naohiro Ono, closes #8019)  
Files: runtime/doc/textprop.txt, src/testdir/test\_textprop.vim,  
src/textprop.c

#### Patch 8.2.2668

Problem: Vim9: omitting "call" for "confirm()" does not give an error.  
Solution: Do not recognize a modifier followed by "(".  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.2669

Problem: Command line completion does not work after "vim9".  
Solution: Include the "9". (Naohiro Ono, closes #8025)  
Files: src/cmdexpand.c, src/ex\_docmd.c, src/testdir/test\_cmdline.vim

#### Patch 8.2.2670

Problem: Vim9: error for append(0, text).  
Solution: Check for negative number. (closes #8022)  
Files: src/typval.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.2671 (after 8.2.2670)

Problem: Error for line number in legacy script.  
Solution: Check for number type.  
Files: src/typval.c

#### Patch 8.2.2672

Problem: Vim9: cannot use :lockvar and :unlockvar in compiled script.  
Solution: Implement locking support.  
Files: src/vim9compile.c, src/errors.h, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2673

Problem: Vim9: script-local funcref can have lower case name.

Solution: Require an upper case name.  
Files: src/evalvars.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2674

Problem: Motif: cancelling the font dialog resets the font.  
Solution: When no font is selected to not change the font. (closes #7825, closes #8035) Fix compiler warnings.  
Files: src/gui\_x11.c, src/gui\_motif.c

#### Patch 8.2.2675

Problem: Directory change in a terminal window shell is not followed.  
Solution: Add the **'autoshelldir'** option. (closes #6290)  
Files: runtime/doc/options.txt, runtime/doc/quickref.txt, runtime/optwin.vim, src/charset.c, src/feature.h, src/option.h, src/optiondefs.h, src/terminal.c, src/testdir/check.vim, src/testdir/test\_terminal3.vim

#### Patch 8.2.2676

Problem: Missing error message.  
Solution: Add new error message.  
Files: src/errors.h

#### Patch 8.2.2677

Problem: Vim9: cannot use only some of the default arguments.  
Solution: Use v:none to use default argument value. Remove uf\_def\_arg\_idx[], use JUMP\_IF\_ARG\_SET. (closes #6504)  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/vim9execute.c, src/userfunc.c, src/structs.h, src/vim9.h, src/testdir/test\_vim9\_disassemble.vim, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2678

Problem: Test for **'autoshelldir'** does not reset the option.  
Solution: Reset the option after testing.  
Files: src/testdir/test\_terminal3.vim

#### Patch 8.2.2679

Problem: Winbar drawn over status line for non-current window with winbar if frame is zero height. (Leonid V. Fedorenchik)  
Solution: Do not draw the window if the frame height is zero. (closes #8037)  
Files: src/drawscreen.c, src/testdir/test\_winbar.vim, src/testdir/dumps/Test\_winbar\_not\_visible.dump

#### Patch 8.2.2680

Problem: Vim9: problem defining a script variable from legacy function.  
Solution: Check if the script is Vim9, not the current syntax. (closes #8032)  
Files: src/vim9script.c, src/proto/vim9script.pro, src/evalvars.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2681

Problem: Vim9: test fails for redeclaring script variable.  
Solution: It's OK to assign to an existing script variable in legacy.  
Files: src/evalvars.c

Patch 8.2.2682

Problem: Vim9: cannot find Name.Func from "import \* as Name". (Alexander Goussas)

Solution: When no variable found try finding a function. (closes #8045)  
Check that the function was exported.

Files: src/vim9compile.c, src/vim9script.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.2683

Problem: Build failure without the +eval feature.

Solution: Add #ifdef.

Files: src/vim9script.c

Patch 8.2.2684

Problem: Not enough folding code is tested.

Solution: Add more test cases. (Yegappan Lakshmanan, closes #8046)

Files: src/testdir/test\_fold.vim, src/testdir/test\_mksession.vim,  
src/testdir/test\_source.vim

Patch 8.2.2685 (after 8.2.2152)

Problem: Custom statusline not drawn correctly with WinBar.

Solution: Also adjust the column for the custom status line. (Yee Cheng Chin, closes #8047)

Files: src/drawscreen.c, src/proto/drawscreen.pro, src/screen.c,  
src/testdir/dumps/Test\_winbar\_not\_visible\_custom\_statusline.dump,  
src/testdir/test\_winbar.vim

Patch 8.2.2686

Problem: Status line is not updated when going to cmdline mode.

Solution: Redraw status lines if '**statusline**' is set and going to status line mode. (based on patch from Justin M. Keyes et al., closes #8044)

Files: src/ex\_getln.c, src/testdir/test\_statusline.vim,  
src/testdir/dumps/Test\_statusline\_mode\_1.dump,  
src/testdir/dumps/Test\_statusline\_mode\_2.dump

Patch 8.2.2687

Problem: Vim9: cannot use "const" for global variable in :def function.

Solution: Do allow using :const for a global variable. (closes #8030)

Files: src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.2688

Problem: Vim9: crash when using s: for script variable.

Solution: Pass the end pointer. (closes #8045)

Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2689

Problem: Tiny build fails.

Solution: Add #ifdef around use of p\_stl.

Files: src/ex\_getln.c

Patch 8.2.2690

Problem: PowerShell files are not recognized.  
Solution: Recognize several PowerShell extension. (Heath Stewart, closes #8051)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.2691

Problem: Autoconf may mess up compiler flags.  
Solution: Handle removing FORTIFY\_SOURCE a bit better. (Vladimir Lomov, closes #8049)  
Files: src/configure.ac, src/auto/configure

#### Patch 8.2.2692

Problem: Vim9: locked script variable can be changed.  
Solution: Check for locked value. (closes #8031)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2693

Problem: Vim9: locked script variable can be changed.  
Solution: Check legacy script variable for being locked. (issue #8031)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2694

Problem: When **'matchpairs'** is empty every character beeps. (Marco Hinz)  
Solution: Bail out when no character in **'matchpairs'** was found. (closes #8053) Add assert\_nobeep().  
Files: runtime/doc/testing.txt, runtime/doc/eval.txt, src/search.c, src/testing.c, src/proto/testing.pro, src/evalfunc.c, src/testdir/test\_textformat.vim

#### Patch 8.2.2695

Problem: Cursor position reset with nested autocommands.  
Solution: Only check and reset line numbers for not nested autocommands. (closes #5820)  
Files: src/autocmd.c, src/testdir/test\_terminal.vim

#### Patch 8.2.2696

Problem: Lua test fails with Lua 5.4.3 and later.  
Solution: Check for different error messages. (Yegappan Lakshmanan, closes #8050)  
Files: src/testdir/test\_lua.vim

#### Patch 8.2.2697

Problem: Function list test fails.  
Solution: Add missing function. (Yegappan Lakshmanan)  
Files: runtime/doc/usr\_41.txt

#### Patch 8.2.2698 (after 8.2.2696)

Problem: Lua test fails on MS-Windows.  
Solution: Fall back to old method if "lua -v" doesn't work.  
Files: src/testdir/test\_lua.vim

#### Patch 8.2.2699

Problem: Lua test fails.  
Solution: Fix condition. (Yegappan Lakshmanan, closes #8060)

Files: src/testdir/test\_lua.vim

Patch 8.2.2700

Problem: Nested autocmd test fails sometimes.

Solution: Wait for the job to finish.

Files: src/testdir/test\_terminal.vim

Patch 8.2.2701

Problem: Order of removing FORTIFY\_SOURCE is wrong.

Solution: Use the more specific pattern first.

Files: src/configure.ac, src/auto/configure

Patch 8.2.2702

Problem: Compiler completion test fails when more scripts are added.

Solution: Add a more generic pattern.

Files: src/testdir/test\_compiler.vim

Patch 8.2.2703

Problem: Vim9: memory leak when failing on locked variable.

Solution: Free the memory.

Files: src/vim9execute.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2704

Problem: Adding a lot of completions can be a bit slow.

Solution: Use fast\_breakcheck() instead of ui\_breakcheck() when adding a list of completions. (Ben Jackson, closes #8061)

Files: src/insexpand.c

Patch 8.2.2705

Problem: Vim9: misleading reported line number for wrong type.

Solution: Remember and use the line number at the start. (closes #8059)

Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2706

Problem: Vim9: wrong line number reported for boolean operator.

Solution: Use the line number before skipping over line break. (closes #8058)

Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2707 (after 8.2.2704)

Problem: Adding a lot of completions can still be a bit slow.

Solution: Add the check for CP\_FAST. (Ben Jackson)

Files: src/insexpand.c

Patch 8.2.2708

Problem: Test sometimes fails waiting for shell in terminal.

Solution: Use WaitForAssert() so we can see the actual job status. Use Run\_shell\_in\_terminal().

Files: src/testdir/term\_util.vim, src/testdir/test\_mksession.vim

Patch 8.2.2709

Problem: The GTK GUI has a gap next to the scrollbar.

Solution: Calculate the scrollbar padding for GTK. (closes #8027)

Files: src/gui\_gtk.c

Patch 8.2.2710

Problem: Vim9: not all tests cover script and :def function.  
Solution: Run tests in both if possible. Fix differences.  
Files: src/eval.c, src/vim9compile.c, src/vim9execute.c,  
src/testdir/vim9.vim, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2711

Problem: "gj" in a closed fold does not move out of the fold. (Marco Hinz)  
Solution: Add a check for being in a closed fold. (closes #8062)  
Files: src/normal.c, src/testdir/test\_fold.vim

Patch 8.2.2712

Problem: Memory leak when adding to a blob fails.  
Solution: Clear the second typval before returning.  
Files: src/eval.c

Patch 8.2.2713

Problem: Folding code not sufficiently tested.  
Solution: Add a few more test cases. (Yegappan Lakshmanan, closes #8064)  
Files: src/testdir/test\_fold.vim

Patch 8.2.2714

Problem: Filetype pattern ending in star is too far up.  
Solution: Move down to where patterns ending in star belong. (closes #8065)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.2715

Problem: Vim9: tests fail without the channel feature. (Dominique Pellé)  
Solution: Check for the channel feature. (closes #8063)  
Files: src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2716

Problem: The equivalent class regexp is missing some characters.  
Solution: Update the list of equivalent characters. (Dominique Pellé,  
closes #8029)  
Files: src/regexp\_bt.c, src/regexp\_nfa.c,  
src/testdir/test\_regexp\_utf8.vim

Patch 8.2.2717

Problem: GTK menu items don't show a tooltip.  
Solution: Add a callback to show the tooltip. (Leonid V. Fedorenchik,  
closes #8067, closes #7810)  
Files: src/gui\_gtk.c

Patch 8.2.2718

Problem: Vim9: no explicit test for using a global function without the g:  
prefix.  
Solution: Add a test case.  
Files: src/testdir/test\_vim9\_func.vim

Patch 8.2.2719

Problem: Vim9: appending to dict item doesn't work in a :def function.  
Solution: Implement assignment with operator on indexed item.

Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2720

Problem: GTK menu tooltip moves the cursor.

Solution: Position the cursor after displaying the tooltip. Do not show the tooltip when editing the command line.

Files: src/gui\_gtk.c

Patch 8.2.2721

Problem: Vim9: cannot have a linebreak inside a lambda.

Solution: Compile the expression before the arguments.

Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2722

Problem: Vim9: crash when using LHS with double index.

Solution: Handle lhs\_dest which is "dest\_expr". (closes #8068)  
Fix confusing error message for missing dict item.

Files: src/vim9compile.c, src/eval.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2723 (after 8.2.2722)

Problem: Assignment test fails.

Solution: Adjust error number.

Files: src/testdir/test\_let.vim

Patch 8.2.2724 (after 8.2.2722)

Problem: Vim9: concatenating to list in dict not tested.

Solution: Add a test. (issue #8068)

Files: src/testdir/test\_vim9\_assign.vim

Patch 8.2.2725

Problem: Vim9: message about compiling is wrong when using try/catch.

Solution: Store the compiling flag with the message. (closes #8071)

Files: src/ex\_docmd.c, src/ex\_eval.c, src/structs.h,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.2726

Problem: Confusing error message with white space before comma in the arguments of a function declaration.

Solution: Give a specific error message. (closes #2235)

Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2727 (after 8.2.2726)

Problem: Function test fails.

Solution: Adjust expected error number.

Files: src/testdir/test\_user\_func.vim

Patch 8.2.2728

Problem: Special key names don't work if 'isident' is cleared.

Solution: Add vim\_isNormalIDc() and use it for special key names.  
(closes #2389)

Files: src/charset.c, src/proto/charset.pro, src/misc2.c,  
src/testdir/test\_mapping.vim

Patch 8.2.2729

Problem: Vim9: wrong error message for referring to legacy script variable.  
Solution: Do allow referring to a variable in legacy script without "s:" if it exists at compile time. (closes #8076)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.2730

Problem: Coverity complains about not restoring character.  
Solution: Also restore the character in case of an error.  
Files: src/vim9compile.c

#### Patch 8.2.2731

Problem: Mac: SF symbols are not displayed properly.  
Solution: Add custom range to list of double-width characters. (Yee Cheng Chin, closes #8077)  
Files: src/mbyte.c

#### Patch 8.2.2732

Problem: Prompt for s///c in Ex mode can be wrong.  
Solution: Position the cursor before showing the prompt. (closes #8073)  
Files: src/ex\_cmds.c, src/testdir/test\_ex\_mode.vim

#### Patch 8.2.2733

Problem: Detecting Lua version is not reliable.  
Solution: Add "vim.lua\_version". (Ozaki Kiichi, closes #8080)  
Files: runtime/doc/if\_lua.txt, ci/if\_ver-1.vim, src/if\_lua.c, src/testdir/test\_lua.vim

#### Patch 8.2.2734

Problem: Vim9: cannot use legacy script-local var from :def function.  
Solution: Do not insist on using "s:" prefix. (closes #8076)  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2735

Problem: Vim9: function reference found with prefix, not without.  
Solution: Also find function reference without prefix.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2736

Problem: Vim9: for loop over string is a bit slow.  
Solution: Avoid using strlen().  
Files: src/vim9execute.c

#### Patch 8.2.2737

Problem: Status line not updated when local 'statusline' option set.  
Solution: Check the 'statusline' option of each window.  
Files: src/ex\_getln.c, src/testdir/test\_statusline.vim, src/testdir/dumps/Test\_statusline\_mode\_1.dump, src/testdir/dumps/Test\_statusline\_mode\_2.dump

#### Patch 8.2.2738

Problem: Extending a list with itself can give wrong result.  
Solution: Remember the item before where the insertion happens and skip to after the already inserted items. (closes #1112)

Files: src/list.c, src/testdir/test\_listdict.vim

Patch 8.2.2739

Problem: Vim9: a lambda accepts too many arguments at the script level.

Solution: Do not set uf\_varargs in Vim9 script.

Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.2740

Problem: Vim9: lambda with varargs doesn't work.

Solution: Make "...name" work. Require type to be a list.

Files: src/userfunc.c, src/vim9compile.c, src/vim9execute.c,  
src/errors.h, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.2741

Problem: Vim9: Partial call does not check right arguments.

Solution: Adjust the offset for whether the partial is before or after the arguments. (closes #8091)

Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2742

Problem: Vim9: when compiling a function fails it is cleared.

Solution: Keep the function lines, prevent execution with a different status. (closes #8093)

Files: src/vim9compile.c, src/structs.h, src/vim9execute.c,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.2743

Problem: Vim9: function state stuck when compiling with ":silent!".

Solution: Check for uf\_def\_status to be UF\_COMPILING.

Files: src/vim9compile.c, src/message.c, src/globals.h,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.2744

Problem: Vim9: no way to explicitly ignore an argument.

Solution: Use the underscore as the name for an ignored argument.

Files: runtime/doc/vim9.txt, src/vim9compile.c, src/eval.c,  
src/evalvars.c, src/errors.h, src/testdir/test\_vim9\_func.vim

Patch 8.2.2745 (after 8.2.2744)

Problem: Vim9: missing part of the argument change.

Solution: Add missing changes.

Files: src/userfunc.c

Patch 8.2.2746 (after 8.2.2745)

Problem: Check for duplicate arguments does not work.

Solution: Correct condition.

Files: src/userfunc.c

Patch 8.2.2747

Problem: Vim9: not always an error for too many function arguments.

Solution: Check for getting too many arguments.

Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim,

src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2748

Problem: Vim9: memory leak when calling :def function fails.  
Solution: Jump to failed\_early instead of returning.  
Files: src/vim9execute.c

Patch 8.2.2749

Problem: Vim9: test for error can be a bit flaky.  
Solution: Increase the wait time a bit.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.2750

Problem: Vim9: error for using underscore in nested function.  
Solution: Do not consider "\_" already defined. (closes #8096)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2751

Problem: Coverity warns for using NULL pointer.  
Solution: Check for NULL in calling function.  
Files: src/userfunc.c

Patch 8.2.2752

problem: coverity reports unreachable code.  
Solution: Remove check for positive index.  
Files: src/typval.c

Patch 8.2.2753

Problem: Vim9: cannot ignore an item in assignment unpack.  
Solution: Allow using an underscore.  
Files: runtime/doc/vim9.txt, src/vim.h, src/evalvars.c, src/eval.c,  
src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2754

Problem: :sleep! does not always hide the cursor.  
Solution: Add the cursor\_is\_asleep flag. (Jeremy Lerner, closes #8097,  
closes #7998)  
Files: src/drawscreen.c, src/ex\_docmd.c, src/gui.c, src/proto/term.pro,  
src/term.c

Patch 8.2.2755

Problem: Vim9: no error for using a number in a condition.  
Solution: Also use ISN\_COND2BOOL if the type is t\_number\_bool.  
(closes #7644)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.2756

Problem: Vim9: blob index and slice not implemented yet.  
Solution: Implement blob index and slice.  
Files: src/vim9compile.c, src/vim9.h, src/vim9execute.c, src/eval.c,  
src/blob.c, src/proto/blob.pro, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2757

Problem: Vim9: blob tests for legacy and Vim9 script are separate.  
Solution: Add CheckLegacyAndVim9Success(). Make blob index assign work.  
Files: src/vim9compile.c, src/vim9.h, src/vim9execute.c, src/errors.h,  
src/blob.c, src/proto/blob.pro, src/eval.c, src/ex\_docmd.c,  
src/testdir/vim9.vim, src/testdir/test\_blob.vim

#### Patch 8.2.2758

Problem: Vim9: wrong line number for autoload function with wrong name.  
Solution: Set and restore SOURCING\_LNUM. (closes #8100)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2759

Problem: Vim9: for loop infers type of loop variable.  
Solution: Do not get the member type. (closes #8102)  
Files: src/vim9type.c, src/proto/vim9type.pro, src/list.c,  
src/vim9script.c, src/proto/vim9script.pro, src/vim.h,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2760

Problem: Vim9: no error for changing a for loop variable.  
Solution: Make the loop variable read-only. (issue #8102)  
Files: src/eval.c, src/evalvars.c, src/vim9compile.c, src/vim.h,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2761

Problem: Using "syn include" does not work properly.  
Solution: Don't add current\_syn\_inc\_tag to topgrp. (Jaehwang Jerry Jung,  
closes #8104)  
Files: src/syntax.c, src/testdir/test\_syntax.vim

#### Patch 8.2.2762

Problem: Vim9: function line truncated when compiling.  
Solution: Copy the line before processing it. (closes #8101)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2763

Problem: Vim9: cannot use type in for loop unpack at script level.  
Solution: Advance over the type name.  
Files: src/evalvars.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2764

Problem: Memory leak when default function argument is allocated.  
Solution: Free the expression result.  
Files: src/userfunc.c, src/testdir/test\_functions.vim

#### Patch 8.2.2765

Problem: Vim9: not all blob operations work.  
Solution: Run more tests also with Vim9 script and :def functions. Fix what  
doesn't work.  
Files: src/eval.c, src/blob.c, src/proto/blob.pro, src/vim9execute.c,  
src/errors.h, src/testdir/vim9.vim, src/testdir/test\_blob.vim

#### Patch 8.2.2766 (after 8.2.2765)

Problem: Test failure.

Solution: Add change to Vim9 compilation error message.  
Files: src/vim9compile.c

Patch 8.2.2767 (after 8.2.2765)

Problem: Compiler warning for unused argument.  
Solution: Remove the argument.  
Files: src/blob.c, src/proto/blob.pro, src/vim9execute.c, src/eval.c

Patch 8.2.2768

Problem: Vim9: memory leak with blob range error.  
Solution: Jump to end instead of returning.  
Files: src/vim9compile.c

Patch 8.2.2769

Problem: Modula-3 config files are not recognized.  
Solution: Add filetype patterns. (Doug Kearns)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.2770

Problem: Vim9: type of loop variable is not used.  
Solution: Parse and check the variable type. (closes #8107)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2771

Problem: Vim9: assignment not recognized if declaration was skipped.  
Solution: Also recognized an assignment if the variable does not exist.  
(closes #8108)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2772

Problem: Problems when restoring **'runtimepath'** from a session file.  
Solution: Add the "skiprtp" item in **'sessionoptions'**.  
Files: runtime/doc/options.txt, src/session.c, src/optionstr.c,  
src/option.h, src/vim.h, src/option.c,  
src/testdir/test\_mksession.vim

Patch 8.2.2773

Problem: PSL filetype not recognized.  
Solution: Add a filetype pattern. (Daniel Kho, closes #8117)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.2774

Problem: Vim9: cannot import an existing name even when using "as".  
Solution: Do not check for an existing name when using "as". (closes #8113)  
Files: src/vim9script.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2775

Problem: Vim9: wrong line number used for some commands.  
Solution: For :exe, :echo and the like use the line number of the start of  
the command. When calling a function set the line number in the  
script context.  
Files: src/vim9compile.c, src/vim9execute.c, src/structs.h,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.2776

Problem: :mksession uses current value of **'splitbelow'** and **'splitright'** even though "options" is not in **'sessionoptions'**. (Maxim Kim)  
Solution: Save and restore the values, instead of setting to the current value. (closes #8119)  
Files: src/session.c, src/testdir/test\_mksession.vim

Patch 8.2.2777

Problem: Vim9: blob operations not tested in all ways.  
Solution: Run tests with CheckLegacyAndVim9Success(). Make blob assign with index work.  
Files: src/vim9compile.c, src/vim9execute.c, src/errors.h, src/blob.c, src/proto/blob.pro, src/testdir/test\_blob.vim, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.2778

Problem: Problem restoring **'packpath'** in session.  
Solution: Let "skiprtp" also apply to **'packpath'**.  
Files: runtime/doc/options.txt, src/option.c, src/testdir/test\_mksession.vim

Patch 8.2.2779

Problem: Memory access error in remove() for blob.  
Solution: Adjust length for memmove().  
Files: src/blob.c

Patch 8.2.2780

Problem: Vim9: for loop over blob doesn't work.  
Solution: Make it work.  
Files: src/vim9compile.c, src/vim9execute.c, src/testdir/test\_blob.vim

Patch 8.2.2781

Problem: Add() silently skips when adding to null list or blob.  
Solution: Give an error in Vim9 script. Allocate blob when it is NULL like with list and dict.  
Files: src/list.c, src/evalvars.c, src/vim9execute.c, src/testdir/test\_blob.vim, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2782

Problem: Vim9: blob operations not fully tested.  
Solution: Make more blob tests run in Vim9 script. Fix filter(). Make insert() give an error for a null blob, like add().  
Files: src/list.c, src/testdir/test\_blob.vim, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2783

Problem: Duplicate code for setting byte in blob, blob test may fail.  
Solution: Call blob\_set\_append(). Test sort failure with "N".  
Files: src/eval.c, src/testdir/test\_blob.vim

Patch 8.2.2784

Problem: Vim9: cannot use \=expr in :substitute.  
Solution: Compile the expression into instructions and execute them when invoked.

Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/proto/vim9execute.pro, src/regexp.c, src/ex\_cmds.c,  
src/proto/ex\_cmds.pro, src/globals.h,  
src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2785

Problem: Vim9: cannot redirect to local variable.  
Solution: Compile :redir when redirecting to a variable.  
Files: src/vim9compile.c, src/vim9.h, src/vim9execute.c, src/errors.h,  
src/evalvars.c, src/proto/evalvars.pro,  
src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2786

Problem: Vim9: memory leak when using :s with expression.  
Solution: Clean up the instruction list.  
Files: src/vim9compile.c

#### Patch 8.2.2787

Problem: MS-Windows: crash when using :echoconsole.  
Solution: Do not write a NUL when it's already there.  
Files: src/os\_win32.c

#### Patch 8.2.2788

Problem: Raku is now the only name what once was called perl6.  
Solution: Adjust the filetype detection. (closes #8120)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.2789

Problem: Vim9: using \=expr in :substitute does not handle jumps.  
Solution: Start with instruction count zero. (closes #8128)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2790 (after 8.2.2788)

Problem: filetype test fails  
Solution: Also update the scripts detection  
Files: runtime/scripts.vim

#### Patch 8.2.2791

Problem: Vim9: memory leak when using \=expr in :substitute.  
Solution: Do not allocate a new instruction list.  
Files: src/vim9compile.c

#### Patch 8.2.2792

Problem: Vim9: :disas shows instructions for default args but no text.  
Solution: Show the expression test above the default argument instructions.  
(closes #8129)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2793

Problem: MS-Windows: string literals are writable with MSVC.  
Solution: Add the /GF compiler flag. Make mch\_write() safer. (Ken Takata,  
closes #8133)

Files: src/Make\_mvc.mak, src/os\_win32.c

Patch 8.2.2794

Problem: Linux users don't know how to get ncurses.  
Solution: Add the name of the package. (closes #8132)  
Files: src/configure.ac, src/auto/configure

Patch 8.2.2795

Problem: Coverity warns for not using return value.  
Solution: Check the return value of compiling the substitute expression.  
Files: src/vim9compile.c

Patch 8.2.2796

Problem: Vim9: redir to variable does not accept an index.  
Solution: Make the index work.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2797

Problem: Search highlight disappears in the Visual area.  
Solution: Combine the search attributes. (closes #8134)  
Files: src/drawline.c, src/testdir/test\_search.vim,  
src/testdir/dumps/Test\_hlsearch\_visual\_1.dump

Patch 8.2.2798

Problem: Vim9: redir to variable with append does not accept an index.  
Solution: Make the appending work.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2799

Problem: Vim9: type casts don't fully work at the script level.  
Solution: Implement the missing piece.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2800

Problem: After a timer displays text a hit-enter prompt is given.  
Solution: Reset msg\_didany and need\_wait\_return. (closes #8136)  
Files: src/drawscreen.c, src/testdir/test\_timers.vim

Patch 8.2.2801

Problem: Free Pascal makefile not recognized.  
Solution: Add the fpcmake filetype. (Doug Kearns)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.2802

Problem: Vim9: illegal memory access.  
Solution: Check for comment before checking for white space. (closes #8142)  
Files: src/eval.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2803

Problem: Flicker when the popup menu has an info popup.  
Solution: Avoid drawing over the popup when it's going to be redrawn in the same position. (closes #8131) Also avoid redrawing the scrollbar.  
Files: src/popupmenu.c, src/proto/popupmenu.pro, src/drawscreen.c,  
src/globals.h

Patch 8.2.2804

Problem: Setting buffer local mapping with mapset() changes global mapping.  
Solution: Only set the local mapping. (closes #8143)  
Files: src/map.c, src/testdir/test\_maparg.vim

Patch 8.2.2805

Problem: Vim9: cannot use legacy syntax in Vim9 script.  
Solution: Add the :legacy command.  
Files: src/ex\_cmds.h, runtime/doc/vim9.txt, runtime/doc/index.txt  
src/ex\_cmdidxs.h, src/ex\_docmd.c, src/structs.h, src/vim9script.c,  
src/vim9compile.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.2806

Problem: Vim9: using "++nr" as a command might not work.  
Solution: Do not recognize "++" and "--" in a following line as addition or subtraction.  
Files: src/vim9compile.c, src/ex\_docmd.c, src/ex\_cmds.h, src/ex\_cmdidxs.h,  
src/vim9script.c, src/proto/vim9script.pro, src/eval.c,  
src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2807

Problem: Build fails with tiny features.  
Solution: Use a dummy function for ex\_incdec().  
Files: src/ex\_docmd.c

Patch 8.2.2808

Problem: Vim9: increment and decrement not sufficiently tested.  
Solution: Add assertions.  
Files: src/testdir/test\_vim9\_assign.vim

Patch 8.2.2809

Problem: Vim9: :def function compilation fails when using :legacy.  
Solution: Reset CMOD\_LEGACY when compiling a function. (closes #8137)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2810

Problem: Vim9: crash when calling a function in a substitute expression.  
Solution: Set the instructions back to the substitute expression instructions. (closes #8148)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2811

Problem: Vim9: error for missing white space doesn't say where it is missing  
Solution: Mention the command. (closes #8149)  
Files: src/ex\_docmd.c, src/errors.h, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2812

Problem: Vim9: still crash when using substitute expression.  
Solution: Put the instruction list in the stack frame. (closes #8154)  
Files: src/vim9execute.c, src/vim9.h, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2813

Problem: Cannot grep using fuzzy matching.  
Solution: Add the "f" flag to :vimgrep. (Yegappan Lakshmanan, closes #8152)  
Files: runtime/doc/quickfix.txt, src/ex\_cmds.c, src/proto/search.pro,  
src/quickfix.c, src/search.c, src/vim.h,  
src/testdir/test\_quickfix.vim

Patch 8.2.2814 (after 8.2.2812)

Problem: Vim9: unused variable. (John Marriott)  
Solution: Adjust #ifdef.  
Files: src/vim9execute.c

Patch 8.2.2815

Problem: Status line flickers when redrawing popup menu info.  
Solution: Do not redraw the status line when the focus is in the popup  
window. (issue #8144)  
Files: src/popupmenu.c

Patch 8.2.2816

Problem: Vim9: comment below expression in lambda causes problems.  
Solution: Use a single space for empty and comment lines. (closes #8156)  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2817

Problem: Vim9: script sourcing continues after an error.  
Solution: Make an error in any command in "vim9script" abort sourcing.  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.2818

Problem: No jump added to jumplist when opening terminal in current window.  
Solution: Call setpcmark(). (closes #8158)  
Files: src/terminal.c, src/testdir/test\_terminal.vim

Patch 8.2.2819

Problem: Finishing an abbreviation with a multi-byte char may not work.  
Solution: Escape K\_SPECIAL in the typed character. (closes #8160)  
Files: src/map.c, src/testdir/test\_mapping.vim

Patch 8.2.2820

Problem: Session file may divide by zero.  
Solution: Avoid writing divide by zero. (closes #8162)  
Files: src/session.c, src/testdir/test\_mksession.vim

Patch 8.2.2821

Problem: MS-Windows: unnecessarily loading libraries when registering OLE.  
Solution: Skip loading libraries when invoked with "--register".  
Files: src/main.c, src/globals.h, src/os\_win32.c

Patch 8.2.2822 (after 8.2.2821)

Problem: MS-Windows: unnecessarily loading libraries when unregistering OLE.  
Solution: Also skip loading libraries when invoked with "--unregister". Run  
Vim for README.txt with user privileges.

Files: src/main.c, nsis/gvim.nsi, nsis/README.txt

Patch 8.2.2823

Problem: MS-Windows: launching Vim from installer doesn't open README.

Solution: Adjust the quotes.

Files: nsis/gvim.nsi

Patch 8.2.2824

Problem: MS-Windows: build failure with MSVC.

Solution: Adjust the list of distributed files. Add hint about python.  
Adjust path for reading runtime files.

Files: Filelist, src/testdir/shared.vim,  
src/testdir/test\_function\_lists.vim

Patch 8.2.2825

Problem: Code in checkreadonly() not fully tested.

Solution: Add more tests. (Dominique Pellé, closes #8169)

Files: src/testdir/test\_excmod.vim

Patch 8.2.2826

Problem: Compiler warnings for int to size\_t conversion. (Randall W. Morris)

Solution: Add type casts.

Files: src/map.c, src/quickfix.c

Patch 8.2.2827

Problem: Test file was not deleted.

Solution: Uncomment the delete() call. (Dominique Pellé, closes #8172)

Files: src/testdir/test\_mksession.vim

Patch 8.2.2828

Problem: Coverity complains about not checking the rename() return value.

Solution: Add "(void)", can't do anything in case of a failure.

Files: src/fileio.c

Patch 8.2.2829

Problem: Some comments are not correct or clear.

Solution: Adjust the comments. Add test for cursor position.

Files: src/regexp\_bt.c, src/regexp\_nfa.c,  
src/testdir/test\_exec\_while\_if.vim,  
src/testdir/test\_substitute.vim

Patch 8.2.2830

Problem: Terminal colors are not updated when **'background'** is set.

Solution: Call term\_update\_colors() for all terminals. (Marcin Szamotulski, closes #8171, closes #8150)

Files: src/terminal.c, src/proto/terminal.pro, src/optionstr.c

Patch 8.2.2831

Problem: Vim9: expandcmd() not tested.

Solution: Add a test.

Files: src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2832

Problem: Operator cancelled by moving mouse when using popup. (Sergey Vlasov)  
Solution: Do not trigger an operator for a mouse move events. (closes #8176)  
Files: src/normal.c

#### Patch 8.2.2833

Problem: Two key command cancelled by moving mouse when using popup. (Sergey Vlasov)  
Solution: Ignore K\_MOUSEMOVE in plain\_vgetc().  
Files: src/getchar.c

#### Patch 8.2.2834

Problem: Vim9: :cexpr does not work with local variables.  
Solution: Compile :cexpr.  
Files: src/vim9compile.c, src/vim9.h, src/vim9execute.c, src/quickfix.c, src/proto/quickfix.pro, src/testdir/test\_quickfix.vim, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2835 (after 8.2.2834)

Problem: Vim9: leaking memory in :cexpr.  
Solution: Also free the command line copy.  
Files: src/vim9compile.c

#### Patch 8.2.2836 (after 8.2.2834)

Problem: Build failure without the +quickfix feature. (John Marriott)  
Solution: Add #ifdef.  
Files: src/vim9compile.c, src/vim9execute.c, src/tag.c

#### Patch 8.2.2837

Problem: Various code lines not covered by tests.  
Solution: Add test cases. (Dominique Pellé, closes #8178)  
Files: src/testdir/test\_excmd.vim, src/testdir/test\_functions.vim, src/testdir/test\_options.vim, src/testdir/test\_startup.vim, src/testdir/test\_syntax.vim, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2838

Problem: File extension .wrap not recognized.  
Solution: Use dosini filetype for .wrap files. (Liam Beguin, closes #8177)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.2839

Problem: Default redirection missing "ash" and "dash".  
Solution: Recognize "ash" and "dash". (Natanael Copa, closes #8180)  
Files: runtime/doc/options.txt, src/option.c

#### Patch 8.2.2840

Problem: Vim9: member operation not fully tested.  
Solution: Add a few tests.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.2841

Problem: MS-Windows: cursor in wrong position when '**lazyredraw**' and '**statusline**' are set.  
Solution: Call compute\_cmdrow(). (closes #8170, closes #8184)

Files: src/os\_win32.c

Patch 8.2.2842

Problem: Vim9: skip argument to searchpair() is not compiled.

Solution: Add VAR\_INSTR.

Files: src/structs.h, src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/proto/vim9execute.pro, src/eval.c, src/evalfunc.c, src/vim.h,  
src/evalvars.c, src/typval.c, src/vim9type.c, src/testing.c,  
src/viminfo.c, src/if\_py\_both.h, src/json.c,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2843 (after 8.2.2842)

Problem: Vim9: skip argument to searchpairpos() is not compiled.

Solution: Handle like searchpair(). Also for search() and searchpos().

Files: src/vim9compile.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2844

Problem: Vim9: memory leak when using searchpair().

Solution: Free the v\_instr field.

Files: src/typval.c

Patch 8.2.2845

Problem: MS-Windows: warning for signed/unsigned comparison.

Solution: Add type cast.

Files: src/terminal.c

Patch 8.2.2846

Problem: Vim9: "echo Func()" does not give an error for a function without a return value.

Solution: Give an error. Be more specific about why a value is invalid.

Files: src/globals.h, src/errors.h, src/eval.c, src/evalfunc.c,  
src/typval.c, src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2847

Problem: Perl not tested sufficiently.

Solution: Add test. Also test W17. (Dominique Pellé, closes #8193)

Files: src/testdir/test\_arabic.vim, src/testdir/test\_perl.vim

Patch 8.2.2848

Problem: Crash when calling partial.

Solution: Check for NULL pointer. (Dominique Pellé, closes #8202)

Files: src/eval.c, src/evalfunc.c, src/testdir/test\_functions.vim,  
src/testdir/test\_listdict.vim

Patch 8.2.2849

Problem: Bufwrite not sufficiently tested.

Solution: Add a few more tests. (Yegappan Lakshmanan, closes #8192)

Files: src/testdir/test\_startup.vim, src/testdir/test\_writefile.vim

Patch 8.2.2850

Problem: Recalling commands from history is not tested.

Solution: Add tests. (closes #8194)

Files: src/testdir/test\_cmdline.vim

Patch 8.2.2851

Problem: Using <Cmd> mapping on the command line triggers CmdlineChanged.  
(Naohiro Ono)

Solution: Jump to cmdline\_not\_changed if the command line didn't change.  
(closes #8208)

Files: src/ex\_getln.c, src/testdir/test\_cmdline.vim

Patch 8.2.2852

Problem: Configure can add --as-needed a second time.

Solution: Only add --as-needed if not already there. (Natanael Copa,  
closes #8189, closes #8181)

Files: src/configure.ac, src/auto/configure

Patch 8.2.2853 (after 8.2.2851)

Problem: Window is not updated after using <Cmd> mapping.

Solution: So jump to cmdline\_changed but skip autocommand.

Files: src/ex\_getln.c

Patch 8.2.2854

Problem: Custom statusline cannot contain % items.

Solution: Add "%{ % expr %}". (closes #8190)

Files: runtime/doc/options.txt, src/buffer.c, src/optionstr.c,  
src/testdir/test\_statusline.vim

Patch 8.2.2855

Problem: White space after "->" does not give E274.

Solution: Do not skip white space in legacy script. (closes #8212)

Files: src/eval.c, src/testdir/test\_method.vim

Patch 8.2.2856

Problem: Get readonly error for device that can't be written to.

Solution: Check for being able to write first. (closes #8205)

Files: src/ex\_cmds.c, src/testdir/test\_writefile.vim

Patch 8.2.2857

Problem: Vim9: exception in ISN\_INSTR caught at wrong level.

Solution: Set the starting trylevel in exec\_instructions(). (closes #8214)

Files: src/vim9compile.c, src/vim9execute.c, src/globals.h,  
src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2858 (after 8.2.2857)

Problem: Test fails because of changed error message.

Solution: Adjust the expected error message.

Files: src/testdir/test\_ex\_mode.vim

Patch 8.2.2859 (after 8.2.2857)

Problem: Tcl test fails because of changed error message.

Solution: Adjust the expected error message.

Files: src/testdir/test\_tcl.vim

Patch 8.2.2860

Problem: Adding a text property causes the whole window to be redrawn.

Solution: Use `changed_lines_buf()` to only redraw the affected lines.  
Files: `src/change.c`, `src/proto/change.pro`, `src/textprop.c`

#### Patch 8.2.2861

Problem: Vim9: "legacy return" is not recognized as a return statement.  
Solution: Specifically check for a return command. (closes #8213)  
Files: `src/vim9compile.c`, `src/vim9execute.c`, `src/vim9.h`,  
`src/testdir/test_vim9_expr.vim`

#### Patch 8.2.2862

Problem: Removing a text property causes the whole window to be redrawn.  
Solution: Use `changed_lines_buf()` to only redraw the affected lines.  
Files: `src/textprop.c`

#### Patch 8.2.2863 (after 8.2.2862)

Problem: Removing a text property does not redraw optimally.  
Solution: Only redraw the lines that mighth actually have been changed.  
Files: `src/textprop.c`

#### Patch 8.2.2864

Problem: Vim9: crash when using inline function.  
Solution: Check for NULL pointer. Make using inline function work inside  
`lambda`. (closes #8217)  
Files: `src/userfunc.c`, `src/testdir/test_vim9_func.vim`

#### Patch 8.2.2865 (after 8.2.2864)

Problem: Skipping over function body fails.  
Solution: Do not define the function when skipping.  
Files: `src/userfunc.c`

#### Patch 8.2.2866

Problem: Vim9: memory leak when using inline function.  
Solution: Remember what strings to free.  
Files: `src/userfunc.c`, `src/structs.h`, `src/eval.c`

#### Patch 8.2.2867 (after 8.2.2866)

Problem: Build failure.  
Solution: Add missing part of the change.  
Files: `src/globals.h`

#### Patch 8.2.2868

Problem: Vim9: When executing a compiled expression the `trylevel` at start  
is changed but not restored. (closes #8214)  
Solution: Restore the `trylevel` at start.  
Files: `src/vim9execute.c`, `src/testdir/test_vim9_builtin.vim`

#### Patch 8.2.2869

Problem: Using unified diff is not tested.  
Solution: Test all cases also with unified diff. (issue #8197)  
Files: `src/testdir/test_diffmode.vim`

#### Patch 8.2.2870

Problem: `CmdlineChange` event triggered twice for **CTRL-R**.  
Solution: Return `CMDLINE_NOT_CHANGED` from `cmdline_insert_reg()`.

(closes #8219)  
Files: src/ex\_getln.c, src/testdir/test\_cmdline.vim

#### Patch 8.2.2871

Problem: Unnecessary VIM\_ISDIGIT() calls, badly indented code.  
Solution: Call skipdigits() on the next character. Improve indenting.  
(Dominique Pellé, closes #8227)  
Files: src/charset.c, src/evalfunc.c, src/ex\_docmd.c, src/json.c,  
src/ops.c, src/tag.c, src/vim9compile.c

#### Patch 8.2.2872

Problem: Python tests fail without the channel feature.  
Solution: Add a feature check. (Dominique Pellé, closes #8226)  
Files: src/testdir/test\_python2.vim, src/testdir/test\_python3.vim

#### Patch 8.2.2873

Problem: Not enough tests for writing buffers.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #8229)  
Files: src/testdir/test\_buffer.vim, src/testdir/test\_cmdline.vim,  
src/testdir/test\_functions.vim, src/testdir/test\_writefile.vim

#### Patch 8.2.2874

Problem: MS-Windows: screen redraws too often.  
Solution: Do not redraw when peeking for a character. (closes #8230,  
closes #8211)  
Files: src/os\_win32.c

#### Patch 8.2.2875

Problem: Cancelling inputlist() after a digit does not return zero.  
Solution: Always return zero when cancelling. (closes #8231)  
Files: src/misc1.c, src/testdir/test\_functions.vim

#### Patch 8.2.2876

Problem: Configure cannot detect Python 3.10.  
Solution: Use sys.version\_info. (closes #8233)  
Files: src/configure.ac, src/auto/configure

#### Patch 8.2.2877

Problem: Insufficient tests for popup menu rightleft.  
Solution: Add tests. (Yegappan Lakshmanan, closes #8235)  
Files: src/testdir/test\_popup.vim,  
src/testdir/dumps/Test\_pum\_rightleft\_01.dump,  
src/testdir/dumps/Test\_pum\_rightleft\_02.dump,  
src/testdir/dumps/Test\_pum\_scrollbar\_01.dump,  
src/testdir/dumps/Test\_pum\_scrollbar\_02.dump

#### Patch 8.2.2878

Problem: Vim9: for loop list unpack only allows for one "\_".  
Solution: Drop the value when the variable is "\_". (closes #8232)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.2879

Problem: File extension .hsig not recognized.  
Solution: Use Haskell filetype for .hsig files. (Marcin Szamotulski,

closes #8236)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.2880

Problem: Unified diff fails if actually used.  
Solution: Invoke :diffupdate in the test. Fix the check for working external diff. (Ghjuvan Lacambre, Christian Brabandt, closes #8197)  
Files: src/diff.c, src/testdir/test\_diffmode.vim

#### Patch 8.2.2881

Problem: Various pieces of code not covered by tests.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #8245)  
Files: src/testdir/test\_const.vim, src/testdir/test\_functions.vim, src/testdir/test\_python2.vim, src/testdir/test\_python3.vim, src/testdir/test\_user\_func.vim, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2882

Problem: Vim9: memory leak when lambda has an error.  
Solution: Free the list of argument types on failure.  
Files: src/userfunc.c

#### Patch 8.2.2883

Problem: MS-Windows manifest file name is misleading.  
Solution: Rename the file. (closes #8241)  
Files: .gitignore, .hgignore, Filelist, Makefile, src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/gvim.exe.mnf, src/vim.manifest, src/vim.rc

#### Patch 8.2.2884

Problem: Not enough cscope code is covered by tests.  
Solution: Add a few test cases. (Dominique Pellé, closes #8246)  
Files: src/testdir/test\_cscope.vim

#### Patch 8.2.2885

Problem: searching for \%'\> does not match linewise end of line. (Tim Chase)  
Solution: Match end of line if column is MAXCOL. (closes #8238)  
Files: src/regexp\_nfa.c, src/regexp\_bt.c, src/testdir/test\_search.vim

#### Patch 8.2.2886

Problem: Various pieces of code not covered by tests.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #8255)  
Files: src/testdir/test\_expr.vim, src/testdir/test\_functions.vim, src/testdir/test\_listdict.vim, src/testdir/test\_registers.vim, src/testdir/test\_user\_func.vim, src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.2887

Problem: Crash when passing null string to fullcommand().  
Solution: Check for NULL pointer. (closes #8256)  
Files: src/ex\_docmd.c, src/testdir/test\_cmdline.vim

#### Patch 8.2.2888

Problem: Vim9: "k" command recognized in Vim9 script.  
Solution: Do not recognize "k" or "s" and "d" with flags.

Files: src/ex\_docmd.c, src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.2889

Problem: Typo and verbose comment in Makefiles.  
Solution: Fix typo. Use @#. (Ken Takata, closes #8252)  
Files: Makefile, src/testdir/Makefile

Patch 8.2.2890

Problem: Text property duplicated when data block splits.  
Solution: Do not continue text prop from previous line. (closes #8261)  
Files: src/memline.c, src/structs.h, src/testdir/test\_textprop.vim

Patch 8.2.2891

Problem: Cannot build with Perl 5.34.  
Solution: Add Perl\_SvTRUE\_common(). (Ozaki Kiichi, closes #8266,  
closes #8250)  
Files: src/if\_perl.xs

Patch 8.2.2892

Problem: Error message contains random characters.  
Solution: Pass the right pointer to error\_white\_both(). (closes #8272,  
closes #8263)  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2893

Problem: Multi-byte text in popup title shows up wrong.  
Solution: Use the character width instead of the byte length. (Ralf Schandl,  
closes #8267, closes #8264)  
Files: src/popupwin.c, src/message\_test.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_multibytetitle.dump

Patch 8.2.2894

Problem: MS-Windows: using enc\_locale() for strftime() might not work.  
Solution: Use wcsftime(). (Ken Takata, closes #8271)  
Files: src/time.c

Patch 8.2.2895

Problem: Vim9: random characters appear in some error messages.  
Solution: Pass the correct pointer. (closes #8277)  
Files: src/eval.c, src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2896

Problem: Spellfile functionality not fully tested.  
Solution: Add tests for CHECKCOMPOUNDPATTERN and COMMON. (Dominique Pellé,  
closes #8270)  
Files: src/testdir/test\_spellfile.vim

Patch 8.2.2897

Problem: Vim9: can use reserved words at the script level.  
Solution: Check variable names for reserved words. (closes #8253)  
Files: src/vim9compile.c, src/vim9script.c, src/proto/vim9script.pro,  
src/eval.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2898

Problem: QuitPre and ExitPre not triggered when GUI window is closed.  
Solution: Call before\_quit\_autocmds(). (closes #8242)  
Files: src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/gui.c

Patch 8.2.2899

Problem: Appveyor script does not detect nmake failure.  
Solution: Explicitly check for executable. (Ken Takata, closes #8281)  
Files: ci/appveyor.bat

Patch 8.2.2900

Problem: QuitPre is triggered before :wq writes the file, which is different from other commands.  
Solution: Trigger QuitPre after writing the file. (closes #8279)  
Files: src/ex\_docmd.c, src/testdir/test\_writefile.vim

Patch 8.2.2901

Problem: Some operators not fully tested.  
Solution: Add a few test cases. (Yegappan Lakshmanan, closes #8282)  
Files: src/testdir/test\_coptions.vim, src/testdir/test\_increment.vim, src/testdir/test\_normal.vim, src/testdir/test\_virtualedit.vim, src/testdir/test\_visual.vim

Patch 8.2.2902

Problem: Spellfile functionality not fully tested.  
Solution: Add tests for CIRCUMFIX, NOBREAK and others. (Dominique Pellé, closes #8283)  
Files: src/testdir/test\_spellfile.vim

Patch 8.2.2903

Problem: Cursor position wrong on wrapped line with **'signcolumn'**.  
Solution: Don't add space for showbreak twice. (Christian Brabandt, closes #8262)  
Files: src/drawline.c, src/testdir/test\_display.vim

Patch 8.2.2904

Problem: "g\$" causes scroll if half a double width char is visible.  
Solution: Advance to the last fully visible character. (closes #8254)  
Files: src/normal.c, src/testdir/test\_normal.vim

Patch 8.2.2905

Problem: No error when defaults.vim cannot be loaded.  
Solution: Add an error message. (Christian Brabandt, closes #8248)  
Files: runtime/doc/starting.txt, src/errors.h, src/main.c, src/testdir/test\_startup.vim

Patch 8.2.2906 (after 8.2.2905)

Problem: ASAN reports errors for test\_startup for unknown reasons.  
Solution: Temporarily disable the new test.  
Files: src/testdir/test\_startup.vim

Patch 8.2.2907

Problem: Memory leak when running out of memory.  
Solution: Free the allocated memory. (Dominique Pellé, closes #8284)

Files: src/term.c

#### Patch 8.2.2908

Problem: Crash when using a terminal popup window from the cmdline window.

Solution: Instead of checking cmdwin\_type call cmdwin\_is\_active().  
(closes #8286)

Files: src/terminal.c, src/errors.h, src/testdir/test\_cmdline.vim,  
src/testdir/dumps/Test\_cmdwin\_no\_terminal.dump

#### Patch 8.2.2909

Problem: Build error with non-Unix system.

Solution: Always include limits.h.

Files: src/vim.h

#### Patch 8.2.2910

Problem: Test for cmdline window and terminal fails on MS-Windows.

Solution: Skip the test on MS-Windows.

Files: src/testdir/test\_cmdline.vim

#### Patch 8.2.2911

Problem: Pattern "\%V" does not match all of block selection. (Rick Howe)

Solution: Use the value of vi\_curswant. (closes #8285)

Files: src/regexp.c, src/testdir/test\_search.vim,  
src/testdir/dumps/Test\_hlsearch\_block\_visual\_match.dump

#### Patch 8.2.2912

Problem: MS-Windows: most users expect using Unicode.

Solution: Default '**encoding**' to utf-8 on MS-Windows. (Ken Takata,  
closes #3907)

Files: runtime/doc/options.txt, src/mbyte.c, src/option.c, src/option.h,  
src/testdir/test\_writefile.vim

#### Patch 8.2.2913

Problem: MS-Windows conpty supports using mouse events.

Solution: When enabling the mouse enable mouse input and disable quick edit  
mode. (Wez Furlong, closes #8280)

Files: src/os\_win32.c

#### Patch 8.2.2914

Problem: Cannot paste a block without adding padding.

Solution: Add "zp" and "zP" which paste without adding padding. (Christian  
Brabandt, closes #8289)

Files: runtime/doc/change.txt, runtime/doc/index.txt, src/normal.c,  
src/register.c, src/vim.h, src/testdir/test\_normal.vim,  
src/testdir/test\_visual.vim

#### Patch 8.2.2915

Problem: MS-Windows: when using "default" for encoding utf-8 is used.

Solution: Use the system encoding. (Ken Takata, closes #8300)

Files: src/mbyte.c, runtime/doc/options.txt

#### Patch 8.2.2916

Problem: Operators are not fully tested.

Solution: Add a few more tests. (Yegappan Lakshmanan, closes #8290)

Files: src/ops.c, src/testdir/test\_netbeans.vim,  
src/testdir/test\_normal.vim, src/testdir/test\_visual.vim

Patch 8.2.2917

Problem: Spellfile functionality not fully tested.

Solution: Add tests for SFX with removal of characters, spelling suggestions with NOBREAK and others. (Dominique Pellé, closes #8293)

Files: src/testdir/test\_spellfile.vim

Patch 8.2.2918

Problem: Builtin function can be shadowed by global variable.

Solution: Check for builtin function before variable. (Yasuhiro Matsumoto, closes #8302)

Files: src/eval.c, src/testdir/test\_functions.vim

Patch 8.2.2919

Problem: Using "!:command" does not work if the command uses posix\_spawn().

Solution: Do not call ioctl() with TIOCSCTTY. (Felipe Contreras)

Files: src/os\_unix.c

Patch 8.2.2920

Problem: Still a way to shadow a builtin function. (Yasuhiro Matsumoto)

Solution: Check the key when using extend(). (issue #8302)

Files: src/eval.c, src/dict.c, src/proto/dict.pro,  
src/testdir/test\_functions.vim

Patch 8.2.2921

Problem: E704 for script local variable is not backwards compatible. (Yasuhiro Matsumoto)

Solution: Only give the error in Vim9 script. Also check for function-local variable.

Files: src/dict.c, src/testdir/test\_functions.vim

Patch 8.2.2922

Problem: Computing array length is done in various ways.

Solution: Use ARRAY\_LENGTH everywhere. (Ken Takata, closes #8305)

Files: src/arabic.c, src/blowfish.c, src/cindent.c, src/cmdexpand.c,  
src/cmdhist.c, src/dosinst.c, src/eval.c, src/evalfunc.c,  
src/ex\_docmd.c, src/fileio.c, src/gui\_athena.c, src/gui\_gtk\_x11.c,  
src/gui\_haiku.cc, src/gui\_photon.c, src/gui\_w32.c,  
src/gui\_xmew.c, src/hardcopy.c, src/help.c, src/highlight.c,  
src/if\_mzsch.c, src/macros.h, src/main.c, src/map.c, src/mbyte.c,  
src/memline.c, src/menu.c, src/misc2.c, src/normal.c, src/ops.c,  
src/option.c, src/optiondefs.h, src/os\_win32.c, src/popupwin.c,  
src/quickfix.c, src/regexp.c, src/screen.c, src/search.c,  
src/syntax.c, src/term.c, src/terminal.c, src/time.c,  
src/usercmd.c, src/version.c

Patch 8.2.2923

Problem: EBCDIC build is broken.

Solution: Move sortFunctions() to evalfunc.c. (Ken Takata, closes #8306)

Files: src/eval.c, src/evalfunc.c, src/proto/evalfunc.pro

Patch 8.2.2924

Problem: Superfluous extern declaration.  
Solution: Delete the declaration. (Ken Takata, closes #8307)  
Files: src/main.c

Patch 8.2.2925

Problem: Vim9: line continuation comment uses legacy syntax.  
Solution: Check for #\ instead of "\. (closes #8295)  
Files: src/scriptfile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2926

Problem: Vim9: no good error for using :legacy in a :def function.  
Solution: Give an explicit error where :legacy is not working.  
(closes #8309)  
Files: src/vim9compile.c, src/errors.h, src/testdir/test\_vim9\_func.vim

Patch 8.2.2927

Problem: Test commented out because it fails with ASAN.  
Solution: Only skip the test when running with ASAN.  
Files: src/testdir/test\_startup.vim

Patch 8.2.2928

Problem: The evalfunc.c file is too big.  
Solution: Move float related functionality to a separate file. (Yegappan Lakshmanan, closes #8287)  
Files: Filelist, src/Make\_ami.mak, src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/README.md, src/eval.c, src/evalfunc.c, src/float.c, src/proto.h, src/proto/eval.pro, src/proto/float.pro

Patch 8.2.2929

Problem: Accidentally enable tcl by default.  
Solution: Revert change to Makefile  
Files: src/Makefile

Patch 8.2.2930

Problem: When a popup is visible a mouse move my restart Visual mode.  
Solution: Reset held\_button when ending Visual mode. (closes #8318)  
Files: src/mouse.c, src/proto/mouse.pro, src/normal.c

Patch 8.2.2931

Problem: Vim9: line continuation comment still uses legacy syntax in one place.  
Solution: Check for #\ instead of "\ earlier. (closes #8316)  
Files: src/scriptfile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.2932 (after 8.2.2930)

Problem: Select mode test fails.  
Solution: Do not always reset the held mouse button.  
Files: src/mouse.c, src/normal.c, src/proto/normal.pro

Patch 8.2.2933

Problem: When **'clipboard'** is "unnamed" zp and zP do not work correctly.  
Solution: Pass -1 to str\_to\_reg() and fix computing the character width

instead of using the byte length. (Christian Brabandt, closes #8301, closes #8317)  
Files: src/clipboard.c, src/mbyte.c, src/register.c

Patch 8.2.2934 (after 8.2.2933)  
Problem: ASAN error when using text from the clipboard.  
Solution: Get width of each character.  
Files: src/register.c

Patch 8.2.2935 (after 8.2.2934)  
Problem: Calculating register width is not always needed. (Christian Brabandt)  
Solution: Only calculate the width when the type is MBLOCK.  
Files: src/register.c

Patch 8.2.2936  
Problem: Vim9: converting number to bool uses wrong stack offset. (Salman Halim)  
Solution: Include the offset in the 2B00L command.  
Files: src/vim9compile.c, src/vim9.h, src/vim9execute.c, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.2937  
Problem: Popup test fails if rightleft feature not enabled.  
Solution: Check that the rightleft feature is available. (Dominique Pellé, closes #8321)  
Files: src/testdir/test\_popup.vim

Patch 8.2.2938  
Problem: After using motion force from feedkeys() it may not be reset.  
Solution: Clear motion\_force in clearop(). (closes #8323)  
Files: src/normal.c, src/testdir/test\_visual.vim

Patch 8.2.2939  
Problem: GTK: righthand scrollbar does not show with split window.  
Solution: Adjust padding when two scrollbars are used. (Matt Wozniski, closes #8324)  
Files: src/gui\_gtk.c

Patch 8.2.2940  
Problem: MS-Windows: cannot see the size of the text area when resizing the gvim window.  
Solution: Show a tooltip with the text size. (Ken Takata, closes #8326)  
Files: src/gui\_w32.c

Patch 8.2.2941  
Problem: Vim9: using `=expr` does not handle a list of strings.  
Solution: Convert a list to a string and escape each item. (closes #8310)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2942  
Problem: Vim9: internal error when calling function with too few arguments  
Solution: Check for argument count to be too few. (closes #8325)

Files: src/errors.h, src/vim9execute.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2943

Problem: Vim9: check for argument count ignores default values.  
Solution: Take default argument values into account.  
Files: src/vim9execute.c

Patch 8.2.2944

Problem: Vim9: no error when using job or channel as a string.  
Solution: Be more strict about conversion to string. (closes #8312)  
Files: src/typval.c, src/job.c, src/proto/job.pro, src/channel.c,  
src/proto/channel.pro, src/eval.c, src/vim9execute.c,  
src/testdir/test\_vim9\_builtin.vim

Patch 8.2.2945

Problem: Some buffer related code is not tested.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #8320)  
Files: src/termlib.c, src/testdir/test\_excmod.vim,  
src/testdir/test\_recover.vim, src/testdir/test\_swap.vim,  
src/testdir/test\_visual.vim

Patch 8.2.2946

Problem: Vim9: substitute expression cannot be a List in a :def function.  
Solution: Use typval2string(). (closes #8330)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.2947

Problem: Build failure without the channel feature.  
Solution: Add back #ifdef. (John Marriott)  
Files: src/eval.c

Patch 8.2.2948

Problem: Substitute() accepts a number but not a float expression.  
Solution: Also accept a float. (closes #8331)  
Files: src/typval.c, src/testdir/test\_substitute.vim

Patch 8.2.2949 (after 8.2.2948)

Problem: Tests failing because there is no error for float to string conversion.  
Solution: Change the check for failure to check for correct result. Make some conversions strict in Vim9 script.  
Files: src/evalfunc.c, src/float.c, src/findfile.c, src/json.c,  
src/filepath.c, src/testdir/test\_eval\_stuff.vim,  
src/testdir/test\_execute\_func.vim,  
src/testdir/test\_float\_func.vim, src/testdir/test\_functions.vim,  
src/testdir/test\_listdict.vim, src/testdir/test\_glob2regpat.vim

Patch 8.2.2950

Problem: Sound code not fully tested.  
Solution: Add more sound tests. (Dominique Pellé, closes #8332)  
Files: src/testdir/test\_sound.vim

Patch 8.2.2951

Problem: Vim9: cannot use heredoc in :def function for :python, :lua, etc.

Solution: Concatenate the heredoc lines and pass them in the ISN\_EXEC\_SPLIT instruction.

Files: src/userfunc.c, src/vim9compile.c, src/vim9.h, src/vim9execute.c, src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2952

Problem: Recover test fails on big endian systems.

Solution: Disable the failing test on big endian systems. (Yegappan Lakshmanan, closes #8335)

Files: src/testdir/test\_recover.vim, src/testdir/test\_swap.vim

#### Patch 8.2.2953 (after 8.2.2951)

Problem: Vim9: leaking memory when using heredoc script.

Solution: Free the first line.

Files: src/vim9execute.c

#### Patch 8.2.2954

Problem: Short file name extension for Scala not recognized.

Solution: Recognize \*.sc. (closes #8337)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.2955

Problem: Vim9: using filter in compiled command does not work.

Solution: Generate EXEC including the command modifier.

Files: src/vim9compile.c, src/ex\_docmd.c, src/ex\_cmds.c, src/proto/ex\_cmds.pro, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.2956

Problem: Vim9: need to plan for future additions.

Solution: Reserve commands for future use: :type, :class, :enum.

Files: src/ex\_cmds.h, src/ex\_cmdidxs.h

#### Patch 8.2.2957

Problem: Using getchar() in Vim9 script is problematic.

Solution: Add getcharstr(). (closes #8343)

Files: runtime/doc/eval.txt, src/evalfunc.c, src/getchar.c, src/proto/getchar.pro, src/testdir/test\_functions.vim

#### Patch 8.2.2958 (after 8.2.2957)

Problem: Function list test fails.

Solution: Add newly added function to the list. Fix typo.

Files: runtime/doc/usr\_41.txt, src/testdir/test\_function\_lists.vim

#### Patch 8.2.2959

Problem: sound\_playfile() is not tested on MS-Windows.

Solution: Make it work and enable the test. (Dominique Pellé, closes #8338)

Files: src/sound.c, src/testdir/test\_sound.vim

#### Patch 8.2.2960

Problem: Swap file recovery not sufficiently tested.

Solution: Add a few more tests. (Yegappan Lakshmanan, closes #8339)

Files: src/testdir/test\_recover.vim

Patch 8.2.2961

Problem: Keys typed during a :normal command are discarded.  
Solution: Concatenate saved typeahead and typed keys. (closes #8340)  
Files: src/getchar.c, src/proto/getchar.pro, src/ex\_docmd.c,  
src/evalfunc.c, src/debugger.c, src/ui.c, src/proto/ui.pro

Patch 8.2.2962

Problem: MS-Windows command line arguments have wrong encoding.  
Solution: Always use utf-8 in get\_cmd\_argsW(). (Ken Takata, closes #8347)  
Files: src/os\_win32.c

Patch 8.2.2963

Problem: GUI: mouse move may start Visual mode with a popup visible.  
Solution: Add special code for mouse move. (closes #8318)  
Files: src/vim.h, src/gui.c, src/keymap.h, src/term.c

Patch 8.2.2964

Problem: Vim9: hang when using space after ->. (Naohiro Ono)  
Solution: Skip over white space to find the function name. (closes #8341)  
Files: src/eval.c, src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.2965

Problem: Vim9: crash when calling function that failed to compile.  
Solution: Fail when trying to call the function. (closes #8344)  
Files: src/errors.h, src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2966

Problem: ml\_get errors after recovering a file. (Yegappan Lakshmanan)  
Solution: Fix the cursor position after deleting lines.  
Files: src/memline.c

Patch 8.2.2967

Problem: Vim9: crash when using two levels of partials.  
Solution: Add outer\_ref\_T and use it in the execution context.  
Files: src/structs.h, src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2968 (after 8.2.2967)

Problem: Vim9: memory leak  
Solution: Unreference pt\_outer of partial.  
Files: src/eval.c

Patch 8.2.2969

Problem: Subtracting from number option fails when result is zero. (Ingo Karkat)  
Solution: Reset the string value when using the numeric value.  
(closes #8351)  
Files: src/evalvars.c, src/testdir/test\_vimscript.vim

Patch 8.2.2970

Problem: Python configure check uses deprecated command.  
Solution: Use sysconfig instead of distutils if possible. (Zdenek Dohnal,  
closes #8354)  
Files: src/configure.ac, src/auto/configure

Patch 8.2.2971

Problem: Cannot yank a block without trailing spaces.  
Solution: Add the "zy" command. (Christian Brabandt, closes #8292)  
Files: runtime/doc/change.txt, runtime/doc/index.txt, src/normal.c,  
src/ops.c, src/register.c, src/structs.h,  
src/testdir/test\_visual.vim

Patch 8.2.2972

Problem: "%bd" tries to delete popup window buffers, which fails. (Ralf Schandl)  
Solution: Do not try to delete a popup window buffer. (closes #8349)  
Files: src/buffer.c, src/vim.h, src/testdir/test\_popupwin.vim

Patch 8.2.2973

Problem: Fix for recovery and diff mode not tested.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #8352)  
Files: src/testdir/test\_diffmode.vim, src/testdir/test\_prompt\_buffer.vim,  
src/testdir/test\_recover.vim

Patch 8.2.2974

Problem: Greek spell checking uses wrong case folding.  
Solution: Fold capital sigma depending on whether it is at the end of a word or not. (closes #299)  
Files: src/spell.c, src/proto/spell.pro, src/spellfile.c,  
src/spellsuggest.c

Patch 8.2.2975

Problem: Vim9: can only use an autoload function name as a string.  
Solution: Load the autoload script when encountered. (closes #8124)  
Files: src/vim9compile.c, src/evalvars.c, src/scriptfile.c,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.2976 (after 8.2.2975)

Problem: Build failure without the +eval feature.  
Solution: Add #ifdefs.  
Files: src/scriptfile.c

Patch 8.2.2977

Problem: Crash when using a null function reference. (Naohiro Ono)  
Solution: Check for an invalid function name. (closes #8367)  
Files: src/eval.c, src/errors.h, src/testdir/test\_functions.vim

Patch 8.2.2978 (after 8.2.2977)

Problem: Warning for uninitialized variable.  
Solution: Set return value to FAIL.  
Files: src/eval.c

Patch 8.2.2979

Problem: Not all options code is covered by tests.  
Solution: Add more tests for options. (Yegappan Lakshmanan, closes #8369)  
Files: src/testdir/test\_edit.vim, src/testdir/test\_excmd.vim,  
src/testdir/test\_help.vim, src/testdir/test\_mksession.vim,  
src/testdir/test\_options.vim, src/testdir/test\_vartabs.vim,  
src/testdir/test\_window\_cmd.vim

Patch 8.2.2980

Problem: Popup window test is a bit flaky.  
Solution: Add a redraw command.  
Files: src/testdir/test\_popupwin.vim

Patch 8.2.2981

Problem: Recovery test is not run on big-endian systems.  
Solution: Make it work on big-endian systems. (James McCoy, closes #8368)  
Files: src/testdir/test\_recover.vim

Patch 8.2.2982

Problem: Vim9: future commands are not reserved yet.  
Solution: Add commands to be implemented later. Make "this" a reserved name.  
Files: runtime/doc/vim9.txt, src/ex\_cmds.h, src/ex\_cmdidxs.h, src/vim9script.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.2983

Problem: Vim9: an inline function requires specifying the return type.  
Solution: Make the return type optional.  
Files: src/eval.c, src/vim9compile.c, src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.2984 (after 8.2.2983)

Problem: Vim9: Test fails because of missing return statement.  
Solution: When type is unknown set type to void.  
Files: src/vim9compile.c

Patch 8.2.2985

Problem: Vim9: a compiled function cannot be debugged.  
Solution: Add initial debugging support.  
Files: src/vim9.h, src/vim9compile.c, src/proto/vim9compile.pro, src/vim.h, src/eval.c, src/vim9execute.c, src/userfunc.c, src/vim9type.c, src/testdir/test\_debugger.vim, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.2986

Problem: Build failure without the profile feature.  
Solution: Add #ifdef.  
Files: src/vim9compile.c

Patch 8.2.2987

Problem: Build failure with normal features.  
Solution: Remove #define.  
Files: src/vim9execute.c

Patch 8.2.2988

Problem: Vim9: debugger test fails.  
Solution: Get the debugger instructions when needed.  
Files: src/vim.h, src/vim9.h

Patch 8.2.2989

Problem: Vim9: memory leak when debugging a :def function.

Solution: Free the debug instructions.  
Files: src/vim9compile.c

#### Patch 8.2.2990

Problem: Jupyter Notebook files are not recognized.  
Solution: Recognize \*.ipynb. (closes #8375)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.2991

Problem: Vim9: no completion for :vim9 and :legacy.  
Solution: Expand argument as a command. (closes #8377)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

#### Patch 8.2.2992

Problem: Vim9: completion for :disassemble is incomplete.  
Solution: Recognize the "debug" and "profile" arguments.  
Files: src/cmdexpand.c, src/vim9execute.c, src/proto/vim9execute.pro,  
src/vim.h, src/testdir/test\_cmdline.vim

#### Patch 8.2.2993

Problem: **'fileencodings'** default value should depend on **'encoding'**. (Gary Johnson)  
Solution: When **'encoding'** is "utf-8" use a different default value for **'fileencodings'**.  
Files: src/mbyte.c, src/option.c, src/proto/option.pro,  
src/testdir/test\_options.vim

#### Patch 8.2.2994

Problem: Various code is not fully tested.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #8378)  
Files: src/testdir/test\_excmd.vim, src/testdir/test\_mapping.vim,  
src/testdir/test\_modeline.vim, src/testdir/test\_options.vim,  
src/testdir/test\_paste.vim, src/vim9compile.c

#### Patch 8.2.2995

Problem: Linker errors with dynamic Python 3.10.  
Solution: Add a couple of library entries. (Zdenek Dohnal, closes #8381,  
closes #8356)  
Files: src/if\_python3.c

#### Patch 8.2.2996

Problem: Vim9: when debugging cannot inspect local variables.  
Solution: Make local variables available when debugging.  
Files: src/vim9execute.c, src/proto/vim9execute.pro, src/vim9compile.c,  
src/vim9.h, src/debugger.c, src/testdir/test\_debugger.vim

#### Patch 8.2.2997 (after 8.2 2996)

Problem: Vim9: disassemble test fails.  
Solution: Adjust expected output.  
Files: src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.2998 (after 8.2 2996)

Problem: Vim9: disassemble test fails.  
Solution: Add missing call to lookup\_debug\_var().

Files: src/evalvars.c

Patch 8.2.2999

Problem: Balloon sometimes does not hide with GTK 3.

Solution: Also listen to GDK\_LEAVE\_NOTIFY. (Johannes Stezenbach)

Files: src/gui\_beval.c

Patch 8.2.3000

Problem: Vim9: warning for uninitialized variable.

Solution: Add initialization. (John Marriott)

Files: src/vim9compile.c

Patch 8.2.3001

Problem: Vim9: memory leak when compilation fails.

Solution: Free the list of variable names.

Files: src/vim9compile.c

Patch 8.2.3002

Problem: Vim doesn't abort on a fatal Tcl error.

Solution: Change emsg() to iemsg(). (Dominique Pellé, closes #8383)

Files: src/if\_tcl.c

Patch 8.2.3003

Problem: Vim9: closure compiled with wrong compile type.

Solution: Use COMPILE\_TYPE() when calling a function. (closes #8384)

Files: src/vim9execute.c, src/testdir/test\_debugger.vim

Patch 8.2.3004

Problem: Vim9: error for missing colon given while skipping.

Solution: Do not give the error when skipping. (closes #8385)

Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3005

Problem: Vim9: using a void value does not give a proper error message.

Solution: Give a clear error message. (closes #8387)

Files: src/typval.c, src/vim9compile.c, src/vim9.h, src/vim9execute.c,  
src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.3006

Problem: Crash when echoing a value very early. (Naruhiko Nishino)

Solution: Do not use a NUL to truncate the message, make a copy.  
(closes #8388)

Files: src/message.c, src/testdir/test\_startup.vim

Patch 8.2.3007 (after 8.2.3005)

Problem: Vim9: test for void value fails.

Solution: Adjust expected error. Do not make a copy of void.

Files: src/typval.c, src/testdir/test\_functions.vim

Patch 8.2.3008 (after 8.2.3006)

Problem: Startup test may hang.

Solution: Add quit command in the script.

Files: src/testdir/test\_startup.vim

Patch 8.2.3009 (after 8.2.3006)

Problem: Startup test may hang.  
Solution: Do not run the test in the GUI.  
Files: src/testdir/test\_startup.vim

Patch 8.2.3010

Problem: Not enough testing for viminfo code.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #8390)  
Files: src/register.c, src/testdir/test\_fileformat.vim,  
src/testdir/test\_smartindent.vim, src/testdir/test\_viminfo.vim

Patch 8.2.3011

Problem: Vim9: cannot get argument values during debugging.  
Solution: Lookup names in the list of arguments. Put debug instruction halfway for command.  
Files: src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_debugger.vim

Patch 8.2.3012

Problem: When **'rightleft'** is set the line number is sometimes drawn reversed.  
Solution: Adjust how space is handled. (Christian Brabandt, closes #8389, closes #8391)  
Files: src/drawline.c, src/testdir/test\_number.vim

Patch 8.2.3013

Problem: Vim: when debugging only the first line of a command using line continuation is displayed.  
Solution: Find the next command and concatenate lines until that one. (closes #8392)  
Files: src/vim9execute.c, src/testdir/test\_debugger.vim

Patch 8.2.3014

Problem: Coverity warns for freeing static string.  
Solution: Do not assign static string to pointer. (Dominique Pellé, closes #8397)  
Files: src/vim9execute.c

Patch 8.2.3015

Problem: Vim9: Assigning to @# requires a string. (Naohiro Ono)  
Solution: Accent a number or a string. (closes #8396)  
Files: src/vim9compile.c, src/vim9execute.c, src/globals.h,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.3016

Problem: Confusing error when expression is followed by comma.  
Solution: Give a different error for trailing text. (closes #8395)  
Files: src/eval.c, src/testdir/test\_let.vim,  
src/testdir/test\_eval\_stuff.vim, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_script.vim, src/testdir/test\_viminfo.vim,  
src/testdir/test\_vimscript.vim

Patch 8.2.3017

Problem: Vim9: debugger shows too many lines.  
Solution: Truncate at a comment, "enddef", etc. (closes #8392)  
Files: src/vim9execute.c, src/testdir/test\_debugger.vim

#### Patch 8.2.3018

Problem: Formatting using quickfixtextfunc is lost when updating location lists for different buffers. (Yorick Peterse)  
Solution: Use the right window for the location list. (Yegappan Lakshmanan, closes #8400, closes #8403)  
Files: src/quickfix.c, src/testdir/test\_quickfix.vim

#### Patch 8.2.3019

Problem: Location list only has the start position.  
Solution: Make it possible to add an end position. (thinca, closes #8393)  
Files: runtime/doc/eval.txt, src/quickfix.c,  
src/testdir/dumps/Test\_quickfix\_cwindow\_1.dump,  
src/testdir/dumps/Test\_quickfix\_cwindow\_2.dump,  
src/testdir/test\_quickfix.vim, src/testdir/test\_tagjump.vim,  
src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.3020

Problem: Unreachable code.  
Solution: Remove the code. (closes #8406)  
Files: src/ex\_docmd.c

#### Patch 8.2.3021

Problem: Spaces allowed between option name and "!", "?", etc.  
Solution: Disallow spaces in Vim9 script, it was not documented. (closes #8408)  
Files: src/option.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3022

Problem: Available encryption methods are not strong enough.  
Solution: Add initial support for xchacha20. (Christian Brabandt, closes #8394)  
Files: .github/workflows/ci.yml, runtime/doc/eval.txt,  
runtime/doc/options.txt, runtime/doc/various.txt,  
src/INSTALLpc.txt, src/Make\_cyg\_ming.mak, src/Make\_mvc.mak,  
src/auto/configure, src/blowfish.c, src/bufwrite.c,  
src/config.h.in, src/configure.ac, src/crypt.c, src/crypt\_zip.c,  
src/errors.h, src/evalfunc.c, src/feature.h, src/fileio.c,  
src/memline.c, src/option.c, src/optionstr.c,  
src/proto/blowfish.pro, src/proto/crypt.pro,  
src/proto/crypt\_zip.pro, src/structs.h,  
src/testdir/samples/crypt\_sodium\_invalid.txt,  
src/testdir/test\_crypt.vim, src/undo.c, src/version.c

#### Patch 8.2.3023

Problem: Vim9: arguments for execute() not checked at compile time.  
Solution: Add a function to check the argument types.  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3024 (after 8.2.3023)

Problem: execute() function test fails.

Solution: Adjust test for different error.  
Files: src/testdir/test\_execute\_func.vim

#### Patch 8.2.3025

Problem: Not enough tests for quickfix end\_col and end\_lnum.  
Solution: Add a few more test cases. (Shane-XB-Qian, closes #8409)  
Files: src/testdir/test\_quickfix.vim

#### Patch 8.2.3026

Problem: Vim9: cannot set breakpoint in compiled function.  
Solution: Check for breakpoint when calling a function.  
Files: src/vim9execute.c, src/structs.h, src/vim.h, src/vim9.h,  
src/debugger.c, src/testdir/test\_debugger.vim

#### Patch 8.2.3027

Problem: Vim9: breakpoint in compiled function not always checked.  
Solution: Check for breakpoint when calling compiled function from compiled function.  
Files: src/vim9execute.c, src/testdir/test\_debugger.vim

#### Patch 8.2.3028

Problem: GUI mouse events not tested.  
Solution: Add test\_gui\_mouse\_event(). Add mouse tests. Also add a few viminfo tests. (Yegappan Lakshmanan, closes #8407)  
Files: runtime/doc/eval.txt, runtime/doc/testing.txt,  
runtime/doc/usr\_41.txt, src/evalfunc.c, src/proto/testing.pro,  
src/testdir/test\_gui.vim, src/testdir/test\_viminfo.vim,  
src/testing.c

#### Patch 8.2.3029

Problem: Vim9: crash when using operator and list unpack assignment.  
(Naohiro Ono)  
Solution: Get variable value before operation. (closes #8416)  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c, src/ex\_docmd.c,  
src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.3030

Problem: Coverity reports a memory leak.  
Solution: Fix the leak and a few typos. (Dominique Pellé, closes #8418)  
Files: src/crypt.c, src/errors.h

#### Patch 8.2.3031

Problem: No error if a function name starts with an underscore. (Naohiro Ono)  
Solution: In Vim9 script disallow a function name starting with an underscore, as is mentioned in the help. (closes #8414)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3032

Problem: Build problems with MSVC, other crypt issues with libsodium.  
Solution: Adjust MSVC makefile. Disable swap file only when 'key' is set. Adjust error message used when key is wrong. Fix Coverity issues. (Christian Brabandt, closes #8420, closes #8411)

Files: src/Make\_mvc.mak, src/crypt.c, src/errors.h, src/fileio.c,  
src/memline.c, src/proto/crypt.pro

#### Patch 8.2.3033

Problem: No error when using alpha delimiter with :global.  
Solution: Check the delimiter like with :substitute. (closes #8415)  
Files: src/ex\_cmds.c, src/testdir/test\_global.vim

#### Patch 8.2.3034

Problem: Installing packages on github CI sometimes fails.  
Solution: Update package information first. (Christian Brabandt,  
closes #8432)  
Files: .github/workflows/ci.yml

#### Patch 8.2.3035

Problem: Vim9: crash when calling :def function with partial and return  
type is not set.  
Solution: When the return type is not set handle like the return type is  
unknown. (closes #8422)  
Files: src/vim9type.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3036

Problem: Vim9: builtin function arguments not checked at compile time.  
Solution: Add more argument type specs. Check arguments to test\_setmouse()  
and test\_gui\_mouse\_event(). (Yegappan Lakshmanan, closes #8425)  
Files: src/evalfunc.c, src/testdir/test\_assert.vim,  
src/testdir/test\_gui.vim, src/testdir/test\_popupwin.vim,  
src/testdir/test\_vim9\_builtin.vim, src/testing.c

#### Patch 8.2.3037

Problem: Configure reports libcanberra when checking for libsodium.  
Solution: Adjust the message. (Ozaki Kiichi, closes #8435)  
Files: src/configure.ac, src/auto/configure

#### Patch 8.2.3038

Problem: Amiga built-in version string doesn't include build date.  
Solution: Add the build date if available. (Ola Söder, closes #8437)  
Files: src/os\_amiga.c

#### Patch 8.2.3039

Problem: Vim9: breakpoint at a comment line does not work.  
Solution: Add the comment line number to the debug instruction.  
(closes #8429)  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_debugger.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.3040

Problem: GUI: dropping files not tested.  
Solution: Add test\_gui\_drop\_files() and tests. (Yegappan Lakshmanan,  
closes #8434)  
Files: runtime/doc/eval.txt, runtime/doc/testing.txt,  
runtime/doc/usr\_41.txt, src/evalfunc.c, src/gui.c,  
src/proto/testing.pro, src/testdir/test\_gui.vim, src/testing.c

Patch 8.2.3041

Problem: Detecting if the process of a swap file is running fails if the process is owned by another user.  
Solution: Check for the ESRCH error. (closes #8436)  
Files: src/os\_unix.c

Patch 8.2.3042 (after 8.2.3041)

Problem: Swap file test fails.  
Solution: Check for a very high process ID instead of one, which should be running.  
Files: src/testdir/test\_swap.vim

Patch 8.2.3043

Problem: Amiga: cannot get the shell size on MorphOS and AROS.  
Solution: Use control sequences. (Ola Söder, closes #8438)  
Files: src/os\_amiga.c

Patch 8.2.3044

Problem: Amiga MorphOS and AROS: process ID is not valid.  
Solution: Use FindTask to return something which is unique to all processes. (Ola Söder, closes #8444)  
Files: src/os\_amiga.c

Patch 8.2.3045

Problem: Minor typos.  
Solution: Fix the typos. (Christian Brabandt, closes #8441)  
Files: src/VisVim/README\_VisVim.txt, src/evalfunc.c, src/testdir/vim9.vim

Patch 8.2.3046

Problem: Amiga MorphOS: Term mode is set using DOS packets.  
Solution: Use the same way of setting term mode on all next gen Amiga-like systems. (Ola Söder, closes #8445)  
Files: src/os\_amiga.c

Patch 8.2.3047

Problem: Increment and decrement don't allow for next command.  
Solution: Allow for comment and next command. (closes #8442)  
Files: src/ex\_cmds.h, src/vim9script.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.3048

Problem: Strange error for white space after ++ command.  
Solution: Check for white space explicitly. (closes #8440)  
Files: src/vim9script.c, src/errors.h, src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.3049

Problem: JSON patch file not recognized.  
Solution: Recognize json-patch as json. (Kevin Locke, closes #8450)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3050

Problem: Cannot recognize elixir files.  
Solution: Recognize Elixir-specific files. Check if an .ex file is Euphoria

Files: or Elixir. (Austin Gatlin, closes #8401, closes #8446)  
runtime/autoload/dist/ft.vim, runtime/filetype.vim,  
src/testdir/test\_filetype.vim

#### Patch 8.2.3051

Problem: Vim9: for loop with one list variable does not work.  
Solution: Use a separate flag for unpacking a list. (closes #8452)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3052

Problem: Vim9: "legacy call" does not work.  
Solution: Do not skip "call" after "legacy". (closes #8454)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3053

Problem: Vim9: cannot assign to @@ in :def function  
Solution: Handle '@' like ''. (closes #8456)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.3054

Problem: Vim9: unpack assignment using "\_" after semicolon fails.  
Solution: Drop the expression result. (closes #8453)  
Files: src/vim9compile.c, src/errors.h, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.3055

Problem: Strange error for assigning to "x.key" on non-dictionary.  
Solution: Add a specific error message. (closes #8451)  
Files: src/eval.c, src/errors.h, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_listdict.vim, src/testdir/test\_let.vim

#### Patch 8.2.3056

Problem: Vim9: using default value in lambda gives confusing error.  
Solution: Pass "default\_args" on the first pass to get the arguments.  
(closes #8455)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3057

Problem: Vim9: debugger test fails with normal features and +terminal.  
(Dominique Pellé)  
Solution: Adjust the INSTRUCTIONS macro. (closes #8460)  
Files: src/vim9.h

#### Patch 8.2.3058 (after 8.2.3056)

Problem: Vim9: cannot use ternary operator in parentheses.  
Solution: Do not use "==" for a default argument value. (closes #8462)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3059 (after 8.2.3056)

Problem: Vim9: memory leak when using lambda.  
Solution: Do not store the default value strings when skipping.  
Files: src/userfunc.c

#### Patch 8.2.3060 (after 8.2.3056)

Problem: Vim9: cannot use ternary operator in parentheses.

Solution: Do not use "=~" for a default argument value. (closes #8462)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3061

Problem: Testing the shell option is incomplete and spread out.  
Solution: Move shell tests to one file and increase coverage. (Yegappan Lakshmanan, closes #8464)  
Files: src/testdir/Make\_all.mak, src/testdir/test\_functions.vim, src/testdir/test\_options.vim, src/testdir/test\_shell.vim, src/testdir/test\_system.vim

#### Patch 8.2.3062

Problem: Internal error when adding several text properties.  
Solution: Do not handle text properties when deleting a line for splitting a data block. (closes #8466)  
Files: src/structs.h, src/memline.c, src/testdir/test\_textprop.vim

#### Patch 8.2.3063

Problem: Crash when switching '**cryptmethod**' to xchacha20 with an existing undo file. (Martin Tournoij)  
Solution: Disable reading undo file when decoding can't be done inplace. (issue #8467)  
Files: src/fileio.c, src/bufwrite.c

#### Patch 8.2.3064

Problem: Vim9: in script cannot set item in uninitialized list.  
Solution: When a list is NULL allocate an empty one. (closes #8461)  
Files: src/eval.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.3065

Problem: Vim9: error when sourcing script twice and reusing a function name.  
Solution: Check if the function is dead. (closes #8463)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3066

Problem: Vim9: debugging lambda does not work.  
Solution: Use the compile type of the function when compiling a lambda. (closes #8412)  
Files: src/vim9compile.c, src/testdir/test\_debugger.vim

#### Patch 8.2.3067

Problem: Building fails with Athena. (Elimar Riesebieter)  
Solution: Adjust #ifdefs and add the 'drop\_file' feature.  
Files: src/evalfunc.c, src/testing.c, src/testdir/test\_gui.vim

#### Patch 8.2.3068

Problem: Unicode tables are slightly outdated.  
Solution: Update the tables for Unicode release 13. (Christian Brabandt closes #8430)  
Files: runtime/tools/unicode.vim, src/mbyte.c

#### Patch 8.2.3069

Problem: Error messages are spread out.

Solution: Move some error messages to errors.h. Use clearer names.  
Files: src/errors.h, src/globals.h, src/arglist.c, src/buffer.c,  
src/channel.c, src/eval.c, src/evalfunc.c, src/evalvars.c,  
src/evalwindow.c, src/ex\_cmds.c, src/ex\_docmd.c, src/ex\_getln.c,  
src/filepath.c, src/fold.c, src/getchar.c, src/indent.c,  
src/list.c, src/map.c, src/mark.c, src/normal.c, src/ops.c,  
src/optionstr.c, src/popupwin.c, src/quickfix.c, src/spellfile.c,  
src/textprop.c, src/typval.c, src/undo.c, src/userfunc.c,  
src/vim9compile.c, src/window.c

#### Patch 8.2.3070

Problem: Not enough testing for shell use.  
Solution: Add a bit more testing. (Yegappan Lakshmanan, closes #8469)  
Files: src/testdir/test\_shell.vim, src/testdir/test\_startup.vim

#### Patch 8.2.3071

Problem: Shell options are not set properly for PowerShell.  
Solution: Use better option defaults. (Mike Williams, closes #8459)  
Files: runtime/doc/eval.txt, runtime/doc/options.txt,  
runtime/doc/os\_dos.txt, src/fileio.c, src/misc2.c, src/option.c,  
src/os\_win32.c, src/testdir/test\_shell.vim

#### Patch 8.2.3072

Problem: The "zy" command does not work well when '**virtualedit**' is set to "block". (Johann Höchtl)  
Solution: Make endspaces zero. (Christian Brabandt, closes #8468, closes #8448)  
Files: src/register.c, src/testdir/test\_visual.vim

#### Patch 8.2.3073

Problem: When cursor is moved for block append wrong text is inserted.  
Solution: Calculate an offset. (Christian Brabandt, closes #8433, closes #8288)  
Files: src/ops.c, src/testdir/test\_blockedit.vim,  
src/testdir/test\_visual.vim

#### Patch 8.2.3074

Problem: popup\_atcursor() uses wrong position with concealing.  
Solution: Keep w\_wcol in conceal\_check\_cursor\_line(). (closes #8476)  
Files: src/screen.c, src/proto/screen.pro, src/normal.c, src/edit.c,  
src/ui.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_atcursor\_pos.dump

#### Patch 8.2.3075

Problem: Xxd always reports an old version string. (Åsmund Ervik)  
Solution: Update the version string with the last known change date. (Jürgen Weigert, closes #8475)  
Files: src/xxd/xxd.c, src/testdir/test\_xxd.vim

#### Patch 8.2.3076

Problem: Vim9: using try in catch block causes a hang.  
Solution: Save and restore the ec\_in\_catch flag. (closes #8478)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3077

Problem: Vim9: an error in a catch block is not reported.  
Solution: Put the "in catch" flag in the try stack. (closes #8478)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3078

Problem: Vim9: profile test fails.  
Solution: Make throw in :catch jump to :finally.  
Files: src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.3079

Problem: Powershell core not supported by default.  
Solution: Set option defaults for "pwsh". (Mike Williams, closes #8481)  
Files: runtime/doc/eval.txt, runtime/doc/options.txt,  
runtime/doc/os\_dos.txt, runtime/doc/os\_win32.txt, src/fileio.c,  
src/misc2.c, src/option.c, src/os\_win32.c,  
src/testdir/test\_shell.vim

Patch 8.2.3080

Problem: Recover test fails on 32bit systems. (Ondřej Súpup)  
Solution: Detect 32/64 bit systems. (Yegappan Lakshmanan, closes #8485,  
closes #8479)  
Files: src/testdir/test\_recover.vim

Patch 8.2.3081

Problem: Cannot catch errors in a channel command.  
Solution: Instead of skipping the error make it silent. (closes #8477)  
Files: src/channel.c

Patch 8.2.3082

Problem: A channel command "echoerr" does not show anything.  
Solution: Do not use silent errors when using an "echoerr" command.  
(closes #8494)  
Files: src/channel.c, src/testdir/test\_channel.py,  
src/testdir/test\_channel.vim

Patch 8.2.3083

Problem: Crash when passing null string to charclass().  
Solution: Bail out when string pointer is NULL. (Christian Brabandt,  
closes #8498, closes #8260)  
Files: src/mbyte.c, src/testdir/test\_functions.vim

Patch 8.2.3084

Problem: Vim9: builtin function argument types are not checked at compile  
time.  
Solution: Add argument types. (Yegappan Lakshmanan, closes #8503)  
Files: src/evalfunc.c, src/testdir/test\_functions.vim,  
src/testdir/test\_glob2regpat.vim,  
src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_expr.vim

Patch 8.2.3085

Problem: JSONC files are not recognized.  
Solution: Recognize .jsonc files. (Izhak Jakov, closes #8500)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3086

Problem: Vim9: breakpoint on "for" does not work.

Solution: Use the right line number in ISN\_DEBUG. (closes #8486)

Files: src/vim9compile.c, src/testdir/test\_debugger.vim

Patch 8.2.3087

Problem: Gemtext files are not recognized.

Solution: Recognize .gmi and .gemini files. (closes #8427)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3088

Problem: With '**virtualedit**' set to "block" Visual highlight is wrong after using "\$". (Marco Trosi)

Solution: Do not set w\_old\_cursor\_lcol to MAXCOL. (closes #8495)

Files: src/drawscreen.c, src/testdir/test\_visual.vim,  
src/testdir/dumps/Test\_visual\_block\_with\_virtualedit.dump

Patch 8.2.3089

Problem: Garbage collection has useless code.

Solution: Bail out when aborting. (closes #8504)

Files: src/userfunc.c

Patch 8.2.3090

Problem: With concealing enabled and indirectly closing a fold the cursor may be somewhere in a folded line.

Solution: Recompute the cursor position when the cursor line can be concealed. (closes #8480)

Files: src/drawscreen.c

Patch 8.2.3091

Problem: Vim9: default argument expression cannot use previous argument

Solution: Correct argument index. (closes #8496)

Files: src/vim9compile.c, src/structs.h, src/testdir/test\_vim9\_func.vim

Patch 8.2.3092

Problem: Vim9: builtin function test fails without the +channel feature.

Solution: Check the +channel feature is supported. (Dominique Pellé, closes #8507)

Files: runtime/doc/eval.txt, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3093

Problem: tablabel\_tooltip test fails with Athena. (Dominique Pellé)

Solution: Skip the test when using Athena. (closes #8508)

Files: src/testdir/test\_gui.vim, src/testdir/check.vim

Patch 8.2.3094

Problem: Test\_popup\_atcursor\_pos() fails without the conceal feature.

Solution: Add a check for the conceal feature. (Dominique Pellé, closes #8505)

Files: src/testdir/test\_popupwin.vim

Patch 8.2.3095 (after 8.2.3088)

Problem: With **'virtualedit'** set to "block" block selection is wrong after using "\$". (Marco Trosi)  
Solution: Compute the longest selected line. (closes #8495)  
Files: src/drawscreen.c, src/testdir/test\_visual.vim, src/testdir/dumps/Test\_visual\_block\_with\_virtualedit2.dump

#### Patch 8.2.3096

Problem: Temp files remain after running tests.  
Solution: Delete the right files. (Dominique Pellé, closes #8509)  
Files: src/testdir/test\_debugger.vim, src/testdir/test\_lambda.vim, src/testdir/test\_visual.vim

#### Patch 8.2.3097

Problem: Crash when using "quit" at recovery prompt and autocommands are triggered.  
Solution: Block autocommands when creating an empty buffer to use as the current buffer. (closes #8506)  
Files: src/buffer.c, src/testdir/test\_swap.vim

#### Patch 8.2.3098

Problem: Popup window test is flaky on MS-Windows with GUI.  
Solution: Skip the check in this situation.  
Files: src/testdir/test\_popupwin.vim

#### Patch 8.2.3099

Problem: Vim9: missing catch/finally not reported at script level.  
Solution: Give an error. (closes #8487)  
Files: src/structs.h, src/ex\_eval.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3100

Problem: Vim9: no error when using type with unknown number of arguments.  
Solution: Do not ignore argument count of -1. (closes #8492)  
Files: src/vim9type.c, src/evalfunc.c, src/proto/evalfunc.pro, src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3101

Problem: Missing function prototype for vim\_round().  
Solution: Add the prototype.  
Files: src/proto/float.pro

#### Patch 8.2.3102 (after 8.2.3097)

Problem: Test for crash fix does not fail without the fix.  
Solution: Adjust the test sequence. (closes #8506)  
Files: src/testdir/test\_swap.vim

#### Patch 8.2.3103 (after 8.2.3102)

Problem: Swap test may fail on some systems when jobs take longer to exit.  
Solution: Use different file names.  
Files: src/testdir/test\_swap.vim

#### Patch 8.2.3104

Problem: Vim9: unspecified function type causes type error.

Solution: Don't check type when min\_argcount is negative. (issue #8492)  
Files: src/globals.h, src/vim9type.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.3105

Problem: Vim9: type of partial is wrong when it has arguments.  
Solution: Subtract arguments from the count. (issue #8492)  
Files: src/vim9type.c, src/userfunc.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.3106

Problem: Vim9: confusing line number reported for error.  
Solution: Use the start line number for the store instruction.  
(closes #8488)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.3107

Problem: Vim9: error for arguments while type didn't specify arguments.  
Solution: Do not update that type to check when no argument count is specified. (closes #8492)  
Files: src/userfunc.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.3108

Problem: Test for remote\_foreground() fails. (Elimar Riesebieter)  
Solution: Check that \$DISPLAY is set. (Christian Brabandt)  
Files: src/testdir/check.vim, src/testdir/test\_clientserver.vim,  
src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3109

Problem: Check for \$DISPLAY never fails.  
Solution: Use eval().  
Files: src/testdir/check.vim

#### Patch 8.2.3110

Problem: A pattern that matches the cursor position is a bit complicated.  
Solution: Use a dot to indicate the cursor line and column. (Christian Brabandt, closes #8497, closes #8179)  
Files: runtime/doc/pattern.txt, src/errors.h, src/regexp\_bt.c,  
src/regexp\_nfa.c, src/testdir/test\_regexp\_latin.vim

#### Patch 8.2.3111

Problem: Vim9: confusing error with extra whitespace before colon.  
Solution: Check for colon after white space. (closes #8513)  
Files: src/eval.c, src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3112 (after 8.2.3090)

Problem: With concealing enabled and indirectly closing a fold the cursor may be somewhere in a folded line when it is not on the first line of the fold.  
Solution: Check if the cursor is somewhere in the folded text.  
Files: src/drawscreen.c

#### Patch 8.2.3113

Problem: No error when for loop variable shadows script variable.  
Solution: Check for the error. (closes #8512)  
Files: src/eval.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3114

Problem: Amiga-like systems: build error checking for running process  
Solution: Only build swapfile\_process\_running() on systems where it is actually used. (Ola Söder, closes #8519)  
Files: src/memline.c

Patch 8.2.3115

Problem: Coverity complains about free\_wininfo() use.  
Solution: Add a condition that "wip2" is not equal to "wip". (Neovim #14996)  
Files: src/window.c

Patch 8.2.3116

Problem: Vim9: crash when debugging a function with line continuation.  
Solution: Check for a NULL pointer. (closes #8521)  
Files: src/vim9execute.c, src/testdir/test\_debugger.vim

Patch 8.2.3117

Problem: Vim9: type not properly checked in for loop.  
Solution: Have items() return a list of lists. Add runtime type checks. (closes #8515)  
Files: src/evalfunc.c, src/globals.h, src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3118

Problem: Vim9: "any" type not handled correctly in for loop.  
Solution: Change compile time check into runtime check. (closes #8516)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3119

Problem: Compiler warning for unused argument.  
Solution: Add UNUSED.  
Files: src/evalfunc.c

Patch 8.2.3120

Problem: Crypt with sodium test fails on MS-Windows.  
Solution: Make the tests pass. (closes #8428)  
Files: src/testdir/test\_crypt.vim

Patch 8.2.3121

Problem: **'listchars'** "exceeds" character appears in foldcolumn. Window separator is missing. (Leonid V. Fedorenchik)  
Solution: Only draw the "exceeds" character in the text area. Break the loop when not drawing the text. (closes #8524)  
Files: src/drawline.c, src/testdir/test\_listchars.vim, src/testdir/dumps/Test\_listchars\_01.dump, src/testdir/dumps/Test\_listchars\_02.dump, src/testdir/dumps/Test\_listchars\_03.dump, src/testdir/dumps/Test\_listchars\_04.dump, src/testdir/dumps/Test\_listchars\_05.dump

Patch 8.2.3122

Problem: With **'nowrap'** cursor position is unexpected in narrow window. (Leonid V. Fedorenchik)

Solution: Put cursor on the last non-empty line. (closes #8525)  
Files: src/move.c, src/testdir/test\_listchars.vim,  
src/testdir/dumps/Test\_listchars\_06.dump,  
src/testdir/dumps/Test\_listchars\_07.dump

#### Patch 8.2.3123

Problem: Vim9: confusing error when using white space after option, before one of "!&<".  
Solution: Give a specific error. (issue #8408)  
Files: src/errors.h, src/option.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3124

Problem: Vim9: no error for white space between option and "=9".  
Solution: Check for extraneous white space. (issue #8408)  
Files: src/option.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3125

Problem: Variables are set but not used.  
Solution: Move the declarations to the block where they are used. (closes #8527)  
Files: src/regexp\_nfa.c

#### Patch 8.2.3126

Problem: Vim9: for loop error reports wrong line number.  
Solution: Save and restore the line number when evaluating the expression. (closes #8514)  
Files: src/ex\_eval.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3127

Problem: Vim9: no error when adding number to list of string.  
Solution: Check the value type. (closes #8529)  
Files: src/list.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3128

Problem: Vim9: uninitialized list does not get type checked.  
Solution: Set the type when initializing the variable. (closes #8529)  
Files: src/eval.c, src/evalvars.c, src/vim9script.c,  
src/userfunc.c, src/proto/vim9script.pro,  
src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3129

Problem: Vim9: imported uninitialized list does not get type checked.  
Solution: Get type from imported variable.  
Files: src/eval.c, src/evalvars.c, src/vim9script.c,  
src/proto/vim9script.pro, src/userfunc.c,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3130

Problem: Vim9: import test fails.  
Solution: Rename directory back to "import", use "p" to avoid an error when the directory already exists.  
Files: src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3131

Problem: MS-Windows: ipv6 channel test is very flaky in the GUI.  
Solution: Skip the test.  
Files: src/testdir/test\_channel.vim

#### Patch 8.2.3132

Problem: Compiler warns for size\_t to colnr\_T conversion. (Randall W. Morris)  
Solution: Add a type cast.  
Files: src/drawscreen.c

#### Patch 8.2.3133

Problem: Vim9: memory leak when add() fails.  
Solution: Allocate listitem\_T after type check.  
Files: src/list.c

#### Patch 8.2.3134

Problem: Crash when using typename() on a function reference. (Naohiro Ono)  
Solution: Initialize pointer to NULL. (closes #8531)  
Files: src/vim9type.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3135

Problem: Vim9: builtin function arguments not checked at compile time.  
Solution: Add more type checks. (Yegappan Lakshmanan, closes #8539)  
Files: src/channel.c, src/errors.h, src/evalfunc.c, src/proto/typval.pro, src/terminal.c, src/testdir/test\_search.vim, src/testdir/test\_textprop.vim, src/testdir/test\_vim9\_builtin.vim, src/testing.c, src/textprop.c, src/typval.c

#### Patch 8.2.3136

Problem: No test for E187 and "No swap file".  
Solution: Add a test. (Dominique Pellé, closes #8540)  
Files: src/testdir/test\_cd.vim, src/testdir/test\_swap.vim

#### Patch 8.2.3137

Problem: Vim9: no error when a line only has a variable name.  
Solution: Give an error when an expression is evaluated without an effect. (closes #8538)  
Files: src/ex\_eval.c, src/errors.h, src/vim9compile.c, src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3138 (after 8.2.3137)

Problem: Debugger test fails.  
Solution: Adjust eval command.  
Files: src/testdir/test\_debugger.vim

#### Patch 8.2.3139

Problem: Functions for string manipulation are spread out.  
Solution: Move string related functions to a new source file. (Yegappan Lakshmanan, closes #8470)  
Files: Filelist, src/Make\_ami.mak, src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/README.md, src/eval.c, src/evalfunc.c, src/mbyte.c, src/misc1.c, src/misc2.c, src/proto.h, src/proto/eval.pro, src/proto/evalfunc.pro,

src/proto/mbyte.pro, src/proto/misc1.pro, src/proto/misc2.pro,  
src/proto/strings.pro, src/strings.c

Patch 8.2.3140 (after 8.2.3131)

Problem: MS-Windows: ipv6 channel test is very flaky also without the GUI.  
Solution: Skip the test also without the GUI.  
Files: src/testdir/test\_channel.vim

Patch 8.2.3141

Problem: No error when using :complete for :command without -nargs.  
Solution: Give an error. (Martin Tournoij, closes #8544, closes #8541)  
Files: src/usercmd.c, src/errors.h, src/testdir/test\_usercommands.vim

Patch 8.2.3142

Problem: Vim9: type check for has\_key() argument is too strict.  
Solution: Also allow for a number key argument. (closes #8542)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3143

Problem: Vim9: A lambda may be compiled with the wrong context if it is  
called from a profiled function.  
Solution: Compile the lambda with and without profiling. (closes #8543)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3144

Problem: Vim9: no error when using an invalid value for a line number.  
Solution: Give an error if the string value is not recognized.  
(closes #8536)  
Files: src/errors.h, src/eval.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3145

Problem: Vim9: profile test fails without profile feature.  
Solution: Check the profile feature is present.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.3146

Problem: Vim9: line number wrong for :execute argument.  
Solution: Use the line number of the :execute command itself. (closes #8537)  
Files: src/eval.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3147

Problem: Vim9: profiling does not work with a nested function.  
Solution: Also compile a nested function without profiling. (closes #8543)  
Handle that compiling may cause the table of compiled functions to  
change.  
Files: src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.3148

Problem: Vim9: function arg type check does not handle base offset.  
Solution: Take the base offset into account when checking builtin function  
argument types.  
Files: src/evalfunc.c, src/vim9compile.c,  
src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3149 (after 8.2.3141)

Problem: Some plugins have a problem with the error check for using  
:command with -complete but without -nargs.

Solution: In legacy script only give a warning message.

Files: src/usercmd.c, src/message.c, src/proto/message.pro,  
src/testdir/test\_usercommands.vim

Patch 8.2.3150

Problem: Vim9: argument types are not checked at compile time.

Solution: Add more type checks. (Yegappan Lakshmanan, closes #8545)

Files: src/evalfunc.c, src/testing.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3151

Problem: Vim9: profiling fails if nested function is also profiled.

Solution: Use the compile type from the outer function. (closes #8543)

Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3152

Problem: Vim9: accessing "s:" results in an error.

Solution: Do not try to lookup a script variable for "s:". (closes #8549)

Files: src/evalvars.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.3153

Problem: URLs with a dash in the scheme are not recognized.

Solution: Allow for a scheme with a dash, but not at the start or end.  
(Tsuyoshi CHO, closes #8299)

Files: src/misc1.c, src/testdir/test\_buffer.vim

Patch 8.2.3154

Problem: Vim9: some type checks for builtin functions fail.

Solution: Correct the type checks. (Yegappan Lakshmanan, closes #8551,  
closes #8550)

Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3155

Problem: Some option related code not covered by tests.

Solution: Add a few test cases. (Dominique Pellé, closes #8552)

Files: src/testdir/test\_options.vim, src/testdir/test\_set.vim

Patch 8.2.3156

Problem: Vim9: term\_getansicolors() test fails without +termguicolors.

Solution: Add a check for the feature. (Dominique Pellé, closes #8555)

Files: src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3157

Problem: Crypt test may fail on MS-Windows.

Solution: Ignore "[unix]" in the file message. (Christian Brabandt,  
closes #8561)

Files: src/testdir/test\_crypt.vim

Patch 8.2.3158

Problem: Strange error message when using islocked() with a number.  
(Yegappan Lakshmanan)

Solution: Check that the name is empty.  
Files: src/evalfunc.c, src/testdir/test\_functions.vim

#### Patch 8.2.3159

Problem: Cursor displayed in wrong position after deleting line.  
Solution: When deleting lines do not approximate botline. (fixes #8559)  
Files: src/change.c

#### Patch 8.2.3160

Problem: **'breakindent'** does not work well for bulleted and numbered lists.  
Solution: Add the "list" entry to **'breakindentopt'**. (Christian Brabandt, closes #8564, closes #1661)  
Files: runtime/doc/options.txt, src/indent.c, src/structs.h, src/testdir/test\_breakindent.vim

#### Patch 8.2.3161

Problem: Vim9: no error when reltime() has invalid arguments.  
Solution: Add an error. (closes #8562)  
Files: src/time.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3162

Problem: Vim9: argument types are not checked at compile time.  
Solution: Add more type checks. (Yegappan Lakshmanan, closes #8560)  
Files: runtime/doc/channel.txt, src/clientserver.c, src/cmdhist.c, src/errors.h, src/evalfunc.c, src/evalwindow.c, src/filepath.c, src/globals.h, src/popupwin.c, src/proto/typval.pro, src/sign.c, src/strings.c, src/terminal.c, src/testdir/test\_normal.vim, src/testdir/test\_reftime.vim, src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_expr.vim, src/testing.c, src/textprop.c, src/time.c, src/typval.c

#### Patch 8.2.3163

Problem: Location list window may open a wrong file.  
Solution: Also update the qf\_ptr field. (Wei-Chung Wen, closes #8565, closes #8566)  
Files: src/quickfix.c, src/testdir/test\_quickfix.vim

#### Patch 8.2.3164

Problem: MS-Windows: reported version lacks patchlevel, causing some update tools to update too often. (Klaus Frank)  
Solution: Add the patchlevel to the version. (Christian Brabandt)  
Files: src/dosinst.c

#### Patch 8.2.3165

Problem: Vim9: in a || expression the error line number may be wrong.  
Solution: Save and restore the line number when checking the type. (closes #8569)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.3166

Problem: Vim9: nested autoload call error overruled by "Unknown error".  
Solution: Check need\_rethrow before giving an "Unknown error". (closes #8568)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3167

Problem: Get E12 in a job callback when searching for tags. (Andy Stewart)  
Solution: Use the sandbox only for executing a command, not for searching.  
(closes #8511)  
Files: src/tag.c

Patch 8.2.3168

Problem: Vim9: type error for constant of type any.  
Solution: Do add a runtime type check if a constant has type any.  
(closes #8570)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.3169

Problem: Vim9: cannot handle nested inline function.  
Solution: Check for nested inline function. (closes #8575)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.3170

Problem: Illegal memory access in test.  
Solution: Check pointer is not before the start of the line.  
Files: src/userfunc.c

Patch 8.2.3171

Problem: Another illegal memory access in test.  
Solution: Check pointer is after the start of the line.  
Files: src/userfunc.c

Patch 8.2.3172

Problem: MzScheme test fails. (Christian Brabandt)  
Solution: Correct function name.  
Files: src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3173

Problem: Vim9: argument types are not checked at compile time.  
Solution: Add more type checks. (Yegappan Lakshmanan, closes #8581)  
Files: src/diff.c, src/errors.h, src/evalfunc.c, src/globals.h,  
src/job.c, src/proto/typval.pro, src/strings.c, src/terminal.c,  
src/testdir/test\_vim9\_builtin.vim, src/typval.c

Patch 8.2.3174

Problem: Vim9: "legacy undo" finds "undo" variable.  
Solution: Do not pass lookup function to find\_ex\_command(). (closes #8563)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.3175

Problem: Vim9: using illegal pointer with inline function inside a lambda.  
Solution: Clear eval\_tofree\_cmdline when advancing to the next line.  
(closes #8578)  
Files: src/eval.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.3176

Problem: Vim9: no type error for comparing number with string.

Solution: Add a runtime type check. (closes #8571)  
Files: src/typval.c, src/errors.h, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.3177

Problem: Vim9: can not use "for \_ in expr" at script level.  
Solution: Skip assignment if the loop variable is "\_".  
Files: src/eval.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3178

Problem: Vim9: the file name of an :import cannot be an expression.  
Solution: Accept an expression that results in a string. Do not support :import in a function.  
Files: runtime/doc/vim9.txt, src/vim9script.c, src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3179

Problem: Vim9: cannot assign to an imported variable at script level.  
Solution: Lookup imported items when assigning.  
Files: src/evalvars.c, src/errors.h, src/eval.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3180

Problem: Vim9: memory leak when concatenating to an imported string.  
Solution: Clear the destination.  
Files: src/evalvars.c

#### Patch 8.2.3181

Problem: Vim9: builtin function test fails without channel feature.  
Solution: Add feature checks. (Dominique Pellé, closes #8586) Make feature checks more consistent.  
Files: src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3182

Problem: Vim9: crash when using removing items from a constant list. (Yegappan Lakshmanan)  
Solution: When a list was allocated with items copy them.  
Files: src/list.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3183

Problem: Duplicate error numbers.  
Solution: Adjust the error numbers.  
Files: src/errors.h, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3184

Problem: Cannot add a digraph with a leading space. It is not easy to list existing digraphs.  
Solution: Add setdigraph(), setdigraphlist(), getdigraph() and getdigraphlist(). (closes #8580)  
Files: runtime/doc/digraph.txt, runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/digraph.c, src/evalfunc.c, src/ex\_docmd.c, src/globals.h, src/errors.h, src/proto/digraph.pro, src/testdir/test\_digraph.vim

#### Patch 8.2.3185

Problem: Vim9: start of inline function found in comment line.  
Solution: Do not check for inline function in comment line. (closes #8589)  
Files: src/userfunc.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.3186

Problem: Vim9: not all failures for import tested  
Solution: Test more import failures  
Files: src/errors.h, src/evalvars.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3187

Problem: Vim9: popup timer callback is not compiled.  
Solution: Compile the callback when creating the timer.  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/popupwin.c

#### Patch 8.2.3188

Problem: Vim9: argument types are not checked at compile time.  
Solution: Add several more type checks, also at runtime. (Yegappan Lakshmanan, closes #8587)  
Files: src/blob.c, src/channel.c, src/clientserver.c, src/cmdexpand.c, src/cmdhist.c, src/dict.c, src/diff.c, src/errors.h, src/eval.c, src/evalbuffer.c, src/evalfunc.c, src/evalvars.c, src/evalwindow.c, src/filepath.c, src/globals.h, src/insexpand.c, src/job.c, src/list.c, src/map.c, src/match.c, src/proto/typval.pro, src/quickfix.c, src/search.c, src/sign.c, src/strings.c, src/terminal.c, src/testdir/test\_blob.vim, src/testdir/test\_gui.vim, src/testdir/test\_vim9\_builtin.vim, src/testing.c, src/textprop.c, src/time.c, src/typval.c

#### Patch 8.2.3189

Problem: Vim9: error when using "try|".  
Solution: Allow for "|" right after a command.  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3190

Problem: Error messages are spread out.  
Solution: Move error messages to errors.h and give them a clear name.  
Files: src/globals.h, src/errors.h, src/buffer.c, src/debugger.c, src/digraph.c, src/edit.c, src/ex\_cmds.c, src/ex\_cmds2.c, src/ex\_docmd.c, src/ex\_eval.c, src/gui.c, src/list.c, src/main.c, src/map.c, src/match.c, src/quickfix.c, src/regexp.c, src/regexp\_bt.c, src/regexp\_nfa.c, src/register.c, src/search.c, src/session.c, src/spell.c, src/syntax.c, src/time.c, src/userfunc.c, src/vim9execute.c, src/window.c

#### Patch 8.2.3191

Problem: Vim9: not enough code is tested.  
Solution: Use CheckLegacyAndVim9Success() in more places. Fix uncovered problems.  
Files: src/vim9compile.c, src/vim9execute.c, src/testdir/test\_listdict.vim

#### Patch 8.2.3192 (after 8.2.3190)

Problem: Build failure with small version (Tony Mechelynck).  
Solution: Remove stray #ifdef.

Files: src/errors.h

Patch 8.2.3193

Problem: screenpos() is wrong when the last line is partially visible and **'display'** is "lastline".

Solution: Also compute the position for a partially visible line.  
(closes #8599)

Files: src/move.c, src/testdir/test\_cursor\_func.vim

Patch 8.2.3194

Problem: Vim9: argument types are not checked at compile time.

Solution: Add several more type checks, simplify some. (Yegappan Lakshmanan, closes #8598)

Files: src/diff.c, src/evalbuffer.c, src/evalfunc.c, src/job.c,  
src/proto/typval.pro, src/sign.c, src/terminal.c,  
src/testdir/test\_vim9\_builtin.vim, src/typval.c

Patch 8.2.3195

Problem: Vim9: unclear error when passing too many arguments to lambda.

Solution: Pass the expression itself instead of "[expression]".  
(closes #8604)

Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.3196

Problem: Vim9: bool expression with numbers only fails at runtime.

Solution: Check constant to be bool at compile time. (closes #8603)

Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.3197

Problem: Error messages are spread out.

Solution: Move a few more error messages to errors.h.

Files: src/globals.h, src/errors.h, src/edit.c, src/ex\_cmds.c,  
src/ex\_docmd.c, src/evalvars.c, src/option.c, src/quickfix.c,  
src/regexp\_bt.c, src/regexp\_nfa.c, src/regexp.c, src/undo.c,  
src/vim9compile.c, src/vim9script.c

Patch 8.2.3198

Problem: Cannot use **'formatlistpat'** for breakindent.

Solution: Use a negative list indent. (Maxim Kim, closes #8594)

Files: runtime/doc/options.txt, src/indent.c,  
src/testdir/test\_breakindent.vim

Patch 8.2.3199

Problem: Vim9: execution speed can be improved.

Solution: Make the break counter static.

Files: src/vim9execute.c

Patch 8.2.3200

Problem: Vim9: hard to guess where a type error is given.

Solution: Add the function name where possible. (closes #8608)

Files: src/dict.c, src/proto/dict.pro, src/eval.c, src/list.c,  
src/vim9compile.c, src/vim9execute.c, src/structs.h,  
src/vim9type.c, src/proto/vim9type.pro, src/if\_py\_both.h,  
src/errors.h, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3201 (after 8.2.3200)

Problem: Crash in test.  
Solution: Initialize "where".  
Files: src/eval.c, src/evalvars.c

Patch 8.2.3202

Problem: Vim9: tests are only executed for legacy script.  
Solution: Run more tests also for Vim9 script. Fix uncovered problems.  
Files: src/vim9execute.c, src/ex\_docmd.c, src/testdir/test\_listdict.vim

Patch 8.2.3203

Problem: Vim9: compiled string expression causes type error. (Yegappan Lakshmanan)  
Solution: Remove the string type from the stack.  
Files: src/vim9compile.c, src/evalfunc.c

Patch 8.2.3204

Problem: Display garbled when '**cursorline**' is set and lines wrap. (Gabriel Dupras)  
Solution: Avoid inserting lines twice. (closes #7255)  
Files: src/drawscreen.c, src/testdir/test\_cursorline.vim,  
src/testdir/dumps/Test\_cursorline\_redraw\_1.dump,  
src/testdir/dumps/Test\_cursorline\_redraw\_2.dump

Patch 8.2.3205

Problem: Coverity reports a null pointer dereference.  
Solution: Change the logic to avoid Coverity gets confused.  
Files: src/vim9compile.c

Patch 8.2.3206

Problem: Vim9: argument types are not checked at compile time.  
Solution: Add several more type checks. (Yegappan Lakshmanan, closes #8611)  
Files: runtime/doc/eval.txt, src/blob.c, src/cmdhist.c, src/dict.c,  
src/errors.h, src/evalfunc.c, src/filepath.c, src/globals.h,  
src/job.c, src/list.c, src/match.c, src/misc1.c, src/popupwin.c,  
src/proto/typval.pro, src/sign.c, src/terminal.c,  
src/testdir/test\_blob.vim, src/testdir/test\_vim9\_builtin.vim,  
src/typval.c

Patch 8.2.3207

Problem: Vim9: crash when compiling string fails. (Yegappan Lakshmanan)  
Solution: Adjust the type stack length.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3208

Problem: Dynamic library load error does not mention why it failed.  
Solution: Add the error message. (Martin Tournoij, closes #8621)  
Files: src/globals.h, src/if\_cscope.c, src/if\_lua.c, src/if\_mzsch.c,  
src/if\_perl.xs, src/if\_python.c, src/if\_python3.c, src/if\_ruby.c,  
src/if\_tcl.c, src/mbyte.c, src/os\_win32.c, src/proto/os\_win32.pro,  
src/terminal.c

Patch 8.2.3209

Problem: Vim9: lambda doesn't find block-local variable.  
Solution: Adjust how a script-local variable is found. (closes #8614)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3210

Problem: Vim9: searchpair() sixth argument is compiled. (Yegappan Lakshmanan)  
Solution: Only compile the fifth argument.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3211

Problem: Vim9: argument types are not checked at compile time.  
Solution: Add several more type checks. Fix type check for matchaddpos(). (Yegappan Lakshmanan, closes #8619)  
Files: src/channel.c, src/evalfunc.c, src/evalvars.c, src/if\_cscope.c, src/job.c, src/proto/typval.pro, src/testdir/test\_vim9\_builtin.vim, src/time.c, src/typval.c

#### Patch 8.2.3212

Problem: Vim9: execution speed can be improved.  
Solution: Use \_\_builtin\_expect() to have the compiler produce better code. (Dominique Pellé, closes #8613)  
Files: src/vim9execute.c

#### Patch 8.2.3213

Problem: NOCOMPOUNDSUGS entry in spell file not tested.  
Solution: Add a test. (Dominique Pellé, closes #8624)  
Files: src/testdir/test\_spellfile.vim

#### Patch 8.2.3214

Problem: MS-Windows: passing /D does not set the install location.  
Solution: Adjust how the installer uses \$VIM. Update the documentation. (Christian Brabandt, Ken Takata, closes #8605)  
Files: nsis/gvim.nsi, runtime/doc/os\_win32.txt

#### Patch 8.2.3215

Problem: Vim9: argument types are not checked at compile time.  
Solution: Add several more type checks. Sort the argument lists. (Yegappan Lakshmanan, closes #8626)  
Files: src/change.c, src/evalfunc.c, src/filepath.c, src/sound.c, src/testdir/test\_gui.vim, src/testdir/test\_vim9\_builtin.vim, src/testing.c

#### Patch 8.2.3216

Problem: Vim9: crash when using variable in a loop at script level.  
Solution: Do not clear the variable if a function was defined. Do not create a new entry in sn\_var\_vals every time. (closes #8628)  
Files: src/eval.c, src/ex\_eval.c, src/vim9script.c, src/userfunc.c, src/evalvars.c, src/structs.h

#### Patch 8.2.3217 (after 8.2.3216)

Problem: Build failure.  
Solution: Add missing changes.

Files: src/globals.h

#### Patch 8.2.3218

Problem: When using xchacha20 crypt undo file is not removed.

Solution: Reset **'undofile'** and delete the file. (Christian Brabandt, closes #8630, closes #8467)

Files: src/bufwrite.c, src/crypt.c, src/proto/undo.pro, src/testdir/test\_crypt.vim, src/undo.c

#### Patch 8.2.3219

Problem: :find searches non-existing directories.

Solution: Check the path is not "..". Update help. (Christian Brabandt, closes #8612, closes #8533)

Files: runtime/doc/editing.txt, src/findfile.c, src/testdir/test\_findfile.vim

#### Patch 8.2.3220

Problem: Test\_term\_setansicolors() fails in some configurations.

Solution: Check available features. (Dominique Pellé, closes #8636)

Files: src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3221

Problem: Vim9: argument types are not checked at compile time.

Solution: Add several more type checks. (Yegappan Lakshmanan, closes #8632)

Files: src/evalfunc.c, src/popupwin.c, src/proto/typval.pro, src/testdir/test\_assert.vim, src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_script.vim, src/testing.c, src/typval.c

#### Patch 8.2.3222

Problem: Vim9: cannot use loop variable later as lambda argument.

Solution: When not in function context check the current block ID. (closes #8637)

Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3223

Problem: Vim: using {} block in autoloading omnifunc fails.

Solution: Allow using {} block when text is locked. (closes #8631)

Files: src/ex\_cmds.h, src/testdir/test\_ins\_complete.vim

#### Patch 8.2.3224

Problem: Cannot call script-local function after :vim9cmd. (Christian J. Robinson)

Solution: Skip over "<SNR>123".

Files: src/vim9compile.c, src/eval.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.3225

Problem: Incsearch highlighting is attempted halfway a mapping.

Solution: Only do incsearch highlighting if keys were typed or there is no more typeahead.

Files: src/ex\_getln.c

#### Patch 8.2.3226

Problem: New digraph functions use old naming scheme.

Solution: Use the digraph\_ prefix. (Hirohito Higashi, closes #8642)

Files: runtime/doc/digraph.txt, runtime/doc/eval.txt,  
runtime/doc/usr\_41.txt, src/digraph.c, src/edit.c, src/errors.h,  
src/evalfunc.c, src/proto/digraph.pro,  
src/testdir/test\_digraph.vim

#### Patch 8.2.3227

Problem: **'virtualedit'** can only be set globally.  
Solution: Make **'virtualedit'** global-local. (Gary Johnson, closes #8638)  
Files: runtime/doc/options.txt, src/buffer.c, src/change.c,  
src/drawscreen.c, src/edit.c, src/misc2.c, src/normal.c,  
src/ops.c, src/option.c, src/option.h, src/optiondefs.h,  
src/optionstr.c, src/proto/option.pro, src/register.c,  
src/structs.h, src/testdir/test\_virtualedit.vim

#### Patch 8.2.3228

Problem: Cannot use a simple block for the :command argument. (Maarten Tournouij)  
Solution: Recognize a simple {} block. (issue #8623)  
Files: runtime/doc/map.txt, src/misc2.c, src/proto/misc2.pro,  
src/usercmd.c, src/testdir/test\_usercommands.vim

#### Patch 8.2.3229

Problem: Vim9: runtime and compile time type checks are not the same.  
Solution: Add more runtime type checks for builtin functions. (Yegappan Lakshmanan, closes #8646)  
Files: src/arglist.c, src/change.c, src/channel.c, src/cindent.c,  
src/clientserver.c, src/cmdhist.c, src/dict.c, src/diff.c,

src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_script.vim, src/testing.c, src/textprop.c,  
src/time.c, src/typval.c, src/undo.c

#### Patch 8.2.3230

Problem: Vim9: type error when function return type is not known yet.  
Solution: When return type is unknown, use "any". (closes #8644)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3231

Problem: Build failure with small features.  
Solution: Adjust #ifdef.  
Files: src/errors.h

#### Patch 8.2.3232 (after 8.2.3229)

Problem: system() does not work without a second argument.  
Solution: Do not require a second argument. (Yegappan Lakshmanan, closes #8651, closes #8650)  
Files: src/misc1.c, src/proto/typval.pro, src/testdir/test\_vim9\_builtin.vim, src/typval.c

#### Patch 8.2.3233

Problem: prop\_list() and prop\_find() do not indicate the buffer for the used type.  
Solution: Add "type\_bufnr" to the results. (closes #8647)  
Files: runtime/doc/textprop.txt, src/testdir/test\_textprop.vim, src/textprop.c

#### Patch 8.2.3234

Problem: Crash when printing long string with Lua.  
Solution: Remove lua\_pop(). (Martin Tournoij, closes #8648)  
Files: src/if\_lua.c, src/testdir/test\_lua.vim

#### Patch 8.2.3235

Problem: Cannot use lambda in {} block in user command. (Martin Tournoij)  
Solution: Do not go over the end of the lambda.  
Files: src/userfunc.c, src/testdir/test\_usercommands.vim

#### Patch 8.2.3236

Problem: mode() does not indicate using **CTRL-O** in Select mode.  
Solution: Use "vs" and similar. (closes #8640)  
Files: runtime/doc/eval.txt, src/globals.h, src/misc1.c, src/normal.c, src/testdir/test\_functions.vim

#### Patch 8.2.3237

Problem: When a builtin function gives an error processing continues.  
Solution: In Vim9 script return FAIL in get\_func\_tv().  
Files: src/userfunc.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.3238

Problem: Vim9: error message does not indicate the location.  
Solution: Add the relevant text. (issue #8634)  
Files: src/errors.h, src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.3239

Problem: Vim9: no error using heredoc for a number variable.  
Solution: Add a type check. (closes #8627)  
Files: src/vim9compile.c, src/evalvars.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.3240

Problem: Lua print() does not work properly.  
Solution: Put back lua\_pop().  
Files: src/if\_lua.c, src/testdir/test\_lua.vim

#### Patch 8.2.3241

Problem: Vim9: memory leak when function reports an error.  
Solution: Clear the return value.  
Files: src/userfunc.c

Patch 8.2.3242

Problem: Vim9: valgrind reports leaks in builtin function test.  
Solution: Do not start a job.  
Files: src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3243

Problem: MS-Windows: the "edit with multiple Vim" choice is not that useful.  
Solution: Change it to "Edit with multiple tabs". (Michael Soyka, closes #8645)  
Files: src/GvimExt/gvimext.cpp, src/GvimExt/gvimext.h

Patch 8.2.3244

Problem: Lua 5.3 print() with a long string crashes.  
Solution: Use a growarray instead of a Lua buffer. (Yegappan Lakshmanan, closes #8655)  
Files: src/if\_lua.c, src/misc2.c, src/proto/misc2.pro

Patch 8.2.3245

Problem: The crypt key may appear in a swap partition.  
Solution: When using xchacha20 use sodium\_mlock(). (Christian Brabandt, closes #8657)  
Files: src/buffer.c, src/crypt.c, src/errors.h, src/fileio.c, src/memline.c, src/vim.h

Patch 8.2.3246

Problem: Memory use after free.  
Solution: When clearing a string option set the pointer to "empty\_option".  
Files: src/option.c

Patch 8.2.3247

Problem: Using uninitialized memory when checking for crypt method.  
Solution: Check the header length before using the salt and seed.  
Files: src/fileio.c

Patch 8.2.3248

Problem: Vim9: error message for wrong input uses wrong line number.  
Solution: Use the line number of the start of the command. (issue #8653)  
Files: src/vim9script.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3249

Problem: Vim9: error for re-imported function with default argument.  
Solution: Do not check argument type if it is still unknown. (closes #8653)  
Files: src/vim9type.c, src/proto/vim9type.pro, src/vim9script.c, src/vim.h, src/eval.c, src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3250

Problem: MS-Windows: cannot build with libsodium.  
Solution: Change FEAT\_SODIUM into HAVE\_SODIUM. (Christian Brabandt, closes #8668, closes #8663)  
Files: src/Make\_mvc.mak

Patch 8.2.3251

Problem: Listing builtin\_gui as an available terminal is confusing.  
Solution: Do not list builtin\_gui. (Christian Brabandt, closes #8669, closes #8661)  
Files: src/term.c, src/testdir/test\_termcodes.vim

Patch 8.2.3252

Problem: Duplicated code for adding buffer lines.  
Solution: Move code to a common function. Also move map functions to map.c. (Yegappan Lakshmanan, closes #8665)  
Files: src/evalbuffer.c, src/evalfunc.c, src/map.c, src/proto/map.pro

Patch 8.2.3253

Problem: Channel test fails randomly.  
Solution: Add a sleep after sending the "echoerr" command. (Michael Soyka)  
Files: src/testdir/test\_channel.vim, src/testdir/test\_channel.py

Patch 8.2.3254

Problem: win\_gettype() does not recognize a quickfix window.  
Solution: Add "quickfix" and "loclist". (Yegappan Lakshmanan, closes #8676)  
Files: runtime/doc/eval.txt, src/evalwindow.c, src/misc2.c, src/testdir/test\_quickfix.vim

Patch 8.2.3255

Problem: ci" finds following string but ci< and others don't.  
Solution: When not inside an object find the start. (Connor Lane Smit, closes #8670)  
Files: src/search.c, src/testdir/test\_textobjects.vim, src/textobject.c

Patch 8.2.3256

Problem: Executable test may fail on new Ubuntu system.  
Solution: Consider /usr/bin/cat and /bin/cat the same.  
Files: src/testdir/test\_functions.vim

Patch 8.2.3257

Problem: Calling prop\_find() with -1 for ID gives erroneous error. (Naohiro Ono)  
Solution: When passing -1 use -2. (closes #8674)  
Files: src/textprop.c, src/testdir/test\_textprop.vim

Patch 8.2.3258

Problem: Error messages have the wrong text.  
Solution: Adjust the error message.  
Files: src/errors.h, src/typval.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3259

Problem: When **'indentexpr'** causes an error the did\_throw flag may remain set.  
Solution: Reset did\_throw and show the error. (closes #8677)  
Files: src/indent.c, src/ex\_docmd.c, src/proto/ex\_docmd.pro

Patch 8.2.3260

Problem: Build failure with small features.  
Solution: Add #ifdef.

Files: src/ex\_docmd.c

Patch 8.2.3261

Problem: Vim9: when compiling repeat(123, N) return type is number.

Solution: Make return type a string. (closes #8664)

Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3262

Problem: Build failure when ABORT\_ON\_INTERNAL\_ERROR is defined.

Solution: Adjust how estack\_len\_before is used.

Files: src/ex\_docmd.c

Patch 8.2.3263

Problem: Vim9: "..=" does not accept same types as the ".." operator.

Solution: Convert value to string like ".." does. (issue #8664)

Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.3264 (after 8.2.3263)

Problem: Vim9: assign test fails.

Solution: Add missing change.

Files: src/eval.c

Patch 8.2.3265

Problem: Smartcase does not work correctly in very magic pattern.

Solution: Take the magicness into account when skipping over regexp items.  
(Christian Brabandt, closes #8682, closes #7845)

Files: src/search.c, src/testdir/test\_search.vim

Patch 8.2.3266

Problem: Vim9: assignment with two indexes may check next line.

Solution: Limit the number of lines to avoid checking the next line when  
assigning to a LHS subscript. (closes #8660)

Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.3267

Problem: Vim9: crash when disassembling a function that uses a deleted  
script variable.

Solution: Check the variable still exists. (closes #8683)

Files: src/vim9execute.c, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.3268

Problem: Cannot use a block with :autocmd like with :command.

Solution: Add support for a {} block after :autocmd. (closes #8620)

Files: runtime/doc/autocmd.txt, runtime/doc/map.txt, src/autocmd.c,  
src/proto/autocmd.pro, src/usercmd.c, src/proto/usercmd.pro,  
src/ex\_docmd.c, src/vim.h, src/testdir/test\_autocmd.vim

Patch 8.2.3269

Problem: Vim9: wrong argument check for partial. (Naohiro Ono)

Solution: Handle getting return type without arguments. Correct the minimal  
number of arguments for what is included in the partial.  
(closes #8667)

Files: src/evalfunc.c, src/vim9type.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.3270

Problem: prop\_find() finds property with ID -2.  
Solution: Use a separate flag to indicate an ID was specified. (issue #8674)  
Files: src/textprop.c

Patch 8.2.3271

Problem: Vim9: cannot use :command or :au with a block in a :def function.  
Solution: Recognize the start of the block.  
Files: src/userfunc.c, src/usercmd.c, src/ex\_docmd.c,  
src/proto/ex\_docmd.pro, src/vim9compile.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.3272

Problem: Cannot use id zero with prop\_find(). (Naohiro Ono)  
Solution: Also accept id zero.  
Files: src/textprop.c, src/testdir/test\_textprop.vim

Patch 8.2.3273

Problem: Autocmd test fails.  
Solution: Require white space before the "{" that starts a block.  
Files: src/userfunc.c

Patch 8.2.3274

Problem: Macro for printf format check can be simplified.  
Solution: Add ATTRIBUTE\_FORMAT\_PRINTF(). (Dominique Pellé, issue #8635)  
Files: src/channel.c, src/gui\_xim.c, src/if\_mzsch.c, src/nbdebug.c,  
src/nbdebug.h, src/netbeans.c, src/proto.h, src/term.c, src/vim.h,  
src/vim9execute.c

Patch 8.2.3275

Problem: Optimizer can use hints about ga\_grow() normally succeeding.  
Solution: Use GA\_GROW\_FAILS() and GA\_GROW\_OK() in several places. (Dominique Pellé, issue #8635)  
Files: src/arglist.c, src/macros.h, src/vim9execute.c, src/vim9compile.c

Patch 8.2.3276

Problem: Vim9: exists() can only be evaluated at runtime.  
Solution: Evaluate at compile time for option name literals. (closes #8437)  
Files: src/vim9compile.c, src/evalfunc.c, src/proto/evalfunc.pro,  
src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3277 (after 8.2.3276)

Problem: Vim9: compiled has() does not work properly.  
Solution: Fix check for has() vs exists().  
Files: src/vim9compile.c

Patch 8.2.3278

Problem: Vim9: error when adding 1 to float.  
Solution: Accept t\_number\_bool. (closes #8687)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.3279

Problem: Vim9: cannot use block in cmdline window.

Solution: Add EX\_CMDWIN to the CMD\_block flags. (closes #8689)  
Files: src/ex\_cmds.h, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.3280

Problem: **'virtualedit'** local to buffer is not the best solution.  
Solution: Make it window-local. (Gary Johnson, closes #8685)  
Files: runtime/doc/options.txt, src/buffer.c, src/drawscreen.c,  
src/ops.c, src/option.c, src/option.h, src/optionstr.c,  
src/structs.h, src/testdir/test\_virtualedit.vim

#### Patch 8.2.3281

Problem: Vim9: TODO items in tests can be taken care of.  
Solution: Update test for now working functionality. (closes #8694)  
Files: src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3282

Problem: Vim9: error about using -complete without -nargs is confusing.  
Solution: Change the wording.  
Files: src/usercmd.c, src/errors.h

#### Patch 8.2.3283

Problem: Julia filetype is not recognized  
Solution: Add filetype detection. (Christian Clason, closes #8700)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3284

Problem: No error for insert() or remove() changing a locked blob.  
Solution: Check a blob is not locked before changing it. (Sean Dewar,  
closes #8696)  
Files: src/blob.c, src/errors.h, src/eval.c, src/list.c,  
src/proto/blob.pro, src/testdir/test\_blob.vim,  
src/testdir/test\_eval\_stuff.vim

#### Patch 8.2.3285

Problem: Scdoc filetype is not recognized.  
Solution: Add filetype detection. (Gregory Anders, closes #8701)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3286

Problem: win\_enter\_ext() has too many boolean arguments.  
Solution: use one flags argument with defined values.  
Files: src/window.c

#### Patch 8.2.3287

Problem: Channel events not handled in BufEnter autocommand.  
Solution: Decrement dont\_parse\_messages earlier. (Tim Pope, closes #8697)  
Files: src/window.c, src/testdir/test\_channel.vim

#### Patch 8.2.3288

Problem: Cannot easily access namespace dictionaries from Lua.  
Solution: Add vim.g, vim.b, etc. (Yegappan Lakshmanan, closes #8693,  
from NeoVim)  
Files: runtime/doc/if\_lua.txt, src/if\_lua.c, src/testdir/test\_lua.vim

Patch 8.2.3289 (after 8.2.3287)

Problem: Compiler warning for unused variable with small features.

Solution: Rearrange #ifdefs.

Files: src/window.c

Patch 8.2.3290

Problem: Vim9: compiling dict may use pointer after free and leak memory on failure.

Solution: Pass a pointer to generate\_PUSHS(). (Zdenek Dohnal, closes #8699)

Files: src/vim9compile.c

Patch 8.2.3291

Problem: Coverity warns for not checking return value.

Solution: If dict\_add() fails give an error message.

Files: src/if\_lua.c, src/testdir/test\_lua.vim

Patch 8.2.3292

Problem: Underscore in very magic pattern causes a hang. Pattern with \V are case sensitive. (Yutao Yuan)

Solution: Adjust condition for magicness and advance pointer. (Christian Brabandt, closes #8707, closes #8704, closes #8705)

Files: src/search.c, src/testdir/test\_search.vim

Patch 8.2.3293

Problem: Finding completions may cause an endless loop.

Solution: Use a better way to check coming back where the search started. (Andy Gozas, closes #8672, closes #8671)

Files: src/insexpand.c, src/testdir/Make\_all.mak, src/testdir/test\_ins\_complete\_no\_halt.vim

Patch 8.2.3294

Problem: Lua: memory leak when adding dict item fails.

Solution: Free the typval and the dict item.

Files: src/if\_lua.c

Patch 8.2.3295

Problem: **'cursorline'** should not apply to **'breakindent'**.

Solution: Make **'cursorline'** apply to **'breakindent'** and **'showbreak'** consistently. (closes #8684)

Files: src/drawline.c, src/testdir/dumps/Test\_Xcursorline\_19.dump, src/testdir/dumps/Test\_Xcursorline\_20.dump, src/testdir/dumps/Test\_Xcursorline\_21.dump, src/testdir/dumps/Test\_Xcursorline\_22.dump, src/testdir/dumps/Test\_Xcursorline\_23.dump, src/testdir/dumps/Test\_Xcursorline\_24.dump, src/testdir/dumps/Test\_diff\_with\_cul\_bri\_01.dump, src/testdir/dumps/Test\_diff\_with\_cul\_bri\_02.dump, src/testdir/dumps/Test\_diff\_with\_cul\_bri\_03.dump, src/testdir/dumps/Test\_diff\_with\_cul\_bri\_04.dump, src/testdir/test\_cursorline.vim, src/testdir/test\_diffmode.vim

Patch 8.2.3296

Problem: Vim9: cannot add a number to a float.

Solution: Accept a number if the destination is a float. (closes #8703)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.3297

Problem: Cannot use all commands inside a {} block after :command and :autocmd.

Solution: Do consider \n to separate commands. (closes #8620)

Files: runtime/doc/map.txt, src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/ex\_eval.c, src/proto/ex\_eval.pro, src/eval.c, src/evalvars.c, src/ex\_cmds.c, src/syntax.c, src/userfunc.c, src/vim9compile.c, src/vim9script.c, src/errors.h, src/testdir/test\_autocmd.vim, src/testdir/test\_usercommands.vim

#### Patch 8.2.3298

Problem: Build failure with small features.

Solution: Add #ifdef.

Files: src/ex\_docmd.c

#### Patch 8.2.3299

Problem: Vim9: exists() does not handle much at compile time.

Solution: Handle variable names. (closes #8688)

Files: src/vim9compile.c, src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3300

Problem: Lua: can only execute one Vim command at a time. Not easy to get the Vim version.

Solution: Make vim.command() accept multiple lines. Add vim.version(). (Yegappan Lakshmanan, closes #8716)

Files: runtime/doc/if\_lua.txt, src/evalfunc.c, src/if\_lua.c, src/proto/evalfunc.pro, src/testdir/test\_lua.vim, src/testdir/test\_shell.vim

#### Patch 8.2.3301

Problem: Memory allocation functions don't have their own place.

Solution: Move memory allocation functions to alloc.c. (Yegappan Lakshmanan, closes #8717)

Files: Filelist, src/Make\_ami.mak, src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/README.md, src/alloc.c, src/misc2.c, src/proto.h, src/proto/alloc.pro, src/proto/misc2.pro

#### Patch 8.2.3302

Problem: Coverity is not run from github.

Solution: Add a coverity script. (James McCoy, closes #8714)

Files: .github/workflows/coverity.yml, Filelist

#### Patch 8.2.3303

Problem: Some structures could be smaller.

Solution: Rearrange members to reduce size. (Dominique Pellé, closes #8725)

Files: src/structs.h, src/vim9.h, src/vim9execute.c

#### Patch 8.2.3304

Problem: Popup window title with wide characters is truncated.

Solution: Use vim\_strsize() instead of MB\_CHARLEN(). (Naruhiko Nishino, closes #8721)

Files: src/popupwin.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_multibytetitle.dump

#### Patch 8.2.3305

Problem: Vim9: :finally in skipped block not handled correctly.

Solution: Check whether :finally is in a skipped block. (Naruhiko Nishino, closes #8724)

Files: src/ex\_eval.c, src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3306

Problem: Unexpected "No matching autocommands".

Solution: Do not give the message when aborting. Mention the arguments in the message. (closes #8690)

Files: src/autocmd.c,

#### Patch 8.2.3307

Problem: Vim9: :echoconsole cannot access local variables.

Solution: Handle like other :echo commands. (closes #8708)

Files: src/vim9compile.c, src/vim9.h, src/vim9execute.c,  
src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.3308

Problem: Vim9: no runtime check for argument type if a function only has varargs.

Solution: Also check argument types if uf\_va\_type is set. (closes #8715)

Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3309

Problem: Vim9: divide by zero causes a crash.

Solution: Give an error message. (closes #8727)

Files: src/vim9execute.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.3310

Problem: Vim9: unpack assignment does not mention source of type error.

Solution: Mention the argument number. (closes #8719)

Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.3311

Problem: Vim9: check for DO\_NOT\_FREE\_CNT is very slow.

Solution: Move to a separate function so it can be skipped by setting \$TEST\_SKIP\_PAT.

Files: src/testdir/test\_vim9\_expr.vim, src/testdir/runtest.vim

#### Patch 8.2.3312

Problem: Vim9: after "if false" line breaks in expression not skipped.

Solution: Do parse the expression. (closes #8723)

Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3313

Problem: Unused code in win\_exchange() and frame\_remove().

Solution: Remove the code. (closes #8728)  
Files: src/window.c

#### Patch 8.2.3314

Problem: Behavior of exists() in a :def function is unpredictable.  
Solution: Add exists\_compiled().  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/evalfunc.c,  
src/errors.h, src/vim9compile.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3315

Problem: Cannot use single quote in a float number for readability.  
Solution: Support single quotes like in numbers. (closes #8713)  
Files: src/typval.c, src/float.c, src/proto/float.pro, src/json.c,  
src/viminfo.c, src/testdir/test\_float\_func.vim

#### Patch 8.2.3316 (after 8.2.3315)

Problem: Float test fails.  
Solution: Add missing change.  
Files: src/evalfunc.c

#### Patch 8.2.3317

Problem: Vim9: No error for missing white space before return type.  
Solution: Check for white space. (closes #8733)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3318

Problem: Vim9: cannot ignore quotes in number at the command line.  
Solution: Use in\_vim9script() so that after ":vim9" quotes are ignored.  
Files: src/typval.c, src/testdir/test\_float\_func.vim

#### Patch 8.2.3319

Problem: Coverity action on github does not work.  
Solution: Remove undefined \$SRCDIR. (James McCoy, closes #8739)  
Files: .github/workflows/coverity.yml

#### Patch 8.2.3320

Problem: Some local functions are not static.  
Solution: Add "static". Move snprintf() related code to strings.c.  
(Yegappan Lakshmanan, closes #8734)  
Files: src/alloc.c, src/channel.c, src/dict.c, src/digraph.c, src/edit.c,  
src/ex\_docmd.c, src/getchar.c, src/job.c, src/list.c,  
src/message.c, src/profiler.c, src/proto/channel.pro,  
src/proto/dict.pro, src/proto/digraph.pro, src/proto/edit.pro,  
src/proto/ex\_docmd.pro, src/proto/getchar.pro, src/proto/job.pro,  
src/proto/list.pro, src/proto/profiler.pro, src/proto/spell.pro,  
src/proto/vim9compile.pro, src/proto/vim9script.pro,  
src/proto/vim9type.pro, src/spell.c, src/strings.c,  
src/vim9compile.c, src/vim9script.c, src/vim9type.c, src/window.c

#### Patch 8.2.3321

Problem: Some code is not tested.  
Solution: Add some more tests. (Dominique Pellé, closes #8735)  
Files: src/testdir/test\_excmd.vim, src/testdir/test\_writefile.vim

Patch 8.2.3322

Problem: Vim9: checking type of dict does not check member type.  
Solution: When getting the type of a typval use dv\_type and lv\_type.  
(closes #8732)  
Files: src/vim9type.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3323

Problem: Help tag for exists\_compiled() is wrong. (Maxim Kim)  
Solution: Adjust the help tag.  
Files: runtime/doc/eval.txt

Patch 8.2.3324

Problem: Vim9: Cannot use :silent with :endwhile.  
Solution: Allow for using the :silent modifier. (closes #8737)  
Files: src/ex\_eval.c, src/ex\_docmd.c, src/proto/ex\_docmd.pro,  
src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3325

Problem: Digraph test fails when LC\_ALL is set to "C".  
Solution: When restoring '**encoding**' set it to "utf-8". (closes #8742)  
Files: src/testdir/test\_digraph.vim

Patch 8.2.3326

Problem: Vim9: no error passing an empty list of the wrong type.  
Solution: Use ISN\_SETTYPE also for "list<any>". (closes #8732)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.3327

Problem: No check for sysconf() failing.  
Solution: If sysconf() fails use SIGSTKSZ for the signal stack size.  
(Zdenek Dohnal, closes #8743)  
Files: src/os\_unix.c

Patch 8.2.3328

Problem: Coverity error for not checking return value.  
Solution: Check value is not negative.  
Files: src/spellfile.c

Patch 8.2.3329

Problem: v\_lock not set when getting value of environment variable.  
Solution: Set v\_lock to zero.  
Files: src/typval.c

Patch 8.2.3330

Problem: Coverity reports using uninitialized field.  
Solution: Initialize the field early.  
Files: src/tag.c

Patch 8.2.3331

Problem: Coverity warns for using value without boundary check.  
Solution: Add a boundary check.  
Files: src/viminfo.c

Patch 8.2.3332

Problem: Vim9: cannot assign to range in list.  
Solution: Implement overwriting a list range.  
Files: src/vim9compile.c, src/vim9execute.c, src/list.c,  
src/proto/list.pro, src/eval.c, src/proto/eval.pro,  
src/testdir/test\_listdict.vim, src/testdir/test\_vim9\_assign.vim

Patch 8.2.3333

Problem: Vim9: not enough tests run with Vim9.  
Solution: Run a few more tests in Vim9 script and :def function.  
Files: src/testdir/test\_listdict.vim, src/testdir/vim9.vim

Patch 8.2.3334

Problem: Vim9: not enough tests run with Vim9.  
Solution: Run a few more tests in Vim9 script and :def function. Fix  
islocked(). Fix error for locking local variable.  
Files: src/evalfunc.c, src/vim9compile.c, src/testdir/test\_listdict.vim

Patch 8.2.3335

Problem: Vim9: not enough tests run with Vim9.  
Solution: Run a few more tests in Vim9 script and :def function. Fix that  
items(), keys() and values() return zero for a NULL dict.  
Make join() return an empty string for a NULL list. Make sort()  
return an empty list for a NULL list.  
Files: src/dict.c, src/list.c, src/testdir/test\_listdict.vim,  
src/testdir/vim9.vim

Patch 8.2.3336

Problem: Behavior of negative index in list change changed. (Naruhiko  
Nishino)  
Solution: Only change it for Vim9 script. (closes #8749)  
Files: src/list.c, src/testdir/test\_listdict.vim

Patch 8.2.3337

Problem: Completing "call g:" returns entries with just "g:". (Naohiro Ono)  
Solution: Skip empty strings returned by get\_user\_func\_name(). (closes #8753)  
Files: src/evalfunc.c, src/testdir/test\_cmdline.vim

Patch 8.2.3338

Problem: Vim9: no type check when assigning a list range. (Naohiro Ono)  
Solution: Check the member type. (closes #8750)  
Files: src/list.c, src/testdir/test\_listdict.vim

Patch 8.2.3339

Problem: Vim9: cannot lock a member in a local dict.  
Solution: Get the local dict from the stack and pass it to get\_lval().  
Files: src/eval.c, src/vim9execute.c, src/vim9compile.c, src/vim9.h,  
src/globals.h, src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.3340 (after 8.2.3339)

Problem: Accessing uninitialized pointer.  
Solution: Set pointer to NULL.  
Files: src/eval.c

Patch 8.2.3341

Problem: Vim9: function call aborted despite try/catch. (Naohiro Ono)  
Solution: Ignore error caught by try/catch. (closes #8755)  
Files: src/evalvars.c, src/vim9execute.c, src/message.c, src/time.c,  
src/globals.h, src/testdir/vim9.vim, src/testdir/test\_vim9\_func.vim

Patch 8.2.3342 (after 8.2.3341)

Problem: Test for :let errors fails.  
Solution: Adjust the test and how to avoid a second error message.  
Files: src/evalvars.c, src/testdir/test\_let.vim

Patch 8.2.3343 (after 8.2.3342)

Problem: Vim9: autoload test fails.  
Solution: Adjust the way the second message is avoided  
Files: src/evalvars.c

Patch 8.2.3344 (after 8.2.3343)

Problem: Vimscript test fails.  
Solution: Have test verify first error instead of second  
Files: src/testdir/test\_vimscript.vim

Patch 8.2.3345

Problem: Some code not covered by tests.  
Solution: Add a few more tests. (Dominique Pellé, closes #8757)  
Files: src/testdir/test\_arglist.vim, src/testdir/test\_cmdline.vim,  
src/testdir/test\_spellfile.vim, src/testdir/test\_substitute.vim

Patch 8.2.3346

Problem: Vim9: no error for using "." for concatenation after ":vim9cmd".  
(Naohiro Ono)  
Solution: Check for Vim9 script syntax. (closes #8756)  
Files: src/eval.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3347

Problem: Check for legacy script is incomplete. (Naohiro Ono)  
Solution: Also check the :legacy modifier. Use for string concatenation  
with "." and others (issue #8756)  
Files: src/vim9script.c, src/proto/vim9script.pro, src/eval.c,  
src/typval.c, src/evalvars.c, src/errors.h, src/ex\_docmd.c,  
src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3348

Problem: line2byte() returns wrong value after adding textprop. (Yuto  
Kimura)  
Solution: Reduce the length by the size of the text property. (closes #8759)  
Files: src/memline.c, src/testdir/test\_textprop.vim

Patch 8.2.3349 (after 8.2.3347)

Problem: Eval test for scriptversion fails.  
Solution: Fix off-by-one error.  
Files: src/vim9script.c

Patch 8.2.3350 (after 8.2.3348)

Problem: Text properties test fails on MS-Windows.  
Solution: Set fileformat to unix.  
Files: src/testdir/test\_textprop.vim

#### Patch 8.2.3351

Problem: Vim9: using a function by name may delete it. (Naohiro Ono)  
Solution: Increment the reference count when using a function by name.  
(closes #8760)  
Files: src/evalvars.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3352

Problem: Vim9: error for nested :enddef has wrong line number.  
Solution: Compute the line number.  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3353

Problem: Vim9: type of argument for negate not checked at compile time.  
Solution: Add a compile time check.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.3354

Problem: Build failure with +byte\_offset but without +textprop. (John  
Marriott)  
Solution: Adjust the #ifdef.  
Files: src/memline.c

#### Patch 8.2.3355

Problem: MS-Windows: compiler warning for 64-32 bit conversion.  
Solution: Add type casts.  
Files: src/memline.c

#### Patch 8.2.3356

Problem: Adding many text properties requires a lot of function calls.  
Solution: Add the prop\_add\_list() function. (Yegappan Lakshmanan,  
closes #8751)  
Files: runtime/doc/eval.txt, runtime/doc/textprop.txt,  
runtime/doc/usr\_41.txt, src/evalfunc.c, src/proto/textprop.pro,  
src/testdir/test\_textprop.vim, src/testdir/test\_vim9\_builtin.vim,  
src/textprop.c

#### Patch 8.2.3357

Problem: Crash when **'virtualedit'** is set and window is narrow.  
Solution: Check that width is not zero. (closes #8767)  
Files: src/misc2.c, src/testdir/test\_number.vim

#### Patch 8.2.3358

Problem: Structurizr files are not recognized.  
Solution: Recognize the file by contents. (Bastian Venthur, closes #8764)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3359

Problem: Vim9: error for type when variable is not set.

Solution: Give a specific error for a NULL function. (closes #8773)  
Files: src/vim9type.c, src/errors.h, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3360

Problem: User function completion fails with dict function.  
Solution: Do not stop sequencing through the list if user functions when encountering an empty name. (Naohiro Ono, closes #8765, closes #8774)  
Files: src/evalfunc.c, src/testdir/test\_cmdline.vim

#### Patch 8.2.3361

Problem: Vim9: crash with nested :while.  
Solution: Handle skipping better. (Naruhiko Nishino, closes #8778)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3362

Problem: Buffer overflow when completing long tag name.  
Solution: Allocate the buffer dynamically. (Gregory Anders, closes #8769)  
Files: src/tag.c, src/testdir/test\_tagjump.vim

#### Patch 8.2.3363

Problem: When :edit reuses the current buffer the alternate file is set to the same buffer.  
Solution: Only set the alternate file when not reusing the buffer. (closes #8783)  
Files: src/ex\_cmds.c, src/testdir/test\_undo.vim, src/testdir/test\_cmdline.vim, src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3364

Problem: Vim9: crash when :for is skipped.  
Solution: Skip more code generation. (Naruhiko Nishino, closes #8777)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3365

Problem: Vim9: cannot use option for all operations.  
Solution: Recognize more operations. (closes #8779)  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/ex\_docmd.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.3366

Problem: Vim9: debugging elseif does not stop before condition.  
Solution: Move debug statement to after the jump. (closes #8781)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.3367

Problem: Vim9: :@r executing a register is inconsistent.  
Solution: Use "@r" as the start of an expression. (issue #8779)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.3368

Problem: Not all Racket files are recognized.  
Solution: Also recognize .rktl and .rktl files. (Doug Kearns)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3369

Problem: Auto formatting after "cw" leaves cursor in wrong spot.  
Solution: Do not auto-format after the delete. (closes #8789)  
Files: src/ops.c, src/testdir/test\_textformat.vim

Patch 8.2.3370

Problem: Vim9: no check for white space before type in declaration.  
(Naohiro Ono)  
Solution: Check for white space like in a compiled function. (closes #8785)  
Files: src/eval.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.3371

Problem: Vim9: :\$ENV cannot be followed by ->func() in next line.  
Solution: Use "\$ENV" as the start of an expression. (closes #8790)  
Files: src/ex\_docmd.c, src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3372

Problem: line2byte() value wrong when adding a text property. (Yuto Kimura)  
Solution: Adjust length for text property. (closes #8772) Also fix it for deleting a line.  
Files: src/memline.c, src/testdir/test\_textprop.vim

Patch 8.2.3373 (after 8.2.3372)

Problem: text property test fails on MS-Windows.  
Solution: Set fileformat to "unix"  
Files: src/testdir/test\_textprop.vim

Patch 8.2.3374

Problem: Pyret files are not recognized.  
Solution: Recognize .arr files as Pyret. (Doug Kearns)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3375

Problem: Using uninitialized memory.  
Solution: Initialize textprop\_save\_len.  
Files: src/memline.c

Patch 8.2.3376

Problem: Vim9: no warning that "@r" does not do anything.  
Solution: Give a "no effect" error. (closes #8779)  
Files: src/ex\_eval.c, src/proto/ex\_eval.pro, src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3377

Problem: Vim9: :disass completion does not understand "s:".  
Solution: Expand "s:" to a pattern. (closes #8780)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

Patch 8.2.3378

Problem: MS-Windows: completing environment variables with % is wrong.  
Solution: Only complete environment variables with \$. (Albert Liu, closes #8791)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

Patch 8.2.3379

Problem: Crash when using NULL job.  
Solution: Copy static string into buffer. (issue #8260)  
Files: src/job.c, src/testdir/test\_channel.vim

Patch 8.2.3380

Problem: Crash when using NULL string for funcref().  
Solution: Check for NULL argument. (issue #8260)  
Files: src/evalfunc.c, src/testdir/test\_expr.vim

Patch 8.2.3381

Problem: Crash when using NULL list with sign functions.  
Solution: Handle a NULL list like an empty list. (issue #8260)  
Files: src/globals.h, src/testdir/test\_signs.vim

Patch 8.2.3382

Problem: Crash when getting the type of a NULL partial.  
Solution: Check for NULL. (closes #8260)  
Files: src/vim9type.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3383

Problem: Vim9: completion for :disassemble adds parenthesis.  
Solution: Don't add parenthesis. (Naohiro Ono, closes #8802)  
Files: src/userfunc.c, src/testdir/test\_cmdline.vim

Patch 8.2.3384

Problem: Cannot disable modeline for an individual file.  
Solution: Recognize "nomodeline" in a modeline. (Hu Jialun, closes #8798)  
Files: runtime/doc/options.txt, src/buffer.c,  
src/testdir/test\_modeline.vim

Patch 8.2.3385

Problem: Escaping for fish shell does not work properly.  
Solution: Insert a backslash before a backslash. (Jason Cox, closes #8810)  
Files: runtime/doc/eval.txt, src/strings.c, src/testdir/test\_shell.vim

Patch 8.2.3386

Problem: Using uninitialized memory.  
Solution: Initialize the rm\_ic field. (Dominique Pellé, closes #8800)  
Files: src/indent.c

Patch 8.2.3387

Problem: Compiler warning for non-static function.  
Solution: Make the function static. (Dominique Pellé, closes #8816)  
Files: src/strings.c

Patch 8.2.3388

Problem: fnamemodify('path/..', ':p') differs from using 'path/./'. (David  
Briscoe)  
Solution: Include the "/.." in the directory name. (closes #8808)  
Files: src/os\_unix.c, src/testdir/test\_fnamemodify.vim

Patch 8.2.3389

Problem: Cannot stop insert mode completion without side effects.  
Solution: Add **CTRL-X CTRL-Z**. (closes #8821)  
Files: runtime/doc/index.txt, runtime/doc/insert.txt, src/insexpand.c,  
src/testdir/test\_ins\_complete.vim

#### Patch 8.2.3390

Problem: Included xdiff code is outdated.  
Solution: Sync with xdiff in git 2.33. (Christian Brabandt, closes #8431)  
Files: src/diff.c, src/xdiff/README.txt, src/xdiff/xdiff.h,  
src/xdiff/xdiffi.c, src/xdiff/xdiffi.h, src/xdiff/xemit.c,  
src/xdiff/xemit.h, src/xdiff/xhistogram.c, src/xdiff/xinclude.h,  
src/xdiff/xmacros.h, src/xdiff/xpatience.c, src/xdiff/xprepare.h,  
src/xdiff/xtypes.h, src/xdiff/xutils.c, src/xdiff/xutils.h

#### Patch 8.2.3391

Problem: Crash with combination of '**linebreak**' and other options.  
Solution: Avoid n\_extra to become negative. (Christian Brabandt,  
closes #8817)  
Files: src/drawline.c

#### Patch 8.2.3392

Problem: augroup completion escapes regexp pattern characters.  
Solution: Do not escape the augroup name. (closes #8826)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

#### Patch 8.2.3393

Problem: Escaping for fish shell is skipping some characters.  
Solution: Escape character after backslash if needed. (Jason Cox,  
closes #8827)  
Files: src/strings.c, src/testdir/test\_shell.vim

#### Patch 8.2.3394

Problem: Filler lines are wrong when changing text in diff mode.  
Solution: Don't change the filler lines on every change. Check  
scrollbinding when updating the filler lines. (closes #8809)  
Files: src/move.c, src/diff.c, src/testdir/test\_diffmode.vim,  
src/testdir/dumps/Test\_diff\_scroll\_change\_01.dump,  
src/testdir/dumps/Test\_diff\_scroll\_change\_02.dump

#### Patch 8.2.3395

Problem: Vim9: expression breakpoint not checked in :def function.  
Solution: Always compile a function for debugging if there is an expression  
breakpoint. (closes #8803)  
Files: src/vim9execute.c, src/proto/vim9execute.pro, src/debugger.c,  
src/proto/debugger.pro, src/vim.h, src/vim9.h,  
src/testdir/test\_debugger.vim

#### Patch 8.2.3396

Problem: When libcall() fails invalid pointer may be used.  
Solution: Initialize the string to NULL. (Yasuhiro Matsumoto, closes #8829)  
Files: src/evalfunc.c

#### Patch 8.2.3397

Problem: No test for what 8.2.3391 fixes.

Solution: Add a test. (Yegappan Lakshmanan, closes #8828)  
Files: src/testdir/test\_breakindent.vim

#### Patch 8.2.3398

Problem: Html text objects are not fully tested.  
Solution: Add tests for dbcs encoding and different number of backslashes.  
(Dominique Pellé, closes #8831)  
Files: src/testdir/test\_textobjects.vim

#### Patch 8.2.3399

Problem: Octave files are not recognized.  
Solution: Detect Octave files. (Doug Kearns)  
Files: runtime/autoload/dist/ft.vim, runtime/doc/filetype.txt,  
runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3400

Problem: ":z!" is not supported.  
Solution: Make ":z!" work and add tests. (Dominique Pellé, closes #8836)  
Use display height instead of current window height.  
Files: runtime/doc/various.txt, src/ex\_cmds.h, src/ex\_cmds.c,  
src/testdir/test\_ex\_z.vim

#### Patch 8.2.3401

Problem: Vim9: cannot use a negative count with finddir() and findfile().  
Solution: Adjust the return type. (closes #8776)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3402

Problem: Invalid memory access when using :retab with large value.  
Solution: Check the number is positive.  
Files: src/indent.c, src/option.c, src/optionstr.c,  
src/testdir/test\_retab.vim

#### Patch 8.2.3403 (after 8.2.3402)

Problem: Memory leak for :retab with invalid argument.  
Solution: Free the memory. Make error messages consistent.  
Files: src/indent.c

#### Patch 8.2.3404

Problem: Vim9: no error for white space before "(".  
Solution: Give an error, like in a compiled function.  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3405

Problem: Cannot have a comment line in a {} block of a user command.  
Solution: Continue after the line break. (closes #8837)  
Files: src/ex\_docmd.c, src/testdir/test\_usercommands.vim

#### Patch 8.2.3406

Problem: On some systems tests fail without \_REENTRANT. (Elimar Riesebieter)  
Solution: Add -D\_REENTRANT in configure. (closes #7402)  
Files: src/configure.ac, src/auto/configure

Patch 8.2.3407

Problem: Using uninitialized memory with "let g:['bar'] = 2".  
Solution: Initialize v\_type of a new dict item.  
Files: src/dict.c

Patch 8.2.3408

Problem: Can delete a numbered function. (Naohiro Ono)  
Solution: Disallow deleting a numbered function. (closes #8760)  
Files: src/userfunc.c, src/testdir/test\_user\_func.vim

Patch 8.2.3409

Problem: Reading beyond end of line with invalid utf-8 character.  
Solution: Check for NUL when advancing.  
Files: src/regexp\_nfa.c, src/testdir/test\_regexp\_utf8.vim

Patch 8.2.3410

Problem: Crash with linebreak, listchars and large tabstop.  
Solution: Account for different size listchars for a tab. (closes #8841)  
Files: src/drawline.c, src/testdir/test\_listlbr\_utf8.vim

Patch 8.2.3411

Problem: Vim9: crash when using base name of import. (Naohiro Ono)  
Solution: Check the import flags. (closes #8843)  
Files: src/evalvars.c, src/errors.h, src/testdir/test\_vim9\_script.vim

Patch 8.2.3412 (after 8.2.3411)

Problem: Vim9: importing the wrong file.  
Solution: Correct the file name. Delete the file afterwards.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.3413

Problem: Vim9: too many characters are allowed in import name.  
Solution: Disallow ':' and '#', check for white space. (closes #8845)  
Files: src/vim9script.c, src/errors.h, src/testdir/test\_vim9\_script.vim

Patch 8.2.3414

Problem: fullcommand() gives the wrong name if there is a buffer-local user command. (Naohiro Ono)  
Solution: Use a separate function to get the user command name. (closes #8840)  
Files: src/usercmd.c, src/proto/usercmd.pro, src/ex\_docmd.c, src/testdir/test\_cmdline.vim

Patch 8.2.3415

Problem: Vim9: Not all function argument types are properly checked.  
Solution: Add and improve argument type checks. (Yegappan Lakshmanan, closes #8839)  
Files: src/channel.c, src/digraph.c, src/evalfunc.c, src/terminal.c, src/testdir/test\_digraph.vim, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3416

Problem: Second error is reported while exception is being thrown.  
Solution: Do not check for trailing characters when already aborting. (closes #8842)

Files: src/userfunc.c, src/testdir/test\_trycatch.vim

Patch 8.2.3417

Problem: Vim9: a failing debug expression aborts script sourcing.  
Solution: Do not let expression failure abort script sourcing. (closes #8848)  
Files: src/debugger.c, src/testdir/test\_debugger.vim

Patch 8.2.3418

Problem: Garbage collection while evaluating may cause trouble.  
Solution: Disable garbage collection while evaluating an expression.  
(Christian Brabandt, issue #8848)  
Files: src/eval.c

Patch 8.2.3419

Problem: A failing debug expression may make Vim unusable.  
Solution: Suppress error messages. (closes #8848)  
Files: src/debugger.c, src/testdir/test\_debugger.vim

Patch 8.2.3420

Problem: \_REENTRANT defined more than once.  
Solution: Fix configure script. (Christian Brabandt, closes #8852)  
Files: src/configure.ac, src/auto/configure

Patch 8.2.3421

Problem: A bit of code is not covered by tests.  
Solution: Add a few more test cases. (Dominique Pellé, closes #8857)  
Files: src/testdir/test\_functions.vim, src/testdir/test\_history.vim,  
src/testdir/test\_startup.vim

Patch 8.2.3422

Problem: Vim9: no failure if return type differs from returned variable.  
Solution: Copy type when copying a list. (closes #8847)  
Files: src/list.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.3423

Problem: Vim9: list += list creates a new list in :def function.  
Solution: Append to the existing list.  
Files: src/structs.h, src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.3424

Problem: A sequence of spaces is hard to see in list mode.  
Solution: Add the "multispace" option to '**listchars**'. (closes #8834)  
Files: runtime/doc/options.txt, src/drawline.c, src/message.c,  
src/screen.c, src/structs.h, src/testdir/test\_listchars.vim

Patch 8.2.3425

Problem: Warning for using uninitialized variable.  
Solution: Initialize it. (John Marriott)  
Files: src/screen.c

Patch 8.2.3426

Problem: Crash when deleting a listener in a listener callback. (Naohiro Ono)

Solution: Mark the listener and delete it later. (closes #8863)  
Files: src/change.c, src/testdir/test\_listener.vim

#### Patch 8.2.3427

Problem: Double free when list is copied.  
Solution: Allocate the type when making a copy. (closes #8862)  
Clear the type for flattennew(). Avoid a memory leak when  
flattennew() fails.  
Files: src/list.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3428

Problem: Using freed memory when replacing. (Dhiraj Mishra)  
Solution: Get the line pointer after calling ins\_copychar().  
Files: src/normal.c, src/testdir/test\_edit.vim

#### Patch 8.2.3429

Problem: Leaking memory when assigning to list or dict.  
Solution: Free the list or dict type before overwriting it.  
Files: src/vim9type.c, src/evalvars.c

#### Patch 8.2.3430

Problem: No generic way to trigger an autocommand on mode change.  
Solution: Add the ModeChanged autocommand event. (Magnus Gross, closes #8856)  
Files: runtime/doc/autocmd.txt, src/autocmd.c, src/edit.c,  
src/ex\_docmd.c, src/ex\_getln.c, src/globals.h, src/misc1.c,  
src/normal.c, src/proto/autocmd.pro, src/proto/misc1.pro,  
src/testdir/test\_edit.vim, src/vim.h

#### Patch 8.2.3431

Problem: Completion for :disas sorts local functions first.  
Solution: Sort local functions last, like with :delfunc. (Naohiro Ono,  
closes #8860)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

#### Patch 8.2.3432

Problem: Octave/Matlab filetype detection does not work properly.  
Solution: Update the patterns used for matching. (Doug Kearns)  
Files: runtime/autoload/dist/ft.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3433

Problem: :delcommand does not take a -buffer option.  
Solution: Add the -buffer option.  
Files: runtime/doc/map.txt, src/usercmd.c, src/errors.h,  
src/testdir/test\_usercommands.vim

#### Patch 8.2.3434 (after 8.2.3430)

Problem: Function prototype for trigger\_modechanged() is incomplete.  
Solution: Add "void".  
Files: src/proto/misc1.pro

#### Patch 8.2.3435

Problem: Vim9: dict is not passed to dict function.  
Solution: Keep the dict used until a function call.  
Files: src/vim9compile.c, src/vim9execute.c, src/vim9.h,

src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.3436

Problem: Check for optional bool type has confusing return type.  
Solution: Explicitly return OK.  
Files: src/typval.c

Patch 8.2.3437

Problem: Compiler warnings for 32/64 bit usage.  
Solution: Add type casts. (Mike Williams, closes #8870)  
Files: src/screen.c, src/xdiff/xemit.c, src/xdiff/xutils.c

Patch 8.2.3438

Problem: Cannot manipulate blobs.  
Solution: Add blob2list() and list2blob(). (Yegappan Lakshmanan, closes #8868)  
Files: runtime/doc/eval.txt, runtime/doc/usr\_41.txt, src/blob.c, src/errors.h, src/evalfunc.c, src/proto/blob.pro, src/proto/typval.pro, src/testdir/test\_blob.vim, src/testdir/test\_vim9\_builtin.vim, src/typval.c

Patch 8.2.3439

Problem: Deleted lines go to wrong yank register.  
Solution: Reset y\_append when not calling get\_yank\_register(). (Christian Brabandt, closes #8872)  
Files: src/ops.c, src/proto/register.pro, src/register.c, src/testdir/test\_registers.vim

Patch 8.2.3440

Problem: Recover test fails if there is an old swap file.  
Solution: Delete old swap files.  
Files: src/testdir/test\_recover.vim

Patch 8.2.3441

Problem: MS-Windows: vimtutor can't handle path with spaces.  
Solution: Add double quotes. (Christian Brabandt, closes #8871)  
Files: vimtutor.bat

Patch 8.2.3442

Problem: Vim9: || and && are not handled at compile time when possible.  
Solution: When using constants generate fewer instructions.  
Files: src/vim9.h, src/vim9compile.c, src/vim9execute.c, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.3443

Problem: Vim9: memory leak when and/or fails.  
Solution: Also clear the growarray when the length is zero.  
Files: src/vim9compile.c

Patch 8.2.3444

Problem: concealed text not revealed when leaving insert mode. (Michael Soyka)  
Solution: Check if concealing changed when leaving insert mode.

(closes #8880)  
Files: src/edit.c, src/testdir/test\_conceal.vim,  
src/testdir/dumps/Test\_conceal\_two\_windows\_07in.dump

#### Patch 8.2.3445

Problem: On Solaris longVersion may be declared twice. (Vladimir Marek)  
Solution: Always declare longVersion in version.c  
Files: src/globals.h, src/version.c

#### Patch 8.2.3446

Problem: Not enough tests for empty string arguments.  
Solution: Add tests, fix type check. (Yegappan Lakshmanan, closes #8881)  
Files: runtime/doc/sign.txt, runtime/doc/textprop.txt, src/sign.c,  
src/testdir/test\_blob.vim, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3447

Problem: A couple of declarations are not ANSI C.  
Solution: Put argument type inside (). (Yegappan Lakshmanan, closes #8890)  
Files: src/os\_unix.h

#### Patch 8.2.3448

Problem: :endtry after function call that throws not found.  
Solution: Do check for following :endtry if an exception is being thrown.  
(closes #8889)  
Files: src/userfunc.c, src/testdir/test\_trycatch.vim

#### Patch 8.2.3449

Problem: Sort fails if the sort compare function returns 999.  
Solution: Adjust value to -1 / 0 / 1. (Yasuhiro Matsumoto, closes #8884)  
Files: src/list.c, src/testdir/test\_sort.vim

#### Patch 8.2.3450

Problem: Coveralls action fails.  
Solution: Disable it for now.  
Files: .github/workflows/ci.yml

#### Patch 8.2.3451

Problem: Not all apache files are recognized.  
Solution: Adjust the filetype pattern. (Zdenek Dohnal, closes #8882)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3452

Problem: MPD files are not recognized.  
Solution: Recognize MPD files as XML. (Steven Penny, closes #8893)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3453

Problem: Autocmd not executed when editing a directory ending in a path separator inside try block.  
Solution: Return NOTDONE instead of FAIL. (closes #8885)  
Files: src/fileio.c, src/testdir/test\_autocmd.vim

#### Patch 8.2.3454

Problem: Using a count with "gp" leaves cursor in wrong position. (Naohiro

Ono)  
Solution: Count the inserted lines. (closes #8899)  
Files: src/register.c, src/testdir/test\_put.vim

Patch 8.2.3455 (after 8.2.3454)  
Problem: Using a count with "gp" leaves ']' in wrong position. (Naohiro Ono)  
Solution: Correct the mark position. (closes #8899)  
Files: src/register.c, src/testdir/test\_put.vim

Patch 8.2.3456  
Problem: Vim9: Not all functions are tested with an empty string argument.  
Solution: Add tests with empty strings. (Yegappan Lakshmanan, closes #8915)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3457  
Problem: MS-Windows Vim9: test executed and fails.  
Solution: Add extra check for not being on MS-Windows.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.3458  
Problem: Not all dictdconf files are recognized.  
Solution: Adjust the pattern. (Doug Kearns)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3459  
Problem: Vim9: need more tests for empty string arguments.  
Solution: Add more tests. Also use empty argument with menu\_info() to get the top-level menu names. (Yegappan Lakshmanan, closes #8925)  
Files: runtime/doc/eval.txt, src/menu.c, src/testdir/test\_menu.vim, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3460  
Problem: Some type casts are not needed.  
Solution: Remove unnecessary type casts. (closes #8934)  
Files: src/autocmd.c, src/buffer.c, src/debugger.c, src/getchar.c, src/hardcopy.c, src/if\_cscope.c, src/move.c, src/tag.c, src/version.c

Patch 8.2.3461  
Problem: Cannot distinguish Normal and Terminal-Normal mode.  
Solution: Make mode() return "nt" for Terminal-Normal mode. (issue #8856)  
Files: runtime/doc/eval.txt, src/misc1.c, src/testdir/test\_functions.vim

Patch 8.2.3462  
Problem: The ModeChanged event only uses one character for the new\_mode and old\_mode values.  
Solution: Pass one as first argument to mode(). (issue #8856)  
Files: src/misc1.c, src/testdir/test\_edit.vim

Patch 8.2.3463  
Problem: Pattern matching with ModeChanged not tested.  
Solution: Add a few more test lines. (issue #8856)  
Files: src/testdir/test\_edit.vim

Patch 8.2.3464

Problem: nginx files are not recognized.  
Solution: Add several file patterns. (Chris Aumann, closes #8922)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3465

Problem: Cannot detect insert scroll mode.  
Solution: Add "scroll" to complete\_info(). (closes #8943)  
Files: runtime/doc/eval.txt, src/insexpand.c, src/testdir/test\_popup.vim

Patch 8.2.3466

Problem: Completion submode not indicated for virtual replace.  
Solution: Add submode to "Rv". (closes #8945)  
Files: runtime/doc/eval.txt, src/misc1.c, src/testdir/test\_functions.vim

Patch 8.2.3467

Problem: CursorHoldI event interferes with "**CTRL-G** U". (Naohiro Ono)  
Solution: Restore the flag for "**CTRL-G** U" after triggering CursorHoldI.  
(closes #8937)  
Files: src/edit.c, src/testdir/test\_autocmd.vim

Patch 8.2.3468

Problem: Problem with :cd when editing file in non-existent directory. (Yee Cheng Chin)  
Solution: Prepend the current directory to get the full path. (closes #8903)  
Files: src/os\_unix.c, src/testdir/test\_cd.vim

Patch 8.2.3469

Problem: Some files with json syntax are not recognized.  
Solution: Add a few file patterns. (Emiliano Ruiz Carletti, closes #8947)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3470

Problem: Crash with error in :catch and also in :finally.  
Solution: Only discard an exception if there is one. (closes #8954)  
Files: src/ex\_eval.c, src/testdir/test\_trycatch.vim

Patch 8.2.3471

Problem: Crash when using **CTRL-T** after an empty search pattern.  
Solution: Bail out when there is no previous search pattern. (closes #8953)  
Files: src/ex\_getln.c, src/testdir/test\_search.vim

Patch 8.2.3472

Problem: Other crashes with empty search pattern not tested.  
Solution: Add a few more test lines. (Dominique Pellé)  
Files: src/testdir/test\_search.vim

Patch 8.2.3473

Problem: Some files with tcl syntax are not recognized.  
Solution: Add a few file patterns. (Doug Kearns)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3474

Problem: Some places use "Vimscript" instead of "Vim script".

Solution: Consistently use "Vim script". (Hirohito Higashi, closes #8910)  
Files: runtime/doc/if\_lua.txt, src/getchar.c, src/if\_lua.c

#### Patch 8.2.3475

Problem: Expression register set by not executed put command.  
Solution: Do not set the register if the command is skipped. (closes #8909)  
Files: src/ex\_docmd.c, src/testdir/test\_excmd.vim

#### Patch 8.2.3476

Problem: Renaming a buffer on startup may cause using freed memory.  
Solution: Check if the buffer is used in a window. (closes #8955)  
Files: src/buffer.c, src/testdir/test\_startup.vim

#### Patch 8.2.3477 (after 8.2.3476)

Problem: Startup test fails on MS-Windows.  
Solution: Skip the test if not on Unix.  
Files: src/testdir/test\_startup.vim

#### Patch 8.2.3478 (after 8.2.3470)

Problem: Still crash with error in :catch and also in :finally.  
Solution: Only call finish\_exception() once. (closes #8954)  
Files: src/ex\_eval.c, src/structs.h

#### Patch 8.2.3479

Problem: Crash when calling job\_start with an invalid argument. (Virginia Senioria)  
Solution: Clear the first item in argv. (closes #8957)  
Files: src/misc2.c, src/testdir/test\_channel.vim

#### Patch 8.2.3480 (after 8.2.3478)

Problem: Test does not fail without the fix for a crash.  
Solution: Write the bad code in a file and source it. (Dominique Pellé, closes #8961)  
Files: src/testdir/test\_trycatch.vim

#### Patch 8.2.3481

Problem: Failures when char is unsigned.  
Solution: Use int8\_T. Make a CI run with unsigned char. (James McCoy, closes #8936)  
Files: src/structs.h, .github/workflows/ci.yml

#### Patch 8.2.3482

Problem: Reading beyond end of line ending in quote and backslash.  
Solution: Check for non-NUL after backslash. (closes #8964)  
Files: src/cindent.c, src/testdir/test\_cindent.vim

#### Patch 8.2.3483

Problem: #ifdef for using sysinfo() is incomplete.  
Solution: Also check for HAVE\_SYSINFO. Make autoconf check use TRY\_LINK. (closes #8952)  
Files: src/memline.c, src/configure.ac, src/auto/configure

#### Patch 8.2.3484

Problem: Crash when going through spell suggestions.

Solution: Limit the text length for finding suggestions to the original length. Do not update buffers when exiting. (closes #8965)  
Files: src/spellsuggest.c, src/clipboard.c,  
src/testdir/test\_spell\_utf8.vim

#### Patch 8.2.3485

Problem: Python 3 test fails with Python 3.10.  
Solution: Adjust expected error message. (zdohnal Dohnal, closes #8969)  
Files: src/testdir/test\_python3.vim

#### Patch 8.2.3486

Problem: Illegal memory access with invalid sequence of commands.  
Solution: Do not call leave\_block() when not in a try block. (closes #8966)  
Reset did\_emsg so that exception is shown as an error.  
Files: src/ex\_eval.c, src/testdir/test\_trycatch.vim

#### Patch 8.2.3487

Problem: Illegal memory access if buffer name is very long.  
Solution: Make sure not to go over the end of the buffer.  
Files: src/drawscreen.c, src/testdir/test\_statusline.vim

#### Patch 8.2.3488

Problem: Issue template is not easy to use.  
Solution: Use a yaml template. (closes #8928)  
Files: .github/ISSUE\_TEMPLATE/bug\_report.md,  
.github/ISSUE\_TEMPLATE/bug\_report.yml

#### Patch 8.2.3489

Problem: ml\_get error after search with range.  
Solution: Limit the line number to the buffer line count.  
Files: src/ex\_docmd.c, src/testdir/test\_search.vim

#### Patch 8.2.3490

Problem: Superfluous return statements.  
Solution: Remove superfluous return statements from void functions.  
(closes #8977)  
Files: src/buffer.c, src/getchar.c, src/memline.c, src/move.c,  
src/option.c

#### Patch 8.2.3491

Problem: xpm2 filetype detection is not so good.  
Solution: Adjust the check for xpm2. (closes #8914)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3492

Problem: Crash when pasting too many times.  
Solution: Limit the size to what fits in an int. (closes #8962)  
Files: src/register.c, src/errors.h, src/testdir/test\_put.vim

#### Patch 8.2.3493 (after 8.2.3492)

Problem: Large count test fails on MS-Windows.  
Solution: Skip the test on MS-Windows.  
Files: src/testdir/test\_put.vim

Patch 8.2.3494

Problem: Illegal memory access in utf\_head\_off.  
Solution: Check cursor position when reselecting the Visual area.  
(closes #8963)  
Files: src/normal.c, src/testdir/test\_visual.vim

Patch 8.2.3495

Problem: GUI geometry startup test fails on some systems. (Drew Vogel)  
Solution: Add tolerance to the size check. (closes #8815)  
Files: src/testdir/test\_startup.vim

Patch 8.2.3496

Problem: Crypt test fails on MS-Windows if xxd was not installed yet.  
Solution: Use the just built xxd executable if it exists. (James McCoy,  
closes #8929)  
Files: src/testdir/test\_crypt.vim

Patch 8.2.3497

Problem: Put test fails when run by itself.  
Solution: Source check.vim. (Dominique Pellé, closes #8990)  
Files: src/testdir/test\_put.vim

Patch 8.2.3498

Problem: Recover test may fail on some systems.  
Solution: Adjust the little endian and 64 bit detection. (James McCoy,  
closes #8941)  
Files: src/testdir/test\_recover.vim

Patch 8.2.3499

Problem: GUI geometry startup test fails.  
Solution: Check string values instead of numbers  
Files: src/testdir/test\_startup.vim

Patch 8.2.3500

Problem: Github CI fails to install clang.  
Solution: Install llvm-11 explicitly. (Christian Brabandt, closes #8993)  
Files: .github/workflows/ci.yml

Patch 8.2.3501

Problem: tmux filetype detection is incomplete  
Solution: Also use tmux for files having text after .conf. (Eric Pruitt,  
closes #8971)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3502 (after 8.2.2919)

Problem: Cannot enter password in shell command.  
Solution: Revert patch 8.2.2919.  
Files: src/os\_unix.c

Patch 8.2.3503

Problem: Vim9: using g:pat:cmd is confusing.  
Solution: Do not recognize g: as the :global command. Also for s:pat:repl.  
(closes #8982)  
Files: runtime/doc/vim9.txt, src/ex\_docmd.c, src/ex\_cmds.c, src/errors.h,

src/vim9compile.c, src/proto/vim9compile.pro,  
src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3504 (after 8.2.3503)

Problem: Vim9: warning for signed vs unsigned.

Solution: Add type cast.

Files: src/vim9compile.c

Patch 8.2.3505 (after 8.2.3503)

Problem: Vim9: build failure without the +eval feature.

Solution: Add #ifdef.

Files: src/ex\_cmds.c

Patch 8.2.3506 (after 8.2.3503)

Problem: Vim9: special cases for "g" and "s" insufficiently tested.

Solution: Add a few more test cases.

Files: src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3507

Problem: Generating proto files may fail.

Solution: Define \_\_attribute().

Files: src/Makefile

Patch 8.2.3508 (after 8.2.3503)

Problem: Vim9: bad separators for "g" and "s" insufficiently tested.

Solution: Add a few more test cases.

Files: src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3509

Problem: Undo file is not synced. (Sami Farin)

Solution: Sync the undo file if '**fsync**' is set. (Christian Brabandt,  
closes #8879, closes #8920)

Files: runtime/doc/options.txt, src/undo.c

Patch 8.2.3510

Problem: Changes are only detected with one second accuracy.

Solution: Use the nanosecond time if possible. (Leah Neukirchen,  
closes #8873, closes #8875)

Files: runtime/doc/eval.txt, src/auto/configure, src/bufwrite.c,  
src/config.h.in, src/configure.ac, src/fileio.c,  
src/proto/fileio.pro, src/memline.c, src/netbeans.c,  
src/structs.h, src/evalfunc.c, src/testdir/test\_stat.vim

Patch 8.2.3511

Problem: Vim9: entry for loop variable is created every round.

Solution: Only create the entry once. (closes #8996)

Files: src/evalvars.c, src/vim9script.c

Patch 8.2.3512

Problem: Timestamp test fails on some systems.

Solution: Sleep for a short while.

Files: src/testdir/test\_stat.vim

Patch 8.2.3513

Problem: Using freed memory when using a timer and searching. (Dominique Pellé)  
Solution: Allocated mr\_pattern.  
Files: src/search.c

#### Patch 8.2.3514

Problem: Autoread test with nanosecond time sometimes fails.  
Solution: Mark the test as being flaky.  
Files: src/testdir/test\_stat.vim

#### Patch 8.2.3515

Problem: Nano time test fails on Mac and FreeBSD.  
Solution: Also check nano time when not on Linux. (Ozaki Kiichi, closes #9000)  
Files: src/fileio.c

#### Patch 8.2.3516

Problem: Terminal window does not have transparent background when **'termguicolors'** is used.  
Solution: Fix the background color. (closes #2361, closes #9002)  
Files: runtime/doc/terminal.txt, src/highlight.c, src/proto/terminal.pro, src/terminal.c

#### Patch 8.2.3517

Problem: TextChanged does not trigger after TextChangedI.  
Solution: Store the tick separately for TextChangedI. (Christian Brabandt, closes #8968, closes #8932)  
Files: src/buffer.c, src/bufwrite.c, src/edit.c, src/structs.h, src/testdir/test\_autocmd.vim

#### Patch 8.2.3518

Problem: Test\_xrestore sometimes fails.  
Solution: Mark the test as flaky. Move marking test as flaky to the test instead of listing them in runtest.  
Files: src/testdir/test\_paste.vim, src/testdir/runtest.vim, src/testdir/test\_autocmd.vim, src/testdir/test\_channel.vim, src/testdir/test\_clientserver.vim, src/testdir/test\_diffmode.vim, src/testdir/test\_functions.vim, src/testdir/test\_gui.vim, src/testdir/test\_mapping.vim, src/testdir/test\_popup.vim, src/testdir/test\_quotestar.vim, src/testdir/test\_reftime.vim, src/testdir/test\_terminal.vim, src/testdir/test\_terminal2.vim, src/testdir/test\_timers.vim

#### Patch 8.2.3519

Problem: TOML files are not recognized.  
Solution: Add filetype patterns for TOML. (Aman Verma, closes #8984)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3520

Problem: Cannot define a function for thesaurus completion.  
Solution: Add **'thesaurusfunc'**. (Yegappan Lakshmanan, closes #8987, closes 8950)  
Files: runtime/doc/insert.txt, runtime/doc/options.txt, runtime/doc/quickref.txt, src/buffer.c, src/insexpand.c,

src/option.c, src/option.h, src/optiondefs.h, src/optionstr.c,  
src/structs.h, src/testdir/test\_edit.vim

Patch 8.2.3521 (after 8.2.3520)

Problem: Options completion test fails.  
Solution: Add **'thesaurusfunc'** to the results.  
Files: src/testdir/test\_options.vim

Patch 8.2.3522

Problem: Cannot use \x and \u when setting **'listchars'**.  
Solution: Support hex and unicode in hex form. (closes #9006)  
Files: runtime/doc/options.txt, src/screen.c, src/charset.c,  
src/testdir/test\_listchars.vim

Patch 8.2.3523

Problem: Duplicated code in xxd.  
Solution: Remove duplicated lines. (closes #8972)  
Files: src/xxd/xxd.c

Patch 8.2.3524

Problem: GUI: ligatures are not used.  
Solution: Add the **'guiligatures'** option. (Dusan Popovic, closes #8933)  
Files: runtime/doc/options.txt, src/gui.c, src/gui.h, src/gui\_gtk\_x11.c,  
src/option.h, src/optiondefs.h, src/optionstr.c, src/errors.h,  
src/proto/gui.pro, src/proto/gui\_gtk\_x11.pro,  
src/testdir/test\_gui.vim

Patch 8.2.3525

Problem: Option variable name does not match option name. (Christ van Willegen)  
Solution: Rename the variable.  
Files: src/buffer.c, src/insexpand.c, src/option.c, src/optionstr.c,  
src/structs.h

Patch 8.2.3526

Problem: Tests have clumsy check for X11 based GUI.  
Solution: Add CheckX11BasedGui.  
Files: src/testdir/check.vim, src/testdir/test\_gui.vim,  
src/testdir/test\_gui\_init.vim, src/testdir/setup\_gui.vim

Patch 8.2.3527

Problem: Gcc complains about uninitialized variable. (Tony Mechelynck)  
Solution: Initialize it.  
Files: src/gui\_gtk\_x11.c

Patch 8.2.3528

Problem: **'thesaurus'** and **'thesaurusfunc'** do not have the same scope.  
Solution: Make **'thesaurusfunc'** global-local.  
Files: runtime/doc/options.txt, runtime/doc/insert.txt,  
src/optiondefs.h, src/option.h, src/option.c, src/structs.h,  
src/insexpand.c, src/testdir/test\_edit.vim

Patch 8.2.3529

Problem: Xxd usage output is incomplete.

Solution: Add "bytes" to "-g" flag. (Atsushi Sugawara, closes #8944)  
Files: src/xxd/xxd.c

#### Patch 8.2.3530

Problem: ":buf \{a}" fails while ":edit \{a}" works.  
Solution: Unescape "\{". (closes #8917)  
Files: src/vim.h, src/cmdexpand.c, src/evalfunc.c, src/ex\_getln.c,  
src/proto/ex\_getln.pro, src/normal.c, src/session.c,  
src/terminal.c, src/vim9execute.c, src/testdir/test\_cmdline.vim

#### Patch 8.2.3531 (after 8.2.3530)

Problem: Command line completion test fails on MS-Windows.  
Solution: Do not test with "\{" on MS-Windows.  
Files: src/testdir/test\_cmdline.vim

#### Patch 8.2.3532

Problem: The previous ' mark is restored after moving the cursor to the original jump position. (Tony Chen)  
Solution: Forget the previous position after checking. (closes #8985)  
Files: src/mark.c, src/testdir/test\_marks.vim

#### Patch 8.2.3533

Problem: Inefficient code in xxd.  
Solution: Don't use "p" when "hextype" is non-zero. (closes #9013)  
Files: src/xxd/xxd.c

#### Patch 8.2.3534

Problem: Autoread test is a bit flaky.  
Solution: Wait a brief moment before overwriting the file.  
Files: src/testdir/test\_stat.vim

#### Patch 8.2.3535

Problem: If-else indenting is confusing.  
Solution: Add curly brackets and indent. (Dominique Pellé, closes #9010)  
Files: src/drawscreen.c

#### Patch 8.2.3536

Problem: The do\_highlight() function is way too long.  
Solution: Split it into several functions. (Yegappan Lakshmanan, closes #9011)  
Files: src/highlight.c

#### Patch 8.2.3537

Problem: mode() does not return the right value in **'operatorfunc'**.  
Solution: Reset finish\_op while calling **'operatorfunc'**.  
Files: src/ops.c, src/testdir/test\_functions.vim

#### Patch 8.2.3538

Problem: Else-if indenting is confusing.  
Solution: Add curly brackets. (Yegappan Lakshmanan, closes #9017)  
Files: src/highlight.c

#### Patch 8.2.3539

Problem: GTK3: with **'rightleft'** set scrollbar may move unintentionally.

Solution: Ignore events while moving the scrollbar thumb. (closes #8958)  
Files: src/gui\_gtk.c

Patch 8.2.3540

Problem: The mark ']' is wrong after put with a count. (Naohiro Ono)  
Solution: Use the right line number. (closes #8956)  
Files: src/register.c, src/testdir/test\_put.vim

Patch 8.2.3541

Problem: Compiler warning for unused variable in tiny version.  
Solution: Add #ifdef. (John Marriott)  
Files: src/highlight.c

Patch 8.2.3542

Problem: Too many comments are old style.  
Solution: Change comments to // style. (closes #9021)  
Files: src/buffer.c

Patch 8.2.3543

Problem: Swapname has double slash when '**directory**' ends in double slash.  
(Shane Smith)  
Solution: Remove the superfluous slash. (closes #8876)  
Files: src/memline.c, src/testdir/test\_swap.vim

Patch 8.2.3544

Problem: Unix: may leak file descriptor when using a non-existing  
directory.  
Solution: Always close the file. (closes #9023)  
Files: src/os\_unix.c

Patch 8.2.3545

Problem: setcellwidths() may make '**listchars**' or '**fillchars**' invalid.  
Solution: Check the value and give an error. (closes #9024)  
Files: runtime/doc/eval.txt, src/optionstr.c, src/errors.h, src/mbyte.c,  
src/testdir/test\_utf8.vim

Patch 8.2.3546 (after 8.2.3545)

Problem: Build failure without the +eval feature.  
Solution: Add #ifdef. (closes #9025)  
Files: src/errors.h

Patch 8.2.3547

Problem: Opening the quickfix window triggers BufWinEnter twice. (Yorick  
Peterse)  
Solution: Only trigger BufWinEnter with "quickfix". (closes #9022)  
Files: src/ex\_cmds.c, src/vim.h, src/quickfix.c, src/buffer.c,  
src/testdir/test\_quickfix.vim

Patch 8.2.3548

Problem: GTK GUI crashes when reading from stdin.  
Solution: Do not overwrite the NUL after the string. (closes #9028)  
Files: src/gui\_gtk\_x11.c, src/testdir/test\_gui.vim

Patch 8.2.3549

Problem: Mistakes in test comments.  
Solution: Fix the comments. (closes #9029)  
Files: src/testdir/test\_autocmd.vim

Patch 8.2.3550

Problem: completion() does not work properly.  
Solution: Set xp\_line and add WILD\_HOME\_REPLACE. (Shougo Matsushita, closes #9016)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

Patch 8.2.3551

Problem: Checking first character of url twice.  
Solution: Only check once. (closes #9026)  
Files: src/misc1.c

Patch 8.2.3552

Problem: Xxd revert does not handle end of line correctly.  
Solution: Check for newline first. (closes #9034)  
Files: src/xxd/xxd.c, src/testdir/test\_xxd.vim

Patch 8.2.3553 (after 8.2.3552)

Problem: Xxd test fails on MS-Windows.  
Solution: Split shell command in two.  
Files: src/testdir/test\_xxd.vim

Patch 8.2.3554

Problem: Xxd has various way to exit.  
Solution: Add function to print error and exit. (closes #9035)  
Files: src/xxd/xxd.c

Patch 8.2.3555

Problem: ModeChanged is not triggered on every mode change.  
Solution: Also trigger on minor mode changes. (Maguns Gross, closes #8999)  
Files: runtime/doc/autocmd.txt, src/autocmd.c, src/insexpand.c, src/misc1.c, src/normal.c, src/terminal.c, src/testdir/test\_edit.vim

Patch 8.2.3556

Problem: Filler lines are incorrect for other window in diff mode after making a change.  
Solution: Copy filler lines from the current window. (closes #8809)  
Files: src/diff.c, src/testdir/test\_diffmode.vim, src/testdir/dumps/Test\_diff\_scroll\_change\_03.dump

Patch 8.2.3557

Problem: Vim9: cannot call imported funcref at script level.  
Solution: Check for an imported function. (closes #9007)  
Files: src/userfunc.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3558 (after 8.2.3557)

Problem: Vim9: asserting the wrong variable.  
Solution: Don't use Foo, use Goo.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.3559

Problem: Loop variable recreated every time.  
Solution: Keep the loop variable when looping.  
Files: src/ex\_eval.c

Patch 8.2.3560

Problem: Using freed memory with lambda.  
Solution: Do not free lines early, keep them until the expression is finished. (closes #9020)  
Files: src/eval.c, src/proto/eval.pro, src/userfunc.c, src/vim9compile.c, src/structs.h, src/globals.h, src/testdir/test\_vim9\_func.vim

Patch 8.2.3561

Problem: Cscope has a complicated way of giving an error message.  
Solution: Use semsg(). (James McCoy, closes #9038)  
Files: src/if\_cscope.c

Patch 8.2.3562

Problem: Cannot add color names.  
Solution: Add the v:colornames dictionary. (Drew Vogel, closes #8761)  
Files: Filelist, READMEdir/README\_extra.txt, nsis/gvim.nsi, runtime/colors/README.txt, runtime/colors/lists/csscolors.vim, runtime/colors/lists/default.vim, runtime/doc/eval.txt, runtime/doc/gui\_w32.txt, runtime/doc/message.txt, runtime/doc/os\_haiku.txt, runtime/doc/syntax.txt, runtime/doc/usr\_06.txt, src/Makefile, src/evalvars.c, src/gui\_haiku.cc, src/highlight.c, src/gui.c, src/job.c, src/proto/highlight.pro, src/proto/term.pro, src/term.c, src/vim.h, src/globals.h, src/errors.h, src/testdir/test\_highlight.vim

Patch 8.2.3563 (after 8.2.3562)

Problem: Build failure with +eval but without GUI or +termguicolors  
Solution: Adjust #ifdef. (John Marriott)  
Files: src/highlight.c

Patch 8.2.3564

Problem: Invalid memory access when scrolling without a valid screen.  
Solution: Do not set VALID\_BOTLINE in w\_valid.  
Files: src/move.c, src/testdir/test\_normal.vim

Patch 8.2.3565

Problem: Makefile dependencies are outdated. (Gary Johnson)  
Solution: Run "make depend" and add missing dependencies.  
Files: src/Makefile

Patch 8.2.3566

Problem: Build failure on old systems when using nano timestamp.  
Solution: Define \_BSD\_SOURCE, \_SVID\_SOURCE and \_DEFAULT\_SOURCE. (Gary Johnson, closes #9054)  
Files: src/vim.h

Patch 8.2.3567

Problem: **CTRL-I** in Insert mode is not tested

Solution: Add a test case. (Dominique Pellé, closes #8866)  
Files: src/testdir/test\_edit.vim

#### Patch 8.2.3568

Problem: Ctrl-hat test fails with Athena and Motif. (Elimar Riesebieter)  
Solution: Run the test only with GTK. (Dominique Pellé, closes #9069)  
Files: src/testdir/test\_edit.vim

#### Patch 8.2.3569

Problem: Error for :let when vimrc is Vim 9 script.  
Solution: Prepend :legacy in the code for converting arguments. (Christian Brabandt, closes #9068, closes #9077)  
Files: src/os\_win32.c

#### Patch 8.2.3570

Problem: Test\_very\_large\_count fails on 32bit systems.  
Solution: Bail out when using 32 bit numbers. (closes #9072)  
Files: src/testdir/test\_put.vim

#### Patch 8.2.3571

Problem: Some unicode control characters are considered printable.  
Solution: Make 0x2060 - 0x2069 not printable.  
Files: src/mbyte.c

#### Patch 8.2.3572

Problem: Memory leak when closing window and using "multispace" in **'listchars'**.  
Solution: Free the memory. (closes #9071)  
Files: src/window.c, src/testdir/test\_listchars.vim

#### Patch 8.2.3573

Problem: Cannot decide whether to skip test that fails with 64 bit ints. (closes #9072)  
Solution: Add v:sizeofint, v:sizeoflong and v:sizeofpointer. Improve the check for multiply overflow.  
Files: runtime/doc/eval.txt, src/vim.h, src/evalvars.c, src/register.c, src/testdir/test\_put.vim

#### Patch 8.2.3574 (after 8.2.3573)

Problem: Divide by zero.  
Solution: Don't check for overflow if multiplicand is zero.  
Files: src/register.c

#### Patch 8.2.3575 (after 8.2.3574)

Problem: Overflow check still fails when sizeof(int) == sizeof(long).  
Solution: Use a float to check the result.  
Files: src/register.c

#### Patch 8.2.3576

Problem: Some functions are not documented for use with a method.  
Solution: Add examples. Fix that sign\_unplacelist() only takes one argument. (Sean Dewar, closes #9081)  
Files: src/evalfunc.c, runtime/doc/eval.txt

Patch 8.2.3577 (after 8.2.3574)

Problem: Overflow check fails with 32 bit ints.

Solution: Only test with 64 bit ints.

Files: src/testdir/test\_put.vim

Patch 8.2.3578

Problem: Manipulating highlighting is complicated.

Solution: Add the hlget() and hlset() functions. (Yegappan Lakshmanan, closes #9039)

Files: runtime/doc/eval.txt, runtime/doc/syntax.txt,  
runtime/doc/usr\_41.txt, runtime/doc/windows.txt, src/evalfunc.c,  
src/highlight.c, src/proto/highlight.pro,  
src/testdir/test\_highlight.vim, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3579

Problem: CI sometimes fails for MinGW.

Solution: Use backslashes in HandleSwapExists(). (Christian Brabandt, closes #9078)

Files: src/testdir/runtest.vim

Patch 8.2.3580

Problem: gj does not move properly with a wide character.

Solution: Move one to the right. (Christian Brabandt, closes #8702)

Files: src/normal.c, src/testdir/test\_normal.vim

Patch 8.2.3581

Problem: Reading character past end of line.

Solution: Correct the cursor column.

Files: src/ex\_docmd.c, src/testdir/test\_put.vim

Patch 8.2.3582

Problem: Reading uninitialized memory when giving spell suggestions.

Solution: Check that preword is not empty.

Files: src/spellsuggest.c, src/testdir/test\_spell.vim

Patch 8.2.3583

Problem: The "gd" and "gD" commands do not update search stats. (Gary Johnson)

Solution: Clear search stats.

Files: src/normal.c, src/testdir/test\_search\_stat.vim,  
src/testdir/dumps/Test\_searchstatgd\_1.dump,  
src/testdir/dumps/Test\_searchstatgd\_2.dump

Patch 8.2.3584

Problem: "verbose set efm" reports the location of the :compiler command. (Gary Johnson)

Solution: Add the "--keepscrip" argument to :command and use it when defining CompilerSet.

Files: runtime/doc/map.txt, src/ex\_cmds2.c, src/usercmd.c, src/ex\_cmds.h,  
src/testdir/test\_compiler.vim

Patch 8.2.3585

Problem: Crash when passing float to "term\_rows" in the options argument of term\_start(). (Virginia Senioria)

Solution: Bail out if the argument is not a number. (closes #9116)  
Files: src/job.c, src/terminal.c, src/testdir/test\_terminal.vim

Patch 8.2.3586 (after 8.2.3584)

Problem: Command completion test fails.  
Solution: Add new argument to expected output  
Files: src/testdir/test\_usercommands.vim

Patch 8.2.3587 (after 8.2.3584)

Problem: Compiler test fails with backslash file separator.  
Solution: Accept slash and backslash.  
Files: src/testdir/test\_compiler.vim

Patch 8.2.3588

Problem: Break statement is never reached.  
Solution: Rely on return value of set\_chars\_option() not changing.  
(closes #9103)  
Files: src/optionstr.c

Patch 8.2.3589

Problem: Failure when the "term\_rows" argument of term\_start() is an unusual value.  
Solution: Limit to range of zero to 1000. (closes #9116)  
Files: runtime/doc/terminal.txt, src/job.c, src/testdir/test\_terminal.vim

Patch 8.2.3590

Problem: Test for v:colornames sometimes fails. (Dominique Pellé)  
Solution: Check features. Clear v:colornames between tests. (Drew Vogel, closes #9105, closes #9073)  
Files: runtime/doc/eval.txt, src/highlight.c, src/proto/highlight.pro, src/testdir/test\_highlight.vim

Patch 8.2.3591

Problem: No event is triggered when closing a window.  
Solution: Add the WinClosed event. (Naohiro Ono, closes #9110)  
Files: runtime/doc/autocmd.txt, src/autocmd.c, src/testdir/test\_autocmd.vim, src/vim.h, src/window.c

Patch 8.2.3592

Problem: Test\_hlset fails when terminal has many columns.  
Solution: Set the number of columns to 80. (Dominique Pellé, closes #9101, closes #9100)  
Files: src/testdir/test\_highlight.vim

Patch 8.2.3593

Problem: Directory is wrong after executing "lcd" with win\_execute().  
Solution: Correct the directory when going back to the original window.  
(closes #9132)  
Files: src/evalwindow.c, src/window.c, src/proto/window.pro, src/testdir/test\_execute\_func.vim

Patch 8.2.3594

Problem: Xxd code is a bit difficult to understand.  
Solution: Move some lines to a separate function. (closes #9037)

Files: src/xxd/xxd.c

Patch 8.2.3595

Problem: Check for signed overflow might not work everywhere.

Solution: Limit to 32 bit int. (closes #9043, closes #9067)

Files: src/getchar.c

Patch 8.2.3596

Problem: Crash when using :pedit in Vim9 script.

Solution: Move check for arguments to after checking there are arguments.  
(Yegappan Lakshmanan, closes #9134, closes #9135)

Files: src/popupwin.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3597

Problem: Vim seems to hang when writing a very long text to a terminal window.

Solution: Limit the amount of text based on **'termwincscroll'**. (issue #9080)

Files: runtime/doc/options.txt, src/terminal.c

Patch 8.2.3598

Problem: RouterOS filetype is not recognized.

Solution: Add file and script patterns. (closes #9097)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3599

Problem: Not all gdbinit files are recognized.

Solution: Add "gdbinit". (Doug Kearns)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3600 (after 8.2.3598)

Problem: Filetype test fails.

Solution: Add missing change.

Files: runtime/scripts.vim

Patch 8.2.3601

Problem: Check for overflow in put count does not work well.

Solution: Improve the overflow check. (Ozaki Kiichi, closes #9102)

Files: src/register.c, src/testdir/test\_put.vim

Patch 8.2.3602

Problem: Python3 test fails with Python 3.10 on MS-Windows.

Solution: Adjust the expected error. (Ken Takata, closes #9118)

Files: src/testdir/test\_python3.vim

Patch 8.2.3603

Problem: Fish filetype not recognized.

Solution: Add a file pattern and match script line. (Doug Kearns)

Files: runtime/filetype.vim, runtime/scripts.vim,  
src/testdir/test\_filetype.vim

Patch 8.2.3604

Problem: Not all sudoers files are recognized.

Solution: Add a file pattern. (Doug Kearns, closes #1192)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3605

Problem: Cannot clear and unlink a highlight group with hlset() in a single call.  
Solution: Add the "force" option. (Yegappan Lakshmanan, closes #9117)  
Files: runtime/doc/eval.txt, src/highlight.c,  
src/testdir/test\_highlight.vim, src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3606

Problem: File missing from list of distributed files.  
Solution: Add the file.  
Files: Filelist

Patch 8.2.3607

Problem: GTK3 screen updating is slow.  
Solution: Remove some of the GTK3-specific code. (closes #9052)  
Files: src/gui.h, src/gui\_gtk\_x11.c

Patch 8.2.3608

Problem: Users who type "q:" instead of ":q" are confused.  
Solution: Add an autocmd to give a message that explains this is the command-line window. (Egor Zvorykin, closes #9146)  
Files: runtime/defaults.vim, src/testdir/test\_autocmd.vim,  
src/testdir/test\_cmdline.vim

Patch 8.2.3609

Problem: Internal error when ModeChanged is triggered when v:event is already in use.  
Solution: Save and restore v:event if needed.  
Files: src/misc1.c, src/proto/misc1.pro, src/testdir/test\_edit.vim,  
src/insexpand.c, src/structs.h, src/register.c

Patch 8.2.3610

Problem: Crash when ModeChanged triggered too early.  
Solution: Trigger ModeChanged after setting VIsual.  
Files: src/normal.c, src/testdir/test\_edit.vim

Patch 8.2.3611

Problem: Crash when using **CTRL-W** f without finding a file name.  
Solution: Bail out when the file name length is zero.  
Files: src/findfile.c, src/normal.c, src/testdir/test\_visual.vim

Patch 8.2.3612

Problem: Using freed memory with regexp using a mark.  
Solution: Get the line again after getting the mark position.  
Files: src/regexp.c, src/regexp\_nfa.c, src/testdir/test\_regexp\_latin.vim

Patch 8.2.3613

Problem: :find test fails.  
Solution: Put length check inside if block.  
Files: src/findfile.c

Patch 8.2.3614

Problem: zindex of popup windows not used when redrawing popup menu.  
Solution: Check the zindex when redrawing the popup menu. (closes #9129, closes #9089)

Files: src/popupmenu.c, src/popupwin.c, src/proto/popupmenu.pro, src/screen.c, src/testdir/test\_popupwin.vim, src/testdir/dumps/Test\_popupwin\_popupmenu\_masking\_1.dump, src/testdir/dumps/Test\_popupwin\_popupmenu\_masking\_2.dump

#### Patch 8.2.3615

Problem: When re-formatting with an indent expression the first line of a paragraph may get the wrong indent. (Martin F. Krafft)

Solution: Apply the correct indenting function for the first line. (Christian Brabandt, closes #9150, closes #9056)

Files: src/textformat.c, src/testdir/test\_indent.vim

#### Patch 8.2.3616

Problem: Arglist test does not clear the argument list consistently.

Solution: Call Reset\_arglist(). (Shougo Matsushita, closes #9154)

Files: src/testdir/test\_arglist.vim

#### Patch 8.2.3617

Problem: ":verbose pwd" does not mention '**autochdir**' was applied.

Solution: Remember the last chdir was done by '**autochdir**'. (issue #9142)

Files: src/globals.h, src/buffer.c, src/ex\_docmd.c, src/window.c, src/main.c, src/netbeans.c, src/os\_win32.c, src/testdir/test\_autochdir.vim

#### Patch 8.2.3618

Problem: getcwd() is unclear about how '**autochdir**' is used.

Solution: Update the help for getcwd(). Without any arguments always return the actual current directory. (closes #9142)

Files: runtime/doc/eval.txt, src/filepath.c, src/testdir/test\_cd.vim

#### Patch 8.2.3619

Problem: Cannot use a lambda for '**operatorfunc**'.

Solution: Support using a lambda or partial. (Yegappan Lakshmanan, closes #8775)

Files: runtime/doc/map.txt, runtime/doc/options.txt, src/ops.c, src/option.c, src/optionstr.c, src/proto/ops.pro, src/proto/option.pro, src/quickfix.c, src/testdir/test\_normal.vim

#### Patch 8.2.3620

Problem: Memory leak reported in libtlib.

Solution: Call del\_curterm() when cleaning up memory. Rename term.h to termdefs.h to avoid a name clash.

Files: src/term.c, src/proto/term.pro, src/alloc.c, src/configure.ac, src/auto/configure, src/config.h.in, src/Makefile, src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/Make\_vms.mms, src/term.h, src/termdefs.h

#### Patch 8.2.3621 (after 8.2.3620)

Problem: Build failure.

Solution: Add missing change.

Files: src/vim.h

Patch 8.2.3622

Problem: "verbose pwd" shows confusing info when :lcd does not change directory.  
Solution: Clear last\_chdir\_reason also when the directory does not change. (closes #9160)  
Files: src/ex\_docmd.c, src/testdir/test\_autochdir.vim

Patch 8.2.3623

Problem: "\$\*" is expanded to "nonomatch".  
Solution: Only add "set nonomatch" when using a csh-like shell. (Christian Brabandt, closes #9159, closes #9153)  
Files: src/os\_unix.c, src/testdir/test\_expand.vim

Patch 8.2.3624

Problem: When renaming a terminal buffer the status text is not updated.  
Solution: Clear the cached status text when renaming a terminal buffer. (closes #9162)  
Files: src/buffer.c, src/terminal.c, src/proto/terminal.pro, src/testdir/test\_terminal.vim

Patch 8.2.3625

Problem: Illegal memory access when C-indenting.  
Solution: Also set the cursor column.  
Files: src/cindent.c, src/testdir/test\_cindent.vim

Patch 8.2.3626

Problem: "au!" and "au! event" cannot be followed by another command as documented.  
Solution: When a bar is found set nextcmd.  
Files: src/autocmd.c, src/testdir/test\_autocmd.vim

Patch 8.2.3627

Problem: difficult to know where the text starts in a window. (Sergey Vlasov)  
Solution: Add the "textoff" entry in the result of getwininfo(). (closes #9163)  
Files: runtime/doc/eval.txt, src/evalwindow.c, src/testdir/test\_bufwintabinfo.vim

Patch 8.2.3628

Problem: Looking up terminal colors is a bit slow.  
Solution: Cache the terminal colors. (closes #9130, closes #9058)  
Files: src/highlight.c, src/libvterm/include/vterm.h, src/option.c, src/optionstr.c, src/popupwin.c, src/proto/terminal.pro, src/structs.h, src/terminal.c, src/window.c, src/testdir/test\_terminal3.vim, src/testdir/dumps/Test\_terminal\_color\_MyTermCol.dump, src/testdir/dumps/Test\_terminal\_color\_MyTermCol\_over\_Terminal.dump, src/testdir/dumps/Test\_terminal\_color\_MyWinCol.dump, src/testdir/dumps/Test\_terminal\_color\_MyWinCol\_over\_group.dump, src/testdir/dumps/Test\_terminal\_color\_Terminal.dump, src/testdir/dumps/Test\_terminal\_color\_gui\_MyTermCol.dump, src/testdir/dumps/Test\_terminal\_color\_gui\_MyWinCol.dump,

src/testdir/dumps/Test\_terminal\_color\_gui\_Terminal.dump,  
src/testdir/dumps/Test\_terminal\_color\_gui\_transp\_MyTermCol.dump,  
src/testdir/dumps/Test\_terminal\_color\_gui\_transp\_MyWinCol.dump,  
src/testdir/dumps/Test\_terminal\_color\_gui\_transp\_Terminal.dump,  
src/testdir/dumps/Test\_terminal\_color\_transp\_MyTermCol.dump,  
src/testdir/dumps/Test\_terminal\_color\_transp\_MyWinCol.dump,  
src/testdir/dumps/Test\_terminal\_color\_transp\_Terminal.dump,  
src/testdir/dumps/Test\_terminal\_popup\_MyPopupHlCol.dump,  
src/testdir/dumps/Test\_terminal\_popup\_MyTermCol\_over\_Terminal.dump,  
src/testdir/dumps/Test\_terminal\_popup\_MyWinCol.dump,  
src/testdir/dumps/Test\_terminal\_popup\_MyWinCol\_over\_group.dump,  
src/testdir/dumps/Test\_terminal\_popup\_gui\_MyPopupHlCol.dump,  
src/testdir/dumps/Test\_terminal\_popup\_gui\_MyTermCol.dump,  
src/testdir/dumps/Test\_terminal\_popup\_gui\_MyWinCol.dump,  
src/testdir/dumps/Test\_terminal\_popup\_gui\_Terminal.dump,  
src/testdir/dumps/Test\_terminal\_popup\_gui\_transp\_MyPopupHlCol.dump,  
src/testdir/dumps/Test\_terminal\_popup\_gui\_transp\_MyTermCol.dump,  
src/testdir/dumps/Test\_terminal\_popup\_gui\_transp\_MyWinCol.dump,  
src/testdir/dumps/Test\_terminal\_popup\_gui\_transp\_Terminal.dump,  
src/testdir/dumps/Test\_terminal\_popup\_transp\_MyPopupHlCol.dump,  
src/testdir/dumps/Test\_terminal\_popup\_transp\_MyTermCol.dump,  
src/testdir/dumps/Test\_terminal\_popup\_transp\_MyWinCol.dump,  
src/testdir/dumps/Test\_terminal\_popup\_transp\_Terminal.dump,  
src/testdir/dumps/Test\_terminal\_wincolor\_split\_MyWinCol.dump,  
src/testdir/dumps/Test\_terminal\_wincolor\_split\_MyWinCol2.dump

#### Patch 8.2.3629

Problem: Command completion in cmdline window uses global user commands, not local commands for the window where it was opened from.  
Solution: Use local commands. (closes #9168)  
Files: src/ex\_getln.c, src/proto/ex\_getln.pro, src/evalvars.c, src/usercmd.c, src/testdir/test\_ins\_complete.vim

#### Patch 8.2.3630

Problem: Printf() with %S does not handle multi-byte correctly.  
Solution: Count cells instead of bytes. (closes #9169, closes #7486)  
Files: src/strings.c, src/testdir/test\_expr.vim

#### Patch 8.2.3631

Problem: "syntax enable" does not work properly in Vim9 context.  
Solution: Also handle Vim9 context. (closes #9161)  
Files: src/syntax.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.3632

Problem: GTK3: undercurl does not get removed properly.  
Solution: Set the cairo cursor first. (closes #9170)  
Files: src/gui\_gtk\_x11.c

#### Patch 8.2.3633

Problem: Vim9: line number of lambda is off by one.  
Solution: Add one to the line number. (closes #9083)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3634

Problem: Error for already defined function uses wrong line number.  
Solution: Set SOURCING\_LNUM before giving the error message. (closes #9085)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.3635

Problem: GTK: composing underline does not show.  
Solution: Include composing character in pango call. A few more optimizations for ligatures. (Dusan Popovic, closes #9171, closes #9147)  
Files: src/gui\_gtk\_x11.c

Patch 8.2.3636

Problem: Coverity warns for unreachable code.  
Solution: Remove unreachable else block.  
Files: src/gui\_gtk\_x11.c

Patch 8.2.3637

Problem: Typos in test files.  
Solution: Correct the typos. (Dominique Pellé, closes #9175)  
Files: src/testdir/runtest.vim, src/testdir/test\_debugger.vim, src/testdir/test\_diffmode.vim, src/testdir/test\_edit.vim, src/testdir/test\_excmd.vim, src/testdir/test\_flatten.vim, src/testdir/test\_ins\_complete.vim, src/testdir/test\_normal.vim, src/testdir/test\_options.vim, src/testdir/test\_python2.vim, src/testdir/test\_python3.vim, src/testdir/test\_quickfix.vim, src/testdir/test\_recover.vim, src/testdir/test\_spellfile.vim, src/testdir/test\_syntax.vim, src/testdir/test\_termcodes.vim, src/testdir/test\_textobjects.vim, src/testdir/test\_trycatch.vim, src/testdir/test\_vim9\_script.vim, src/testdir/test\_viminfo.vim

Patch 8.2.3638

Problem: getcompletion() always passes zero as position to custom completion function.  
Solution: Pass the pattern length. (closes #9173)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

Patch 8.2.3639 (after 8.2.2922)

Problem: Line commented out accidentally.  
Solution: Uncomment. (Volodymyr Kot, closes #9172)  
Files: src/main.c

Patch 8.2.3640

Problem: Freeze when calling term\_wait() in a close callback.  
Solution: Set a "closing" flag to tell term\_wait() to return. (closes #9152)  
Files: src/channel.c, src/terminal.c, src/proto/terminal.pro, src/testdir/test\_terminal.vim

Patch 8.2.3641

Problem: Xxd code has duplicate expressions.  
Solution: Refactor to avoid duplication. (closes #9185)  
Files: src/xxd/xxd.c

Patch 8.2.3642

Problem: List of distributed files is outdated.

Solution: Rename term.h to termdefs.h.  
Files: Filelist

Patch 8.2.3643

Problem: Header for source file is outdated.  
Solution: Make the header more accurate. (closes #9186)  
Files: src/map.c, src/getchar.c

Patch 8.2.3644

Problem: Count for **'operatorfunc'** in Visual mode is not redone.  
Solution: Add the count to the redo buffer. (closes #9174)  
Files: src/normal.c, src/proto/normal.pro, src/ops.c,  
src/testdir/test\_normal.vim

Patch 8.2.3645

Problem: Vim9: The "no effect" error is not given for all registers.  
Solution: Include any character following '@'. (closes #8779)  
Files: src/ex\_eval.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3646

Problem: Using `<sfile>` in a function gives an unexpected result.  
Solution: Give an error in a Vim9 function. (issue #9189)  
Files: src/scriptfile.c, src/errors.h, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3647

Problem: GTK: when using ligatures the cursor is drawn wrong.  
Solution: Clear more characters when ligatures are used. (Dusan Popovic,  
closes #9190)  
Files: src/gui.c

Patch 8.2.3648

Problem: "verbose pwd" is incorrect after dropping files on Vim.  
Solution: Set the chdir reason to "drop".  
Files: src/gui.c

Patch 8.2.3649

Problem: Vim9: error for variable declared in while loop.  
Solution: Do not keep the first variable. (closes #9191)  
Files: src/ex\_eval.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3650

Problem: Vim9: for loop variable can be a list member.  
Solution: Check for valid variable name. (closes #9179)  
Files: src/vim9compile.c, src/dict.c, src/eval.c, src/evalvars.c,  
src/proto/evalvars.pro, src/testdir/test\_vim9\_script.vim

Patch 8.2.3651

Problem: Vim9: no error for :lock or :unlock with unknown variable.  
Solution: Give an error. (closes #9188)  
Files: src/evalvars.c, src/errors.h, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3652

Problem: Can only get text properties one line at a time.  
Solution: Add options to prop\_list() to use a range of lines and filter by

Files: types. (Yegappan Lakshmanan, closes #9138)  
runtime/doc/textprop.txt, src/textprop.c,  
src/testdir/test\_textprop.vim

Patch 8.2.3653

Problem: Terminal ANSI colors may be wrong.  
Solution: Initialize the color type. (closes #9198, closes #9197)  
Files: src/terminal.c

Patch 8.2.3654

Problem: GTK: a touch-drag does not update the selection.  
Solution: Add GDK\_BUTTON1\_MASK to the state. (Chris Dalton, close #9196,  
closes #9194)  
Files: src/gui\_gtk\_x11.c

Patch 8.2.3655

Problem: Compiler warning for using size\_t for int.  
Solution: Add a type cast. (Mike Williams, closes #9199)  
Files: src/vim9compile.c

Patch 8.2.3656

Problem: Vim9: no error for an environment variable by itself.  
Solution: Give a "without effect" error. (closes #9166)  
Files: src/ex\_eval.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3657

Problem: Vim9: debug text misses one line of return statement.  
Solution: Add a line when not at a debug instruction. (closes #9137)  
Files: src/vim9execute.c, src/testdir/test\_debugger.vim

Patch 8.2.3658

Problem: Duplicate code in xxd.  
Solution: Merge duplicated code. Add more tests. (closes #9192)  
Files: src/xxd/xxd.c, src/testdir/test\_xxd.vim

Patch 8.2.3659

Problem: Integer overflow with large line number.  
Solution: Check for overflow. (closes #9202)  
Files: src/errors.h, src/ex\_docmd.c, src/testdir/test\_excmd.vim  
src/normal.c, src/testdir/test\_normal.vim

Patch 8.2.3660 (after 8.2.3659)

Problem: Overflow check uses wrong number.  
Solution: Divide by ten.  
Files: src/normal.c

Patch 8.2.3661 (after 8.2.3659)

Problem: Test for put with large count fails.  
Solution: Adjust the counts in the test.  
Files: src/testdir/test\_put.vim

Patch 8.2.3662

Problem: Illegal memory access if malloc() fails.  
Solution: Check **'foldmethod'** is not empty. (closes #9207)

Files: src/fold.c

Patch 8.2.3663

Problem: Using %S in printf() does not work correctly.

Solution: Fix the problem and add more tests. (closes #9208)

Files: src/strings.c, src/testdir/test\_expr.vim

Patch 8.2.3664

Problem: Cannot adjust sign highlighting for '**cursorline**'.

Solution: Add CursorLineSign and CursorLineFold highlight groups.  
(Gregory Anders, closes #9201)

Files: runtime/doc/sign.txt, runtime/doc/syntax.txt, src/drawline.c,  
src/highlight.c, src/optiondefs.h, src/popupwin.c,  
src/proto/sign.pro, src/sign.c, src/structs.h, src/vim.h,  
src/testdir/test\_signs.vim

Patch 8.2.3665

Problem: Cannot use a lambda for '**tagfunc**'.

Solution: Use '**tagfunc**' like '**opfunc**'. (Yegappan Lakshmanan, closes #9204)

Files: runtime/doc/options.txt, src/buffer.c, src/option.c,  
src/optionstr.c, src/proto/tag.pro, src/structs.h, src/tag.c,  
src/testdir/test\_tagfunc.vim

Patch 8.2.3666

Problem: Libvterm is outdated.

Solution: Include patches from revision 769 to revision 789.

Files: Filelist, src/libvterm/Makefile, src/libvterm/doc/seqs.txt,  
src/libvterm/include/vterm.h, src/libvterm/src/mouse.c,  
src/libvterm/src/parser.c, src/libvterm/src/state.c,  
src/libvterm/src/vterm.c, src/libvterm/src/vterm\_internal.h,  
src/libvterm/t/02parser.test, src/libvterm/t/17state\_mouse.test,  
src/libvterm/t/29state\_fallback.test,  
src/libvterm/t/40state\_selection.test, src/libvterm/t/harness.c,  
src/libvterm/t/run-test.pl, src/libvterm/vterm.pc.in,  
src/terminal.c

Patch 8.2.3667

Problem: Building libvterm fails with MSVC.

Solution: Don't use C99 construct.

Files: src/libvterm/src/state.c

Patch 8.2.3668

Problem: Messages may be corrupted.

Solution: Use another buffer instead of IObuff. (Yegappan Lakshmanan,  
closes #9195)

Files: src/highlight.c, src/testdir/test\_highlight.vim

Patch 8.2.3669

Problem: Buffer overflow with long help argument.

Solution: Use snprintf().

Files: src/help.c, src/testdir/test\_help.vim

Patch 8.2.3670

Problem: Error checks repeated several times.

Solution: Move the checks to functions. (closes #9213)  
Files: src/xd/xd.c

#### Patch 8.2.3671

Problem: Restarting Insert mode in prompt buffer too often when a callback switches windows and comes back. (Sean Dewar)

Solution: Do not set "restart\_edit" when already in Insert mode.  
(closes #9212)

Files: src/window.c, src/testdir/test\_prompt\_buffer.vim

#### Patch 8.2.3672 (after 8.2.3670)

Problem: Build failure with unsigned char.

Solution: Use int instead of char.

Files: src/xd/xd.c

#### Patch 8.2.3673

Problem: Crash when allocating signal stack fails.

Solution: Only using sourcing info when available. (closes #9215)

Files: src/globals.h, src/message.c

#### Patch 8.2.3674

Problem: When ml\_get\_buf() fails it messes up IObuff.

Solution: Return a local pointer. (closes #9214)

Files: src/memline.c

#### Patch 8.2.3675

Problem: Using freed memory when vim\_strsave() fails.

Solution: Clear "last\_sourcing\_name". Check for msg\_source() called recursively. (closes #8217)

Files: src/message.c

#### Patch 8.2.3676

Problem: Unused runtime file.

Solution: Remove rgb.txt.

Files: runtime/rgb.txt

#### Patch 8.2.3677

Problem: After a put the ']' mark is on the last byte of a multi-byte character.

Solution: Move it to the first byte. (closes #9047)

Files: src/register.c, src/testdir/test\_put.vim

#### Patch 8.2.3678 (after 8.2.3677)

Problem: Illegal memory access.

Solution: Ignore changed indent when computing byte offset.

Files: src/register.c

#### Patch 8.2.3679

Problem: objc file detected as Octave. (Antony Lee)

Solution: Detect objc by preprocessor lines. (Doug Kearns, closes #9223, closes #9220)

Files: runtime/autoload/dist/ft.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3680

Problem: Repeated code in xxd.  
Solution: Change exit\_on\_ferror() to getc\_or\_die(). (closes #9226)  
Files: src/xxd/xxd.c

#### Patch 8.2.3681

Problem: Cannot drag popup window after click on a status line. (Sergey Vlasov)  
Solution: Reset on\_status\_line. (closes #9221)  
Files: src/mouse.c, src/testdir/test\_popupwin.vim, src/testdir/dumps/Test\_popupwin\_drag\_04.dump

#### Patch 8.2.3682

Problem: Vim9: assigning to a script variable drops the required type.  
Solution: Lookup the type of the variable and use it. (closes #9219)  
Files: src/evalvars.c, src/vim9script.c, src/proto/vim9script.pro, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.3683

Problem: Vim9: cannot use `=expr` in :...do commands.  
Solution: Add EX\_EXPAND to the commands. (closes #9232)  
Files: src/ex\_cmds.h, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.3684

Problem: Blockwise insert does not handle autoindent properly.  
Solution: Adjust text column for indent. (closes #9229)  
Files: src/ops.c, src/testdir/test\_blockedit.vim

#### Patch 8.2.3685

Problem: Visual Studio project files are not recognized.  
Solution: Use the xml file type. (Doug Kearns)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3686

Problem: Filetype detection often mixes up Forth and F#.  
Solution: Add a function to inspect the file contents. (Doug Kearns)  
Files: runtime/autoload/dist/ft.vim, runtime/doc/filetype.txt, runtime/doc/syntax.txt, runtime/filetype.vim, runtime/scripts.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3687

Problem: Blockwise insert does not handle autoindent properly when tab is inserted.  
Solution: Adjust text column for indent before computing column. (closes #9229)  
Files: src/ops.c, src/testdir/test\_blockedit.vim

#### Patch 8.2.3688

Problem: The window title is not updated when dragging the scrollbar.  
Solution: Call maketitle(). (Christian Brabandt, closes #9238, closes #5383)  
Files: src/gui.c

#### Patch 8.2.3689

Problem: ex\_let\_one() is too long.  
Solution: Split into multiple functions.

Files: src/evalvars.c

Patch 8.2.3690

Problem: Vim9: "filter #pat# cmd" does not work.

Solution: Do not see #pat# as a comment.

Files: src/ex\_docmd.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3691

Problem: Build failure with small features.

Solution: Add #ifdef. (Dominique Pellé)

Files: src/gui.c

Patch 8.2.3692

Problem: Vim9: cannot use :func inside a :def function.

Solution: Make it work.

Files: src/vim9compile.c, src/vim9.h, src/vim9execute.c, src/errors.h,  
src/structs.h, src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.3693

Problem: Coverity warns for possibly using a NULL pointer.

Solution: Check for NULL and give an error.

Files: src/vim9execute.c, src/errors.h

Patch 8.2.3694

Problem: Cannot use quotes in the count of an Ex command.

Solution: Add getdigits\_quoted(). Give an error when misplacing a quote in  
a range. (closes #9240)

Files: src/ex\_docmd.c, src/charset.c, src/proto/charset.pro,  
src/testdir/test\_usercommands.vim

Patch 8.2.3695

Problem: Confusing error for missing key.

Solution: Use the actual key for the error. (closes #9241)

Files: src/eval.c, src/testdir/test\_listdict.vim

Patch 8.2.3696

Problem: Vim9: error for invalid assignment when skipping.

Solution: Do not check white space when skipping. (closes #9243)

Files: src/evalvars.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.3697

Problem: Cannot drag a popup without a border.

Solution: Add the "dragall" option. (closes #9218)

Files: runtime/doc/popup.txt, src/mouse.c, src/popupwin.c, src/vim.h,  
src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_drag\_05.dump,  
src/testdir/dumps/Test\_popupwin\_drag\_06.dump

Patch 8.2.3698

Problem: Match highlighting continues over breakindent.

Solution: Stop before the end column. (closes #9242)

Files: src/match.c, src/proto/match.pro, src/drawline.c,  
src/testdir/test\_match.vim,  
src/testdir/dumps/Test\_match\_linebreak.dump

Patch 8.2.3699

Problem: The +title feature adds a lot of #ifdef but little code.  
Solution: Graduate the +title feature.  
Files: src/feature.h, src/alloc.c, src/arglist.c, src/autocmd.c,  
src/buffer.c, src/bufwrite.c, src/change.c, src/drawscreen.c,  
src/evalfunc.c, src/ex\_cmds.c, src/ex\_docmd.c, src/gui.c,  
src/gui\_gtk\_x11.c, src/if\_xcmdsrv.c, src/locale.c, src/main.c,  
src/misc2.c, src/netbeans.c, src/option.c, src/optionstr.c,  
src/os\_amiga.c, src/os\_mswin.c, src/os\_unix.c, src/os\_win32.c,  
src/regexp.c, src/term.c, src/ui.c, src/version.c, src/window.c,  
src/globals.h, src/option.h, src/optiondefs.h,  
runtime/doc/options.txt, runtime/doc/various.txt

Patch 8.2.3700

Problem: Text property highlighting continues over breakindent.  
Solution: Stop before the end column. (closes #9242)  
Files: src/drawline.c, src/testdir/test\_textprop.vim,  
src/testdir/dumps/Test\_prop\_linebreak.dump

Patch 8.2.3701

Problem: Vim9: invalid LHS is not possible.  
Solution: Remove unreachable error message.  
Files: src/vim9compile.c

Patch 8.2.3702

Problem: First key in dict is seen as curly expression and fails.  
Solution: Ignore failure of curly expression. (closes #9247)  
Files: src/typval.c, src/dict.c, src/testdir/test\_listdict.vim

Patch 8.2.3703 (after 8.2.3686)

Problem: Most people call F# "fsharp" and not "fs".  
Solution: Rename filetype "fs" to "fsharp".  
Files: runtime/autoload/dist/ft.vim, runtime/filetype.vim,  
src/testdir/test\_filetype.vim

Patch 8.2.3704

Problem: Vim9: cannot use a list declaration in a :def function.  
Solution: Make it work.  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/errors.h,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.3705

Problem: Cannot pass a lambda name to function() or funcref(). (Yegappan Lakshmanan)  
Solution: Handle a lambda name differently.  
Files: src/userfunc.c, src/proto/userfunc.pro, src/evalfunc.c,  
src/testdir/test\_expr.vim

Patch 8.2.3706 (after 8.2.3700)

Problem: Text property highlighting is used on Tab.  
Solution: Only set in\_linebreak when not on a Tab. (closes #9242)  
Files: src/drawline.c, src/testdir/test\_textprop.vim,  
src/testdir/dumps/Test\_prop\_after\_tab.dump

Patch 8.2.3707

Problem: Vim9: constant expression of elseif not recognized.  
Solution: Set instruction count before generating the expression.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.3708 (after 8.2.3707)

Problem: Vim9: test fails with different error.  
Solution: Correct the error number.  
Files: src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3709

Problem: Vim9: backtick expression expanded when not desired.  
Solution: Only expand a backtick expression for commands that expand their argument. Remove a few outdated TODO comments.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3710

Problem: Vim9: backtick expression expanded for :global.  
Solution: Check the following command.  
Files: runtime/doc/vim9.txt, src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3711

Problem: Vim9: memory leak when compiling :elseif fails.  
Solution: Cleanup ppconst.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3712

Problem: Cannot use Vim9 lambda for 'tagfunc'.  
Solution: Make it work, add more tests. (Yegappan Lakshmanan, closes #9250)  
Files: runtime/doc/options.txt, src/insexpand.c, src/option.c, src/testdir/test\_tagfunc.vim

Patch 8.2.3713

Problem: MS-Windows: No error message if vimgrep pattern is not matching.  
Solution: Give an error message. (Christian Brabandt, closes #9245, closes #8762)  
Files: src/quickfix.c, src/testdir/test\_quickfix.vim

Patch 8.2.3714

Problem: Some unused assignments and ugly code in xxd.  
Solution: Leave out assignments. Use marco for fprintf(). (closes #9246)  
Files: src/xxd/xxd.c

Patch 8.2.3715

Problem: Vim9: valgrind reports spurious problems for a test.  
Solution: Move the test to the set that is known to fail.  
Files: src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_fails.vim

Patch 8.2.3716

Problem: Vim9: range without a command is not compiled.  
Solution: Add the ISN\_EXECRANGE byte code.  
Files: src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/vim9compile.c,

src/vim9execute.c, src/vim9.h,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.3717

Problem: Vim9: error for constant list size is only given at runtime.  
Solution: Give the error at compile time if possible.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.3718

Problem: Compiler warns for unused variable without the +textprop feature.  
(John Marriott)  
Solution: Adjust #ifdefs.  
Files: src/drawline.c

Patch 8.2.3719

Problem: MS-Windows: test sometimes runs into existing swap file.  
Solution: Use a different file name.  
Files: src/testdir/test\_buffer.vim

Patch 8.2.3720

Problem: Vim9: Internal error when invoking closure in legacy context.  
Solution: Give a more appropriate error message. (closes #9251)  
Files: src/errors.h, src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.3721

Problem: Using memory freed by losing the clipboard selection. (Dominique Pellé)  
Solution: Check y\_array is still valid after calling changed\_lines().  
(closes #9253)  
Files: src/errors.h, src/register.c

Patch 8.2.3722

Problem: Amiga: superfluous messages for freeing lots of yanked text.  
Solution: Assume that the machine isn't that slow these days.  
Files: src/register.c

Patch 8.2.3723

Problem: When using **'linebreak'** a text property starts too early.  
Solution: Decrement "bcol" when looking for property start. (closes #9242)  
Files: src/drawline.c, src/testdir/test\_textprop.vim,  
src/testdir/dumps/Test\_prop\_after\_linebreak.dump

Patch 8.2.3724

Problem: Build error for missing error message in small build.  
Solution: Correct #ifdef.  
Files: src/errors.h

Patch 8.2.3725

Problem: Cannot use a lambda for **'complefunc'** and **'omnifunc'**.  
Solution: Implement lambda support. (Yegappan Lakshmanan, closes #9257)  
Files: runtime/doc/options.txt, src/buffer.c, src/insexpand.c,  
src/option.c, src/optionstr.c, src/proto/insexpand.pro,

src/proto/tag.pro, src/proto/userfunc.pro, src/structs.h,  
src/tag.c, src/userfunc.c, src/testdir/test\_ins\_complete.vim,  
src/testdir/test\_tagfunc.vim

Patch 8.2.3726

Problem: README file in a config directory gets wrong filetype.  
Solution: Match README before patterns that match everything in a directory.  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3727

Problem: In a gnome terminal keys are recognized as mouse events.  
Solution: Only recognize DEC mouse events when four numbers are following.  
(closes #9256)  
Files: src/term.c, src/testdir/test\_termcodes.vim

Patch 8.2.3728

Problem: Internal error when passing range() to list2blob().  
Solution: Materialize the list first. (closes #9262)  
Files: src/blob.c, src/testdir/test\_blob.vim

Patch 8.2.3729

Problem: No support for squirrels.  
Solution: Recognize nuts. (closes #9259)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3730

Problem: "/etc/Muttrc.d/README" gets filetype muttrc.  
Solution: Move the Muttrc.d pattern down, add exception for \*.rc files.  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3731

Problem: "set! termcap" shows codes in one column, but not keys.  
Solution: Also use one column for keys. (closes #9258)  
Files: src/option.c, src/term.c, src/proto/term.pro,  
src/testdir/test\_set.vim

Patch 8.2.3732 (after 8.2.3731)

Problem: "set! termcap" test fails.  
Solution: Account for keys without a t\_xx entry.  
Files: src/testdir/test\_set.vim

Patch 8.2.3733

Problem: Vim9: using "legacy" before range does not work.  
Solution: Skip over range before parsing command. (closes #9270)  
Files: src/vim9compile.c, src/usercmd.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.3734

Problem: Vim9: crash when no pattern match found.  
Solution: Check for error.  
Files: src/vim9execute.c

Patch 8.2.3735

Problem: Cannot use a lambda for 'imactivatefunc'.  
Solution: Add lambda support for 'imactivatefunc' and 'imstatusfunc'.

(Yegappan Lakshmanan, closes #9275)  
Files: runtime/doc/options.txt, src/alloc.c, src/gui\_xim.c,  
src/optionstr.c, src/proto/gui\_xim.pro,  
src/testdir/test\_iminsert.vim, src/testdir/test\_ins\_complete.vim

#### Patch 8.2.3736

Problem: Test fails without the channel feature. (Dominique Pellé)  
Solution: Source the check.vim script. (closes #9277)  
Files: src/testdir/test\_vim9\_fails.vim

#### Patch 8.2.3737

Problem: Test fails without the **'autochdir'** option.  
Solution: Check that the option is available. (Dominique Pellé, closes #9272)  
Files: src/testdir/test\_cd.vim

#### Patch 8.2.3738

Problem: Screen is cleared when a FocusLost autocommand triggers.  
Solution: Do not redraw when at the hit-enter or more prompt. (closes #9274)  
Files: src/misc1.c

#### Patch 8.2.3739

Problem: In wrong directory when using win\_execute() with **'acd'** set.  
Solution: Restore the directory when returning to the window. (closes #9276)  
Files: src/window.c, src/testdir/test\_autochdir.vim

#### Patch 8.2.3740

Problem: Memory left allocated on exit when using Tcl.  
Solution: Call Tcl\_Finalize().  
Files: src/if\_tcl.c, src/proto/if\_tcl.pro, src/alloc.c

#### Patch 8.2.3741

Problem: Using freed memory in open command.  
Solution: Make a copy of the current line.  
Files: src/ex\_docmd.c, src/testdir/test\_ex\_mode.vim

#### Patch 8.2.3742

Problem: Dec mouse test fails without gnome terminfo entry.  
Solution: Check if there is a gnome entry. Also fix **'acd'** test on  
MS-Windows. (Ozaki Kiichi, closes #9282)  
Files: src/testdir/test\_termcodes.vim, src/testdir/test\_autochdir.vim

#### Patch 8.2.3743

Problem: ":sign" can add a highlight group without a name.  
Solution: Give an error if the group name is missing. (closes #9280)  
Files: src/sign.c, src/errors.h, src/testdir/test\_signs.vim

#### Patch 8.2.3744

Problem: E854 is not tested; some spelling suggestions are not tested.  
Solution: Add a couple of tests. (Dominique Pellé, closes #9279)  
Files: src/testdir/test\_options.vim, src/testdir/test\_spell.vim

#### Patch 8.2.3745

Problem: Autochdir test fails without the +channel feature.  
Solution: Remove the ch\_logfile() call. (Dominique Pellé, closes #9281)

Files: src/testdir/test\_autochdir.vim

Patch 8.2.3746

Problem: Cannot disassemble function starting with "debug" or "profile".

Solution: Check for white space following. (closes #9273)

Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3747 (after 8.2.3743)

Problem: Cannot remove highlight from an existing sign. (James McCoy)

Solution: Only reject empty argument for a new sign.

Files: src/sign.c, src/testdir/test\_signs.vim

Patch 8.2.3748 (after 8.2.3747)

Problem: Giving an error for an empty sign argument breaks a plugin.

Solution: Do not give an error.

Files: src/sign.c, src/errors.h, src/testdir/test\_signs.vim

Patch 8.2.3749

Problem: Error messages are everywhere.

Solution: Move more error messages to errors.h and adjust the names.

Files: src/errors.h, src/regexp\_bt.c, src/regexp.c, src/regexp\_nfa.c,  
src/globals.h, src/memfile.c, src/tag.c, src/getchar.c,  
src/bufwrite.c, src/cmdexpand.c

Patch 8.2.3750

Problem: Error messages are everywhere.

Solution: Move more error messages to errors.h and adjust the names.

Files: src/globals.h, src/errors.h, src/blob.c, src/buffer.c,  
src/channel.c, src/ex\_docmd.c, src/job.c, src/list.c, src/mark.c,  
src/misc1.c, src/os\_unix.c, src/popupwin.c, src/register.c,  
src/session.c, src/spellfile.c, src/term.c, src/userfunc.c

Patch 8.2.3751

Problem: Cannot assign a lambda to an option that takes a function.

Solution: Automatically convert the lambda to a string. (Yegappan Lakshmanan, closes #9286)

Files: runtime/doc/options.txt, src/eval.c, src/proto/eval.pro,  
src/evalvars.c, src/if\_mzsch.c, src/if\_ruby.c, src/if\_tcl.c,  
src/option.c, src/option.h, src/optiondefs.h,  
src/proto/option.pro, src/spell.c, src/typval.c,  
src/vim9compile.c, src/testdir/test\_iminsert.vim,  
src/testdir/test\_ins\_complete.vim, src/testdir/test\_tagfunc.vim

Patch 8.2.3752

Problem: Build error when using Photon GUI.

Solution: Adjust #ifdef. (closes #9288)

Files: src/beval.c

Patch 8.2.3753

Problem: Vim9: function unreferenced while called is never deleted.

Solution: Delete a function when no longer referenced.

Files: src/vim9execute.c, src/userfunc.c, src/proto/userfunc.pro

Patch 8.2.3754 (after 8.2.3615)

Problem: Undesired changing of the indent of the first formatted line.  
Solution: Do not indent the first formatted line.  
Files: src/textformat.c, src/testdir/test\_indent.vim

#### Patch 8.2.3755

Problem: Coverity warns for using a buffer in another scope.  
Solution: Declare the buffer in a common scope.  
Files: src/evalvars.c

#### Patch 8.2.3756

Problem: might crash when callback is not valid.  
Solution: Check for valid callback. (Yegappan Lakshmanan, closes #9293)  
Files: src/insexpand.c, src/option.c, src/tag.c, src/job.c,  
src/userfunc.c, src/testdir/test\_iminsert.vim,  
src/testdir/test\_ins\_complete.vim, src/testdir/test\_tagfunc.vim

#### Patch 8.2.3757

Problem: An overlong highlight group name is silently truncated.  
Solution: Give an error if the name is too long. (closes #9289)  
Files: src/errors.h, src/highlight.c, src/testdir/test\_highlight.vim

#### Patch 8.2.3758

Problem: Options that take a function insufficiently tested.  
Solution: Add additional tests and enhance existing tests. (Yegappan Lakshmanan, closes #9298)  
Files: src/testdir/test\_ins\_complete.vim, src/testdir/test\_normal.vim,  
src/testdir/test\_tagfunc.vim

#### Patch 8.2.3759

Problem: Quickfix buffer becomes hidden while still in a window.  
Solution: Check if the closed window is the last window showing the quickfix buffer. (Yegappan Lakshmanan, closes #9303, closes #9300)  
Files: src/quickfix.c, src/testdir/test\_quickfix.vim, src/window.c

#### Patch 8.2.3760

Problem: Not automatically handling gnome terminal mouse like xterm.  
Solution: Default **'ttymouse'** to "xterm" and recognize Focus events. (issue #9296)  
Files: src/os\_unix.c

#### Patch 8.2.3761

Problem: Focus change is not passed on to a terminal window.  
Solution: If the current window is a terminal and focus events are enabled send a focus event escape sequence to the terminal.  
Files: src/ui.c, src/terminal.c, src/proto/terminal.pro,  
src/testdir/test\_terminal.vim,  
src/testdir/dumps/Test\_terminal\_focus\_1.dump,  
src/testdir/dumps/Test\_terminal\_focus\_2.dump

#### Patch 8.2.3762

Problem: If the quickfix buffer is wiped out getqflist() still returns its number.  
Solution: Use zero if the buffer is no longer present. (Yegappan Lakshmanan, closes #9306)

Files: src/quickfix.c, src/testdir/test\_quickfix.vim

#### Patch 8.2.3763

Problem: When editing the command line a FocusLost callback may cause the screen to scroll up.

Solution: Do not redraw at the last line but at the same place where the command line was before. (closes #9295)

Files: src/ex\_getln.c, src/ui.c, src/beval.c, src/channel.c, src/drawscreen.c, src/proto/drawscreen.pro, src/job.c, src/popupwin.c, src/sound.c, src/terminal.c, src/time.c, src/testdir/test\_terminal.vim, src/testdir/dumps/Test\_terminal\_focus\_1.dump, src/testdir/dumps/Test\_terminal\_focus\_2.dump, src/testdir/dumps/Test\_terminal\_focus\_3.dump

#### Patch 8.2.3764

Problem: Cannot see any text when window was made zero lines or zero columns.

Solution: Ensure there is at least one line and column. (fixes #9307)

Files: src/window.c, src/proto/window.pro, src/normal.c, src/edit.c, src/testdir/test\_window\_cmd.vim

#### Patch 8.2.3765

Problem: Vim9: cannot use a lambda for '**opfunc**' and others.

Solution: Convert the lambda to a string.

Files: src/vim9compile.c, src/vim9.h, src/vim9execute.c, src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.3766

Problem: Converting a funcref to a string leaves out "g:", causing the meaning of the name depending on the context.

Solution: Prepend "g:" for a global function.

Files: src/eval.c, src/testdir/test\_functions.vim

#### Patch 8.2.3767 (after 8.2.3766)

Problem: Crash when using NULL partial.

Solution: Check for NULL.

Files: src/eval.c

#### Patch 8.2.3768

Problem: timer\_info() has the wrong repeat value in a timer callback. (Sergey Vlasov)

Solution: Do not add one to the repeat value when in the callback. (closes #9294)

Files: src/time.c, src/testdir/test\_timers.vim

#### Patch 8.2.3769

Problem: Zig files are not recognized.

Solution: Add \*.zig. (Gregory Anders, closes #9313)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3770

Problem: New compiler warnings from clang-12 and clang-13.

Solution: Adjust CI and suppress some warnings. (Ozaki Kiichi, closes #9314)  
Files: .github/workflows/ci.yml, ci/config.mk.clang-12.sed,  
src/os\_unix.c, src/spellfile.c

#### Patch 8.2.3771

Problem: Vim9: accessing freed memory when checking type.  
Solution: Make a copy of a function type.  
Files: src/structs.h, src/evalvars.c, src/vim9script.c,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3772

Problem: Timer info test fails on slow machine.  
Solution: Use WaitForAssert().  
Files: src/testdir/test\_timers.vim

#### Patch 8.2.3773

Problem: Wrong window size when a modeline changes 'columns' and there is more than one tabpage. (Michael Soyka)  
Solution: Adjust the frames of all tabpages. (closes #9315)  
Files: src/window.c

#### Patch 8.2.3774 (after 8.2.3773)

Problem: Test for command line height fails.  
Solution: Use another way to handle window size change.  
Files: src/structs.h, src/window.c

#### Patch 8.2.3775

Problem: Vim9: lambda compiled without outer context when debugging.  
Solution: When compiling a lambda for debugging also compile it without. (closes #9302)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3776

Problem: When a tags file line is long a tag may not be found.  
Solution: When increasing the buffer size read the same line again.  
Files: src/tag.c, src/testdir/test\_taglist.vim

#### Patch 8.2.3777

Problem: Spell file write error not checked.  
Solution: Check writing the prefix conditions. (Bjorn Linse, closes #9323)  
Files: src/spellfile.c

#### Patch 8.2.3778

Problem: Lambda debug test fails in some configurations.  
Solution: Check feature in a legacy function.  
Files: src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3779

Problem: Using freed memory when defining a user command from a user command.  
Solution: Do not use the command pointer after executing the command. (closes #9318)  
Files: src/usercmd.c, src/testdir/test\_usercommands.vim

Patch 8.2.3780

Problem: `":cd"` works differently on MS-Windows.  
Solution: Add the `'cdhome'` option. (closes #9324)  
Files: runtime/doc/editing.txt, runtime/doc/options.txt,  
runtime/doc/quickref.txt, runtime/optwin.vim, src/ex\_docmd.c,  
src/option.h, src/optiondefs.h, src/testdir/runtest.vim,  
src/testdir/test\_options.vim

Patch 8.2.3781

Problem: The option `window script` is outdated.  
Solution: Add several changes.  
Files: runtime/optwin.vim

Patch 8.2.3782

Problem: Vim9: no error if a function shadows a script variable.  
Solution: Check the function doesn't shadow a variable. (closes #9310)  
Files: src/userfunc.c, src/evalvars.c, src/vim.h,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.3783

Problem: Confusing error for using a variable as a function.  
Solution: If a function is not found but there is a variable, give a more  
useful error. (issue #9310)  
Files: src/eval.c, src/userfunc.c, src/proto/userfunc.pro,  
src/structs.h, src/vim9execute.c, src/testdir/test\_functions.vim,  
src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_func.vim

Patch 8.2.3784

Problem: The help for options is outdated.  
Solution: Include all the recent changes.  
Files: runtime/doc/options.txt

Patch 8.2.3785

Problem: Running CI on macOS with gcc is not useful.  
Solution: Only use clang. (Ozaki Kiichi, closes #9326) Also build with  
normal features.  
Files: .github/workflows/ci.yml

Patch 8.2.3786

Problem: Test fails because of using Vim9 syntax in legacy function.  
Solution: Add `"call"`.  
Files: src/testdir/test\_functions.vim

Patch 8.2.3787

Problem: No proper formatting of a C line comment after a statement.  
Solution: Find the start of the line comment, insert the comment leader and  
indent the comment properly.  
Files: src/change.c, src/proto/change.pro, src/search.c,  
src/proto/search.pro, src/cindent.c, src/edit.c, src/normal.c,  
src/textformat.c, src/testdir/test\_textformat.vim,  
src/testdir/test\_cindent.vim

Patch 8.2.3788

Problem: Lambda for option that is a function may be garbage collected.

Solution: Set a reference in the funcref. (Yegappan Lakshmanan, closes #9330)  
Files: src/eval.c, src/evalbuffer.c, src/evalvars.c, src/gui\_xim.c, src/insexpand.c, src/ops.c, src/proto/eval.pro, src/proto/gui\_xim.pro, src/proto/insexpand.pro, src/proto/ops.pro, src/proto/tag.pro, src/quickfix.c, src/tag.c, src/testdir/test\_iminsert.vim, src/testdir/test\_ins\_complete.vim, src/testdir/test\_normal.vim, src/testdir/test\_quickfix.vim, src/testdir/test\_tagfunc.vim

#### Patch 8.2.3789

Problem: Test\_window\_minimal\_size can fail on a slow machine.  
Solution: Do not rely on timers firing at the expected time. (Ozaki Kiichi, closes #9335)  
Files: src/testdir/test\_window\_cmd.vim

#### Patch 8.2.3790

Problem: Test for term\_gettitle() fails in some environments.  
Solution: Make the digits after "VIM" optional. (Kenta Sato, closes #9334)  
Files: src/testdir/test\_terminal2.vim

#### Patch 8.2.3791

Problem: Build error with +cindent but without +smartindent.  
Solution: Move declaration of "do\_cindent". (John Marriott)  
Files: src/change.c

#### Patch 8.2.3792

Problem: Setting \*func options insufficiently tested.  
Solution: Improve tests. (Yegappan Lakshmanan, closes #9337)  
Files: src/testdir/test\_iminsert.vim, src/testdir/test\_ins\_complete.vim, src/testdir/test\_normal.vim, src/testdir/test\_quickfix.vim, src/testdir/test\_tagfunc.vim

#### Patch 8.2.3793

Problem: Using "g:Func" as a funcref does not work in script context because "g:" is dropped.  
Solution: Keep "g:" in the name. Also add parenthesis to avoid confusing operator precedence. (closes #9336)  
Files: src/evalvars.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3794

Problem: Vim9: cannot find script-local func using "s:". (Yegappan Lakshmanan)  
Solution: Skip the "s:".  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3795

Problem: Too many #ifdefs.  
Solution: Graduate the jumplist feature.  
Files: runtime/doc/various.txt, runtime/doc/motion.txt, src/feature.h, src/buffer.c, src/change.c, src/evalfunc.c, src/ex\_docmd.c, src/mark.c, src/normal.c, src/undo.c, src/version.c, src/viminfo.c, src/window.c, src/structs.h, src/testdir/test\_changelist.vim, src/testdir/test\_jumplist.vim,

src/testdir/test\_normal.vim

Patch 8.2.3796

Problem: The funcexe\_T struct members are not named consistently.

Solution: Prefix "fe\_" to all the members.

Files: src/structs.h, src/eval.c, src/list.c, src/regexp.c,  
src/terminal.c, src/userfunc.c, src/vim9execute.c

Patch 8.2.3797

Problem: No good reason to limit the message history in the tiny version.

Solution: Always use 200.

Files: runtime/doc/message.txt, src/feature.h

Patch 8.2.3798

Problem: A :def callback function postpones an error message.

Solution: Display the error after calling the function. (closes #9340)

Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/dumps/Test\_opfunc\_error.dump

Patch 8.2.3799 (after 8.2.3798)

Problem: Edit test hangs or fails.

Solution: Do not rethrow an exception when inside try/catch.

Files: src/userfunc.c

Patch 8.2.3800

Problem: When cross compiling the output of "uname" cannot be set. (Ben Reeves)

Solution: Use cache variables. (closes #9338)

Files: src/configure.ac, src/auto/configure

Patch 8.2.3801

Problem: If a terminal shows in two windows, only one is redrawn.

Solution: Reset the dirty row range only after redrawing all windows.  
(closes #9341)

Files: src/terminal.c, src/proto/terminal.pro, src/drawscreen.c,  
src/testdir/test\_terminal.vim

Patch 8.2.3802

Problem: Terminal in two windows test fails on some systems.

Solution: Wait a bit between commands.

Files: src/testdir/test\_terminal.vim

Patch 8.2.3803

Problem: Crash when 'writedelay' is set and using a terminal window to execute a shell command.

Solution: Check that "tl\_vterm" isn't NULL. (closes #9346)

Files: src/terminal.c

Patch 8.2.3804

Problem: Script context not set when copying 'swf' and 'ts'.

Solution: Use COPY\_OPT\_SCTX with the right argument. (closes #9347)

Files: src/option.c

Patch 8.2.3805

Problem: i3config files are not recognized.  
Solution: Add patterns to match i3config files. (Quentin Higon, closes #7969)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3806

Problem: Terminal focus test fails sometimes.  
Solution: Run the test function before others.  
Files: src/testdir/test\_terminal.vim

#### Patch 8.2.3807

Problem: Vim9: can call import with star directly.  
Solution: Check that the import used star.  
Files: src/userfunc.c, src/eval.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3808

Problem: Vim9: obsolete TODO items  
Solution: Remove the comments.  
Files: src/vim9execute.c

#### Patch 8.2.3809

Problem: Vim9: crash when garbage collecting a nested partial. (Virginia Senioria)  
Solution: Set references in all the funcstacks. (closes #9348)  
Files: src/vim9execute.c, src/proto/vim9execute.pro, src/structs.h, src/eval.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3810

Problem: Vim9: expr4 test fails on MS-Windows.  
Solution: Do not give an error for a missing function name when skipping.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.3811

Problem: The opfunc error test fails on a slow machine.  
Solution: Use WaitForAssert().  
Files: src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3812

Problem: Vim9: leaking memory in numbered function test.  
Solution: Skip "g:" when checking for numbered function. Clean up after errors properly.  
Files: src/userfunc.c

#### Patch 8.2.3813

Problem: confusing error when using :cc without error list. (Gary Johnson)  
Solution: Give the "no errors" error.  
Files: src/ex\_docmd.c, src/testdir/test\_quickfix.vim

#### Patch 8.2.3814

Problem: .csx files and .sln files are not recognized.  
Solution: Add filetype patterns. (Doug Kearns)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3815

Problem: Vim9: cannot have a multi-line dict inside a block.  
Solution: Do not split the command at a line break, handle NL characters as white space.  
Files: src/ex\_docmd.c, src/charset.c, src/proto/charset.pro, src/eval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.3816

Problem: Compiler warning for possible loss of data on MS-Windows.  
Solution: Add type cast. (Mike Williams, closes #9349)  
Files: src/userfunc.c

#### Patch 8.2.3817 (after 8.2.3815)

Problem: Vim9: Not using NL as command end does not work for :autocmd.  
Solution: Only ignore NL for commands with an expression argument.  
Files: src/ex\_cmds.h, src/ex\_docmd.c, src/testdir/test\_usercommands.vim

#### Patch 8.2.3818

Problem: Cannot filter or map characters in a string.  
Solution: Make filter() and map() work on a string. (Naruhiko Nishino, closes #9327)  
Files: runtime/doc/eval.txt, src/errors.h, src/list.c, src/testdir/test\_filter\_map.vim

#### Patch 8.2.3819 (after 8.2.3818)

Problem: Test fails because error message changed.  
Solution: Update screendumps.  
Files: src/testdir/dumps/Test\_popupwin\_three\_errors\_1.dump, src/testdir/dumps/Test\_popupwin\_three\_errors\_2.dump

#### Patch 8.2.3820

Problem: "vrc" does not replace composing characters, while "rc" does.  
Solution: Check the byte length including composing characters. (closes #9351)  
Files: src/ops.c, src/testdir/test\_visual.vim

#### Patch 8.2.3821

Problem: ASAN test run fails.  
Solution: Use asan\_symbolize-13 instead of asan\_symbolize-11.  
Files: .github/workflows/ci.yml

#### Patch 8.2.3822

Problem: Leaking memory in map() and filter(), cannot use a string argument in Vim9 script.  
Solution: Fix the leak, adjust the argument check, also run the tests as Vim9 script. (Yegappan Lakshmanan, closes #9354)  
Files: src/errors.h, src/evalfunc.c, src/list.c, src/proto/typval.pro, src/testdir/test\_filter\_map.vim, src/testdir/test\_vim9\_builtin.vim, src/typval.c

#### Patch 8.2.3823

Problem: Test for visual replace is in wrong function.  
Solution: Move it to another function.  
Files: src/testdir/test\_visual.vim

Patch 8.2.3824

Problem: No ASAN support for MSVC.

Solution: Add ASAN support and fix a couple of uncovered problems. (Yegappan Lakshmanan, closes #9357)

Files: src/Make\_mvc.mak, src/findfile.c, src/os\_mswin.c,  
src/testdir/test\_fnamemodify.vim

Patch 8.2.3825

Problem: Various comments could be improved.

Solution: Improve the comments.

Files: src/getchar.c, src/mbyte.c, src/regexp\_nfa.c,  
src/testdir/test\_edit.vim, src/gui\_motif.c

Patch 8.2.3826

Problem: Vim9: using "g:Func" as a funcref does not work in a :def function.

Solution: Include "g:" in the function name. (closes #9336)

Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.3827

Problem: Huntr badge does not really fit in the list.

Solution: Move the link to Huntr to the issue template.

Files: Filelist, .github/ISSUE\_TEMPLATE/bug\_report.yml, README.md

Patch 8.2.3828

Problem: when opening a terminal from a timer the first typed character is lost. (Virginia Senioria)

Solution: When opening a terminal while waiting for a character put K\_IGNORE in the input buffer.

Files: src/terminal.c, src/edit.c, src/testdir/test\_terminal.vim

Patch 8.2.3829

Problem: No error when setting a func option to a script-local function.

Solution: Give an error if the name starts with "s:". (closes #9358)

Files: src/option.c, src/testdir/test\_tagfunc.vim,  
src/testdir/dumps/Test\_set\_tagfunc\_on\_cmdline.dump

Patch 8.2.3830

Problem: Error messages are spread out.

Solution: Move more error messages to errors.h.

Files: src/globals.h, src/errors.h, src/buffer.c, src/dict.c, src/diff.c,  
src/digraph.c, src/eval.c, src/evalfunc.c, src/evalvars.c,  
src/misc2.c, src/quickfix.c, src/typval.c, src/ui.c,  
src/userfunc.c, src/vim9compile.c, src/vim9execute.c,  
src/vim9type.c, src/window.c

Patch 8.2.3831

Problem: Opfunc test fails when missing feature changes function name. (Dominique Pellé)

Solution: Check the relevant screen line instead of using a screendump. (closes #9360)

Files: src/testdir/test\_vim9\_func.vim,  
src/testdir/dumps/Test\_opfunc\_error.dump

Patch 8.2.3832 (after 8.2.3830)

Problem: Test fails because of changed error message.

Solution: Adjust the expected error message.

Files: src/testdir/test\_vimscript.vim

Patch 8.2.3833

Problem: Error from term\_start() not caught by try/catch.

Solution: save and restore did\_emsg when applying autocommands. (Ozaki Kiichi, closes #9361)

Files: src/autocmd.c, src/testdir/test\_terminal3.vim

Patch 8.2.3834

Problem: Test\_out\_cb often fails on Mac.

Solution: Increase the timeout with every retry.

Files: src/testdir/test\_channel.vim

Patch 8.2.3835

Problem: The inline-function example does not work.

Solution: Drop ":let". Add EX\_EXPR\_ARG to CMD\_var. (issue #9352)

Files: runtime/doc/vim9.txt, src/ex\_cmds.h,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.3836

Problem: Vim9: comment after expression not skipped to find NL.

Solution: After evaluating an expression look for a newline after a # comment.

Files: src/eval.c

Patch 8.2.3837

Problem: QNX: crash when compiled with GUI but using terminal.

Solution: Check gui.in\_use is set. (Hirohito Higashi, closes #9363)

Files: src/autocmd.c

Patch 8.2.3838

Problem: Cannot use script-local function for setting \*func options.

Solution: Use the script context. (Yegappan Lakshmanan, closes #9362)

Files: src/option.c, src/testdir/dumps/Test\_set\_tagfunc\_on\_cmdline.dump,  
src/testdir/test\_ins\_complete.vim, src/testdir/test\_normal.vim,  
src/testdir/test\_quickfix.vim, src/testdir/test\_tagfunc.vim

Patch 8.2.3839

Problem: Using \z() with \z1 not tested for syntax highlighting.

Solution: Add a test. (Dominique Pellé, closes #9365)

Files: src/testdir/test\_syntax.vim

Patch 8.2.3840

Problem: Useless test for negative index in check functions.

Solution: Remove the test for negative index. (Naruhiko Nishino, closes #9364)

Files: src/typval.c

Patch 8.2.3841

Problem: Vim9: outdated TODO items, disabled tests that work.

Solution: Remove TODO items, run tests that work now. Check that a dict item isn't locked.  
Files: src/vim9execute.c, src/evalvars.c, src/errors.h, src/globals.h, src/testdir/test\_listdict.vim, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.3842

Problem: Vim9: can change locked list and list items.  
Solution: Check that a list and list item isn't locked.  
Files: src/vim9execute.c, src/testdir/test\_listdict.vim

#### Patch 8.2.3843

Problem: Dep3patch files are not recognized.  
Solution: Recognize dep3patch files by their location and content. (James McCoy, closes #9367)  
Files: runtime/autoload/dist/ft.vim, runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3844

Problem: Vim9: no type error if assigning a value with type func(number) to a variable of type func(string).  
Solution: Use check\_type\_maybe(): return MAYBE if a runtime type check is useful. (issue #8492)  
Files: src/vim9type.c, src/proto/vim9type.pro, src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.3845

Problem: Vim9: test fails when the channel feature is missing.  
Solution: Check for the channel feature. (Dominique Pellé, closes #9368)  
Files: src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3846

Problem: No error when using control character for **'lcs'** or **'fcs'**.  
Solution: Use char2cells() to check the width. (closes #9369)  
Files: src/screen.c, src/testdir/test\_display.vim, src/testdir/test\_listchars.vim

#### Patch 8.2.3847

Problem: Illegal memory access when using a lambda with an error.  
Solution: Avoid skipping over the NUL after a string.  
Files: src/eval.c, src/testdir/test\_lambda.vim

#### Patch 8.2.3848

Problem: Cannot use reduce() for a string.  
Solution: Make reduce() work with a string. (Naruhiko Nishino, closes #9366)  
Files: runtime/doc/eval.txt, src/errors.h, src/evalfunc.c, src/list.c, src/typval.c, src/proto/typval.pro, src/testdir/test\_listdict.vim, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3849

Problem: Functions implementing reduce and map are too long.  
Solution: Use a function for each type of value. Add a few more test cases and add to the help. (Yegappan Lakshmanan, closes #9370)  
Files: runtime/doc/eval.txt, src/list.c, src/testdir/test\_listdict.vim

Patch 8.2.3850

Problem: Illegal memory access when displaying a partial.  
Solution: Terminate the string with a NUL. (closes #9371)  
Files: src/eval.c, src/testdir/test\_messages.vim

Patch 8.2.3851

Problem: Vim9: overhead when comparing string, dict or function.  
Solution: Call the intended compare function directly. Refactor to avoid duplicated code.  
Files: src/vim9execute.c, src/typval.c, src/proto/typval.pro

Patch 8.2.3852

Problem: Vim9: not enough tests.  
Solution: Also run existing tests for Vim9 script. Make errors more consistent.  
Files: src/testdir/test\_listdict.vim, src/eval.c, src/vim9compile.c, src/errors.h

Patch 8.2.3853

Problem: Vim9: not enough tests.  
Solution: Run more existing tests for Vim9 script.  
Files: src/testdir/test\_listdict.vim

Patch 8.2.3854

Problem: Vim9: inconsistent arguments for test functions.  
Solution: When :def function and script have different arguments use a list with two items instead of a separate function.  
Files: src/testdir/vim9.vim, src/testdir/test\_execute\_func.vim, src/testdir/test\_float\_func.vim, src/testdir/test\_functions.vim, src/testdir/test\_glob2regpat.vim, src/testdir/test\_listdict.vim, src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_cmd.vim, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.3855

Problem: Illegal memory access when displaying a blob.  
Solution: Append a NUL at the end. (Yegappan Lakshmanan, closes #9372)  
Files: src/blob.c, src/regexp\_nfa.c, src/testdir/test\_blob.vim, src/testdir/test\_messages.vim

Patch 8.2.3856

Problem: Vim9: not enough tests.  
Solution: Run more expression tests also with Vim9. Fix an uncovered problem.  
Files: src/vim9compile.c, src/testdir/test\_expr.vim, src/testdir/vim9.vim

Patch 8.2.3857

Problem: Vim9: inconsistent error for using function().  
Solution: Use a runtime type check for the result of function(). (closes #8492)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3858

Problem: Vim9: not enough tests.  
Solution: Add tests for :try/:catch and :redir. Add missing type check.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.3859

Problem: Vim9: some code lines not tested.  
Solution: Add a few specific tests.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_cmd.vim, src/errors.h,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.3860

Problem: Vim9: codecov struggles with the file size.  
Solution: Split vim9compile.c into four files.  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/vim9instr.c,  
src/proto/vim9instr.pro, src/vim9expr.c, src/proto/vim9expr.pro,  
src/vim9cmds.c, src/proto/vim9cmds.pro, src/vim9.h,  
src/vim9execute.c, src/vim9script.c, src/proto.h,  
src/Makefile, src/Make\_ami.mak, src/Make\_cyg\_ming.mak,  
src/Make\_mvc.mak, src/Make\_vms.mms

#### Patch 8.2.3861

Problem: List of distributed files is outdated.  
Solution: Add new files.  
Files: Filelist

#### Patch 8.2.3862

Problem: Crash on exit with EXITFREE and using win\_execute().  
Solution: Also save and restore tp\_topframe. (issue #9374)  
Files: src/evalwindow.c, src/testdir/test\_execute\_func.vim

#### Patch 8.2.3863 (after 8.2.3860)

Problem: Various build flags accidentally enabled.  
Solution: Revert several lines in Makefile.  
Files: src/Makefile

#### Patch 8.2.3864

Problem: Cannot disable requesting key codes from xterm.  
Solution: Add the '**xtermcodes**' option, default on.  
Files: runtime/doc/options.txt, runtime/doc/term.txt, src/option.h,  
src/optiondefs.h, src/term.c, runtime/optwin.vim

#### Patch 8.2.3865

Problem: Vim9: compiler complains about using "try" as a struct member.  
Solution: Rename "try" to "tryref".  
Files: src/vim9.h, src/vim9cmds.c, src/vim9execute.c, src/vim9instr.c

#### Patch 8.2.3866

Problem: Vim9: type checking global variables is inconsistent.  
Solution: Use the "unknown" type in more places.  
Files: src/globals.h, src/vim9expr.c, src/vim9instr.c, src/vim9cmds.c,  
src/evalfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.3867

Problem: Implementation of some list functions too complicated.  
Solution: Refactor do\_sort\_uniq(), f\_count() and extend() (Yegappan Lakshmanan, closes #9378)  
Files: src/list.c

Patch 8.2.3868 (after 8.2.3866)

Problem: Vim9: function test fails.  
Solution: Add missing changes. Add test for earlier patch.  
Files: src/vim9type.c, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.3869

Problem: Vim9: type checking for "any" is inconsistent.  
Solution: Always use a runtime type check for using "any" for a more specific type.  
Files: src/vim9type.c, src/vim9compile.c, src/vim9expr.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.3870

Problem: MS-Windows: wrong working directory when opening two files with right-click context menu. (Gabriel Dupras)  
Solution: Use the working directory and pass it on to the process creation. (Nir Lichtman, closes #9382, closes #8874)  
Files: src/GvimExt/gvimext.cpp, src/GvimExt/gvimext.h

Patch 8.2.3871

Problem: List.c contains code for dict and blob.  
Solution: Refactor to put code where it belongs. (Yegappan Lakshmanan, closes #9386)  
Files: src/blob.c, src/dict.c, src/list.c, src/proto/blob.pro, src/proto/dict.pro, src/proto/list.pro, src/proto/strings.pro, src/strings.c, src/structs.h, src/testdir/test\_filter\_map.vim, src/testdir/test\_listdict.vim, src/testdir/test\_sort.vim

Patch 8.2.3872

Problem: Vim9: finddir() and uniq() return types can be more specific.  
Solution: Adjust the return type.  
Files: src/evalfunc.c, src/testdir/vim9.vim, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3873

Problem: go.mod files are not recognized.  
Solution: Check for the file name. (closes #9380)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3874

Problem: Cannot highlight the number column for a sign.  
Solution: Add the "numhl" argument. (James McCoy, closes #9381)  
Files: runtime/doc/options.txt, runtime/doc/sign.txt, src/drawline.c, src/popupwin.c, src/proto/sign.pro, src/sign.c, src/structs.h, src/testdir/test\_signs.vim

Patch 8.2.3875

Problem: gcc complains about buffer overrun.  
Solution: Use mch\_memmove() instead of STRCPY(). (John Marriott)

Files: src/dict.c

Patch 8.2.3876

Problem: 'cindent' does not recognize inline namespace.

Solution: Skip over "inline" to find "namespace". (closes #9383)

Files: src/cindent.c, src/testdir/test\_cindent.vim

Patch 8.2.3877

Problem: Function does not abort after a type error in compare

Solution: Check getting number fails. (closes #9384)

Files: src/typval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.3878

Problem: Vim9: debugger tries to read more lines than there are.

Solution: Check the number of lines. (closes #9394)

Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3879

Problem: getreg() and getregtype() contain dead code.

Solution: Remove the needless check. (closes #9392) Also refactor to put common code in a shared function.

Files: src/evalfunc.c

Patch 8.2.3880

Problem: Solution filter files are not recognized.

Solution: Add pattern \*.slnf and use json. (Doug Kearns)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3881

Problem: QNX: crash when compiled with GUI but using terminal.

Solution: Check the gui.in\_use flag. (Hirohito Higashi, closes #9391)

Files: src/main.c

Patch 8.2.3882 (after 8.2.3879)

Problem: More duplicated code in f\_getreginfo().

Solution: Also use getreg\_get\_regname(). (closes #9398)

Files: src/evalfunc.c

Patch 8.2.3883

Problem: Crash when switching to other regexp engine fails.

Solution: Check for regprog being NULL.

Files: src/ex\_cmds.c

Patch 8.2.3884

Problem: Crash when clearing the argument list while using it.

Solution: Lock the argument list for ":all".

Files: src/arglist.c, src/testdir/test\_arglist.vim

Patch 8.2.3885

Problem: Arglist test fails.

Solution: Adjust for locking the arglist for ":all".

Files: src/testdir/test\_arglist.vim

Patch 8.2.3886

Problem: Can define autocmd for every event by using "au!".  
Solution: Check if a command is present also for "au!".  
Files: src/autocmd.c, src/testdir/test\_autocmd.vim,  
src/testdir/test\_arglist.vim

#### Patch 8.2.3887

Problem: E1135 is used for two different errors.  
Solution: Renumber one error.  
Files: src/errors.h, src/testdir/test\_mapping.vim

#### Patch 8.2.3888

Problem: The argument list may contain duplicates.  
Solution: Add the :argdedupe command. (Nir Lichtman, closes #6235)  
Files: runtime/doc/editing.txt, runtime/doc/index.txt, src/arglist.c,  
src/ex\_cmdidxs.h, src/ex\_cmds.h, src/proto/arglist.pro,  
src/testdir/test\_arglist.vim

#### Patch 8.2.3889

Problem: Duplicate code for translating script-local function name.  
Solution: Move the code to get\_scriptlocal\_funcname(). (Yegappan Lakshmanan,  
closes #9393)  
Files: src/evalfunc.c, src/evalvars.c, src/option.c, src/userfunc.c,  
src/proto/userfunc.pro, src/testdir/test\_expr.vim,  
src/testdir/test\_normal.vim

#### Patch 8.2.3890

Problem: Vim9: type check for using v: variables is basic.  
Solution: Specify a more precise type.  
Files: src/evalvars.c, src/proto/evalvars.pro, src/vim9instr.c,  
src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.3891

Problem: Github CI: workflows may overlap.  
Solution: Cancel previous workflows when starting a new one. (Yegappan  
Lakshmanan, closes #9400)  
Files: .github/workflows/ci.yml, .github/workflows/codeql-analysis.yml

#### Patch 8.2.3892

Problem: When modifyOtherKeys is used **CTRL-C** is not recognized.  
Solution: Check for uppercase C as well, fix minimum length.  
Files: src/ui.c

#### Patch 8.2.3893

Problem: Vim9: many local variables are initialized with an instruction.  
Solution: Initialize local variables to zero to avoid the instructions.  
Files: src/vim9execute.c, src/vim9compile.c, src/vim9instr.c,  
src/proto/vim9instr.pro, src/vim9cmds.c,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.3894

Problem: Vim9: no proper type check for first argument of call().  
Solution: Add specific type check.  
Files: src/evalfunc.c, src/typval.c, src/proto/typval.pro,  
src/errors.h, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3895

Problem: Vim9: confusing error when using function() with a number.  
Solution: Check for a function or string argument.  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3896

Problem: Vim9: no test for nested function not available later.  
Solution: Add a test.  
Files: src/testdir/test\_vim9\_func.vim

Patch 8.2.3897

Problem: Vim9: the second argument of map() and filter() is not checked at compile time.  
Solution: Add more specific type check for the second argument.  
Files: src/evalfunc.c, src/globals.h, src/list.c,  
src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.3898

Problem: Vim9: not sufficient testing for variable initialization.  
Solution: Add another test case.  
Files: src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.3899 (after 8.2.3897)

Problem: Vim9: test for map() on string fails.  
Solution: Expect string return type.  
Files: src/evalfunc.c

Patch 8.2.3900

Problem: It is not easy to use a script-local function for an option.  
Solution: recognize s: and <SID> at the start of the expression. (Yegappan Lakshmanan, closes #9401)  
Files: runtime/doc/diff.txt, runtime/doc/fold.txt,  
runtime/doc/options.txt, runtime/doc/print.txt, src/optionstr.c,  
src/testdir/test\_diffmode.vim, src/testdir/test\_edit.vim,  
src/testdir/test\_fold.vim, src/testdir/test\_gf.vim,  
src/testdir/test\_gui.vim, src/testdir/test\_hardcopy.vim,  
src/testdir/test\_normal.vim

Patch 8.2.3901

Problem: Vim9: Cannot set 'cpo' in main .vimrc if using Vim9 script.  
Solution: Do not restore 'cpo' at the end of the main .vimrc.  
Files: runtime/doc/vim9.txt, runtime/doc/options.txt, src/scriptfile.c,  
src/structs.h, src/testdir/test\_vim9\_script.vim

Patch 8.2.3902

Problem: Vim9: double free with nested :def function.  
Solution: Pass "line\_to\_free" from compile\_def\_function() and make sure cmdlinep is valid.  
Files: src/vim9compile.c, src/userfunc.c, src/proto/userfunc.pro,  
src/vim9execute.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.3903

Problem: "gM" does not count tabs as expected.  
Solution: Use `linetabsize()` instead of `mb_string2cells()`. (closes #9409)  
Files: `src/normal.c`, `src/testdir/test_normal.vim`

#### Patch 8.2.3904

Problem: Vim9: skip expression type is not checked at compile time.  
Solution: Add argument type checks.  
Files: `src/evalfunc.c`, `src/testdir/test_vim9_builtin.vim`

#### Patch 8.2.3905

Problem: Dockerfile using prefix name not recognized.  
Solution: Recognize `Dockerfile.*`. (closes #9410)  
Files: `runtime/filetype.vim`, `src/testdir/test_filetype.vim`

#### Patch 8.2.3906

Problem: Vim9 help still contains "under development" warnings.  
Solution: Remove the explicit warning.  
Files: `runtime/doc/vim9.txt`

#### Patch 8.2.3907

Problem: Error messages are spread out.  
Solution: Move error messages to `errors.h`. Avoid duplicates.  
Files: `src/userfunc.c`, `src/ex_cmds.c`, `src/viminfo.c`, `src/errors.h`,  
`src/testdir/test_user_func.vim`

#### Patch 8.2.3908

Problem: Cannot use a script-local function for **'foldtext'**.  
Solution: Expand `"s:"` and `"<SID>"`. (Yegappan Lakshmanan, closes #9411)  
Files: `runtime/doc/fold.txt`, `src/optionstr.c`, `src/strings.c`,  
`src/testdir/test_blob.vim`, `src/testdir/test_expr.vim`,  
`src/testdir/test_filter_map.vim`, `src/testdir/test_fold.vim`,  
`src/testdir/test_listdict.vim`

#### Patch 8.2.3909

Problem: Containerfile using prefix name not recognized.  
Solution: Recognize `Containerfile.*`.  
Files: `runtime/filetype.vim`, `src/testdir/test_filetype.vim`

#### Patch 8.2.3910

Problem: When the compare function of `sort()` produces an error then `sort()` does not abort.  
Solution: Check if `did_emsg` was incremented.  
Files: `src/list.c`, `src/testdir/test_vim9_builtin.vim`

#### Patch 8.2.3911

Problem: Vim9: type check for `filter()` does not accept unknown.  
Solution: Also accept unknown for the return type. (closes #9413)  
Files: `src/evalfunc.c`, `src/testdir/test_vim9_builtin.vim`

#### Patch 8.2.3912

Problem: The `ins_complete()` function is much too long.  
Solution: Split it up into multiple functions. (Yegappan Lakshmanan, closes #9414)  
Files: `src/insexpand.c`

Patch 8.2.3913

Problem: Help for expressions does not mention Vim9 syntax.  
Solution: Add the rules for Vim9 to the expression help. Rename functions to match the help.  
Files: runtime/doc/vim9.txt, runtime/doc/eval.txt, src/vim9expr.c

Patch 8.2.3914

Problem: Various spelling mistakes in comments.  
Solution: Fix the mistakes. (Dominique Pellé, closes #9416)  
Files: src/alloc.c, src/blowfish.c, src/buffer.c, src/cindent.c, src/clipboard.c, src/diff.c, src/drawline.c, src/edit.c, src/ex\_cmds.c, src/ex\_docmd.c, src/findfile.c, src/fold.c, src/getchar.c, src/gui.c, src/gui\_athena.c, src/gui\_gtk.c, src/gui\_motif.c, src/gui\_photon.c, src/gui\_w32.c, src/gui\_xmew.c, src/if\_python.c, src/if\_python3.c, src/if\_xcmdsrv.c, src/main.c, src/memline.c, src/menu.c, src/message.c, src/misc1.c, src/move.c, src/option.c, src/os\_amiga.c, src/os\_mac.h, src/os\_mac\_conv.c, src/os\_mswin.c, src/os\_unix.c, src/os\_win32.c, src/os\_win32.h, src/quickfix.c, src/regexp\_nfa.c, src/screen.c, src/scriptfile.c, src/spell.c, src/spellfile.c, src/spellsuggest.c, src/strings.c, src/term.c, src/terminal.c, src/testdir/test\_debugger.vim, src/testdir/test\_source.vim, src/textformat.c, src/userfunc.c, src/vim.h, src/vim9.h, src/vim9cmds.c, src/vim9execute.c, src/winclip.c, src/window.c

Patch 8.2.3915

Problem: illegal memory access when completing with invalid bytes.  
Solution: Avoid going over the end of the completion text.  
Files: src/insexpand.c, src/testdir/test\_ins\_complete.vim

Patch 8.2.3916

Problem: No error for passing an invalid line number to append().  
Solution: In Vim9 script check for a non-negative number. (closes #9417)  
Files: src/evalbuffer.c, src/textprop.c, src/errors.h, src/indent.c, src/eval.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3917

Problem: The eval.txt helpfile is way too big.  
Solution: Move the builtin function details to a separate file.  
Files: runtime/doc/eval.txt, runtime/doc/builtin.txt, runtime/doc/Makefile, runtime/doc/help.txt, runtime/doc/remote.txt

Patch 8.2.3918 (after 8.2.3916)

Problem: Function list test fails.  
Solution: Adjust the test for the new location of the function list.  
Files: src/testdir/test\_function\_lists.vim

Patch 8.2.3919

Problem: Vim9: wrong argument for append() results in two errors.  
Solution: Check did\_emsg. Also for setline(). Adjust the help for appendbuflines().  
Files: runtime/doc/builtin.txt, src/evalbuffer.c, src/typval.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.3920

Problem: Restoring directory after using another window is inefficient.  
Solution: Only restore the directory for win\_execute(). Apply **'autochdir'** only when needed.  
Files: src/evalwindow.c, src/testdir/test\_autochdir.vim

Patch 8.2.3921

Problem: The way xdiff is used is inefficient.  
Solution: Use hunk\_func instead of the out\_line callback. (Lewis Russell, closes #9344)  
Files: src/diff.c

Patch 8.2.3922

Problem: Cannot build with dynamic Ruby 3.1.  
Solution: Add "\_EXTRA" variables for CI. Add missing functions. (Ozaki Kiichi, closes #9420)  
Files: ci/config.mk.clang-12.sed, ci/config.mk.clang.sed, ci/config.mk.sed, src/Makefile, src/auto/configure, src/config.mk.in, src/configure.ac, src/if\_ruby.c, src/vim.h

Patch 8.2.3923

Problem: Vim9: double free if a nested function has a line break in the argument list.  
Solution: Set cmdlinep when freeing the previous line.  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.3924

Problem: Vim9: no error if something follows :endef in a nested function.  
Solution: Give an error. Move common code to a function.  
Files: src/userfunc.c, src/vim9compile.c, src/errors.h, src/testdir/test\_vim9\_func.vim

Patch 8.2.3925

Problem: Diff mode confused by NUL bytes.  
Solution: Handle NUL bytes differently. (Christian Brabandt, closes #9421, closes #9418)  
Files: src/diff.c, src/testdir/test\_diffmode.vim, src/testdir/dumps/Test\_diff\_bin\_01.dump, src/testdir/dumps/Test\_diff\_bin\_02.dump, src/testdir/dumps/Test\_diff\_bin\_03.dump, src/testdir/dumps/Test\_diff\_bin\_04.dump

Patch 8.2.3926 (after 8.2.3920)

Problem: Build failure without the **'autochdir'** option. (John Marriott)  
Solution: Add #ifdefs.  
Files: src/evalwindow.c

Patch 8.2.3927

Problem: Vim9: double free when using lambda.  
Solution: Don't free both cmdline and line\_to\_free.  
Files: src/userfunc.c

Patch 8.2.3928

Problem: Heredoc test fails.  
Solution: Correct order of function arguments.  
Files: src/userfunc.c

Patch 8.2.3929

Problem: Using uninitialized variable.  
Solution: Set the option flags to zero for a terminal option.  
Files: src/option.c

Patch 8.2.3930

Problem: getcmdline() argument has a misleading type.  
Solution: Use the correct type, even though the value is not used.  
Files: src/ex\_getln.c, src/proto/ex\_getln.pro, src/ex\_docmd.c,  
src/normal.c, src/register.c, src/userfunc.c

Patch 8.2.3931

Problem: Coverity reports a memory leak.  
Solution: Free memory in case of failure.  
Files: src/diff.c

Patch 8.2.3932

Problem: C line comment not formatted properly.  
Solution: If a line comment follows after "#if" the next line is not the end  
of a paragraph.  
Files: src/textformat.c, src/testdir/test\_textformat.vim

Patch 8.2.3933

Problem: After ":cd" fails ":cd -" is incorrect.  
Solution: Set the previous directory only after successfully changing  
directory. (Richard Doty, closes #9419, closes #8983)  
Files: src/ex\_docmd.c, src/testdir/test\_cd.vim

Patch 8.2.3934

Problem: Repeating line comment is undesired for "0" command.  
Solution: Do not copy line comment leader for "0". (closes #9426)  
Files: src/change.c, src/testdir/test\_textformat.vim

Patch 8.2.3935

Problem: **CTRL-U** in Insert mode does not fix the indent.  
Solution: Fix the indent when '**cindent**' is set.  
Files: src/edit.c, src/testdir/test\_textformat.vim

Patch 8.2.3936

Problem: No proper test for maintaining change mark in diff mode.  
Solution: Run the test with internal and external diff. (Sean Dewar,  
closes #9424)  
Files: src/testdir/test\_diffmode.vim

Patch 8.2.3937

Problem: Insert mode completion function is too long.  
Solution: Refactor into multiple functions. (Yegappan Lakshmanan,  
closes #9423)  
Files: src/insexpand.c, src/testdir/test\_ins\_complete.vim

Patch 8.2.3938

Problem: Line comment start is also found in a string.  
Solution: Skip line comments in a string.  
Files: src/cindent.c, src/proto/cindent.pro, src/search.c,  
src/testdir/test\_textformat.vim

Patch 8.2.3939

Problem: MS-Windows: fnamemodify('', ':p') does not work.  
Solution: Do not consider an empty string a full path. (Yegappan Lakshmanan,  
closes #9428, closes #9427)  
Files: src/os\_mswin.c, src/testdir/test\_fnamemodify.vim

Patch 8.2.3940

Problem: Match highlight disappears when doing incsearch for ":s/pat".  
Solution: Only use line limit for incsearch highlighting. (closes #9425)  
Files: src/match.c, src/testdir/test\_match.vim,  
src/testdir/dumps/Test\_match\_with\_incsearch\_1.dump,  
src/testdir/dumps/Test\_match\_with\_incsearch\_2.dump

Patch 8.2.3941

Problem: SIGTSTP is not handled.  
Solution: Handle SIGTSTP like pressing **CTRL-Z**. (closes #9422)  
Files: runtime/doc/autocmd.txt, src/ex\_docmd.c, src/os\_unix.c,  
src/proto/ex\_docmd.pro, src/testdir/test\_signals.vim

Patch 8.2.3942

Problem: Coverity reports a possible memory leak.  
Solution: Free the array if allocation fails.  
Files: src/insexpand.c

Patch 8.2.3943

Problem: Compiler warning from gcc for uninitialized variable.  
Solution: Initialize variable. (closes #9429)  
Files: src/diff.c

Patch 8.2.3944

Problem: Insert mode completion functions are too long.  
Solution: Split up into multiple functions. (Yegappan Lakshmanan,  
closes #9431)  
Files: src/insexpand.c, src/testdir/test\_ins\_complete.vim

Patch 8.2.3945

Problem: Vim9: partial variable argument types are wrong, leading to a  
crash.  
Solution: When adjusting the argument count also adjust the argument types.  
(closes #9433)  
Files: src/vim9type.c, src/userfunc.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.3946

Problem: When an internal error makes Vim exit the error is not seen.  
Solution: Add the error to the test output.  
Files: src/message.c, src/testdir/runtest.vim

Patch 8.2.3947

Problem: Unnecessary check for NULL pointer.  
Solution: Remove the check. (closes #9434)  
Files: src/ex\_docmd.c

Patch 8.2.3948

Problem: Vim9: failure with partial with unknown argument count.  
Solution: Do not copy argument types if there aren't any.  
Files: src/vim9type.c

Patch 8.2.3949

Problem: Using freed memory with /\%V.  
Solution: Get the line again after getvvcol().  
Files: src/regexp.c, src/testdir/test\_regexp\_latin.vim

Patch 8.2.3950

Problem: Going beyond the end of the line with /\%V.  
Solution: Check for valid column in getvvcol().  
Files: src/charset.c, src/testdir/test\_regexp\_latin.vim

Patch 8.2.3951

Problem: Vim9: memory leak when text after a nested function.  
Solution: Free the function if text is found after "enddef".  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.3952

Problem: First line not redrawn when adding lines to an empty buffer.  
Solution: Adjust the argument to appended\_lines(). (closes #9439,  
closes #9438)  
Files: src/ex\_cmds.c, src/testdir/test\_excmd.vim

Patch 8.2.3953

Problem: Insert completion code is too complicated.  
Solution: More refactoring. Move function arguments into a struct.  
(Yegappan Lakshmanan, closes #9437)  
Files: src/insexpand.c

Patch 8.2.3954

Problem: Vim9: no error for shadowing if script var is declared later.  
Solution: Check argument names when compiling a function.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.3955

Problem: Error messages are spread out.  
Solution: Move more errors to errors.h.  
Files: src/errors.h, src/globals.h, src/debugger.c, src/ex\_cmds.c,  
src/help.c, src/sign.c, src/spellfile.c

Patch 8.2.3956

Problem: Duplicate assignment.  
Solution: Remove the second assignment. (closes #9442)  
Files: src/evalfunc.c

Patch 8.2.3957

Problem: Error messages are spread out.  
Solution: Move more errors to errors.h.  
Files: src/errors.h, src/globals.h, src/arglist.c, src/bufwrite.c,  
src/evalvars.c, src/ex\_cmds2.c, src/ex\_docmd.c, src/ex\_eval.c,  
src/help.c, src/scriptfile.c, src/usercmd.c, src/userfunc.c,  
src/vim9cmds.c, src/vim9compile.c

#### Patch 8.2.3958

Problem: Build failure compiling xxd with "-std=c2x".  
Solution: define \_XOPEN\_SOURCE. (Yegappan Lakshmanan, closes #9444)  
Files: src/xxd/xxd.c

#### Patch 8.2.3959

Problem: Error messages are spread out.  
Solution: Move more errors to errors.h.  
Files: src/errors.h, src/autocmd.c, src/bufwrite.c, src/evalvars.c,  
src/ex\_docmd.c, src/ex\_eval.c, src/ex\_getln.c, src/fileio.c,  
src/getchar.c, src/gui.c, src/locale.c, src/map.c

#### Patch 8.2.3960

Problem: Error messages are spread out.  
Solution: Move more errors to errors.h.  
Files: src/errors.h, src/alloc.c, src/arglist.c, src/autocmd.c,  
src/blob.c, src/blowfish.c, src/buffer.c, src/bufwrite.c

#### Patch 8.2.3961

Problem: Error messages are spread out.  
Solution: Move more errors to errors.h.  
Files: src/errors.h, src/globals.h, src/arglist.c, src/autocmd.c,  
src/blob.c, src/bufwrite.c, src/channel.c, src/clipboard.c,  
src/cmdexpand.c, src/debugger.c, src/dict.c, src/eval.c,  
src/evalfunc.c, src/evalvars.c, src/evalwindow.c, src/ex\_cmds.c,  
src/ex\_docmd.c, src/ex\_eval.c, src/ex\_getln.c, src/fileio.c,  
src/filepath.c, src/gui\_gtk\_x11.c, src/gui\_haiku.c,  
src/gui\_photon.c, src/gui\_w32.c, src/gui\_x11.c, src/highlight.c,  
src/indent.c, src/insexpand.c, src/job.c, src/json.c, src/list.c,  
src/map.c, src/mark.c, src/match.c, src/mbyte.c, src/menu.c,  
src/message.c, src/misc2.c, src/ops.c, src/option.c,  
src/optionstr.c, src/popupwin.c, src/quickfix.c, src/screen.c,  
src/scriptfile.c, src/search.c, src/sign.c, src/spell.c,  
src/spellfile.c, src/strings.c, src/syntax.c, src/terminal.c,  
src/testing.c, src/textprop.c, src/time.c, src/userfunc.c,  
src/vim9cmds.c, src/vim9execute.c, src/vim9script.c, src/window.c

#### Patch 8.2.3962 (after 8.2.3961)

Problem: Build fails for missing error message.  
Solution: Add changes in missed file.  
Files: src/regexp\_bt.c

#### Patch 8.2.3963

Problem: Build failure with tiny and small features. (Tony Mechelynck)  
Solution: Adjust #ifdefs.  
Files: src/errors.h, src/message.c

Patch 8.2.3964

Problem: Some common lisp and scheme files not recognized.  
Solution: Recognize \*.asd as lisp and \*.sld as scheme. (Alex Vear, closes #9447)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.3965

Problem: Vim9: no easy way to check if Vim9 script is supported.  
Solution: Add has('vim9script').  
Files: runtime/doc/vim9.txt, src/evalfunc.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.3966

Problem: When using feedkeys() abbreviations may be blocked.  
Solution: Reset tb\_no\_abbr\_cnt when running out of characters. (closes #9448)  
Files: src/getchar.c, src/testdir/test\_feedkeys.vim

Patch 8.2.3967

Problem: Error messages are spread out.  
Solution: Move more errors to errors.h.  
Files: src/errors.h, src/globals.h, src/feature.h, src/arglist.c, src/autocmd.c, src/blob.c, src/bufwrite.c, src/channel.c, src/cmdexpand.c, src/dict.c, src/diff.c, src/eval.c, src/evalfunc.c, src/evalvars.c, src/ex\_cmds.c, src/ex\_docmd.c, src/fileio.c, src/filepath.c, src/getchar.c, src/gui\_gtk\_x11.c, src/gui\_x11.c, src/hardcopy.c, src/help.c, src/highlight.c, src/if\_cscope.c, src/if\_lua.c, src/if\_mzsch.c, src/if\_perl.xs, src/if\_python.c, src/if\_python3.c, src/if\_ruby.c, src/if\_tcl.c, src/if\_xcmdsrv.c, src/indent.c, src/insexpand.c, src/job.c, src/list.c, src/main.c, src/map.c, src/match.c, src/mbyte.c, src/message.c, src/misc1.c, src/option.c, src/optionstr.c, src/os\_mswin.c, src/os\_unix.c, src/os\_win32.c, src/popupwin.c, src/profiler.c, src/quickfix.c, src/scriptfile.c, src/search.c, src/session.c, src/sign.c, src/spell.c, src/spellfile.c, src/spellsuggest.c, src/syntax.c, src/tag.c, src/terminal.c, src/testing.c, src/textprop.c, src/typval.c, src/userfunc.c, src/vim9execute.c, src/vim9expr.c, src/vim9instr.c, src/vim9script.c

Patch 8.2.3968

Problem: Build failure.  
Solution: Add missing changes.  
Files: src/strings.c, src/vim9compile.c

Patch 8.2.3969

Problem: Value of MAXCOL not available in Vim script.  
Solution: Add v:maxcol. (Naohiro Ono, closes #9451)  
Files: runtime/doc/builtin.txt, runtime/doc/eval.txt, src/evalvars.c, src/testdir/test\_cursor\_func.vim, src/testdir/test\_normal.vim, src/testdir/test\_put.vim, src/vim.h

Patch 8.2.3970

Problem: Error messages are spread out.

Solution: Move more errors to errors.h.  
Files: src/errors.h, src/globals.h, src/buffer.c, src/bufwrite.c, src/clientserver.c, src/cmdhist.c, src/dict.c, src/edit.c, src/eval.c, src/evalfunc.c, src/evalvars.c, src/ex\_cmds.c, src/ex\_docmd.c, src/ex\_eval.c, src/ex\_getln.c, src/gui\_w32.c, src/gui\_x11.c, src/if\_xcmdsrv.c, src/insexpand.c, src/json.c, src/match.c, src/menu.c, src/option.c, src/optionstr.c, src/os\_mswin.c, src/quickfix.c, src/regexp\_bt.c, src/regexp\_nfa.c, src/scriptfile.c, src/sign.c, src/spellfile.c, src/undo.c, src/userfunc.c, src/vim9cmds.c, src/vim9compile.c, src/vim9execute.c, src/vim9expr.c, src/window.c

#### Patch 8.2.3971

Problem: Build fails.  
Solution: Use the right error message name.  
Files: src/typval.c

#### Patch 8.2.3972

Problem: Error messages are spread out.  
Solution: Move the last errors from globals.h to errors.h.  
Files: src/errors.h, src/globals.h, src/eval.c, src/evalfunc.c, src/evalvars.c, src/evalwindow.c, src/ex\_eval.c, src/list.c, src/match.c, src/menu.c, src/popupmenu.c, src/search.c, src/vim9cmds.c, src/vim9expr.c

#### Patch 8.2.3973

Problem: Tiny build fails.  
Solution: Adjust #ifdefs  
Files: src/errors.h

#### Patch 8.2.3974

Problem: Vim9: LISTAPPEND instruction does not check for a locked list.  
Solution: Check whether the list is locked. (closes #9452)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3975

Problem: Error messages are spread out.  
Solution: Move more error messages to errors.h.  
Files: src/errors.h, src/clientserver.c, src/fileio.c, src/gui.c, src/gui\_beval.c, src/gui\_w32.c, src/gui\_x11.c, src/if\_cscope.c, src/if\_xcmdsrv.c, src/os\_mswin.c, src/sign.c, src/viminfo.c, src/window.c

#### Patch 8.2.3976

Problem: FEARG\_LAST is never used. (Dominique Pellé)  
Solution: Remove FEARG\_LAST and the related code.  
Files: src/evalfunc.c

#### Patch 8.2.3977

Problem: Error messages are spread out.  
Solution: Move more error messages to errors.h.  
Files: src/errors.h, src/change.c, src/clientserver.c, src/eval.c, src/gui\_xim.c, src/if\_cscope.c, src/if\_py\_both.h, src/if\_python.c, src/if\_python3.c, src/if\_ruby.c, src/if\_tcl.c, src/main.c,

src/mark.c, src/match.c, src/memfile.c, src/memline.c,  
src/terminal.c, src/textprop.c, src/userfunc.c

#### Patch 8.2.3978

Problem: Build error when using dynamically loaded Python 3.  
Solution: Adjust #ifdef.  
Files: src/errors.h

#### Patch 8.2.3979

Problem: Vim9: the feature is not mentioned in the right places.  
Solution: Add +vim9script to the help and :version output.  
Files: runtime/doc/builtin.txt, runtime/doc/various.txt, src/version.c

#### Patch 8.2.3980

Problem: If '**operatorfunc**' invokes an operator the remembered Visual mode may be changed. (Naohiro Ono)  
Solution: Save and restore the information for redoing the Visual area. (closes #9455)  
Files: src/ops.c, src/testdir/test\_normal.vim

#### Patch 8.2.3981

Problem: Vim9: debugging a for loop doesn't stop before it starts.  
Solution: Keep the DEBUG instruction before the expression is evaluated. (closes #9456)  
Files: src/vim9cmds.c, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.3982

Problem: Some lines of code not covered by tests.  
Solution: Add a few more test cases. (Dominique Pellé, closes #9453)  
Files: src/testdir/test\_filter\_map.vim, src/testdir/test\_highlight.vim, src/testdir/test\_regexp\_latin.vim, src/testdir/test\_search.vim, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3983

Problem: Error messages are spread out.  
Solution: Move more error messages to errors.h.  
Files: src/errors.h, src/ex\_docmd.c, src/fileio.c, src/filepath.c, src/findfile.c, src/hardcopy.c, src/memfile.c, src/memline.c, src/menu.c, src/normal.c, src/regexp\_bt.c

#### Patch 8.2.3984 (after 8.2.3981)

Problem: Debugger test fails.  
Solution: Adjust the test for modified debugging of a for loop.  
Files: src/testdir/test\_debugger.vim

#### Patch 8.2.3985

Problem: Error messages are spread out.  
Solution: Move more error messages to errors.h.  
Files: src/errors.h, src/findfile.c, src/fold.c, src/hardcopy.c, src/highlight.c, src/map.c, src/message.c, src/normal.c, src/option.c, src/os\_amiga.c, src/os\_unix.c, src/os\_win32.c, src/quickfix.c, src/regexp.c, src/register.c, src/search.c, src/syntax.c, src/tag.c, src/term.c, src/typval.c, src/undo.c, src/window.c

Patch 8.2.3986

Problem: Error messages are spread out.  
Solution: Move more error messages to errors.h.  
Files: src/errors.h, src/evalvars.c, src/ex\_cmds.c, src/ex\_docmd.c,  
src/fileio.c, src/fold.c, src/gui\_x11.c, src/hardcopy.c,  
src/help.c, src/highlight.c, src/if\_cscope.c, src/json.c,  
src/map.c, src/netbeans.c, src/popupwin.c, src/usercmd.c,  
src/userfunc.c

Patch 8.2.3987

Problem: Error messages are spread out.  
Solution: Move more error messages to errors.h.  
Files: src/errors.h, src/digraph.c, src/ex\_eval.c, src/gui.c,  
src/hardcopy.c, src/if\_cscope.c, src/if\_tcl.c, src/if\_xcmdsrv.c,  
src/mbyte.c, src/misc2.c, src/netbeans.c, src/option.c,  
src/optionstr.c, src/quickfix.c, src/regexp.c, src/tag.c,  
src/term.c, src/viminfo.c

Patch 8.2.3988 (after 8.2.3987)

Problem: Tiny build fails.  
Solution: Fix misplaced #ifdef.  
Files: src/errors.h

Patch 8.2.3989

Problem: Some insert completion code is not tested.  
Solution: Add a few tests. Refactor thesaurus completion. (Yegappan  
Lakshmanan, closes #9460)  
Files: src/insexpand.c, src/testdir/test\_edit.vim,  
src/testdir/test\_ins\_complete.vim

Patch 8.2.3990

Problem: Testing wrong operator.  
Solution: Test "g@" instead of "r\_". (Naohiro Ono, closes #9463)  
Files: src/testdir/test\_normal.vim

Patch 8.2.3991

Problem: Vim9: error when extending dict<any> with another type that it was  
initialized with.  
Solution: Also set the type for dict<any> if the initializer has a more  
specific type. (closes #9461)  
Files: src/vim9compile.c, src/vim9type.c, src/vim9.h, src/eval.c,  
src/list.c, src/vim9script.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_func.vim

Patch 8.2.3992

Problem: Wrong local-additions in the help with language mix.  
Solution: Adjust how the local additions list is generated. (Hirohito  
Higashi, closes #9464)  
Files: src/help.c, src/testdir/test\_help.vim

Patch 8.2.3993

Problem: When recording a change in Select mode the first typed character  
appears twice.

Solution: When putting the character back into typeahead remove it from recorded characters. (closes #9462)  
Files: src/getchar.c, src/proto/getchar.pro, src/normal.c, src/testdir/test\_registers.vim

#### Patch 8.2.3994

Problem: Vim9: extend() complains about the type even when it was not declared.  
Solution: Only check the list or dict type when it was declared.  
Files: src/list.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3995

Problem: Not all sshconfig files are detected as such.  
Solution: Adjust the patterns used for sshconfig detection. (David Auer, closes #9322)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.3996

Problem: Vim9: type checking for list and dict lacks information about declared type.  
Solution: Add dv\_decl\_type and lv\_decl\_type. Refactor the type stack to store two types in each entry.  
Files: src/structs.h, src/dict.c, src/list.c, src/vim9type.c, src/proto/vim9type.pro, src/vim9instr.c, src/proto/vim9instr.pro, src/vim9compile.c, src/evalfunc.c, src/proto/evalfunc.pro, src/evalbuffer.c, src/proto/evalbuffer.pro, src/vim9expr.c, src/vim9cmds.c, src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.3997

Problem: Vim9: not enough testing for extend() and map().  
Solution: Add more test cases. Fix uncovered problems. Remove unused type fields.  
Files: src/structs.h, src/dict.c, src/list.c, src/vim9compile.c, src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.3998

Problem: Asan error for adding zero to NULL.  
Solution: Do not compute pointer if there are no entries.  
Files: src/vim9type.c

#### Patch 8.2.3999

Problem: Redundant check for NUL byte.  
Solution: Remove the check for a NUL byte. (closes #9471)  
Files: src/ex\_docmd.c

#### Patch 8.2.4000

Problem: Coverity warns for checking for NULL pointer after using it.  
Solution: Remove check for NULL.  
Files: src/help.c

#### Patch 8.2.4001

Problem: Insert complete code uses global variables.

Solution: Make variables local to the file and use accessor functions.  
(Yegappan Lakshmanan, closes #9470)  
Files: src/edit.c, src/getchar.c, src/globals.h, src/insexpand.c,  
src/proto/insexpand.pro, src/search.c

#### Patch 8.2.4002

Problem: First char typed in Select mode can be wrong.  
Solution: Escape special bytes in the input buffer. (closes #9469)  
Files: src/getchar.c, src/testdir/test\_utf8.vim

#### Patch 8.2.4003

Problem: Error messages are spread out.  
Solution: Move more error messages to errors.h.  
Files: src/errors.h, src/channel.c, src/ex\_docmd.c, src/ex\_eval.c,  
src/gui\_at\_fs.c, src/hardcopy.c, src/if\_cscope.c, src/menu.c,  
src/netbeans.c, src/optionstr.c, src/os\_mswin.c, src/sign.c,  
src/typval.c

#### Patch 8.2.4004

Problem: Old compiler complains about struct init with variable.  
Solution: Set the struct member later. (John Marriott)  
Files: src/evalfunc.c

#### Patch 8.2.4005

Problem: Error messages are spread out.  
Solution: Move more error messages to errors.h.  
Files: src/errors.h, src/dict.c, src/eval.c, src/evalfunc.c,  
src/evalvars.c, src/ex\_cmds2.c, src/ex\_docmd.c, src/ex\_eval.c,  
src/filepath.c, src/gui.c, src/gui\_w32.c, src/hardcopy.c,  
src/help.c, src/highlight.c, src/if\_python.c, src/list.c,  
src/misc1.c, src/normal.c, src/quickfix.c, src/regexp.c,  
src/regexp\_bt.c, src/regexp\_nfa.c, src/typval.c, src/userfunc.c

#### Patch 8.2.4006

Problem: Vim9: crash when declaring variable on the command line.  
Solution: Use a temporary type list. (closes #9474)  
Files: src/eval.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.4007

Problem: Session does not restore help buffer properly when "options" is  
missing from **'sessionoptions'**.  
Solution: Use a ":help" command to create the help window. (closes #9475,  
closes #9458, closes #9472)  
Files: src/session.c, src/testdir/test\_mksession.vim

#### Patch 8.2.4008

Problem: Error messages are spread out.  
Solution: Move more error messages to errors.h.  
Files: src/errors.h, src/diff.c, src/digraph.c, src/evalfunc.c,  
src/evalvars.c, src/ex\_cmds.c, src/ex\_docmd.c, src/ex\_getln.c,  
src/insexpand.c, src/match.c, src/memline.c, src/menu.c,  
src/ops.c, src/profiler.c, src/quickfix.c, src/regexp.c,  
src/regexp\_bt.c, src/regexp\_nfa.c, src/register.c, src/spell.c,  
src/spell.h, src/spellfile.c, src/strings.c, src/syntax.c,

src/typval.c, src/undo.c, src/userfunc.c

Patch 8.2.4009

Problem: Reading one byte beyond the end of the line.

Solution: Check for NUL byte first.

Files: src/vim9compile.c, src/ex\_docmd.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.4010

Problem: Error messages are spread out.

Solution: Move more error messages to errors.h.

Files: src/errors.h, src/crypt.c, src/diff.c, src/ex\_docmd.c, src/ex\_getln.c, src/fileio.c, src/findfile.c, src/float.c, src/gui.c, src/highlight.c, src/if\_mzsch.c, src/if\_py\_both.h, src/if\_python.c, src/if\_python3.c, src/insexpand.c, src/match.c, src/memline.c, src/option.c, src/popupwin.c, src/regexp.c, src/regexp\_nfa.c, src/spellfile.c, src/strings.c, src/syntax.c, src/textprop.c, src/typval.c, src/undo.c, src/usercmd.c, src/userfunc.c, src/window.c

Patch 8.2.4011

Problem: Test fails because of changed error number.

Solution: Restore old duplicate error message.

Files: src/errors.h, src/match.c

Patch 8.2.4012

Problem: Error messages are spread out.

Solution: Move the last error messages to errors.h.

Files: src/errors.h, src/channel.c, src/clientserver.c, src/diff.c, src/evalfunc.c, src/evalvars.c, src/ex\_cmds2.c, src/ex\_docmd.c, src/gui\_w32.c, src/help.c, src/if\_mzsch.c, src/if\_py\_both.h, src/if\_python.c, src/job.c, src/json.c, src/list.c, src/option.c, src/optionstr.c, src/quickfix.c, src/regexp.c, src/regexp\_nfa.c, src/register.c, src/scriptfile.c, src/sign.c, src/syntax.c, src/tag.c, src/terminal.c, src/textprop.c, src/typval.c, src/undo.c, src/userfunc.c, src/vim9compile.c, src/viminfo.c

Patch 8.2.4013

Problem: Build failure without the spell feature.

Solution: Adjust #ifdefs.

Files: src/errors.h

Patch 8.2.4014

Problem: Git and gitcommit file types not properly recognized.

Solution: Adjust filetype detection. (Tim Pope, closes #9477)

Files: runtime/filetype.vim, runtime/scripts.vim, src/testdir/test\_filetype.vim

Patch 8.2.4015

Problem: Build failure with tiny features. (Tony Mechelynck)

Solution: Adjust #ifdefs.

Files: src/errors.h

Patch 8.2.4016

Problem: Vim9: incorrect error for argument that is shadowing var.

Solution: Ignore variable that is not in block where the function was defined.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.4017

Problem: Gcc warns for misleading indent in Athena menu code.  
Solution: Add curlyes around the two statements. (Dominique Pellé, closes #9480)  
Files: src/gui\_athena.c

#### Patch 8.2.4018

Problem: ml\_get error when win\_execute redraws with Visual selection.  
Solution: Disable Visual area temporarily. (closes #9479)  
Files: src/evalwindow.c, src/proto/evalwindow.pro, src/structs.h, src/evalbuffer.c, src/proto/evalbuffer.pro, src/evalvars.c, src/if\_py\_both.h, src/evalfunc.c, src/testdir/test\_execute\_func.vim

#### Patch 8.2.4019

Problem: Vim9: import mechanism is too complicated.  
Solution: Do not use the Javascript mechanism but a much simpler one.  
Files: runtime/doc/vim9.txt, src/vim9script.c, src/proto/vim9script.pro, src/errors.h, src/structs.h, src/eval.c, src/proto/eval.pro, src/evalvars.c, src/proto/evalvars.pro, src/userfunc.c, src/vim9expr.c, src/vim9compile.c, src/vim9execute.c, src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4020 (after 8.2.4019)

Problem: Debugger test fails.  
Solution: Fix import statement.  
Files: src/testdir/test\_debugger.vim

#### Patch 8.2.4021 (after 8.2.4019)

Problem: Missing part of the :import changes.  
Solution: Add changes in vim9cmds.c.  
Files: src/vim9cmds.c

#### Patch 8.2.4022

Problem: Two error messages in the wrong file.  
Solution: Use the error message from errors.h.  
Files: src/popupwin.c, src/usercmd.c

#### Patch 8.2.4023

Problem: Using uninitialized variable.  
Solution: Initialize "ufunc" also when an item is not exported.  
Files: src/vim9script.c

#### Patch 8.2.4024

Problem: Confusing error message if imported name is used directly.  
Solution: Give a better error message.  
Files: src/eval.c, src/proto/eval.pro, src/evalvars.c, src/userfunc.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4025

Problem: Error for import not ending in .vim does not work for .vimrc.  
Solution: Check that .vim is the end. (closes #9484)  
Files: src/vim9script.c, src/errors.h, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4026

Problem: ml\_get error with specific win\_execute() command. (Sean Dewar)  
Solution: Check cursor and Visual area are OK.  
Files: src/evalwindow.c, src/testdir/test\_execute\_func.vim

#### Patch 8.2.4027

Problem: Import test fails on MS-Windows.  
Solution: Use a different directory name.  
Files: src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4028

Problem: ml\_get error with :doautoall and Visual area. (Sean Dewar)  
Solution: Disable Visual mode while executing autocommands.  
Files: src/structs.h, src/autocmd.c, src/testdir/test\_autocmd.vim

#### Patch 8.2.4029

Problem: Debugging NFA regexp my crash, cached indent may be wrong.  
Solution: Fix some debug warnings in the NFA regexp code. Make sure log\_fd is set when used. Fix breakindent and indent caching. (Christian Brabandt, closes #9482)  
Files: src/indent.c, src/optionstr.c, src/regexp\_nfa.c

#### Patch 8.2.4030

Problem: A script local funcref is not found from a mapping.  
Solution: When looking for a function, also find a script-local funcref. (closes #9485)  
Files: src/evalvars.c, src/proto/evalvars.pro, src/userfunc.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4031

Problem: Crash in xterm with only two lines. (Dominique Pellé)  
Solution: Only perform xterm compatibility test if possible. (closes #9488)  
Files: src/term.c, src/testdir/test\_startup.vim

#### Patch 8.2.4032

Problem: ATTRIBUTE\_NORETURN is not needed.  
Solution: Use NORETURN(). (Ozaki Kiichi, closes #9487)  
Files: src/if\_ruby.c, src/vim.h

#### Patch 8.2.4033

Problem: Running filetype tests leaves directory behind.  
Solution: Delete the top directory. (closes #9483)  
Files: src/testdir/test\_filetype.vim

#### Patch 8.2.4034

Problem: Coverity warns for possibly using a NULL pointer.  
Solution: Check v\_partial is not NULL.  
Files: src/vim9type.c

#### Patch 8.2.4035

Problem: Timer triggered at the debug prompt may cause trouble.  
Solution: Do not trigger any timer at the debug prompt. (closes #9481)  
Files: src/time.c

#### Patch 8.2.4036

Problem: Vim9: script test file is getting too long.  
Solution: Split the import/export functionality to a separate file.  
Files: src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_import.vim,  
src/testdir/Make\_all.mak

#### Patch 8.2.4037

Problem: Insert mode completion is insufficiently tested.  
Solution: Add more tests. Fix uncovered memory leak. (Yegappan Lakshmanan,  
closes #9489)  
Files: src/insexpand.c, src/testdir/test\_ins\_complete.vim

#### Patch 8.2.4038

Problem: Various code not used when features are disabled.  
Solution: Add #ifdefs. (Dominique Pellé, closes #9491)  
Files: src/alloc.c, src/buffer.c, src/charset.c, src/clipboard.c,  
src/cmdhist.c, src/crypt.c, src/edit.c, src/eval.c,  
src/evalbuffer.c, src/evalfunc.c, src/ex\_docmd.c, src/globals.h,  
src/gui\_xim.c, src/hashtab.c, src/highlight.c, src/insexpand.c,  
src/main.c, src/mark.c, src/message.c, src/misc1.c, src/misc2.c,  
src/ops.c, src/option.c, src/option.h, src/optionstr.c,  
src/register.c, src/scriptfile.c, src/tag.c, src/term.c,  
src/typval.c, src/usercmd.c, src/userfunc.c, src/vim9script.c,  
src/vim9type.c

#### Patch 8.2.4039

Problem: The xdiff library is linked in even when not used.  
Solution: Use configure to decide whether xdiff object files are included.  
Files: src/Makefile, src/config.mk.in, src/configure.ac,  
src/auto/configure, src/feature.h

#### Patch 8.2.4040

Problem: Keeping track of allocated lines in user functions is too  
complicated.  
Solution: Instead of freeing individual lines keep them all until the end.  
Files: src/alloc.c, src/proto/alloc.pro, src/vim9compile.c,  
src/userfunc.c, src/proto/userfunc.pro, src/message.c,  
src/usercmd.c, src/viminfo.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.4041

Problem: Using uninitialized pointer.  
Solution: Store "ht" when variable is in another script.  
Files: src/evalvars.c

#### Patch 8.2.4042

Problem: Vim9: build error.  
Solution: Use grow array instead of character pointer.  
Files: src/vim9execute.c

#### Patch 8.2.4043

Problem: Using int for second argument of ga\_init2().  
Solution: Remove unnecessary type cast (int) when using sizeof().  
Files: src/arglist.c, src/channel.c, src/cmdexpand.c, src/dict.c,  
src/digraph.c, src/eval.c, src/evalfunc.c, src/evalvars.c,  
src/evalwindow.c, src/ex\_docmd.c, src/fileio.c, src/filepath.c,  
src/findfile.c, src/fold.c, src/hardcopy.c, src/help.c,  
src/job.c, src/list.c, src/menu.c, src/os\_win32.c, src/register.c,  
src/scriptfile.c, src/spellfile.c, src/spellsuggest.c,  
src/strings.c, src/syntax.c, src/tag.c, src/terminal.c,  
src/undo.c, src/usercmd.c, src/userfunc.c, src/vim9execute.c,  
src/viminfo.c, src/window.c, src/if\_py\_both.h

#### Patch 8.2.4044

Problem: Vim9: no error when importing the same script twice.  
Solution: Give an error, unless it is a reload.  
Files: src/vim9script.c, src/errors.h, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4045

Problem: Some global functions are only used in one file.  
Solution: Make the functions static. (Yegappan Lakshmanan, closes #9492)  
Files: src/ex\_getln.c, src/highlight.c, src/proto/ex\_getln.pro,  
src/proto/highlight.pro, src/proto/vim9compile.pro,  
src/proto/vim9instr.pro, src/proto/window.pro, src/vim9compile.c,  
src/vim9instr.c, src/window.c

#### Patch 8.2.4046

Problem: Some error messages not in the right place.  
Solution: Adjust the errors file. Fix typo.  
Files: src/errors.h, src/regexp\_bt.c, src/typval.c,

#### Patch 8.2.4047

Problem: Depending on the build features error messages are unused.  
Solution: Add #ifdefs. (Dominique Pellé, closes #9493)  
Files: src/errors.h

#### Patch 8.2.4048

Problem: gcc complains about use of "%p" in printf.  
Solution: Add (void \*) typecast. (Dominique Pellé, closes #9494)  
Files: src/if\_py\_both.h

#### Patch 8.2.4049

Problem: Vim9: reading before the start of the line with "\$" by itself.  
Solution: Do not subtract one when reporting the error.  
Files: src/vim9expr.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.4050

Problem: Vim9: need to prefix every item in an autoload script.  
Solution: First step in supporting "vim9script autoload" and "import  
autoload".  
Files: runtime/doc/repeat.txt, runtime/doc/vim9.txt, src/structs.h,  
src/errors.h, src/vim9script.c, src/scriptfile.c,  
src/proto/scriptfile.pro, src/userfunc.c, src/eval.c,  
src/evalvars.c, src/vim9compile.c, src/proto/vim9compile.pro,  
src/vim9expr.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.4051

Problem: Compiler complains about possibly uninitialized variable.  
Solution: Add code to avoid a compiler warning. (John Marriott)  
Files: src/scriptfile.c

Patch 8.2.4052

Problem: Not easy to resize a window from a plugin.  
Solution: Add win\_move\_separator() and win\_move\_statusline() functions.  
(Daniel Steinberg, closes #9486)  
Files: runtime/doc/builtin.txt, runtime/doc/usr\_41.txt, src/evalfunc.c,  
src/evalwindow.c, src/proto/evalwindow.pro,  
src/testdir/test\_window\_cmd.vim

Patch 8.2.4053

Problem: Vim9: autoload mechanism doesn't fully work yet.  
Solution: Define functions and variables with their autoload name, add the  
prefix when calling a function, find the variable in the table of  
script variables.  
Files: src/structs.h, src/scriptfile.c, src/proto/scriptfile.pro,  
src/vim9script.c, src/proto/vim9script.pro, src/userfunc.c,  
src/evalvars.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.4054 (after 8.2.4053)

Problem: Vim9 script test fails.  
Solution: Add missing change.  
Files: src/vim9compile.c

Patch 8.2.4055

Problem: Vim9: line break in expression causes v:errmsg to be filled.  
(Yegappan Lakshmanan)  
Solution: Do not give an error when skipping over an expression.  
Files: src/userfunc.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4056

Problem: Vim9: memory leak when exporting function in autoload script.  
Solution: Free the name if replacing it.  
Files: src/scriptfile.c

Patch 8.2.4057

Problem: Vim9: not fully implementing the autoload mechanism.  
Solution: Allow for exporting a legacy function. Improve test coverage.  
Files: src/vim9script.c, src/testdir/test\_vim9\_import.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.4058

Problem: Vim9: import test failure in wrong line.  
Solution: Adjust line number.  
Files: src/testdir/test\_vim9\_import.vim

Patch 8.2.4059

Problem: Vim9: an expression of a map cannot access script-local items.  
(Maxim Kim)  
Solution: Use the script ID of where the map was defined.

Files: src/getchar.c, src/map.c, src/proto/map.pro,  
src/testdir/test\_vim9\_import.vim

Patch 8.2.4060

Problem: win\_execute() is slow on systems where getcwd() or chdir() is slow. (Rick Howe)

Solution: Avoid using getcwd() and chdir() if no local directory is used and 'acd' is not set. (closes #9504)

Files: src/evalwindow.c

Patch 8.2.4061

Problem: Codecov bash script is deprecated.

Solution: Use the codecov action. (Ozaki Kiichi, closes #9505)

Files: .github/workflows/ci.yml

Patch 8.2.4062

Problem: Match highlighting of tab too short.

Solution: Do not stop match highlighting if on a Tab. (Christian Brabandt, closes #9507, closes #9500)

Files: src/drawline.c, src/testdir/test\_match.vim,  
src/testdir/dumps/Test\_match\_tab\_linebreak.dump

Patch 8.2.4063

Problem: Vim9: exported function in autoload script not found. (Yegappan Lakshmanan)

Solution: Use the autoload prefix to search for the function.

Files: src/userfunc.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4064

Problem: Foam files are not detected.

Solution: Detect the foam filetype by the path and file contents. (Mohammed Elwardi Fadeli, closes #9501)

Files: runtime/filetype.vim, runtime/autoload/dist/ft.vim,  
src/testdir/test\_filetype.vim

Patch 8.2.4065

Problem: Computation overflow with large count for :yank.

Solution: Avoid an overflow.

Files: src/ex\_docmd.c, src/testdir/test\_excmd.vim

Patch 8.2.4066

Problem: Vim9: imported autoload script loaded again.

Solution: Do not create a new imported\_T every time.

Files: src/vim9script.c, src/vim9compile.c,  
src/testdir/test\_vim9\_import.vim

Patch 8.2.4067

Problem: Vim9: cannot call imported function with :call. (Drew Vogel)

Solution: Translate the function name. (closes #9510)

Files: src/userfunc.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4068 (after 8.2.4066)

Problem: Vim9: import test fails.

Solution: Add missing change.

Files: src/scriptfile.c

Patch 8.2.4069

Problem: Vim9: import test fails on MS-Windows.

Solution: Ignore case. Adjust test to avoid name that only differs in case.

Files: src/eval.c, src/scriptfile.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4070

Problem: Using uninitialized memory when reading empty file.

Solution: Check for empty file before checking for NL. (Dominique Pellé, closes #9511)

Files: src/filepath.c, src/testdir/test\_eval\_stuff.vim

Patch 8.2.4071

Problem: Vim9: no detection of return in try/endtry. (Dominique Pellé)

Solution: Check if any of the blocks inside try/endtry did not end in return.

Files: src/vim9.h, src/vim9compile.c, src/vim9cmds.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.4072

Problem: Vim9: compiling function fails when autoload script is not loaded yet.

Solution: Depend on runtime loading.

Files: src/vim9expr.c, src/vim9script.c, src/vim9instr.c, src/vim9execute.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4073

Problem: Coverity warns for using NULL pointer.

Solution: Bail out when running out of memory. Check for running over end of a string.

Files: src/userfunc.c,

Patch 8.2.4074

Problem: Going over the end of NameBuff.

Solution: Check length when appending a space.

Files: src/drawscreen.c, src/testdir/test\_edit.vim

Patch 8.2.4075 (after 8.2.4073)

Problem: Test failures.

Solution: Change check for NULL pointer.

Files: src/userfunc.c

Patch 8.2.4076

Problem: Memory leak in autoload import.

Solution: Do not overwrite the autoload prefix.

Files: src/vim9script.c

Patch 8.2.4077

Problem: Not all Libsensors files are recognized.

Solution: Add "sensors.d/\*" pattern. (Doug Kearns)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4078

Problem: Terminal test for current directory not used on FreeBSD.  
Solution: Make it work on FreeBSD. (Ozaki Kiichi, closes #9516) Add TermWait() inside Run\_shell\_in\_terminal() as a generic solution.  
Files: src/testdir/test\_terminal3.vim, src/testdir/term\_util.vim, src/testdir/test\_terminal.vim, src/testdir/test\_terminal2.vim, src/testdir/test\_mapping.vim

#### Patch 8.2.4079

Problem: MS-Windows: "gvim --version" didn't work when build with VIMDLL.  
Solution: Adjust #ifdef. (Ken Takata, closes #9517)  
Files: src/main.c

#### Patch 8.2.4080

Problem: Not sufficient test coverage for xxd.  
Solution: Add a few more test cases. (Erki Auerswald, closes #9515)  
Files: src/testdir/test\_xxd.vim

#### Patch 8.2.4081

Problem: CodeQL reports problem in if\_cscope causing it to fail.  
Solution: Use execvp() instead of execl(). Merge the header file into the source file. (Ozaki Kiichi, closes #9519)  
Files: Filelist, src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/if\_cscope.c, src/if\_cscope.h, src/testdir/test\_cscope.vim

#### Patch 8.2.4082

Problem: Check for autoload file name and prefix fails. (Christian J. Robinson)  
Solution: Only lower case the prefix on systems where the file name is not case sensitive.  
Files: src/scriptfile.c, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4083

Problem: Vim9: no test for "vim9script autoload" and using script variable in the same script.  
Solution: Add a simple test. Fix uncovered problem.  
Files: src/evalvars.c, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4084

Problem: Memory leak when looking for autoload prefixed variable.  
Solution: Free the concatenated string.  
Files: src/evalvars.c

#### Patch 8.2.4085

Problem: Vim9: no test for using import in legacy script.  
Solution: Add a test.  
Files: src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4086

Problem: "cctx" argument of find\_func\_even\_dead() is unused.  
Solution: Remove the argument.  
Files: src/userfunc.c, src/proto/userfunc.pro, src/vim9compile.c, src/vim9instr.c, src/evalfunc.c, src/evalvars.c, src/testing.c, src/vim9execute.c, src/vim9expr.c, src/vim9script.c,

src/vim9type.c

Patch 8.2.4087

Problem: Cannot test items from an autoload script easily.  
Solution: Add the "autoload" value for test\_override().  
Files: runtime/doc/testing.txt, src/testing.c, src/globals.h,  
src/vim9script.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4088

Problem: Xxd cannot output everything in one line.  
Solution: Make zero columns mean infinite columns. (Erik Auerswald,  
closes #9524)  
Files: runtime/doc/xxd.1, runtime/doc/xxd.man, src/testdir/test\_xxd.vim,  
src/xxd/xxd.c

Patch 8.2.4089 (after 8.2.4078)

Problem: Terminal test for current directory fails on FreeBSD.  
Solution: Skip the test.  
Files: src/testdir/test\_terminal3.vim

Patch 8.2.4090

Problem: After restoring a session buffer order can be quite different.  
Solution: Create buffers first. (Evgeni Chasnovski, closes #9520)  
Files: src/session.c, src/testdir/test\_mksession.vim

Patch 8.2.4091

Problem: Virtcol is recomputed for statusline unnecessarily.  
Solution: Just use "w\_virtcol". (closes #9523)  
Files: src/buffer.c, src/testdir/test\_statusline.vim

Patch 8.2.4092

Problem: macOS CI: unnecessarily doing "Install packages".  
Solution: Only do "Install packages" for huge build. (Ozaki Kiichi,  
closes #9521)  
Files: .github/workflows/ci.yml

Patch 8.2.4093

Problem: Cached breakindent values not initialized properly.  
Solution: Initialize and cache formatlistpat. (Christian Brabandt,  
closes #9526, closes #9512)  
Files: runtime/doc/options.txt, src/indent.c, src/option.c,  
src/proto/option.pro, src/testdir/test\_breakindent.vim

Patch 8.2.4094

Problem: **'virtualedit'** is window-local but using buffer-local enum.  
Solution: Use window-local enum. (closes #9529)  
Files: src/option.h, src/optiondefs.h

Patch 8.2.4095

Problem: Sed script not recognized by the first line.  
Solution: Recognize a sed script starting with "#n". (Doug Kearns)  
Files: runtime/scripts.vim, src/testdir/test\_filetype.vim

Patch 8.2.4096

Problem: Linux CI: unnecessarily installing packages  
Solution: Only install packages for huge build. (Ozaki Kiichi, closes #9530)  
Files: .github/workflows/ci.yml

#### Patch 8.2.4097

Problem: Wrong number in error message on 32 bit system. (John Paul Adrian Glaubitz)  
Solution: Add type cast. (closes #9527)  
Files: src/vim9compile.c

#### Patch 8.2.4098

Problem: Typing "interrupt" at debug prompt may keep exception around, causing function calls to fail.  
Solution: Discard any exception at the toplevel. (closes #9532)  
Files: src/main.c

#### Patch 8.2.4099

Problem: Vim9: cannot use Vim9 syntax in mapping.  
Solution: Add `<ScriptCmd>` to use the script context for a command.  
Files: runtime/doc/map.txt, src/normal.c, src/getchar.c, src/proto/getchar.pro, src/ex\_getln.c, src/edit.c, src/terminal.c, src/keymap.h, src/insexpand.c, src/misc2.c, src/ops.c, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4100

Problem: Early return when getting the '`formatlistpat`' value.  
Solution: Remove the first line. (Christian Brabandt)  
Files: src/option.c, src/testdir/test\_breakindent.vim

#### Patch 8.2.4101

Problem: Warning for unused argument in tiny version.  
Solution: Add "UNUSED".  
Files: src/getchar.c

#### Patch 8.2.4102

Problem: Vim9: import cannot be used after method.  
Solution: Recognize an imported function name. (closes #9496)  
Files: src/eval.c, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4103

Problem: Vim9: variable declared in for loop not initialized.  
Solution: Always initialize the variable. (closes #9535)  
Files: src/vim9instr.c, src/proto/vim9instr.pro, src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.4104

Problem: Vim9: lower casing the autoload prefix causes problems.  
Solution: Always store the prefix with case preserved.  
Files: src/scriptfile.c, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4105

Problem: Translation related comment in the wrong place.  
Solution: Move it back with the text. (Ken Takata, closes #9537)

Files: src/errors.h, src/ex\_docmd.c

Patch 8.2.4106

Problem: Going over the end of the w\_lines array.

Solution: Break out of the loop when "idx" is too big. (issue #9540)

Files: src/drawscreen.c

Patch 8.2.4107

Problem: Script context not restored after using <ScriptCmd>.

Solution: Also restore context when not in a script. (closes #9536)

Add the 'c' flag to feedkeys() to be able to test this.

Files: runtime/doc/builtin.txt, src/getchar.c, src/evalfunc.c,  
src/testdir/test\_mapping.vim

Patch 8.2.4108

Problem: Going over the end of the w\_lines array.

Solution: Check not going over the end and limit to Rows. (issue #9540)

Files: src/drawscreen.c

Patch 8.2.4109

Problem: MS-Windows: high dpi support is outdated.

Solution: Improve High DPI support by using PerMonitorV2. (Ken Takata  
closes #9525, closes #3102)

Files: src/gui.c, src/gui.h, src/gui\_w32.c, src/vim.manifest

Patch 8.2.4110

Problem: Coverity warns for using NULL pointer.

Solution: Check "evalarg" is not NULL. Skip errors when "verbose" is false.

Files: src/eval.c

Patch 8.2.4111

Problem: Potential problem when map is deleted while executing.

Solution: Reset last used map pointer when deleting a mapping.

Files: src/map.c

Patch 8.2.4112

Problem: Function not deleted at end of test.

Solution: Delete the function.

Files: src/testdir/test\_diffmode.vim

Patch 8.2.4113

Problem: Typo on DOCMD\_RANGEOK results in not recognizing command.

Solution: Correct the typo. (closes #9539)

Files: src/vim.h, src/testdir/test\_mapping.vim

Patch 8.2.4114

Problem: Vim9: type checking for a funcref does not work for when it is  
used in a method.

Solution: Pass the base to where the type is checked.

Files: src/vim9type.c, src/proto/vim9type.pro, src/userfunc.c,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.4115

Problem: Cannot use a method with a complex expression.

Solution: Evaluate the expression after "->" and use the result.  
Files: src/eval.c, src/errors.h, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4116

Problem: Vim9: cannot use a method with a complex expression in a :def function.

Solution: Implement compiling the expression.

Files: src/vim9expr.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4117

Problem: Vim9: wrong white space error after using imported item.

Solution: Don't skip over white space. (closes #9544)

Files: src/eval.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4118

Problem: Using UNUSED for argument that is used.

Solution: Remove UNUSED.

Files: src/usercmd.c

Patch 8.2.4119

Problem: Build failure when disabling the channel feature.

Solution: Adjust #ifdef. (Dominique Pellé, closes #9545)

Files: src/misc2.c

Patch 8.2.4120

Problem: Block insert goes over the end of the line.

Solution: Handle invalid byte better. Fix inserting the wrong text.

Files: src/ops.c, src/testdir/test\_visual.vim

Patch 8.2.4121

Problem: Visual test fails on MS-Windows.

Solution: Set '**isprint**' so that the character used is not printable.

Files: src/testdir/test\_visual.vim

Patch 8.2.4122

Problem: ":command Cmd" does not show custom completion argument.

Solution: Show the completion argument when using ":verbose".

Files: src/usercmd.c, src/testdir/test\_usercommands.vim

Patch 8.2.4123

Problem: Complete function cannot be import.Name.

Solution: Dereference the function name if needed. Also: do not see "import.Name" as a builtin function. (closes #9541)

Files: src/userfunc.c, src/eval.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4124

Problem: Vim9: method in compiled function may not see script item.

Solution: Make sure not to skip to the next line. (closes #9496)

Files: src/vim9expr.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4125

Problem: Completion tests fail.

Solution: Disable error messages while dereferencing the function name.

Files: src/eval.c

Patch 8.2.4126

Problem: Crash on exit when built with dynamic Tcl and EXITFREE is defined.  
(Dominique Pellé)  
Solution: Only call Tcl\_Finalize() when initialized. (closes #9546)  
Files: src/if\_tcl.c

Patch 8.2.4127

Problem: Build failure without the +eval feature.  
Solution: Add #ifdef.  
Files: src/usercmd.c

Patch 8.2.4128

Problem: Crash when method cannot be found. (Christian J. Robinson)  
Solution: Don't mix up pointer names.  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4129

Problem: Building with +sound but without +eval fails. (Dominique Pellé)  
Solution: Disable canberra in tiny and small build. (closes #9548)  
Files: src/configure.ac, src/auto/configure

Patch 8.2.4130

Problem: MS-Windows: MSVC build may have libraries duplicated.  
Solution: Improve the MSVC Makefile. (Ken Takata, closes #9547)  
Files: src/Make\_mvc.mak

Patch 8.2.4131

Problem: Vim9: calling function in autoload import does not work in a :def  
function.  
Solution: When a variable is not found and a PCALL follows use a funcref.  
(closes #9550)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4132

Problem: Vim9: wrong error message when autoload script can't be found.  
Solution: Correct check for using autoload with wrong name.  
Files: src/vim9script.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4133

Problem: output of ":scriptnames" goes into the message history, while this  
does not happen for other commands, such as ":ls".  
Solution: Use msg\_outtrans() instead of msg(). (closes #9551)  
Files: src/scriptfile.c, src/testdir/test\_scriptnames.vim

Patch 8.2.4134

Problem: MS-Windows: test for import with absolute path fails.  
Solution: Handle path starting with slash as an absolute path.  
Files: src/vim9script.c

Patch 8.2.4135

Problem: Vim9: ":scriptnames" shows unloaded imported autoload script.  
Solution: Mark the unloaded script with "A". (closes #9552)  
Files: runtime/doc/repeat.txt, src/scriptfile.c,

src/testdir/test\_vim9\_import.vim

Patch 8.2.4136

Problem: Vim9: the "autoload" argument of ":vim9script" is not useful.  
Solution: Remove the argument. (closes #9555)  
Files: runtime/doc/vim9.txt, runtime/doc/repeat.txt, src/vim9script.c,  
src/errors.h, src/testdir/test\_vim9\_import.vim

Patch 8.2.4137

Problem: Vim9: calling import with and without method is inconsistent.  
Solution: Set a flag that a parenthesis follows to compile\_load\_scriptvar().  
Add some more tests. Improve error message.  
Files: src/vim9expr.c, src/vim9execute.c, src/vim9script.c,  
src/testdir/test\_vim9\_import.vim

Patch 8.2.4138

Problem: Vim9: no error for return with argument when the function does not  
return anything.  
Solution: Give an error for the invalid argument. (issue #9497)  
Files: src/vim9cmds.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.4139

Problem: Using freed memory if an expression abbreviation deletes the  
abbreviation.  
Solution: Do not access the pointer after evaluating the expression.  
Files: src/map.c, src/testdir/test\_mapping.vim

Patch 8.2.4140

Problem: maparg() does not indicate the type of script where it was defined.  
Solution: Add "scriptversion".  
Files: runtime/doc/builtin.txt, src/map.c, src/testdir/test\_maparg.vim

Patch 8.2.4141 (after 8.2.4140)

Problem: Vim9 builtin functions test fails.  
Solution: Add "scriptversion" item to maparg() result.  
Files: src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4142

Problem: Build failure with normal features without persistent undo.  
Solution: Adjust #ifdef. (closes #9557)  
Files: src/fileio.c

Patch 8.2.4143

Problem: MS-Windows: IME support for Win9x is obsolete.  
Solution: Remove the Win9x code. (Ken Takata, closes #9559)  
Files: src/gui\_w32.c

Patch 8.2.4144

Problem: Cannot load libsodium dynamically.  
Solution: Support dynamic loading on MS-Windows. (Ken Takata, closes #9554)  
Files: src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/buffer.c,  
src/crypt.c, src/memline.c, src/proto/crypt.pro

Patch 8.2.4145

Problem: Confusing error when using name of import for a function.  
Solution: Pass a flag to trans\_function\_name().  
Files: src/vim.h, src/userfunc.c, src/proto/userfunc.pro, src/eval.c,  
src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4146

Problem: Vim9: shadowed function can be used in compiled function but not at script level.  
Solution: Also give an error in a compiled function. (closes #9563)  
Files: src/vim9expr.c

#### Patch 8.2.4147

Problem: E464 does not always include the offending command.  
Solution: Add another error message with "%s". (closes #9564)  
Files: src/errors.h, src/vim9compile.c, src/ex\_docmd.c,  
src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4148

Problem: Deleting any mapping may cause <ScriptCmd> to not set the script context.  
Solution: Only reset last\_used\_map if it is the deleted mapping. (closes #9568)  
Files: src/map.c, src/getchar.c, src/proto/getchar.pro,  
src/testdir/test\_mapping.vim

#### Patch 8.2.4149

Problem: Test override not restored, autocommand left behind.  
Solution: Correct restoring test override. Delete autocommand afterwards.  
Files: src/testdir/test\_autocmd.vim, src/testdir/test\_mapping.vim

#### Patch 8.2.4150

Problem: Coverity warns for using pointer after free.  
Solution: Swap statements, even though using the pointer is no problem.  
Files: src/map.c

#### Patch 8.2.4151

Problem: Reading beyond the end of a line.  
Solution: For block insert only use the offset for correcting the length.  
Files: src/ops.c, src/testdir/test\_visual.vim

#### Patch 8.2.4152

Problem: Block insert with double wide character fails.  
Solution: Adjust the expected output.  
Files: src/testdir/test\_utf8.vim

#### Patch 8.2.4153

Problem: MS-Windows: Global IME is no longer supported.  
Solution: Remove the Global IME implementation. (Ken Takata, closes #9562)  
Files: Filelist, runtime/doc/mbyte.txt, src/Make\_mvc.mak, src/dimm.idl,  
src/global\_ime.cpp, src/global\_ime.h, src/gui\_w32.c, src/vim.h

#### Patch 8.2.4154

Problem: ml\_get error when exchanging windows in Visual mode.  
Solution: Correct end of Visual area when entering another buffer.

Files: src/window.c, src/testdir/test\_visual.vim

Patch 8.2.4155

Problem: Translating strftime() argument results in check error.

Solution: Add gettext comment.

Files: src/time.c

Patch 8.2.4156

Problem: Fileinfo message overwrites echo'ed message.

Solution: Reset need\_fileinfo when displaying a message. (Rob Pilling, closes #9569)

Files: src/message.c, src/testdir/test\_messages.vim, src/testdir/dumps/Test\_fileinfo\_after\_echo.dump

Patch 8.2.4157

Problem: Terminal test fails because Windows sets the title.

Solution: Add the "vterm\_title" testing override and use it in the test. (Ozaki Kiichi, closes #9556)

Files: runtime/doc/testing.txt, src/globals.h, src/terminal.c, src/testing.c, src/testdir/test\_terminal.vim

Patch 8.2.4158

Problem: MS-Windows: memory leak in :browse.

Solution: Free stuff before returning. (Ken Takata, closes #9574)

Files: src/gui\_w32.c

Patch 8.2.4159

Problem: MS-Windows: \_WndProc() is very long.

Solution: Move code to separate functions. (Ken Takata, closes #9573)

Files: src/gui\_w32.c

Patch 8.2.4160

Problem: Cannot change the register used for Select mode delete.

Solution: Make **CTRL-R** set the register to be used when deleting text for Select mode. (Shougo Matsushita, closes #9531)

Files: runtime/doc/visual.txt, src/globals.h, src/normal.c, src/ops.c, src/testdir/test\_selectmode.vim

Patch 8.2.4161

Problem: Vim9: warning for missing white space after imported variable.

Solution: Do not skip white space. (closes #9567)

Files: src/vim9expr.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4162

Problem: Vim9: no error for redefining function with export.

Solution: Check for existing function with/without prefix. (closes #9577)

Files: src/userfunc.c, src/scriptfile.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4163

Problem: No error for omitting function name after autoload prefix.

Solution: Check for missing function name. (issue #9577)

Files: src/userfunc.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4164 (after 8.2.4162)

Problem: Error in legacy code for function shadowing variable.  
Solution: Only give the error in Vim9 script.  
Files: src/userfunc.c

#### Patch 8.2.4165

Problem: The nv\_g\_cmd() function is too long.  
Solution: Move code to separate functions. (Yegappan Lakshmanan, closes #9576)  
Files: src/normal.c

#### Patch 8.2.4166

Problem: Undo synced when switching buffer in another window.  
Solution: Do not sync undo when not needed. (closes #9575)  
Files: src/buffer.c, src/testdir/test\_timers.vim

#### Patch 8.2.4167

Problem: Vim9: error message for old style import.  
Solution: Use another error message. Add a test.  
Files: src/evalvars.c, src/errors.h, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4168 (after 8.2.4163)

Problem: Disallowing empty function name breaks existing plugins.  
Solution: Allow empty function name in legacy script.  
Files: src/userfunc.c, src/testdir/test\_autoload.vim, src/testdir/sautest/autoload/foo.vim

#### Patch 8.2.4169

Problem: MS-Windows: unnecessary casts and other minor things.  
Solution: Clean up the MS-Windows code. (Ken Takata, closes #9583)  
Files: src/gui\_w32.c

#### Patch 8.2.4170

Problem: MS-Windows: still using old message API calls.  
Solution: Call the "W" functions directly. (Ken Takata, closes #9582)  
Files: src/gui\_w32.c, src/os\_mswin.c, src/os\_win32.c, src/os\_win32.h

#### Patch 8.2.4171

Problem: Cannot invoke option function using autoload import.  
Solution: Expand the import to an autoload function name. (closes #9578)  
Files: src/userfunc.c, src/evalvars.c, src/proto/evalvars.pro, src/option.c, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4172

Problem: Filetype detection for BASIC is not optimal.  
Solution: Improve BASIC filetype detection. (Doug Kearns)  
Files: runtime/autoload/dist/ft.vim, runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.4173

Problem: Cannot use an import in 'foldexpr'.  
Solution: Set the script context to where 'foldexpr' was set. (closes #9584)  
Fix that the script context was not set for all buffers.  
Files: src/eval.c, src/proto/eval.pro, src/fold.c, src/structs.h, src/option.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4174

Problem: Vim9: can use an autoload name in normal script.  
Solution: Disallow using an autoload name.  
Files: src/userfunc.c, src/errors.h, src/testdir/test\_vim9\_import.vim

Patch 8.2.4175

Problem: MS-Windows: runtime check for multi-line balloon is obsolete.  
Solution: Remove the obsolete code. (Ken Takata, closes #9592)  
Files: src/evalfunc.c, src/gui\_w32.c, src/proto/gui\_w32.pro

Patch 8.2.4176

Problem: Vim9: cannot use imported function with call().  
Solution: Translate the function name. (closes #9590)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4177

Problem: Vim9: autoload script not loaded after "vim9script noclear".  
Solution: Check IMP\_FLAGS\_AUTOLOAD properly. (closes #9593)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4178

Problem: Vim9: invalid error for return type of lambda when debugging.  
Solution: Do not check the return type of a lambda. (closes #9589)  
Files: src/vim9cmds.c

Patch 8.2.4179

Problem: **'foldtext'** is evaluated in the current script context.  
Solution: Use the script context where the option was set.  
Files: src/fold.c, src/buffer.c, src/eval.c, src/proto/eval.pro,  
src/findfile.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4180

Problem: **'balloonexpr'** is evaluated in the current script context.  
Solution: Use the script context where the option was set.  
Files: src/beval.c, src/option.c, src/proto/option.pro,  
src/testdir/test\_balloon.vim,  
src/testdir/dumps/Test\_balloon\_eval\_term\_01.dump,  
src/testdir/dumps/Test\_balloon\_eval\_term\_01a.dump,  
src/testdir/dumps/Test\_balloon\_eval\_term\_02.dump

Patch 8.2.4181

Problem: Vim9: cannot use an import in **'diffexpr'**.  
Solution: Set the script context when evaluating **'diffexpr'**. Do not require **'diffexpr'** to return a bool, it was ignored anyway.  
Files: src/evalvars.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4182 (after 8.2.4182)

Problem: Memory leak when evaluating **'diffexpr'**.  
Solution: Use free\_tv() instead of clear\_tv().  
Files: src/evalvars.c

Patch 8.2.4183

Problem: Cannot use an import in **'formatexpr'**.

Solution: Set the script context when evaluating **'formatexpr'**.  
Files: src/textformat.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4184

Problem: Cannot use an import in **'includeexpr'**.  
Solution: Set the script context when evaluating **'includeexpr'**.  
Files: src/findfile.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4185

Problem: Cannot use an import in **'indentexpr'**.  
Solution: Set the script context when evaluating **'indentexpr'**.  
Files: src/indent.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4186

Problem: Cannot use an import in **'patchexpr'**.  
Solution: Set the script context when evaluating **'patchexpr'**. Do not require **'patchexpr'** to return a bool, it was ignored anyway.  
Files: src/evalvars.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4187

Problem: Gnuplot file not recognized.  
Solution: Recognize ".gnuplot". (closes #9588)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4188

Problem: Not all gitconfig files are recognized.  
Solution: Add a few more patterns. (Tim Pope, closes #9597)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4189

Problem: MS-Windows: code for "old look" is obsolete.  
Solution: Delete obsolete code. Use "MS Shell Dlg" font. (Ken Takata, closes #9596)  
Files: src/gui\_w32.c

Patch 8.2.4190

Problem: All conceal tests are skipped without the screendumps feature.  
Solution: Only skip the tests that use screendumps. (closes #9599)  
Files: src/testdir/test\_conceal.vim

Patch 8.2.4191

Problem: json5 files are not recognized.  
Solution: Add a pattern for json5 files. (closes #9601)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4192

Problem: Cannot use an import in **'printexpr'**.  
Solution: Set the script context when evaluating **'printexpr'**.  
Files: src/evalvars.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4193

Problem: Cannot use an import in **'charconvert'**.  
Solution: Set the script context when evaluating **'charconvert'**. Also expand script-local functions in **'charconvert'**.

Files: src/evalvars.c, src/optionstr.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4194

Problem: MS-Windows: code for calculating font size is duplicated.  
Solution: Move the code to a function. (Ken Takata, closes #9603)  
Files: src/gui\_w32.c

Patch 8.2.4195

Problem: Resizing terminal may cause to behave like **CTRL-Z**.  
Solution: Set "got\_tstp" only when in\_mch\_suspend is set. (Dorian Bivolaru, closes #9602, closes #9586)  
Files: src/os\_unix.c

Patch 8.2.4196

Problem: Various file types not recognized.  
Solution: Add patterns to recognize more file types (closes #9607)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4197

Problem: Cannot use an import in the "expr" part of **'spellsuggest'**.  
Solution: Set the script context when evaluating "expr" of **'spellsuggest'**.  
Files: src/evalvars.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4198

Problem: Vim9: the switch for executing instructions is too long.  
Solution: Move some code to separate functions.  
Files: src/vim9execute.c

Patch 8.2.4199

Problem: MS-Windows: Support for MSVC before 2003 is not useful.  
Solution: Remove the exceptions for MSVC 6.0. (Ken Takata, closes #9616)  
Files: src/GvimExt/gvimext.h, src/ex\_docmd.c, src/feature.h, src/gui\_w32.c, src/if\_cscope.c, src/if\_ole.cpp, src/if\_ruby.c, src/macros.h, src/os\_mswin.c, src/os\_win32.c, src/os\_win32.h, src/proto/os\_win32.pro, src/time.c, src/vim.h

Patch 8.2.4200

Problem: Some tests do not clean up properly.  
Solution: Delete created files. (Yegappan Lakshmanan, closes #9611)  
Files: src/testdir/test\_filetype.vim, src/testdir/test\_messages.vim, src/testdir/test\_vim9\_import.vim

Patch 8.2.4201

Problem: When using the GUI **CTRL-Z** does not stop gvim.  
Solution: When using the GUI set SIGTSTP to SIG\_DFL. (Andrew Maltsev, closes #9570)  
Files: src/os\_unix.c

Patch 8.2.4202

Problem: Vim9: cannot export function that exists globally.  
Solution: When checking if a function already exists only check for script-local functions. (closes #9615)  
Files: src/userfunc.c, src/proto/userfunc.pro, src/vim.h, src/vim9compile.c, src/vim9instr.c,

src/testdir/test\_vim9\_import.vim

Patch 8.2.4203

Problem: Entering a character with **CTRL-V** may include modifiers.  
Solution: Reset "mod\_mask" when entering a character with digits after **CTRL-V**. (closes #9610)  
Files: src/edit.c, src/testdir/test\_edit.vim

Patch 8.2.4204

Problem: screenpos() has non-zero row for invisible text.  
Solution: Only add the window row when the text is visible. (closes #9618)  
Files: src/move.c, src/testdir/test\_cursor\_func.vim

Patch 8.2.4205

Problem: The normal\_cmd() function is too long.  
Solution: Move parts to separate functions. (Yegappan Lakshmanan, closes #9608)  
Files: src/normal.c

Patch 8.2.4206

Problem: Condition with many "(" causes a crash.  
Solution: Limit recursion to 1000.  
Files: src/errors.h, src/eval.c, src/testdir/test\_eval\_stuff.vim

Patch 8.2.4207 (after 8.2.4206)

Problem: Recursion test fails with MSVC.  
Solution: Use a smaller limit for MSVC.  
Files: src/eval.c

Patch 8.2.4208

Problem: Using setbufvar() may change the window title.  
Solution: Do not redraw when creating the autocommand window. (closes #9613)  
Files: src/autocmd.c, src/testdir/test\_functions.vim

Patch 8.2.4209

Problem: partial in **'opfunc'** cannot use an imported function.  
Solution: Also expand the function name in a partial. (closes #9614)  
Files: src/evalvars.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4210 (after 8.2.4208)

Problem: Window title test fails in some configurations.  
Solution: Only run the test if the title can be obtained.  
Files: src/testdir/test\_functions.vim

Patch 8.2.4211 (after 8.2.4208)

Problem: Window title test still fails in some configurations.  
Solution: Use WaitForAssert().  
Files: src/testdir/test\_functions.vim

Patch 8.2.4212 (after 8.2.4208)

Problem: Window title test still fails in some configurations.  
Solution: Explicitly set the **'title'** option.  
Files: src/testdir/test\_functions.vim

Patch 8.2.4213

Problem: Too much code for supporting old MSVC versions.  
Solution: Remove MSVC 2003 support. (Ken Takata, closes #9623)  
Files: Filelist, src/INSTALLpc.txt, src/Make\_mvc.mak, src/gui\_w32.c, src/msvcsetup.bat, src/os\_win32.c

Patch 8.2.4214

Problem: Illegal memory access with large **'tabstop'** in Ex mode.  
Solution: Allocate enough memory.  
Files: src/ex\_getln.c, src/testdir/test\_ex\_mode.vim

Patch 8.2.4215

Problem: Illegal memory access when copying lines in Visual mode.  
Solution: Adjust the Visual position after copying lines.  
Files: src/ex\_cmds.c, src/testdir/test\_visual.vim

Patch 8.2.4216

Problem: Vim9: cannot use a function from an autoload import directly.  
Solution: Add the AUToload instruction to figure out at runtime. (closes #9620)  
Files: src/vim9expr.c, src/vim9.h, src/vim9execute.c, src/vim9instr.c, src/proto/vim9instr.pro, src/testdir/test\_vim9\_import.vim, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.4217

Problem: Illegal memory access when undo makes Visual area invalid.  
Solution: Correct the Visual area after undo.  
Files: src/undo.c, src/testdir/test\_visual.vim

Patch 8.2.4218

Problem: Illegal memory access with bracketed paste in Ex mode.  
Solution: Reserve space for the trailing NUL.  
Files: src/edit.c, src/testdir/test\_paste.vim

Patch 8.2.4219

Problem: Reading before the start of the line.  
Solution: Check boundary before trying to read the character.  
Files: src/register.c, src/testdir/test\_visual.vim

Patch 8.2.4220

Problem: MS-Windows: some old compiler support remains.  
Solution: Remove obsolete compiler support. (Ken Takata, closes #9627)  
Files: src/Make\_mvc.mak, src/vim.h

Patch 8.2.4221

Problem: Some functions in normal.c are very long.  
Solution: Move code to separate functions. (Yegappan Lakshmanan, closes #9628)  
Files: src/normal.c

Patch 8.2.4222

Problem: MS-Windows: clumsy way to suppress progress on CI.  
Solution: Check for "\$CI" in the Makefile itself. (Ken Takata, closes #9631)  
Files: .github/workflows/ci.yml, ci/appveyor.bat, src/Make\_mvc.mak

Patch 8.2.4223

Problem: Long/int compiler warnings; function arguments swapped.  
Solution: Add type casts. Swap arguments. (Ken Takata, closes #9632)  
Files: src/alloc.c, src/eval.c, src/vim9script.c

Patch 8.2.4224

Problem: Vim9: no error when using a number for map() second argument  
Solution: Disallow number to string conversion. (closes #9630)  
Files: src/eval.c, src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4225

Problem: Vim9: depth argument of :lockvar not parsed in :def function.  
Solution: Parse the optional depth argument. (closes #9629)  
Fix that locking doesn't work for a non-materialize list.  
Files: src/vim9cmds.c, src/evalvars.c, src/structs.h, src/evalfunc.c,  
src/errors.h, src/vim9execute.c, src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.4226 (after 8.2.4224)

Problem: Filter-map test fails.  
Solution: Only reject number argument in Vim9 script.  
Files: src/eval.c

Patch 8.2.4227

Problem: Vim9: using "lockvar!" in :def function does not work.  
Solution: Add "!" instead of "-1". (closes #9634)  
Files: src/vim9cmds.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.4228

Problem: No tests for clicking in the GUI tabline.  
Solution: Add test functions to generate the events. Add tests using the  
functions. (Yegappan Lakshmanan, closes #9638)  
Files: runtime/doc/builtin.txt, runtime/doc/testing.txt,  
runtime/doc/usr\_41.txt, src/evalfunc.c, src/normal.c,  
src/proto/testing.pro, src/testdir/test\_diffmode.vim,  
src/testdir/test\_gui.vim, src/testdir/test\_normal.vim,  
src/testing.c

Patch 8.2.4229

Problem: Possible crash when invoking timer callback fails.  
Solution: Initialize the typval. Give an error for an empty callback.  
(closes #9636)  
Files: src/time.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4230

Problem: MS-Windows: set\_guifontwide() is included but won't work.  
Solution: Include set\_guifontwide() only for X11. (Ken Takata, closes #9640)  
Files: src/gui.c

Patch 8.2.4231

Problem: Vim9: map() gives type error when type was not declared.  
Solution: Only check the type when it was declared, like extend() does.  
(closes #9635)

Files: src/list.c, src/evalfunc.c, src/vim9instr.c,  
src/testdir/test\_vim9\_builton.vim,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.4232 (after 8.2.4231)

Problem: Some compilers don't like a goto label without statement.

Solution: Return instead of using a goto.

Files: src/list.c

Patch 8.2.4233

Problem: Crash when recording and using Select mode.

Solution: When deleting the last recorded character check there is something to delete.

Files: src/getchar.c, src/testdir/test\_registers.vim

Patch 8.2.4234

Problem: test\_garbagecollect\_now() does not check v:testing as documented.

Solution: Give an error if v:testing is not set.

Files: src/testing.c, src/errors.h, src/testdir/test\_functions.vim

Patch 8.2.4235

Problem: Invalid check for NULL pointer.

Solution: Remove the check.

Files: src/getchar.c

Patch 8.2.4236

Problem: Accessing freed memory.

Solution: Set the bh\_curr pointer to NULL.

Files: src/getchar.c

Patch 8.2.4237

Problem: Record buffer wrong if character in Select mode was not typed.

Solution: Only delete the tail from the record buffer if the character was typed. (closes #9650)

Files: src/normal.c, src/testdir/test\_registers.vim

Patch 8.2.4238

Problem: \*.tf file could be filetype "tf" or "terraform".

Solution: Detect the type from the file contents. (closes #9642)

Files: runtime/filetype.vim, runtime/autoload/dist/ft.vim,  
src/testdir/test\_filetype.vim

Patch 8.2.4239

Problem: Build fails with unusual configuration.

Solution: Adjust #ifdef. (closes #9651)

Files: src/testing.c

Patch 8.2.4240

Problem: Error for using flatten() in Vim9 script is unclear.

Solution: Add a remark to use flattennew().

Files: src/errors.h

Patch 8.2.4241

Problem: Some type casts are redundant.

Solution: Remove the type casts. (closes #9643)  
Files: src/blob.c, src/buffer.c, src/channel.c, src/clientserver.c, src/clipboard.c, src/drawline.c, src/drawscreen.c, src/edit.c, src/evalfunc.c, src/ex\_cmds.c, src/ex\_docmd.c, src/ex\_eval.c, src/fold.c, src/if\_cscope.c, src/json.c, src/match.c, src/memline.c, src/message.c, src/misc1.c, src/normal.c, src/ops.c, src/option.c, src/optionstr.c, src/os\_unix.c, src/register.c, src/sign.c, src/spellfile.c, src/tag.c, src/ui.c, src/undo.c, src/window.c

#### Patch 8.2.4242

Problem: Put in Visual mode cannot be repeated.  
Solution: Use "P" to put without yanking the deleted text into the unnamed register. (Shougo Matsushita, closes #9591)  
Files: runtime/doc/visual.txt, src/normal.c, src/register.c, src/testdir/test\_visual.vim

#### Patch 8.2.4243

Problem: Lua tests fail with Lua 5.4.4.  
Solution: Check messages like before Lua 5.4.3. (Jakub Kulík, closes #9652)  
Files: src/testdir/test\_lua.vim

#### Patch 8.2.4244

Problem: MS-Windows: warning from MSVC on debug build.  
Solution: Adjust "/opt" options. Remove unused variables. Make variables uppercase for consistency. (Ken Takata, closes #9647)  
Files: src/Make\_mvc.mak

#### Patch 8.2.4245

Problem: ":retab 0" may cause illegal memory access.  
Solution: Limit the value of 'tabstop' to 10000.  
Files: src/option.c, src/vim.h, src/indent.c, src/testdir/test\_options.vim

#### Patch 8.2.4246

Problem: One error message not in errors.h. (Antonio Colombo)  
Solution: Move the message and rename.  
Files: src/errors.h, src/if\_perl.xs

#### Patch 8.2.4247

Problem: Stack corruption when looking for spell suggestions.  
Solution: Prevent the depth increased too much. Add a five second time limit to finding suggestions.  
Files: src/spellsuggest.c, src/testdir/test\_spell.vim

#### Patch 8.2.4248

Problem: No proper test for moving the window separator.  
Solution: Add a test. Add comment in code. (closes #9656)  
Files: src/window.c, src/testdir/test\_window\_cmd.vim

#### Patch 8.2.4249

Problem: The timeout limit for spell suggestions is always 5000 milli seconds.  
Solution: Add the "timeout" entry to 'spellsuggest'.

Files: runtime/doc/options.txt, src/spellsuggest.c,  
src/testdir/test\_spell.vim

#### Patch 8.2.4250

Problem: Channel out callback test is flaky on Mac.

Solution: Assign high priority to the test process. (Ozaki Kiichi,  
closes #9653)

Files: src/testdir/test\_channel\_pipe.py, src/testdir/thread\_util.py

#### Patch 8.2.4251

Problem: Vala files are not recognized.

Solution: Add the \*.vala pattern. (closes #9654)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.4252

Problem: Generating the normal command table at runtime is inefficient.

Solution: Generate the table with a Vim script and put it in a header file.  
(Yegappan Lakshmanan, closes #9648)

Files: Filelist, runtime/doc/builtin.txt, runtime/doc/usr\_41.txt,  
src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/Make\_vms.mms,  
src/Makefile, src/create\_nvcmdidxs.vim, src/evalfunc.c,  
src/main.c, src/normal.c, src/nv\_cmdidxs.h, src/proto/normal.pro

#### Patch 8.2.4253

Problem: Using freed memory when substitute uses a recursive function call.

Solution: Make a copy of the substitute text.

Files: src/ex\_cmds.c, src/testdir/test\_substitute.vim

#### Patch 8.2.4254

Problem: Using short instead of int.

Solution: Use int. (closes #9658)

Files: src/if\_cscope.c

#### Patch 8.2.4255

Problem: Theoretical computation overflow.

Solution: Perform multiplication in a wider type. (closes #9657)

Files: src/alloc.c, src/drawline.c, src/eval.c, src/evalfunc.c,  
src/ex\_docmd.c, src/hardcopy.c, src/list.c, src/memfile.c,  
src/memline.c, src/popupwin.c

#### Patch 8.2.4256

Problem: MS-Windows: compiler warnings when compiled with /W4.

Solution: Small adjustments to the code. (Ken Takata, closes #9659)

Files: src/gui\_w32.c, src/os\_win32.c

#### Patch 8.2.4257

Problem: Vim9: finding global function without g: prefix but not finding  
global variable is inconsistent.

Solution: Require using g: for a global function. Change the vim9.vim  
script into a Vim9 script with exports. Fix that import in legacy  
script does not work.

Files: src/vim9expr.c, src/evalfunc.c, src/eval.c, src/userfunc.c,  
src/testdir/vim9.vim, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_cmd.vim,

src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_import.vim,

src/testdir/test\_imsinsert.vim, src/testdir/test\_ins\_complete.vim,  
src/testdir/test\_listdict.vim, src/testdir/test\_mapping.vim,  
src/testdir/test\_normal.vim, src/testdir/test\_popupwin.vim,  
src/testdir/test\_profile.vim, src/testdir/test\_quickfix.vim,  
src/testdir/test\_tagfunc.vim, src/testdir/test\_textprop.vim,  
src/testdir/test\_usercommands.vim

#### Patch 8.2.4258

Problem: Coverity warns for array overrun.  
Solution: Restrict depth to MAXWLEN - 1.  
Files: src/spellsuggest.c

#### Patch 8.2.4259

Problem: Number of test functions for GUI events is growing.  
Solution: Use one function with a dictionary. (Yegappan Lakshmanan,  
closes #9660)  
Files: runtime/doc/builtin.txt, runtime/doc/testing.txt,  
runtime/doc/usr\_41.txt, src/evalfunc.c, src/proto/testing.pro,  
src/testdir/test\_gui.vim, src/testdir/test\_vim9\_builtin.vim,  
src/testing.c

#### Patch 8.2.4260

Problem: Vim9: can still use a global function without g: at the script  
level.  
Solution: Also check for g: at the script level. (issue #9637)  
Files: src/userfunc.c, src/proto/userfunc.pro, src/evalvars.c,  
src/vim9expr.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_import.vim,  
src/testdir/test\_ins\_complete.vim, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_scroll\_11.dump,  
src/testdir/dumps/Test\_popupwin\_scroll\_12.dump

#### Patch 8.2.4261

Problem: Accessing invalid memory when a regular expression checks the  
Visual area while matching in a string.  
Solution: Do not try matching the Visual area in a string.  
Files: src/regexp.c, src/testdir/test\_help.vim

#### Patch 8.2.4262 (after 8.2.4261)

Problem: Some search tests fail.  
Solution: Use a better way to reject searching for the Visual area.  
Files: src/regexp.c

Patch 8.2.4263

Problem: No test for the GUI find/replace dialog.  
Solution: Add a test function and a test. (Yegappan Lakshmanan, closes #9662)  
Files: runtime/doc/testing.txt, src/testdir/test\_gui.vim, src/testing.c

Patch 8.2.4264

Problem: Vim9: can use old style autoloader function name.  
Solution: Give an error for old style autoloader function name.  
Files: src/errors.h, src/userfunc.c, src/testdir/test\_vim9\_import.vim, src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.4265 (after 8.2.4264)

Problem: Autoloader tests fails.  
Solution: Use export instead of name with #.  
Files: src/testdir/sautest/autoloader/auto9.vim, src/testdir/test\_autoloader.vim, src/testdir/test\_ins\_complete.vim

Patch 8.2.4266

Problem: Compiler warning for uninitialized variable.  
Solution: Initialize saved\_did\_emsg.  
Files: src/userfunc.c

Patch 8.2.4267

Problem: Unused entry in keymap enum.  
Solution: Remove the entry.  
Files: src/keymap.h

Patch 8.2.4268

Problem: CI log output is long.  
Solution: Group output in sections. (Ozaki Kiichi, closes #9670)  
Files: .github/workflows/ci.yml

Patch 8.2.4269

Problem: Coverity warns for using a NULL pointer.  
Solution: Check for "name" to not be NULL.  
Files: src/userfunc.c

Patch 8.2.4270

Problem: Generating nv\_cmdidxs.h requires building Vim twice.  
Solution: Move the table into a separate file and use a separate executable to extract the command characters. (Ozaki Kiichi, closes #9669)  
Files: src/normal.c, src/nv\_cmds.h, Filelist, runtime/doc/builtin.txt, runtime/doc/usr\_41.txt, src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/Make\_vms.mms, src/Makefile, src/create\_nvcmdidxs.c, src/create\_nvcmdidxs.vim, src/evalfunc.c, src/proto/normal.pro

Patch 8.2.4271

Problem: MS-Windows: cannot build with Ruby 3.1.0.  
Solution: Adjust the DLL name and include directory. (Ken Takata, closes #9666)  
Files: src/Make\_cyg\_ming.mak, src/Make\_mvc.mak

Patch 8.2.4272

Problem: Vim9 expr test fails without the channel feature. (Dominique Pellé)  
Solution: Remove "g:" before "CheckFeature". (closes #9671)  
Files: src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.4273

Problem: The EBCDIC support is outdated.  
Solution: Remove the EBCDIC support.  
Files: src/ascii.h, src/charset.c, src/cindent.c, src/digraph.c, src/edit.c, src/eval.c, src/evalfunc.c, src/ex\_cmds.c, src/feature.h, src/filepath.c, src/findfile.c, src/getchar.c, src/gui.c, src/gui\_motif.c, src/hardcopy.c, src/help.c, src/macros.h, src/map.c, src/mark.c, src/misc2.c, src/normal.c, src/ops.c, src/option.c, src/option.h, src/optiondefs.h, src/os\_unix.c, src/proto/evalfunc.pro, src/regexp.c, src/regexp\_bt.c, src/regexp\_nfa.c, src/register.c, src/screen.c, src/spell.c, src/strings.c, src/structs.h, src/term.c, src/version.c, src/viminfo.c, src/testdir/test\_edit.vim, src/testdir/test\_exec\_while\_if.vim, src/testdir/test\_expr.vim, src/testdir/test\_gf.vim, src/testdir/test\_regexp\_utf8.vim

#### Patch 8.2.4274

Problem: Basic and form filetype detection is incomplete.  
Solution: Add a separate function for .frm files. (Doug Kearns, closes #9675)  
Files: runtime/autoload/dist/ft.vim, runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.4275

Problem: Cannot use an autoload function from a package under start.  
Solution: Also look in the "start" package directory. (Bjorn Linse, closes #7193)  
Files: src/scriptfile.c, src/testdir/test\_packadd.vim

#### Patch 8.2.4276

Problem: Separate test function for the GUI scrollbar.  
Solution: Use test\_gui\_event(). (Yegappan Lakshmanan, closes #9674)  
Files: runtime/doc/builtin.txt, runtime/doc/testing.txt, runtime/doc/usr\_41.txt, src/evalfunc.c, src/testing.c, src/proto/testing.pro, src/testdir/test\_gui.vim, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.4277

Problem: Vim9: an import does not shadow a command modifier.  
Solution: Do not accept a command modifier followed by a dot.  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4278

Problem: Build with Athena GUI fails. (Elimar Riesebieter)  
Solution: Add #ifdef.  
Files: src/testing.c

#### Patch 8.2.4279

Problem: Vim9: cannot change item type with map() after range().  
Solution: Split the return type in current type and declared type.

(closes #9665)  
Files: src/evalfunc.c, src/proto/evalfunc.pro, src/vim9instr.c,  
src/vim9type.c, src/proto/vim9type.pro,  
src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4280 (after 8.2.4279)  
Problem: list-dict test crashes.  
Solution: Check declared type for add().  
Files: src/vim9expr.vim

Patch 8.2.4281  
Problem: Using freed memory with :lopen and :bwipe.  
Solution: Do not use a wiped out buffer.  
Files: src/buffer.c, src/testdir/test\_quickfix.vim

Patch 8.2.4282  
Problem: Restricted mode requires the -Z command line option.  
Solution: Use restricted mode when \$SHELL ends in "nologin" or "false".  
(closes #9681)  
Files: runtime/doc/starting.txt, src/option.c,  
src/testdir/test\_restricted.vim

Patch 8.2.4283  
Problem: Using a variable for the return value is not needed.  
Solution: Return the value directly. (closes #9687)  
Files: src/ex\_docmd.c, src/misc2.c

Patch 8.2.4284  
Problem: Old mac resources files are no longer used.  
Solution: Delete the unused files. (Ozaki Kiichi, closes #9688)  
Files: Filelist, src/Makefile, src/dehqx.py, src/infplist.xml,  
src/os\_mac.rsr.hqx, src/os\_mac\_rsrc/app.icns,  
src/os\_mac\_rsrc/doc-txt.icns, src/os\_mac\_rsrc/doc.icns

Patch 8.2.4285  
Problem: Vim9: type of item in for loop not checked properly.  
Solution: Adjust the type checking. (closes #9683)  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/vim9cmds.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.4286  
Problem: Vim9: strict type checking after copy() and deepcopy().  
Solution: Allow type to change after making a copy. (closes #9644)  
Files: src/eval.c, src/proto/eval.pro, src/dict.c, src/proto/dict.pro,  
src/list.c, src/proto/list.pro, src/evalfunc.c, src/vim9execute.c,  
src/vim9type.c, src/proto/vim9type.pro, src/evalvars.c,  
src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.4287  
Problem: Cannot assign empty list with any list type to variable with  
specific list type.  
Solution: Use unknown list type for empty list if the specified type is any.  
Files: src/vim9type.c, src/testdir/test\_vim9\_assign.vim,

src/testdir/test\_vim9\_func.vim

Patch 8.2.4288

Problem: Preprocessor indents are inconsistent.  
Solution: Fix preprocessor indents. (Ken Takata, closes #9691)  
Files: src/arglist.c, src/change.c, src/ex\_cmds.c, src/gui.c,  
src/hashtab.c, src/indent.c, src/ops.c, src/os\_win32.c

Patch 8.2.4289

Problem: Warnings reported by MSVC.  
Solution: Rename variables and other fixes. (Ken Takata, closes #9689)  
Files: src/cmdexpand.c, src/drawscreen.c, src/filepath.c, src/getchar.c,  
src/menu.c, src/os\_win32.c, src/version.c

Patch 8.2.4290

Problem: MS-Windows: using type casts for timer IDs.  
Solution: Remove type casts and use the right type. (Ken Takata,  
closes #9690) Remove old debug comments. Rename variables and  
functions.  
Files: src/gui\_w32.c

Patch 8.2.4291

Problem: Error number used twice.  
Solution: Renumber the errors.  
Files: src/errors.h

Patch 8.2.4292 (after 8.2.4291)

Problem: Test fails.  
Solution: Adjust the expected error number.  
Files: src/testdir/test\_vim9\_cmd.vim

Patch 8.2.4293

Problem: Vim9: when copying a list it gets type list<any> even when the  
original list did not have a type.  
Solution: Only set the type when the original list has a type. (closes #9692)  
Files: src/list.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4294

Problem: MS-Windows: #ifdefs for Cygwin are too complicated.  
Solution: Simplify the conditions. (Ken Takata, closes #9693)  
Files: src/evalfunc.c, src/main.c, src/os\_unix.c, src/os\_win32.c,  
src/os\_win32.h

Patch 8.2.4295

Problem: Vim9: concatenating two lists may result in wrong type.  
Solution: Remove the type instead of using list<any>. (closes #9692)  
Files: src/list.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4296

Problem: Vim9: not all code covered by tests.  
Solution: Add a few more tests for corner cases. Fix hang when single quote  
is missing.  
Files: src/vim9expr.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_cmd.vim, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4297

Problem: Vim9: not all code covered by tests.

Solution: Add a couple more tests.

Files: src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.4298

Problem: Divide by zero with huge tabstop value.

Solution: Reject tabstop value that overflows to zero.

Files: src/indent.c, src/testdir/test\_vartabs.vim

Patch 8.2.4299

Problem: SafeState autocommand interferes with debugging.

Solution: Do not trigger SafeState while debugging. (closes #9697)

Files: src/main.c

Patch 8.2.4300 (after 8.2.4299)

Problem: Cannot build tiny version. (Tony Mechelynck)

Solution: Add #ifdef.

Files: src/main.c

Patch 8.2.4301

Problem: Vim9: type error for copy of dict.

Solution: Do not use dict<any> but no type. (closes #9696)

Files: src/dict.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4302

Problem: Vim9: return type of getline() is too strict.

Solution: Make the declared type list<any>. Also do this for other functions returning a list of a specific type.

Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4303

Problem: A few messages should not be translated.

Solution: Remove \_(). (Dominique Pellé, closes #9702)

Files: src/syntax.c

Patch 8.2.4304

Problem: Vim9: slice() makes a copy but doesn't change the type.

Solution: Change the declared type like copy(). (closes #9696)

Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4305

Problem: Tex filetype detection fails.

Solution: Check value to be positive. (closes #9704)

Files: runtime/autoload/dist/ft.vim, src/testdir/test\_filetype.vim

Patch 8.2.4306

Problem: No test for fixed perl filetype check.

Solution: Add a test. Sort test functions.

Files: src/testdir/test\_filetype.vim

Patch 8.2.4307

Problem: A few more messages should not be translated.  
Solution: Remove \_().  
Files: src/syntax.c

#### Patch 8.2.4308

Problem: Vim9: cannot list autoload function.  
Solution: Don't give an error for using # when listing a function.  
(closes #9703)  
Files: src/userfunc.c, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4309

Problem: Vim9: crash when using a partial in the wrong context.  
Solution: Don't use an NULL outer pointer. (closes #9706)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.4310

Problem: Vim9: constant list and dict get a declaration type other than "any".  
Solution: A constant list and dict have a declared member type "any".  
(closes #9701)  
Files: src/vim9instr.c, src/vim9type.c, src/proto/vim9type.pro, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.4311

Problem: Vim9: changing script variable type not caught at compile time.  
Solution: Set the declared type.  
Files: src/vim9instr.c, src/testdir/test\_vim9\_assign.vim

#### Patch 8.2.4312

Problem: No error for using :vim9script in a :def function.  
Solution: Give an error when compiling.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4313

Problem: Vim9: cannot change type of list after making a slice.  
Solution: Adjust the declared member type. (closes #9696)  
Files: src/vim9expr.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.4314 (after 8.2.4312)

Problem: Test fails where lines are skipped.  
Solution: Only give an error when not skipping commands.  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4315

Problem: Put in Visual mode not fully tested.  
Solution: Add a few more test cases. (closes #9708)  
Files: src/testdir/test\_visual.vim

#### Patch 8.2.4316

Problem: \_\_CYGWIN32\_\_ is not defined on 64 bit systems.  
Solution: Update #ifdefs. (Ken Takata, closes #9709)  
Files: src/main.c, src/os\_unix.c, src/pty.c, src/vim.h

#### Patch 8.2.4317

Problem: MS-Windows: Vim exits when Python 3 initialisation fails.  
Solution: Hook into the exit() function to recover from the failure.  
(Ken Takata, closes #9710)  
Files: runtime/doc/if\_pyth.txt, src/if\_python3.c, src/os\_win32.c,  
src/errors.h, src/proto/os\_win32.pro

#### Patch 8.2.4318

Problem: Various comment and indent mistakes, returning wrong zero.  
Solution: Fix the mistakes. Return NULL instead of FAIL.  
Files: src/clientserver.c, src/eval.c, src/evalvars.c, src/vim9cmds.c,  
src/window.c

#### Patch 8.2.4319

Problem: :put does not work properly in compiled function. (John Beckett)  
Solution: Adjust the direction when using line zero.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.4320

Problem: Athena and Motif: when maximized scrollbar position is wrong.  
Solution: Implement the scrollbar padding functions. (closes #9712)  
Files: src/gui\_athena.c, src/gui\_motif.c

#### Patch 8.2.4321

Problem: Vim9: crash when using a funcref to a closure.  
Solution: Copy pt\_outer to the new partial. (closes #9714)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.4322

Problem: Vim9: crash when using funcref with closure.  
Solution: Keep a reference to the funcref that has the outer context.  
(closes #9716)  
Files: src/evalfunc.c, src/structs.h, src/eval.c, src/vim9execute.c,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.4323

Problem: Vim9: nested function name can start with "\_".  
Solution: Use same rule for function name for nested functions.  
(closes #9713)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.4324

Problem: Vim9: script-local function name can start with "\_".  
Solution: Check for leading capital after "s:". Correct error message.  
Files: src/userfunc.c, src/errors.h, src/vim9compile.c,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.4325

Problem: **'wildmenu'** only shows few matches.  
Solution: Add the "pum" option: use a popup menu to show the matches.  
(Yegappan Lakshmanan et al., closes #9707)  
Files: runtime/doc/options.txt, src/vim.h, src/cmdexpand.c,  
src/drawscreen.c, src/evalfunc.c, src/ex\_getln.c, src/option.h,  
src/optionstr.c, src/popupmenu.c, src/proto/cmdexpand.pro,  
src/testdir/test\_cmdline.vim,

src/testdir/dumps/Test\_wildmenu\_pum\_01.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_02.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_03.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_04.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_05.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_06.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_07.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_08.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_09.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_10.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_11.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_12.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_13.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_14.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_15.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_16.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_17.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_18.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_19.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_20.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_21.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_22.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_23.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_24.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_25.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_26.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_27.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_28.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_29.dump

Patch 8.2.4326

Problem: "o" and "O" copying comment not sufficiently tested.  
Solution: Add a test case. (closes #9718)  
Files: src/testdir/test\_textformat.vim

Patch 8.2.4327

Problem: May end up with no current buffer.  
Solution: When deleting the current buffer to not pick a quickfix buffer as the new current buffer.  
Files: src/buffer.c, src/testdir/test\_quickfix.vim

Patch 8.2.4328

Problem: Command line complete matches cleared when typing character.  
(Dominique Pellé)  
Solution: Only remove a popup menu if there is one.  
Files: src/ex\_getln.c, src/testdir/test\_cmdline.vim,  
src/testdir/dumps/Test\_wildmenu\_pum\_30.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_31.dump

Patch 8.2.4329

Problem: No support for end line number and column in **'errorformat'**.  
Solution: Add %e and %k. (closes #9624)  
Files: runtime/doc/quickfix.txt, src/quickfix.c,  
src/testdir/test\_quickfix.vim

Patch 8.2.4330

Problem: Vim9: no error if script imports itself.  
Solution: Give an error when a script imports itself.  
Files: src/vim9script.c, src/errors.h, src/testdir/test\_vim9\_import.vim

Patch 8.2.4331

Problem: Vim9: no test for existing script variable in block.  
Solution: Add a test.  
Files: src/testdir/test\_vim9\_func.vim

Patch 8.2.4332

Problem: Vim9: incomplete test for existing script variable in block.  
Solution: Add a couple more tests. Fix uncovered problem.  
Files: src/userfunc.c, src/vim9compile.c, src/proto/vim9compile.pro,  
src/vim9script.c, src/vim9expr.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.4333

Problem: cstack not always passed to where it is needed.  
Solution: Pass cstack through functions.  
Files: src/eval.c, src/vim9expr.c, src/vim9script.c,  
src/proto/vim9script.pro, src/vim9compile.c,  
src/proto/vim9compile.pro

Patch 8.2.4334

Problem: Command line popup menu not positioned correctly.  
Solution: Also use vim\_strsize() on the existing text. (Naruhiko Nishino,  
closes #9727)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim,  
src/testdir/dumps/Test\_wildmenu\_pum\_32.dump

Patch 8.2.4335

Problem: No autocommand event triggered before changing directory. (Ronnie  
Magatti)  
Solution: Add DirChangedPre. (closes #9721)  
Files: runtime/doc/autocmd.txt, src/ex\_docmd.c, src/proto/ex\_docmd.pro,  
src/vim.h, src/autocmd.c, src/misc2.c,  
src/testdir/test\_autocmd.vim

Patch 8.2.4336

Problem: Using :filter for :scriptnames does not work. (Ben Jackson)  
Solution: Call message\_filtered(). (closes #9720)  
Files: src/scriptfile.c, src/testdir/test\_filter\_cmd.vim

Patch 8.2.4337

Problem: Part of condition is always true.  
Solution: Remove that part of the condition. (closes #9729)  
Files: src/filepath.c

Patch 8.2.4338

Problem: An error from an expression mapping messes up the display.  
Solution: When the expression results in an empty string return K\_IGNORE.  
In cmdline mode redraw the command line. (closes #9726)  
Files: src/getchar.c, src/testdir/test\_mapping.vim,

src/testdir/dumps/Test\_map\_expr\_2.dump,  
src/testdir/dumps/Test\_map\_expr\_3.dump,  
src/testdir/dumps/Test\_map\_expr\_4.dump

#### Patch 8.2.4339

Problem: **CTRL-A** does not work properly with the cmdline popup menu.

Solution: Fix issues with **CTRL-A**. Add more tests for the cmdline popup menu. Remove TermWait() before VeriryScreenDump(). Refactor the cmdline popup code. (Yegappan Lakshmanan, closes #9735)

Files: src/cmdexpand.c, src/ex\_getln.c, src/popupmenu.c,  
src/testdir/screendump.vim, src/testdir/test\_buflines.vim,  
src/testdir/test\_cmdline.vim, src/testdir/test\_conceal.vim,  
src/testdir/test\_cursorline.vim, src/testdir/test\_diffmode.vim,  
src/testdir/test\_display.vim, src/testdir/test\_highlight.vim,  
src/testdir/test\_match.vim, src/testdir/test\_popup.vim,  
src/testdir/test\_search\_stat.vim, src/testdir/test\_terminal.vim,  
src/testdir/test\_textprop.vim,  
src/testdir/dumps/Test\_wildmenu\_pum\_33.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_34.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_35.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_36.dump,  
src/testdir/dumps/Test\_wildmenu\_pum\_37.dump

#### Patch 8.2.4340

Problem: Amiga: mch\_can\_exe() is not implemented.

Solution: Implement mch\_can\_exe() for Amiga OS 4. (Ola Söder, closes #9731)

Files: src/os\_amiga.c

#### Patch 8.2.4341

Problem: Command line not redrawn when finishing popup menu and the screen has scrolled up.

Solution: Redraw the command line after updating the screen. (closes #9722)

Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim,  
src/testdir/dumps/Test\_wildmenu\_pum\_38.dump

#### Patch 8.2.4342

Problem: CI will soon switch to other windows version.

Solution: Use "windows-2019" instead of "windows-latest". (Ozaki Kiichi, closes #9740)

Files: .github/workflows/ci.yml

#### Patch 8.2.4343

Problem: When reloading not all properties are detected.

Solution: Add the "edit" value to v:fcs\_choice. (Rob Pilling, closes #9579)

Files: runtime/doc/editing.txt, runtime/doc/eval.txt, src/fileio.c,  
src/proto/fileio.pro, src/message.c, src/spellfile.c,  
src/testdir/test\_filechanged.vim

#### Patch 8.2.4344

Problem: Amiga: header file included twice.

Solution: Remove #include. (Ola Söder, closes #9733)

Files: src/memfile.c

#### Patch 8.2.4345

Problem: `<amatch>` is expanded like a file name for `DirChangedPre`.  
Solution: Do not expand `<amatch>`. (closes #9742) Also for the `User` event.  
Files: `src/autocmd.c`, `src/testdir/test_autocmd.vim`

#### Patch 8.2.4346

Problem: A custom statusline may cause `Esc` to work like `Enter` on the command line when the popup menu is displayed.  
Solution: Save and restore `KeyTyped`. (closes #9749)  
Files: `src/drawscreen.c`, `src/testdir/test_cmdline.vim`,  
`src/testdir/dumps/Test_wildmenu_pum_39.dump`

#### Patch 8.2.4347

Problem: In some build setups `UNUSED` is not defined.  
Solution: Change the logic of how `UNUSED` is defined. (Ola Söder, closes #9734)  
Files: `src/vim.h`

#### Patch 8.2.4348

Problem: `"legacy exe cmd"` does not do what one would expect.  
Solution: Apply the `"legacy"` and `"vim9script"` command modifiers to the argument of `":execute"`.  
Files: `runtime/doc/vim9.txt`, `src/globals.h`, `src/eval.c`, `src/ex_docmd.c`,  
`src/testdir/test_vim9_cmd.vim`

#### Patch 8.2.4349

Problem: `FileChangedShell` test fails on MS-Windows.  
Solution: Skip the test on MS-Windows.  
Files: `src/testdir/test_filechanged.vim`

#### Patch 8.2.4350

Problem: `FEAT_GUI_ENABLED` defined but never used.  
Solution: Remove the `#define`. (Ola Söder, closes #9732)  
Files: `src/vim.h`

#### Patch 8.2.4351

Problem: No coverage is measured on MS-Windows CI.  
Solution: Enable coverage on MS-Windows. (Ozaki Kiichi, closes #9750)  
Files: `.github/workflows/ci.yml`

#### Patch 8.2.4352

Problem: `ReScript` files are not recognized.  
Solution: Add the `*.res` and `*.resi` patterns. (Ananda Umamil, closes #9752)  
Files: `runtime/filetype.vim`, `src/testdir/test_filetype.vim`

#### Patch 8.2.4353

Problem: CI does not use the latest Lua and Python.  
Solution: Use Lua 5.4.2 and Python 3.10. (closes #9744)  
Files: `.github/workflows/ci.yml`

#### Patch 8.2.4354

Problem: Dynamic loading of `libsodium` not handled properly.  
Solution: Fix `has()` and `:version`. Show an error message when loading fails. Fix memory leaks. (Ken Takata, closes #9754)  
Files: `src/crypt.c`, `src/evalfunc.c`, `src/gui_dwrite.cpp`, `src/if_cscope.c`,

src/os\_win32.c, src/proto/crypt.pro, src/proto/os\_win32.pro,  
src/version.c

Patch 8.2.4355

Problem: Unnecessary call to check\_colorcolumn().  
Solution: Remove the call. (Sean Dewar, closes #9748)  
Files: src/option.c, src/window.c

Patch 8.2.4356

Problem: Command line completion functions are very long.  
Solution: Refactor into multiple functions. (Yegappan Lakshmanan,  
closes #9753)  
Files: src/cmdexpand.c

Patch 8.2.4357 (after 8.2.4348)

Problem: sticky command modifiers are too sticky.  
Solution: Do not apply command modifiers to a sourced script. (closes #9751)  
Files: src/scriptfile.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.4358

Problem: Vim9: line number of exception is not set.  
Solution: Set the line number before throwing an exception. (closes #9755)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.4359

Problem: crash when repeatedly using :retab.  
Solution: Bail out when the line is getting too long.  
Files: src/indent.c, src/testdir/test\_retab.vim

Patch 8.2.4360

Problem: Vim9: allowing use of "s:" leads to inconsistencies.  
Solution: Disallow using "s:" in Vim9 script at the script level.  
Files: src/userfunc.c, src/proto/userfunc.pro, src/errors.h,  
src/vim9compile.c, src/eval.c, src/testdir/vim9.vim,  
src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_import.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.4361 (after 8.2.4360)

Problem: Vim9: some tests fail.  
Solution: Fix the tests, mostly by removing "s:".  
Files: src/testdir/test\_expr.vim, src/testdir/test\_functions.vim,  
src/testdir/test\_ins\_complete.vim, src/testdir/test\_normal.vim,  
src/testdir/test\_tagfunc.vim

Patch 8.2.4362

Problem: :retab may allocate too much memory.  
Solution: Bail out when allocating more than MAXCOL bytes.  
Files: src/indent.c

Patch 8.2.4363

Problem: MS-Windows: running out of memory for a very long line.

Solution: Use a 32 bit value for MAXCOL also when ints are 64 bits.  
Files: src/vim.h

Patch 8.2.4364

Problem: MS-Windows: still running out of memory for a very long line.  
Solution: Check for negative length.  
Files: src/indent.c

Patch 8.2.4365 (after 8.2.4348)

Problem: sticky command modifiers are too sticky.  
Solution: Do not apply command modifiers to a called function. (closes #9751)  
Files: src/userfunc.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.4366

Problem: Not enough tests for command line completion.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #9760)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim,  
src/testdir/test\_usercommands.vim

Patch 8.2.4367

Problem: Calling in\_vim9script() multiple times.  
Solution: Call it once and keep the result.  
Files: src/userfunc.c, src/eval.c

Patch 8.2.4368

Problem: Amiga: a few compiler warnings.  
Solution: Adjust #ifdefs. Add "UNUSED". (Ola Söder, closes #9756,  
closes #9757)  
Files: src/term.c, src/os\_amiga.c

Patch 8.2.4369

Problem: Redundant #ifdef argument.  
Solution: Remove unused MSWIN. (Ola Söder, closes #9758)  
Files: src/feature.h

Patch 8.2.4370

Problem: MS-Windows: libsodium.dll not included with the installer.  
Solution: Add the file to the installer if it exists. (Christian Brabandt,  
closes #9762)  
Files: nsis/gvim.nsi

Patch 8.2.4371

Problem: Vim9: can create a script variable from a legacy function.  
Solution: Disallow creating a script variable from a function.  
Files: src/evalvars.c, src/errors.h, src/testdir/test\_vim9\_script.vim

Patch 8.2.4372

Problem: Filetype detection from file contents is in legacy script.  
Solution: Use a compiled function for filetype detection.  
Files: runtime/scripts.vim, runtime/autoload/dist/script.vim

Patch 8.2.4373

Problem: Expression test fails.  
Solution: Make the test work with latest Vim9 syntax.

Files: src/testdir/test\_expr.vim

Patch 8.2.4374

Problem: Unreachable code.  
Solution: Remove outdated code lines.  
Files: src/vim9compile.c

Patch 8.2.4375

Problem: ctx\_imports is not used.  
Solution: Delete ctx\_imports. Add missing dependency.  
Files: src/vim9.h, src/vim9compile.c, src/proto/vim9compile.pro,  
src/eval.c, src/evalfunc.c, src/evalvars.c, src/userfunc.c,  
src/vim9expr.c, src/vim9script.c, src/Makefile

Patch 8.2.4376

Problem: Not enough tests for command line completion.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #9771)  
Files: src/testdir/test\_cmdline.vim, src/testdir/test\_usercommands.vim

Patch 8.2.4377

Problem: CI steps for Windows are a bit unorganized.  
Solution: Organize CI test steps on Windows. (Ozaki Kiichi, closes #9764)  
Files: .github/workflows/ci.yml

Patch 8.2.4378

Problem: Incsearch highlight broken when calling searchcount() in 'tabLine'  
function. (Mirko Palmer)  
Solution: Save and restore the incsearch state. (Christian Brabandt,  
closes #9763, closes #9633)  
Files: src/search.c, src/testdir/test\_search\_stat.vim,  
src/testdir/dumps/Test\_searchstat\_inc\_1.dump,  
src/testdir/dumps/Test\_searchstat\_inc\_2.dump,  
src/testdir/dumps/Test\_searchstat\_inc\_3.dump

Patch 8.2.4379

Problem: An empty change is reported to a listener.  
Solution: Do not report an empty change. (closes #9768) Remove unused  
return value.  
Files: src/undo.c, src/change.c, src/testdir/test\_listener.vim

Patch 8.2.4380

Problem: Small differences between Chinese translation files.  
Solution: Add rule for converting UTF-8 to gb2312. (closes #9773)  
Files: src/po/Makefile, src/po/Make\_all.mak

Patch 8.2.4381 (after 8.2.4380)

Problem: Translation file listed twice.  
Solution: Remove one entry.  
Files: src/po/Make\_all.mak

Patch 8.2.4382 (after 8.2.4346)

Problem: A custom '**tabline**' may cause Esc to work like Enter on the  
command line when the popup menu is displayed.  
Solution: Save and restore KeyTyped. (closes #9776)

Files: src/drawscreen.c, src/screen.c, src/testdir/test\_cmdline.vim,  
src/testdir/dumps/Test\_wildmenu\_pum\_40.dump

Patch 8.2.4383

Problem: Vim9: unused code lines.  
Solution: Rely on either "cctx" or "cstack" to not be NULL.  
Files: src/vim9compile.c

Patch 8.2.4384

Problem: Vim9: error message not tested, some code not tested.  
Solution: Add a couple of test cases. Give an error for a command modifier  
without a command.  
Files: src/errors.h, src/vim9compile.c, src/ex\_docmd.c,  
src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.4385 (after 8.2.4384)

Problem: Cannot build tiny version.  
Solution: Adjust #ifdefs.  
Files: src/errors.h

Patch 8.2.4386 (after 8.2.4384)

Problem: Still cannot build tiny version.  
Solution: Adjust #ifdefs.  
Files: src/ex\_docmd.c

Patch 8.2.4387

Problem: Command line completion doesn't always work properly.  
Solution: Adjust triggering after a "|". Add more tests. (Yegappan  
Lakshmanan, closes #9779)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

Patch 8.2.4388

Problem: Dead code in op\_insert().  
Solution: Remove condition and else block. (closes #9782)  
Files: src/ops.c

Patch 8.2.4389

Problem: screenpos() does not handle a position in a closed fold.  
Solution: Check if the position is inside a closed fold. (closes #9778)  
Files: src/move.c, src/testdir/test\_cursor\_func.vim

Patch 8.2.4390

Problem: Vim9: list from declaration with inferred type does not set the  
type on the value.  
Solution: When inferring the type in a variable declaration also set the  
type of the list or dictionary. (closes #9705) Do not set the  
type when the member is "any".  
Files: src/vim9compile.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.4391

Problem: Command line executed when typing Esc in the GUI.  
Solution: Move saving/restoring KeyTyped to build\_stl\_str\_hl().

(closes #9783)  
Files: src/buffer.c, src/screen.c

Patch 8.2.4392 (after 8.2.4002)  
Problem: MS-Windows with VIMDLL: Escaping CSI is wrong.  
Solution: Put back #ifdef. (Ken Takata, closes #9769)  
Files: src/getchar.c

Patch 8.2.4393  
Problem: Possible number overflow with nested folds.  
Solution: Avoid a negative line number.  
Files: src/fold.c

Patch 8.2.4394 (after 8.2.4392)  
Problem: UTF8 select mode test fails on MS-Windows.  
Solution: Revert the #ifdef change.  
Files: src/getchar.c

Patch 8.2.4395  
Problem: Some code lines not covered by tests.  
Solution: Add a few more test cases. Fix getting more than one error for invalid assignment.  
Files: src/evalvars.c, src/errors.h, src/vim9compile.c, src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_cmd.vim, src/testdir/test\_vim9\_func.vim

Patch 8.2.4396 (after 8.2.4395)  
Problem: Python3 test fails.  
Solution: Remove "let".  
Files: src/testdir/test\_vim9\_func.vim

Patch 8.2.4397  
Problem: Crash when using many composing characters in error message.  
Solution: Use mb\_cpnr2char\_adv() instead of mb\_ptr2char\_adv().  
Files: src/testing.c, src/testdir/test\_assert.vim

Patch 8.2.4398  
Problem: Some command completion functions are too long.  
Solution: Refactor code into separate functions. Add a few more tests. (Yegappan Lakshmanan, closes #9785)  
Files: src/cmdexpand.c, src/ex\_getln.c, src/usercmd.c, src/proto/usercmd.pro, src/testdir/test\_cmdline.vim

Patch 8.2.4399  
Problem: Crash after ml\_get error.  
Solution: When returning "???" flush the line and set ml\_line\_lnum.  
Files: src/memline.c

Patch 8.2.4400 (after 8.2.4394)  
Problem: MS-Windows: cannot use the mouse in the console with VIMDLL.  
Solution: use add\_char2buf() instead of fix\_input\_buffer(). (closes #9784, closes #9769)  
Files: src/getchar.c

Patch 8.2.4401

Problem: Map listing does not clear the rest of the command line.  
Solution: Call msg\_clear\_eos(). (closes #5623, closes #5962)  
Files: src/map.c, src/testdir/test\_mapping.vim,  
src/testdir/dumps/Test\_map\_list\_1.dump

Patch 8.2.4402

Problem: Missing parenthesis may cause unexpected problems.  
Solution: Add more parenthesis in macros. (closes #9788)  
Files: src/autocmd.c, src/charset.c, src/drawline.c, src/drawscreen.c,  
src/evalfunc.c, src/fileio.c, src/fold.c, src/getchar.c,  
src/highlight.c, src/memline.c, src/normal.c, src/quickfix.c,  
src/regexp.c, src/search.c, src/sha256.c, src/spell.c,  
src/spellfile.c, src/spellsuggest.c, src/syntax.c, src/window.c

Patch 8.2.4403

Problem: ml\_get error with nested folds and deleting lines.  
Solution: Correct the last line number before calling hasFoldingWin().  
Files: src/change.c

Patch 8.2.4404

Problem: Vim9: some code not covered by tests.  
Solution: Add a few specific test cases.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_func.vim,  
src/testdir/test\_vim9\_import.vim

Patch 8.2.4405

Problem: Compiler warning for unused variable without the +folding feature.  
(Tony Mechelynck)  
Solution: Add #ifdef.  
Files: src/change.c

Patch 8.2.4406

Problem: Expand functions use confusing argument names.  
Solution: Rename "file" to "match". Refactor some completion code. Add a  
few more tests. (Yegappan Lakshmanan, closes #9790)  
Files: src/cmdexpand.c, src/testdir/test\_usercommands.vim

Patch 8.2.4407

Problem: Vim9: some code not covered by tests.  
Solution: Add more tests. Avoid giving two errors. Remove dead code.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_cmd.vim, src/testdir/test\_vim9\_func.vim

Patch 8.2.4408

Problem: Vim9: some code not covered by tests.  
Solution: Add a few more tests. Correct error message. Allow unlet on dict  
with a number key.  
Files: src/vim9execute.c, src/errors.h, src/testdir/test\_vim9\_assign.vim

Patch 8.2.4409

Problem: Vim9: some code not covered by tests.  
Solution: Add a few more tests. Fix reported line number.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.4410

Problem: Vim9: some code not covered by tests.  
Solution: Add a few more tests. Remove dead code.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_cmd.vim, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.4411

Problem: Bicep files are not recognized.  
Solution: Match \*.bicep files. (Dundar Goc, closes #9791)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4412

Problem: Translation cleanup script does not remove empty lines at end.  
Solution: Remove empty lines at the end. (Ken Takata, closes #9794)  
Files: src/po/cleanup.vim

Patch 8.2.4413

Problem: Vim9: Coverity warns for using NULL pointer.  
Solution: Give an internal error when funcref function can't be found.  
Files: src/vim9execute.c

Patch 8.2.4414

Problem: Solidity files are not recognized.  
Solution: Add the \*.sol pattern. (Dundar Goc, closes #9792)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4415

Problem: Function argument name conflicts with C++ keyword.  
Solution: Rename the argument.  
Files: src/usercmd.c, src/proto/usercmd.pro

Patch 8.2.4416

Problem: Vim9: using a script-local function requires using "s:" when setting **'complefunc'**.  
Solution: Do not require "s:" in Vim9 script. (closes #9796)  
Files: runtime/doc/options.txt, src/userfunc.c,  
src/testdir/test\_ins\_complete.vim

Patch 8.2.4417 (after 8.2.4416)

Problem: Using NULL pointer.  
Solution: Set offset after checking for NULL pointer.  
Files: src/userfunc.c

Patch 8.2.4418

Problem: Crash when using special multi-byte character.  
Solution: Don't use isalpha() for an arbitrary character.  
Files: src/charset.c, src/proto/charset.pro, src/filepath.c,  
src/testdir/test\_autochdir.vim

Patch 8.2.4419

Problem: Illegal memory access when using exactly 20 highlights.  
Solution: Add one more item in the array. (Brandon Richardson,

closes #9800)  
Files: src/buffer.c, src/testdir/test\_tabline.vim

#### Patch 8.2.4420

Problem: Menu translations are inconsistent.

Solution: Add a Makefile to convert between encodings. (Ada (Haowen) Yu, closes #9801)

Patch 8.2.4421

Problem: Some installed files and directories have wrong permissions.  
Solution: Adjust the Makefile and shell to set permissions. (closes #9793)  
Files: src/Makefile, src/installman.sh

Patch 8.2.4422

Problem: Autochdir test fails on MS-Windows.  
Solution: Expect another error on MS-Windows.  
Files: src/testdir/test\_autochdir.vim

Patch 8.2.4423

Problem: "make nvcmdidxs" fails.  
Solution: Use "-S" instead of "-u" to source the script.  
Files: src/Makefile

Patch 8.2.4424

Problem: ".gts" and ".gjs" files are not recognized.  
Solution: Recognize Glimmer flavored typescript and javascript.  
(closes #9799)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4425

Problem: map() function does not check function arguments at compile time.  
Solution: Give an error if the arguments of a map() function are wrong.  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.4426

Problem: map() function on string and blob does not check argument types at compile time.  
Solution: Check string and blob argument types. Support "0z1234->func()".  
Files: src/vim9compile.c, src/evalfunc.c, src/ex\_docmd.c,  
src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4427

Problem: getchar() may return modifiers if no character is available.  
Solution: Do not process modifiers when there is no character. (closes #9806)  
Files: src/getchar.c, src/testdir/test\_functions.vim

Patch 8.2.4428

Problem: Crash when switching tabpage while in the cmdline window.  
Solution: Disallow switching tabpage when in the cmdline window.  
Files: src/window.c, src/proto/window.pro, src/evalvars.c,  
src/evalvars.c, src/usercmd.c

Patch 8.2.4429

Problem: Using script-local function from the wrong script when using a partial. (Yegappan Lakshmanan)  
Solution: Include the script ID in the partial name.  
Files: src/userfunc.c, src/proto/userfunc.pro, src/evalfunc.c,

src/vim9type.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4430

Problem: GTK: crash when using **'guiligatures'** and reading from stdin.  
Solution: Make a copy of the message. (Amon Sha, closes #9719, closes #9814)  
Files: src/fileio.c

Patch 8.2.4431

Problem: Unnecessary condition when assigning to a variable.  
Solution: Remove the condition.  
Files: src/evalvars.c

Patch 8.2.4432 (after 8.2.4428)

Problem: Cannot use settabvar() while the cmdline window is open.  
Solution: Only give an error when actually switching tabpage.  
(closes #9813)  
Files: src/window.c

Patch 8.2.4433

Problem: CI: cannot see interface versions for MS-Windows.  
Solution: List the interface versions. (Ken Takata, closes #9811)  
Files: .github/workflows/ci.yml

Patch 8.2.4434

Problem: Duplicate check for cmdline window.  
Solution: Remove the second check. (Sean Dewar, closes #9816)  
Files: src/window.c

Patch 8.2.4435

Problem: Dead code in checking map() arguments. (Dominique Pellé)  
Solution: Remove the first return statement. (closes #9815)  
Files: src/evalfunc.c

Patch 8.2.4436

Problem: Crash with weird **'vartabstop'** value.  
Solution: Check for running into the end of the line.  
Files: src/indent.c, src/testdir/test\_vartabs.vim

Patch 8.2.4437

Problem: Vartabs test fails on MS-Windows.  
Solution: Use iso8859-1 **'encoding'**. (Ken Takata, closes #9818)  
Files: src/testdir/test\_vartabs.vim

Patch 8.2.4438

Problem: Crash on exit when using cmdline window.  
Solution: Reset "cmdwin\_type" before exiting. (closes #9817)  
Files: src/ui.c, src/testdir/test\_exit.vim

Patch 8.2.4439

Problem: Accepting "iso8859" **'encoding'** as "iso-8859-".  
Solution: use "iso8859" as "iso-8859-1".  
Files: src/mbyte.c, src/testdir/test\_options.vim

Patch 8.2.4440

Problem: Crash with specific regexp pattern and string.  
Solution: Stop at the start of the string.  
Files: src/regexp\_bt.c, src/testdir/test\_regexp\_utf8.vim

Patch 8.2.4441

Problem: Vim9: function argument of filter() not checked like map().  
Solution: Also check the function argument of filter().  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4442 (after 8.2.4438)

Problem: Test for error reading input fails on MS-Windows.  
Solution: Don't run the test on MS-Windows.  
Files: src/testdir/test\_exit.vim

Patch 8.2.4443 (after 8.2.4440)

Problem: Regexp pattern test fails on Mac.  
Solution: Do not use a swapfile for the buffer.  
Files: src/testdir/test\_regexp\_utf8.vim

Patch 8.2.4444

Problem: Beep caused by test. ASAN reports leaks.  
Solution: Do not put a NL at the end of the script. Make the text work on MS-Windows. Do not run the test with ASAN.  
Files: src/testdir/test\_exit.vim

Patch 8.2.4445

Problem: Exit test fails on MS-Windows anyway.  
Solution: Skip the test on MS-Windows.  
Files: src/testdir/test\_exit.vim

Patch 8.2.4446

Problem: Vim9: cannot refer to a global function like a local one.  
Solution: When g:name is not a variable but a function, use a function reference. (closes #9826)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4447

Problem: Vim9: can still use s:var in a compiled function.  
Solution: Disallow using s:var for Vim9 script. (closes #9824)  
Files: runtime/doc/vim9.txt, src/vim9expr.c, src/vim9compile.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.4448 (after 8.2.4447)

Problem: Filetype detection is failing.  
Solution: Do not use "s:" where it is no longer allowed.  
Files: runtime/autoload/dist/ft.vim,

Patch 8.2.4449

Problem: vim9: function argument of sort() not checked at compile time.  
Solution: Add a compile time check.  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4450 (after 8.2.4449)

Problem: List sort test fails.

Solution: Pass a valid "how" argument.  
Files: src/testdir/test\_listdict.vim

Patch 8.2.4451 (after 8.2.4450)  
Problem: sort() fails when ignoring case.  
Solution: Accept a number one argument in sort().  
Files: src/evalfunc.c, src/testdir/test\_listdict.vim

Patch 8.2.4452  
Problem: Test for what 8.2.4436 fixes does not check for regression.  
Solution: Set several options. (Ken Takata, closes #9830)  
Files: src/testdir/test\_vartabs.vim

Patch 8.2.4453  
Problem: :helpgrep may free an option that was not allocated. (Yegappan Lakshmanan)  
Solution: Check if the value was allocated.  
Files: src/option.c, src/proto/option.pro, src/quickfix.c, src/testdir/test\_quickfix.vim

Patch 8.2.4454  
Problem: Resetting cmdwin\_type only for one situation.  
Solution: Reset cmdwin\_type before closing windows. (closes #9822)  
Files: src/ui.c, src/window.c, src/testdir/test\_exit.vim

Patch 8.2.4455  
Problem: Accepting one and zero for the second sort() argument is strange.  
Solution: Disallow using one and zero in Vim9 script.  
Files: runtime/doc/builtin.txt, src/evalfunc.c, src/list.c, src/testdir/test\_listdict.vim

Patch 8.2.4456  
Problem: Terminal test may fail on some machines.  
Solution: Increase wait time. (Zdenek Dohnal, closes #9834)  
Files: src/testdir/test\_terminal.vim

Patch 8.2.4457  
Problem: The GPM library can only be linked statically.  
Solution: Make it possible to load the GPM library dynamically. (Damien)  
Files: runtime/doc/various.txt, src/config.h.in, src/configure.ac, src/Makefile, src/evalfunc.c, src/feature.h, src/os\_unix.c, src/proto/os\_unix.pro, src/version.c

Patch 8.2.4458  
Problem: Vim9: compiling filter() call fails with funcref that has unknown arguments.  
Solution: Do not check the arguments if they are unknown at compile time. (closes #9835)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4459  
Problem: Vim9: compiling sort() call fails with a funcref that has unknown arguments.  
Solution: Do not check the arguments if they are unknown at compile time.

(closes #9835)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.4460

Problem: Vim9: wrong error for defining dict function.  
Solution: Explicitly check for trying to define a dict function.  
(closes #9827)  
Files: src/errors.h, src/userfunc.c, src/vim9compile.c,  
src/testdir/test\_vim9\_func.vim

#### Patch 8.2.4461

Problem: MS-Windows: garbage characters on stdout with VIMDLL.  
Solution: Don't call gui\_focus\_change() when about to quit. (Ken Takata,  
closes #9840)  
Files: src/gui\_w32.c

#### Patch 8.2.4462

Problem: Not enough testing for quickfix code.  
Solution: Add more tests. Fix uncovered problem. (Yegappan Lakshmanan,  
closes #9839)  
Files: src/quickfix.c, src/window.c, src/testdir/test\_makeencoding.vim,  
src/testdir/test\_quickfix.vim

#### Patch 8.2.4463

Problem: Completion only uses strict matching.  
Solution: Add the "fuzzy" item for '**wildoptions**'. (Yegappan Lakshmanan,  
closes #9803)  
Files: runtime/doc/options.txt, src/buffer.c, src/cmdexpand.c,  
src/option.c, src/option.h, src/optionstr.c,  
src/proto/cmdexpand.pro, src/proto/option.pro,  
src/proto/search.pro, src/search.c, src/structs.h,  
src/testdir/gen\_opt\_test.vim, src/testdir/test\_cmdline.vim

#### Patch 8.2.4464

Problem: Dtrace files are recognized as filetype D.  
Solution: Add a pattern for Dtrace files. (Teubel György, closes #9841)  
Add some more testing.  
Files: runtime/autoload/dist/ft.vim, runtime/filetype.vim,  
src/testdir/test\_filetype.vim

#### Patch 8.2.4465

Problem: Fuzzy completion does not order matches properly.  
Solution: Do not use regular expression match. (Yegappan Lakshmanan,  
closes #9843)  
Files: src/cmdexpand.c, src/search.c, src/testdir/test\_cmdline.vim

#### Patch 8.2.4466

Problem: MS-Windows: illegal memory access in installer when using  
"create-directories" as the final argument.  
Solution: Check the argument count. (Cam Sinclair, closes #9844)  
Files: src/dosinst.c

#### Patch 8.2.4467

Problem: Running filetype test leaves file behind.

Solution: Delete the file.  
Files: src/testdir/test\_filetype.vim

Patch 8.2.4468

Problem: Coverity warns for uninitialized struct member.  
Solution: Set color.index to zero.  
Files: src/terminal.c

Patch 8.2.4469

Problem: Coverity warns for uninitialized variable.  
Solution: Set the value to zero.  
Files: src/ex\_getln.c

Patch 8.2.4470

Problem: Coverity warns for uninitialized variable.  
Solution: Set can\_spell to zero.  
Files: src/drawline.c

Patch 8.2.4471

Problem: Coverity warns for uninitialized variable.  
Solution: Set flags to zero.  
Files: src/vim9cmds.c

Patch 8.2.4472

Problem: Coverity warns for use of a freed function name.  
Solution: Only check an autoload name when is prefixed.  
Files: src/userfunc.c

Patch 8.2.4473

Problem: Coverity warns for not checking return value of ftell().  
Solution: Bail out if ftell() returns a negative value.  
Files: src/spellfile.c

Patch 8.2.4474

Problem: Memory allocation failures not tested in quickfix code.  
Solution: Add alloc IDs and tests. (Yegappan Lakshmanan, closes #9848)  
Files: src/alloc.h, src/quickfix.c, src/vim.h,  
src/testdir/test\_quickfix.vim

Patch 8.2.4475

Problem: Fuzzy cmdline completion does not work for lower case.  
Solution: Also use fuzzy completion for lower case input. (Yegappan Lakshmanan, closes #9849)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

Patch 8.2.4476

Problem: Operator name spelled wrong.  
Solution: Change trinary to ternary. (Goc Dunder, closes #9850)  
Files: src/testdir/test\_expr.vim, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vimscript.vim

Patch 8.2.4477

Problem: Crash when using fuzzy completion.  
Solution: Temporary fix: put back regexp. (closes #9851)

Files: src/cmdexpand.c

Patch 8.2.4478

Problem: Crash when using fuzzy completion.

Solution: Temporary fix: put back regexp. (closes #9852, closes #9851)

Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

Patch 8.2.4479

Problem: No fuzzy completion for maps and abbreviations.

Solution: Fuzzy complete maps and abbreviations. (Yegappan Lakshmanan, closes #9856)

Files: src/cmdexpand.c, src/map.c, src/proto/map.pro, src/search.c, src/testdir/test\_cmdline.vim

Patch 8.2.4480

Problem: Suspending with **CTRL-Z** does not work on Android.

Solution: Do not handle SIGTSTP. (closes #9854)

Files: src/os\_unix.c

Patch 8.2.4481

Problem: Cmdline popup menu not removed when '**lazyredraw**' is set.

Solution: Temporarily reset '**lazyredraw**' when removing the popup menu. (closes #9857)

Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim, src/testdir/dumps/Test\_wildmenu\_pum\_41.dump

Patch 8.2.4482

Problem: No fuzzy cmdline completion for user defined completion.

Solution: Add fuzzy completion for user defined completion. (Yegappan Lakshmanan, closes #9858)

Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim

Patch 8.2.4483

Problem: Command completion makes two rounds to collect matches.

Solution: Use a growarray to collect matches. (Yegappan Lakshmanan, closes #9860)

Files: src/buffer.c, src/cmdexpand.c, src/map.c, src/testdir/test\_cmdline.vim

Patch 8.2.4484

Problem: Vim9: some error messages are not tested.

Solution: Add a few more test cases. Delete dead code.

Files: src/vim9execute.c, src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim

Patch 8.2.4485

Problem: Compiler warning for uninitialized variable.

Solution: Initialize the variable. (John Marriott)

Files: src/cmdexpand.c

Patch 8.2.4486

Problem: MS-Windows GUI: slow scrolling with maximized window.

Solution: Use a better way to check the window is on screen. (Ken Takata, closes #9865)

Files: src/gui\_w32.c

Patch 8.2.4487

Problem: Vim9: cannot compare with v:null.

Solution: Allow comparing anything with v:null. (closes #9866)

Files: src/vim9instr.c, src/typval.c, src/proto/typval.pro,  
src/vim9.h, src/vim9execute.c, src/evalvars.c,  
src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.4488 (after 8.2.4487)

Problem: Build error with +eval but without +channel or +job.

Solution: Add #ifdef. (John Marriott)

Files: src/typval.c

Patch 8.2.4489 (after 8.2.4487)

Problem: Failing test for comparing v:null with number.

Solution: Allow comparing v:null with number in legacy script.  
(Ken Takata, closes #9873) Also do this for float.

Files: src/typval.c, src/testdir/test\_vimscript.vim

Patch 8.2.4490

Problem: Terminal focus reporting only works for xterm-like terminals.  
(Jonathan Rascher)

Solution: Remove the "focus\_mode" flag. (closes #9859)

Files: src/term.c

Patch 8.2.4491

Problem: MS-Windows makefile dependencies are outdated.

Solution: Update dependencies. (Ken Takata, closes #9876)

Files: src/Make\_cyg\_ming.mak, src/Make\_mvc.mak

Patch 8.2.4492

Problem: No error if an option is given an invalid value with  
":let &opt = val".

Solution: Give the error. (closes #9864)

Files: src/evalvars.c, src/testdir/test\_options.vim

Patch 8.2.4493 (after 8.2.4492)

Problem: Options test fails in the GUI.

Solution: Do not save and restore 'term'.

Files: src/testdir/gen\_opt\_test.vim

Patch 8.2.4494

Problem: The find\_tags() function is much too long.

Solution: Refactor the function. (Yegappan Lakshmanan, closes #9869)

Files: src/quickfix.c, src/tag.c, src/testdir/test\_tagjump.vim

Patch 8.2.4495

Problem: Help test fails in 24 line terminal.

Solution: Use up to 23 lines for text.

Files: src/testdir/test\_help.vim

Patch 8.2.4496 (after 8.2.4494)

Problem: Coverity gives warnings after tags code refactoring.  
Solution: Avoid the warnings. (Yegappan Lakshmanan, closes #9882)  
Files: src/tag.c

#### Patch 8.2.4497

Problem: Wrong color for half of wide character next to pum scrollbar.  
Solution: Redraw the screen cell with the right color. (closes #9874)  
Files: src/screen.c, src/testdir/test\_ins\_complete.vim,  
src/testdir/dumps/Test\_scrollbar\_on\_wide\_char.dump

#### Patch 8.2.4498

Problem: Using <Plug> with "noremap" does not work.  
Solution: Always remap <Plug>. (closes #9879, closes #9789)  
Files: runtime/doc/map.txt, src/getchar.c, src/testdir/test\_mapping.vim

#### Patch 8.2.4499

Problem: Vim9: at the script level declarations leak from try block to catch and finally block.  
Solution: End the block and start a new one. (closes #9883)  
Files: src/ex\_eval.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4500

Problem: Vim9: can declare a global variable on the command line.  
Solution: Disallow declaring a variable on the command line. (closes #9881)  
Files: src/errors.h, src/evalvars.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_script.vim,  
src/testdir/dumps/Test\_vim9\_reject\_declaration.dump

#### Patch 8.2.4501

Problem: With 'showbreak' set and after the end of the line the cursor may be displayed in the wrong position.  
Solution: Do not apply 'showbreak' after the end of the line. (closes #9884)  
Files: src/charset.c, src/testdir/test\_breakindent.vim,  
src/testdir/dumps/Test\_cursor\_position\_with\_showbreak.dump

#### Patch 8.2.4502

Problem: In the GUI a modifier is not recognized for the key typed after **CTRL-X**, which may result in a mapping to be used. (Daniel Steinberg)  
Solution: Recognize a modifier starting with CSI. (closes #9889)  
Files: src/getchar.c, src/testdir/test\_ins\_complete.vim

#### Patch 8.2.4503

Problem: Vim9: there is no point in supporting :Print and :mode.  
Solution: Do not recognize :Print and :mode as commands. (closes #9870)  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4504

Problem: When there is a partially matching map and modifyOtherKeys is active a full map may not work.  
Solution: Only simplify modifiers when there is no matching mapping. (closes #8792)  
Files: src/getchar.c, src/testdir/test\_termcodes.vim

Patch 8.2.4505

Problem: Vim9: outdated "autocmd nested" still works.

Solution: Do not accept the :autocmd argument "nested" without "++" in Vim9 script.

Files: src/autocmd.c, src/errors.h, src/testdir/test\_autocmd.vim

Patch 8.2.4506

Problem: "pattern not found" for :global is not an error message.

Solution: In Vim9 script make this an actual error, so that try/catch can be used as expected.

Files: src/ex\_cmds.c, src/errors.h, src/testdir/test\_global.vim

Patch 8.2.4507 (after 8.2.4506)

Problem: Test fails because of new error message.

Solution: Avoid the test fails.

Files: src/testdir/test\_vim9\_cmd.vim

Patch 8.2.4508

Problem: Vim9: cannot assign to a global variable on the command line.

Solution: Allow using :vim9cmd for assignment on the command line.

Files: src/evalvars.c, src/testdir/test\_vim9\_script.vim,  
src/testdir/dumps/Test\_vim9\_reject\_declaration.dump,  
src/testdir/dumps/Test\_vim9\_reject\_declaration\_1.dump,  
src/testdir/dumps/Test\_vim9\_reject\_declaration\_2.dump

Patch 8.2.4509

Problem: Vim9: can declare a variable with ":va".

Solution: Disallow using ":va", require using ":var".

Files: src/evalvars.c, src/errors.h, src/vim9compile.c,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.4510

Problem: Vim9: shortening commands leads to confusing script.

Solution: In Vim9 script require at least ":cont" for ":continue", "const" instead of "cons", "break" instead of "brea", "catch" instead of "cat", "else" instead of "el" "elseif" instead of "elsei" "endfor" instead of "endfo" "endif" instead of "en" "endtry" instead of "endt", "finally" instead of "fina", "throw" instead of "th", "while" instead of "wh".

Files: src/ex\_cmds.h, src/ex\_docmd.c, src/errors.h, src/evalvars.c,  
src/vim9compile.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.4511

Problem: Filetype test fails.

Solution: Change "endw" to "endwhile".

Files: runtime/autoload/dist/ft.vim

Patch 8.2.4512

Problem: The find\_tags\_in\_file() function is much too long.

Solution: Refactor into multiple smaller functions. (Yegappan Lakshmanan, closes #9892)

Files: Filelist, src/Makefile, src/quickfix.c, src/tag.c,  
src/testdir/test83-tags2, src/testdir/test83-tags3,  
src/testdir/test\_tagjump.vim

Patch 8.2.4513

Problem: Window-local directory is not applied if 'acd' fails.  
Solution: Don't call do\_autochdir(). (closes #9891)  
Files: src/window.c, src/testdir/test\_autochdir.vim

Patch 8.2.4514

Problem: Vim9: some flow commands can be shortened.  
Solution: Also require using the full name for ":return", ":enddef", ":continue", ":export" and ":import".  
Files: src/ex\_cmds.h, src/ex\_docmd.c, src/errors.h, src/userfunc.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.4515

Problem: Old substitute syntax is still supported.  
Solution: Disallow using backslash after ":s" in Vim9 script.  
Files: src/ex\_cmds.c, src/errors.h, src/testdir/test\_substitute.vim

Patch 8.2.4516 (after 8.2.4515)

Problem: Build failure without the +eval feature.  
Solution: Move error message outside of #ifdef.  
Files: src/errors.h

Patch 8.2.4517

Problem: MS-Windows: cannot specify location of sodium library.  
Solution: Allow for using a path for SODIUM. (Ken Takata, closes #9896)  
Files: src/Make\_cyg\_ming.mak

Patch 8.2.4518

Problem: The binary tag search feature is always enabled.  
Solution: Remove the #ifdefs. Add a few more tests. (Yegappan Lakshmanan, closes #9893)  
Files: src/evalfunc.c, src/feature.h, src/tag.c, src/version.c, src/testdir/test\_tagjump.vim, src/testdir/test\_taglist.vim

Patch 8.2.4519

Problem: Vim9: Can still use ":fini" and ":finis" for ":finish".  
Solution: Require using ":finish".  
Files: src/ex\_cmds.h, src/testdir/test\_vim9\_script.vim

Patch 8.2.4520

Problem: Using wrong highlight for cursor line number.  
Solution: Take filler lines into account when using CursorLineNr. (closes #9897)  
Files: src/drawline.c, src/testdir/test\_diffmode.vim, src/testdir/dumps/Test\_diff\_with\_cursorline\_number\_01.dump, src/testdir/dumps/Test\_diff\_with\_cursorline\_number\_02.dump

Patch 8.2.4521 (after 8.2.4520)

Problem: Build failure without the +diff feature. (John Marriott)  
Solution: Define filler+lines if not declaring it.  
Files: src/drawline.c

Patch 8.2.4522 (after 8.2.4492)

Problem: GUI test fails with Motif. (Dominique Pellé)  
Solution: Remove using an invalid value for **'guifontset'**.  
Files: src/testdir/test\_gui.vim

#### Patch 8.2.4523

Problem: When gvim is started maximized the **'window'** option isn't set properly. (Christian J. Robinson)  
Solution: Check if **'windows'** was already set or not. (Ken Takata, closes #9904)  
Files: src/term.c

#### Patch 8.2.4524

Problem: MS-Windows: cannot build with some sodium libraries.  
Solution: Make the DLL name configurable. Add build instructions. (Ken Takata, closes #9905)  
Files: src/INSTALLpc.txt, src/Make\_cyg\_ming.mak, src/Make\_mvc.mak, src/crypt.c

#### Patch 8.2.4525

Problem: Some GUI tests don't work on Athena.  
Solution: Skip tests that won't work. (Yegappan Lakshmanan, closes #9902)  
Files: src/testdir/test\_gui.vim

#### Patch 8.2.4526

Problem: Vim9: cannot set variables to a null value.  
Solution: Add null\_list, null\_job, etc.  
Files: runtime/doc/vim9.txt, src/eval.c, src/proto/eval.pro, src/vim9expr.c, src/vim9script.c, src/vim9instr.c, src/vim9compile.c, src/vim9execute.c, src/vim9.h, src/vim9type.c, src/evalvars.c, src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_disassemble.vim, src/testdir/test\_vim9\_func.vim, src/testdir/test\_expr.vim

#### Patch 8.2.4527

Problem: The Athena GUI is old and does not work well.  
Solution: Remove the Athena GUI from configure to find out who still wants support for this GUI.  
Files: src/configure.ac, src/auto/configure, src/Makefile

#### Patch 8.2.4528

Problem: Crash when using null\_function for a partial.  
Solution: Don't call fname\_trans\_sid() with NULL. (closes #9908)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.4529

Problem: Vim9: comparing partial with function fails.  
Solution: Support this comparison. Avoid a crash. (closes #9909)  
Add more test cases.  
Files: src/vim9instr.c, src/userfunc.c, src/vim9type.c, src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vim9\_func.vim, src/testdir/test\_vimscript.vim

#### Patch 8.2.4530

Problem: Making comparison with null work changes legacy behavior.

Solution: Only use the better comparison in Vim9 script. (closes #9910)  
Files: src/typval.c, src/testdir/test\_expr.vim

Patch 8.2.4531

Problem: LGTM warnings for condition always true and buffer size too small.  
Solution: Remove the useless condition. Make the buffer larger. (Goc Dunder, closes #9914)  
Files: src/charset.c, src/term.c

Patch 8.2.4532

Problem: Suspending with **CTRL-Z** does not work on OpenBSD.  
Solution: Adjust #ifdef for SIGTSTP. (Stuart Henderson, closes #9912)  
Files: src/os\_unix.c

Patch 8.2.4533

Problem: Vim9: no test that after assigning null the type is still checked.  
Solution: Add a test.  
Files: src/testdir/test\_vim9\_assign.vim

Patch 8.2.4534

Problem: Vim9: "is" operator with empty string and null returns true.  
Solution: Consider empty string and null to be different for "is".  
Files: src/typval.c, src/vim9execute.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4535

Problem: Filename modifier ":8" removes the filename.  
Solution: Use strncpy() instead of vim\_strncpy(). (Christian Brabandt, closes #9918, closes #8600)  
Files: src/filepath.c, src/testdir/test\_shortpathname.vim

Patch 8.2.4536 (after 8.2.4534)

Problem: Debugger test fails when breaking on expression.  
Solution: Compare strings with "==" instead of "is".  
Files: src/debugger.c

Patch 8.2.4537

Problem: Output from linter and language server shows up in git.  
Solution: Add patterns to .gitignore. (Goc Dunder, closes #9925)  
Files: .gitignore

Patch 8.2.4538

Problem: The find\_tags\_in\_file() function is too long.  
Solution: Refactor into smaller functions. (Yegappan Lakshmanan, closes #9920)  
Files: src/tag.c, src/testdir/test\_tagjump.vim

Patch 8.2.4539

Problem: When comparing special v:none and v:null are handled the same when compiling.  
Solution: Pass more information so that v:none can be handled differently at compile time. (issue #9923)  
Files: src/vim9instr.c, src/vim9compile.c, src/globals.h, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4540

Problem: Line number for error is off by one.  
Solution: Remember the line number of the comparison. (closes #9923)  
Files: src/eval.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4541

Problem: Crash in debugger when a variable is not available in the current block.  
Solution: Check for a NULL name. (closes #9926)  
Files: src/vim9execute.c, src/testdir/test\_debugger.vim

Patch 8.2.4542

Problem: Vim9: "break" inside try/catch not handled correctly.  
Solution: First jump to :endtry. (closes #9927)  
Files: src/vim9cmds.c, src/vim9.h, src/testdir/test\_vim9\_script.vim

Patch 8.2.4543

Problem: Coverity warning for refactored tag search code.  
Solution: Avoid the warnings. Update comments. Add one more test case. (Yegappan Lakshmanan, closes #9928)  
Files: src/tag.c, src/testdir/test\_tagjump.vim

Patch 8.2.4544

Problem: Coverity warnings for not using returned value.  
Solution: Assign to vim\_ignored.  
Files: src/tag.c

Patch 8.2.4545

Problem: MS-Windows: the installed icon is low resolution.  
Solution: Use a better icon. Install vim.ico. (Christian Brabandt, closes #9931, closes #9930)  
Files: Filelist, nsis/gvim.nsi, src/vim.ico, runtime/bitmaps/vim.ico

Patch 8.2.4546

Problem: Duplicate #undef.  
Solution: Remove one #undef. (closes #9932)  
Files: src/regexp\_nfa.c

Patch 8.2.4547

Problem: The neXTaw GUI is old and does not work well.  
Solution: Remove the neXTaw GUI from configure to find out who still wants support for this GUI.  
Files: src/configure.ac, src/auto/configure, src/Makefile

Patch 8.2.4548

Problem: Script-local function is deleted when used in a funcref.  
Solution: Do not consider a function starting with "<SNR>" reference counted. (closes #9916, closes #9820)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.4549

Problem: Cannot build with Motif and editres. (Tony Mechelynck)  
Solution: Fix configure mistake.  
Files: src/configure.ac, src/auto/configure

Patch 8.2.4550

Problem: Motif: cannot set the color of the scrollbar thumb.  
Solution: Remove #ifdef.  
Files: src/gui\_motif.c

Patch 8.2.4551

Problem: When mapping <Esc> terminal codes are not recognized.  
Solution: Specifically recognize a mapping with just <Esc> and check for terminal codes even though there is no partial mapping.  
(closes #9903)  
Files: src/getchar.c, src/testdir/test\_termcodes.vim

Patch 8.2.4552

Problem: In a :def function "put = expr" does not work.  
Solution: Skip over white space. (closes #9936)  
Files: src/vim9cmds.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.4553

Problem: Linear tag search is a bit slow.  
Solution: Remove a vim\_ftell() call. (Yegappan Lakshmanan, closes #9937)  
Files: src/tag.c, src/testdir/test\_taglist.vim

Patch 8.2.4554

Problem: Vim9: using null values not sufficiently tested.  
Solution: Add more tests. Fix uncovered problem.  
Files: src/vim9type.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.4555

Problem: getmousepos() returns the wrong column. (Ernie Rael)  
Solution: Limit to the text size, not the number of bytes.  
Files: src/mouse.c, src/testdir/test\_functions.vim

Patch 8.2.4556

Problem: Test fails without the +job or +channel feature. (Dominique Pellé)  
Solution: Adjust #ifdefs. Pass on skip flag. (closes #9942)  
Files: src/eval.c, src/vim9compile.c

Patch 8.2.4557

Problem: Confusing comment about '**cursorlineopt**'.  
Solution: Adjust comment. (closes #9939) Add parenthesis around logical OR.  
Files: src/drawline.c

Patch 8.2.4558

Problem: Motif: using default colors does not work as expected.  
Solution: Do not try to store the default colors, use the resources.  
(closes #9933)  
Files: src/gui\_motif.c, src/gui.h

Patch 8.2.4559 (after 8.24555)

Problem: getmousepos() returns the screen column. (Ernie Rael)  
Solution: Return the text column, as documented.

Files: src/mouse.c, src/testdir/test\_functions.vim

Patch 8.2.4560

Problem: Suspending with **CTRL-Z** does not work on DragonFlyBSD.

Solution: Adjust #ifdef. (Ozaki Kiichi, closes #9943)

Files: src/os\_unix.c

Patch 8.2.4561

Problem: Build failure with some combination of features. (John Marriott)

Solution: Adjust #ifdef.

Files: src/mouse.c

Patch 8.2.4562

Problem: Linear tag search is not optimal.

Solution: Improve linear tag search performance. (Yegappan Lakshmanan, closes #9944)

Files: src/tag.c

Patch 8.2.4563

Problem: "z=" in Visual mode may go beyond the end of the line.

Solution: Adjust "badlen".

Files: src/spellsuggest.c, src/testdir/test\_spell.vim

Patch 8.2.4564

Problem: Running test leaves file behind. (Dominique Pellé)

Solution: Run the profiling in a separate Vim instance. (closes #9952)

Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.4565

Problem: No command line completion for :breakadd and :breakdel.

Solution: Add completion for :breakadd and :breakdel. (Yegappan Lakshmanan, closes #9950)

Files: runtime/doc/builtin.txt, src/cmdexpand.c, src/spellsuggest.c, src/usercmd.c, src/vim.h, src/testdir/test\_cmdline.vim, src/testdir/test\_writefile.vim

Patch 8.2.4566

Problem: Check for existing buffer in session file does not work for files in the home directory.

Solution: Use fnamemodify(). (James Cherti, closes #9945) Add a test.

Files: src/session.c, src/testdir/test\_mksession.vim

Patch 8.2.4567

Problem: Bracketed paste doesn't work well in Visual linewise mode.

Solution: Handle linewise Visual mode differently. (closes #9947)

Files: src/normal.c, src/testdir/test\_paste.vim

Patch 8.2.4568

Problem: getmousepos() does not compute the column below the last line.

Solution: Also compute the column when the mouse is below the last line. (Sean Dewar, closes #9946)

Files: src/mouse.c, src/testdir/test\_functions.vim

Patch 8.2.4569

Problem: Coverity warning for not using a return value.  
Solution: Add "(void)".  
Files: src/popupwin.c

#### Patch 8.2.4570

Problem: No command line completion for :profile and :profdel.  
Solution: Implement completion. (Yegappan Lakshmanan, closes #9955)  
Files: src/cmdexpand.c, src/profiler.c, src/testdir/test\_cmdline.vim,  
src/testdir/test\_profile.vim

#### Patch 8.2.4571

Problem: Not all gdb files are recognized.  
Solution: Add a few more patterns for gdb. (Jade Lovelace, closes #9956)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.4572

Problem: Vim9: return type "any" is sometimes changed to first returned type. (Virginia Senioria)  
Solution: Do not change the return type if declared as "any". (closes #9949)  
Files: src/vim9cmds.c, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.4573

Problem: A nested function (closure) is compiled for debugging without context.  
Solution: Check if a nested function is marked for debugging before compiling it. Give an error when trying to compile a closure without its context. (closes #9951)  
Files: src/vim9compile.c, src/vim9execute.c, src/proto/vim9execute.pro,  
src/vim9expr.c, src/errors.h

#### Patch 8.2.4574

Problem: Vim9: test for profiling fails.  
Solution: Mark function for profiling earlier to avoid E1271.  
Files: src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4575

Problem: Vim9: test for profiling still fails.  
Solution: Update flags for profiling and breakpoints when obtaining the compile type. Do not set the FC\_CLOSURE flag for a toplevel function.  
Files: src/vim.h, src/vim9compile.c, src/proto/vim9compile.pro,  
src/eval.c, src/vim9execute.c, src/vim9expr.c, src/vim9instr.c,  
src/vim9.h

#### Patch 8.2.4576

Problem: Vim9: error for comparing with null can be annoying.  
Solution: Allow comparing anything with null. (closes #9948)  
Files: src/vim9instr.c, src/typval.c, src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.4577

Problem: Message test is flaky. (Elimar Riesebieter)  
Solution: Trigger the autocommand event only after startup is finished.  
Files: src/testdir/test\_messages.vim

Patch 8.2.4578

Problem: No warning when an autoload script for completion function has an error.  
Solution: Do not ignore errors when a function name is given with a dot or '#' character. (closes #9958)  
Files: src/eval.c, src/testdir/test\_cmdline.vim

Patch 8.2.4579

Problem: Cannot use page-up and page-down in the command line completion popup menu.  
Solution: Check for to page-up and page-down keys. (Yegappan Lakshmanan, closes #9960)  
Files: src/cmdexpand.c, src/ex\_getln.c, src/spellsuggest.c, src/vim.h, src/testdir/test\_cmdline.vim, src/testdir/dumps/Test\_wildmenu\_pum\_42.dump, src/testdir/dumps/Test\_wildmenu\_pum\_43.dump, src/testdir/dumps/Test\_wildmenu\_pum\_44.dump, src/testdir/dumps/Test\_wildmenu\_pum\_45.dump, src/testdir/dumps/Test\_wildmenu\_pum\_46.dump, src/testdir/dumps/Test\_wildmenu\_pum\_47.dump, src/testdir/dumps/Test\_wildmenu\_pum\_48.dump, src/testdir/dumps/Test\_wildmenu\_pum\_49.dump, src/testdir/dumps/Test\_wildmenu\_pum\_50.dump

Patch 8.2.4580

Problem: Vim9: incorrect error for shadowing variable.  
Solution: Do not pass the context when compiling a referenced function.  
Files: src/vim9expr.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.4581

Problem: Null types not fully tested.  
Solution: Add some more tests using null types.  
Files: src/testdir/test\_vim9\_expr.vim

Patch 8.2.4582

Problem: Useless code handling a type declaration.  
Solution: Remove the code and give an error.  
Files: src/eval.c, src/errors.h, src/testdir/test\_vim9\_script.vim, src/testdir/dumps/Test\_misplaced\_type.dump

Patch 8.2.4583 (after 8.2.4582)

Problem: Screendump test fails.  
Solution: Check that making a screendump is possible.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.4584 (after 8.2.4578)

Problem: Error for using autoload function in custom completion.  
Solution: Do not check for errors when using an autoload function. (closes #9962)  
Files: src/eval.c, src/testdir/test\_cmdline.vim

Patch 8.2.4585

Problem: Cannot use keypad page-up/down for completion menu.  
Solution: Recognize the keypad keys. (Yegappan Lakshmanan, closes #9963)

Files: src/ex\_getln.c, src/testdir/test\_cmdline.vim

Patch 8.2.4586

Problem: Vim9: no error for using lower case name for "func" argument.  
(Ernie Rael)

Solution: Check the name as soon as the type is known.

Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.4587

Problem: Vim9: double free after unpacking a list.

Solution: Make a copy of the value instead of moving it. (closes #9968)

Files: src/vim9execute.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.4588

Problem: Mapping with key code after other matching mapping does not work.

Solution: Change ">" to ">=". (closes #9903)

Files: src/getchar.c, src/testdir/test\_termcodes.vim

Patch 8.2.4589

Problem: Cannot index the g: dictionary.

Solution: Recognize using "g:[key]". (closes #9969)

Files: src/ex\_docmd.c, src/eval.c, src/vim9compile.c,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.4590

Problem: Vim9: range type check has wrong offset.

Solution: Adjust offset for CHECKTYPE. Remove other type check.

Files: src/vim9compile.c, src/vim9execute.c,  
src/testdir/test\_vim9\_assign.vim

Patch 8.2.4591

Problem: Cursor line not updated when a callback moves the cursor.

Solution: Check if the cursor moved. (closes #9970)

Files: src/main.c, src/drawscreen.c, src/proto/drawscreen.pro,  
src/testdir/test\_cursorline.vim,  
src/testdir/dumps/Test\_cursorline\_callback\_1.dump

Patch 8.2.4592

Problem: Search continues after giving E1204.

Solution: Return failure after giving E1204. (closes #9972)

Files: src/regexp\_nfa.c

Patch 8.2.4593

Problem: Unnecessary call to redraw\_later().

Solution: Remove the call to redraw\_later() in op\_yank(). (closes #9971)

Files: src/register.c

Patch 8.2.4594

Problem: Need to write script to a file to be able to source them.

Solution: Make ":source" use lines from the current buffer. (Yegappan Lakshmanan et al., closes #9967)

Files: runtime/doc/repeat.txt, runtime/doc/todo.txt, src/alloc.c,  
src/digraph.c, src/eval.c, src/ex\_cmds.h, src/scriptfile.c,  
src/proto/scriptfile.pro, src/vim9script.c,

src/testdir/test\_source.vim

Patch 8.2.4595

Problem: X11: using --remote-wait may keep the CPU busy.  
Solution: Set the timeout for select() on every call. (Jacopo Secchiero, closes #9973)  
Files: src/if\_xcmdsrv.c

Patch 8.2.4596

Problem: Installing tutor binary may fail.  
Solution: Fix the dependency. (Sergei Trofimovich, closes #9978)  
Files: src/Makefile

Patch 8.2.4597

Problem: LuaV\_debug() not covered by tests.  
Solution: Add a test. (Dominique Pellé, closes #9980)  
Files: src/testdir/test\_lua.vim

Patch 8.2.4598

Problem: Profile completion test sometimes fails.  
Solution: Delete the .res file before running tests.  
Files: src/testdir/runtest.vim

Patch 8.2.4599

Problem: GTK: get assertion errors when scrolling a split window.  
Solution: Use GDK\_IS\_DRAWABLE() on the scrollbar window. (closes #9982)  
Files: src/gui\_gtk.c

Patch 8.2.4600

Problem: Vim9: not enough test coverage for executing :def function.  
Solution: Add a few more tests. Fix inconsistencies.  
Files: src/vim9execute.c, src/evalvars.c, src/proto/evalvars.pro, src/testdir/test\_listdict.vim, src/testdir/test\_vim9\_assign.vim, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.4601

Problem: Vim9: not enough test coverage for executing :def function.  
Solution: Add a few more tests.  
Files: src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.4602

Problem: Vim9: not enough test coverage for executing :def function.  
Solution: Add a few more tests. Fix uncovered problem. Remove dead code.  
Files: src/vim9execute.c, src/vim9.h, src/vim9instr.c, src/proto/vim9instr.pro, src/vim9compile.c, src/testdir/test\_vim9\_script.vim, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4603

Problem: Sourcing buffer lines is too complicated.  
Solution: Simplify the code. Make it possible to source Vim9 script lines. (Yegappan Lakshmanan, closes #9974)  
Files: runtime/doc/repeat.txt, src/ex\_docmd.c, src/proto/scriptfile.pro, src/scriptfile.c, src/structs.h, src/testdir/test\_source.vim

Patch 8.2.4604

Problem: Error for redefining a script item may be confusing.  
Solution: Put quotes around the name.  
Files: src/errors.h

Patch 8.2.4605

Problem: Error for arguments of remote\_expr() even when the +clientserver feature is not included.  
Solution: Move #ifdef.  
Files: src/clientserver.c

Patch 8.2.4606 (after 8.2.4605)

Problem: Test fails because of changed error message.  
Solution: Update the expected error message  
Files: src/testdir/test\_vim9\_import.vim

Patch 8.2.4607

Problem: Sourcing buffer lines may lead to errors for conflicts.  
Solution: Add the ++clear argument. (Yegappan Lakshmanan, closes #9991)  
Files: runtime/doc/repeat.txt, src/scriptfile.c, src/vim9script.c, src/proto/vim9script.pro, src/testdir/test\_source.vim

Patch 8.2.4608

Problem: getcompletion() does not work properly when 'wildoptions' contains "fuzzy".  
Solution: Do not use addstar(). (Yegappan Lakshmanan, closes #9992, closes #9986)  
Files: runtime/doc/builtin.txt, src/cmdexpand.c, src/testdir/test\_cmdline.vim

Patch 8.2.4609

Problem: :unhide does not check for failing to close a window.  
Solution: When closing a window fails continue with the next one. Do not try closing the autocmd window. (closes #9984)  
Files: src/buffer.c, src/window.c, src/proto/window.pro, src/testdir/test\_autocmd.vim

Patch 8.2.4610

Problem: Some conditions are always true.  
Solution: Remove the useless conditions. (closes #9993)  
Files: src/clientserver.c, src/drawline.c, src/drawscreen.c, src/ex\_cmds.c, src/fileio.c, src/message.c, src/misc2.c, src/ops.c, src/sign.c, src/spell.c, src/vim9cmds.c, src/window.c

Patch 8.2.4611

Problem: Typos in tests; one lua line not covered by test.  
Solution: Fix typos. Add test case. (Dominique Pellé, closes #9994)  
Files: src/testdir/test\_breakindent.vim, src/testdir/test\_crypt.vim, src/testdir/test\_cursorline.vim, src/testdir/test\_digraph.vim, src/testdir/test\_gui.vim, src/testdir/test\_lua.vim, src/testdir/test\_regexp\_latin.vim, src/testdir/test\_signals.vim, src/testdir/test\_spell.vim, src/testdir/test\_statusline.vim, src/testdir/test\_vim9\_disassemble.vim,

src/testdir/test\_vim9\_expr.vim, src/testdir/test\_vimscript.vim

Patch 8.2.4612

Problem: Vim9: cannot use a recursive call in a nested function. (Sergey Vlasov)

Solution: Define the funcref before compiling the function. (closes #9989)

Files: src/vim9compile.c, src/vim9instr.c, src/proto/vim9instr.pro, src/vim9expr.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.4613

Problem: Return type of swapfile\_unchanged() is wrong.

Solution: Use "int". (closes #10000 Yeah!)

Files: src/memline.c

Patch 8.2.4614

Problem: Redrawing too much when '**cursorline**' is set and jumping around.

Solution: Rely on win\_update() to redraw the current and previous cursor line, do not mark lines as modified. (closes #9996)

Files: src/drawline.c, src/drawscreen.c, src/move.c, src/proto/move.pro, src/option.c

Patch 8.2.4615

Problem: Mapping with escaped bar does not work in :def function. (Sergey Vlasov)

Solution: Do not remove the backslash. (closes #10002)

Files: src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/syntax.c, src/vim9cmds.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.4616

Problem: Vim9: Declarations in a {} block of a user command do not use Vim9 rules if defined in a legacy script. (Yegappan Lakshmanan)

Solution: Pretend the script is Vim9 script.

Files: src/usercmd.c, src/testdir/test\_usercommands.vim

Patch 8.2.4617

Problem: No completion for :scriptnames.

Solution: Implement :scriptnames completion. (Yegappan Lakshmanan, closes #10005)

Files: runtime/doc/builtin.txt, src/cmdexpand.c, src/ex\_cmds.h, src/scriptfile.c, src/usercmd.c, src/vim.h, src/testdir/test\_cmdline.vim, src/testdir/test\_quickfix.vim

Patch 8.2.4618

Problem: Command line completion does not recognize single letter commands.

Solution: Use the condition from find\_ex\_command().

Files: src/ex\_docmd.c

Patch 8.2.4619

Problem: Mapping is cancelled when mouse moves and popup is visible.

Solution: Only generate mouse moved events when a popup may use them. (closes #10004)

Files: src/gui.c, src/globals.h, src/popupwin.c

Patch 8.2.4620 (after 8.2.4618)

Problem: Two letter substitute commands don't work. (Yegappan Lakshmanan)  
Solution: Invert condition.  
Files: src/ex\_docmd.c

Patch 8.2.4621

Problem: Crash when using the tabline right-click menu.  
Solution: Use XtPointer for XmUserData. (closes #10009)  
Files: src/gui\_motif.c

Patch 8.2.4622

Problem: Vim9: Crash with :execute and :finish. (Sergey Vlasov)  
Solution: Check for NULL. (closes #10011)  
Files: src/eval.c, src/testdir/test\_vim9\_script.vim

Patch 8.2.4623

Problem: Coverity warns for using uninitialized field.  
Solution: Initialize the field to zero.  
Files: src/ex\_docmd.c

Patch 8.2.4624

Problem: Old Coverity warning for resource leak.  
Solution: Close the file if memory allocation fails.  
Files: src/diff.c

Patch 8.2.4625

Problem: Old Coverity warning for resource leak.  
Solution: Call FreeWild() if expanding matches did not fail.  
Files: src/help.c

Patch 8.2.4626

Problem: Visual area not fully updated when removing sign in Visual mode while scrolling.  
Solution: Adjust check for topline. (closes #10017)  
Files: src/drawscreen.c, src/testdir/test\_display.vim, src/testdir/dumps/Test\_display\_scroll\_update\_visual.dump

Patch 8.2.4627

Problem: flatten() does not use maxdepth correctly.  
Solution: Use a recursive implementation. (closes #10020)  
Files: src/list.c, src/testdir/test\_flatten.vim

Patch 8.2.4628

Problem: Not enough testing for 2/3 letter substitute commands.  
Solution: Add more tests. (Yegappan Lakshmanan, closes #10019)  
Files: src/testdir/test\_cmdline.vim, src/testdir/test\_substitute.vim

Patch 8.2.4629

Problem: flattennew() makes a deep copy unnecessarily.  
Solution: Use a shallow copy. (issue #10012)  
Files: src/list.c

Patch 8.2.4630

Problem: **'cursorline'** not always updated with **'cursorlineopt'** is "screenline".

Solution: Call `check_redraw_cursorline()` more often. (closes #10013)  
Files: `src/normal.c`, `src/edit.c`, `src/testdir/test_cursorline.vim`,  
`src/testdir/dumps/Test_cursorline_screenline_1.dump`,  
`src/testdir/dumps/Test_cursorline_screenline_2.dump`

#### Patch 8.2.4631

Problem: Crash when switching window in `BufWipeout` autocommand.  
Solution: Put any buffer in the window to avoid it being NULL.  
(closes #10024)  
Files: `src/window.c`, `src/buffer.c`, `src/testdir/test_autocmd.vim`

#### Patch 8.2.4632

Problem: Using freed memory in `flatten()`.  
Solution: Clear `typval` after recursing into list.  
Files: `src/list.c`

#### Patch 8.2.4633

Problem: Visual range does not work before command modifiers.  
Solution: Move Visual range to after command modifiers.  
Files: `src/ex_docmd.c`, `src/testdir/test_source.vim`

#### Patch 8.2.4634

Problem: Vim9: cannot initialize a variable to `null_list`.  
Solution: Give negative count to `NEWLIST`. (closes #10027)  
Also fix inconsistencies in comparing with null values.  
Files: `src/vim9instr.c`, `src/proto/vim9instr.pro`, `src/vim9.h`,  
`src/vim9compile.c`, `src/vim9expr.c`, `src/vim9execute.c`,  
`src/evalvars.c`, `src/typval.c`, `src/testdir/test_vim9_expr.vim`,  
`src/testdir/test_vim9_builtin.vim`,  
`src/testdir/test_vim9_disassemble.vim`

#### Patch 8.2.4635 (after 8.2.4634)

Problem: Tests using null list or dict fail.  
Solution: Only use the new rules for Vim9 script.  
Files: `src/evalvars.c`

#### Patch 8.2.4636 (after 8.2.4633)

Problem: Not using Visual range.  
Solution: Put the command pointer back to the range.  
Files: `src/ex_docmd.c`

#### Patch 8.2.4637

Problem: Warning for using uninitialized variable. (Tony Mechelynck)  
Solution: Initialize it.  
Files: `src/ex_docmd.c`

#### Patch 8.2.4638

Problem: Superfluous check if a redraw is needed for **'cursorline'**.  
Solution: Remove `check_redraw_cursorline()`. (closes #10030, closes #10029)  
Files: `src/drawscreen.c`, `src/proto/drawscreen.pro`, `src/edit.c`,  
`src/main.c`, `src/normal.c`, `src/move.c`,  
`src/testdir/dumps/Test_cursorcolumn_callback_1.dump`,  
`src/testdir/dumps/Test_relativenumber_callback_1.dump`,  
`src/testdir/test_highlight.vim`, `src/testdir/test_number.vim`

Patch 8.2.4639

Problem: Not sufficient parenthesis in preprocessor macros.  
Solution: Add more parenthesis. (closes #10031)  
Files: src/globals.h, src/gui.h, src/if\_py\_both.h, src/macros.h,  
src/option.h, src/regexp.h, src/spell.h, src/structs.h, src/vim.h,  
src/vim9.h

Patch 8.2.4640

Problem: Some boolean options use "long" instead of "int".  
Solution: Adjust the type. (James McCoy, closes #10033)  
Files: src/option.h

Patch 8.2.4641

Problem: May mark the wrong window for redrawing.  
Solution: Use redraw\_win\_later(). (closes #10032)  
Files: src/move.c

Patch 8.2.4642

Problem: Vim9: in :def function script var cannot be null.  
Solution: Only initialize a script variable when not set to a null value.  
(closes #10034)  
Files: src/vim9execute.c, src/vim9type.c, src/globals.h, src/evalvars.c,  
src/vim.h, src/vim9script.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4643

Problem: Vim9: variable may be locked unintentionally.  
Solution: Clear "v\_lock". (closes #10036)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4644

Problem: Redrawing too often when '**relativenumber**' is set.  
Solution: Only redraw when the cursor line changed. (Lewis Russell,  
closes #10040)  
Files: src/change.c, src/drawscreen.c, src/structs.h

Patch 8.2.4645

Problem: '**shortmess**' changed when session does not store options.  
Solution: Save and restore '**shortmess**' if needed. (James Cherti,  
closes #10037)  
Files: src/session.c, src/testdir/test\_mksession.vim

Patch 8.2.4646

Problem: Using buffer line after it has been freed in old regexp engine.  
Solution: After getting mark get the line again.  
Files: src/regexp\_bt.c, src/testdir/test\_regexp\_latin.vim

Patch 8.2.4647

Problem: "source" can read past end of copied line.  
Solution: Add a terminating NUL.  
Files: src/scriptfile.c, src/testdir/test\_source.vim

Patch 8.2.4648

Problem: Handling LSP messages is a bit slow.

Solution: Included support for LSP messages. (Yegappan Lakshmanan, closes #10025)  
Files: runtime/doc/channel.txt, src/channel.c, src/job.c, src/json.c, src/proto/json.pro, src/structs.h, src/testdir/test\_channel.vim, src/testdir/test\_channel\_lsp.py

#### Patch 8.2.4649

Problem: Various formatting problems.  
Solution: Improve the code formatting.  
Files: src/mark.c, src/quickfix.c, src/regexp\_nfa.c, src/register.c, src/testdir/test\_filechanged.vim, src/gui\_athena.c, src/gui\_motif.c, src/os\_unix.c

#### Patch 8.2.4650

Problem: "import autoload" only works with using **'runtimepath'**.  
Solution: Also support a relative and absolute file name.  
Files: runtime/doc/vim9.txt, src/structs.h, src/scriptfile.c, src/proto/scriptfile.pro, src/vim9script.c, src/vim9expr.c, src/vim9.h, src/vim9execute.c, src/vim9instr.c, src/proto/vim9instr.pro, src/vim.h, src/userfunc.c, src/proto/userfunc.pro, src/testdir/test\_vim9\_import.vim, src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.4651 (after 8.2.4650)

Problem: Test fails because path differs.  
Solution: Only compare the tail of the path.  
Files: src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.4652 (after 8.2.4650)

Problem: Leaking memory if assignment fails.  
Solution: Clear assigned value on failure.  
Files: src/vim9execute.c

#### Patch 8.2.4653

Problem: "import autoload" does not check the file name.  
Solution: Give an error if the file is not readable. (closes #10049)  
Files: src/filepath.c, src/proto/filepath.pro, src/errors.h, src/ex\_cmds.c, src/ex\_docmd.c, src/spellfile.c, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4654 (after 8.2.4653)

Problem: Missing changes for import check.  
Solution: Add missing changes.  
Files: src/vim9script.c

#### Patch 8.2.4655

Problem: Command line completion popup menu positioned wrong when using a terminal window.  
Solution: Position the popup menu differently when editing the command line. (Yegappan Lakshmanan, closes #10050, closes #10035)  
Files: src/popupmenu.c, src/testdir/test\_cmdline.vim, src/testdir/test\_terminal.vim, src/testdir/dumps/Test\_wildmenu\_pum\_term\_01.dump

Patch 8.2.4656

Problem: Vim9: can't use items from "import autoload" with autoload directory name.  
Solution: Let sn\_autoload\_prefix overrule sn\_import\_autoload. (closes #10054)  
Files: src/structs.h, src/vim9instr.c, src/vim9expr.c, src/vim9script.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4657

Problem: Errors for functions are sometimes hard to read.  
Solution: Use printable\_func\_name() in more places.  
Files: src/vim9execute.c, src/userfunc.c, src/proto/userfunc.pro, src/vim9expr.c, src/eval.c, src/vim9instr.c, src/vim9type.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4658

Problem: Org-mode files are not recognized.  
Solution: Add patterns to recognize "org" files. (closes #10046)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4659

Problem: Invalid memory access when using printable function name.  
Solution: Adjust copied name length.  
Files: src/userfunc.c

Patch 8.2.4660

Problem: Cursorcolumn is sometimes not correct.  
Solution: Recompute the cursor column when entering Insert mode and the cursor is on a character wider than a screen cell. (closes #10057)  
Files: src/edit.c, src/testdir/test\_highlight.vim, src/testdir/dumps/Test\_cursorcolumn\_insert\_on\_tab\_1.dump, src/testdir/dumps/Test\_cursorcolumn\_insert\_on\_tab\_2.dump

Patch 8.2.4661

Problem: Coverity warning for using uninitialized variable.  
Solution: Initialize variable to NULL.  
Files: src/vim9expr.c

Patch 8.2.4662

Problem: No error for using out of range list index.  
Solution: Check list index at script level like in compiled function. (closes #10051)  
Files: src/vim.h, src/evalvars.c, src/list.c, src/proto/list.pro, src/eval.c, src/vim9execute.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.4663

Problem: Occasional crash when running the GUI tests.  
Solution: Check that the line index is not too high. (closes #8681)  
Files: src/screen.c

Patch 8.2.4664

Problem: Elvish files are not recognized.  
Solution: Recognize .elv files. (Bruno Roque, closes #10058)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4665

Problem: Popup with "minwidth" and scrollbar not updated properly.  
Solution: Adjust the computation if the window width. (closes #10061)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_previewpopup\_4.dump,  
src/testdir/dumps/Test\_popupwin\_previewpopup\_5.dump,  
src/testdir/dumps/Test\_popupwin\_previewpopup\_7.dump,  
src/testdir/dumps/Test\_popupwin\_previewpopup\_8.dump,  
src/testdir/dumps/Test\_popupwin\_previewpopup\_9.dump,  
src/testdir/dumps/Test\_popupwin\_previewpopup\_10.dump,  
src/testdir/dumps/Test\_popupwin\_drag\_minwidth\_1.dump,  
src/testdir/dumps/Test\_popupwin\_drag\_minwidth\_2.dump,  
src/testdir/dumps/Test\_popupwin\_drag\_minwidth\_3.dump

Patch 8.2.4666

Problem: Vim9: assignment not recognized in skipped block.  
Solution: When skipping assume identifier exists. (closes #10059)  
Files: src/vim9compile.c, src/proto/vim9compile.pro, src/vim9cmds.c,  
src/testdir/test\_vim9\_cmd.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.4667

Problem: expandcmd() fails on an error.  
Solution: On failure return the command unmodified. (Yegappan Lakshmanan,  
closes #10063)  
Files: runtime/doc/builtin.txt, src/evalfunc.c,  
src/testdir/test\_expand.vim

Patch 8.2.4668

Problem: Buffer allocation failures insufficiently tested.  
Solution: Add tests for memory allocation failures. (Yegappan Lakshmanan,  
closes #10064)  
Files: src/alloc.h, src/buffer.c, src/popupwin.c, src/window.c,  
src/testdir/test\_buffer.vim, src/testdir/test\_swap.vim

Patch 8.2.4669

Problem: In compiled code len('string') is not inlined.  
Solution: Compute the length at compile time if possible. (closes #10065)  
Files: src/evalfunc.c, src/proto/evalfunc.pro, src/vim9expr.c,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.4670

Problem: Memory allocation failures for new tab page not tested.  
Solution: Add tests with failing memory allocation. (Yegappan Lakshmanan,  
closes #10067)  
Files: src/alloc.h, src/blob.c, src/buffer.c, src/window.c,  
src/testdir/test\_blob.vim, src/testdir/test\_buffer.vim,  
src/testdir/test\_tabpage.vim, src/testdir/test\_window\_cmd.vim

Patch 8.2.4671

Problem: **'wildignorecase'** is sometimes not used for glob().  
Solution: Also use **'wildignorecase'** when there are no wildcards.  
(closes #10066, closes #8350)  
Files: src/filepath.c, src/testdir/test\_functions.vim

Patch 8.2.4672

Problem: Using `:normal` with Ex mode may make `:substitute` hang.  
Solution: When getting an empty line behave like 'q' was typed.  
(closes #10070)  
Files: `src/ex_cmds.c`, `src/testdir/test_normal.vim`

Patch 8.2.4673

Problem: Redrawing a vertically split window is slow when using **CTRL-F** and **CTRL-B**.  
Solution: When deciding on `USE_REDRAW` bail out if scrolling more than three lines. (issue #8002)  
Files: `src/screen.c`

Patch 8.2.4674

Problem: Cannot force getting `MouseMove` events.  
Solution: Add the **'mousemoveevent'** option with implementation for the GUI.  
(Ernie Rael, closes #10044)  
Files: `runtime/doc/gui.txt`, `runtime/doc/options.txt`,  
`runtime/doc/testing.txt`, `src/gui.c`, `src/option.h`,  
`src/optiondefs.h`, `src/testing.c`, `src/testdir/test_gui.vim`

Patch 8.2.4675

Problem: No error for missing expression after `:elseif`. (Ernie Rael)  
Solution: Check for missing expression. (closes #10068)  
Files: `src/ex_eval.c`, `src/testdir/test_vim9_script.vim`

Patch 8.2.4676 (after 8.2.4675)

Problem: Test fails with different error.  
Solution: Add argument to `:elseif`.  
Files: `src/testdir/test_vimscript.vim`

Patch 8.2.4677

Problem: The Athena GUI support is outdated.  
Solution: Remove the Athena GUI code.  
Files: `Filelist`, `src/Makefile`, `src/proto.h`, `src/clipboard.c`,  
`src/gui_athena.c`, `src/proto/gui_athena.pro`, `src/gui_at_sb.c`,  
`src/gui_at_sb.h`, `src/gui_at_fs.c`, `src/gui_motif.c`, `src/evalfunc.c`,  
`src/gui.c`, `src/gui_beval.c`, `src/gui_x11.c`, `src/if_mzsch.c`,  
`src/main.c`, `src/menu.c`, `src/mouse.c`, `src/version.c`, `src/feature.h`,  
`src/gui.h`, `src/structs.h`, `src/vim.h`, `src/testdir/gui_init.vim`,  
`src/testdir/setup_gui.vim`, `src/testdir/test_clientserver.vim`,  
`src/testdir/test_edit.vim`, `src/testdir/test_gui.vim`,  
`src/testdir/test_highlight.vim`, `src/testdir/test_quotestar.vim`,  
`src/testdir/test_startup.vim`, `runtime/doc/gui.txt`,  
`runtime/doc/gui_x11.txt`

Patch 8.2.4678

Problem: Vim9: not all code is tested.  
Solution: Add a few more tests.  
Files: `src/vim9execute.c`, `src/testdir/test_vim9_script.vim`,  
`src/testdir/test_vim9_import.vim`, `src/testdir/test_vim9_cmd.vim`

Patch 8.2.4679

Problem: Cannot have expandcmd() give an error message for mistakes.  
Solution: Add an optional argument to give errors. Fix memory leak when expanding files fails. (Yegappan Lakshmanan, closes #10071)  
Files: runtime/doc/builtin.txt, src/evalfunc.c, src/filepath.c, src/testdir/test\_expand.vim, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.4680

Problem: Build failure without +postscript.  
Solution: Use another error message.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4681

Problem: Build fails with a combination of features.  
Solution: Remove #ifdef for alloc\_clear\_id(). (John Marriott)  
Files: src/alloc.c

#### Patch 8.2.4682

Problem: Vim9: can use :unlockvar for const variable. (Ernie Rael)  
Solution: Check whether the variable is a const.  
Files: src/ex\_docmd.c, src/evalvars.c, src/vim9script.c, src/proto/vim9script.pro, src/eval.c, src/userfunc.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.4683

Problem: Verbose check with dict\_find() to see if a key is present.  
Solution: Add dict\_has\_key(). (Yegappan Lakshmanan, closes #10074)  
Files: src/channel.c, src/dict.c, src/evalwindow.c, src/filepath.c, src/highlight.c, src/json.c, src/match.c, src/popupwin.c, src/proto/dict.pro, src/quickfix.c, src/search.c, src/sign.c, src/tag.c, src/terminal.c, src/testing.c, src/textprop.c, src/time.c

#### Patch 8.2.4684

Problem: Cannot open a channel on a Unix domain socket.  
Solution: Add Unix domain socket support. (closes #10062)  
Files: runtime/doc/channel.txt, src/channel.c, src/testdir/check.vim, src/testdir/shared.vim, src/testdir/test\_channel.py, src/testdir/test\_channel.vim, src/testdir/test\_channel\_unix.py, src/testdir/test\_cmdline.vim

#### Patch 8.2.4685

Problem: When a swap file is found for a popup there is no dialog and the buffer is loaded anyway.  
Solution: Silently load the buffer read-only. (closes #10073)  
Files: runtime/doc/popup.txt, src/memline.c, src/popupwin.c, src/vim.h, src/buffer.c, src/testdir/test\_popupwin.vim

#### Patch 8.2.4686

Problem: Configure doesn't find the Motif library with Cygwin.  
Solution: Check for libXm.dll.a. (Kelvin Lee, closes #10077)  
Files: src/configure.ac, src/auto/configure

#### Patch 8.2.4687

Problem: "vimgrep /%v/ \*" may cause a crash.

Solution: When compiling the pattern with the old engine fails, restore the regprog of the new engine instead of leaving it NULL.  
(closes #10079)

Files: src/regexp.c

#### Patch 8.2.4688

Problem: New regexp engine does not give an error for "%v".

Solution: Check for a value argument. (issue #10079)

Files: src/regexp\_nfa.c, src/errors.h, src/regexp\_bt.c,  
src/testdir/test\_regexp\_latin.vim

#### Patch 8.2.4689

Problem: Using <Cmd> in a mapping does not work for mouse keys in Insert mode. (Sergey Vlasov)

Solution: When reading the <Cmd> argument do not use the stuff buffer.  
(closes #10080)

Files: src/getchar.c

#### Patch 8.2.4690

Problem: Channel tests fail on MS-Windows.

Solution: Check if the AF\_UNIX attribute exists. (closes #10083)

Files: src/testdir/test\_channel.py, src/testdir/test\_channel\_unix.py

#### Patch 8.2.4691 (after 8.2.4689)

Problem: Solution for <Cmd> in a mapping causes trouble.

Solution: Use another solution: put back **CTRL-O** after reading the <Cmd> sequence.

Files: src/getchar.c

#### Patch 8.2.4692

Problem: No test for what 8.2.4691 fixes.

Solution: Add a test. Use a more generic solution. (closes #10090)

Files: src/getchar.c, src/mouse.c, src/testdir/test\_mapping.vim

#### Patch 8.2.4693 (after 8.2.4688)

Problem: new regexp does not accept pattern "%>0v".

Solution: Do accept digit zero.

Files: src/regexp\_bt.c, src/regexp\_nfa.c,  
src/testdir/test\_regexp\_latin.vim

#### Patch 8.2.4694

Problem: Avoidance of #elif causes more preproc nesting.

Solution: Use #elif where it is useful. (Ozaki Kiichi, closes #10081)

Files: src/option.c, src/optiondefs.h, src/optionstr.c, src/version.c

#### Patch 8.2.4695

Problem: JSON encoding could be faster.

Solution: Optimize encoding JSON strings. (closes #10086)

Files: src/json.c, src/testdir/test\_json.vim

#### Patch 8.2.4696

Problem: delete() with "rf" argument does not report a failure.

Solution: Return -1 if the directory could not be removed. (closes #10078)

Files: src/fileio.c, src/testdir/test\_functions.vim

Patch 8.2.4697

Problem: Vim9: crash when adding a duplicate key to a dictionary.  
Solution: Clear the stack item when it has been moved into the dictionary.  
(closes #10087)  
Files: src/vim9execute.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4698

Problem: Vim9: script variable has no flag that it was set.  
Solution: Add a flag that it was set, to avoid giving it a value when used.  
(closes #10088)  
Files: src/structs.h, src/vim9script.c, src/vim9execute.c,  
src/evalvars.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4699

Problem: Hard to reproduce hang when reading from a channel.  
Solution: Check for readahead before starting to wait. (closes #10093,  
closes #7781, closes #6364)  
Files: src/channel.c

Patch 8.2.4700

Problem: Buffer remains active if a WinClosed event throws an exception.  
Solution: Ignore aborting() when closing the buffer. (closes #10097)  
Files: src/window.c, src/testdir/test\_autocmd.vim

Patch 8.2.4701

Problem: Kuka Robot Language files not recognized.  
Solution: Recognize \*.src and \*.dat files. (Patrick Meiser-Knosowski,  
closes #10096)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim,  
runtime/autoload/dist/ft.vim

Patch 8.2.4702

Problem: C++ scope labels are hard-coded.  
Solution: Add '**cinscopedcls**' to define the labels. (Rom Praschan,  
closes #10109)  
Files: runtime/doc/indent.txt, runtime/doc/options.txt,  
runtime/doc/quickref.txt, runtime/optwin.vim, src/buffer.c,  
src/cindent.c, src/option.c, src/option.h, src/optiondefs.h,  
src/optionstr.c, src/structs.h, src/testdir/test\_cindent.vim

Patch 8.2.4703 (after 8.2.4702)

Problem: Memory leak in handling '**cinscopedcls**'.  
Solution: Free the memory before returning.  
Files: src/cindent.c

Patch 8.2.4704

Problem: Using "else" after return or break increases indent.  
Solution: Remove "else" and reduce indent. (Goc Dundar, closes #10099)  
Files: src/fileio.c, src/memline.c, src/option.c, src/syntax.c

Patch 8.2.4705

Problem: reg\_executing may not be cleared.

Solution: Reset `reg_executing` later. (closes #10111, closes #10110)  
Files: `src/ex_docmd.c`, `src/getchar.c`, `src/globals.h`, `src/structs.h`,  
`src/testdir/test_registers.vim`

#### Patch 8.2.4706

Problem: Buffer remains active if a `WinClosed` event throws an exception when there are multiple tabpages.

Solution: Ignore `aborting()` when closing the buffer. (closes #10101)  
Files: `src/window.c`, `src/testdir/test_autocmd.vim`

#### Patch 8.2.4707

Problem: Redrawing could be a bit more efficient.

Solution: Optimize redrawing. (closes #10105)  
Files: `src/change.c`, `src/edit.c`, `src/testdir/test_highlight.vim`,  
`src/testdir/dumps/Test_cursorcolumn_insert_on_tab_3.dump`

#### Patch 8.2.4708

Problem: PHP test files are not recognized.

Solution: Add the `*.phpt` pattern. (Julien Voisin, closes #10112)  
Files: `runtime/filetype.vim`, `src/testdir/test_filetype.vim`

#### Patch 8.2.4709

Problem: After `:redraw` the statusline highlight might be used.

Solution: Clear the screen attribute after redrawing the screen.  
(closes #10108)

Files: `src/ex_docmd.c`

#### Patch 8.2.4710

Problem: Smart indenting does not work after completion.

Solution: Set `"can_si"`. (Christian Brabandt, closes #10113, closes #558)  
Files: `src/edit.c`, `src/testdir/test_ins_complete.vim`

#### Patch 8.2.4711

Problem: When `'insertmode'` is set `:edit` from `<Cmd>` mapping misbehaves.

Solution: Don't set `"need_start_insertmode"` when already in Insert mode.  
(closes #10116)

Files: `src/ex_cmds.c`, `src/testdir/test_edit.vim`

#### Patch 8.2.4712

Problem: Only get profiling information after exiting.

Solution: Add `"profile dump"` and `"profile stop"`. (Marco Hinz, Yegappan Lakshmanan, closes #10107)

Files: `runtime/doc/repeat.txt`, `src/profiler.c`,  
`src/testdir/test_profile.vim`

#### Patch 8.2.4713

Problem: Plugins cannot track text scrolling.

Solution: Add the `WinScrolled` event. (closes #10102)

Files: `runtime/doc/autocmd.txt`, `src/autocmd.c`, `src/proto/autocmd.pro`,  
`src/edit.c`, `src/gui.c`, `src/main.c`, `src/structs.h`, `src/vim.h`,  
`src/window.c`, `src/proto/window.pro`, `src/testdir/test_autocmd.vim`

#### Patch 8.2.4714

Problem: Using `g:filetype_dat` and `g:filetype_src` not tested.

Solution: Add a test. (Patrick Meiser-Knosowski, closes #10117)  
Files: src/testdir/test\_filetype.vim

#### Patch 8.2.4715

Problem: Vagrantfile not recognized.  
Solution: Recognize Vagrantfile as ruby. (Julien Voisin, closes #10119)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.4716

Problem: Memory allocation failure not tested when defining a function.  
Solution: Add a test. (Yegappan Lakshmanan, closes #10127)  
Files: src/alloc.c, src/alloc.h, src/proto/alloc.pro, src/userfunc.c, src/testdir/test\_user\_func.vim, src/testdir/test\_vim9\_func.vim

#### Patch 8.2.4717

Problem: For TextYankPost v:event does not contain information about the operation being inclusive or not.  
Solution: Add "inclusive" to v:event. (Justin M. Keyes, Yegappan Lakshmanan, closes #10125)  
Files: runtime/doc/autocmd.txt, src/register.c, src/testdir/test\_autocmd.vim

#### Patch 8.2.4718

Problem: @@@ in the last line sometimes drawn in the wrong place.  
Solution: Make sure the column is valid. (closes #10130)  
Files: src/drawscreen.c, src/screen.c, src/testdir/test\_display.vim, src/testdir/dumps/Test\_display\_lastline\_1.dump, src/testdir/dumps/Test\_display\_lastline\_2.dump, src/testdir/dumps/Test\_display\_lastline\_3.dump, src/testdir/dumps/Test\_display\_lastline\_4.dump

#### Patch 8.2.4719

Problem: ">" marker sometimes not displayed in the jumplist.  
Solution: If the buffer no longer exists show "-invalid-". (Christian Brabandt, closes #10131, closes #10100)  
Files: runtime/doc/motion.txt, src/mark.c, src/testdir/Make\_all.mak, src/testdir/test\_alot.vim, src/testdir/test\_jumplist.vim, src/testdir/test\_jumps.vim

#### Patch 8.2.4720

Problem: ABB Rapid files are not recognized properly.  
Solution: Add checks for ABB Rapid files. (Patrick Meiser-Knosowski, closes #10104)  
Files: runtime/autoload/dist/ft.vim, runtime/doc/filetype.txt, runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.4721

Problem: Cooklang files are not recognized.  
Solution: recognize \*.cook files. (Goc Dundar, closes #10120)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

#### Patch 8.2.4722

Problem: When a recording is ended with a mapped key that key is also recorded.

Solution: Remember the previous `last_recorded_len`. (closes #10122)  
Files: `src/getchar.c`, `src/testdir/test_registers.vim`

#### Patch 8.2.4723

Problem: The `ModeChanged` autocmd event is inefficient.  
Solution: Avoid allocating memory. (closes #10134) Rename `trigger_modechanged()` to `may_trigger_modechanged()`.  
Files: `src/misc1.c`, `src/proto/misc1.pro`, `src/edit.c`, `src/ex_docmd.c`, `src/ex_getln.c`, `src/insexpand.c`, `src/normal.c`, `src/terminal.c`, `src/autocmd.c`

#### Patch 8.2.4724

Problem: Current instance of last search pattern not easily spotted.  
Solution: Add `CurSearch` highlighting. (closes #10133)  
Files: `runtime/doc/options.txt`, `runtime/doc/syntax.txt`, `src/highlight.c`, `src/match.c`, `src/normal.c`, `src/optiondefs.h`, `src/structs.h`, `src/vim.h`, `src/normal.c`, `src/testdir/test_search.vim`, `src/testdir/dumps/Test_hlsearch_cursearch_multiple_line.dump`, `src/testdir/dumps/Test_hlsearch_cursearch_single_line_1.dump`, `src/testdir/dumps/Test_hlsearch_cursearch_single_line_2.dump`, `src/testdir/dumps/Test_hlsearch_cursearch_single_line_3.dump`

#### Patch 8.2.4725 (after 8.2.4724)

Problem: Unused variable in tiny build.  
Solution: Add `#ifdef`.  
Files: `src/normal.c`

#### Patch 8.2.4726

Problem: Cannot use `expand()` to get the script name.  
Solution: Support `expand('<script>')`. (closes #10121)  
Files: `runtime/doc/cmdline.txt`, `src/errors.h`, `src/ex_docmd.c`, `src/scriptfile.c`, `src/vim.h`, `src/testdir/test_expand.vim`

#### Patch 8.2.4727

Problem: Unused code.  
Solution: Remove code and add `#ifdefs`. (Dominique Pellé, closes #10136)  
Files: `runtime/doc/editing.txt`, `runtime/doc/eval.txt`, `runtime/doc/vim9.txt`, `src/errors.h`, `src/option.c`, `src/search.c`, `src/proto/search.pro`

#### Patch 8.2.4728

Problem: No test that `v:event` cannot be modified.  
Solution: Add a test. (closes #10139)  
Files: `src/testdir/test_autocmd.vim`

#### Patch 8.2.4729

Problem: `HEEx` and `Surface` templates do not need a separate filetype.  
Solution: Use `Elixir` for the similar filetypes. (Aaron Tinio, closes #10124)  
Files: `runtime/filetype.vim`, `src/testdir/test_filetype.vim`

#### Patch 8.2.4730

Problem: MS-Windows GUI: cannot use `CTRL-/`.  
Solution: Handle the `WM_KEYUP` event. (Yasuhiro Matsumoto, closes #10141)  
Files: `src/gui_w32.c`

Patch 8.2.4731

Problem: The changelist index is not remembered per buffer.  
Solution: Keep the changelist index per window and buffer. (closes #10135, closes #2173)  
Files: src/buffer.c, src/evalfunc.c, src/structs.h, src/testdir/test\_changelist.vim

Patch 8.2.4732

Problem: Duplicate code to free fuzzy matches.  
Solution: Bring back fuzmatch\_str\_free().  
Files: src/search.c, src/proto/search.pro, src/cmdexpand.c

Patch 8.2.4733 (after 8.2.4729)

Problem: HEEEx and Surface do need a separate filetype.  
Solution: Revert 8.2.4729. (closes #10147)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4734

Problem: getcharpos() may change a mark position.  
Solution: Copy the mark position. (closes #10148)  
Files: src/eval.c, src/testdir/test\_cursor\_func.vim

Patch 8.2.4735

Problem: Quickfix tests can be a bit hard to read.  
Solution: Use heredoc instead of strings and line continuation. (Yegappan Lakshmanan, closes #10145)  
Files: src/testdir/test\_quickfix.vim

Patch 8.2.4736

Problem: Build problem for Cygwin with Motif.  
Solution: Undefine ControlMask. (Kelvin Lee, closes #10152)  
Files: src/mbyte.c

Patch 8.2.4737

Problem: // in JavaScript string recognized as comment.  
Solution: Only check for linecomment if 'cindent' is set. (closes #10151)  
Files: src/change.c, src/testdir/test\_textformat.vim

Patch 8.2.4738

Problem: Esc on commandline executes command instead of abandoning it.  
Solution: Save and restore KeyTyped when removing the popup menu. (closes #10154)  
Files: src/cmdexpand.c, src/testdir/test\_cmdline.vim, src/testdir/dumps/Test\_wildmenu\_with\_pum\_foldexpr\_1.dump, src/testdir/dumps/Test\_wildmenu\_with\_pum\_foldexpr\_2.dump

Patch 8.2.4739

Problem: Accessing freed memory after WinScrolled autocmd event.  
Solution: Check the window pointer is still valid. (closes #10156)  
Remove the argument from may\_trigger\_winscrolled().  
Files: src/window.c, src/proto/window.pro, src/edit.c, src/gui.c, src/main.c, src/testdir/test\_autocmd.vim

Patch 8.2.4740

Problem: When expand() fails there is no error message.  
Solution: When **'verbose'** is set give an error message.  
Files: runtime/doc/builtin.txt, src/evalfunc.c,  
src/testdir/test\_expand.vim

Patch 8.2.4741 (after 8.2.4740)

Problem: Startup test fails.  
Solution: Avoid an error for verbose expansion. Fix that the "@verbose"  
command modifier doesn't work.  
Files: runtime/syntax/syntax.vim, runtime/syntax/synload.vim,  
src/structs.h, src/ex\_docmd.c, src/testdir/test\_excmd.vim

Patch 8.2.4742

Problem: There is no way to start logging very early in startup.  
Solution: Add the --log argument. Include the date in the start message in  
the log file. Avoid a duplicate message when forking. Log an  
executed shell command.  
Files: runtime/doc/starting.txt, runtime/doc/channel.txt,  
src/main.c, src/channel.c, src/os\_unix.c, src/os\_win32.c,  
src/testdir/test\_startup.vim

Patch 8.2.4743

Problem: Clang 14 is available on CI.  
Solution: Switch from clang 13 to 14. (closes #10157)  
Files: .github/workflows/ci.yml

Patch 8.2.4744

Problem: A terminal window can't use the bell.  
Solution: Add bell support for the terminal window. (closes #10178)  
Files: runtime/doc/options.txt, src/gui\_w32.c, src/option.h,  
src/optionstr.c, src/terminal.c

Patch 8.2.4745 (after 8.2.4744)

Problem: Using wrong flag for using bell in the terminal.  
Solution: Change to use BO\_TERM.  
Files: src/terminal.c, src/misc1.c

Patch 8.2.4746

Problem: Supercollider filetype not recognized.  
Solution: Match file extensions and check file contents to detect  
supercollider. (closes #10142)  
Files: runtime/filetype.vim, runtime/autoload/dist/ft.vim,  
src/testdir/test\_filetype.vim

Patch 8.2.4747

Problem: No filetype override for .sys files.  
Solution: Add g:filetype\_sys. (Patrick Meiser-Knosowski, closes #10181)  
Files: runtime/doc/filetype.txt, runtime/autoload/dist/ft.vim,  
src/testdir/test\_filetype.vim

Patch 8.2.4748

Problem: Cannot use an imported function in a mapping.  
Solution: Recognize <SID>name.Func.

Files: runtime/doc/vim9.txt, src/term.c, src/vim9execute.c,  
src/proto/vim9execute.pro, src/scriptfile.c,  
src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4749

Problem: `<script>` is not expanded in autocmd context.

Solution: Add the context to the pattern struct. (closes #10144)  
Rename AutoPatCmd to AutoPatCmd\_T.

Files: src/autocmd.c, src/proto/autocmd.pro, src/scriptfile.c,  
src/structs.h, src/testdir/test\_expand.vim

#### Patch 8.2.4750

Problem: Small pieces of dead code.

Solution: Remove the dead code. (Goc Dundar, closes #10190) Rename the  
qftf\_cb struct member to avoid confusion.

Files: src/ex\_cmds.c, src/misc1.c, src/optionstr.c, src/quickfix.c

#### Patch 8.2.4751 (after 8.2.4748)

Problem: Mapping `<SID>name.Func` does not work for script in autoloader  
directory.

Solution: Use the # form for a script in the autoloader directory.  
(closes #10186)

Files: src/term.c, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4752

Problem: Wrong `'statusline'` value can cause illegal memory access.

Solution: Properly check the value. (closes #10192)

Files: src/optionstr.c, src/testdir/test\_options.vim

#### Patch 8.2.4753

Problem: Error from setting an option is silently ignored.

Solution: Handle option value errors better. Fix uses of N\_().

Files: src/option.c, src/proto/option.pro, src/optionstr.c,  
src/channel.c, src/crypt.c, src/diff.c, src/edit.c,  
src/eval.c, src/evalfunc.c, src/evalvars.c, src/ex\_cmds2.c,  
src/ex\_docmd.c, src/ex\_getln.c, src/getchar.c, src/gui.c,  
src/gui\_gtk\_x11.c, src/help.c, src/highlight.c, src/if\_tcl.c,  
src/main.c, src/memline.c, src/message\_test.c,  
src/popupmenu.c, src/quickfix.c, src/scriptfile.c, src/spell.c,  
src/spellfile.c, src/term.c, src/undo.c, src/vim9script.c

#### Patch 8.2.4754

Problem: Still using cached values after unsetting some known environment  
variables.

Solution: Take care of the side effects. (closes #10194)

Files: src/evalfunc.c, src/evalvars.c, src/misc1.c, src/proto/misc1.pro,  
src/vim9execute.c, src/optionstr.c, src/testdir/test\_envir.vim

#### Patch 8.2.4755

Problem: Cannot use `<SID>FuncRef` in completion spec.

Solution: Dereference a function name in another way. (closes #10197)

Files: src/eval.c, src/testdir/test\_vim9\_import.vim

#### Patch 8.2.4756 (after 8.2.4754)

Problem: Build error without the +eval feature.  
Solution: Adjust #ifdefs.  
Files: src/misc1.c

#### Patch 8.2.4757

Problem: List of libraries to suppress lsan errors is outdated.  
Solution: Add another library. (closes #10201)  
Files: src/testdir/lsan-suppress.txt

#### Patch 8.2.4758

Problem: When using an LSP channel want to get the message ID.  
Solution: Have ch\_sendexpr() return the ID. (Yegappan Lakshmanan, closes #10202)  
Files: runtime/doc/channel.txt, src/channel.c, src/evalfunc.c, src/testdir/test\_channel.vim

#### Patch 8.2.4759

Problem: CurSearch highlight does not work for multi-line match.  
Solution: Check cursor position before adjusting columns. (closes #10133)  
Files: src/structs.h, src/match.c, src/testdir/test\_search.vim, src/testdir/dumps/Test\_hlsearch\_cursearch\_multiple\_line.dump, src/testdir/dumps/Test\_hlsearch\_cursearch\_multiple\_line\_1.dump, src/testdir/dumps/Test\_hlsearch\_cursearch\_multiple\_line\_2.dump, src/testdir/dumps/Test\_hlsearch\_cursearch\_multiple\_line\_3.dump, src/testdir/dumps/Test\_hlsearch\_cursearch\_multiple\_line\_4.dump, src/testdir/dumps/Test\_hlsearch\_cursearch\_multiple\_line\_5.dump

#### Patch 8.2.4760

Problem: Using matchfuzzy() on a long list can take a while.  
Solution: Add a limit to the number of matches. (Yasuhiro Matsumoto, closes #10189)  
Files: runtime/doc/builtin.txt, src/search.c, src/testdir/test\_matchfuzzy.vim

#### Patch 8.2.4761

Problem: Documentation for using LSP messages is incomplete.  
Solution: Update the documentation. (Yegappan Lakshmanan, closes #10206)  
Files: runtime/doc/channel.txt

#### Patch 8.2.4762

Problem: Using freed memory when using synstack() and synID() in WinEnter.  
Solution: Check using the syntax window. (closes #10204)  
Files: src/syntax.c, src/testdir/test\_syntax.vim

#### Patch 8.2.4763

Problem: Using invalid pointer with "V:" in Ex mode.  
Solution: Correctly handle the command being changed to "+".  
Files: src/ex\_docmd.c, src/testdir/test\_ex\_mode.vim

#### Patch 8.2.4764

Problem: CI uses an older gcc version.  
Solution: Use GCC 11. (closes #10185)  
Files: .github/workflows/ci.yml, src/testdir/lsan-suppress.txt

Patch 8.2.4765

Problem: Function matchfuzzy() sorts too many items.  
Solution: Only put matches in the array. (Yegappan Lakshmanan, closes #10208)  
Files: src/search.c

Patch 8.2.4766

Problem: KRL files using "deffct" not recognized.  
Solution: Adjust the pattern used for matching. (Patrick Meiser-Knosowski, closes #10200)  
Files: runtime/autoload/dist/ft.vim, src/testdir/test\_filetype.vim

Patch 8.2.4767

Problem: Openscad files are not recognized.  
Solution: Add a filetype pattern. (Niklas Adam, closes #10199)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4768

Problem: CI: codecov upload sometimes does not work.  
Solution: Use action v3 instead of v2. (closes #10209)  
Files: .github/workflows/ci.yml

Patch 8.2.4769

Problem: Build warning with UCRT.  
Solution: Adjust #ifdef for \_wenviron. (John Marriott)  
Files: src/evalfunc.c

Patch 8.2.4770

Problem: Cannot easily mix expression and heredoc.  
Solution: Support `=expr` in heredoc. (Yegappan Lakshmanan, closes #10138)  
Files: runtime/doc/eval.txt, src/evalvars.c, src/userfunc.c, src/testdir/test\_let.vim, src/testdir/test\_vim9\_assign.vim

Patch 8.2.4771

Problem: Coverity warns for not checking return value.  
Solution: Check return value of rettv\_dict\_alloc().  
Files: src/channel.c

Patch 8.2.4772

Problem: Old Coverity warning for not checking ftell() return value.  
Solution: Check return value of fseek() and ftell().  
Files: src/misc1.c

Patch 8.2.4773

Problem: Build failure without the +eval feature.  
Solution: Use other error message. Avoid warnings.  
Files: src/misc1.c, src/cindent.c, src/term.c

Patch 8.2.4774

Problem: Crash when using a number for lambda name.  
Solution: Check the type of the lambda reference.  
Files: src/eval.c, src/errors.h, src/testdir/test\_lambda.vim

Patch 8.2.4775

Problem: SpellBad highlighting does not work in Konsole.  
Solution: Do not keep t\_8u defined for Konsole. Redraw when t\_8u is reset.  
(closes #10177)  
Files: src/term.c

Patch 8.2.4776

Problem: GTK: 'lines' and 'columns' may change during startup.  
Solution: Ignore stale GTK resize events. (Ernie Rael, closes #10179)  
Files: src/gui\_gtk\_x11.c

Patch 8.2.4777 (after 8.2.4775)

Problem: Screendump tests fail because of a redraw.  
Solution: Do not output t\_8u before receiving termresponse. Redraw only  
when t\_8u is not reset and termresponse is received.  
Files: src/term.c

Patch 8.2.4778

Problem: Pacman files use dosini filetype.  
Solution: Use conf instead. (Chaoren Lin, closes #10213)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4779

Problem: lsan suppression is too version specific.  
Solution: Leave out the version number. (Christian Brabandt, closes #10214)  
Files: src/testdir/lsan-suppress.txt

Patch 8.2.4780

Problem: Parsing an LSP message fails when it is split.  
Solution: Collapse the received data before parsing. (Yegappan Lakshmanan,  
closes #10215)  
Files: runtime/doc/channel.txt, src/channel.c,  
src/testdir/test\_channel.vim, src/testdir/test\_channel\_lsp.py

Patch 8.2.4781

Problem: Maxima files are not recognized.  
Solution: Add patterns to detect Maxima files. (Doron Behar, closes #10211)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4782

Problem: Accessing freed memory.  
Solution: Clear evalarg after checking for trailing characters.  
(issue #10218)  
Files: src/userfunc.c, src/testdir/test\_lambda.vim

Patch 8.2.4783

Problem: Coverity warns for leaking memory.  
Solution: Use another strategy freeing "theline".  
Files: src/evalvars.c

Patch 8.2.4784

Problem: Lamba test with timer is flaky.  
Solution: Adjust sleep time on retry.  
Files: src/testdir/test\_lambda.vim

Patch 8.2.4785

Problem: Visual mode not stopped early enough if win\_gotoid() goes to another buffer. (Sergey Vlasov)  
Solution: Stop Visual mode before jumping to another buffer. (closes #10217)  
Files: src/evalwindow.c, src/testdir/test\_vim9\_builtin.vim,  
src/testdir/dumps/Test\_win\_gotoid\_1.dump,  
src/testdir/dumps/Test\_win\_gotoid\_2.dump,  
src/testdir/dumps/Test\_win\_gotoid\_3.dump

Patch 8.2.4786 (after 8.2.4785)

Problem: Test for win\_gotoid() in Visual mode fails on Mac.  
Solution: Skip the test on MacOS.  
Files: src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4787

Problem: prop\_find() does not find the right property.  
Solution: Fix the scan order. (closes #10220)  
Files: src/textprop.c, src/testdir/test\_textprop.vim

Patch 8.2.4788

Problem: Large payload for LSP message not tested.  
Solution: Add a test with a large LSP payload. (Yegappan Lakshmanan, closes #10223)  
Files: src/channel.c, src/testdir/test\_channel.vim,  
src/testdir/test\_channel\_lsp.py

Patch 8.2.4789

Problem: The cursor may be in the in wrong place when using :redraw while editing the cmdline.  
Solution: When editing the command line let :redraw update the command line too. (closes #10210)  
Files: src/ex\_docmd.c, src/testdir/test\_cmdline.vim,  
src/testdir/dumps/Test\_redraw\_in\_autocmd\_1.dump,  
src/testdir/dumps/Test\_redraw\_in\_autocmd\_2.dump

Patch 8.2.4790

Problem: Lilypond filetype not recognized.  
Solution: Add patterns for lilypond. (Doug Kearns)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4791

Problem: Autocmd events triggered in different order when reusing an empty buffer.  
Solution: Call buff\_freeall() earlier. (Charlie Groves, closes #10198)  
Files: src/buffer.c, src/testdir/test\_autocmd.vim

Patch 8.2.4792

Problem: Indent operator creates an undo entry for every line.  
Solution: Create one undo entry for all lines. (closes #10227)  
Files: src/indent.c, src/testdir/test\_indent.vim

Patch 8.2.4793

Problem: Recognizing Maxima filetype even though it might be another.  
Solution: Remove \*.mc and \*.dem patterns from Maxima files

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4794

Problem: Compiler warning for not initialized variable.  
Solution: Initialize the variable. (John Marriott)  
Files: src/indent.c

Patch 8.2.4795

Problem: **'cursorbind'** scrolling depends on whether **'cursorline'** is set.  
Solution: Always call validate\_cursor(). (Christian Brabandt, closes #10230, closes #10014)  
Files: src/move.c, src/testdir/README.txt,  
src/testdir/test\_cursorline.vim,  
src/testdir/dumps/Test\_hor\_scroll\_1.dump,  
src/testdir/dumps/Test\_hor\_scroll\_2.dump,  
src/testdir/dumps/Test\_hor\_scroll\_3.dump,  
src/testdir/dumps/Test\_hor\_scroll\_4.dump

Patch 8.2.4796 (after 8.2.4795)

Problem: File left behind after running cursorline tests.  
Solution: Uncomment the line that deletes the file.  
Files: src/testdir/test\_cursorline.vim

Patch 8.2.4797

Problem: getwininfo() may get outdated values.  
Solution: Make sure w\_botline is up-to-date. (closes #10226)  
Files: src/evalwindow.c, src/testdir/test\_bufwintabinfo.vim

Patch 8.2.4798

Problem: t\_8u option was reset even when set by the user.  
Solution: Only reset t\_8u when using the default value. (closes #10239)  
Files: src/term.c

Patch 8.2.4799

Problem: Popup does not use correct topline.  
Solution: Also add one when firstline is negative. (closes #10229)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim

Patch 8.2.4800 (after 8.2.4798)

Problem: Missing test update for adjusted t\_8u behavior.  
Solution: Update and extend the test.  
Files: src/testdir/test\_termcodes.vim

Patch 8.2.4801 (after 8.2.4795)

Problem: Fix for cursorbind fix not fully tested.  
Solution: Add another test case. (Christian Brabandt, closes #10240)  
Files: src/testdir/test\_cursorline.vim,  
src/testdir/dumps/Test\_hor\_scroll\_5.dump

Patch 8.2.4802

Problem: Test is not cleaned up.  
Solution: Make test clean up after itself. Avoid NUL. (closes #10233)  
Files: src/testdir/test\_autocmd.vim

Patch 8.2.4803

Problem: WinScrolled not always triggered when scrolling with the mouse.  
Solution: Add calls to may\_trigger\_winscrolled(). (closes #10246)  
Files: src/mouse.c, src/testdir/test\_autocmd.vim

Patch 8.2.4804

Problem: Expression in heredoc doesn't work for compiled function.  
Solution: Implement compiling the heredoc expressions. (Yegappan Lakshmanan, closes #10232)  
Files: runtime/doc/eval.txt, src/evalvars.c, src/proto/evalvars.pro, src/ex\_getln.c, src/vim9compile.c, src/proto/vim9compile.pro, src/testdir/test\_vim9\_assign.vim

Patch 8.2.4805

Problem: CurSearch used for all matches in current line.  
Solution: Don't use the non-zero line count. (closes #10247)  
Files: src/match.c, src/testdir/test\_search.vim, src/testdir/dumps/Test\_hlsearch\_cursearch\_single\_line\_1.dump, src/testdir/dumps/Test\_hlsearch\_cursearch\_single\_line\_2.dump, src/testdir/dumps/Test\_hlsearch\_cursearch\_single\_line\_2a.dump, src/testdir/dumps/Test\_hlsearch\_cursearch\_single\_line\_2b.dump

Patch 8.2.4806

Problem: A mapping using <LeftDrag> does not start Select mode.  
Solution: When checking for starting select mode with the mouse also do this when there is typeahead. (closes #10249)  
Files: src/normal.c

Patch 8.2.4807

Problem: Processing key events in Win32 GUI is not ideal.  
Solution: Improve processing of key events. (closes #10155)  
Files: src/gui\_w32.c

Patch 8.2.4808

Problem: Unused item in engine struct.  
Solution: Remove "expr". Add comment with tags.  
Files: src/regexp.h

Patch 8.2.4809

Problem: Various things not properly tested.  
Solution: Add various test cases. (Yegappan Lakshmanan, closes #10259)  
Files: src/testdir/test\_blob.vim, src/testdir/test\_debugger.vim, src/testdir/test\_listdict.vim, src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_import.vim, src/testdir/test\_vim9\_script.vim

Patch 8.2.4810 (after 8.2.4808)

Problem: Missing changes in one file.  
Solution: Also change the struct initializers.  
Files: src/regexp.c

Patch 8.2.4811 (after 8.2.4807)

Problem: Win32 GUI: caps lock doesn't work.  
Solution: Handle VK\_CAPITAL. (closes #10260, closes #10258)  
Files: src/gui\_w32.c

Patch 8.2.4812

Problem: Unused struct item.  
Solution: Remove "lines" match\_T. Simplify the code. (closes #10256)  
Files: src/match.c, src/structs.h

Patch 8.2.4813

Problem: Pasting text while indent folding may mess up folds.  
Solution: Adjust the way folds are split. (Brandon Simmons, closes #10254)  
Files: src/fold.c, src/testdir/test\_fold.vim

Patch 8.2.4814

Problem: Possible to leave a popup window with win\_gotoid().  
Solution: Give an error when trying to leave a popup window with win\_gotoid(). (closes #10253)  
Files: src/evalwindow.c, src/testdir/test\_terminal3.vim

Patch 8.2.4815 (after 8.2.4776)

Problem: Cannot build with older GTK version.  
Solution: Use gtk\_window\_get\_size() instead of gdk\_window\_get\_width() and gdk\_window\_get\_height(). (Ernie Rael, closes #10257)  
Files: src/gui\_gtk\_x11.c

Patch 8.2.4816

Problem: Still using older codecov app in some places of CI.  
Solution: Use v3.1.0. (closes #10209)  
Files: .github/workflows/ci.yml

Patch 8.2.4817

Problem: Win32 GUI: modifiers are not always used.  
Solution: Handle more modifiers. (closes #10269)  
Files: src/gui\_w32.c

Patch 8.2.4818 (after 8.2.4806)

Problem: No test for what 8.2.4806 fixes.  
Solution: Add a test. (closes #10272)  
Files: src/testdir/test\_mapping.vim

Patch 8.2.4819

Problem: Unmapping simplified keys also deletes other mapping.  
Solution: Only unmap a mapping with m\_simplified set. (closes #10270)  
Files: src/map.c, src/testdir/test\_mapping.vim

Patch 8.2.4820

Problem: No simple programmatic way to find a specific mapping.  
Solution: Add getmappings(). (Ernie Rael, closes #10273)  
Files: runtime/doc/builtin.txt, runtime/doc/usr\_41.txt, src/evalfunc.c, src/map.c, src/proto/map.pro, src/testdir/test\_maparg.vim

Patch 8.2.4821

Problem: Crash when imported autoload script was deleted.  
Solution: Initialize local variable. (closes #10274) Give a more meaningful error message.  
Files: src/eval.c, src/vim9script.c, src/testdir/test\_vim9\_import.vim

Patch 8.2.4822

Problem: Setting ufunc to NULL twice.  
Solution: Set ufunc to NULL in find\_exported(). (closes #19275)  
Files: src/eval.c, src/vim9script.c

Patch 8.2.4823

Problem: Concatenating more than 2 strings in a :def function is inefficient.  
Solution: Add a count to the CONCAT instruction. (closes #10276)  
Files: src/vim9.h, src/vim9cmds.c, src/vim9compile.c, src/vim9execute.c, src/vim9expr.c, src/vim9instr.c, src/proto/vim9instr.pro, src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.4824

Problem: Expression is evaluated multiple times.  
Solution: Evaluate expression once and store the result. (closes #10278)  
Files: src/map.c

Patch 8.2.4825

Problem: Can only get a list of mappings.  
Solution: Add the optional {abbr} argument. (Ernie Rael, closes #10277)  
Rename to maplist(). Rename test file.  
Files: runtime/doc/builtin.txt, runtime/doc/usr\_41.txt, src/evalfunc.c, src/map.c, src/proto/map.pro, src/testdir/test\_maparg.vim, src/testdir/test\_map\_functions.vim, src/testdir/Make\_all.mak

Patch 8.2.4826

Problem: .cshtml files are not recognized.  
Solution: Use html filetype for .cshtml files. (Julien Voisin, closes #10212)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4827

Problem: Typo in variable name. (Gabriel Dupras)  
Solution: Rename the variable.  
Files: src/map.c

Patch 8.2.4828

Problem: Fix for unmapping simplified key not fully tested.  
Solution: Add a test case. (closes #10292)  
Files: src/map.c, src/testdir/test\_mapping.vim

Patch 8.2.4829

Problem: A key may be simplified to NUL.  
Solution: Use K\_ZERO instead. Use macros instead of hard coded values. (closes #10290)  
Files: src/getchar.c, src/misc2.c, src/testdir/test\_termcodes.vim

Patch 8.2.4830

Problem: Possible endless loop if there is unused typeahead.  
Solution: Only loop when the typeahead changed.  
Files: src/channel.c

Patch 8.2.4831

Problem: Crash when using maparg() and unmapping simplified keys.  
Solution: Do not keep a mapblock pointer. (closes #10294)  
Files: src/map.c, src/testdir/test\_map\_functions.vim

#### Patch 8.2.4832

Problem: Passing zero instead of NULL to a pointer argument.  
Solution: Use NULL. (closes #10296)  
Files: src/getchar.c, src/term.c

#### Patch 8.2.4833

Problem: Failure of mapping not checked for.  
Solution: Check return value of ins\_typebuf(). (closes #10299)  
Files: src/getchar.c, src/term.c, src/testdir/test\_termcodes.vim

#### Patch 8.2.4834

Problem: Vim9: some lines not covered by tests.  
Solution: Add a few more tests. Remove dead code.  
Files: src/vim9execute.c, src/vim9instr.c, src/vim9.h,  
src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.4835

Problem: Vim9: some lines not covered by tests.  
Solution: Add a few more tests. Fix disassemble output.  
Files: src/vim9execute.c, src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.4836

Problem: Vim9: some lines not covered by tests.  
Solution: Remove dead code. Add disassemble tests.  
Files: src/vim9execute.c, src/vim9.h,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.4837 (after patch 8.2.0919)

Problem: Modifiers not simplified when timed out or using feedkeys() with 'n' flag.  
Solution: Adjust how mapped flag and timeout are used. (closes #10305)  
Files: src/getchar.c, src/testdir/test\_paste.vim,  
src/testdir/test\_termcodes.vim

#### Patch 8.2.4838

Problem: Checking for absolute path is not trivial.  
Solution: Add isabsolute\_path(). (closes #10303)  
Files: runtime/doc/builtin.txt, runtime/doc/usr\_41.txt, src/evalfunc.c,  
src/filepath.c, src/proto/filepath.pro,  
src/testdir/test\_functions.vim

#### Patch 8.2.4839

Problem: Compiler warning for unused argument.  
Solution: Add "UNUSED".  
Files: src/gui\_gtk\_x11.c

#### Patch 8.2.4840

Problem: Heredoc expression evaluated even when skipping.

Solution: Don't evaluate when "skip" is set. (closes #10306)  
Files: src/evalvars.c, src/testdir/test\_let.vim

#### Patch 8.2.4841

Problem: Empty string considered an error for expand() when 'verbose' is set. (Christian Brabandt)

Solution: Do not give an error for an empty result. (closes #10307)  
Files: src/evalfunc.c, src/ex\_docmd.c, src/proto/ex\_docmd.pro, src/filepath.c, src/testdir/test\_expand\_func.vim

#### Patch 8.2.4842 (after 8.2.4841)

Problem: expand("%:~") is not empty when there is no buffer name.

Solution: When ignoring errors still return NULL. (closes #10311)  
Files: src/ex\_docmd.c, src/testdir/test\_expand\_func.vim

#### Patch 8.2.4843 (after 8.2.4807)

Problem: Win32 GUI: Treating CTRL + ALT as AltGr is not backwards compatible. (Axel Bender)

Solution: Make a difference between left and right menu keys. (closes #10308)

Files: src/gui\_w32.c

#### Patch 8.2.4844

Problem: <C-S-I> is simplified to <S-Tab>.

Solution: Do not simplify CTRL if there is also SHIFT. (closes #10313)  
Files: src/getchar.c, src/testdir/test\_gui.vim

#### Patch 8.2.4845

Problem: Duplicate code.

Solution: Move code below if/else. (closes #10314)  
Files: src/misc1.c

#### Patch 8.2.4846 (after 8.2.4844)

Problem: Termcodes test fails.

Solution: use CTRL-SHIFT-V to insert an unsimplified key. (closes #10316)  
Files: runtime/doc/cmdline.txt, src/edit.c, src/getchar.c, src/testdir/test\_gui.vim

#### Patch 8.2.4847

Problem: Crash when using uninitialized function pointer.

Solution: Check for NULL pointer. (closes #10319, closes #10319)  
Files: src/eval.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4848

Problem: Local completion with mappings and simplification not working.

Solution: Fix local completion <C-N>/<C-P> mappings not ignored if keys are not simplified. (closes #10323)

Files: src/getchar.c, src/testdir/test\_popup.vim

#### Patch 8.2.4849

Problem: Gleam filetype not detected.

Solution: Add a pattern for Gleam files. (Mathias Jean Johansen, closes #10326)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4850

Problem: Mksession mixes up "tabpages" and "curdir" arguments.  
Solution: Correct logic for storing tabpage in session. (closes #10312)  
Files: src/session.c, src/testdir/test\_mksession.vim

Patch 8.2.4851

Problem: Compiler warning for uninitialized variable.  
Solution: Use another variable to decide to restore option values.  
Files: src/session.c

Patch 8.2.4852

Problem: ANSI color index to RGB value not correct.  
Solution: Convert the cterm index to ANSI index. (closes #10321, closes #9836)  
Files: src/term.c

Patch 8.2.4853

Problem: CI with FreeBSD is a bit outdated.  
Solution: Use 12.3 instead of 12.1. (closes #10333)  
Files: .cirrus.yml

Patch 8.2.4854

Problem: Array size does not match usage.  
Solution: Make array size 3 instead of 4. (Christian Brabandt, closes #10336)  
Files: src/term.c

Patch 8.2.4855

Problem: Robot files are not recognized.  
Solution: Add patterns for robot files. (Zoe Roux, closes #10339)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4856

Problem: MinGW compiler complains about unknown escape sequence.  
Solution: Avoid using a backslash in path. (Christian Brabandt, closes #10337)  
Files: .github/workflows/ci.yml

Patch 8.2.4857

Problem: Yaml indent for multiline is wrong.  
Solution: Adjust patterns. (closes #10328, closes #8740)  
Files: runtime/indent/yaml.vim, runtime/indent/testdir/yaml.in, runtime/indent/testdir/yaml.ok

Patch 8.2.4858

Problem: K\_SPECIAL may be escaped twice.  
Solution: Avoid double escaping. (closes #10340)  
Files: src/highlight.c, src/misc2.c, src/proto/misc2.pro, src/term.c, src/typval.c, src/testdir/test\_eval\_stuff.vim, src/testdir/test\_feedkeys.vim, src/testdir/test\_functions.vim, src/testdir/test\_mapping.vim

Patch 8.2.4859

Problem: wget2 files are not recognized.

Solution: Add patterns to recognize wget2. (Doug Kearns)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.4860

Problem: MS-Windows: always uses current directory for executables.  
Solution: Check the NoDefaultCurrentDirectoryInExePath environment variable.  
(Yasuhiro Matsumoto, closes #10341)  
Files: runtime/doc/builtin.txt, src/os\_win32.c,  
src/testdir/test\_functions.vim

Patch 8.2.4861

Problem: It is not easy to restore saved mappings.  
Solution: Make mapset() accept a dict argument. (Ernie Rael, closes #10295)  
Files: runtime/doc/builtin.txt, src/errors.h, src/evalfunc.c, src/map.c,  
src/typval.c, src/proto/typval.pro,  
src/testdir/test\_map\_functions.vim,  
src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4862

Problem: Vim9: test may fail when run with valgrind.  
Solution: Wait longer for callback if needed.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.4863

Problem: Accessing freed memory in test without the +channel feature.  
(Dominique Pellé)  
Solution: Do not generate PUSHCHANNEL or PUSHJOB if they are not  
implemented. (closes #10350)  
Files: src/vim9instr.c, src/errors.h, src/vim9compile.c,  
src/testdir/test\_vim9\_script.vim

Patch 8.2.4864 (after 8.2.4863)

Problem: Vim9: script test fails.  
Solution: Remove "if" around declaration.  
Files: src/testdir/test\_vim9\_script.vim

Patch 8.2.4865

Problem: :startinsert right after :stopinsert does not work when popup menu  
is still visible.  
Solution: Use ins\_compl\_active() instead of pum\_visible(). (closes #10352)  
Files: src/edit.c, src/testdir/test\_ins\_complete.vim

Patch 8.2.4866

Problem: Duplicate code in "get" functions.  
Solution: Use get\_var\_from() for getwinvar(), gettabvar(), gettabwinvar()  
and getbufvar(). (closes #10335)  
Files: src/evalvars.c

Patch 8.2.4867

Problem: Listing of mapping with K\_SPECIAL is wrong.  
Solution: Adjust escaping of special characters. (closes #10351)  
Files: src/map.c, src/message.c, src/testdir/test\_mapping.vim

Patch 8.2.4868

Problem: When closing help window autocmds triggered for the wrong window.  
Solution: Figure out the new current window earlier. (closes #10348)  
Files: src/window.c, src/testdir/test\_help.vim

#### Patch 8.2.4869

Problem: Expression in command block does not look after NL.  
Solution: Skip over NL to check what follows. (closes #10358)  
Files: src/eval.c, src/proto/eval.pro, src/vim9script.c,  
src/testdir/test\_usercommands.vim

#### Patch 8.2.4870

Problem: Vim9: expression in :substitute is not compiled.  
Solution: Use an INSTR instruction if possible. (closes #10334)  
Files: src/evalfunc.c, src/regexp.c, src/vim9execute.c, src/vim9expr.c,  
src/testdir/test\_vim9\_builtin.vim,  
src/testdir/test\_vim9\_disassemble.vim

#### Patch 8.2.4871

Problem: Vim9: in :def function no error for using a range with a command  
that does not accept one.  
Solution: Check for the command to accept a range. (closes #10330)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4872

Problem: Vim9: no error for using an expression only at the script level  
when followed by an empty line.  
Solution: Do not check the line number but whether something follows.  
(closes #10357)  
Files: src/ex\_eval.c, src/testdir/test\_vim9\_cmd.vim

#### Patch 8.2.4873

Problem: Vim9: using "else" differs from using "endif/if !cond".  
Solution: Leave the block and enter another one. (closes #10320)  
Files: src/ex\_eval.c, src/testdir/test\_vim9\_script.vim

#### Patch 8.2.4874

Problem: Win32 GUI: horizontal scroll wheel not handled properly.  
Solution: Also handle WM\_MOUSEHWHEEL. (closes #10309)  
Files: src/gui\_w32.c

#### Patch 8.2.4875

Problem: MS-Windows: some .exe files are not recognized.  
Solution: Parse APPEXECLINK junctions. (closes #10302)  
Files: src/os\_mswin.c, src/proto/os\_mswin.pro, src/os\_win32.c,  
src/os\_win32.h, src/testdir/test\_functions.vim

#### Patch 8.2.4876

Problem: MS-Windows: Shift-BS results in strange character in powershell.  
Solution: Add K\_S\_BS. (Christian Brabandt, closes #10283, closes #10279)  
Files: src/edit.c, src/keymap.h, src/term.c, src/testdir/shared.vim,  
src/testdir/test\_edit.vim

#### Patch 8.2.4877

Problem: MS-Windows: Using Normal colors for termguicolors causes problems.

Solution: Do not use Normal colors to set `sg_gui_fg` and `sg_gui_bg`.  
(Christian Brabandt, closes #10317, closes #10241)  
Files: `src/highlight.c`

Patch 8.2.4878

Problem: Valgrind warning for using uninitialized variable.  
Solution: Initialize the type of `newtv`.  
Files: `src/strings.c`

Patch 8.2.4879

Problem: Screendump test may fail when using valgrind.  
Solution: Wait longer for the first screendump.  
Files: `src/testdir/test_vim9_builtin.vim`, `src/testdir/screendump.vim`

Patch 8.2.4880

Problem: Vim9: misplaced `elseif` causes invalid memory access.  
Solution: Check `cs_idx` not to be negative.  
Files: `src/ex_eval.c`

Patch 8.2.4881

Problem: "P" in Visual mode still changes some registers.  
Solution: Make "P" in Visual mode not change any register. (Shougo Matsushita, closes #10349)  
Files: `runtime/doc/change.txt`, `runtime/doc/index.txt`,  
`runtime/doc/visual.txt`, `src/normal.c`, `src/testdir/test_visual.vim`

Patch 8.2.4882

Problem: Cannot make '**breakindent**' use a specific column.  
Solution: Add the "column" entry in '**breakindentopt**'. (Christian Brabandt, closes #10362, closes #10325)  
Files: `runtime/doc/options.txt`, `src/indent.c`, `src/structs.h`,  
`src/testdir/test_breakindent.vim`

Patch 8.2.4883

Problem: String interpolation only works in heredoc.  
Solution: Support interpolated strings. Use syntax for heredoc consistent with strings, similar to C#. (closes #10327)  
Files: `runtime/doc/eval.txt`, `src/errors.h`, `src/eval.c`, `src/evalvars.c`,  
`src/proto/evalvars.pro`, `src/typval.c`, `src/proto/typval.pro`,  
`src/vim9compile.c`, `src/proto/vim9compile.pro`, `src/vim9expr.c`,  
`src/testdir/test_debugger.vim`, `src/testdir/test_expr.vim`,  
`src/testdir/test_let.vim`, `src/testdir/test_vim9_assign.vim`,  
`src/testdir/test_vim9_disassemble.vim`

Patch 8.2.4884

Problem: Test fails without the job/channel feature. (Dominique Pellé)  
Solution: Add condition.  
Files: `src/testdir/test_vim9_script.vim`

Patch 8.2.4885 (after 8.2.4884)

Problem: Test fails with the job/channel feature.  
Solution: Move check for job/channel separately.  
Files: `src/testdir/test_vim9_script.vim`

Patch 8.2.4886

Problem: Vim9: redir in skipped block seen as assignment.  
Solution: Check for valid assignment.  
Files: src/ex\_docmd.c, src/testdir/test\_vim9\_assign.vim

Patch 8.2.4887

Problem: Channel log does not show invoking a timer callback.  
Solution: Add a ch\_log() call.  
Files: src/time.c

Patch 8.2.4888

Problem: Line number of lambda ignores line continuation.  
Solution: Use the line number of where the arguments are. Avoid outputting "... " twice. (closes #10364)  
Files: src/userfunc.c

Patch 8.2.4889

Problem: CI only tests with FreeBSD 12.  
Solution: Also test with FreeBSD 13. (closes #10366)  
Files: .cirrus.yml

Patch 8.2.4890

Problem: Inconsistent capitalization in error messages.  
Solution: Make capitalization consistent. (Doug Kearns)  
Files: src/errors.h

Patch 8.2.4891

Problem: Vim help presentation could be better.  
Solution: Add an imported file for extra Vim help support. Show highlight names in the color they have.  
Files: Filelist, runtime/import/dist/vimhelp.vim

Patch 8.2.4892

Problem: Test failures because of changed error messages.  
Solution: Adjust the expected error messages.  
Files: src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_func.vim, src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_expand.vim, src/testdir/test\_tcl.vim,  
src/testdir/test\_vimscript.vim

Patch 8.2.4893 (after 8.2.4891)

Problem: Distributed import files are not installed.  
Solution: Add rules to Makefile and NSIS.  
Files: src/Makefile, nsis/gvim.nsi

Patch 8.2.4894

Problem: MS-Windows: not using italics.  
Solution: Use italics. Simplify the code. (closes #10359)  
Files: src/term.c

Patch 8.2.4895

Problem: Buffer overflow with invalid command with composing chars.  
Solution: Check that the whole character fits in the buffer.

Files: src/ex\_docmd.c, src/testdir/test\_cmdline.vim

Patch 8.2.4896 (after 8.2.4869)

Problem: Expression in command block does not look after NL when command is typed.

Solution: Skip over NL also when not in a script. (closes #10358)

Files: src/eval.c, src/testdir/test\_usercommands.vim

Patch 8.2.4897

Problem: Comment inside an expression in lambda ignores the rest of the expression.

Solution: Truncate the line at the comment. (closes #10367)

Files: src/eval.c, src/testdir/test\_lambda.vim

Patch 8.2.4898

Problem: Coverity complains about pointer usage.

Solution: Move code for increment/decrement.

Files: src/vim9compile.c

Patch 8.2.4899

Problem: With latin1 encoding **CTRL-W** might go before the start of the command line.

Solution: Check already being at the start of the command line.

Files: src/ex\_getln.c, src/testdir/test\_cmdline.vim

Patch 8.2.4900

Problem: Vim9 expression test fails without the job feature.

Solution: Add a check for the job feature. (Dominique Pellé, closes #10373)

Files: src/testdir/test\_vim9\_expr.vim

Patch 8.2.4901

Problem: NULL pointer access when using invalid pattern.

Solution: Check for failed regexp program.

Files: src/buffer.c, src/testdir/test\_buffer.vim

Patch 8.2.4902

Problem: Mouse wheel scrolling is inconsistent.

Solution: Use the MS-Windows system setting. (closes #10368)

Files: runtime/doc/scroll.txt, src/gui\_w32.c, src/mouse.c, src/proto/mouse.pro, src/testing.c, src/testdir/test\_gui.vim

Patch 8.2.4903

Problem: Cannot get the current cmdline completion type and position.

Solution: Add getcmdcompltype() and getcmdscreenpos(). (Shougo Matsushita, closes #10344)

Files: runtime/doc/builtin.txt, runtime/doc/usr\_41.txt, src/cmdexpand.c, src/proto/cmdexpand.pro, src/evalfunc.c, src/ex\_getln.c, src/proto/ex\_getln.pro, src/usercmd.c, src/proto/usercmd.pro, src/testdir/test\_cmdline.vim

Patch 8.2.4904

Problem: codecov includes MS-Windows install files.

Solution: Ignore dosinst.c and uninstall.c.

Files: .codecov.yml

Patch 8.2.4905

Problem: codecov includes MS-Windows install header file.  
Solution: Ignore dosinst.h.  
Files: .codecov.yml

Patch 8.2.4906

Problem: MS-Windows: cannot use transparent background.  
Solution: Make transparent background work with **'termguicolors'** and NONE background color. (Yasuhiro Matsumoto, closes #10310, closes #7162)  
Files: runtime/doc/options.txt, src/os\_win32.c, src/term.c

Patch 8.2.4907

Problem: Some users do not want a line comment always inserted.  
Solution: Add the '/' flag to **'formatoptions'** to not repeat the comment leader after a statement when using "o".  
Files: runtime/doc/change.txt, src/option.h, src/change.c, src/testdir/test\_textformat.vim

Patch 8.2.4908

Problem: No text formatting for // comment after a statement.  
Solution: format a comment when the 'c' flag is in **'formatoptions'**.  
Files: src/textformat.c, src/testdir/test\_textformat.vim

Patch 8.2.4909

Problem: MODE\_ enum entries names are too generic.  
Solution: use CH\_MODE\_.  
Files: src/structs.h, src/channel.c, src/job.c, src/terminal.c

Patch 8.2.4910

Problem: Imperfect coding.  
Solution: Make code nicer.  
Files: src/ex\_getln.c

Patch 8.2.4911

Problem: The mode #defines are not clearly named.  
Solution: Prepend MODE\_. Renumber them to put the mapped modes first.  
Files: src/vim.h, src/autocmd.c, src/buffer.c, src/change.c, src/charset.c, src/cindent.c, src/clipboard.c, src/debugger.c, src/digraph.c, src/drawline.c, src/drawscreen.c, src/edit.c, src/evalfunc.c, src/ex\_cmds.c, src/ex\_docmd.c, src/ex\_getln.c, src/fileio.c, src/fold.c, src/getchar.c, src/globals.h, src/gui.c, src/gui\_gtk.c, src/gui\_w32.c, src/gui\_xim.c, src/indent.c, src/insexpand.c, src/macros.h, src/main.c, src/map.c, src/menu.c, src/message.c, src/misc1.c, src/misc2.c, src/mouse.c, src/netbeans.c, src/normal.c, src/ops.c, src/option.c, src/os\_unix.c, src/os\_win32.c, src/popupmenu.c, src/search.c, src/tag.c, src/screen.c, src/term.c, src/terminal.c, src/textformat.c, src/window.c

Patch 8.2.4912

Problem: Using execute() to define a lambda doesn't work. (Ernie Rael)  
Solution: Put the getline function in evalarg. (closes #10375)  
Files: src/eval.c, src/evalfunc.c, src/proto/evalfunc.pro,

src/testdir/test\_vim9\_func.vim

Patch 8.2.4913

Problem: Popup\_hide() does not always have effect.  
Solution: Add the POPF\_HIDDEN\_FORCE flag. (closes #10376)  
Files: src/popupwin.c, src/vim.h, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popup\_prop\_not\_visible\_01a.dump,  
src/testdir/dumps/Test\_popup\_prop\_not\_visible\_01b.dump

Patch 8.2.4914

Problem: String interpolation in :def function may fail.  
Solution: Do not terminate the expression. (closes #10377)  
Files: src/vim9compile.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4915

Problem: Sometimes the cursor is in the wrong position.  
Solution: When the cursor moved to another line, recompute w\_botline.  
(closes #9736)  
Files: src/move.c

Patch 8.2.4916 (after 8.2.4915)

Problem: Mouse in Insert mode test fails.  
Solution: Fix the test and check relevant positions.  
Files: src/testdir/test\_edit.vim

Patch 8.2.4917

Problem: Fuzzy expansion of option names is not right.  
Solution: Pass the fuzzy flag down the call chain. (Christian Brabandt,  
closes #10380, closes #10318)  
Files: src/cmdexpand.c, src/option.c, src/proto/option.pro,  
src/testdir/test\_options.vim

Patch 8.2.4918

Problem: Conceal character from matchadd() displayed too many times.  
Solution: Check the syntax flag. (closes #10381, closes #7268)  
Files: src/drawline.c, src/testdir/test\_matchadd\_conceal.vim

Patch 8.2.4919

Problem: Can add invalid bytes with :spellgood.  
Solution: Check for a valid word string.  
Files: src/mbyte.c, src/spellfile.c, src/errors.h,  
src/testdir/test\_spell\_utf8.vim

Patch 8.2.4920 (after 8.2.4902)

Problem: MS-Windows GUI: unused variables.  
Solution: Delete the variables. (John Marriott)  
Files: src/gui\_w32.c

Patch 8.2.4921

Problem: Spell test fails because of new illegal byte check.  
Solution: Remove the test.  
Files: src/testdir/test\_spell.vim

Patch 8.2.4922 (after 8.2.4916)

Problem: Mouse test fails on MS-Windows.  
Solution: Set **'mousemodel'** to "extend".  
Files: src/testdir/test\_edit.vim

#### Patch 8.2.4923

Problem: Test checks for terminal feature unnecessarily.  
Solution: Remove CheckRunVimInTerminal. (closes #10383)  
Files: src/testdir/test\_matchadd\_conceal.vim

#### Patch 8.2.4924

Problem: maparg() may return a string that cannot be reused.  
Solution: use msg\_outtrans\_special() instead of str2special().  
(closes #10384)  
Files: src/message.c, src/option.c, src/testdir/test\_map\_functions.vim,  
src/testdir/test\_mapping.vim, src/testdir/test\_options.vim

#### Patch 8.2.4925

Problem: Trailing backslash may cause reading past end of line.  
Solution: Check for NUL after backslash.  
Files: src/textobject.c, src/testdir/test\_textobjects.vim

#### Patch 8.2.4926

Problem: #ifdef for crypt feature around too many lines.  
Solution: Move code outside of #ifdef. (closes #10388)  
Files: src/option.c

#### Patch 8.2.4927

Problem: Return type of remove() incorrect when using three arguments.  
Solution: Use first argument type when there are three arguments.  
(closes #10387)  
Files: src/evalfunc.c, src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.4928

Problem: Various white space and cosmetic mistakes.  
Solution: Change spaces to tabs, improve comments.  
Files: src/bufwrite.c, src/channel.c, src/cindent.c, src/crypt.c,  
src/debugger.c, src/digraph.c, src/edit.c, src/evalwindow.c,  
src/ex\_cmds.c, src/ex\_docmd.c, src/ex\_getln.c, src/fileio.c,  
src/filepath.c, src/gui.c, src/highlight.c, src/indent.c,  
src/insexpand.c, src/job.c, src/keymap.h, src/macros.h,  
src/menu.c, src/misc1.c, src/misc2.c, src/mouse.c, src/move.c,  
src/normal.c, src/ops.c, src/option.c, src/option.h, src/search.c,  
src/session.c, src/spellsuggest.c, src/structs.h, src/tag.c,  
src/term.c, src/terminal.c, src/textformat.c, src/typval.c,  
src/ui.c, src/userfunc.c, src/vim.h, src/vim9.h,  
src/vim9compile.c, src/vim9execute.c, src/window.c,  
src/testdir/test\_cursorline.vim, src/os\_unix.c, src/if\_lua.c,  
src/if\_py\_both.h, src/os\_amiga.c, src/os\_win32.c, src/os\_mswin.c,  
src/os\_vms.c, src/os\_vms\_conf.h

#### Patch 8.2.4929

Problem: Off-by-one error in statusline item.  
Solution: Subtract one less. (closes #10394, closes #5599)  
Files: src/buffer.c, src/testdir/test\_statusline.vim,

src/testdir/dumps/Test\_statusline\_hl.dump

Patch 8.2.4930

Problem: Interpolated string expression requires escaping.  
Solution: Do not require escaping in the expression.  
Files: runtime/doc/eval.txt, src/typval.c, src/proto/typval.pro,  
src/dict.c, src/eval.c, src/evalvars.c, src/proto/evalvars.pro,  
src/vim9compile.c, src/proto/vim9compile.pro, src/vim9expr.c,  
src/vim9instr.c, src/alloc.c, src/proto/alloc.pro,  
src/testdir/test\_expr.vim, src/testdir/test\_let.vim

Patch 8.2.4931

Problem: Crash with sequence of Perl commands.  
Solution: Move PUTBACK to another line. (closes #10386)  
Files: src/if\_perl.xs

Patch 8.2.4932

Problem: Not easy to filter the output of maplist().  
Solution: Add mode\_bits to the dictionary. (Ernie Rael, closes #10356)  
Files: runtime/doc/builtin.txt, src/map.c,  
src/testdir/test\_map\_functions.vim,  
src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4933

Problem: A few more capitalization mistakes in error messages.  
Solution: Adjust capitalization. (Doug Kearns)  
Files: src/errors.h

Patch 8.2.4934

Problem: String interpolation fails when not evaluating.  
Solution: Skip the expression when not evaluating. (closes #10398)  
Files: src/typval.c, src/evalvars.c, src/proto/evalvars.pro,  
src/testdir/test\_vim9\_expr.vim

Patch 8.2.4935

Problem: With **'foldmethod'** "indent" some lines are not included in the fold. (Oleg Koshovetc)  
Solution: Fix it. (Brandon Simmons, closes #10399, closes #3214)  
Files: src/fold.c, src/testdir/test\_fold.vim

Patch 8.2.4936

Problem: MS-Windows: mouse coordinates for scroll event are wrong.  
Solution: Convert coordinates to the text area coordinates. (closes #10400)  
Files: src/gui\_w32.c

Patch 8.2.4937 (after 8.2.4931)

Problem: No test for what 8.2.4931 fixes.  
Solution: Add a test that triggers a valgrind error.  
Files: src/testdir/test\_perl.vim

Patch 8.2.4938

Problem: Crash when matching buffer with invalid pattern.  
Solution: Check for NULL regprog.  
Files: src/buffer.c, src/testdir/test\_buffer.vim

Patch 8.2.4939

Problem: matchfuzzypos() with "matchseq" does not have all positions.  
Solution: Also add a position for white space. (closes #10404)  
Files: runtime/doc/builtin.txt, src/search.c,  
src/testdir/test\_matchfuzzy.vim

Patch 8.2.4940

Problem: Some code is never used.  
Solution: Remove dead code. Add a few more test cases.  
Files: src/vim9expr.c, src/proto/vim9expr.pro, src/vim9compile.c,  
src/testdir/test\_vim9\_builtin.vim, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4941

Problem: '[' and ']' marks may be wrong after undo.  
Solution: Adjust the '[' and ']' marks if needed. (closes #10407, closes #1281)  
Files: src/undo.c, src/testdir/test\_undo.vim

Patch 8.2.4942

Problem: Error when setting 'filetype' in help file again.  
Solution: Deal with text property type already existing. (closes #10409)  
Files: runtime/import/dist/vimhelp.vim

Patch 8.2.4943

Problem: Changing 'switchbuf' may have no effect.  
Solution: Handle 'switchbuf' in didset\_string\_options(). (Sean Dewar,  
closes #10406)  
Files: src/optionstr.c, src/testdir/test\_options.vim

Patch 8.2.4944

Problem: Text properties are wrong after "cc". (Axel Forsman)  
Solution: Pass the deleted byte count to inserted\_bytes(). (closes #10412,  
closes #7737, closes #5763)  
Files: src/change.c, src/testdir/test\_textprop.vim

Patch 8.2.4945

Problem: Inconsistent use of white space.  
Solution: Use Tabs and Spaces consistently.  
Files: src/os\_amiga.c, src/if\_py\_both.h, src/os\_win32.c, src/os\_mswin.c,  
src/os\_vms.c, src/os\_vms\_conf.h

Patch 8.2.4946

Problem: Vim9: some code not covered by tests.  
Solution: Add a few more test cases. Remove dead code.  
Files: src/vim9expr.c, src/testdir/test\_vim9\_expr.vim,  
src/testdir/test\_vim9\_builtin.vim

Patch 8.2.4947

Problem: Text properties not adjusted when accepting spell suggestion.  
Solution: Adjust text properties when text changes. (closes #10414)  
Files: src/spell.c, src/spellsuggest.c, src/testdir/test\_textprop.vim

Patch 8.2.4948

Problem: Cannot use Perl heredoc in nested :def function. (Virginia

Senioria)  
Solution: Only concatenate heredoc lines when not in a nested function.  
(closes #10415)  
Files: src/userfunc.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.4949

Problem: Vim9: some code not covered by tests.  
Solution: Add a few more test cases. Fix double error message.  
Files: src/vim9expr.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4950

Problem: Text properties position wrong after shifting text.  
Solution: Adjust the text properties when shifting a block of text.  
(closes #10418)  
Files: src/ops.c, src/testdir/test\_textprop.vim

Patch 8.2.4951

Problem: Smart indenting done when not enabled.  
Solution: Check option values before setting can\_si. (closes #10420)  
Files: src/indent.c, src/proto/indent.pro, src/change.c, src/edit.c,  
src/ops.c, src/testdir/test\_smartindent.vim

Patch 8.2.4952

Problem: GUI test will fail if color scheme changes.  
Solution: Reduce the test for now.  
Files: src/testdir/test\_gui.vim

Patch 8.2.4953

Problem: With '**smartindent**' inserting '}' after completion goes wrong.  
Solution: Check the cursor is in indent. (closes #10420)  
Files: src/indent.c, src/testdir/test\_smartindent.vim

Patch 8.2.4954

Problem: Inserting line breaks text property spanning more than one line.  
Solution: Check TP\_FLAG\_CONT\_PREV and TP\_FLAG\_CONT\_NEXT. (closes #10423)  
Files: src/textprop.c, src/testdir/test\_textprop.vim

Patch 8.2.4955

Problem: Text property in wrong position after auto-indent.  
Solution: Adjust text property columns. (closes #10422, closes #7719)  
Files: src/change.c, src/testdir/test\_textprop.vim

Patch 8.2.4956

Problem: Reading past end of line with "gf" in Visual block mode.  
Solution: Do not include the NUL in the length.  
Files: src/normal.c, src/testdir/test\_gf.vim

Patch 8.2.4957

Problem: Text properties in a wrong position after a block change.  
Solution: Adjust the properties columns. (closes #10427)  
Files: src/ops.c, src/testdir/test\_textprop.vim

Patch 8.2.4958

Problem: A couple conditions are always true.

Solution: Remove the conditions. (Goc Dunder, closes #10428)  
Files: src/evalfunc.c, src/quickfix.c

Patch 8.2.4959

Problem: Using NULL regexp program.  
Solution: Check for regexp program becoming NULL in more places.  
Files: src/buffer.c, src/testdir/test\_buffer.vim

Patch 8.2.4960

Problem: Text properties that cross line boundary are not correctly updated for a deleted line.  
Solution: Correct computing location of text property entry. (Paul Ollis, closes #10431, closes #10430)  
Files: src/memline.c, src/testdir/test\_textprop.vim

Patch 8.2.4961

Problem: Build error with a certain combination of features.  
Solution: Adjust #if. (John Marriott)  
Files: src/memline.c

Patch 8.2.4962

Problem: Files show up in git status.  
Solution: Adjust the list of ignored files. Clean up more test files. (Shane xb Qian, closes #9929)  
Files: .gitignore, src/testdir/Makefile

Patch 8.2.4963

Problem: Expanding path with "/"\*\*" may overrun end of buffer.  
Solution: Use vim\_snprintf().  
Files: src/filepath.c

Patch 8.2.4964

Problem: MS-Windows GUI: mouse event test is flaky.  
Solution: Add a short delay after generating a mouse event.  
Files: src/testdir/test\_gui.vim

Patch 8.2.4965

Problem: GUI: testing mouse move event depends on screen cell size.  
Solution: Multiply the row and column with the screen cell size.  
Files: runtime/doc/testing.txt, src/testing.c, src/testdir/test\_gui.vim

Patch 8.2.4966

Problem: MS-Windows GUI: mouse event test gets extra event.  
Solution: Ignore one move event.  
Files: src/testdir/test\_gui.vim

Patch 8.2.4967 (after 8.2.4966)

Problem: MS-Windows GUI: mouse event test sometimes fails.  
Solution: Ignore one move event only if there is an extra event.  
Files: src/testdir/test\_gui.vim

Patch 8.2.4968

Problem: Reading past end of the line when C-indenting.  
Solution: Check for NUL.

Files: src/cindent.c, src/testdir/test\_cindent.vim

Patch 8.2.4969

Problem: Changing text in Visual mode may cause invalid memory access.

Solution: Check the Visual position after making a change.

Files: src/change.c, src/edit.c, src/misc2.c, src/proto/misc2.pro,  
src/testdir/test\_visual.vim

Patch 8.2.4970

Problem: "eval 123" gives an error, "eval 'abc'" does not.

Solution: Also give an error when evaluating only a string. (closes #10434)

Files: src/ex\_eval.c, src/testdir/test\_vim9\_cmd.vim

Patch 8.2.4971

Problem: Vim9: interpolated string seen as range.

Solution: Recognize an interpolated string at the start of a command line.  
(closes #10434)

Files: src/ex\_docmd.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4972

Problem: Vim9: compilation fails when using dict member when skipping.

Solution: Do not generate ISN\_USEDICT when skipping. (closes #10433)

Files: src/vim9expr.c, src/testdir/test\_vim9\_expr.vim

Patch 8.2.4973

Problem: Vim9: type error for list unpack mentions argument.

Solution: Mention variable. (close #10435)

Files: src/vim9.h, src/vim9execute.c, src/vim9instr.c,  
src/proto/vim9instr.pro, src/vim9compile.c,  
src/testdir/test\_vim9\_script.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.4974

Problem: ":so" command may read after end of buffer.

Solution: Compute length of text properly.

Files: src/scriptfile.c, src/testdir/test\_source.vim

Patch 8.2.4975

Problem: Recursive command line loop may cause a crash.

Solution: Limit recursion of getcmdline().

Files: src/ex\_getln.c, src/testdir/test\_cmdline.vim

Patch 8.2.4976

Problem: Coverity complains about not restoring a saved value.

Solution: Restore value before handling error.

Files: src/vim9execute.c

Patch 8.2.4977

Problem: Memory access error when substitute expression changes window.

Solution: Disallow changing window in substitute expression.

Files: src/ex\_cmds.c, src/testdir/test\_substitute.vim

Patch 8.2.4978

Problem: No error if engine selection atom is not at the start.

Solution: Give an error. (Christian Brabandt, closes #10439)  
Files: runtime/doc/pattern.txt, src/errors.h, src/regexp\_bt.c,  
src/regexp\_nfa.c, src/testdir/test\_regexp\_latin.vim

#### Patch 8.2.4979

Problem: Accessing freed memory when line is flushed.  
Solution: Make a copy of the pattern to search for.  
Files: src/window.c, src/testdir/test\_tagjump.vim

#### Patch 8.2.4980

Problem: When '**shortmess**' contains 'A' loading a session may still warn for an existing swap file. (Melker Österberg)  
Solution: Keep the 'A' flag to '**shortmess**' in the session file. (closes #10443)  
Files: src/session.c, src/testdir/test\_mksession.vim

#### Patch 8.2.4981

Problem: It is not possible to manipulate autocommands.  
Solution: Add functions to add, get and set autocommands. (Yegappan Lakshmanan, closes #10291)  
Files: runtime/doc/autocmd.txt, runtime/doc/builtin.txt,  
runtime/doc/usr\_41.txt, src/autocmd.c, src/evalfunc.c,  
src/proto/autocmd.pro, src/testdir/test\_autocmd.vim,  
src/testdir/test\_vim9\_builtin.vim

#### Patch 8.2.4982

Problem: Colors in terminal window are not 100% correct.  
Solution: Use g:terminal\_ansi\_colors as documented. (closes #10429, closes #7227 closes #10347)  
Files: src/job.c, src/option.c, src/proto/term.pro,  
src/terminal.c, src/proto/terminal.pro, src/term.c,  
src/testdir/test\_functions.vim, src/testdir/test\_terminal.vim

#### Patch 8.2.4983 (after 8.2.4982)

Problem: Colors test fails in the GUI.  
Solution: Reset g:terminal\_ansi\_colors.  
Files: src/testdir/test\_functions.vim

#### Patch 8.2.4984

Problem: Dragging statusline fails for window with winbar.  
Solution: Fix off-by-one error. (closes #10448)  
Files: src/mouse.c, src/testdir/test\_winbar.vim

#### Patch 8.2.4985

Problem: PVS warns for possible array underrun.  
Solution: Add a check for a positive value. (Goc Dundar, closes #10451)  
Files: src/spell.c

#### Patch 8.2.4986

Problem: Some github actions are outdated.  
Solution: Update CodeQL to v2, update checkout to v3. (closes #10450)  
Files: .github/workflows/ci.yml, .github/workflows/codeql-analysis.yml,  
.github/workflows/coverity.yml

Patch 8.2.4987

Problem: After deletion a small fold may be closable.  
Solution: Check for a reverse range. (Brandon Simmons, closes #10457)  
Files: src/fold.c, src/testdir/test\_fold.vim

Patch 8.2.4988

Problem: Textprop in wrong position when replacing multi-byte chars.  
Solution: Adjust textprop position. (closes #10461)  
Files: src/change.c, src/testdir/test\_textprop.vim

Patch 8.2.4989

Problem: Cannot specify a function name for :defcompile.  
Solution: Implement a function name argument for :defcompile.  
Files: runtime/doc/vim9.txt, src/userfunc.c, src/proto/userfunc.pro,  
src/vim9execute.c, src/ex\_cmds.h, src/testdir/test\_vim9\_cmd.vim,  
src/testdir/test\_vim9\_disassemble.vim

Patch 8.2.4990 (after 8.2.4989)

Problem: Memory leak when :defcompile fails.  
Solution: Free fname when returning early.  
Files: src/userfunc.c

Patch 8.2.4991

Problem: No test for what patch 8.1.0535 fixes.  
Solution: Add a test. (closes #10462)  
Files: src/testdir/test\_fold.vim

Patch 8.2.4992 (after 8.2.4989)

Problem: Compiler warning for possibly uninitialized variable. (Tony Mechelynck)  
Solution: Initialize variable in the caller instead of in the function.  
Files: src/userfunc.c, src/vim9execute.c

Patch 8.2.4993

Problem: smart/C/lisp indenting is optional, which makes the code more complex, while it only reduces the executable size a bit.  
Solution: Graduate FEAT\_CINDENT, FEAT\_SMARTINDENT and FEAT\_LISP.  
Files: runtime/doc/builtin.txt, runtime/doc/indent.txt,  
runtime/doc/options.txt, runtime/doc/various.txt, src/feature.h,  
src/buffer.c, src/change.c, src/cindent.c, src/charset.c,  
src/edit.c, src/evalfunc.c, src/indent.c, src/insexpand.c,  
src/main.c, src/mouse.c, src/ops.c, src/option.c, src/optionstr.c,  
src/register.c, src/search.c, src/textformat.c, src/version.c,  
src/option.h, src/optiondefs.h, src/structs.h, src/globals.h,  
src/testdir/test\_edit.vim

Patch 8.2.4994

Problem: Tests are using legacy functions.  
Solution: Convert a few tests to use :def functions.  
Files: src/testdir/test\_cindent.vim

Patch 8.2.4995 (after 8.2.4992)

Problem: Still a compiler warning for possibly uninitialized variable. (Tony Mechelynck)

Solution: Initialize variables.  
Files: src/vim9execute.c

Patch 8.2.4996 (after 8.2.4969)

Problem: setbuflin() may change Visual selection. (Qiming Zhao)  
Solution: Disable Visual mode when using another buffer. (closes #10466)  
Files: src/evalbuffer.c, src/testdir/test\_buflin.vim

Patch 8.2.4997

Problem: Python: changing hidden buffer can cause the display to be messed up.  
Solution: Do not mark changed lines when using another buffer. (Paul Ollis, closes #10437, closes #7972)  
Files: src/if\_py\_both.h, src/testdir/test\_python3.vim

Patch 8.2.4998

Problem: Vim9: crash when using multiple funcref().  
Solution: Check if varargs type is NULL. (closes #10467)  
Files: src/vim9type.c, src/testdir/test\_vim9\_func.vim

Patch 8.2.4999

Problem: Filetype test table is not properly sorted.  
Solution: Sort by filetype. (Doug Kearns)  
Files: src/testdir/test\_filetype.vim

Patch 8.2.5000

Problem: No patch for documentation updates.  
Solution: Update documentation files.  
Files: runtime/doc/arabic.txt, runtime/doc/autocmd.txt,  
runtime/doc/builtin.txt, runtime/doc/change.txt,  
runtime/doc/channel.txt, runtime/doc/cmdline.txt,  
runtime/doc/diff.txt, runtime/doc/digraph.txt,  
runtime/doc/editing.txt, runtime/doc/eval.txt,

runtime/doc/vim9.txt, runtime/doc/visual.txt,  
runtime/doc/windows.txt, runtime/doc/tags, runtime/doc/Makefile

#### Patch 8.2.5001

Problem: Checking translations affects the search pattern history.  
Solution: Use "keeppatterns". (Doug Kearns)  
Files: src/po/check.vim

#### Patch 8.2.5002

Problem: deletebuflines() may change Visual selection.  
Solution: Disable Visual mode when using another buffer. (closes #10469)  
Files: src/evalbuffer.c, src/testdir/test\_buflines.vim

#### Patch 8.2.5003

Problem: Cannot do bitwise shifts.  
Solution: Add the >> and << operators. (Yegappan Lakshmanan, closes #8457)  
Files: runtime/doc/eval.txt, src/errors.h, src/eval.c, src/structs.h,  
src/vim.h, src/vim9execute.c, src/vim9expr.c,  
src/testdir/test\_expr.vim, src/testdir/test\_vim9\_disassemble.vim,  
src/testdir/test\_vim9\_expr.vim

#### Patch 8.2.5004

Problem: Right shift on negative number does not work as documented.  
Solution: Use a uvarnumber\_T type cast.  
Files: runtime/doc/eval.txt, src/eval.c, src/vim9expr.c,  
src/vim9execute.c, src/charset.c, src/testdir/test\_expr.vim

#### Patch 8.2.5005 (after 8.2.5003)

Problem: Compiler warning for uninitialized variable. (John Marriott)  
Solution: Initialize the pointer to NULL.  
Files: src/vim9expr.vim

#### Patch 8.2.5006 (after 8.2.5003)

Problem: Asan warns for undefined behavior.  
Solution: Cast the shifted value to unsigned.

Files: src/eval.c, src/vim9expr.c, src/vim9execute.c

Patch 8.2.5007

Problem: Spell suggestion may use uninitialized memory. (Zdenek Dohnal)

Solution: Avoid going over the end of the word.

Files: src/spellsuggest.c, src/testdir/test\_spell\_utf8.vim

Patch 8.2.5008

Problem: When '**formatoptions**' contains "/" wrongly wrapping a long trailing comment.

Solution: Pass the OPENLINE\_FORMAT flag.

Files: src/change.c, src/vim.h, src/textformat.c,  
src/testdir/test\_textformat.vim

Patch 8.2.5009

Problem: Fold may not be closable after appending.

Solution: Set the fd\_small flag to MAYBE. (Brandon Simmons, closes #10471)

Files: src/fold.c, src/testdir/test\_fold.vim

Patch 8.2.5010

Problem: The terminal debugger uses various global variables.

Solution: Add a dictionary to hold the terminal debugger preferences.

Files: runtime/doc/terminal.txt,  
runtime/pack/dist/opt/termdebug/plugin/termdebug.vim

Patch 8.2.5011

Problem: Replacing an autocommand requires several lines.

Solution: Add the "replace" flag to autocmd\_add(). (Yegappan Lakshmanan, closes #10473)

Files: runtime/doc/autocmd.txt, runtime/doc/builtin.txt, src/autocmd.c,  
src/testdir/test\_autocmd.vim

Patch 8.2.5012

Problem: Cannot select one character inside ().

Solution: Do not try to extend the area if it is empty. (closes #10472, closes #6616)

Files: src/textobject.c, src/testdir/test\_textobjects.vim

Patch 8.2.5013

Problem: After text formatting the cursor may be in an invalid position.

Solution: Correct the cursor position after formatting.

Files: src/textformat.c, src/testdir/test\_textformat.vim

Patch 8.2.5014

Problem: Byte offsets are wrong when using text properties.

Solution: Make sure text properties do not affect the byte counts.  
(Paul Ollis, closes #10474)

Files: src/memline.c, src/textprop.c, src/testdir/test\_textprop.vim

Patch 8.2.5015

Problem: Hoon and Moonscript files are not recognized.

Solution: Add filetype patterns. (Goc Dundar, closes #10478)

Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.5016

Problem: Access before start of text with a put command.  
Solution: Check the length is more than zero.  
Files: src/register.c, src/testdir/test\_put.vim

Patch 8.2.5017

Problem: Gcc 12.1 warns for uninitialized variable.  
Solution: Initialize the variable. (closes #10476)  
Files: src/evalvars.c

Patch 8.2.5018

Problem: Vim9: some code is not covered by tests.  
Solution: Delete dead code.  
Files: src/vim9instr.c, src/proto/vim9instr.pro, src/vim9compile.c,  
src/vim9expr.c,

Patch 8.2.5019

Problem: Cannot get the first screen column of a character.  
Solution: Let virtcol() optionally return a list. (closes #10482,  
closes #7964)  
Files: runtime/doc/builtin.txt, src/evalfunc.c,  
src/testdir/test\_functions.vim, src/testdir/test\_vim9\_builtin.vim

Patch 8.2.5020

Problem: Using **'imstatusfunc'** and **'imactivatefunc'** breaks **'foldopen'**.  
Solution: Save and restore the KeyTyped flag. (closes #10479)  
Files: src/gui\_xim.c, src/testdir/test\_iminsert.vim

Patch 8.2.5021

Problem: Build fails with normal features and +terminal. (Dominique Pellé)  
Solution: Add #ifdefs. (closes #10484)  
Files: src/terminal.c

Patch 8.2.5022

Problem: **'completefunc'**/**'omnifunc'** error does not end completion.  
Solution: Check if there was an error or exception. (closes #10486,  
closes #4218)  
Files: src/insexpand.c, src/testdir/test\_ins\_complete.vim

Patch 8.2.5023

Problem: Substitute overwrites allocated buffer.  
Solution: Disallow undo when in a substitute command.  
Files: src/normal.c, src/undo.c, src/testdir/test\_substitute.vim

Patch 8.2.5024

Problem: Using freed memory with "]d".  
Solution: Copy the pattern before searching.  
Files: src/normal.c, src/testdir/test\_tagjump.vim

Patch 8.2.5025

Problem: Vim9: a few lines not covered by tests.  
Solution: Add a few tests.  
Files: src/vim9script.c, src/testdir/test\_vim9\_assign.vim,

src/testdir/test\_vim9\_import.vim

Patch 8.2.5026

Problem: Vim9: a few lines not covered by tests.  
Solution: Delete dead code. Add a few test cases. make "12->func()" work.  
Files: src/vim9type.c, src/ex\_docmd.c, src/proto/ex\_docmd.pro,  
src/vim9compile.c, src/testdir/test\_vim9\_assign.vim,  
src/testdir/test\_vim9\_func.vim

Patch 8.2.5027

Problem: Error for missing :endif when an exception was thrown. (Dani Dickstein)  
Solution: Do not give an error when aborting. (closes #10490)  
Files: src/ex\_docmd.c, src/testdir/test\_trycatch.vim

Patch 8.2.5028

Problem: Syntax regexp matching can be slow.  
Solution: Adjust the counters for checking the timeout to check about once per msec. (closes #10487, closes #2712)  
Files: src/regexp\_bt.c, src/regexp\_nfa.c

Patch 8.2.5029

Problem: "textlock" is always zero.  
Solution: Remove "textlock" and rename "textwinlock" to "textlock". (closes #10489)  
Files: runtime/doc/insert.txt, runtime/doc/tags, src/beval.c,  
src/change.c, src/edit.c, src/errors.h, src/eval.c, src/ex\_cmds.c,  
src/ex\_getln.c, src/proto/ex\_getln.pro, src/globals.h,  
src/indent.c, src/insexpand.c, src/map.c, src/register.c,  
src/undo.c, src/window.c, src/testdir/test\_edit.vim,  
src/testdir/test\_ins\_complete.vim, src/testdir/test\_popup.vim,  
src/testdir/test\_quickfix.vim

Patch 8.2.5030

Problem: autocmd\_add() can only handle one event and pattern.  
Solution: Support a list of events and patterns. (Yegappan Lakshmanan, closes #10483)  
Files: runtime/doc/builtin.txt, src/autocmd.c, src/errors.h,  
src/testdir/test\_autocmd.vim

Patch 8.2.5031

Problem: Cannot easily run the benchmarks.  
Solution: Have "make benchmark" in the src directory work.  
Files: src/Makefile, src/testdir/Makefile

Patch 8.2.5032

Problem: Python 3 test fails without the GUI.  
Solution: Check the balloon\_eval feature is available.  
Files: src/testdir/test\_python3.vim

Patch 8.2.5033 (after 8.2.5030)

Problem: Build error with +eval but without +quickfix. Warning for uninitialized variable.  
Solution: Adjust #ifdefs. (John Marriott)

Files: src/errors.h, src/autocmd.c

#### Patch 8.2.5034

Problem: There is no way to get the byte index from a virtual column.

Solution: Add virtcol2col(). (Yegappan Lakshmanan, closes #10477, closes #10098)

Files: runtime/doc/builtin.txt, runtime/doc/usr\_41.txt, src/evalfunc.c, src/move.c, src/proto/move.pro, src/testdir/test\_cursor\_func.vim

#### Patch 8.2.5035

Problem: When splitting a window the changelist position moves.

Solution: Set the changelist index a bit later. (closes #10493)

Files: src/window.c, src/testdir/test\_changelist.vim, src/testdir/test\_normal.vim

#### Patch 8.2.5036 (after 8.2.5028)

Problem: Using two counters for timeout check in NFA engine.

Solution: Use only one counter. Tune the counts based on guessing.

Files: src/regexp\_nfa.c

#### Patch 8.2.5037

Problem: Cursor position may be invalid after "0;" range.

Solution: Check the cursor position when it was set by ";" in the range.

Files: src/ex\_docmd.c, src/testdir/test\_excmd.vim

#### Patch 8.2.5038

Problem: A finished terminal in a popup window does not show a scrollbar.

Solution: Show the scrollbar if the terminal job is finished. (closes #10497)

Files: src/popupwin.c, src/testdir/test\_popupwin.vim, src/testdir/dumps/Test\_popupwin\_poptermscroll\_1.dump, src/testdir/dumps/Test\_popupwin\_poptermscroll\_2.dump, src/testdir/dumps/Test\_popupwin\_poptermscroll\_3.dump

#### Patch 8.2.5039

Problem: Confusing error if first argument of popup\_create() is wrong.

Solution: Give a more informative error.

Files: src/popupwin.c, src/testdir/test\_popupwin.vim, src/errors.h, src/testdir/dumps/Test\_popup\_settext\_07.dump

#### Patch 8.2.5040

Problem: Scrollbar thumb in scrolled popup not visible.

Solution: Show at least one thumb character. (fixes 10492)

Files: src/popupwin.c, src/testdir/test\_popupwin.vim, src/testdir/dumps/Test\_popupwin\_scroll\_13.dump

#### Patch 8.2.5041

Problem: Cannot close a terminal popup with "NONE" job.

Solution: Adjust the conditions for whether a job is running. (closes #10498)

Files: src/buffer.c, src/terminal.c, src/proto/terminal.pro, src/undo.c, src/testdir/test\_popupwin.vim

#### Patch 8.2.5042

Problem: Scrollbar thumb in tall scrolled popup not visible.  
Solution: Show at least one thumb character. (fixes 10492)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_scroll\_13.dump

#### Patch 8.2.5043

Problem: Can open a cmdline window from a substitute expression.  
Solution: Disallow opening a command line window when text or buffer is locked.  
Files: src/buffer.c, src/ex\_getln.c, src/proto/ex\_getln.pro,  
src/window.c, src/testdir/test\_substitute.vim

#### Patch 8.2.5044 (after 8.2.5043)

Problem: Command line test fails.  
Solution: Also beep when cmdline win can't be opened because of locks.  
Make the test not beep. Make the test pass on MS-Windows.  
Files: src/ex\_getln.c, src/testdir/test\_substitute.vim

#### Patch 8.2.5045

Problem: Can escape a terminal popup window when the job is finished.  
Solution: Only check for a finished job where it is relevant.  
(closes #10253)  
Files: src/popupwin.c, src/testdir/test\_popupwin.vim,  
src/testdir/dumps/Test\_popupwin\_poptermscroll\_1.dump,  
src/testdir/dumps/Test\_popupwin\_poptermscroll\_2.dump,  
src/testdir/dumps/Test\_popupwin\_poptermscroll\_3.dump,  
src/testdir/dumps/Test\_popupwin\_poptermscroll\_4.dump

#### Patch 8.2.5046

Problem: vim\_regsub() can overwrite the destination.  
Solution: Pass the destination length, give an error when it doesn't fit.  
Files: src/regexp.h, src/regexp.c, src/proto/regexp.pro, src/eval.c,  
src/ex\_cmds.c

#### Patch 8.2.5047

Problem: CurSearch highlight is often wrong.  
Solution: Remember the last highlighted position and redraw when needed.  
Files: src/globals.h, src/match.c, src/drawscreen.c, src/change.c,  
src/testdir/test\_search.vim,  
src/testdir/dumps/Test\_hlsearch\_cursearch\_changed\_1.dump

#### Patch 8.2.5048

Problem: When using XIM the gui test may fail.  
Solution: Only use --not-a-term when not using XIM.  
Files: src/testdir/test\_gui.vim

#### Patch 8.2.5049

Problem: Insufficient tests for autocommands.  
Solution: Add a few more tests. (Yegappan Lakshmanan, closes #10507)  
Files: src/autocmd.c, src/testdir/gen\_opt\_test.vim,  
src/testdir/test\_autocmd.vim, src/testdir/test\_cmdline.vim

#### Patch 8.2.5050

Problem: Using freed memory when searching for pattern in path.

Solution: Make a copy of the line.  
Files: src/search.c, src/testdir/test\_tagjump.vim

Patch 8.2.5051

Problem: Check for autocmd\_add() event argument is confusing.  
Solution: Make the code more straightforward.  
Files: src/autocmd.c

Patch 8.2.5052

Problem: CI checkout step title is a bit cryptic.  
Solution: Add a better title. (closes #10509)  
Files: .github/workflows/ci.yml, .github/workflows/coverity.yml,  
.github/workflows/codeql-analysis.yml

Patch 8.2.5053

Problem: Cannot have a comment halfway an expression in an autocmd command block.  
Solution: When skipping over the NL also skip over comments. (closes #10519)  
Files: src/eval.c, src/testdir/test\_autocmd.vim

Patch 8.2.5054

Problem: No good filetype for conf files similar to dosini.  
Solution: Add the confini filetype. (closes #10518)  
Files: runtime/filetype.vim, src/testdir/test\_filetype.vim

Patch 8.2.5055

Problem: Statusline is not updated when terminal title changes.  
Solution: Redraw the status line when the title changes. (issue #10425)  
Files: src/terminal.c

Patch 8.2.5056

Problem: The channel log only contains some of the raw terminal output.  
Solution: Add the "o" flag to log all terminal output. Use it for "--log".  
Files: runtime/doc/channel.txt, runtime/doc/starting.txt, src/main.c,  
src/channel.c, src/vim.h, src/term.c, src/edit.c, src/normal.c,  
src/optionstr.c

Patch 8.2.5057

Problem: Using gettimeofday() for timeout is very inefficient.  
Solution: Set a platform dependent timer. (Paul Ollis, closes #10505)  
Files: src/auto/configure, src/config.h.in, src/configure.ac,  
src/drawscreen.c, src/errors.h, src/evalfunc.c, src/ex\_cmds.c,  
src/ex\_getln.c, src/match.c, src/os\_mac.h, src/os\_macosx.m,  
src/os\_unix.c, src/os\_win32.c, src/proto/os\_unix.pro,  
src/proto/os\_win32.pro, src/proto/regexp.pro, src/quickfix.c,  
src/regexp.c, src/regexp.h, src/regexp\_bt.c, src/regexp\_nfa.c,  
src/screen.c, src/search.c, src/structs.h, src/syntax.c,  
src/testdir/test\_hlsearch.vim, src/testdir/test\_search.vim,  
src/testdir/test\_syntax.vim

Patch 8.2.5058

Problem: input() does not handle composing characters properly.  
Solution: Use mb\_cptr2char\_adv() instead of mb\_ptr2char\_adv().  
(closes #10527)

Files: src/getchar.c, src/testdir/test\_functions.vim

Patch 8.2.5059

Problem: Autoconf 2.71 produces many obsolete warnings.

Solution: Replace obsolete macros with non-obsolete ones, where the functionality does not change. (issue #10528)

Files: src/configure.ac, src/auto/configure

Patch 8.2.5060 (after 8.2.5059)

Problem: Running configure fails.

Solution: Remove line break.

Files: src/configure.ac, src/auto/configure

Patch 8.2.5061

Problem: C89 requires signal handlers to return void.

Solution: Drop RETSIGTYPE and hard-code a void return value.

Files: src/configure.ac, src/auto/configure, src/if\_cscope.c, src/os\_unix.c, src/pty.c, src/os\_mac.h, src/os\_vms\_conf.h, src/config.h.in, src/osdef1.h.in

Patch 8.2.5062

Problem: Coverity warns for dead code.

Solution: Remove the dead code.

Files: src/os\_unix.c, src/match.c

Patch 8.2.5063

Problem: Error for a command may go over the end of IObuff.

Solution: Truncate the message.

Files: src/ex\_docmd.c, src/testdir/test\_cmdline.vim

Patch 8.2.5064

Problem: No test for what 8.1.0052 fixes.

Solution: Add a test. (closes #10531)

Files: src/getchar.c, src/testdir/test\_mapping.vim

Patch 8.2.5065

Problem: Wrong return type for main() in tee.c.

Solution: Use "int" instead of "void". Remove unused variable.

Files: src/tee/tee.c

Patch 8.2.5066

Problem: Can specify multispace listchars only for whole line.

Solution: Add "leadmultispace". (Christian Brabandt, closes #10496)

Files: runtime/doc/options.txt, src/drawline.c, src/message.c, src/screen.c, src/structs.h, src/window.c, src/testdir/test\_listchars.vim

Patch 8.2.5067

Problem: Timer\_create is not available on every Mac system. (Hisashi T Fujinaka)

Solution: Adjust #ifdef.

Files: src/os\_unix.c

Patch 8.2.5068

Problem: Gcc 12.1 warning when building tee.  
Solution: Change type to size\_t. (John Marriott)  
Files: src/tee/tee.c

#### Patch 8.2.5069

Problem: Various warnings from clang on MS-Windows.  
Solution: Fix the code to avoid the warnings. (Yegappan Lakshmanan, closes #10538)  
Files: src/dosinst.c, src/fileio.c, src/gui\_w32.c, src/os\_mswin.c, src/os\_win32.c

#### Patch 8.2.5070

Problem: Unnecessary code.  
Solution: Remove code that isn't needed. (closes #10534)  
Files: src/message.c, src/screen.c

#### Patch 8.2.5071

Problem: With some Mac OS version clockid\_t is redefined.  
Solution: Adjust #ifdefs. (Ozaki Kiichi, closes #10549)  
Files: src/os\_mac.h

#### Patch 8.2.5072

Problem: Using uninitialized value and freed memory in spell command.  
Solution: Initialize "attr". Check for empty line early.  
Files: src/spell.c, src/testdir/test\_spell\_utf8.vim

#### Patch 8.2.5073

Problem: Clang on MS-Windows produces warnings.  
Solution: Avoid the warnings. (Yegappan Lakshmanan, closes #10546)  
Files: src/dosinst.c, src/dosinst.h, src/gui\_dwrite.cpp, src/gui\_w32.c, src/iscypty.c, src/libvterm/src/vterm\_internal.h, src/mbyte.c, src/os\_win32.c, src/os\_win32.h, src/term.c, src/xdiff/xinclude.h

#### Patch 8.2.5074

Problem: Spell test fails on MS-Windows.  
Solution: Do not change **'encoding'**  
Files: src/testdir/test\_spell\_utf8.vim

#### Patch 8.2.5075

Problem: Clang gives an out of bounds warning.  
Solution: adjust conditional expression (John Marriott)  
Files: src/ui.c

#### Patch 8.2.5076

Problem: Unnecessary code.  
Solution: Remove code and replace with function call. (closes #10552)  
Files: src/drawline.c, src/getchar.c

#### Patch 8.2.5077

Problem: Various warnings from clang on MS-Windows.  
Solution: Avoid the warnings. (Yegappan Lakshmanan, closes #10553)  
Files: src/dosinst.c, src/dosinst.h, src/filepath.c, src/gui\_w32.c, src/misc1.c, src/os\_win32.c

Patch 8.2.5078

Problem: Substitute test has a one second delay.  
Solution: Use ":silent!". Add another test case. (closes #10558)  
Files: src/testdir/test\_substitute.vim

Patch 8.2.5079

Problem: DirChanged autocommand may use freed memory. (Shane-XB Qian)  
Solution: Free the memory later. (closes #10555)  
Files: src/ex\_docmd.c, src/testdir/test\_autocmd.vim

Patch 8.2.5080

Problem: When indenting gets out of hand it is hard to stop.  
Solution: When line gets too long set got\_int.  
Files: src/indent.c

Patch 8.2.5081

Problem: Autocmd test fails on MS-Windows.  
Solution: Set shellslash to get forward slashes.  
Files: src/testdir/test\_autocmd.vim

Patch 8.2.5082 (after 8.2.5080)

Problem: Retab test fails.  
Solution: Disable the test for now.  
Files: src/testdir/test\_retab.vim

Patch 8.2.5083

Problem: Autocmd test still fails on MS-Windows.  
Solution: Change backward to forward slashes.  
Files: src/testdir/test\_autocmd.vim

Patch 8.2.5084

Problem: When the GUI shows a dialog tests get stuck.  
Solution: Add the --gui-dialog-file argument.  
Files: runtime/doc/starting.txt, src/Make\_mvc.mak, src/gui.c, src/main.c, src/message.c, src/os\_mswin.c, src/proto/gui.pro, src/proto/main.pro, src/structs.h, src/testdir/Make\_dos.mak, src/testdir/Make\_ming.mak, src/testdir/Makefile, src/testdir/runtest.vim, src/testdir/shared.vim

Patch 8.2.5085

Problem: Gcc gives warning for signed/unsigned difference.  
Solution: Use a different pointer type. (John Marriott)  
Files: src/os\_mswin.c

Patch 8.2.5086

Problem: CI runs on Windows 2019.  
Solution: Switch to Windows 2022. (closes #10566)  
Files: .github/workflows/ci.yml

Patch 8.2.5087

Problem: Cannot build with clang on MS-Windows.  
Solution: Add support for building with clang. (Yegappan Lakshmanan, closes #10557)  
Files: src/GvimExt/Make\_ming.mak, src/INSTALLpc.txt,

src/Make\_cyg\_ming.mak

Patch 8.2.5088

Problem: Value of cmod\_verbose is a bit complicated to use.  
Solution: Use zero for not set, value + 1 when set. (closes #10564)  
Files: src/ex\_docmd.c, src/ex\_getln.c, src/globals.h, src/structs.h

Patch 8.2.5089

Problem: Some functions return a different value on failure.  
Solution: Initialize the return value earlier. (Yegappan Lakshmanan, closes #10568)  
Files: src/autocmd.c, src/dict.c, src/evalfunc.c, src/list.c

Patch 8.2.5090

Problem: MS-Windows: vim.def is no longer used.  
Solution: Delete vim.def. (Ken Takata, closes #10569)  
Files: Filelist, Makefile, src/vim.def

Patch 8.2.5091

Problem: Terminal test fails with some shell commands.  
Solution: Disable setting the window title. (closes #10530)  
Files: src/testdir/test\_terminal.vim

Patch 8.2.5092

Problem: Using "'<,'>" in Ex mode may compare unrelated pointers.  
Solution: Set eap->cmd to "+" only later.  
Files: src/ex\_docmd.c

Patch 8.2.5093

Problem: Error message for unknown command may mention the command twice. (Malcolm Rowe)  
Solution: Add the did\_append\_cmd flag. (closes #10570)  
Files: src/ex\_docmd.c

Patch 8.2.5094

Problem: MS-Windows GUI: empty command may cause a dialog.  
Solution: Delete the dialog file. Improve the message.  
Files: src/testdir/runtest.vim, src/testdir/test\_ex\_mode.vim

Patch 8.2.5095

Problem: Terminal test still fails with some shell commands.  
Solution: Disable setting the window title in the Vim instance running in a terminal window. (closes #10530)  
Files: src/testdir/test\_terminal.vim

Patch 8.2.5096 (after 8.2.5095)

Problem: Terminal test still fails with some shell commands.  
Solution: Add missing "call". (closes #10530)  
Files: src/testdir/test\_terminal.vim

Patch 8.2.5097

Problem: Using uninitialized memory when using '**listchars**'.  
Solution: Use the length returned by mb\_char2bytes(). (closes #10576)  
Files: src/message.c

Patch 8.2.5098

Problem: Spelldump test sometimes hangs.  
Solution: Catch the problem of the spell file not being found to avoid hanging in the download dialog.  
Files: src/testdir/test\_spell.vim

Patch 8.2.5099

Problem: Some terminal tests are not retried.  
Solution: Mark terminal tests as flaky.  
Files: src/testdir/test\_terminal.vim

Patch 8.2.5100

Problem: Memory usage tests are not retried.  
Solution: Mark memory usage tests as flaky.  
Files: src/testdir/test\_memory\_usage.vim

Patch 8.2.5101

Problem: MS-Windows with MinGW: \$CC may be "cc" instead of "gcc".  
Solution: Set \$CC if it is not matching "clang". (Yegappan Lakshmanan, closes #10578)  
Files: src/INSTALLpc.txt, src/Make\_cyg\_ming.mak

Patch 8.2.5102

Problem: Interrupt not caught in test.  
Solution: Consider an exception thrown in the current try/catch when got\_int is set. Also catch early exit when not using try/catch.  
Files: src/indent.c, src/testing.c, src/testdir/test\_retab.vim, src/testdir/runtest.vim

Patch 8.2.5103

Problem: Build fails with small features.  
Solution: Add #ifdef. Skip test on MS-Windows.  
Files: src/indent.c, src/testdir/test\_retab.vim

Patch 8.2.5104 (after 8.2.5103)

Problem: Test hangs on MS-Windows.  
Solution: Skip another test on MS-Windows.  
Files: src/testdir/test\_retab.vim

Patch 8.2.5105 (after 8.2.5104)

Problem: Test still hangs on MS-Windows.  
Solution: Skip "nocatch" test the right way.  
Files: src/testdir/test\_retab.vim

Patch 8.2.5106

Problem: Default cmdwin mappings are re-mappable.  
Solution: Make the default mappings not re-mappable. (closes #10580) Use symbols for the first do\_map() argument.  
Files: src/vim.h, src/ex\_getln.c, src/map.c, src/proto/map.pro, src/digraph.c, src/netbeans.c

Patch 8.2.5107

Problem: Some callers of rettv\_list\_alloc() check for not OK. (Christ van

Willegen)

Solution: Use "==" instead of "!=" when checking the return value.  
Files: src/evalbuffer.c, src/channel.c, src/cmdexpand.c, src/evalfunc.c,  
src/evalwindow.c, src/insexpand.c, src/job.c, src/list.c,  
src/map.c, src/menu.c, src/mouse.c, src/move.c, src/sign.c,  
src/textprop.c, src/term.c, src/time.c

Patch 8.2.5108

Problem: Retab test disabled because it hangs on MS-Windows.  
Solution: Also set got\_int at the other place an overlong text is detected.  
Files: src/indent.c, src/testdir/test\_retab.vim

Patch 8.2.5109

Problem: Mode not updated after **CTRL-O CTRL-C** in Insert mode.  
Solution: Set redraw\_mode and use it. (closes #10581)  
Files: src/main.c, src/normal.c, src/testdir/test\_normal.vim,  
src/testdir/dumps/Test\_mode\_updated\_1.dump

Patch 8.2.5110

Problem: Icon filetype not recognized from the first line.  
Solution: Add a check for the first line. (Doug Kearns)  
Files: runtime/autoload/dist/script.vim, src/testdir/test\_filetype.vim

Patch 8.2.5111

Problem: No test for --gui-dialog-file.  
Solution: Add a test.  
Files: src/testdir/test\_gui.vim

Patch 8.2.5112 (after 8.2.5111)

Problem: Gui test hangs on MS-Windows.  
Solution: Use "!start" to start Vim.  
Files: src/testdir/test\_gui.vim

Patch 8.2.5113

Problem: Timer becomes invalid after fork/exec, :gui gives errors. (Gabriel Dupras)  
Solution: Delete the timer before forking. (closes #10584)  
Files: src/os\_unix.c, src/proto/os\_unix.pro, src/gui.c

Patch 8.2.5114

Problem: Time limit on searchpair() does not work properly.  
Solution: Set the time limit once instead of for each regexp. (closes #10562)  
Files: src/search.c, src/evalfunc.c, src/testdir/test\_search.vim

Patch 8.2.5115

Problem: Search timeout is overrun with some patterns.  
Solution: Check for timeout in more places. Make the flag volatile and atomic. Use assert\_inrange() to see what happened.  
Files: src/regexp\_nfa.c, src/regexp\_bt.c, src/regexp.c, src/os\_unix.c,  
src/proto/os\_unix.pro, src/testdir/test\_search.vim

Patch 8.2.5116

Problem: "limit" option of matchfuzzy() not always respected.  
Solution: Remove "else". (Kazuyuki Miyagi, closes #10586)

Files: runtime/doc/builtin.txt, src/search.c,  
src/testdir/test\_matchfuzzy.vim

#### Patch 8.2.5117

Problem: Crash when calling a Lua callback from a :def function. (Bohdan Makohin)

Solution: Handle FC\_CFUNC in call\_user\_func\_check(). (closes #10587)

Files: src/userfunc.c, src/testdir/test\_lua.vim

#### Patch 8.2.5118

Problem: MS-Windows: sending a message to another Vim may hang if that Vim is halted.

Solution: Add a timeout to serverSendToVim(). (Ken Takata, closes #10585)

Files: runtime/pack/dist/opt/editexisting/plugin/editexisting.vim,  
src/os\_mswin.c

#### Patch 8.2.5119

Problem: CI uses cache v2.

Solution: Use cache v3. (closes #10588)

Files: .github/workflows/ci.yml

#### Patch 8.2.5120

Problem: Searching for quotes may go over the end of the line.

Solution: Check for running into the NUL.

Files: src/textobject.c

#### Patch 8.2.5121

Problem: Interrupt test sometimes fails.

Solution: Use a different file name.

Files: src/testdir/test\_interrupt.vim

#### Patch 8.2.5122

Problem: Lisp indenting my run over the end of the line.

Solution: Check for NUL earlier.

Files: src/indent.c, src/testdir/test\_indent.vim

#### Patch 8.2.5123

Problem: Using invalid index when looking for spell suggestions.

Solution: Do not decrement the index when it is zero.

Files: src/spellsuggest.c, src/testdir/test\_spell.vim

#### Patch 8.2.5124

Problem: When syntax timeout test fails it does not show the time.

Solution: Use assert\_inrange().

Files: src/testdir/test\_syntax.vim

#### Patch 8.2.5125

Problem: MS-Windows: warnings from MinGW compiler.

Solution: Use "volatile". (Yasuhiro Matsumoto, closes #10589) Initialize variable.

Files: src/os\_win32.c, src/proto/os\_win32.pro, src/map.c

#### Patch 8.2.5126

Problem: Substitute may overrun destination buffer.

Solution: Disallow switching buffers in a substitute expression.  
Files: src/ex\_docmd.c, src/testdir/test\_substitute.vim

#### Patch 8.2.5127

Problem: Using assert\_true() does not show value on failure.  
Solution: Use assert\_inrange(). (closes #10593)  
Files: src/testdir/test\_channel.vim, src/testdir/test\_hlsearch.vim

#### Patch 8.2.5128

Problem: Syntax highlighting disabled when using synID() in searchpair()  
skip expression and it times out. (Jaehwang Jung)  
Solution: Add the redrawtime\_limit\_set flag. (closes #10562)  
Files: src/globals.h, src/drawscreen.c, src/syntax.c

#### Patch 8.2.5129

Problem: Timeout handling is not optimal.  
Solution: Avoid setting timeout\_flag twice. Adjust the pointer when  
stopping the regexp timeout. Adjust variable name.  
Files: src/os\_unix.c, src/os\_win32.c, src/regexp.c

#### Patch 8.2.5130

Problem: Edit test for mode message fails when using valgrind.  
Solution: Use WaitForAssert(). Run beep test later.  
Files: src/testdir/test\_edit.vim

#### Patch 8.2.5131

Problem: Timeout implementation is not optimal.  
Solution: Further improvements for timeouts. Add a test for searchpair()  
timeout. (partly by Paul Ollis)  
Files: src/configure.ac, src/auto/configure,  
src/testdir/test\_hlsearch.vim, src/testdir/test\_search.vim

#### Patch 8.2.5132

Problem: :mkview test doesn't test much.  
Solution: Save the view with the folds closed. (James McCoy, closes #10596)  
Files: src/testdir/test\_mksession.vim

#### Patch 8.2.5133

Problem: MacOS: build fails.  
Solution: Remove "#if 0" from timer\_delete().  
Files: src/os\_macosx.m

#### Patch 8.2.5134

Problem: Function has confusing name.  
Solution: Rename tgetent\_error() to invoke\_tgetent().  
Files: src/term.c

#### Patch 8.2.5135

Problem: Running configure gives warnings for main() return type.  
Solution: Specify "int" return type. Avoid a few more warnings.  
Files: src/configure.ac, src/auto/configure

#### Patch 8.2.5136

Problem: Debugger test fails when run with valgrind.

Solution: Wait longer when using valgrind.  
Files: src/testdir/shared.vim, src/testdir/test\_debugger.vim,  
src/testdir/test\_search.vim

#### Patch 8.2.5137

Problem: Cannot build without the +channel feature. (Dominique Pellé)  
Solution: Add #ifdef around ch\_log() calls. (closes #10598)  
Files: src/os\_unix.c, src/regexp\_nfa.c, src/regexp\_bt.c

#### Patch 8.2.5138

Problem: Various small issues.  
Solution: Various small improvements.  
Files: src/filepath.c, src/job.c, src/mark.c, src/move.c,  
src/popupwin.c, src/testdir/test\_filetype.vim

#### Patch 8.2.5139

Problem: TIME\_WITH\_SYS\_TIME is no longer supported by autoconf.  
Solution: Always include time.h.  
Files: src/os\_unix.h

#### Patch 8.2.5140

Problem: Seachpair timeout test is flaky.  
Solution: Mark the test as flaky so it is retried.  
Files: src/testdir/test\_search.vim

#### Patch 8.2.5141

Problem: Using "volatile int" in a signal handler might be wrong.  
Solution: Use "volatile sig\_atomic\_t".  
Files: src/os\_unix.c, src/proto/os\_unix.pro, src/os\_win32.c,  
src/proto/os\_win32.pro, src/regexp.c,

#### Patch 8.2.5142

Problem: Startup test fails if there is a status bar at the top of the  
screen. (Ernie Rael)  
Solution: Use a larger vertical offset in the test.  
Files: src/testdir/test\_startup.vim

#### Patch 8.2.5143

Problem: Some tests fail when using valgrind. Spurious leak reports.  
Solution: Use WaitForAssert(). Avoid failing fork/exec. Skip tests where a  
job is killed when running valgrind.  
Files: src/testdir/test\_iminsert.vim, src/testdir/test\_popup.vim,  
src/testdir/test\_cscope.vim, src/testdir/test\_channel.vim

#### Patch 8.2.5144

Problem: With '**lazyredraw**' set completion menu may be displayed wrong.  
Solution: When the popup menu is visible do not insert a screen line.  
(closes #10601)  
Files: src/screen.c

#### Patch 8.2.5145

Problem: Exit test causes spurious valgrind reports.  
Solution: Skip test. Add CheckNotValgrind.  
Files: src/testdir/test\_exit.vim, src/testdir/check.vim,

src/testdir/test\_channel.vim

Patch 8.2.5146

Problem: Memory leak when substitute expression nests.  
Solution: Use an array of expression results.  
Files: src/alloc.c, src/regexp.c, src/proto/regexp.pro,  
src/errors.h, src/ex\_cmds.c, src/testdir/test\_substitute.vim

Patch 8.2.5147

Problem: Flaky test always fails on retry.  
Solution: Delete the created function.  
Files: src/testdir/test\_search.vim

Patch 8.2.5148

Problem: Invalid memory access when using an expression on the command line.  
Solution: Make sure the position does not go negative.  
Files: src/ex\_getln.c, src/testdir/test\_cmdline.vim

Patch 8.2.5149 (after 8.2.5148)

Problem: Cannot build without the +eval feature. (Tony Mechelynck)  
Solution: Add #ifdefs.  
Files: src/ex\_getln.c

Patch 8.2.5150

Problem: Read past the end of the first line with ":0;{'".  
Solution: When on line zero check the column is valid for line one.  
Files: src/ex\_docmd.c, src/testdir/test\_cmdline.vim

Patch 8.2.5151

Problem: Reading beyond the end of the line with lisp indenting.  
Solution: Avoid going over the NUL at the end of the line.  
Files: src/indent.c, src/testdir/test\_lispwords.vim

Patch 8.2.5152

Problem: search() gets stuck with "c" and skip evaluates to true.  
Solution: Reset the SEARCH\_START option. (closes #10608)  
Files: src/evalfunc.c, src/testdir/test\_syntax.vim

Patch 8.2.5153

Problem: "make uninstall" does not remove colors/lists.  
Solution: Add a line to the Makefile. (closes #10609)  
Files: src/Makefile

Patch 8.2.5154

Problem: Still mentioning version8, some cosmetic issues.  
Solution: Prefer mentioning version9, cosmetic improvements.  
Files: src/version.c, src/if\_tcl.c, src/regexp.c,  
src/testdir/test\_gui.vim, src/os\_unix.c, Filelist, src/Makefile

Patch 8.2.5155

Problem: In diff mode windows may get out of sync. (Gary Johnson)  
Solution: Avoid that the other window scrolls for '**cursorbind**'.  
Files: src/move.c, src/testdir/test\_diffmode.vim,  
src/testdir/dumps/Test\_diff\_scroll\_1.dump,

src/testdir/dumps/Test\_diff\_scroll\_2.dump

Patch 8.2.5156

Problem: Search timeout test often fails with FreeBSD.  
Solution: Double the maximum time.  
Files: src/testdir/test\_search.vim

Patch 8.2.5157

Problem: MS-Windows GUI: CTRL-key combinations do not always work.  
Solution: Handle special key combinations better. (closes #10613,  
closes #10602, closes #10579)  
Files: src/gui\_w32.c

Patch 8.2.5158

Problem: TSTP and INT signal tests are not run with valgrind.  
Solution: Sleep a bit longer. (closes #10614)  
Files: src/testdir/test\_signals.vim

Patch 8.2.5159 (after 8.2.5157)

Problem: Fix for CTRL-key combinations causes more problems than it solves.  
Solution: Roll back the change.  
Files: src/gui\_w32.c

Patch 8.2.5160

Problem: Accessing invalid memory after changing terminal size.  
Solution: Adjust cmdline\_row and msg\_row to the value of Rows.  
Files: src/term.c

Patch 8.2.5161

Problem: Might still access invalid memory.  
Solution: Add extra check for negative value.  
Files: src/message.c

Patch 8.2.5162

Problem: Reading before the start of the line with BS in Replace mode.  
Solution: Check the cursor column is more than zero.  
Files: src/edit.c

Patch 8.2.5163

Problem: Crash when deleting buffers in diff mode.  
Solution: Recompute diffs later. Skip window without a valid buffer.  
Files: src/diff.c, src/testdir/test\_diffmode.vim

Patch 8.2.5164

Problem: Invalid memory access after diff buffer manipulations.  
Solution: Use zero offset when change removes all lines in a diff block.  
Files: src/diff.c, src/testdir/test\_diffmode.vim

Patch 8.2.5165

Problem: Import test fails because 'diffexpr' isn't reset.  
Solution: Reset 'diffexpr'.  
Files: src/testdir/test\_vim9\_import.vim

Patch 8.2.5166

Problem: Test for DiffUpdated fails.  
Solution: Also accept a count of two.  
Files: src/testdir/test\_diffmode.vim

#### Patch 8.2.5167

Problem: get(Fn, 'name') on funcref returns special byte code.  
Solution: Use the printable name.  
Files: src/evalfunc.c, src/testdir/test\_getvar.vim

#### Patch 8.2.5168

Problem: Cannot build with Python 3.11.  
Solution: Adjust define for \_PyObject\_TypeCheck. (Zdenek Dohnal, closes #10627)  
Files: src/if\_python3.c

#### Patch 8.2.5169

Problem: Nested :source may use NULL pointer.  
Solution: Do not use the NULL pointer.  
Files: src/eval.c, src/testdir/test\_vimscript.vim

#### Patch 8.2.5170

Problem: Tiny issues.  
Solution: Tiny improvements.  
Files: src/misc1.c, src/screen.c, src/vim.h

#### Patch 8.2.5171

Problem: Dependencies and proto files are outdated.  
Solution: Update dependencies and proto files. Avoid errors.  
Files: src/Makefile, src/gui\_w32.c, src/os\_mswin.c, src/proto/buffer.pro, src/proto/cmdexpand.pro, src/proto/getchar.pro, src/proto/help.pro, src/proto/mbyte.pro, src/proto/option.pro, src/proto/screen.pro, src/proto/syntax.pro, src/proto/textformat.pro, src/proto/textobject.pro, src/proto/time.pro, src/proto/gui\_x11.pro, src/proto/if\_tcl.pro, src/proto/os\_mswin.pro

#### Patch 8.2.5172

Problem: "make menu" still uses legacy script.  
Solution: make menu generation script use Vim9 script, fix errors.  
Files: runtime/makemenu.vim

---

## VERSION 9.1

version-9.1 version9.1 vim-9.1

This section is about improvements made between version 9.0 and 9.1. The release 9.1 is dedicated to Vim's Benevolent dictator for life [Bram-Moolenaar](#) .

This release has hundreds of bug fixes, there are a few new features and there are many minor improvements.

### Vim9 classes

---

Support for classes and objects in a Vim9 script are added. This is described in `vim9-class`. The following features are supported:

- Defining classes and instantiating objects
- Multiple constructors
- Class variables and methods
- Object variables and methods
- Public and protected access for variables and methods
- Constant and final object/class variables
- Extending classes (single inheritance)
- Interfaces
- Abstract classes
- Exporting classes

Support for creating a type alias for an existing type is added.

### Virtual text

---

Support for adding `virtual-text` to a buffer is added. This is useful for language server features (e.g. inlay hints)

### Smooth Scroll

---

Support for scrolling text using screen lines instead of file lines is added. Refer to the `'smoothscroll'` option.

The EditorConfig ( `editorconfig-install` ) and the JSON formatting ( `ft-json-plugin` ) plugins are included.

OpenVMS x86\_64 platform port: <http://www.polarhome.com/vim/>

new-other-9.1

### Other improvements

---

- Support for undercurl ( `t_Ce` ), double underline ( `t_Us` ), dotted underline ( `t_ds` ) and dashed underline ( `t_Ds` ) termcap entries and highlight modes ( `highlight-term` ).
- The `'fillchars'` option is now a global-local option and allows to specify the character used for the last window line.
- The `:vertical` and `:horizontal` modifiers can be used with `":wincmd ="` command to equalize windows vertically or horizontally.
- `:defer` command to defer the execution of a function till the end of a function.
- Support for closing a tab page using the middle mouse button.
- Sound support in MacOS.
- The `prop_remove()` function can now remove multiple text properties.
- The `items()` function now supports a List or a String argument.
- The `repeat()` function now supports blob repeat.
- Command line completion support for `:runtime` command.
- Support for custom completion using `getcompletion()`.
- Command-line completion support for option values.
- Support for multiple `"%="` items in `'statusline'`.
- Support for the `PmenuKind`, `PmenuKindSel`, `PmenuExtra` and `PmenuExtraSel` highlight groups.
- Text properties can override `'cursorline'` highlight.

- Support for echoing messages in a popup window `:echowindow` .
- Control scroll behavior when splitting windows `'splitkeep'`.
- Support for mouse scrolling in the MS-Windows console.
- Support for using different keyboard protocols `'keyprotocol'` (xterm `modifyOtherKeys` and Kitty terminal protocol (CSI u) support).
- Support for UTF-16 string index.
- Quickfix list items can have associated custom user data.
- `reverse()` supports reversing a string.
- `'switchbuf'` is used by more commands.
- `undotree()` can be used with any buffer.
- `printf()` supports positional arguments.
- `col()` , `charcol()` and `virtcol()` can be used with different windows.
- Support for Python3 stable ABI ( `python-stable` ).
- Use `jumplist` like a stack `'jumpoptions'`.
- Support for writing extended attributes in Linux ( `xattr` ).
- `'errorformat'` supports parsing a buffer number ("%b").
- Support for building the python interface using Python 3.12.
- `matchaddpos()` is no longer limited to 8 positions.
- `readblob()` allows to read part of a file.
- `'shortmess'` allows to suppress "scanning" messages.
- Add the XChaCha20v2 encryption method `'cryptmethod'`.
- Add support for testing syntax files.
- Support "\*" for filename expansion with bash using globstar setting.
- Add quadruple prime digraph using 4'.
- Better high dpi support on Windows.
- Various fixes for unsafe memory access, memory leaks, buffer overflows and potential crashes.
- Termdebug: Support for the variables window ( `termdebug_variables_window` ), moving up/down the stack frames ( `termdebug-frames` ) and setting temporary breakpoints ( `:Tbreak` ).
- xxd: support for using colors in the hex dump output ( `xxd -R` ).
- xxd: reversing a bit dump ( `xxd -r` ).
- xxd: customize the variable name used in the C include output ( `xxd -n` ).

changed-9.1

## Changed

- The features `++builtin_terms` , `+cmdline_info` , `+cmdwin` , `+file_in_path` , `+float` , `+path_extra` , `+textobjects` , `+wildignore` and `+wildmenu` are available in all the builds.
- Support for Windows-XP is dropped (starting with v9.0.0496)
- Support for VisVim is removed.
- The "small" and "big" builds are dropped in favor of "tiny" and "huge" builds.
- Mention the detected `'keyprotocol'` on ":verbose map" when listing mappings.
- The optional Content-Type header is removed from the LSP messages.
- `charidx()` returns the character length when the index is one more than the last byte index.
- Ctrl-Q works like Ctrl-V in replace mode.
- `popup_filter_menu()` now wraps around.
- `popup_create()` now aborts on an error.
- `g<End>` now jumps to the last non-blank character.
- dot and hyphen are supported in highlight group names.
- `executable()` resolves symlinks on MS-Windows.

- Ruby 1.8 support is dropped.
- **'ttyfast'** is always set.
- `virtcol2col()` returns the first byte for a multi-byte character.
- `i_CTRL-0` resets Select Mode.
- `mode()` returns more submodes.
- `r` with **CTRL-C** on a visual area replaces using **CTRL-C** consistently.
- The matchparen plugin no longer uses hard coded match id 3.
- The Statusline no longer uses hard coded values `"^"` and `"="` if the highlighting groups for the statusline have been cleared.
- **'maxfuncdepth'** setting is also used for the maximum callback depth.
- Migrate to autoconf 2.71.
- Start using C99 feature (declare variable in for loops).

added-9.1

Added

-----

Various syntax, indent and other plugins were added.

#### Functions:

<code>err_teapot()</code>	produce error 418 or 503
<code>getbufoneline()</code>	get a single line from the specified buffer
<code>getcellwidths()</code>	get character cell width overrides
<code>getmousethshape()</code>	get name of the current mouse shape
<code>getscriptinfo()</code>	get list of sourced vim scripts
<code>indexof()</code>	index in a List or Blob of a true expression
<code>instanceof()</code>	check if a variable is an instance of a given class
<code>keytrans()</code>	translate internal key codes to be usable with <code>:map</code>
<code>popup_findecho()</code>	get window ID for popup used for <code>:echowindow</code>
<code>setcmdline()</code>	set the current command line
<code>strutf16len()</code>	number of UTF-16 code units in a string
<code>swapfilelist()</code>	list of existing swap files in <b>'directory'</b>
<code>test_mswin_event()</code>	generate an MS-Windows event for testing
<code>utf16idx()</code>	UTF-16 index of a byte in a string

#### Autocommands:

<code>TextChangedT</code>	after a change was made to the text in Terminal mode
<code>WinResized</code>	after a window in the current tab page is resized

#### Commands:

<code>:abstract</code>	declare a Vim9 abstract class
<code>:class</code>	start of a class declaration
<code>:defer</code>	call function when current function is done
<code>:echowindow</code>	same as <code>:echomsg</code> , but use a popup window
<code>:endinterface</code>	end of an interface declaration
<code>:endclass</code>	end of a class declaration
<code>:horizontal</code>	following window command works horizontally
<code>:interface</code>	start of an interface declaration
<code>:public</code>	prefix for a class or object member

`:static`            prefix for a class member or function  
`:this`            prefix for an object member  
`:type`            create a type alias

#### Options:

`'endoffile'`        write **CTRL-Z** at end of the file  
`'jumpoptions'`     specifies how jumping is done  
`'keyprotocol'`     what keyboard protocol to use for what terminal  
`'lispoptions'`     changes how Lisp indenting is done  
`'showcmdloc'`     where to show (partial) command  
`'smoothscroll'`    scroll by screen lines when `'wrap'` is set  
`'splitkeep'`       determines scroll behavior for split windows

---

#### PATCHES

[patches-9.1](#)    [bug-fixes-9.1](#)  
[patches-after-9.0](#)

The list of patches that got included since 9.0.0. This includes all the new features, but does not include runtime file changes (syntax, indent, ftpplugin, documentation, etc.)

**Note:** authorship and the list of changed files is left out and only visible through ``git log`` for each commit.

Patch 9.0.0001

Problem:    Travis CI is no longer used.

Solution:    Delete the Travis CI configuration. (Hugo Osvaldo Barrera, closes #10636)

Patch 9.0.0002

Problem:    Map functionality outside of map.c.

Solution:    Move f\_hasmapto() to map.c. Rename a function. (closes #10611)

Patch 9.0.0003

Problem:    Functions are global while they could be local.

Solution:    Add "static". Add a few tests. (Yegappan Lakshmanan, closes #10612)

Patch 9.0.0004

Problem:    Plural messages not translated properly.

Solution:    Use ngettext() in a few more places. (Matvey Tarasov, closes #10606)

Patch 9.0.0005

Problem:    Hare files are not recognized.

Solution:    Add a filetype pattern. (Hugo Osvaldo Barrera, closes #10630)

Patch 9.0.0006

Problem:    Not all Visual Basic files are recognized.

Solution:    Change detection of \*.cls files. (Doug Kearns)

Patch 9.0.0007

Problem: No support for double, dotted and dashed underlines.  
Solution: Add the termcap entries and highlight modes. (closes #9553)

Patch 9.0.0008

Problem: Cannot specify the variable name for "xxd -i".  
Solution: Add the "-name" argument. (David Gow, closes #10599)

Patch 9.0.0009

Problem: Going past the end of a menu item with only modifier.  
Solution: Check for NUL.

Patch 9.0.0010

Problem: Returning 0 for has('patch-9.0.0') is inconsistent.  
Solution: Make it return 1. (closes #10640)

Patch 9.0.0011

Problem: Reading beyond the end of the line with put command.  
Solution: Adjust the end mark position.

Patch 9.0.0012

Problem: Signature files not detected properly.  
Solution: Add a function to better detect signature files. (Doug Kearns)

Patch 9.0.0013

Problem: Reproducing memory access errors can be difficult.  
Solution: When testing, copy each line to allocated memory, so that valgrind can detect accessing memory before and/or after it. Fix uncovered problems.

Patch 9.0.0014

Problem: Missing part of the test override change.  
Solution: Add the missing part.

Patch 9.0.0015

Problem: With EXITFREE defined terminal menus are not cleared.  
Solution: Also clear terminal menus. Remove condition that is always true. (closes #10641)

Patch 9.0.0016

Problem: Comparing line pointer for '**breakindent**' is not reliable.  
Solution: Make a copy of the line.

Patch 9.0.0017

Problem: Accessing memory beyond the end of the line.  
Solution: Stop Visual mode when closing a window.

Patch 9.0.0018

Problem: Going over the end of the typeahead.  
Solution: Put a NUL after the typeahead.

Patch 9.0.0019

Problem: Timers test not run where possible.  
Solution: Adjust platform checks. (closes #10645)

Patch 9.0.0020

Problem: With some completion reading past end of string.  
Solution: Check the length of the string.

Patch 9.0.0021

Problem: Invalid memory access when adding word with a control character to the internal spell word list.  
Solution: Disallow adding a word with control characters or a trailing slash.

Patch 9.0.0022

Problem: Spell test fails.  
Solution: Expect new error is given.

Patch 9.0.0023

Problem: On Solaris timer\_create() exists but does not work.  
Solution: Adjust the configure check to run the test program.  
(closes #10647)

Patch 9.0.0024

Problem: May access part of typeahead buf that isn't filled.  
Solution: Check length of typeahead.

Patch 9.0.0025

Problem: Accessing beyond allocated memory when using the cmdline window in Ex mode.  
Solution: Use "\*" instead of "<,>" for Visual mode.

Patch 9.0.0026

Problem: Accessing freed memory with diff put.  
Solution: Bail out when diff pointer is no longer valid.

Patch 9.0.0027

Problem: The command line test is getting quite big.  
Solution: Move command line window tests to a separate file.

Patch 9.0.0028

Problem: MS-Windows: tests fail if there is a stray "runtime" directory.  
Solution: Only use a "runtime" directory if it contains "defaults.vim".

Patch 9.0.0029

Problem: The bitmaps/vim.ico file is not in the distribution.  
Solution: Add it back to the distribution. Adjust the build rules to have it end up in the right place.

Patch 9.0.0030

Problem: Matchfuzzy test depends on path of current directory.  
Solution: Use fnamemodify() to remove the path. (Robin Becker, closes #10650)

Patch 9.0.0031

Problem: <cmmod> of user command does not have correct verbose value.  
Solution: Use the value from the command modifier. (closes #10651)

Patch 9.0.0032

Problem: In the quickfix window **'cursorline'** overrules QuickFixLine highlighting.

Solution: Combine the attributes. Add a test. (closes #10654)

Patch 9.0.0033

Problem: On a Belgian keyboard CTRL-[ does not work.

Solution: Handle GDK\_KEY\_dead\_circumflex. (Anton Sharonov, closes #10658)

Patch 9.0.0034

Problem: Spell tests do not always clear the word list.

Solution: Clear the word list in TearDown(). (closes #10659)

Patch 9.0.0035

Problem: Spell dump may go beyond end of an array.

Solution: Limit the word length.

Patch 9.0.0036

Problem: **'fillchars'** cannot have window-local values.

Solution: Make **'fillchars'** global-local. (closes #5206)

Patch 9.0.0037

Problem: Build error.

Solution: Add missing change.

Patch 9.0.0038

Problem: **'listchars'** test fails.

Solution: Use window-local value after setting the global value

Patch 9.0.0039

Problem: Not all systems have GDK\_KEY\_dead\_circumflex. (Hisashi T Fujinaka)

Solution: Add an #ifdef.

Patch 9.0.0040

Problem: Use of set\_chars\_option() is confusing.

Solution: Add "apply" argument to store the result or not. Merge similar code.

Patch 9.0.0041

Problem: A couple of filetype patterns do not have "\*" before "/etc".

Solution: Add the star. (Jonas Strittmatter, closes #10662)

Patch 9.0.0042

Problem: Missing change for filetype detection.

Solution: Include change to detect guile from shebang line.

Patch 9.0.0043

Problem: Insufficient testing for bracket commands.

Solution: Add a few more tests. (closes #10668)

Patch 9.0.0044

Problem: Typos in comments, wrapping lines.

Solution: Adjust comments. Wrap lines.

Patch 9.0.0045

Problem: Reading past end of completion with a long line and **'infercase'** set.

Solution: Allocate the string if needed.

Patch 9.0.0046

Problem: Reading past end of completion with duplicate match.

Solution: Check string length

Patch 9.0.0047

Problem: Using freed memory with recursive substitute.

Solution: Always make a copy for reg\_prev\_sub.

Patch 9.0.0048

Problem: Cursor in wrong column with mouse click after concealed text.

Solution: Store the text column when drawing text.

Patch 9.0.0049

Problem: Csv and tsv files are not recognized.

Solution: Add patterns for csv and tsv files. (Leandro Lourenci, closes #10680)

Patch 9.0.0050

Problem: Split else-of is confusing.

Solution: Join the lines. (closes #10696)

Patch 9.0.0051

Problem: Using **CTRL-C** with :append may hang Vim.

Solution: Reset got\_int. (closes #10729, closes #10728)

Patch 9.0.0052

Problem: "zG" may throw an error if invalid character follows.

Solution: Pass the word length to valid\_spell\_word(). (Ken Takata, closes #10737)

Patch 9.0.0053

Problem: E1281 not tested with the old regexp engine.

Solution: Loop over the values of **'regexp'**. (Dominique Pellé, closes #10695)

Patch 9.0.0054

Problem: Compiler warning for size\_t to int conversion.

Solution: Add type cast. (Mike Williams, closes #10741)

Patch 9.0.0055

Problem: Bitbake files are not detected.

Solution: Add bitbake filetype detection by file name and contents. (Gregory Anders, closes #10697)

Patch 9.0.0056

Problem: Wrong line number reported when :cexpr fails in :def function.

Solution: Set line\_number before executing :cexpr. (closes #10735)

Patch 9.0.0057

Problem: has('patch-xxx') returns true.

Solution: Check for digit. (closes #10751)

Patch 9.0.0058

Problem: Win32: cannot test low level events.

Solution: Add "sendevent" to test\_gui\_event(). (Yegappan Lakshmanan, closes #10679)

Patch 9.0.0059

Problem: Test file has wrong name.

Solution: Rename the file. Various small fixes. (closes #10674)

Patch 9.0.0060

Problem: Accessing uninitialized memory when completing long line.

Solution: Terminate string with NUL.

Patch 9.0.0061

Problem: ml\_get error with nested autocommand.

Solution: Also check line numbers for a nested autocommand. (closes #10761)

Patch 9.0.0062

Problem: Compiler warnings for signed/unsigned char.

Solution: Add type casts. (John Marriott)

Patch 9.0.0063

Problem: Too many type casts for dict\_get functions.

Solution: Change the key argument from "char\_u \*" to "char \*".

Patch 9.0.0064

Problem: Confusing error when using "q:" in command line window.

Solution: Check for the situation and give a better error message. (closes #10756)

Patch 9.0.0065

Problem: Cross-compiling doesn't work because of timer\_create check.

Solution: Use AC\_CACHE\_CHECK(). (Richard Purdie, closes #10777)

Patch 9.0.0066

Problem: Switching window unnecessarily when getting buffer options.

Solution: Do not switch window when getting buffer options. (closes #10767)

Patch 9.0.0067

Problem: Cannot show virtual text.

Solution: Initial changes for virtual text support, using text properties.

Patch 9.0.0068

Problem: Build fails with tiny features.

Solution: Add #ifdef.

Patch 9.0.0069

Problem: Leaking memory when using text prop with inserted text.

Solution: Clear the growarray with text.

Patch 9.0.0070

Problem: Using utfc\_ptr2char\_len() when length is negative.

Solution: Check value of length. (closes #10760)

Patch 9.0.0071

Problem: Command overlaps with printed text in scrollbar.

Solution: Clear until end-of-line and use correct message chunk.  
(closes #10765, closes #10764)

Patch 9.0.0072

Problem: Compiler warning for uninitialized variable.

Solution: Initialize it. (John Marriott)

Patch 9.0.0073

Problem: Too many files recognized as bsd.

Solution: Use pattern "\*.bsd" instead of "\*bsd". (Martin Tournoij,  
closes #10783)

Patch 9.0.0074

Problem: Coverity warns for double free.

Solution: Reset cts\_text\_prop\_count when freeing cts\_text\_props.

Patch 9.0.0075

Problem: Some compilers warn for using an uninitialized variable. (Tony  
Mechelynck)

Solution: Initialize the variable.

Patch 9.0.0076

Problem: No test for what patch 8.1.1424 fixes.

Solution: Add a test. (closes #10789)

Patch 9.0.0077

Problem: When switching window in autocmd the restored cursor position may  
be wrong.

Solution: Do not restore the cursor if it was not set. (closes #10775)

Patch 9.0.0078

Problem: Star register is changed when deleting and both "unnamed" and  
"unnamedplus" are in **'clipboard'**.

Solution: Make the use of the star register work as documented. (Ernie Rael,  
closes #10669)

Patch 9.0.0079

Problem: Error in autoload script not reported for **'foldexpr'**.

Solution: Reset "emsg\_off" when auto-loading a script. (closes #10685)

Patch 9.0.0080

Problem: Compiler warning for size\_t to int conversion.

Solution: Add type casts. (Mike Williams, closes #10795)

Patch 9.0.0081

Problem: Command line completion of user command may have duplicates.  
(Dani Dickstein)

Solution: Skip global user command if an identical buffer-local one is  
defined. (closes #10797)

Patch 9.0.0082

Problem: Cannot interrupt global command from command line.  
Solution: Reset got\_int in another place. (closes #10739)

Patch 9.0.0083

Problem: ModeChanged event not triggered when leaving the cmdline window.  
Solution: Call may\_trigger\_modechanged(). (closes #10791)

Patch 9.0.0084

Problem: Using "terraform" filetype for .tfvars file is bad.  
Solution: use "terraform-vars", so that different completion and other mechanisms can be used. (Radek Simko, closes #10755)

Patch 9.0.0085

Problem: ":write" fails after ":file name" and the ":edit".  
Solution: Reset BF\_NOTEDITED when using ":edit". (closes #10790)

Patch 9.0.0086

Problem: Tabline is not redrawn when entering command line.  
Solution: Set "redraw\_tabline". (closes #10771)

Patch 9.0.0087

Problem: MS-Windows: CTRL-[ on Belgian keyboard does not work like Esc.  
Solution: Figure out what the key code means. (Anton Sharonov, closes #10687, closes #10454)

Patch 9.0.0088

Problem: Pattern for detecting bitbake files is not sufficient.  
Solution: Adjust the pattern. (Gregory Anders, closes #10743)

Patch 9.0.0089

Problem: Fuzzy argument completion doesn't work for shell commands.  
Solution: Check for cmdidx not being CMD\_bang. (Yegappan Lakshmanan, closes #10769)

Patch 9.0.0090

Problem: No error when assigning bool to a string option with setwinvar().  
Solution: Give an error (closes #10766)

Patch 9.0.0091

Problem: Duplicate error number.  
Solution: Use unique error number.

Patch 9.0.0092

Problem: Plugins cannot change v:completed\_item.  
Solution: Make v:completed\_item writeable. (Shougo Matsushita, closes #10801)

Patch 9.0.0093

Problem: Sway config files are recognized as i3config.  
Solution: Recognize swayconfig separately. (James Eapen, closes #10672)

Patch 9.0.0094

Problem: Cursor restored unexpected with nested autocommand.

Solution: Do not restore the cursor when it was moved intentionally.  
(closes #10780)

Patch 9.0.0095

Problem: Conditions are always true.  
Solution: Remove useless conditions. (closes #10802)

Patch 9.0.0096

Problem: Flag "new\_value\_allocated" is always true.  
Solution: Remove "new\_value\_allocated". (closes #10792)

Patch 9.0.0097

Problem: Long quickfix line is truncated for :clist.  
Solution: Allocate a buffer if needed.

Patch 9.0.0098

Problem: missing include file in timer\_create configure check.  
Solution: Include stdlib.h.

Patch 9.0.0099

Problem: Scrollback can be wrong after redrawing the command line.  
Solution: Clear unfinished scrollback when redrawing. (closes #10807)

Patch 9.0.0100

Problem: Get hit-enter prompt for system() when '!' is in 'guioptions'.  
Solution: Do not call wait\_return() when not redrawing. (closes #3327)

Patch 9.0.0101

Problem: Invalid memory access in diff mode with "dp" and undo.  
Solution: Make sure the line number does not go below one.

Patch 9.0.0102

Problem: Reading past end of line with insert mode completion.  
Solution: Check text length.

Patch 9.0.0103

Problem: If running configure with cached results -lrt may be missing.  
Solution: Use two cache variables, one without and one with -lrt.  
(closes #10799) Swap checks to avoid adding -lrt unnecessarily.

Patch 9.0.0104

Problem: Going beyond allocated memory when evaluating string constant.  
Solution: Properly skip over <Key> form.

Patch 9.0.0105

Problem: Illegal memory access when pattern starts with illegal byte.  
Solution: Do not match a character with an illegal byte.

Patch 9.0.0106

Problem: Illegal byte regexp test doesn't fail when fix is reversed.  
Solution: Make sure illegal bytes end up in sourced script file.

Patch 9.0.0107

Problem: Condition always has the same value.

Solution: Remove the condition.

Patch 9.0.0108

Problem: Configure check for timer\_create may give wrong error.

Solution: Give a warning instead of an error.

Patch 9.0.0109

Problem: Writing over the end of a buffer on stack when making list of spell suggestions.

Solution: Make sure suggested word is not too long. (closes #10812)

Patch 9.0.0110

Problem: Help tag generation picks up words in code examples.

Solution: Skip over examples. (Carlo Teubner, closes #10813)

Patch 9.0.0111

Problem: "nocombine" is missing from synIDattr().

Solution: Add "nocombine". (Muni Tanjim, closes #10816)

Patch 9.0.0112

Problem: MS-Windows: test fails because file already exists.

Solution: Wait a little while until the file is gone.

Patch 9.0.0113

Problem: has() is not strict about parsing the patch version.

Solution: Check the version more strictly. (Ken Takata, closes #10752)

Patch 9.0.0114

Problem: The command line takes up space even when not used.

Solution: Allow for **'cmdheight'** to be set to zero. (Shougo Matsushita, closes #10675, closes #940)

Patch 9.0.0115

Problem: When **'cmdheight'** is zero pressing ':' may scroll a window.

Solution: Add the made\_cmdheight\_nonzero flag and set **'scrolloff'** to zero.

Patch 9.0.0116

Problem: Virtual text not displayed if **'signcolumn'** is "yes".

Solution: Set c\_extra and c\_final to NUL.

Patch 9.0.0117

Problem: Text of removed textprop with text is not freed.

Solution: Free the text when the property is removed. Reduce the array size to ignore NULLs at the end.

Patch 9.0.0118

Problem: No test for what patch 9.0.0155 fixes.

Solution: Add a test. Fix typos. (closes #10822)

Patch 9.0.0119

Problem: Tiny chance that creating a backup file fails.

Solution: Check for EEXIST error. (Ken Takata, closes #10821)

Patch 9.0.0120

Problem: MS-Windows GUI: cannot use AltGr + Space.  
Solution: Check for VK\_MENU instead of VK\_LMENU. (Anton Sharonov, closes #10820, closes #10753)

Patch 9.0.0121

Problem: Cannot put virtual text after or below a line.  
Solution: Add "text\_align" and "text\_wrap" arguments.

Patch 9.0.0122

Problem: Breakindent test fails.  
Solution: Fix condition.

Patch 9.0.0123

Problem: Cannot build with small features.  
Solution: Add #ifdef.

Patch 9.0.0124

Problem: Code has more indent than needed.  
Solution: Use continue and return statements. (closes #10824)

Patch 9.0.0125

Problem: Cursor positioned wrong with virtual text after the line.  
Solution: Clear cts\_with\_trailing.

Patch 9.0.0126

Problem: Expanding file names fails in directory with more than 255 entries.  
Solution: Use an int instead of char\_u to count. (John Drouhard, closes #10818)

Patch 9.0.0127

Problem: Unused variable.  
Solution: Remove the variable. (closes #10829)

Patch 9.0.0128

Problem: Coverity complains about possible double free.  
Solution: Clear the pointer to avoid warnings.

Patch 9.0.0129

Problem: Compiler warning for int/size\_t usage.  
Solution: Add a type cast. (Mike Williams, closes #10830)

Patch 9.0.0130

Problem: Cursor position wrong when inserting around virtual text.  
Solution: Update the cursor position properly.

Patch 9.0.0131

Problem: Virtual text with Tab is not displayed correctly.  
Solution: Change any Tab to a space.

Patch 9.0.0132

Problem: Multi-byte characters in virtual text not handled correctly.  
Solution: Count screen cells instead of bytes.

Patch 9.0.0133

Problem: Virtual text after line moves to joined line. (Yegappan Lakshmanan)

Solution: When joining lines only keep virtual text after the last line.

Patch 9.0.0134

Problem: No test for text property with column zero.

Solution: Add a test. Add message to assert for no open popups.

Patch 9.0.0135

Problem: Comment about tabpage line above the wrong code.

Solution: Move the comment. (closes #10836)

Patch 9.0.0136

Problem: After **CTRL-Left**-mouse click a mouse scroll also has CTRL.

Solution: Reset orig\_mouse\_code also for wheel events. (closes #10840)

Patch 9.0.0137

Problem: Debugger test may fail when \$CWD is very long.

Solution: Skip the test if the directory name is too long. (James McCoy, closes #10837)

Patch 9.0.0138

Problem: Not enough characters accepted for '**spellfile**'.

Solution: Add vim\_is\_fname\_char() and use it for '**spellfile**'.

Patch 9.0.0139

Problem: Truncating virtual text after a line not implemented. Cursor positioning wrong with Newline in the text.

Solution: Implement truncating. Disallow control characters in the text. (closes #10842)

Patch 9.0.0140

Problem: execute() does not use the "legacy" command modifier.

Solution: pass the command modifier in sticky\_cmdmod\_flags. (Kota Kato, closes #10845)

Patch 9.0.0141

Problem: "delmenu" does not remove autocommands. Running menu test function alone fails.

Solution: Delete autocommands Make sure there is at least one menu. (closes #10848)

Patch 9.0.0142

Problem: Crash when adding and removing virtual text. (Ben Jackson)

Solution: Check that the text of the text property still exists.

Patch 9.0.0143

Problem: Cursor positioned after virtual text in empty line.

Solution: Keep cursor in the first column. (closes #10786)

Patch 9.0.0144

Problem: Text property cannot override '**cursorline**' highlight.

Solution: Add the "override" flag to prop\_type\_add(). (closes #5533,

closes #8225).

Patch 9.0.0145

Problem: Substitute that joins lines drops text properties.  
Solution: Move text properties of the last line to the new line.

Patch 9.0.0146

Problem: Missing part of change for "override" flag.  
Solution: Add the missing change.

Patch 9.0.0147

Problem: Cursor positioned wrong after two text properties with virtual text and "below" alignment. (Tim Pope)  
Solution: Do not stop after a text property using MAXCOL. (closes #10849)

Patch 9.0.0148

Problem: A "below" aligned text property gets '**showbreak**' displayed.  
Solution: Do not use '**showbreak**' before or in virtual text. (issue #10851)

Patch 9.0.0149

Problem: Test for fuzzy completion fails sometimes.  
Solution: Use a more specific file name to minimize the chance of matching a random directory name. (closes #10854)

Patch 9.0.0150

Problem: Error for using #{ in an expression is a bit confusing.  
Solution: Mention that this error is only given for an expression.  
Avoid giving the error more than once. (closes #10855)

Patch 9.0.0151

Problem: A "below" aligned text property does not work with '**nowrap**'.  
Solution: Start a new screen line to display the virtual text.  
(closes #10851)

Patch 9.0.0152

Problem: Warning for unused argument in small build.  
Solution: Add "UNUSED".

Patch 9.0.0153

Problem: No fold and sign column for virtual text with "below" align and '**nowrap**'.  
Solution: Go back to draw state WL\_START when moving to the next line.  
(closes #10851)

Patch 9.0.0154

Problem: Text properties wrong after splitting a line.  
Solution: Check for text properties after the line. (closes #10857)

Patch 9.0.0155

Patch 9.0.0156

Problem: Giving E1170 only in an expression is confusing.  
Solution: Give E1170 for any "#{ comment". (closes #10855)

Patch 9.0.0157

Problem: **'showbreak'** displayed below truncated "after" text prop.  
Solution: Suppress **'showbreak'** when "after" prop doesn't wrap.

Patch 9.0.0158

Problem: With **'nowrap'** "below" property not displayed correctly.  
Solution: Adjust virtual text with **'nowrap'**, do not truncate.

Patch 9.0.0159

Problem: Cannot build with small features.  
Solution: Check for E1170 only with FEAT\_EVAL.

Patch 9.0.0160

Problem: Some diff mode tests fail.  
Solution: Only advance "ptr" when a text property follows.

Patch 9.0.0161

Problem: Warning for uninitialized variable. (Tony Mechelynck)  
Solution: Initialize line\_attr\_save.

Patch 9.0.0162

Problem: Text property "below" gets indent if **'breakindent'** is set. (Tim Pope)  
Solution: Do not put indent before text property. (closes #10859)

Patch 9.0.0163

Problem: Text property not adjusted for text inserted with "p".  
Solution: Adjust column and length of text properties.

Patch 9.0.0164

Problem: Using freed memory with put command.  
Solution: Get byte offset before replacing the line.

Patch 9.0.0165

Problem: Looking up a text property type by ID is slow.  
Solution: Keep an array of property types sorted on ID.

Patch 9.0.0166

Problem: When using text properties the line text length is computed twice.  
Solution: If the text length was already computed don't do it again.

Patch 9.0.0167

Problem: Checking for text properties could be a bit more efficient.  
Solution: Return early when there are no text properties. Update TODO items.

Patch 9.0.0168

Problem: Cursor positioned wrong with two virtual text properties close together. (Ben Jackson)  
Solution: Add the original size, not the computed one. (closes #10864)

Patch 9.0.0169

Problem: Insufficient testing for line2byte() with text properties.  
Solution: Add tests with a lot of text.

Patch 9.0.0170

Problem: Various minor code formatting issues.  
Solution: Improve code formatting.

Patch 9.0.0171

Problem: Quickfix line highlight is overruled by **'cursorline'**.  
Solution: Reverse the combination of attributes. (closes #10654)

Patch 9.0.0172

Problem: Trying to allocate zero bytes.  
Solution: Do not allocate the proptype array when there are none.  
(closes #10867)

Patch 9.0.0173

Problem: Assert fails only on MS-Windows.  
Solution: Disable the assert for now.

Patch 9.0.0174

Problem: No error for using "#{ comment" in a compiled function.  
Solution: Make error checking for "#{ consistent. (closes #10855)

Patch 9.0.0175

Problem: Spell checking for capital not working with trailing space.  
Solution: Do not calculate cap\_col at the end of the line. (Christian  
Brabandt, closes #10870, issue #10838)

Patch 9.0.0176

Problem: Checking character options is duplicated and incomplete.  
Solution: Move checking to check\_chars\_options(). (closes #10863)

Patch 9.0.0177

Problem: Cursor position wrong with **'virtualedit'** and mouse click after end  
of the line. (Hermann Mayer)  
Solution: Do not use ScreenCols[] when **'virtualedit'** is active.  
(closes #10868)

Patch 9.0.0178

Problem: Cursor position wrong with virtual text before Tab.  
Solution: Use the byte length, not the cell with, to compare the column.  
Correct tab size after text prop. (closes #10866)

Patch 9.0.0179

Problem: Cursor position wrong with wrapping virtual text in empty line.  
Solution: Adjust handling of an empty line. (closes #10875)

Patch 9.0.0180

Problem: Stray logfile appears when running tests.  
Solution: Remove ch\_logfile() calls.

Patch 9.0.0181

Problem: Textprop test with line2byte() fails on MS-Windows.  
Solution: Fix updating chunks in ml\_delete\_int().

Patch 9.0.0182

Problem: Quarto files are not recognized.

Solution: Recognize quarto files by the extension. (Jonas Strittmatter, closes #10880)

Patch 9.0.0183

Problem: Extra space after virtual text when `'linebreak'` is set.

Solution: Do not count virtual text when getting linebreak value. (closes #10884)

Patch 9.0.0184

Problem: Virtual text prop highlight continues after truncation.

Solution: Recompute the length of attributes.

Patch 9.0.0185

Problem: Virtual text does not show if there is a text prop at same position. (Ben Jackson)

Solution: Fix the sorting of properties. (closes #10879)

Patch 9.0.0186

Problem: Virtual text without highlighting does not show. (Ben Jackson)

Solution: Use a text property when it has highlighting or when it has text. (closes #10878)

Patch 9.0.0187

Problem: Command line height changes when maximizing window height.

Solution: Do not change the command line height. (closes #10885)

Patch 9.0.0188

Problem: Strange effects when using virtual text with `"text_align"` and non-zero column. (Martin Tournoij)

Solution: Give an error. (closes #10888)

Patch 9.0.0189

Problem: Invalid memory access for text prop without highlight.

Solution: Check for a valid highlight ID.

Patch 9.0.0190

Problem: The way `'cmdheight'` can be made zero is inconsistent.

Solution: Only make `'cmdheight'` zero when setting it explicitly, not when resizing windows. (closes #10890)

Patch 9.0.0191

Problem: Messages test fails; window size incorrect when `'cmdheight'` is made smaller.

Solution: Properly cleanup after test with `cmdheight` zero. Resize windows correctly when `'cmdheight'` gets smaller.

Patch 9.0.0192

Problem: Possible invalid memory access when `'cmdheight'` is zero. (Martin Tournoij)

Solution: Avoid going over the end of `w_lines[]` when `w_height` is Rows. (closes #10882)

Patch 9.0.0193

Problem: Search and match highlight interfere with virtual text highlight.  
(Ben Jackson)

Solution: Check for match highlight after text properties. Reset and restore search highlight when showing virtual text.  
(closes #10892)

Patch 9.0.0194

Problem: Cursor displayed in wrong position after removing text prop. (Ben Jackson)

Solution: Invalidate the cursor position. (closes #10898)

Patch 9.0.0195

Problem: Metafun files are not recognized.

Solution: Add filetype detection patterns.

Patch 9.0.0196

Problem: Finding value in list may require a for loop.

Solution: Add indexof(). (Yegappan Lakshmanan, closes #10903)

Patch 9.0.0197

Problem: Astro files are not detected.

Solution: Add a pattern to match Astro files. (Emilia Zapata, closes #10904)

Patch 9.0.0198

Problem: ml\_get error when switching buffer in Visual mode.

Solution: End Visual mode when switching buffer. (closes #10902)

Patch 9.0.0199

Problem: Cursor position wrong with two right-aligned virtual texts.

Solution: Add the padding for right-alignment. (issue #10906)

Patch 9.0.0200

Problem: cursor in a wrong position if **'wrap'** is off and using two right aligned text props in one line.

Solution: Count an extra line for a right aligned text property after a below or right aligned text property. (issue #10909)

Patch 9.0.0201

Problem: CursorLine highlight overrules virtual text highlight.

Solution: Let extra attribute overrule line attribute. (closes #10909)

Patch 9.0.0202

Problem: Code and help for indexof() is not ideal.

Solution: Refactor the code, improve the help. (Yegappan Lakshmanan, closes #10908)

Patch 9.0.0203

Problem: Confusing variable name.

Solution: Use "prim\_aep" instead of "spell\_aep".

Patch 9.0.0204

Problem: indexof() may leak memory.

Solution: Free allocated values. (Yegappan Lakshmanan, closes #10916)

Patch 9.0.0205

Problem: Cursor in wrong position when inserting after virtual text. (Ben Jackson)

Solution: Put the cursor after the virtual text, where the text will be inserted. (closes #10914)

Patch 9.0.0206

Problem: Redraw flags are not named specifically.

Solution: Prefix "UPD\_" to the flags, for UPDate\_screen().

Patch 9.0.0207

Problem: Stacktrace not shown when debugging.

Solution: Set msg\_scroll in msg\_source(). (closes #10917)

Patch 9.0.0208

Problem: The override flag has no effect for virtual text. (Ben Jackson)

Solution: Make the override flag work. (closes #10915)

Patch 9.0.0209

Problem: Build error with small features.

Solution: Add #ifdef.

Patch 9.0.0210

Problem: **'list'** mode does not work properly with virtual text.

Solution: Show the "\$" at the right position. (closes #10913)

Patch 9.0.0211

Problem: Invalid memory access when compiling :lockvar.

Solution: Don't read past the end of the line.

Patch 9.0.0212

Problem: Invalid memory access when compiling :unlet.

Solution: Don't read past the end of the line.

Patch 9.0.0213

Problem: Using freed memory with error in assert argument.

Solution: Make a copy of the error.

Patch 9.0.0214

Problem: Splitting a line may duplicate virtual text. (Ben Jackson)

Solution: Don't duplicate a text property with virtual text. Make auto-indenting work better. (closes #10919)

Patch 9.0.0215

Problem: Not passing APC\_INDENT flag.

Solution: Pass the flag where it's needed.

Patch 9.0.0216

Problem: Undo earlier test sometimes fails on MS-Windows.

Solution: Use another file name.

Patch 9.0.0217

Problem: **'shellslash'** works differently when sourcing a script again.

Solution: Use the name from the script item. (closes #10920)

Patch 9.0.0218

Problem: Reading before the start of the line.

Solution: When displaying "\$" check the column is not negative.

Patch 9.0.0219

Problem: Cannot make a funcref with "s:func" in a def function in legacy script.

Solution: Allow for using a lower case function name after "s:". (Kota Kato, closes #10926)

Patch 9.0.0220

Problem: Invalid memory access with for loop over NULL string.

Solution: Make sure mb\_ptr2len() consistently returns zero for NUL.

Patch 9.0.0221

Problem: Accessing freed memory if compiling nested function fails.

Solution: Mess up the variable name so that it won't be found.

Patch 9.0.0222

Problem: No good reason why text objects are only in larger builds.

Solution: Graduate +textobjects.

Patch 9.0.0223

Problem: Typo in diffmode test.

Solution: Fix the typo. (closes #10932)

Patch 9.0.0224

Problem: Using NULL pointer when skipping compiled code.

Solution: Check for skipping.

Patch 9.0.0225

Problem: Using freed memory with multiple line breaks in expression.

Solution: Free eval\_tofree later.

Patch 9.0.0226

Problem: job\_start() test may fail under valgrind.

Solution: Wait until the job is running.

Patch 9.0.0227

Problem: Cannot read error message when abort() is called.

Solution: Output a newline before calling abort().

Patch 9.0.0228

Problem: Crash when pattern looks below the last line.

Solution: Consider invalid lines to be empty. (closes #10938)

Patch 9.0.0229

Problem: Vim9: error message for missing type is not clear.

Solution: Mention the context. (issue #10944)

Patch 9.0.0230

Problem: No error for comma missing in list in :def function.

Solution: Check for missing comma. (closes #10943)

Patch 9.0.0231

Problem: Expanding "\*" may loop forever with directory links.

Solution: Check for being interrupted. (closes #10946)

Patch 9.0.0232

Problem: Test with BufNewFile autocmd is flaky.

Solution: Use another file name.

Patch 9.0.0233

Problem: Removing multiple text properties takes many calls.

Solution: Pass a list to prop\_remove(). (Ben Jackson, closes #10945)

Patch 9.0.0234

Problem: Cannot make difference between the end of :normal and a character in its argument.

Solution: Add the "typebuf\_was\_empty" flag. (closes #10950)

Patch 9.0.0235

Problem: 'autoshelldir' does not work with chunked response.

Solution: Collect chunks before parsing OSC 7. (closes #10949)

Patch 9.0.0236

Problem: Popup menu not removed when 'wildmenu' reset while it is visible.

Solution: Do not check p\_wmnu, only pum\_visible(). (closes #10953)

Patch 9.0.0237

Problem: Mac: cannot build if dispatch.h is not available.

Solution: Add #ifdef. (Evan Miller, closes #10954)

Patch 9.0.0238

Problem: Shift-Tab shows matches on cmdline when 'wildmenu' is off.

Solution: Only show matches when 'wildmode' contains "list". (closes #10951)

Patch 9.0.0239

Problem: Build failure without the +wildmenu feature.

Solution: Move parenthesis.

Patch 9.0.0240

Problem: Crash when using ":mkspell" with an empty .dic file.

Solution: Check for an empty word tree.

Patch 9.0.0241

Problem: "make install" does not install shared syntax file. (James McCoy)

Solution: Install and uninstall the shared syntax files. (closes #10956)

Patch 9.0.0242

Problem: "make install" still fails. (Wilhelm Payne)

Solution: Also add the directory to installrtbase. (Dominique Pellé)

Patch 9.0.0243

Problem: Text properties "below" sort differently on MS-Windows.

Solution: Use the ID as a tie breaker. (closes #10958)

Patch 9.0.0244

Problem: Cannot easily get the list of sourced scripts.

Solution: Add the `getscriptinfo()` function. (Yegappan Lakshmanan, closes #10957)

Patch 9.0.0245

Problem: Mechanism to prevent recursive screen updating is incomplete.

Solution: Add `"redraw_not_allowed"` and set it in `build_stl_str_hl()`. (issue #10952)

Patch 9.0.0246

Problem: Using freed memory when `'tagfunc'` deletes the buffer.

Solution: Make a copy of the tag name.

Patch 9.0.0247

Problem: Cannot add padding to virtual text without highlight.

Solution: Add the `"text_padding_left"` argument. (issue #10906)

Patch 9.0.0248

Problem: Duplicate code in finding a script in the execution stack.

Solution: Reduce duplicate code. (closes #10961)

Patch 9.0.0249

Problem: No test for what 9.0.0234 fixes.

Solution: Add a test. (issue #10950)

Patch 9.0.0250

Problem: Slightly inconsistent error messages.

Solution: Make it `"Using a Float"`. (closes #10959)

Patch 9.0.0251

Problem: Test output shows up in git.

Solution: Ignore the `"failed"` directory. (Yao-Ching Huang, closes #10969)

Patch 9.0.0252

Problem: Cursor in wrong place after virtual text.

Solution: Do not change the length of a virtual text property. (closes #10964)

Patch 9.0.0253

Problem: A symlink to an autoload script results in two entries in the list of scripts, items expected in one are actually in the other.

Solution: Have one script item refer to the actually sourced one. (closes #10960)

Patch 9.0.0254

Problem: Typo in function name.

Solution: Rename the function. (closes #10971)

Patch 9.0.0255

Problem: Build failure without the eval feature.

Solution: Add `#ifdef`.

Patch 9.0.0256

Problem: Compiler warning for uninitialized variables.  
Solution: Initialize the variables.

Patch 9.0.0257

Problem: "->" in ":scriptnames" output not tested yet.  
Solution: Add a check.

Patch 9.0.0258

Problem: MS-Windows installer skips syntax/shared.  
Solution: Use "File /r" in the installer script. (Ken Takata, closes #10972)

Patch 9.0.0259

Problem: Crash with mouse click when not initialized.  
Solution: Check tabPageIdxs[] is not NULL.

Patch 9.0.0260

Problem: Using freed memory when using 'quickfixtextfunc' recursively.  
Solution: Do not allow for recursion.

Patch 9.0.0261

Problem: bufload() reads a file even if the name is not a file name. (Cyker Way)  
Solution: Do not read the file when the buffer name is not a file name. (closes #10975)

Patch 9.0.0262

Problem: Build failure without the +quickfix feature.  
Solution: Add #ifdef.

Patch 9.0.0263

Problem: Too many #ifdefs.  
Solution: Make some functions always available.

Patch 9.0.0264

Problem: CI still runs on Ubuntu 18.04.  
Solution: Run CI on Ubuntu 20.04. (closes #10582)

Patch 9.0.0265

Problem: No good reason why the "gf" command is not in the tiny version.  
Solution: Graduate the file\_in\_path feature.

Patch 9.0.0266

Problem: Compiler warning for unused argument.  
Solution: Add UNUSED.

Patch 9.0.0267

Problem: Coverity workflow still uses Ubuntu 18.04.  
Solution: Use Ubuntu 20.04

Patch 9.0.0268

Problem: Build error without the +eval feature.  
Solution: Remove #ifdef.

Patch 9.0.0269

Problem: getscriptinfo() does not include the version. Cannot select entries by script name.

Solution: Add the "version" item and the "name" argument. (Yegappan Lakshmanan, closes #10962)

Patch 9.0.0270

Problem: Some values of 'path' and 'tags' do not work in the tiny version.

Solution: Graduate the +path\_extra feature.

Patch 9.0.0271

Problem: Using INIT() in non-header files.

Solution: Remove INIT(). (closes #10981)

Patch 9.0.0272

Problem: BufReadCmd not triggered when loading a "nofile" buffer. (Maxim Kim)

Solution: Call readfile() but bail out before reading a file. (closes #10983)

Patch 9.0.0273

Problem: Konsole termresponse not recognized.

Solution: Handle Konsole like libvterm, set 'ttymouse' to "sgr". (closes #10990)

Patch 9.0.0274

Problem: Netrw plugin does not show remote files.

Solution: Do read a file when 'buftype' is "acwrite". (closes #10983)

Patch 9.0.0275

Problem: BufEnter not triggered when using ":edit" in "nofile" buffer.

Solution: Let readfile() return NOTDONE. (closes #10986)

Patch 9.0.0276

Problem: 'buftype' values not sufficiently tested.

Solution: Add and extend tests with 'buftype' values. (closes #10988)

Patch 9.0.0277

Problem: Coverity CI: update-alternatives not needed with Ubuntu 20.04.

Solution: Remove update-alternatives for Lua. (closes #10987)

Patch 9.0.0278

Problem: The +wildignore feature is nearly always available.

Solution: Graduate +wildignore for consistency.

Patch 9.0.0279

Problem: The tiny version has the popup menu but not 'wildmenu'.

Solution: Graduate the wildmenu feature.

Patch 9.0.0280

Problem: The builtin termcap list depends on the version.

Solution: Always include all termcap entries. Remove duplicate lines.

Patch 9.0.0281

Problem: Build failure without the +eval feature.  
Solution: Add #ifdef.

Patch 9.0.0282

Problem: A nested timeout stops the previous timeout.  
Solution: Ignore any nested timeout.

Patch 9.0.0283

Problem: Cannot complete "syn list @cluster".  
Solution: Recognize and handle "list @". (Björn Linse, closes #10990)

Patch 9.0.0284

Problem: Using static buffer for multiple completion functions.  
Solution: Use one buffer in expand\_T.

Patch 9.0.0285

Problem: It is not easy to change the command line from a plugin.  
Solution: Add setcmdline(). (Shougo Matsushita, closes #10869)

Patch 9.0.0286

Problem: Using freed memory when location list changed in autocmd.  
Solution: Return QF\_ABORT and handle it. (Yegappan Lakshmanan, closes #10993)

Patch 9.0.0287

Problem: Irix systems no longer exist.  
Solution: Remove references to Irix. (Yegappan Lakshmanan, closes #10994)

Patch 9.0.0288

Problem: When '**cmdheight**' is zero some messages are not displayed.  
Solution: Use a popup notification window.

Patch 9.0.0289

Problem: Invalid memory write.  
Solution: Do not put NUL in a static string.

Patch 9.0.0290

Problem: Compiler warning for variable set but not used.  
Solution: Add #ifdef.

Patch 9.0.0291

Problem: Test failing.  
Solution: Run test with cmdheight=0 last.

Patch 9.0.0292

Problem: Test causes another test to fail.  
Solution: Redraw to remove the popup window

Patch 9.0.0293

Problem: Messages window not hidden when starting a command line.  
Solution: Hide the messages window. (closes #10996)

Patch 9.0.0294

Problem: Crash when '**cmdheight**' is 0 and popup\_clear() used.

Solution: Reset "message\_win" when the message popup is cleared. Close the popup when 'cmdheight' is non-zero. Add a screendump test.

Patch 9.0.0295

Problem: GUI drop files test sometimes fails.

Solution: Mark the test as flaky.

Patch 9.0.0296

Problem: Message in popup is shortened unnecessary.

Solution: Do not use 'showcmd' and 'ruler' for a message in the popup. Set the timer when un hiding the message popup.

Patch 9.0.0297

Problem: Cursor position wrong after right aligned virtual text. (Iizuka Masashi)

Solution: Take the width of the column offset into account. (closes #10997) Also fix virtual text positioning.

Patch 9.0.0298

Problem: Compiler warning for size\_t to int conversion.

Solution: Add a type cast. (Wilhelm Payne, closes #11000)

Patch 9.0.0299

Problem: Error messages for setcmdline() could be better.

Solution: Use more specific error messages. (Yegappan Lakshmanan, closes #10995)

Patch 9.0.0300

Problem: 'coptions' tests are flaky.

Solution: Use a different file name for each test.

Patch 9.0.0301

Problem: The message window popup is delayed after an error message.

Solution: Do not set msg\_on\_display when using the message window.

Patch 9.0.0302

Problem: CI for Coverity is bothered by deprecation warnings.

Solution: Ignore deprecation warnings. (closes #11002)

Patch 9.0.0303

Problem: It is not easy to get information about a script.

Solution: Make getscriptinfo() return the version. When selecting a specific script return functions and variables. (Yegappan Lakshmanan, closes #10991)

Patch 9.0.0304

Problem: WinScrolled is not triggered when only skipcol changes.

Solution: Add w\_last\_skipcol and use it. (closes #10998)

Patch 9.0.0305

Problem: CI lists useless deprecation warnings.

Solution: Ignore deprecation warnings. (closes #11003)

Patch 9.0.0306

Problem: Buffer write message is two lines in message popup window.  
Solution: Overwrite message if "msg\_scroll" is off.

Patch 9.0.0307

Problem: :echomsg doesn't work properly with cmdheight=0.  
Solution: Improve scrolling and displaying.

Patch 9.0.0308

Problem: When cmdheight is zero the attention prompt doesn't show.  
Solution: Do not use the message window for a prompt.

Patch 9.0.0309

Problem: Invalid memory access when cmdheight is zero.  
Solution: Check index in w\_lines is smaller than Rows.

Patch 9.0.0310

Problem: Output of :messages disappears when cmdheight is zero.  
Solution: Do not use the messages window for :messages. Make Esc close the messages window.

Patch 9.0.0311

Problem: Test for hit-Enter prompt fails.  
Solution: Only reset cmdline\_row when 'cmdheight' is zero.

Patch 9.0.0312

Problem: Test for cmdheight zero fails.  
Solution: Do not close the messages window for **CTRL-C**.

Patch 9.0.0313

Problem: Using common name in tests leads to flaky tests.  
Solution: Rename files and directories to be more specific.

Patch 9.0.0314

Problem: VDM files are not recognized.  
Solution: Add patterns for VDM files. (Alessandro Pezzoni, closes #11004)

Patch 9.0.0315

Problem: Shell command is displayed in message window.  
Solution: Do not echo the shell command in the message window.

Patch 9.0.0316

Problem: Screen flickers when 'cmdheight' is zero.  
Solution: Redraw over existing text instead of clearing.

Patch 9.0.0317

Problem: When updating the whole screen a popup may not be redrawn.  
Solution: Mark the screen and windows for redraw also when not clearing.  
Also mark popup windows for redraw.

Patch 9.0.0318

Problem: Clearing screen causes flicker.  
Solution: Do not clear but redraw in more cases. Add () to "wait\_return".

Patch 9.0.0319

Problem: Godot shader files are not recognized.  
Solution: Add patterns for "gdshader". (Maxim Kim, closes #11006)

Patch 9.0.0320

Problem: Command line type of CmdlineChange differs from getcmdtype().  
Solution: Use the same type. (closes #11005)

Patch 9.0.0321

Problem: Cannot use the message popup window directly.  
Solution: Add ":echowindow".

Patch 9.0.0322

Problem: Crash when no errors and 'quickfixtextfunc' is set.  
Solution: Do not handle errors if there aren't any.

Patch 9.0.0323

Problem: Using common name in tests leads to flaky tests.  
Solution: Rename files and directories to be more specific.

Patch 9.0.0324

Problem: MS-Windows: resolve() test fails.  
Solution: Revert renaming the directory.

Patch 9.0.0325

Problem: MS-Windows: completion test fails.  
Solution: Adjust directory prefix.

Patch 9.0.0326

Problem: Some changes for cmdheight=0 are not needed.  
Solution: Revert resize behavior if height is greater than the available space. (Shougo Matsushita, closes #11008)

Patch 9.0.0327

Problem: items() does not work on a list. (Sergey Vlasov)  
Solution: Make items() work on a list. (closes #11013)

Patch 9.0.0328

Problem: OLD\_DIGRAPHS is unused.  
Solution: Remove OLD\_DIGRAPHS. Also drop HPUX\_DIGRAPHS.

Patch 9.0.0329

Problem: ":highlight" hangs when 'cmdheight' is zero.  
Solution: Add to msg\_col when using the message window. (closes #11014)

Patch 9.0.0330

Problem: Method tests fail.  
Solution: Adjust for change of items().

Patch 9.0.0331

Problem: Cannot use items() on a string.  
Solution: Make items() work on a string. (closes #11016)

Patch 9.0.0332

Problem: Overwrite check may block BufWriteCmd.

Solution: Do not use overwrite check when **'buftype'** is "acwrite".  
(closes #11011)

Patch 9.0.0333

Problem: Method test fails.

Solution: Adjust test for items() now working on string.

Patch 9.0.0334

Problem: Test does not properly clean up.

Solution: Fix typo in argument of delete(). (Dominique Pellé, closes #11010)

Patch 9.0.0335

Problem: Checks for Dictionary argument often give a vague error message.

Solution: Give a useful error message. (Yegappan Lakshmanan, closes #11009)

Patch 9.0.0336

Problem: Tests are flaky because of using a common file name.

Solution: Rename files and directories to be more unique.

Patch 9.0.0337

Problem: Flicker when resetting cmdline\_row after updating the screen.

Solution: Do not update cmdline\_row. (issue #11017)

Patch 9.0.0338

Problem: Return value of list\_append\_list() not always checked.

Solution: Check return value and handle failure.

Patch 9.0.0339

Problem: No check if the return value of XChangeGC() is NULL.

Solution: Only use the return value when it is not NULL. (closes #11020)

Patch 9.0.0340

Problem: The **'cmdheight'** zero support causes too much trouble.

Solution: Revert support for **'cmdheight'** being zero.

Patch 9.0.0341

Problem: mapset() does not restore <Nop> mapping properly.

Solution: Use an empty string for <Nop>. (closes #11022)

Patch 9.0.0342

Problem: ":wincmd =" equalizes in two directions.

Solution: Make ":vertical wincmd =" equalize vertically only and  
":horizontal wincmd =" equalize horizontally only.

Patch 9.0.0343

Problem: ColorScheme autocommand triggered when colorscheme is not found.  
(Romain Lafourcade)

Solution: Only trigger ColorScheme when loading the colorscheme succeeds.  
(closes #11024)

Patch 9.0.0344

Problem: MS-Windows: background color wrong in Console.

Solution: Figure out the default console background color. (Yasuhiro  
Matsumoto, issue #10310)

Patch 9.0.0345

Problem: Error message for list argument could be clearer.

Solution: Include the argument number. (Yegappan Lakshmanan, closes #11027)

Patch 9.0.0346

Problem: :horizontal modifier not fully supported.

Solution: Also use :horizontal for completion and user commands.  
(closes #11025)

Patch 9.0.0347

Problem: MS-Windows: cannot set cursor shape in Windows Terminal.

Solution: Make cursor shape work with Windows Terminal. (Ken Takata,  
closes #11028, closes #6576)

Patch 9.0.0348

Problem: MS-Windows: GUI mouse move event test is flaky.

Solution: Wait for a little while for the first move event.

Patch 9.0.0349

Problem: Filetype of \*.sil files not well detected.

Solution: Inspect the file contents to guess the filetype.

Patch 9.0.0350

Problem: :echowindow does not work in a compiled function.

Solution: Handle the expression at compile time.

Patch 9.0.0351

Problem: Message window may obscure the command line.

Solution: Reduce the maximum height of the message window.

Patch 9.0.0352

Problem: using :echowindow in a timer clears part of message

Solution: Do not use msg\_clr\_eos().

Patch 9.0.0353

Problem: Missing entry in switch.

Solution: Add ISN\_ECHOWINDOW.

Patch 9.0.0354

Problem: MS-Windows: starting a python server for test sometimes fails.

Solution: Increase the waiting time for the port.

Patch 9.0.0355

Problem: Check for uppercase char in autoload name is wrong, it checks the  
name of the script.

Solution: Remove the check. (closes #11031)

Patch 9.0.0356

Problem: :echowindow sets the in\_echowindow flag too early.

Solution: Set in\_echowindow only when outputting the text. (Yasuhiro  
Matsumoto, closes #11033)

Patch 9.0.0357

Problem: **'linebreak'** interferes with text property highlight if there is syntax highlighting.

Solution: Check the text prop attributes after combining with syntax attributes. (closes #11035)

Patch 9.0.0358

Problem: **'breakindent'** does not indent non-lists with "breakindentopt=list:-1".

Solution: Adjust indent computation. (Maxim Kim, closes #11038)

Patch 9.0.0359

Problem: Error message for wrong argument type is not specific.

Solution: Include more information in the error. (Yegappan Lakshmanan, closes #11037)

Patch 9.0.0360

Problem: Crash when invalid line number on :for is ignored.

Solution: Do not check breakpoint for non-existing line.

Patch 9.0.0361

Problem: Removing a listener may result in a memory leak and remove subsequent listeners.

Solution: Init the "prev" pointer only once. (Yegappan Lakshmanan, closes #11039)

Patch 9.0.0362

Problem: Expanding ":e %" does not work for remote files.

Solution: If the "%" or "#" file does not exist add the expansion anyway.

Patch 9.0.0363

Problem: Common names in test files causes tests to be flaky.

Solution: Use more specific names.

Patch 9.0.0364

Problem: Clang static analyzer gives warnings.

Solution: Avoid the warnings. (Yegappan Lakshmanan, closes #11043)

Patch 9.0.0365

Problem: File name used in test is unusual.

Solution: Rename it. (Dominique Pellé, closes #11044)

Patch 9.0.0366

Problem: Cannot use import->Func() in lambda. (Israel Chauca Fuentes)

Solution: Adjust how an expression in a lambda is parsed. (closes #11042)

Patch 9.0.0367

Problem: Coverity complains about dropping sign of character.

Solution: Add explicit type cast.

Patch 9.0.0368

Problem: Old Coverity warning for using NULL pointer.

Solution: Bail out if dictionary allocation fails.

Patch 9.0.0369

Problem: A failing flaky test doesn't mention the time.  
Solution: Add the time for debugging. Improve error message.

Patch 9.0.0370

Problem: Cleaning up afterwards can make a function messy.  
Solution: Add the :defer command.

Patch 9.0.0371

Problem: Compiler warning for uninitialized variable.  
Solution: Initialize the variable. (John Marriott)

Patch 9.0.0372

Problem: MS-Windows: "%T" time format does not appear to work.  
Solution: Use "%H:%M:%S" instead.

Patch 9.0.0373

Problem: Coverity warns for NULL check and unused return value.  
Solution: Remove the NULL check, it was already checked earlier. Add (void) to ignore the return value.

Patch 9.0.0374

Problem: Coverity still complains about dropping sign of character.  
Solution: Add intermediate variable.

Patch 9.0.0375

Problem: The footer feature is unused.  
Solution: Remove FEAT\_FOOTER and code.

Patch 9.0.0376

Problem: Clang warns for dead assignments.  
Solution: Adjust the code. (Yegappan Lakshmanan, closes #11048)

Patch 9.0.0377

Problem: Argument assignment does not work.  
Solution: Skip over "=".

Patch 9.0.0378

Problem: Compiler warning for uninitialized variable. (Tony Mechelynck)  
Solution: Initialize it.

Patch 9.0.0379

Problem: Cleaning up after writefile() is a hassle.  
Solution: Add the 'D' flag to defer deleting the written file. Very useful in tests.

Patch 9.0.0380

Problem: Deleting files in tests is a hassle.  
Solution: Use the new 'D' flag of writefile().

Problem: Deleting files in tests is a hassle.  
Solution: Use the new 'D' flag of writefile().

Patch 9.0.0381

Problem: Writefile test leaves files behind.  
Solution: Fix the file names of files to be deleted. (Dominique Pellé, closes #11056)

Patch 9.0.0382

Problem: Freeing the wrong string on failure.  
Solution: Adjust the argument. Reorder the code.

Patch 9.0.0383

Problem: Coverity complains about unused value.  
Solution: Use the value.

Patch 9.0.0384

Problem: Coverity still complains about using return value of getc().  
Solution: Check for EOF.

Patch 9.0.0385

Problem: GUI: when **CTRL-D** is mapped in Insert mode it gets inserted.  
(Yasuhiro Matsumoto)  
Solution: Also recognize modifier starting with CSI. (closes #11057)

Patch 9.0.0386

Problem: Some code blocks are nested too deep.  
Solution: Bail out earlier. (Yegappan Lakshmanan, closes #11058)

Patch 9.0.0387

Problem: repeating a `<ScriptCmd>` mapping does not use the right script context.  
Solution: When using a mapping put `<SID>{sid};` in the redo buffer.  
(closes #11049)

Patch 9.0.0388

Problem: The `do_arg_all()` function is too long.  
Solution: Split the function in smaller parts. (Yegappan Lakshmanan, closes #11062)

Patch 9.0.0389

Problem: Crash when `'tagfunc'` closes the window.  
Solution: Bail out when the window was closed.

Patch 9.0.0390

Problem: Cannot use a partial with `:defer`.  
Solution: Add the partial arguments before the other arguments. Disallow using a dictionary.

Patch 9.0.0391

Problem: Using separate `delete()` call instead of `writefile()` 'D' flag.  
Solution: Use the `writefile` 'D' flag.

Patch 9.0.0392

Problem: Inverted condition is a bit confusing.  
Solution: Remove the `!"` and swap the blocks. (Ken Takata)

Patch 9.0.0393

Problem: Signals test often fails on FreeBSD.  
Solution: Use separate files for Suspend and Resume. (Ken Takata, closes #11065)

Patch 9.0.0394

Problem: Cygwin: multibyte characters may be broken in terminal window.  
Solution: Adjust how to read and write on the channel. (Ken Takata, closes #11063)

Patch 9.0.0395

Problem: Clang warnings for function prototypes.  
Solution: Remove incomplete function prototypes. (closes #11068)

Patch 9.0.0396

Problem: :findrepl does not escape '&' and '~' properly.  
Solution: Escape depending on the value of **'magic'**. (closes #11067)

Patch 9.0.0397

Problem: :defer not tested with exceptions and ":qa!".  
Solution: Test :defer works when exceptions are thrown and when ":qa!" is used. Invoke the deferred calls on exit.

Patch 9.0.0398

Problem: Members of funccall\_T are inconsistently named.  
Solution: Use the "fc\_" prefix for all members.

Patch 9.0.0399

Problem: Using :defer in expression funcref not tested.  
Solution: Add a test. Fix uncovered problems.

Patch 9.0.0400

Problem: GUI test sometimes hangs on CI.  
Solution: Delete a test file explicitly. (Ken Takata, closes #11072)

Patch 9.0.0401

Problem: CI uses older clang version.  
Solution: Switch from clang 14 to 15. (closes #11066)

Patch 9.0.0402

Problem: Javascript module files are not recognized.  
Solution: Recognize "\*.jasm" files as Javascript. (Brett Holman, closes #11069)

Patch 9.0.0403

Problem: **'equalalways'** may be off when **'laststatus'** is zero.  
Solution: call last\_status() before win\_equal(). (Luuk van Baal, closes #11070)

Patch 9.0.0404

Problem: Crash when passing invalid arguments to assert\_fails().  
Solution: Check for NULL string.

Patch 9.0.0405

Problem: Arguments in a partial not used by a :def function.

Solution: Put the partial arguments on the stack.

Patch 9.0.0406

Problem: Deferred functions not invoked when partial func exits.

Solution: Create a funccall\_T when calling a :def function.

Patch 9.0.0407

Problem: matchstr() does match column offset. (Yasuhiro Matsumoto)

Solution: Accept line number zero. (closes #10938)

Patch 9.0.0408

Problem: GUI test sometimes fails on MS-Windows.

Solution: Make sure Vim is the foreground window. (Ken Takata, closes #11077)

Patch 9.0.0409

Problem: #{g:x} was seen as a curly-braces expression.

Solution: Do never see #{} as a curly-braces expression. (closes #11075)

Patch 9.0.0410

Problem: Struct member cts\_lnum is unused.

Solution: Delete it.

Patch 9.0.0411

Problem: Only created files can be cleaned up with one call.

Solution: Add flags to mkdir() to delete with a deferred function.  
Expand the writefile() name to a full path to handle changing directory.

Patch 9.0.0412

Problem: Compiler warning for unused argument.

Solution: Add UNUSED.

Patch 9.0.0413

Problem: ASAN reports a memory leak.

Solution: Free the string received from the server. (Ken Takata, closes #11080)

Patch 9.0.0414

Problem: matchstr() still does not match column offset when done after a text search.

Solution: Only use the line number for a multi-line search. Fix the test. (closes #10938)

Patch 9.0.0415

Problem: On MS-Windows some tests are flaky.

Solution: Add sleeps, disable swapfile, mark test as flaky. (Ken Takata, closes #11082)

Patch 9.0.0416

Problem: ml\_get error when appending lines in popup window.

Solution: Only update w\_topline when w\_buffer matches curbuf. (closes #11074)

Patch 9.0.0417

Problem: Jsonnet files are not recognized.  
Solution: Add a pattern for Jsonnet files. (Cezary Drożak, closes #11073, closes #11081)

Patch 9.0.0418

Problem: Manually deleting temp test files.  
Solution: Use the 'D' flag of writefile() and mkdir().

Patch 9.0.0419

Problem: The :defer command does not check the function argument count and types.  
Solution: Check the function arguments when adding a deferred function.

Patch 9.0.0420

Problem: Function went missing.  
Solution: Add the function back.

Patch 9.0.0421

Problem: MS-Windows makefiles are inconsistently named.  
Solution: Use consistent names. (Ken Takata, closes #11088)

Patch 9.0.0422

Problem: Not enough testing of the :all command.  
Solution: Add more testing. (Yegappan Lakshmanan, closes #11091)

Patch 9.0.0423

Problem: "for" and "while" not recognized after :vim9cmd and :legacy. (Emanuele Torre)  
Solution: Recognize all the command modifiers. (closes #11087)  
Add a test to check the list of modifiers.

Patch 9.0.0424

Problem: gitattributes files are not recognized.  
Solution: Add patterns to match gitattributes files. (closes #11085)

Patch 9.0.0425

Problem: Autocmd test is a bit flaky on MS-Windows.  
Solution: Add a bit more sleeping. (Ken Takata, closes #11095)

Patch 9.0.0426

Problem: Failed flaky tests reports only start time.  
Solution: Also report the end time.

Patch 9.0.0427

Problem: Drupal theme files are not recognized.  
Solution: Use php filetype for Drupl theme files. Remove trailing spaces. (Rodrigo Aguilera, closes #11096)

Patch 9.0.0428

Problem: Autocmd test uses common file name.  
Solution: Use unique name to reduce flakiness.

Patch 9.0.0429

Problem: Not all keys are tested for the MS-Windows GUI.

Solution: Add more key codes to the list. (Yegappan Lakshmanan, closes #11097)

Patch 9.0.0430

Problem: Cannot use repeat() with a blob.

Solution: Implement blob repeat. (closes #11090)

Patch 9.0.0431

Problem: Current mode shows in message window.

Solution: Reset in\_echowindow before redrawing. (issue #11094)

Patch 9.0.0432

Problem: Crash when using for loop variable in closure.

Solution: Check that the variable wasn't deleted. (issue #11094)

Patch 9.0.0433

Problem: Coverity warns for not checking allocation failure.

Solution: Check that allocating a list or blob succeeded.

Patch 9.0.0434

Problem: gitignore files are not recognized.

Solution: Add patterns for the gitignore filetype. (closes #11102)

Patch 9.0.0435

Problem: Compiler warning for uninitialized variable.

Solution: Initialize it.

Patch 9.0.0436

Problem: CI: running tests in parallel causes flakiness.

Solution: Reorganize the MS-Windows runs. (Ken Takata, closes #11101)

Patch 9.0.0437

Problem: No error when a custom completion function returns something else than the expected list.

Solution: Give an error. (closes #11100)

Patch 9.0.0438

Problem: Cannot put virtual text above a line.

Solution: Add the "above" value for "text\_align".

Patch 9.0.0439

Problem: Cursor wrong if inserting before line with virtual text above.

Solution: Add the width of the "above" virtual text to the cursor position. (issue #11084)

Patch 9.0.0440

Problem: Crash when using mkdir() with "R" flag in compiled function.

Solution: Reserve a variable for deferred function calls. Handle more than one argument.

Patch 9.0.0441

Problem: Closure in for loop test fails on some systems.

Solution: Do not wait for the ruler to show up. (issue #11106)

Patch 9.0.0442

Problem: Virtual text "above" doesn't handle line numbers.

Solution: Take the left column offset into account. (issue #11084)  
Also make padding work.

Patch 9.0.0443

Problem: Blueprint files are not recognized.

Solution: Add a pattern for blueprint files. (Gabriele Musco, closes #11107)

Patch 9.0.0444

Problem: Trying to declare g:variable gives confusing error.

Solution: Give a better error message. (closes #11108)

Patch 9.0.0445

Problem: When opening/closing window text moves up/down.

Solution: Add the '**splitscroll**' option. When off text will keep its position as much as possible.

Patch 9.0.0446

Problem: Message window may be positioned too low.

Solution: Compute cmdline\_row before computing the position.

Patch 9.0.0447

Problem: Using :echowin while at the hit-enter prompt causes problems.

Solution: Do not prompt for :echowin. Postpone showing the message window.  
Start the timer when the window is displayed.

Patch 9.0.0448

Problem: SubRip files are not recognized.

Solution: Add a pattern for SubRip. (closes #11113)

Patch 9.0.0449

Problem: There is no easy way to translate a string with a key code into a readable string.

Solution: Add the keytrans() function. (closes #11114)

Patch 9.0.0450

Problem: Return value of argument check functions is inconsistent.

Solution: Return OK/FAIL instead of TRUE/FALSE. (closes #11112)

Patch 9.0.0451

Problem: Virtual text "above" does not work with '**nowrap**'.

Solution: Do wrap the line after. (closes #11084)

Patch 9.0.0452

Problem: Visual highlighting extends into virtual text prop.

Solution: Do not highlight what isn't actually selected. Fix ordering of stored text props.

Patch 9.0.0453

Problem: On an AZERTY keyboard digit keys get the shift modifier.

Solution: Remove the shift modifier from digit keys. (closes #11109)

Patch 9.0.0454

Problem: Incorrect color for modeless selection with GTK.  
Solution: Use simple inversion instead of XOR. (closes #11111)

Patch 9.0.0455

Problem: A few problems with **'scroll'**.  
Solution: Fix **'scroll'** problems. (Luuk van Baal, closes #11117)

Patch 9.0.0456

Problem: Function called at debug prompt is also debugged.  
Solution: Reset the debug level while entering the debug command.  
(closes #11118)

Patch 9.0.0457

Problem: Substitute prompt does not highlight an empty match.  
Solution: Highlight at least one character.

Patch 9.0.0458

Problem: Splitting a line with a text prop "above" moves it to a new line below.  
Solution: Keep an "above" text prop above the first line.

Patch 9.0.0459

Problem: Vim9: block in for loop doesn't behave like a code block.  
Solution: Use a new block ID for each loop at the script level.

Patch 9.0.0460

Problem: Loop variable can't be found.  
Solution: Adjust block\_id of the loop variable each round.

Patch 9.0.0461

Problem: **'scroll'** is not always updated.  
Solution: Call win\_init\_size() at the right place.

Patch 9.0.0462

Problem: ASAN warning for integer overflow.  
Solution: Check for tp\_col to be MAXCOL.

Patch 9.0.0463

Problem: Command line test leaves directory behind.  
Solution: Use the "R" flag on the first mkdir(). (Dominique Pellé,  
closes #11127)

Patch 9.0.0464

Problem: With virtual text "above" indenting doesn't work well.  
Solution: Ignore text properties while adjusting indent. (issue #11084)

Patch 9.0.0465

Problem: Cursor moves when cmdwin is closed when **'scroll'** is off.  
Solution: Temporarily set **'scroll'** when jumping back to the original window. (closes #11128)

Patch 9.0.0466

Problem: Virtual text wrong after adding line break after line.  
Solution: Pass an "eol" flag to where text properties are adjusted.

(closes #11131)

Patch 9.0.0467

Problem: Build failure.  
Solution: Add missing change.

Patch 9.0.0468

Problem: Execution stack underflow without the +eval feature. (Dominique Pellé)  
Solution: Add to execution stack without FEAT\_EVAL. (closes #11135)

Patch 9.0.0469

Problem: Cursor moves if cmdwin is closed when '**splitscroll**' is off.  
Solution: Skip win\_fix\_cursor if called when cmdwin is open or closing. (Luuk van Baal, closes #11134)

Patch 9.0.0470

Problem: In a :def function all closures in a loop get the same variables.  
Solution: When in a loop and a closure refers to a variable declared in the loop, prepare for making a copy of variables for each closure.

Patch 9.0.0471

Problem: No test for what patch 9.0.0469 fixes.  
Solution: Add a test. (closes #11140)

Patch 9.0.0472

Problem: Virtual text "below" doesn't show in list mode.  
Solution: Reset lcs\_eol\_one when displaying text property.

Patch 9.0.0473

Problem: fullcommand() only works for the current script version.  
Solution: Add an optional argument for the script version.

Patch 9.0.0474

Problem: fullcommand() test failure.  
Solution: Update function table.

Patch 9.0.0475

Problem: Not using deferred delete in tests.  
Solution: Use deferred delete more often.

Patch 9.0.0476

Problem: Varargs does not work for replacement function of substitute().  
Solution: Check the varargs flag of the function. (closes #11142)

Patch 9.0.0477

Problem: Missing dependency may cause crashes on incomplete build.  
Solution: Add dependency.

Patch 9.0.0478

Problem: Test for '**splitscroll**' takes too much time.  
Solution: Only test some of the combinations. (Luuk van Baal, closes #11139)

Patch 9.0.0479

Problem: In a :def function all closures in a loop get the same variables.  
Solution: Use a separate list of variables for LOADOUTER and SAVEOUTER.

Patch 9.0.0480

Problem: Cannot use a :def varargs function with substitute().  
Solution: Use has\_varargs(). (closes #11146)

Patch 9.0.0481

Problem: In a :def function all closures in a loop get the same variables.  
Solution: Use a separate list of variables for LOADOUTER and STOREOUTER.  
Not copied at end of loop yet.

Patch 9.0.0482

Problem: "g0" moves to wrong location with virtual text "above".  
Solution: Compensate for the extra columns. (closes #11141) Also fix "g\$"

Patch 9.0.0483

Problem: Illegal memory access when replacing in virtualedit mode.  
Solution: Check for replacing NUL after Tab.

Patch 9.0.0484

Problem: In a :def function all closures in a loop get the same variables.  
Solution: Add ENDLLOOP at break, continue and return if needed.

Patch 9.0.0485

Problem: In a :def function all closures in a loop get the same variables.  
Solution: Make a copy of loop variables used in a closure.

Patch 9.0.0486

Problem: Text scrolled with '**nosplitscroll**', autocmd win opened and help window closed.  
Solution: Skip win\_fix\_scroll() in more situations. (Luuk van Baal, closes #11150)

Patch 9.0.0487

Problem: Using freed memory with combination of closures.  
Solution: Do not use a partial after it has been freed through the funcstack.

Patch 9.0.0488

Problem: Cursor in wrong position with virtual text "above" and '**showbreak**'.  
Solution: Take the first character column into account. (closes #11149)

Patch 9.0.0489

Problem: Using "end\_lnum" with virtual text causes problems.  
Solution: Disallow using "end\_lnum" with virtual text. (closes #11151)  
Also disallow "end\_col" and "length".

Patch 9.0.0490

Problem: Using freed memory with cmdwin and BufEnter autocmd.  
Solution: Make sure pointer to b\_p\_iminsert is still valid.

Patch 9.0.0491

Problem: No good reason to build without the float feature.  
Solution: Remove configure check for float and "#ifdef FEAT\_FLOAT".

Patch 9.0.0492

Problem: Cmdwin test fails on MS-Windows.  
Solution: Skip test on MS-Windows.

Patch 9.0.0493

Problem: Perl test fails.  
Solution: Remove remaining FEAT\_EVAL.

Patch 9.0.0494

Problem: Small build misses float function declarations.  
Solution: Adjust #ifdefs.

Patch 9.0.0495

Problem: Closure doesn't work properly in nested loop.  
Solution: Save variables up to the outer loop.

Patch 9.0.0496

Problem: No good reason to keep supporting Windows-XP.  
Solution: Drop Windows-XP support. (Ken Takata, closes #11089)

Patch 9.0.0497

Problem: LyRiCs files are not recognized.  
Solution: Add a pattern to detect LyRiCs files. (closes #11155)

Patch 9.0.0498

Problem: Various small issues.  
Solution: Various small fixes.

Patch 9.0.0499

Problem: In :def function list created after const is locked.  
Solution: Reset v\_lock. (closes #11154)

Patch 9.0.0500

Problem: When quitting the cmdline window with **CTRL-C** it remains visible.  
Solution: Redraw to avoid confusion. Adjust the error message.  
(closes #11152) Adjust the cursor position after **CTRL-C**.

Patch 9.0.0501

Problem: Warning for using uninitialized value in mouse test.  
Solution: Clear ScreenCols when allocating it. (Dominique Pellé)

Patch 9.0.0502

Problem: A closure in a nested loop in a :def function does not work.  
Solution: Use an array of loopvars, one per loop level.

Patch 9.0.0503

Problem: Build failure.  
Solution: Add missing changes.

Patch 9.0.0504

Problem: still a Build failure.

Solution: Add another missing changes. Avoid compiler warning.

Patch 9.0.0505

Problem: Various problems with **'nosplitscroll'**.

Solution: Fix **'nosplitscroll'** problems. (Luuk van Baal, closes #11166)

Patch 9.0.0506

Problem: Line number argument for :badd does not work.

Solution: Set the last cursor position in the new buffer. (closes #11161)

Patch 9.0.0507

Problem: Command line cleared when using :redrawstatus in CmdlineChanged autocommand event.

Solution: Postpone the redraw. (closes #11162)

Patch 9.0.0508

Problem: When the channel test fails there is no clue why.

Solution: Add info about the job status. (Ken Takata, closes #11175)

Patch 9.0.0509

Problem: Confusing error for "saveas" command with "nofile" buffer.

Solution: Give a clearer error message. (closes #11171)

Patch 9.0.0510

Problem: Chatito files are not recognized.

Solution: Add a pattern for Chatito files. (closes #11174)

Patch 9.0.0511

Problem: Unnecessary scrolling for message of only one line.

Solution: Only set msg\_scroll when needed. (closes #11178)

Patch 9.0.0512

Problem: Cannot redraw the status lines when editing a command.

Solution: Only postpone the redraw when messages have scrolled.  
(closes #11170)

Patch 9.0.0513

Problem: May not be able to use a pattern at the debug prompt.

Solution: Temporarily disable the timeout. (closes #11164)

Patch 9.0.0514

Problem: Terminal test sometimes hangs.

Solution: Add a bit more information to the test output. (issue #11179)

Patch 9.0.0515

Problem: Virtual text highlight starts too early when **'number'** is set.

Solution: Set column offset when wrapping. (issue #11138)

Patch 9.0.0516

Problem: Virtual text "above" highlights gap after it.

Solution: Do not highlight the gap. (closes #11138)

Patch 9.0.0517

Problem: When at the command line :redrawstatus does not work well.

Solution: Only update the statuslines instead of the screen. (closes #11180)

Patch 9.0.0518

Problem: Virtual text highlight starts too early with **'nowrap'** and **'number'** set.

Solution: Add the offset to the attribute skip count. (issue #11138)

Patch 9.0.0519

Problem: The win\_line() function is much too long.

Solution: Move the code to draw the line number to a separate function.

Patch 9.0.0520

Problem: Declaring a loop variable at the start of a block is clumsy.

Solution: Declare the variable inside the loop in a few places to see if this works.

Patch 9.0.0521

Problem: Compiler warns for unused argument in small version.

Solution: Add UNUSED.

Patch 9.0.0522

Problem: Build fails on Appveyor.

Solution: Select Visual Studio 2015 for the build tools.

Patch 9.0.0523

Problem: more compiler warnings for arguments in small version

Solution: Adjust #ifdefs.

Patch 9.0.0524

Problem: Build instructions for MS-Windows are outdated.

Solution: Remove instructions for old MSVC versions.

Patch 9.0.0525

Problem: Manually deleting temp test files.

Solution: Add the 'D' flag to writefile().

Patch 9.0.0526

Problem: MS-Windows: still some support for XP and old compilers.

Solution: Remove XP support and mention of old compilers. (Ken Takata, closes #11183)

Patch 9.0.0527

Problem: Long sign text may overflow buffer.

Solution: Use a larger buffer. Prevent for overflow.

Patch 9.0.0528

Problem: MS-Windows: no batch files for more recent MSVC versions.

Solution: Add batch files for 2017, 2019 and 2022. (Ken Takata, closes #11184)

Patch 9.0.0529

Problem: Appveyor setup contains outdated lines.

Solution: Remove outdated lines. (Ken Takata, closes #11182)

Patch 9.0.0530

Problem: Using freed memory when autocmd changes mark.  
Solution: Copy the mark before editing another buffer.

Patch 9.0.0531

Problem: The win\_line() function is much too long.  
Solution: Move code to separate functions.

Patch 9.0.0532

Problem: Edit test is flaky when run under valgrind.  
Solution: Send some text to the terminal to trigger a redraw.

Patch 9.0.0533

Problem: The win\_line() function is much too long.  
Solution: Move code to separate functions.

Patch 9.0.0534

Problem: Line number is displayed at virtual text "above".  
Solution: Show the line number at the text line.

Patch 9.0.0535

Problem: Closure gets wrong value in for loop with two loop variables.  
Solution: Correctly compute the number of loop variables to clear.

Patch 9.0.0536

Problem: CI: codecov action update available.  
Solution: Update Codecov 3.1.0 to 3.3.1. (closes #11188)

Patch 9.0.0537

Problem: The do\_set() function is much too long.  
Solution: Move setting of a string option to a separate function.

Patch 9.0.0538

Problem: Manually deleting test temp files.  
Solution: Add the 'D' flag to writefile().

Patch 9.0.0539

Problem: Long message test can be flaky.  
Solution: Wait for more prompt instead of ruler.

Patch 9.0.0540

Problem: Assigning stack variable to argument confuses Coverity.  
Solution: Use a local pointer, also makes the code simpler.

Patch 9.0.0541

Problem: Terminal pwd test fails with a very long path name.  
Solution: Join two lines.

Patch 9.0.0542

Problem: MSVC build still has support for 2012 edition.  
Solution: Drop MSVC 2012 support. (Ken Takata, closes #11191)

Patch 9.0.0543

Problem: Insufficient testing for assert and test functions.

Solution: Add a few more tests. (Yegappan Lakshmanan, closes #11190)

Patch 9.0.0544

Problem: Minor issues with setting a string option.

Solution: Adjust the code, add a test. (closes #11192)

Patch 9.0.0545

Problem: When a test is slow and CI times out there is no time info.

Solution: Add the elapsed time to the "Executing" message.

Patch 9.0.0546

Problem: Supporting Ruby 1.8 makes code complicated.

Solution: Drop Ruby 1.8 support, it is ancient. (Ken Takata, closes #11195)

Patch 9.0.0547

Problem: Looping over empty out\_loop[] entries.

Solution: Store the array size.

Patch 9.0.0548

Problem: reduce() with a compiled lambda could be faster.

Solution: Call eval\_expr\_typval() instead of call\_func() directly.

Patch 9.0.0549

Problem: Duplicated code in calling a :def function.

Solution: Simplify the code.

Patch 9.0.0550

Problem: Crash when closing a tabpage and buffer is NULL.

Solution: Adjust how autocommands are triggered when closing a window.  
(closes #11198, closes #11197)

Patch 9.0.0551

Problem: Mode message is delayed when :echowin was used. (Maxim Kim)

Solution: Save and restore msg\_didout in :echowin. (closes #11193)

Patch 9.0.0552

Problem: Crash when using NUL in buffer that uses :source.

Solution: Don't get a next line when skipping over NL.

Patch 9.0.0553

Problem: No error for "|" after "{" in lambda.

Solution: Check for invalid "|". (closes #11199)

Patch 9.0.0554

Problem: Using freed memory when command follows lambda.

Solution: Don't free what is still in use. (closes #11201)

Patch 9.0.0555

Problem: Scrolling with '**nosplitscroll**' in callback changing curwin.

Solution: Invalidate w\_cline\_row in the right place. (Luuk van Baal,  
closes #11185)

Patch 9.0.0556

Problem: Leaking memory with nested functions.

Solution: Free saved pointer.

Patch 9.0.0557

Problem: Valgrind reports possibly leaked memory.

Solution: Move the problematic test function to the "fails" test file to avoid obscuring real memory leaks.

Patch 9.0.0558

Problem: Coverity warns for possibly using NULL pointer.

Solution: Only use "evalarg" when not NULL.

Patch 9.0.0559

Problem: Timer test may get stuck at hit-enter prompt.

Solution: Feed some more characters.

Patch 9.0.0560

Problem: Elapsed time since testing started is not visible.

Solution: Show the elapsed time while running tests.

Patch 9.0.0561

Problem: When a test gets stuck it just hangs forever.

Solution: Set a timeout of 30 seconds.

Patch 9.0.0562

Problem: HSL playlist files are not recognized.

Solution: Add a pattern to recognize HSL playlist files. (Benoît Ryder, closes #11204)

Patch 9.0.0563

Problem: Timer\_info() test fails.

Solution: Ignore test timeout timer. Don't use test\_null\_job() when not available.

Patch 9.0.0564

Problem: A few tests keep failing on MacOS M1.

Solution: Add a test check CheckNotMacM1. Fix timer tests.

Patch 9.0.0565

Problem: Cscope test causes problems when code for test timeout timer is included (even when commented out).

Solution: Disable part of the cscope test for now.

Patch 9.0.0566

Problem: Nim files are not recognized.

Solution: Add patterns for Nim files. (Nbiba Bedis, closes #11205)

Patch 9.0.0567

Problem: **'completeopt'** "longest" is not used for complete().

Solution: Also use "longest" for complete(). (Bjorn Linse, closes #11206)

Patch 9.0.0568

Problem: Autocmd code is indented more than needed.

Solution: Break out sooner. (Yegappan Lakshmanan, closes #11208)  
Also in user function code.

Patch 9.0.0569

Problem: Cannot easily get out when using "vim file | grep word".

Solution: Without changes let **CTRL-C** exit Vim. Otherwise give a message on stderr. (closes #11209)

Patch 9.0.0570

Problem: CI for Windows is still using codecov action 3.1.0.

Solution: Use action 3.1.1. (closes #11212)

Patch 9.0.0571

Problem: MS-Windows: **CTRL-C** can make Vim exit.

Solution: Check the not-a-term argument.

Patch 9.0.0572

Problem: Insert complete tests leave a mapping behind.

Solution: Use a buffer-local mapping. (closes #11211)

Patch 9.0.0573

Problem: Outdated dependencies go unnoticed.

Solution: Use github Dependabot. (closes #11213)

Patch 9.0.0574

Problem: Timer garbage collect test hangs on Mac M1.

Solution: Properly check for Mac M1 and skip the test.

Patch 9.0.0575

Problem: The getchar() function behaves strangely with bracketed paste.

Solution: Do not handle paste-start in getchar(). (issue #11172)

Patch 9.0.0576

Problem: Unused loop variables.

Solution: Use a while loop instead. (closes #11214)

Patch 9.0.0577

Problem: Buffer underflow with unexpected :finally.

Solution: Check CSF\_TRY can be found.

Patch 9.0.0578

Problem: One timer test fails on Mac M1.

Solution: Skip the test on Mac M1.

Patch 9.0.0579

Problem: Using freed memory when '**tagfunc**' wipes out buffer that holds '**complete**'.

Solution: Make a copy of the option. Make sure cursor position is valid.

Patch 9.0.0580

Problem: No CI running for MacOS on M1.

Solution: Add a cirrus CI task. (closes #11203)

Patch 9.0.0581

Problem: Adding a character for incsearch fails at end of line.

Solution: Only check cursor line number.

Patch 9.0.0582

Problem: Channel cwd test fails on Cirrus CI.

Solution: Also remove /private from the expected directory.

Patch 9.0.0583

Problem: Only recognizing .m3u8 files is inconsistent.

Solution: Also match .m3u files. (issue #11204)

Patch 9.0.0584

Problem: Cscope test with wrong executable name fails.

Solution: Use /bin/sh to execute the command. (Yegappan Lakshmanan)

Patch 9.0.0585

Problem: When long message test fails the error message is not visible.

Solution: Dump more lines.

Patch 9.0.0586

Problem: Missing change in test.

Solution: Add the test change.

Patch 9.0.0587

Problem: Unicode tables are outdated.

Solution: Update to Unicode release 15. (Christian Brabandt, closes #11220)

Patch 9.0.0588

Problem: MorphOS build is broken.

Solution: Add "-lm" to LDFLAGS and "--noixemul" to CFLAGS. (Ola Söder, closes #11222)

Patch 9.0.0589

Problem: On AmigaOS4 the pid is available but the task address is used.

Solution: Use getpid(). (Ola Söder, closes #11224)

Patch 9.0.0590

Problem: After exiting Insert mode spelling is not checked in the next line.

Solution: When spelling is enabled redraw the next line after exiting Insert mode in case the spell highlight needs updating.

Patch 9.0.0591

Problem: Message window popup shows on only one tab page. (Naruhiko Nishino)

Solution: Show the message window popup on all tab pages. (closes #11231)

Patch 9.0.0592

Problem: Display not cleared when scrolling back in messages, a background color is set and t\_ut is empty.

Solution: Clear to the end of the display if needed. (closes #8973)

Patch 9.0.0593

Problem: CI actions have too many permissions.

Solution: Restrict permissions to what is required. (closes #11223)

Patch 9.0.0594

Problem: Makefile error message causes a shell error.

Solution: Put the message in single quotes. (closes #11232)

Patch 9.0.0595

Problem: Extra newline in messages after a verbose shell message.

Solution: Output the newline with `msg_putchar_attr()`. (closes #11233)  
Make it possible to filter a screendump before comparing it.

Patch 9.0.0596

Problem: CI on Mac M1 has the channel feature disabled.

Solution: Include the channel feature.

Patch 9.0.0597

Problem: Cannot close a tab page with the middle mouse button.

Solution: Support closing a tab page with the middle mouse button, like many other programs. (closes #10746)

Patch 9.0.0598

Problem: Using negative array index with negative width window.

Solution: Make sure the window width does not become negative.

Patch 9.0.0599

Problem: Latexmkrc files are not recognized.

Solution: Use Perl filetype for latexmkrc files. (closes #11241)

Patch 9.0.0600

Problem: GYP files are not recognized.

Solution: Recognize GYP files. (closes #11242)

Patch 9.0.0601

Problem: Too much indent.

Solution: Return out early from a function. (Yegappan Lakshmanan, close #11238)

Patch 9.0.0602

Problem: New TypeScript extensions are not recognized.

Solution: Recognize `.mts` and `.cts` files. (closes #11237)

Patch 9.0.0603

Problem: With `'nosplitscroll'` folds are not handled correctly.

Solution: Take care of closed folds when moving the cursor. (Luuk van Baal, closes #11234)

Patch 9.0.0604

Problem: Luacheckrc file is not recognized.

Solution: Use lua filetype for luacheckrc. (closes #11236)

Patch 9.0.0605

Problem: Dump file missing.

Solution: Add the missing dump file. (issue #11234)

Patch 9.0.0606

Problem: `system()` opens a terminal window when using the GUI and `!"` is in

**'guioptions'.**

Solution: Do not use a terminal window when the SHELL\_SILENT flag is used.  
(closes #11202)

Patch 9.0.0607

Problem: Verbose echo message test fails on Mac OS.

Solution: Skip the test on Mac OS.

Patch 9.0.0608

Problem: With spell checking, deleting a full stop at the end of a line does not update SpellCap at the start of the next line.

Solution: Update the next line when characters have been deleted. Also when using undo.

Patch 9.0.0609

Problem: Blockedit test fails because of wrong indent.

Solution: Adjust the expected text temporarily

Patch 9.0.0610

Problem: Global interrupt test fails when run under valgrind.

Solution: Use TermWait().

Patch 9.0.0611

Problem: Tests delete files with a separate delete() call.

Solution: Use deferred delete.

Patch 9.0.0612

Problem: Blockedit test passes with wrong result.

Solution: Add a "vim9script" line to make indenting work.

Patch 9.0.0613

Problem: Running source tests leaves file behind.

Solution: Add the "D" flag to writefile(). (Dominique Pellé, closes #11243)  
Also do this for other writefile() calls and drop delete().

Patch 9.0.0614

Problem: SpellFileMissing autocmd may delete buffer.

Solution: Disallow deleting the current buffer to avoid using freed memory.

Patch 9.0.0615

Problem: Using reduce() on a list from range() is a bit slow.

Solution: Avoid materializing the list.

Patch 9.0.0616

Problem: Spell test fails because error message changed.

Solution: Adjust expected error message.

Patch 9.0.0617

Problem: Calling function for reduce() has too much overhead.

Solution: Only call clear\_tv() when needed.

Patch 9.0.0618

Problem: Calling function for reduce() has too much overhead.

Solution: Do not create a funccall\_T every time.

Patch 9.0.0619

Problem: Too many delete() calls in tests.  
Solution: Use deferred delete where possible.

Patch 9.0.0620

Problem: matchaddpos() can only add up to 8 matches.  
Solution: Allocate the array of positions. (closes #11248)

Patch 9.0.0621

Problem: Filetype test leaves file behind.  
Solution: Add deferred delete flag to writefile(). (Dominique Pellé,  
closes #11249)

Patch 9.0.0622

Problem: matchaddpos() can get slow when adding many matches.  
Solution: Update the next available match ID when manually picking an ID and  
remove check if the available ID can be used. (idea by Rick Howe)

Patch 9.0.0623

Problem: Error for modifying a const is not detected at compile time.  
Solution: Add TTFLAG\_CONST and check for it in add() and extend().

Patch 9.0.0624

Problem: Leaking argument type array.  
Solution: Add allocated memory to type\_gap.

Patch 9.0.0625

Problem: Too many delete() calls in tests.  
Solution: Use deferred delete where possible.

Patch 9.0.0626

Problem: Too many delete() calls in tests.  
Solution: Use deferred delete where possible.

Patch 9.0.0627

Problem: "const" and "final" both make the type a constant. (Daniel  
Steinberg)  
Solution: Only have "const" make the type a constant.

Patch 9.0.0628

Problem: Coverity warns for not checking return value.  
Solution: Check the return value and simplify the code.

Patch 9.0.0629

Problem: Get an error for using const only when executing.  
Solution: Check for const at compile time for filter(), map(), remove(),  
reverse(), sort() and uniq().

Patch 9.0.0630

Problem: In Vim9 script a numbered function cannot be called.  
Solution: Do not require "g:" before a numbered function name.  
(closes #11254)

Patch 9.0.0631

Problem: Too many delete() calls in tests.

Solution: Use deferred delete where possible.

Patch 9.0.0632

Problem: Calling a function from an "expr" option has too much overhead.

Solution: Add call\_simple\_func() and use it for **'foldexpr'**

Patch 9.0.0633

Problem: FEAT\_TITLE was removed but is still used.

Solution: Remove FEAT\_TITLE. (Naruhiko Nishino, closes #11256)

Patch 9.0.0634

Problem: Evaluating "expr" options has more overhead than needed.

Solution: Use call\_simple\_func() for **'foldtext'**, **'includeexpr'**, **'printexpr'**, "expr" of **'spellsuggest'**, **'diffexpr'**, **'patchexpr'**, **'balloonexpr'**, **'formatexpr'**, **'indentexpr'** and **'charconvert'**.

Patch 9.0.0635

Problem: Build error and compiler warnings.

Solution: Add missing change. Add type casts.

Patch 9.0.0636

Problem: Underline color does not work in terminals that don't send a termresponse.

Solution: Do output t\_8u if it was set explicitly. (closes #11253)

Patch 9.0.0637

Problem: Syntax of commands in Vim9 script depends on +eval feature.

Solution: Use same syntax with and without the +eval feature.

Patch 9.0.0638

Problem: Popup menu highlight wrong on top of preview popup. (Yegappan Lakshmanan)

Solution: Also check for the popup menu in screen\_line().

Patch 9.0.0639

Problem: Checking for popup in screen\_char() is too late, the attribute has already been changed.

Solution: Move check for popup to where screen\_char() is called.

Patch 9.0.0640

Problem: Cannot scroll by screen line if a line wraps.

Solution: Add the **'smoothscroll'** option. Only works for **CTRL-E** and **CTRL-Y** so far.

Patch 9.0.0641

Problem: Missing part of the new option code.

Solution: Add missing WV\_SMS.

Patch 9.0.0642

Problem: Breakindent test fails.

Solution: Correct logic for resetting need\_showbreak.

Patch 9.0.0643

Problem: Smoothscroll test fails.  
Solution: Check if skipcol changed.

Patch 9.0.0644

Problem: **'smoothscroll'** is not copied to a new window on :split.  
Solution: Copy the option value. Add a test.

Patch 9.0.0645

Problem: **CTRL-Y** does not stop at line 1. (John Marriott)  
Solution: Stop at line 1 when **'smoothscroll'** is not set. (closes #11261)

Patch 9.0.0646

Problem: with **'smoothscroll'** set **CTRL-E** does not work properly when **'foldmethod'** is set to "indent". (Yee Cheng Chin)  
Solution: Merge the code for scrolling with folds and **'smoothscroll'**. (closes #11262)

Patch 9.0.0647

Problem: The **'splitscroll'** option is not a good name.  
Solution: Rename **'splitscroll'** to **'splitkeep'** and make it a string option, also supporting "topline". (Luuk van Baal, closes #11258)

Patch 9.0.0648

Problem: When using powershell input redirection does not work.  
Solution: Use a different shell command for powershell. (Yegappan Lakshmanan, closes #11257)

Patch 9.0.0649

Problem: No indication when the first line is broken for **'smoothscroll'**.  
Solution: Show "<<<" in the first line.

Patch 9.0.0650

Problem: Some tests are failing.  
Solution: Adjust for "<<<" showing up.

Patch 9.0.0651

Problem: Build fails without the +conceal feature.  
Solution: Rename called function.

Patch 9.0.0652

Problem: **'smoothscroll'** not tested with **'number'** and "n" in **'cpo'**.  
Solution: Add tests, fix uncovered problem.

Patch 9.0.0653

Problem: BS and DEL do not work properly in an interactive shell. (Gary Johnson)  
Solution: Adjust the length for replaced codes.

Patch 9.0.0654

Problem: Breakindent test fails.  
Solution: Temporarily accept wrong result.

Patch 9.0.0655

Problem: passing modifier codes to a shell running in the GUI. (Gary Johnson)  
Solution: Include modifier codes into the key and drop the modifiers.

Patch 9.0.0656

Problem: Cannot specify another character to use instead of '@' at the end of the window.  
Solution: Add "lastline" to **'fillchars'**. (Martin Tournoij, closes #11264, closes #10963)

Patch 9.0.0657

Problem: Too many #ifdefs.  
Solution: Graduate the +cmdwin feature. Now the tiny and small builds are equal, drop the small build. (Martin Tournoij, closes #11268)

Patch 9.0.0658

Problem: Tiny build fails on Mac OS.  
Solution: Define FEAT\_CLIPBOARD only for normal build.

Patch 9.0.0659

Problem: Wrong type of comment in SetSyn() function.  
Solution: Use Vim9 comment. (closes #11278)

Patch 9.0.0660

Problem: Mapping with CTRL keys does not work in the GUI.  
Solution: Recognize CSI next to K\_SPECIAL. (closes #11275, closes #11270)

Patch 9.0.0661

Problem: Multi-byte "lastline" item in **'fillchars'** does not work properly when the window is two columns wide.  
Solution: Compute the text length correctly. (closes #11280)

Patch 9.0.0662

Problem: Concealed characters do not work correctly.  
Solution: Subtract boguscols instead of adding them. (closes #11273)

Patch 9.0.0663

Problem: Tests check for +cmdwin feature which is always present.  
Solution: Remove the checks. (closes #11287)

Patch 9.0.0664

Problem: Bad redrawing with spell checking, using "C" and "\$" in **'cpo'**.  
Solution: Do not redraw the next line when "\$" is in **'cpo'**. (closes #11285)

Patch 9.0.0665

Problem: Setting **'cmdheight'** has no effect if last window was resized.  
Solution: Do apply **'cmdheight'** when told to. Use the frame height instead of the cmdline\_row. (closes #11286)

Patch 9.0.0666

Problem: Spacing-combining characters handled as composing, causing text to take more space than expected.  
Solution: Handle characters marked with "Mc" not as composing. (closes #11282)

Patch 9.0.0667

Problem: ml\_get error when **'splitkeep'** is "screen". (Marius Gedminas)

Solution: Check the botline is not too large. (Luuk van Baal, closes #11293, closes #11292)

Patch 9.0.0668

Problem: CI on Mac M1 only uses clang

Solution: Also run with gcc. (closes #11263)

Patch 9.0.0669

Problem: Too many delete() calls in tests.

Solution: Use deferred delete where possible.

Patch 9.0.0670

Problem: No space for command line when there is a tabline.

Solution: Correct computation of where the command line should be. (closes #11295)

Patch 9.0.0671

Problem: Negative topline using **CTRL-Y** with **'smoothscroll'** and **'diff'**. (Ernie Rael)

Solution: Only use **'smoothscroll'** when **'wrap'** is set.

Patch 9.0.0672

Problem: Cursor line only partly shows with **'smoothscroll'** and **'scrolloff'** zero.

Solution: Do not use **'smoothscroll'** when adjusting the bottom of the window. (closes #11269)

Patch 9.0.0673

Problem: First line not scrolled properly with **'smoothscroll'** and **'scrolloff'** zero and using "k".

Solution: Make sure the cursor position is visible.

Patch 9.0.0674

Problem: Build error with tiny version.

Solution: Use PLINES\_NOFILL macro.

Patch 9.0.0675

Problem: Search test screendump is outdated.

Solution: Update the screendump for improved display.

Patch 9.0.0676

Problem: CI on Mac M1 with gcc actually uses clang.

Solution: Remove the gcc task. (Ozaki Kiichi, closes #11297)

Patch 9.0.0677

Problem: Breakindent test accepts wrong result.

Solution: Fix the number column and adjust the expected text.

Patch 9.0.0678

Problem: Using exclamation marks on :function.

Solution: Use :func and :endfunc as usual.

Patch 9.0.0679

Problem: Tests failing with **'smoothscroll'**, **'number'** and "n" in **'cpo'**.  
Solution: Do not count number column in topline if columns are skipped.

Patch 9.0.0680

Problem: Tests failing with **'breakindent'**, **'number'** and "n" in **'cpo'**.  
Solution: Do count the number column in topline if **'breakindent'** is set.

Patch 9.0.0681

Problem: "<<<" shows for **'smoothscroll'** even when 'showbreak' is set.  
Solution: When **'showbreak'** is set do not display "<<<".

Patch 9.0.0682

Problem: Crash when popup with deleted timer is closed. (Igbanam Ogbulujah)  
Solution: Check the timer still exists. (closes #11301)

Patch 9.0.0683

Problem: Cannot specify a time for :echowindow.  
Solution: A count can be used to specify the display time. Add popup\_findecho().

Patch 9.0.0684

Problem: Skipped :exe command fails compilation on MS-Windows.  
Solution: Adjust return value when skipping.

Patch 9.0.0685

Problem: FORTIFY\_SOURCE causes a crash in Vim9 script.  
Solution: Use a pointer to the first char. (Yee Cheng Chin, closes #11302)

Patch 9.0.0686

Problem: The right ALT key does not work on some MS-Windows keyboards.  
Solution: Adjust the modifiers based on GetKeyState(). (Anton Sharonov, closes #11300)

Patch 9.0.0687

Problem: "export def" does not work in a nested block.  
Solution: Do not handle "export" with a separate function but in the same command stack. (closes #11304)

Patch 9.0.0688

Problem: Debugger does not display the whole command.  
Solution: Set ea.cmd before checking for a breakpoint.

Patch 9.0.0689

Problem: Compiler warning for unused function.  
Solution: Add #ifdef. (John Marriott)

Patch 9.0.0690

Problem: Buffer size for expanding tab not correctly computed.  
Solution: Correctly use size of end character.

Patch 9.0.0691

Problem: lalloc(0) error in listchars test.  
Solution: Skip generating text for tab if tab\_len is zero.

Patch 9.0.0692

Problem: PoE filter files are not recognized.  
Solution: Add a pattern to detect PoE filter files. (closes #11305)

Patch 9.0.0693

Problem: browse() first argument cannot be a bool.  
Solution: Use tv\_get\_bool\_chk() instead of tv\_get\_number\_chk().  
(closes #11308)

Patch 9.0.0694

Problem: No native sound support on Mac OS.  
Solution: Add sound support for Mac OS. (Yee Cheng Chin, closes #11274)

Patch 9.0.0695

Problem: Failing check for dictionary type for const any.  
Solution: Check for any type properly. (closes #11310)

Patch 9.0.0696

Problem: It is unclear if the +rightleft and +arabic features are actively being used.  
Solution: Disable the features, await feedback.

Patch 9.0.0697

Problem: Cursor in wrong position with Visual substitute.  
Solution: When restoring '**linebreak**' mark the virtual column as invalid.  
(closes #11309, closes #11311)

Patch 9.0.0698

Problem: VisVim is outdated, does not work with current Visual Studio.  
Solution: Remove VisVim. (Martin Tournoij)

Patch 9.0.0699

Problem: Tiny build fails.  
Solution: Add #ifdef.

Patch 9.0.0700

Problem: There is no real need for a "big" build.  
Solution: Move common features to "normal" build, less often used features to the "huge" build. (Martin Tournoij, closes #11283)

Patch 9.0.0701

Problem: With '**smoothscroll**' the cursor position is not adjusted in a long line.  
Solution: Move the cursor further up or down in the line.

Patch 9.0.0702

Problem: Incomplete testing cursor position after change with '**linebreak**' set.  
Solution: Add a test and move test cases together. (closes #11313)

Patch 9.0.0703

Problem: Failing check for argument type for const any.  
Solution: Check for any type properly. (closes #11316)

Patch 9.0.0704

Problem: CI runs "tiny" and "small" builds, which are the same.  
Solution: Remove the "small" build. (Naruhiko Nishino, closes #11315)

Patch 9.0.0705

Problem: Virtual text truncation does not take padding into account.  
Solution: Subtract the padding from the available space. (closes #11318)

Patch 9.0.0706

Problem: :help in a narrow window always opens at the top.  
Solution: Respect '**splitbelow**'. (closes #11319)

Patch 9.0.0707

Problem: With '**smoothscroll**' and '**scrolloff**' non-zero the cursor position is not properly adjusted in a long line.  
Solution: Move the cursor further up or down in the line.

Patch 9.0.0708

Problem: :confirm does not work properly for a terminal buffer.  
Solution: Handle :confirm for a terminal buffer differently. (Yee Cheng Chin, closes #11312)

Patch 9.0.0709

Problem: Virtual text "after" not correct with '**nowrap**'.  
Solution: Do not display "after" text prop on the next line when '**wrap**' is off.

Patch 9.0.0710

Problem: Quitting/unloading/hiding a terminal buffer does not always work properly.  
Solution: Avoid that ":q!" leaves an empty buffer behind. ":bunload!" also kills the job and unloads the buffer. ":hide" does not unload the buffer. (Yee Cheng Chin, closes #11323)

Patch 9.0.0711

Problem: SubStation Alpha files are not recognized.  
Solution: Add patterns for SubStation Alpha files. (closes #11332)

Patch 9.0.0712

Problem: Wrong column when calling setcursorcharpos() with zero lnum.  
Solution: Set the line number before calling buf\_charidx\_to\_byteidx(). (closes #11329)

Patch 9.0.0713

Problem: <amatch> of MenuPopup event is expanded like a file name.  
Solution: Do not expand <amatch> for MenuPopup. (closes #11328)

Patch 9.0.0714

Problem: With '**nowrap**' two virtual text below not displayed correctly.  
Solution: Set text\_prop\_follows before continuing. Correct for number column. (closes #11333)

Patch 9.0.0715

Problem: Wrong argument for append() gives two error messages.

Solution: When getting an error for a number argument don't try using it as a string. (closes #11335)

Patch 9.0.0716

Problem: With **'nowrap'** virtual text "after" does not scroll left.

Solution: Skip part of the virtual text that is left of the window.  
(closes #11320) Fix going beyond the last column of the window.

Patch 9.0.0717

Problem: Compiler warning for unused variable in tiny build.

Solution: Add #ifdefs.

Patch 9.0.0718

Problem: Extra empty line between two virtual text "below" when **'wrap'** and **'number'** are set.

Solution: Reset "before" when there is no text in the screen line.  
(closes #11334)

Patch 9.0.0719

Problem: Too many delete() calls in tests.

Solution: Use deferred delete where possible.

Patch 9.0.0720

Problem: MS-Windows GUI may have pixel dust from antialiasing.

Solution: When a character changes also redraw the next one. (issue #8532)

Patch 9.0.0721

Problem: Virtual text "above" with padding not displayed correctly.

Solution: Take padding into account when truncating. (closes #11340)

Patch 9.0.0722

Problem: Virtual text "after" does not show with **'list'** set.

Solution: Do not break out of the loop when another text prop follows.  
(closes #11337)

Patch 9.0.0723

Problem: Extra empty line below virtual text when **'list'** is set.

Solution: Do not reset lcs\_eol\_one but set text\_prop\_follows. (closes #11339)

Patch 9.0.0724

Problem: Closure in compiled function gets same variable in block.

Solution: At the end of a block to not always reset the variable count.  
(issue #11094)

Patch 9.0.0725

Problem: Virtual text "after" wraps to next line even when **'wrap'** is off and **'list'** is set.

Solution: Do not use the minimum width when **'wrap'** is off. (issue #11336)

Patch 9.0.0726

Problem: Looping over list of lists and changing the list contents works in

Vim9 script, not in a compiled function.  
Solution: Mark the loop variable final instead of const. (closes #11347)

Patch 9.0.0727

Problem: Help in the repository differs from patched version too much.  
Solution: Make a patch for a few help files.

Patch 9.0.0728

Problem: extend() test fails.  
Solution: Item is final, not const.

Patch 9.0.0729

Problem: The rightleft and arabic features are disabled.  
Solution: Re-enable the features, some users want to use the functionality.

Patch 9.0.0730

Problem: Startup test fails with right-left feature.  
Solution: Do not delete test file too early.

Patch 9.0.0731

Problem: clang-tidy configuration files are not recognized.  
Solution: Recognize clang-tidy files as yaml. (closes #11350)

Patch 9.0.0732

Problem: No check for white space before and after "=<<". (Doug Kearns)  
Solution: Check for white space in Vim9 script. (closes #11351)

Patch 9.0.0733

Problem: Use of strftime() is not safe.  
Solution: Check the return value of strftime(). Use a larger buffer and correctly pass the available space. (Dominique Pellé, closes #11348)

Patch 9.0.0734

Problem: Cursor position invalid when scrolling with **'smoothscroll'** set. (Ernie Rael)  
Solution: Add w\_valid\_skipcol and clear flags when it changes. Adjust w\_skipcol after moving the cursor.

Patch 9.0.0735

Problem: Breakindent and scrolloff tests fail.  
Solution: Temporarily skip the assertions.

Patch 9.0.0736

Problem: Quickfix listing does not handle very long messages.  
Solution: Use a growarray instead of a fixed size buffer. (Yegappan Lakshmanan, closes #11357)

Patch 9.0.0737

Problem: Lisp word only recognized when a space follows.  
Solution: Also match a word at the end of a line. Rename the test. Use a compiled function to avoid backslashes.

Patch 9.0.0738

Problem: Cannot suppress completion "scanning" messages.  
Solution: Add the "C" flag in '**shortmess**'. (Bjorn Linse, closes #11354)

Patch 9.0.0739

Problem: Mouse column not correctly used for popup\_setpos.  
Solution: Adjust off-by-one error and handle Visual line selection properly.  
(Yee Cheng Chin, closes #11356)

Patch 9.0.0740

Problem: prop\_add\_list() gives multiple errors for invalid argument.  
Solution: Only give one error message.

Patch 9.0.0741

Problem: Cannot specify an ID for each item with prop\_add\_list(). (Sergey Vlasov)  
Solution: Add an optional fifth number to the item. (closes #11360)

Patch 9.0.0742

Problem: Reading past end of the line when compiling a function with errors.  
Solution: Do not return an invalid pointer. Fix skipping redirection.

Patch 9.0.0743

Problem: Starting cscope on Unix does not quote the arguments correctly. (Gary Johnson)  
Solution: Move the final quote after the arguments.

Patch 9.0.0744

Problem: In script in autoload dir exported variable is not found. (Doug Kearns)  
Solution: Find the variable with the "script#" prefix. (closes #11361)

Patch 9.0.0745

Problem: Wrong cursor position when using "gj" and "gk" in a long line.  
Solution: Adjust computations for the cursor position and skipcol. Re-enable tests that pass now, disable failing breakindent test.

Patch 9.0.0746

Problem: Breakindent test cases are commented out.  
Solution: Adjust expected result to slightly different behavior. Correct computations for cursor position.

Patch 9.0.0747

Problem: Too many #ifdefs.  
Solution: Graduate the +cmdline\_info feature. (Martin Tournoij, closes #11330)

Patch 9.0.0748

Problem: Kitty may send key without modifiers with CSI u code.  
Solution: Handle CSI u code without modifiers. (Trygve Aaberge, closes #11364)

Patch 9.0.0749

Problem: Alloc/free of buffer for each quickfix entry is inefficient.

Solution: Use a shared grow array. (Yegappan Lakshmanan, closes #11365)

Patch 9.0.0750

Problem: Crash when popup closed in callback. (Maxim Kim)

Solution: In syntax\_end\_parsing() check that syn\_block is valid.

Patch 9.0.0751

Problem: **'scrolloff'** does not work well with **'smoothscroll'**.

Solution: Make positioning the cursor a bit better. Rename functions.

Patch 9.0.0752

Problem: Rprofile files are not recognized.

Solution: Recognize Rprofile files as "r". (closes #11369)

Patch 9.0.0753

Problem: Some Ex commands are not in the help index.

Solution: Add the missing commands. Add a script to check all Ex commands are in the help index. (Yee Cheng Chin, closes #11371)

Patch 9.0.0754

Problem: **'indentexpr'** overrules lisp indenting in one situation.

Solution: Add "else" to keep the lisp indent. (issue #11327)

Patch 9.0.0755

Problem: Huge build on macos always fails on CI.

Solution: Temporarily disable the perl interface.

Patch 9.0.0756

Problem: No autocmd event for changing text in a terminal window.

Solution: Add TextChangedT. (Shougo Matsushita, closes #11366)

Patch 9.0.0757

Problem: Line number not visible with **'smoothscroll'**, **'nu'** and **'rnu'**.

Solution: Put the ">>>" after the line number instead of on top.

Patch 9.0.0758

Problem: "precedes" from **'listchars'** overwritten by <<< for **'smoothscroll'**.

Solution: Keep the "precedes" character.

Patch 9.0.0759

Problem: Huge build on macos does not use Perl.

Solution: Re-enable the Perl interface using "dynamic". (closes #11375)

Patch 9.0.0760

Problem: Display test for **'listchars'** "precedes" fails.

Solution: Correct the expected result.

Patch 9.0.0761

Problem: Cannot use **'indentexpr'** for Lisp indenting.

Solution: Add the **'lispoptions'** option.

Patch 9.0.0762

Problem: Build failure.

Solution: Add missing change.

Patch 9.0.0763

Problem: MS-Windows: warning for using int for size\_t.  
Solution: Declare variable as size\_t.

Patch 9.0.0764

Problem: Indent and option tests fail.  
Solution: Change OP\_INDENT. Add entry to options test table.

Patch 9.0.0765

Problem: With a Visual block a put command column may go negative.  
Solution: Check that the column does not become negative.

Patch 9.0.0766

Problem: Too many delete() calls in tests.  
Solution: Use deferred delete where possible.

Patch 9.0.0767

Problem: Too many delete() calls in tests.  
Solution: Use deferred delete where possible.

Patch 9.0.0768

Problem: Too many delete() calls in tests.  
Solution: Use deferred delete where possible.

Patch 9.0.0769

Problem: Too many delete() calls in tests.  
Solution: Use deferred delete where possible.

Patch 9.0.0770

Problem: Quickfix commands may keep memory allocated.  
Solution: Free memory when it's a bit much. (Yegappan Lakshmanan,  
closes #11379)

Patch 9.0.0771

Problem: Cannot always tell the difference between tex and rexx files.  
Solution: Recognize tex by a leading backslash. (Martin Tournoij,  
closes #11380)

Patch 9.0.0772

Problem: The libvterm code is outdated.  
Solution: Include libvterm changes from revision 790 to 801.

Patch 9.0.0773

Problem: Huge build on MacOS uses dynamic Perl.  
Solution: Use built-in Perl, uninstall the brew one. (closes #11382)

Patch 9.0.0774

Problem: The libvterm code is outdated.  
Solution: Include libvterm changes from revision 802 to 817. Revert some  
changes made for C89.

Patch 9.0.0775

Problem: MS-Windows: mouse scrolling not supported in the console.

Solution: Add event handling for mouse scroll events. (Christopher Plewright, closes #11374)

Patch 9.0.0776

Problem: MSVC can't have field name "small".

Solution: Rename small to smallfont.

Patch 9.0.0777

Problem: Code is indented too much.

Solution: Use an early return. (Yegappan Lakshmanan, closes #11386)

Patch 9.0.0778

Problem: Indexing of unknown const type fails during compilation.

Solution: Check for "any" properly. (closes #11389)

Patch 9.0.0779

Problem: lsl and lm3 file extensions are not recognized.

Solution: Add \*.lsl and \*.lm3 patterns. (Doug Kearns, closes #11384)

Patch 9.0.0780

Problem: **'scroll'** value computed in unexpected location.

Solution: Compute **'scroll'** when the window height is changed. (Luuk van Baal, closes #11387)

Patch 9.0.0781

Problem: Workaround to rename "small" to "smallfont" is clumsy.

Solution: Undefine "small" after including windows.h. (Ken Takata)

Patch 9.0.0782

Problem: OpenVPN files are not recognized.

Solution: Add patterns for OpenVPN files. (closes #11391)

Patch 9.0.0783

Problem: "!!" doesn't do anything but does update the previous command.

Solution: Do not have "!!" change the previous command. (Martin Tournoij, closes #11372)

Patch 9.0.0784

Problem: Text prop "above" not displayed correctly with **'number'** and "n" in **'cpo'**.

Solution: Draw the line number column until the line text is reached.

Patch 9.0.0785

Problem: Memory leak with empty shell command.

Solution: Free the allocated memory when bailing out.

Patch 9.0.0786

Problem: User command does not get number from :tab modifier.

Solution: Include the number. (closes #11393, closes #6901)

Patch 9.0.0787

Problem: MS-Windows: mouse scrolling in terminal misbehaves without dll.

Solution: Add #ifdef as a temporary solution. (Christopher Plewright, closes #11392)

Patch 9.0.0788

Problem: ModeChanged autocmd not executed when Visual mode is ended with **CTRL-C**.

Solution: Do not trigger the autocmd when got\_int is set. (closes #11394)

Patch 9.0.0789

Problem: Dummy buffer ends up in a window.

Solution: Disallow navigating to a dummy buffer.

Patch 9.0.0790

Problem: Test for dummy buffer does not always produce the E86 error.

Solution: Do not check if the error is produced.

Patch 9.0.0791

Problem: At the hit-Enter prompt the End and Home keys may not work.

Solution: Use the special "@" code for End and Home, like it was done for the cursor keys in patch 8.2.2246. (Trygve Aaberge, closes #11396)

Patch 9.0.0792

Problem: MS-Windows: compiler complains about unused function.

Solution: Add #ifdef. (John Marriott)

Patch 9.0.0793

Problem: MS-Windows: mouse scroll events only work with the dll.

Solution: Accept CSI codes for MS-Windows without the GUI. (Christopher Plewright, closes #11401)

Patch 9.0.0794

Problem: There is no way to find out if an escape sequence with modifyOtherKeys has been seen.

Solution: Add a notice with ":verbose map".

Patch 9.0.0795

Problem: readblob() always reads the whole file.

Solution: Add arguments to read part of the file. (Ken Takata, closes #11402)

Patch 9.0.0796

Problem: Mapping test fails in some situations.

Solution: Find the line with the verbose information.

Patch 9.0.0797

Problem: Order of assert function arguments is reverted.

Solution: Swap the arguments. (closes #11399)

Patch 9.0.0798

Problem: Clang format configuration files are not recognized.

Solution: Use yaml for Clang format configuration files. (Marwin Glaser, closes #11398)

Patch 9.0.0799

Problem: In compiled function ->() on next line not recognized.

Solution: Also check for "(" . (closes #11405)

Patch 9.0.0800

Problem: Compiler complains about repeated typedef.

Solution: Remove one typedef.

Patch 9.0.0801

Problem: The modifyOtherKeys flag is set when it should not.

Solution: Do not handle special key codes with a modifier value above 16 as a modifyOtherKeys value. (issue #11403)

Patch 9.0.0802

Problem: MS-Windows: cannot map console mouse scroll events.

Solution: Change CSI to K\_SPECIAL when checking for a mapping. (Christopher Plewright, closes #11410)

Patch 9.0.0803

Problem: readblob() cannot read from character device.

Solution: Use S\_ISCHR() to not check the size. (Ken Takata, closes #11407)

Patch 9.0.0804

Problem: Crash when trying to divide the largest negative number by -1.

Solution: Handle this case specifically.

Patch 9.0.0805

Problem: Filetype autocmd may cause freed memory access.

Solution: Set the quickfix-busy flag while filling the buffer.

Patch 9.0.0806

Problem: **'langmap'** works differently when there are modifiers.

Solution: Only apply **'langmap'** to a character where modifiers have no effect. (closes #11395, closes #11404)

Patch 9.0.0807

Problem: With **'smoothscroll'** typing "0" may not go to the first column.

Solution: Recompute w\_cline\_height when needed. Do not scroll up when it would move the cursor.

Patch 9.0.0808

Problem: jsonnet filetype detection has a typo.

Solution: Change "libjsonnet" to "libsonnet". (Maxime Brunet, closes #11412)

Patch 9.0.0809

Problem: Test for job writing to buffer fails.

Solution: Correct w\_topline when deleting a buffer line.

Patch 9.0.0810

Problem: readblob() returns empty when trying to read too much.

Solution: Return what is available.

Patch 9.0.0811

Problem: Error if :echowin is preceded by a command modifier.

Solution: Do not give an error for range when there is a modifier. (closes #11414)

Patch 9.0.0812

Problem: GUI mouse scrollwheel mappings don't work.

Solution: Add check for "gui.in\_use". (Christopher Plewright, closes #11418)

Patch 9.0.0813

Problem: Kitty terminal is not recognized.

Solution: Recognize Kitty by the termresponse and then do not set seenModifyOtherKeys, since Kitty doesn't support that. (issue #11413)

Patch 9.0.0814

Problem: Aws config files are not recognized.

Solution: Use "confini" for aws config files. (Justin M. Keyes, closes #11416)

Patch 9.0.0815

Problem: "!!" does not switch to the alternate screen.

Solution: For "!!" don't clear the previous command. (closes #11420, closes #11409)

Patch 9.0.0816

Problem: **CTRL-Z** at end of file is always dropped.

Solution: Add the **'endoffile'** option, like the **'endofline'** option. (closes #11408, closes #11397)

Patch 9.0.0817

Problem: Build error.

Solution: correct variable name.

Patch 9.0.0818

Problem: "!ls" does not work.

Solution: Do not free memory that is in use.

Patch 9.0.0819

Problem: Still a build error, tests are failing.

Solution: Correct recent changes. Add missing init for **'eof'**.

Patch 9.0.0820

Problem: Memory leak with empty shell command.

Solution: Free the empty string.

Patch 9.0.0821

Problem: Memory leak with empty shell command.

Solution: Free the empty string.

Patch 9.0.0822

Problem: Crash when dragging the statusline with a mapping.

Solution: Check for valid window pointer. (issue #11427)

Patch 9.0.0823

Problem: Mouse drag test fails.

Solution: Only reset the mouse click flag when actually switching to another tab page. Disable test that keeps failing.

Patch 9.0.0824

Problem: Crash when using win\_move\_separator() in other tab page.  
Solution: Check for valid window in current tab page.  
(closes #11479, closes #11427)

Patch 9.0.0825

Problem: Cannot drag an entry in the tabpage line.  
Solution: Clear dragwin instead of got\_click. (closes #11483,  
closes #11482)

Patch 9.0.0826

Problem: If **'endofline'** is set the **CTRL-Z** may be written in the wrong place.  
Solution: Write **CTRL-Z** at the end of the file. Update the help to explain the possibilities better. (Ken Takata, closes #11486)

Patch 9.0.0827

Problem: The <Home> key in tmux doesn't work when **'term'** is set to "xterm".  
(Dominique Pellé)  
Solution: Only use '@' in a termcap key entry for "1" when ";" follows.  
(closes #11429)

Patch 9.0.0828

Problem: Various typos.  
Solution: Correct typos. (closes #11432)

Patch 9.0.0829

Problem: Wrong counts in macro comment.  
Solution: Update the value counts. (closes #11480)

Patch 9.0.0830

Problem: Compiling with Perl on Mac 12 fails.  
Solution: Suppress infinite warnings. (closes #11499)

Patch 9.0.0831

Problem: Compiler warning for redefining HAVE\_DUP.  
Solution: Undefine HAVE\_DUP if needed. (Ozaki Kiichi, closes #11484)

Patch 9.0.0832

Problem: Deprecation warning causes build failure.  
Solution: Suppress deprecation warning. (closes #11503)

Patch 9.0.0833

Problem: Mac: no +sound feature in huge build.  
Solution: Enable +sound in Mac huge build. (closes #11497)

Patch 9.0.0834

Problem: Warning for missing return type.  
Solution: Add "int". (San James, closes #11496)

Patch 9.0.0835

Problem: The window title is not redrawn when **'endoffile'** changes.  
Solution: redraw the window title when **'endoffile'** is changed. (Ken Takata,  
closes #11488)

Patch 9.0.0836

Problem: Wrong error when using extend() with funcref.

Solution: Better check the variable type. (closes #11468, closes #11455)

Patch 9.0.0837

Problem: append() reports failure when not appending anything.

Solution: Only report failure when appending something. (closes #11498)

Patch 9.0.0838

Problem: Compiler warnings for unused variables.

Solution: Adjust #ifdef and remove unused variables. (John Marriott)

Patch 9.0.0839

Problem: Test may fail depending on sequence of events.

Solution: Accept error codes in either order. (Yee Cheng Chin, closes #11510)

Patch 9.0.0840

Problem: Cannot change a slice of a const list. (Takumi KAGIYAMA)

Solution: Remove the const flag from the slice type. (closes #11490)

Patch 9.0.0841

Problem: deletebufline() does not always return 1 on failure.

Solution: Refactor the code to make it work more predictable. (closes #11511)

Patch 9.0.0842

Problem: Unicode range for Apple SF symbols is outdated.

Solution: Update to SF Symbols 4. (Yee Cheng Chin, closes #11474)

Patch 9.0.0843

Problem: VHS tape files are not recognized.

Solution: Add a filetype pattern. (Carlos Alexandro Becker, closes #11452)

Patch 9.0.0844

Problem: Handling 'statusline' errors is spread out.

Solution: Pass the option name to the lower levels so the option can be reset there when an error is encountered. (Luuk van Baal, closes #11467)

Patch 9.0.0845

Problem: Shell command with just space gives strange error.

Solution: Skip white space at start of the argument. (Christian Brabandt, Shane-XB-Qian, closes #11515, closes #11495)

Patch 9.0.0846

Problem: Using assert\_fails() may cause hit-enter prompt.

Solution: Set no\_wait\_return. (closes #11522)

Patch 9.0.0847

Problem: CI: not totally clear what MS-Windows version is used.

Solution: Show the Windows version. (Ken Takata, closes #11524)

Patch 9.0.0848

Problem: Help item for --log argument is not aligned nicely.  
Solution: Add a Tab. (Ken Takata, closes #11521)

Patch 9.0.0849

Problem: Terminal mouse test is a bit flaky.  
Solution: Add WaitFor() calls. (James McCoy closes #11519) Tune wait times to reduce flakiness.

Patch 9.0.0850

Problem: MS-Windows Terminal has unstable color control.  
Solution: Do not try to read the old command prompt colortable, use modern VT sequences. (Christopher Plewright, closes #11450, closes #11373)

Patch 9.0.0851

Problem: Terminal mouse test is still flaky.  
Solution: Also use WaitForAssert().

Patch 9.0.0852

Problem: Crypt test is skipped if xxd is not found.  
Solution: Find xxd where it was supposed to be build.

Patch 9.0.0853

Problem: Terminal mouse test is still flaky on MacOS M1.  
Solution: Also wait for the file to have some contents.

Patch 9.0.0854

Problem: No proper test for what 9.0.0846 fixes.  
Solution: Run test in a terminal so that the hit-enter prompt can show up. (closes #11523)

Patch 9.0.0855

Problem: Comment not located above the code it refers to.  
Solution: Move the comment. (closes #11527)

Patch 9.0.0856

Problem: MS-Windows: executable not found when running individual test.  
Solution: Also look for vimd.exe. (Christopher Plewright, closes #11525)

Patch 9.0.0857

Problem: Selecting MSVC 2017 does not set \$PLATFORM.  
Solution: Use \$VSCMD\_ARG\_TGT\_ARCH. (Ken Takata, closes #11485)

Patch 9.0.0858

Problem: "!!sort" in a closed fold sorts too many lines.  
Solution: Round to end of fold after adding the line count. (closes #11487)

Patch 9.0.0859

Problem: Compiler warning for unused variable.  
Solution: Add #ifdef.

Patch 9.0.0860

Problem: MS-Windows: windres fails with clang 15.0.4.  
Solution: Use llvm-windres. (John Marriott)

Patch 9.0.0861

Problem: Solution for "!!sort" in closed fold is not optimal.

Solution: Use a different range instead of the subtle difference in handling a range with an offset. (issue #11487)

Patch 9.0.0862

Problem: Default value of 'endoffile' is wrong.

Solution: The default must be 'noendoffile'.

Patch 9.0.0863

Problem: col() and charcol() only work for the current window.

Solution: Add an optional winid argument. (Yegappan Lakshmanan, closes #11466, closes #11461)

Patch 9.0.0864

Problem: Crash when using "!!" without a previous shell command.

Solution: Check "prevcmd" is not NULL. (closes #11487)

Patch 9.0.0865

Problem: Duplicate arguments are not always detected.

Solution: Expand to full path before comparing arguments. (Nir Lichtman, closes #11505, closes #9402)

Patch 9.0.0866

Problem: No test for what patch 8.2.2207 fixes.

Solution: Add a test case. (closes #11531)

Patch 9.0.0867

Problem: Wildmenu redrawing code is spread out.

Solution: Refactor to move code together. (closes #11528)

Patch 9.0.0868

Problem: MS-Windows: after Vim exits console resizing does not work properly.

Solution: Restore screen behavior checks for various WT and VTP combinations. (Christopher Plewright, closes #11526, closes #11507)

Patch 9.0.0869

Problem: Bogus error when string used after :elseif.

Solution: Do not consider a double quote the start of a comment. (closes #11534)

Patch 9.0.0870

Problem: Get E967 when using text property in quickfix window. (Sergey Vlasov)

Solution: Do not add an extra NUL and compute the text length correctly. (closes #11513)

Patch 9.0.0871

Problem: Using freed memory when clearing augroup at more prompt.

Solution: Delay clearing augroup until it's safe. (closes #11441)

Patch 9.0.0872

Problem: Code is indented more than needed.

Solution: Return early. (Yegappan Lakshmanan, closes #11538)

Patch 9.0.0873

Problem: Using freed memory when executing mapclear at the more prompt.

Solution: Do not clear mappings while listing them. (closes #11438)

Patch 9.0.0874

Problem: Using freed memory when executing unmenu at the more prompt.

Solution: Do not clear menus while listing them. (closes #11439)

Patch 9.0.0875

Problem: Using freed memory when executing delfunc at the more prompt.

Solution: Check function list not changed in another place. (closes #11437)

Patch 9.0.0876

Problem: Code is indented more than needed.

Solution: Split ExpandEscape() in two. (Yegappan Lakshmanan, closes #11539)

Patch 9.0.0877

Problem: Using freed memory with :comclear while listing commands.

Solution: Bail out when the command list has changed. (closes #11440)

Patch 9.0.0878

Problem: Coverity warns for dead code.

Solution: Remove the dead code.

Patch 9.0.0879

Problem: Unnecessary nesting in makefile.

Solution: Join "else" and "ifeq". (Ken Takata, closes #11547)

Patch 9.0.0880

Problem: Preprocessor indenting is off.

Solution: Adjust preprocessor indentation. (Ken Takata, closes #11546)

Patch 9.0.0881

Problem: Cannot get the currently showing mouse shape.

Solution: Add getmouseshape().

Patch 9.0.0882

Problem: Using freed memory after SpellFileMissing autocmd uses bwipe.

Solution: Bail out if the window no longer exists.

Patch 9.0.0883

Problem: A silent mapping may cause dots on the command line.

Solution: Don't show dots for completion if they are not going to be removed again. (closes #11501)

Patch 9.0.0884

Problem: Mouse shape remains in op-pending mode after failed change.

Solution: Reset finish\_op and restore it. (closes #11545)

Patch 9.0.0885

Problem: Informational message has an error message number.  
Solution: Use a message without an error number. (closes #11530)

Patch 9.0.0886

Problem: Horizontal mouse scroll only works in the GUI.  
Solution: Make horizontal mouse scroll also work in a terminal.  
(Christopher Plewright, closes #11448)

Patch 9.0.0887

Problem: Cannot easily try out what codes various keys produce.  
Solution: Add a script to gather key code information, with an initial list of codes to compare with.

Patch 9.0.0888

Problem: MS-Windows GUI: **CTRL-]** does not work on Swiss keyboard.  
Solution: Check the key code and don't consider it as a dead key. (Aedin Louis Xavier, closes #11556)

Patch 9.0.0889

Problem: Keycode check script has a few flaws.  
Solution: Sort on terminal name. Ignore XTGETTCAP responses. Check for version and status response. Update entries.

Patch 9.0.0890

Problem: No test for what patch 9.0.0827 fixes.  
Solution: Add a test (still doesn't fail when fix is reverted).

Patch 9.0.0891

Problem: Virtual text below after match has wrong highlight.  
Solution: Restore search\_attr only after the virtual text.  
(closes #11446)

Patch 9.0.0892

Problem: May redraw when not needed, causing slow scrolling.  
Solution: Do not redraw when w\_skipcol doesn't change. When w\_skipcol changes only redraw from the top. (issue #11559)

Patch 9.0.0893

Problem: **'smoothscroll'** cursor calculations wrong when **'number'** is set.  
Solution: Correct the code that computes the width. (closes #11492)

Patch 9.0.0894

Problem: Virtual text property highlight ignores window background.  
Solution: Combine text prop attribute with win\_attr into extra\_attr.  
(closes #11462)

Patch 9.0.0895

Problem: File renamed twice in test; missing feature check.  
Solution: Remove a rename() call. Add check for cryptv feature.  
(closes #11564)

Patch 9.0.0896

Problem: Test for home key fails when **'term'** is "tmux".  
Solution: Only save termcap entries that exist. Adjust code for xHome to

what xterm uses. (closes #11566)

Patch 9.0.0897

Problem: Clinical Quality Language files are not recognized.

Solution: Add the "\*.cql" pattern. (Matthew Gramigna, closes #11452)

Patch 9.0.0898

Problem: With '**smoothscroll**' cursor is one screen line too far down. (Ernie Rael)

Solution: Add a test that currently has the wrong result so that a fix can be made. (issue #11436)

Patch 9.0.0899

Problem: The builtin terminals are in one long list.

Solution: Refactor into multiple lists and an index of the lists.

Patch 9.0.0900

Problem: Cursor moves too far with '**smoothscroll**'.

Solution: Only move as far as really needed. (Yee Cheng Chin, closes #11504)

Patch 9.0.0901

Problem: Setting w\_leftcol and handling side effects is confusing.

Solution: Use a function to set w\_leftcol() and handle side effects.

Patch 9.0.0902

Problem: Some mouse scroll code is not in a good place.

Solution: Refactor the code. (Christopher Plewright, closes #11561)

Patch 9.0.0903

Problem: Key code checker doesn't check modifyOtherKeys resource.

Solution: Request the modifyOtherKeys resource value. Drop resource DCS responses.

Patch 9.0.0904

Problem: Various comment and indent flaws.

Solution: Improve comments and indenting.

Patch 9.0.0905

Problem: Virtual text after the line wraps when '**wrap**' is off.

Solution: Only set text\_prop\_follows when wrapping. (closes #11463)

Patch 9.0.0906

Problem: Mouse scroll code is not optimal.

Solution: Properly organise Normal mode, Insert mode and common code. (Christopher Plewright, closes #11572)

Patch 9.0.0907

Problem: Restoring window after WinScrolled may fail.

Solution: Lock the window layout when triggering WinScrolled.

Patch 9.0.0908

Problem: With '**smoothscroll**' cursor may end up in wrong position.

Solution: Correct the computation of screen lines. (Yee Cheng Chin, closes #11502)

Patch 9.0.0909

Problem: Error message for layout change does not match action.

Solution: Pass the command to where the error is given. (closes #11573)

Patch 9.0.0910

Problem: Setting lines in another buffer may not work well.

Solution: Make sure the buffer being changed has a window. (issue #11558)

Patch 9.0.0911

Problem: With **'smoothscroll'** set mouse click position may be wrong.

Solution: Adjust computations for w\_skipcol. (Yee Cheng Chin, closes #11514)

Patch 9.0.0912

Problem: libvterm with modifyOtherKeys level 2 does not match xterm.

Solution: Adjust key code escape sequences to be the same as what xterm sends in modifyOtherKeys level 2 mode. Check the value of no\_reduce\_keys before using it.

Patch 9.0.0913

Problem: Only a change in the current window triggers the WinScrolled event.

Solution: Trigger WinScrolled if any window scrolled or changed size. (issue #11576)

Patch 9.0.0914

Problem: deletebuflines() may move marks in the wrong window.

Solution: Find a window for the buffer being changed. (closes #11583)

Patch 9.0.0915

Problem: WinScrolled may trigger immediately when defined.

Solution: Initialize the fields in all windows. (closes #11582)

Patch 9.0.0916

Problem: getbuflines() is inefficient for getting a single line.

Solution: Add getbufoneline().

Patch 9.0.0917

Problem: The WinScrolled autocommand event is not enough.

Solution: Add WinResized and provide information about what changed. (closes #11576)

Patch 9.0.0918

Problem: MS-Windows: modifier keys do not work with mouse scroll events.

Solution: Use K\_SPECIAL instead of CSI for the modifier keys. (Christopher Plewright, closes #11587)

Patch 9.0.0919

Problem: Build failure with tiny features.

Solution: Adjust #ifdef's.

Patch 9.0.0920

Problem: Cannot find an import prefixed with "s:". (Doug Kearns)

Solution: Skip over the "s:". (closes #11585)

Patch 9.0.0921

Problem: Missing defined(PROTO) in #ifdef.

Solution: Adjust #ifdef so that proto works with different features.  
Clean up some preprocessor indenting.

Patch 9.0.0922

Problem: Mermaid files are not recognized.

Solution: Add patterns for Mermaid. (Crag MacEachern)

Patch 9.0.0923

Problem: Second SIGWINCH signal may be ignored.

Solution: When set\_shellsize() is busy when called then run the inner code again when it's done. (issue #424)

Patch 9.0.0924

Problem: The first termcap entry of a builtin termcap is not used.

Solution: Remove increment that was previously skipping the KS\_NAME entry.

Patch 9.0.0925

Problem: Two conditions are always false.

Solution: Remove the conditions. Update return value types to make clear what could be returned. (closes #11593)

Patch 9.0.0926

Problem: Coverity warns for not using return value of dict\_add().

Solution: When dict\_add() fails then don't call hash\_remove().

Patch 9.0.0927

Problem: Coverity warns for using a NULL pointer.

Solution: Check for memory allocation failure.

Patch 9.0.0928

Problem: Using Ruby LDFLAGS may cause build problems.

Solution: Do not add Ruby LDFLAGS to Vim's LDFLAGS. (Zdenek Dohnal, closes #11592)

Patch 9.0.0929

Problem: Build failure with tiny version. (Tony Mechelynck)

Solution: Add #ifdef.

Patch 9.0.0930

Problem: Cannot debug the Kitty keyboard protocol with TermDebug.

Solution: Add Kitty keyboard protocol support to the libvterm fork.  
Recognize the escape sequences that the protocol generates. Add the **'keyprotocol'** option to allow the user to specify for which terminal what protocol is to be used, instead of hard-coding this.  
Add recognizing the kitty keyboard protocol status.

Patch 9.0.0931

Problem: MS-Windows: mouse column limited to 223.

Solution: Use two bytes for each mouse coordinate. Add the mouse position to scroll events. (Christopher Plewright, closes #11597)

Patch 9.0.0932

Problem: Oblivion files are not recognized.

Solution: Recognize Oblivion files and alike as "obse". (closes #11540)

Patch 9.0.0933

Problem: Kitty shows "already at oldest change" on startup.

Solution: When receiving the keyboard protocol state return the ignore key.  
(closes #11601)

Patch 9.0.0934

Problem: Various code formatting issues.

Solution: Improve code formatting.

Patch 9.0.0935

Problem: When using dash it may not be recognize as filetype "sh".

Solution: Add checks for "dash". (Eisuke Kawashima, closes #11600)

Patch 9.0.0936

Problem: Wrong type for "isunnamed" returned by getreginfo().

Solution: Use VAR\_BOOL instead of VAR\_SPECIAL. (closes #11598)

Patch 9.0.0937

Problem: Forked repositories send out useless email.

Solution: When Coverity fails to run just ignore it. (Shane-XB-Qian,  
closes #11604)

Patch 9.0.0938

Problem: MS-Windows: debug executable not found when running test.

Solution: Look for vimd.exe. (Christopher Plewright, closes #11602)

Patch 9.0.0939

Problem: Still using simplified mappings when using the kitty keyboard  
protocol.

Solution: Use the kitty\_protocol\_state value to decide whether to use  
simplified mappings. Improve how seenModifyOtherKeys is set and  
reset.

Patch 9.0.0940

Problem: Crash when typing a letter in a terminal window. (Shane-XB-Qian)

Solution: Use the "vterm" variable instead of getting the terminal pointer  
from the current buffer. (closes #11608)

Patch 9.0.0941

Problem: CI failures in sound dummy.

Solution: Temporarily disable building sound dummy. (closes #11610)

Patch 9.0.0942

Problem: Workflow Description Language files are not recognized.

Solution: Add a pattern for the "wdl" filetype. (Matt Dunford,  
closes #11611)

Patch 9.0.0943

Problem: Pretending to go out of Insert mode when Esc is received has side  
effects.

Solution: When the kitty keyboard protocol is enabled expect Esc to always be the start of an escape sequence.

Patch 9.0.0944

Problem: **'cursorline'** causes virtual text highlight to continue.

Solution: Save and restore line\_attr. (closes #11588)

Patch 9.0.0945

Problem: Failures in the cursorline test.

Solution: Reset extra\_attr only after a text property.

Patch 9.0.0946

Problem: CI: Error in Coverity flow is not reported.

Solution: Use another way to avoid errors in a forked repository. (Ken Takata, closes #11609)

Patch 9.0.0947

Problem: Invalid memory access in substitute with function that goes to another file.

Solution: Check for text locked in **CTRL-W** gf.

Patch 9.0.0948

Problem: **'ttyfast'** is set for arbitrary terminals.

Solution: Always set **'ttyfast'**. (closes #11549)

Patch 9.0.0949

Problem: Crash when unletting a variable while listing variables.

Solution: Disallow changing a hashtable while going over the entries. (closes #11435)

Patch 9.0.0950

Problem: The pattern "\\_s\zs" matches at EOL.

Solution: Make the pattern "\\_s\zs" match at the start of the next line. (closes #11617)

Patch 9.0.0951

Problem: Trying every character position for a match is inefficient.

Solution: Use the start position of the match ignoring "\zs".

Patch 9.0.0952

Problem: Eclipse preference files are not recognized.

Solution: Add a pattern to use "jproperties" for Eclipse preference files. (closes #11618)

Patch 9.0.0953

Problem: Part of making search more efficient is missing.

Solution: Add the change in searchit().

Patch 9.0.0954

Problem: Cannot detect whether modifyOtherKeys is enabled.

Solution: Use XTQMODKEYS introduced by xterm version 377 to request the modifyOtherKeys level. Update the keycode check results.

Patch 9.0.0955

Problem: Libvterm does not support the XTQMODKEYS request.  
Solution: Implement the XTQMODKEYS request and response. Update the keycode check results.

Patch 9.0.0956

Problem: Terminal tests fail when using key with modifier.  
Solution: Use the modifyOtherKeys encoding when using RunVimInTerminal().

Patch 9.0.0957

Problem: Tests fail without the terminal feature.  
Solution: Move functions to another utility script.

Patch 9.0.0958

Problem: Messages test is flaky.  
Solution: Add a short delay.

Patch 9.0.0959

Problem: Error when using the "File Settings / Text Width" menu.  
Solution: Use str2nr(). (closes #11624)

Patch 9.0.0960

Problem: Error when using the "Tools / Spelling / Find More Languages" menu.  
Solution: Remove "<SID>". Reset "g:menutrans\_set\_lang\_to" when 'encoding' changes. (closes #11625)

Patch 9.0.0961

Problem: Using deletebuflines() may jump to another window.  
Solution: Do not use a window where the buffer was only in the past. (closes #11594)

Patch 9.0.0962

Problem: Virtual text below cannot be placed below empty lines.  
Solution: Add one character. (James Alvarado, closes #11606, closes #11520)

Patch 9.0.0963

Problem: Function name does not match autocmd event name.  
Solution: Rename "optionsset" to "optionset". (closes #11630)

Patch 9.0.0964

Problem: Status line of other window not redrawn when dragging it when 'splitkeep' is set to "screen".  
Solution: Set w\_redr\_status earlier. (Luuk van Baal, closes #11635, closes #11632)

Patch 9.0.0965

Problem: Using one window for executing autocommands is insufficient.  
Solution: Use up to five windows for executing autocommands.

Patch 9.0.0966

Problem: Some compilers don't allow a declaration after a label.  
Solution: Move the declaration to the start of the block. (John Marriott)

Patch 9.0.0967

Problem: Leaking memory from autocmd windows.  
Solution: Free window when auc\_win is not NULL.

Patch 9.0.0968

Problem: GUI mouse event test is a bit flaky.  
Solution: Mark the test case as flaky. Move test function failure checks to a separate test function.

Patch 9.0.0969

Problem: Matchparen highlight is not updated when switching buffers.  
Solution: Listen to the BufLeave and the BufWinEnter autocmd events.  
(closes #11626)

Patch 9.0.0970

Problem: Coverity warns for uninitialized variable.  
Solution: Initialize "ren\_ret".

Patch 9.0.0971

Problem: Escape sequences not recognized without the termresponse feature.  
Solution: Recognize escape sequences to avoid display mess up.

Patch 9.0.0972

Problem: Build failure on some systems.  
Solution: Adjust #ifdefs related to the termresponse feature.

Patch 9.0.0973

Problem: Kitty keyboard protocol key not decoded when it has an unsupported modifier, such as NumLock.  
Solution: Accept a key with any modifier. (closes #11638)

Patch 9.0.0974

Problem: Even when Esc is encoded a timeout is used.  
Solution: Use K\_ESC when an encoded Esc is found.

Patch 9.0.0975

Problem: Virtual text below an empty line is misplaced when 'number' is set.  
Solution: Adjust the computations. (closes #11629)

Patch 9.0.0976

Problem: Enabling the kitty keyboard protocol uses push/pop.  
Solution: Use the start/stop codes to avoid unpredictable behavior.

Patch 9.0.0977

Problem: It is not easy to see what client-server commands are doing.  
Solution: Add channel log messages if ch\_log() is available. Move the channel logging and make it available with the +eval feature.

Patch 9.0.0978

Problem: Build errors without the +channel feature. (John Marriott)  
Solution: Adjust #ifdefs.

Patch 9.0.0979

Problem: ch\_log() text can be hard to find in the log file.

Solution: Prepend "ch\_log()" to the text.

Patch 9.0.0980

Problem: The keyboard state response may end up in a shell command.

Solution: Only request the keyboard protocol state when the typeahead is empty, no more commands are following and not exiting. Add the t\_RK termcap entry for this.

Patch 9.0.0981

Problem: Build error in tiny version.

Solution: Add #ifdef.

Patch 9.0.0982

Problem: **'cursorline'** not drawn before virtual text below.

Solution: Add the **'cursorline'** attribute to the empty space. (closes #11647)

Patch 9.0.0983

Problem: Stray characters displayed when starting the GUI.

Solution: Add t\_RK to the list of terminal options.

Patch 9.0.0984

Problem: GUI: remote\_foreground() does not always work. (Ron Aaron)

Solution: For GTK use gtk\_window\_set\_keep\_above(). (issue #11641)

Patch 9.0.0985

Problem: When using kitty keyboard protocol function keys may not work. (Kovid Goyal)

Solution: Recognize CSI ending in [\[ABCDEFHPQRS\]](#) also when the termcap entries are not specified. (closes #11648)

Patch 9.0.0986

Problem: Build failure with tiny version.

Solution: Add #ifdef.

Patch 9.0.0987

Problem: File missing from list of distributed files.

Solution: Add logfile.pro to list of distributed files.

Patch 9.0.0988

Problem: Using feedkeys() does not show up in a channel log.

Solution: Add ch\_log() calls and clean up the code.

Patch 9.0.0989

Problem: Popwin test is more flaky on MacOS.

Solution: Use a longer wait time.

Patch 9.0.0990

Problem: Callback name argument is changed by setqflist().

Solution: Use the expanded function name for the callback, do not store it in the argument. (closes #11653)

Patch 9.0.0991

Problem: Crash when reading help index with various options set. (Marius Gedminas)

Solution: Do not set wlv.c\_extra to NUL when wlv.p\_extra is NULL.  
(closes #11651)

Patch 9.0.0992

Problem: Vim9 script: get E1096 when comment follows return.

Solution: Adjust condition for return without expression. (closes #11654)

Patch 9.0.0993

Problem: Display errors when adding or removing text property type.

Solution: Perform a full redraw. Only use text properties for which the type is defined. (closes #11655)

Patch 9.0.0994

Problem: Tests for empty prop type name fail.

Solution: Correct the error number.

Patch 9.0.0995

Problem: Padding before virtual text below is highlighted when **'number'** and **'nowrap'** are set.

Solution: Save and restore n\_attr\_skip. (closes #11643)

Patch 9.0.0996

Problem: If **'keyprotocol'** is empty "xterm" still uses modifyOtherKeys.

Solution: Remove t\_TI, t\_RK and t\_TE from the "xterm" builtin termcap and let the default value of **'keyprotocol'** add those.

Patch 9.0.0997

Problem: Coverity warns for dead code.

Solution: Don't use ASCII\_ISUPPER() for a negative value.

Patch 9.0.0998

Problem: "gk" may reset skipcol when not needed.

Solution: Only reset skipcol if the cursor column is less.

Patch 9.0.0999

Problem: Memory may leak.

Solution: Free the sound callback function name if it was allocated.

Patch 9.0.1000

Problem: With **'smoothscroll'** skipcol may be reset unnecessarily.

Solution: Check the line does actually fit in the window.

Patch 9.0.1001

Problem: Classes are not documented or implemented yet.

Solution: Make the first steps at documenting Vim9 objects, classes and interfaces. Make initial choices for the syntax. Add a skeleton implementation. Add "public" and "this" in the command table.

Patch 9.0.1002

Problem: Command list test fails.

Solution: Add commands added to the list.

Patch 9.0.1003

Problem: Tiny build fails.

Solution: Remove `#ifdef` from error message.

Patch 9.0.1004

Problem: Suspend test sometimes fails on MacOS.

Solution: Wait a short while for terminal responses.

Patch 9.0.1005

Problem: A failed test may leave a swap file behind.

Solution: Delete the swap file to avoid another test to fail. Use another file name.

Patch 9.0.1006

Problem: Suspend test still sometimes fails on MacOS.

Solution: Wait a little while for terminal responses.

Patch 9.0.1007

Problem: There is no way to get a list of swap file names.

Solution: Add the `swapfilelist()` function. Use it in the test script to clean up. Remove deleting individual swap files.

Patch 9.0.1008

Problem: Test for `swapfilelist()` fails on MS-Windows.

Solution: Only check the tail of the path. Mark a test as flaky.

Patch 9.0.1009

Problem: Test for catch after interrupt is flaky on MS-Windows.

Solution: Mark the test as flaky.

Patch 9.0.1010

Problem: Stray warnings for existing swap files.

Solution: Wipe out the buffer until it has no name and no swap file.

Patch 9.0.1011

Problem: `ml_get` error when using `screenpos()`.

Solution: Give an error for the line number. (closes #11661)

Patch 9.0.1012

Problem: Tests may get stuck in buffer with swap file.

Solution: Bail out when `bwipe!` doesn't get another buffer.

Patch 9.0.1013

Problem: Suspend test often fails on Mac OS.

Solution: Make `t_RP` empty.

Patch 9.0.1014

Problem: Zir files are not recognized.

Solution: Add a pattern for Zir files. (closes #11664)

Patch 9.0.1015

Problem: Without `/dev/urandom` `srand()` seed is too predictable.

Solution: Use micro seconds and XOR with process ID. (Yasuhiro Matsumoto, closes #11656)

Patch 9.0.1016

Problem: screenpos() does not count filler lines for diff mode.  
Solution: Add filler lines. (closes 11658)

Patch 9.0.1017

Problem: Test for srand() fails on MS-Windows.  
Solution: Do not expect the same result a second time.

Patch 9.0.1018

Problem: Suspend test still fails on Mac OS.  
Solution: Make **'keyprotocol'** empty.

Patch 9.0.1019

Problem: **'smoothscroll'** and virtual text above don't work together.  
(Yee Cheng Chin)  
Solution: Skip virtual text above when w\_skipcol is non-zero.  
(closes #11665)

Patch 9.0.1020

Problem: Tests call GetSwapFileList() before it is defined.  
Solution: Move the call to after defining the function. (Christopher Plewright)

Patch 9.0.1021

Problem: Test trips over g:name.  
Solution: Delete g:name after using it.

Patch 9.0.1022

Problem: Suspend test fails on Mac OS when suspending Vim.  
Solution: Make **'keyprotocol'** empty.

Patch 9.0.1023

Problem: MS-Windows: dynamic loading of libsodium doesn't work.  
Solution: Add "randombytes\_random". (Ken Takata, closes #11667)

Patch 9.0.1024

Problem: CI doesn't use the latest FreeBSD version.  
Solution: Go from 12.3 to 12.4. (closes #11423)

Patch 9.0.1025

Problem: WinScrolled is not triggered when filler lines change.  
Solution: Add "topfill" to the values that WinScrolled triggers on.  
(closes #11668)

Patch 9.0.1026

Problem: type of w\_last\_topfill is wrong.  
Solution: Use "int" instead of "linenr\_T". (closes #11670)

Patch 9.0.1027

Problem: LGTM is soon shutting down.  
Solution: Remove LGTM from CI. (closes #11671)

Patch 9.0.1028

Problem: Mouse shape test is flaky, especially on Mac OS.  
Solution: Instead of starting all timers at the same time, start the next

one in the callback of the previous one. (Yee Cheng Chin, closes #11673) Also use "bwipe!" instead of "close!" to avoid swap files remaining.

Patch 9.0.1029

Problem: Autoload directory missing from distribution.

Solution: Add the autoload/zig directory to the list of distributed files.

Patch 9.0.1030

Problem: Using freed memory with the cmdline popup menu.

Solution: Clear the popup menu when clearing the matches. (closes #11677)

Patch 9.0.1031

Problem: Vim9 class is not implemented yet.

Solution: Add very basic class support.

Patch 9.0.1032

Problem: Test fails when terminal feature is missing.

Solution: Use CheckRunVimInTerminal.

Patch 9.0.1033

Problem: Tiny build fails because of conflicting typedef.

Solution: Remove one typedef.

Patch 9.0.1034

Problem: Reporting swap file when windows are split.

Solution: Close extra windows after running a test.

Patch 9.0.1035

Problem: Object members are not being marked as used, garbage collection may free them.

Solution: Mark object members as used. Fix reference counting.

Patch 9.0.1036

Problem: Undo misbehaves when writing from an insert mode mapping.

Solution: Sync undo when writing. (closes #11674)

Patch 9.0.1037

Problem: lalloc(0) error for a class without members.

Solution: Don't allocate room for members if there aren't any.  
Don't create the class if there was an error.

Patch 9.0.1038

Problem: Function name does not match what it is used for.

Solution: Include the modifier in the name. (closes #11679)

Patch 9.0.1039

Problem: Using a <Cmd> mapping CmdlineChanged may be triggered twice.

Solution: Count the number of times CmdlineChanged is triggered and avoid doing it twice. (closes #116820)

Patch 9.0.1040

Problem: Test for <Cmd> mapping with CmdlineChanged fails.

Solution: Put back the check for the cmdline length not changing.

Patch 9.0.1041

Problem: Cannot define a method in a class.

Solution: Implement defining an object method. Make calling an object method work.

Patch 9.0.1042

Problem: ASAN gives false alarm about array access.

Solution: Use an intermediate pointer.

Patch 9.0.1043

Problem: Macro has confusing name and is duplicated.

Solution: Use one macro with an understandable name. (closes #11686)

Patch 9.0.1044

Problem: Setting window height using Python may cause errors.

Solution: When setting "curwin" also set "curbuf". (closes #11687)

Patch 9.0.1045

Problem: In a class object members cannot be initialized.

Solution: Support initializing object members. Make "disassemble" work on an object method.

Patch 9.0.1046

Problem: Class method disassemble test fails on MS-Windows.

Solution: Do not match with a specific size.

Patch 9.0.1047

Problem: Matchparen is slow.

Solution: Actually use the position where the match started, not the position where the search started. (closes #11644)

Patch 9.0.1048

Problem: With "screenline" in '**culopt**' cursorline highlight is wrong.

Solution: Apply the priority logic also when "screenline" is in '**culopt**'. (closes #11696)

Patch 9.0.1049

Problem: Crash when opening a very small terminal window.

Solution: Instead of crashing fix the cursor position. (closes #11697)

Patch 9.0.1050

Problem: Using freed memory when assigning to variable twice.

Solution: Make copy of the list type. (closes #11691)

Patch 9.0.1051

Problem: After a failed **CTRL-W** ] next command splits window.

Solution: Reset postponed\_split. (Rob Pilling, closes #11698)

Patch 9.0.1052

Problem: Using freed memory on exit when EXITFREE is defined.

Solution: Make a deep copy of the type. Make sure TTFLAG\_STATIC is not set in the copy.

Patch 9.0.1053

Problem: Default constructor arguments are not optional.  
Solution: Use "= v:none" to make constructor arguments optional.

Patch 9.0.1054

Problem: Object member can't get type from initializer.  
Solution: If there is no type specified try to use the type of the initializer. Check for a valid type.

Patch 9.0.1055

Problem: Coverity warns for using uninitialized memory.  
Solution: Clear the "lhs" field earlier.

Patch 9.0.1056

Problem: Leaking memory when disassembling an object method.  
Solution: Free the typval of the class.

Patch 9.0.1057

Problem: Conflict between supercollider and scala filetype detection.  
Solution: Do not check for "Class : Method", it can appear in both filetypes. (Chris Kipp, closes #11699)

Patch 9.0.1058

Problem: String value of class and object do not have useful information.  
Solution: Add the class name and for the object the member values.

Patch 9.0.1059

Problem: Build failure with some compilers that can't handle a declaration directly after a "case" statement.  
Solution: Add a block to put the declarations in.

Patch 9.0.1060

problem: Private and public object members are not implemented yet.  
Solution: Implement private and public object members.

Patch 9.0.1061

Problem: Cannot display '**showcmd**' somewhere else.  
Solution: Add the '**showcmdloc**' option. (Luuk van Baal, closes #11684)

Patch 9.0.1062

Problem: Some test function names do not match what they are doing.  
Solution: Leave out user data for the test that is called "NoUserData". (closes #11703)

Patch 9.0.1063

Problem: When using Kitty a shell command may mess up the key protocol state.  
Solution: Output t\_te before t\_TE. If t\_te switches between the main and the alternate screen then deactivating the key protocol by t\_TE should happen after switching screen. (issue #11705)

Patch 9.0.1064

Problem: Code for making '**shortmess**' temporarily empty is repeated.  
Solution: Add functions for making '**shortmess**' empty and restoring it.

(Christian Brabandt, closes #11709)

Patch 9.0.1065

Problem: A shell command switching screens may still have a problem with the kitty keyboard protocol.

Solution: Disable the kitty keyboard protocol both in the current and the alternate screen, if there are indications it might be needed. (issue #11705) Also fix naming.

Patch 9.0.1066

Problem: Test function name is wrong.

Solution: Rename to what is actually being tested. (closes #11712)

Patch 9.0.1067

Problem: In diff mode virtual text is highlighted incorrectly. (Rick Howe)

Solution: Do not use diff attributes for virtual text. (closes #11714)

Patch 9.0.1068

Problem: No information about whether requesting term codes has an effect.

Solution: Add ch\_log() calls to report the effect of term code responses. Avoid deleting an entry and then adding back the same one.

Patch 9.0.1069

Problem: Diff mode highlight fails for special characters.

Solution: Adjust condition for setting "diff\_hlf".

Patch 9.0.1070

Problem: Reading beyond array size.

Solution: Only use name[0] and name[1], do not use "name" as a string.

Patch 9.0.1071

Problem: Codecov action version is too specific.

Solution: Only use "v3" to automatically use the latest stable version. (closes #11720)

Patch 9.0.1072

Problem: screenpos() column result in fold may be too small.

Solution: Add space of '**number**', sign column, etc. (closes #11715)

Patch 9.0.1073

Problem: Using "xterm-kitty" for '**term**' causes problems.

Solution: Remove the "xterm-" part when '**term**' is set from \$TERM. Detect a few kitty-specific properties based on the version response instead of the terminal name.

Patch 9.0.1074

Problem: Class members are not supported yet.

Solution: Add initial support for class members.

Patch 9.0.1075

Problem: build fails if the compiler doesn't allow for a declaration right after "case".

Solution: Add a block.

Patch 9.0.1076

Problem: ASAN complains about NULL argument.

Solution: Skip memmove() when there is nothing to move.

Patch 9.0.1077

Problem: Can add text property with negative ID before virtual text property.

Solution: Remember that a text property with a negative ID was used and give an appropriate error message. (closes #11725)  
Fix index computation.

Patch 9.0.1078

Problem: With the +vartabs feature indent folding may use wrong **'tabstop'**.

Solution: Use the "buf" argument instead of "curbuf".

Patch 9.0.1079

Problem: Leaking memory when defining a user command fails.

Solution: Free "compl\_arg" when needed. (closes #11726)

Patch 9.0.1080

Problem: The "kitty" terminfo entry is not widespread, resulting in the kitty terminal not working properly.

Solution: Go back to using "xterm-kitty" and avoid the problems it causes in another way.

Patch 9.0.1081

Problem: Using "->" with split lines does not always work.

Solution: Avoid trying to get another line. (closes #11723)

Patch 9.0.1082

Problem: Some jsonc files are not recognized.

Solution: Add patterns for jsonc and move some from json to jsonc. (closes #11711)

Patch 9.0.1083

Problem: Empty and comment lines in a class cause an error.

Solution: Skip empty and comment lines. (closes #11734)

Patch 9.0.1084

Problem: Code handling low level MS-Windows events cannot be tested.

Solution: Add test\_mswin\_event() and tests using it. (Christopher Plewright, closes #11622)

Patch 9.0.1085

Problem: Compiler warns for uninitialized variable.

Solution: Initialize the variable. Remove unused function. (John Marriott)

Patch 9.0.1086

Problem: Display wrong in Windows terminal after exiting Vim.

Solution: Apply screen restore fix for Windows 11 also to Windows 10 builds. (Christopher Plewright, closes #11713, closes #11706)

Patch 9.0.1087

Problem: Autocommand test sometimes fails.

Solution: Add a short delay. (James McCoy, closes #11737)

Patch 9.0.1088

Problem: Clang warns for unused variable.

Solution: Adjust #ifdef. (John Marriott)

Patch 9.0.1089

Problem: unnecessary assignment

Solution: Remove the assignment. (Luuk van Baal, closes #1136)

Patch 9.0.1090

Problem: FHIR Shorthand files are not recognized.

Solution: Add a pattern to detect FSH files. (Matthew Gramigna, closes #11738)

Patch 9.0.1091

Problem: Assignment to non-existing member causes a crash. (Yegappan Lakshmanan)

Solution: Give an error message and bail out when a member cannot be found.

Patch 9.0.1092

Problem: Search error message doesn't show used pattern.

Solution: Pass the actually used pattern to where the error message is given. (Rob Pilling, closes #11742)

Patch 9.0.1093

Problem: Using freed memory of object member. (Yegappan Lakshmanan)

Solution: Make a copy of the object member when getting it.

Patch 9.0.1094

Problem: Compiler warning when HAS\_MESSAGE\_WINDOW is not defined.

Solution: Add UNUSED.

Patch 9.0.1095

Problem: Using freed memory when declaration fails. (Yegappan Lakshmanan)

Solution: After unreferencing an object set the reference to NULL.

Patch 9.0.1096

Problem: Reallocating hashtable when the size didn't change.

Solution: Bail out when the hashtable is already the desired size.

Patch 9.0.1097

Problem: Tests are failing.

Solution: Do clean up a hashtable when at the initial size.

Patch 9.0.1098

Problem: Code uses too much indent.

Solution: Use an early return. (Yegappan Lakshmanan, closes #11747)

Patch 9.0.1099

Problem: Trying to resize a hashtable may cause a problem.

Solution: Do not try to resize a hashtable before adding an item.

Patch 9.0.1100

Problem: A hashtable with many removed items is not cleaned up.  
Solution: Re-hash a hashtable even when the size didn't change if too many items were removed.

Patch 9.0.1101

Problem: Unused global variable.  
Solution: Remove the variable. (closes #11752)

Patch 9.0.1102

Problem: Complicated use of #ifdef.  
Solution: Simplify #ifdef use. (Ken Takata, closes #11745)

Patch 9.0.1103

Problem: jq files are not recognized.  
Solution: Add detection of Jq files. (David McDonald, closes #11743)

Patch 9.0.1104

Problem: Invalid memory access when checking function argument types.  
Solution: Do not check beyond the number of arguments. (closes #11755)

Patch 9.0.1105

Problem: Code is indented too much.  
Solution: Use an early return. (Yegappan Lakshmanan, closes #11756)

Patch 9.0.1106

Problem: Not all postfix files are recognized.  
Solution: Recognize main.cf.proto files. (closes #11732)

Patch 9.0.1107

Problem: Float constant not recognized as float.  
Solution: Check the vartype instead of comparing with t\_float.  
(closes #11754)

Patch 9.0.1108

Problem: Type error when using "any" type and adding a number to a float.  
Solution: Accept both a number and a float. (closes #11753)

Patch 9.0.1109

Problem: Leaking allocated type.  
Solution: Reset the "static" flag in the allocated type copy.

Patch 9.0.1110

Problem: Build fails on Mac OS X 10.4/10.5 .  
Solution: Check if the dispatch/dispatch.h header exists. (Evan Miller, closes #11746)

Patch 9.0.1111

Problem: Termcap entries for RGB colors are not set automatically.  
Solution: Always set the termcap entries when +termguicolors is enabled.

Patch 9.0.1112

Problem: test\_mswin\_event() can hang.  
Solution: Add the "execute" argument to process events right away.  
(Christopher Plewright, closes #11760)

Patch 9.0.1113

Problem: Users cannot easily try out a PR.

Solution: Add an "artifacts" section to the AppVeyor CI config. (Christian Brabandt, closes #11762)

Patch 9.0.1114

Problem: CI does not use the latest Python version.

Solution: Switch from Python 3.10 to 3.11. (closes #11761)

Patch 9.0.1115

Problem: Code is indented more than needed.

Solution: Use an early return to reduce indenting. (Yegappan Lakshmanan, closes #11758)

Patch 9.0.1116

Problem: Compiler may complain about an unused function.

Solution: Add #ifdef. (John Marriott)

Patch 9.0.1117

Problem: Terminfo entries for bracketed paste are not used.

Solution: Use the newly added terminfo entries for bracketed paste. Correct mixup of output strings and key codes.

Patch 9.0.1118

Problem: Sporadic test failures when using a terminal window.

Solution: Adjust waiting times. (James McCoy, closes #11763)

Patch 9.0.1119

Problem: Type of arguments not checked when calling a partial.

Solution: Give an error for a wrong argument type. (closes #11753)

Patch 9.0.1120

Problem: Tex filetype detection not sufficiently tested.

Solution: Add more test cases for "tex" detection. (Jonas Strittmatter, closes #11765)

Patch 9.0.1121

Problem: Cursor positioning and display problems with **'smoothscroll'** and using "zt", "zb" or "zz".

Solution: Adjust computations and conditions. (Yee Cheng Chin, closes #11764)

Patch 9.0.1122

Problem: Class member access is not fully tested yet.

Solution: Add more tests.

Patch 9.0.1123

Problem: Class function not implemented yet.

Solution: Implement defining and calling a class function.

Patch 9.0.1124

Problem: Virtual text at a column position is truncated at the window edge. (Yegappan Lakshmanan)

Solution: Do not truncated virtual text that is placed at a column.

Patch 9.0.1125

Problem: Memory leak when using class functions.

Solution: Clear and free the array with class functions.

Patch 9.0.1126

Problem: Bracketed paste can be enabled when pasted text is not recognized.

Solution: Output t\_BE only when t\_PS and t\_PE are set.

Patch 9.0.1127

Problem: No error if function argument shadows class member.

Solution: Give an error for shadowing a class member.

Patch 9.0.1128

Problem: Build failure.

Solution: Add type cast. Add missing error messages.

Patch 9.0.1129

Problem: Sporadic Test\_range() failure.

Solution: Clear typeahead. Move to a separate function. (issue #22771)

Patch 9.0.1130

Problem: Unexpected output when autoloading a script for an interactive operation.

Solution: Reset "KeyTyped" while loading a script and when handling a nested function. (closes #11773)

Patch 9.0.1131

Problem: Build failure without the +eval feature.

Solution: Move code inside #ifdef.

Patch 9.0.1132

Problem: Code is indented more than needed.

Solution: Use an early return to reduce indentation. (Yegappan Lakshmanan, closes #11769)

Patch 9.0.1133

Problem: Error message names do not match the items.

Solution: Add "\_str" when the text contains "%s".

Patch 9.0.1134

Problem: Comparing objects uses identity instead of equality.

Solution: Compare the object values.

Patch 9.0.1135

Problem: Missing function argument.

Solution: Add ignore case flag.

Patch 9.0.1136

Problem: Memory leak when getting class member type from expr.

Solution: Clear the expression result.

Patch 9.0.1137

Problem: Some conditions are always false.  
Solution: Remove the useless conditions. (closes #11776)

Patch 9.0.1138

Problem: Crash when expecting varargs but it is something else.  
Solution: Only use the member when the type is a list. (closes #11774)

Patch 9.0.1139

Problem: Cannot create a new object in a compiled function.  
Solution: Compile the instructions to create a new object.

Patch 9.0.1140

Problem: Cannot call an object method in a compiled function.  
Solution: Compile the instructions to invoke an object method.

Patch 9.0.1141

Problem: **'cursorcolumn'** and **'colorcolumn'** wrong after concealing and wrapping line.  
Solution: Reset "wlv.vcol\_off" after each screen line. (Alexey Radkov, closes #11777)

Patch 9.0.1142

Problem: Crash and/or memory leak when redefining function after error.  
Solution: Clear pointer after making a copy. Clear arrays on failure. (closes #11774)

Patch 9.0.1143

Problem: Invalid memory access with bad **'statusline'** value.  
Solution: Avoid going over the NUL at the end.

Patch 9.0.1144

Problem: Reading beyond text.  
Solution: Add strlen\_maxlen() and use it.

Patch 9.0.1145

Problem: Invalid memory access with recursive substitute expression.  
Solution: Check the return value of vim\_regsub().

Patch 9.0.1146

Problem: MS-Windows: various special keys and modifiers are not mappable.  
Solution: Adjust the handling of keys with modifiers. (Christian Plewright, closes #11768)

Patch 9.0.1147

Problem: Cannot access a class member in a compiled function.  
Solution: Implement looking up a class member.

Patch 9.0.1148

Problem: Cmdline test fails in the GUI.  
Solution: Skip the test when running in the GUI.

Patch 9.0.1149

Problem: Class members may be garbage collected.  
Solution: Mark class members as being in use.

Patch 9.0.1150

Problem: :interface is not implemented yet.  
Solution: Implement the basics of :interface.

Patch 9.0.1151

Problem: Build failure.  
Solution: Add missing part of :interface change.

Patch 9.0.1152

Problem: Class "implements" argument not implemented.  
Solution: Implement "implements" argument. Add basic checks for when a class implements an interface.

Patch 9.0.1153

Problem: Build error with some compilers.  
Solution: Clear pointer the right way.

Patch 9.0.1154

Problem: Coverity warns for dead code.  
Solution: Remove condition that is always true.

Patch 9.0.1155

Problem: Cannot use a class as a type.  
Solution: Accept a class and interface name as a type.

Patch 9.0.1156

Problem: Tests fail because of a different error message.  
Solution: Don't give an error if a type name can't be found.

Patch 9.0.1157

Problem: "implements" only handles one interface name.  
Solution: Handle a comma separated list of names. Check for duplicate names.

Patch 9.0.1158

Problem: Code is indented more than necessary.  
Solution: Use an early return where it makes sense. (Yegappan Lakshmanan, closes #11787)

Patch 9.0.1159

Problem: Extends argument for class not implemented yet.  
Solution: Basic implementation of "extends".

Patch 9.0.1160

Problem: ASAN error for ufunc\_T allocated with wrong size.  
Solution: Make sure the size can always fit the struct.

Patch 9.0.1161

Problem: Coverity warns for using strcpy().  
Solution: Call a function to set the function name.

Patch 9.0.1162

Problem: Configure does not handle all FORTIFY\_SOURCE variants.

Solution: Also handle Fedora's default FORTIFY\_SOURCE flags. (Zdenek Dohnal, closes #11794)

Patch 9.0.1163

Problem: Compiler warning for implicit size\_t/int conversion.

Solution: Add a type cast. (Mike Williams, closes #11795)

Patch 9.0.1164

Problem: Evaluating string expression advances function line.

Solution: Disable function lines while parsing a string expression. (Hirohito Higashi, closes #11796)

Patch 9.0.1165

Problem: Tests using IPv6 sometimes fail.

Solution: Use getaddrinfo() and use try/catch. (James McCoy, closes #11783)

Patch 9.0.1166

Problem: Code is indented more than necessary.

Solution: Use an early return where it makes sense. (Yegappan Lakshmanan, closes #11792)

Patch 9.0.1167

Problem: EditorConfig files do not have their own filetype.

Solution: Add the "editorconfig" filetype. (Gregory Anders, closes #11779)

Patch 9.0.1168

Problem: Code to enable/disable mouse is not from terminfo/termcap.

Solution: Request the "XM" entry and use it to set **'ttymouse'** if possible.

Patch 9.0.1169

Problem: Some key+modifier tests fail on some AppVeyor images.

Solution: Adjust the tests for key movements and fix the revealed bugs. (Christopher Plewright, closes #11798)

Patch 9.0.1170

Problem: LGTM badge no longer works.

Solution: Remove the LGTM badge. (closes #11799)

Patch 9.0.1171

Problem: Screen is not redrawn after using setcellwidths().

Solution: Redraw the screen when the cell widths have changed. (Yasuhiro Matsumoto, closes #11800)

Patch 9.0.1172

Problem: When **'selection'** is "exclusive" then "1v" is one char short.

Solution: Add one character when **'selection'** is "exclusive". (closes #11791)

Patch 9.0.1173

Problem: Compiler warning for unused variable on non-Unix systems.

Solution: Move #ifdef. (John Marriott)

Patch 9.0.1174

Problem: Smali files are not recognized.

Solution: Add a pattern for Smali files. (Amaan Qureshi, closes #11801)

Patch 9.0.1175

Problem: The set\_ref\_in\_item() function is too long.

Solution: Use a separate function for more complicated types. (Yegappan Lakshmanan, closes #11802)

Patch 9.0.1176

Problem: smithy files are not recognized.

Solution: Add a pattern for Smithy files. (Chris Kipp, closes #11804)

Patch 9.0.1177

Problem: AppVeyor uses some older tools.

Solution: Switch to Visual Studio 2022 and Python 3.11. (Christopher Plewright, closes #11793)

Patch 9.0.1178

Problem: A child class cannot override functions from a base class.

Solution: Allow overriding and implement "super".

Patch 9.0.1179

Problem: Not all errors around inheritance are tested.

Solution: Add more tests. Fix uncovered problems.

Patch 9.0.1180

Problem: Compiler warnings without the +job feature.

Solution: Adjust #ifdefs. (John Marriott)

Patch 9.0.1181

Problem: Class inheritance and typing insufficiently tested.

Solution: Add more tests. Implement missing behavior.

Patch 9.0.1182

Problem: go checksum files are not recognized.

Solution: Add the name of go checksum files. (Amaan Qureshi, closes #11803)

Patch 9.0.1183

Problem: Code is indented more than necessary.

Solution: Use an early return where it makes sense. (Yegappan Lakshmanan, closes #11805)

Patch 9.0.1184

Problem: Interface of an object is not recognized when checking type.

Solution: Use the interface implemented by an object.

Patch 9.0.1185

Problem: Using class from imported script not tested.

Solution: Add tests. Implement what is missing.

Patch 9.0.1186

Problem: Imported class does not work when used twice in a line.

Solution: Fix the type parsing.

Patch 9.0.1187

Problem: Test for using imported class fails.  
Solution: Skip over rest of type.

Patch 9.0.1188

Problem: Return value of type() for class and object unclear.  
Solution: Add v:t\_object and v:t\_class.

Patch 9.0.1189

Problem: Invalid memory access with folding and using "L".  
Solution: Prevent the cursor from moving to line zero.

Patch 9.0.1190

Problem: AppVeyor runs much slower with MSVC 2022.  
Solution: Go back to MSVC 2015. (Christopher Plewright, closes #11810)

Patch 9.0.1191

Problem: Some Bazel files are not recognized.  
Solution: Add an extra Bazel pattern. (Keith Smily, closes #11807)

Patch 9.0.1192

Problem: No error when class function argument shadows a member.  
Solution: Check for shadowing.

Patch 9.0.1193

Problem: Cannot map <Esc> when using the Kitty key protocol.  
Solution: Add a non-simplified mapping for K\_ESC. (closes #11811)

Patch 9.0.1194

Problem: Compiler warning for comparing pointer with int.  
Solution: Change NULL to zero.

Patch 9.0.1195

Problem: Restoring KeyTyped when building statusline not tested.  
Solution: Add a test. Clean up and fix other tests. (closes #11815)

Patch 9.0.1196

Problem: Code is indented more than necessary.  
Solution: Use an early return where it makes sense. (Yegappan Lakshmanan, closes #11813)

Patch 9.0.1197

Problem: Dump file missing from patch.  
Solution: Add missing dump file.

Patch 9.0.1198

Problem: Abstract class not supported yet.  
Solution: Implement abstract class and add tests.

Patch 9.0.1199

Problem: Crash when using kitty and using a mapping with <Esc>.  
Solution: Do not try setting did\_simplify when it is NULL. (closes #11817)

Patch 9.0.1200

Problem: AppVeyor builds with an old Python version.

Solution: Switch from Python 3.8 to 3.11. (Christopher Plewright, closes #11814)

Patch 9.0.1201

Problem: Assignment with operator doesn't work in object method.

Solution: Handle loading the object member. (closes #11820) Add a few more tests.

Patch 9.0.1202

Problem: Crash when iterating over list of objects.

Solution: Do not make a copy of tt\_member for object or class. (closes #11823)

Patch 9.0.1203

Problem: Return type of values() is always list<any>.

Solution: Use the member type if possible. (issue #11822)

Patch 9.0.1204

Problem: Expression compiled the wrong way after using an object.

Solution: Generate constants before getting the type.

Patch 9.0.1205

Problem: Crash when handling class that extends another class with more than one object members.

Solution: Correct pointer computations. (closes #11824)

Patch 9.0.1206

Problem: Testing with Python on AppVeyor does not work properly.

Solution: Fix typo. Move most lines to the .bat file. (Christopher Plewright, closes #11828)

Patch 9.0.1207

Problem: Error when object type is expected but getting "any".

Solution: When actual type is "any" use a runtime type check. (closes #11826)

Patch 9.0.1208

Problem: Code is indented more than necessary.

Solution: Use an early return where it makes sense. (Yegappan Lakshmanan, closes #11819)

Patch 9.0.1209

Problem: Getting interface member does not always work.

Solution: Convert the index on the interface to the index on the object. (closes #11825)

Patch 9.0.1210

Problem: Compiler complains about declaration after label.

Solution: Move declaration to beginning of block (John Marriott)

Patch 9.0.1211

Problem: Storing value in interface member does not always work.

Solution: Convert the index on the interface to the index on the object.

Patch 9.0.1212

Problem: Cannot read back what setcellwidths() has done.  
Solution: Add getcellwidths(). (Kota Kato, closes #11837)

Patch 9.0.1213

Problem: Adding a line below the last one does not expand fold.  
Solution: Do not skip mark\_adjust() when adding lines below the last one.  
(Brandon Simmons, closes #11832, closes #10698)

Patch 9.0.1214

Problem: File left behind after running tests.  
Solution: Delete the file. (Dominique Pellé, closes #11839)

Patch 9.0.1215

Problem: Using isalpha() adds dependency on current locale.  
Solution: Do not use isalpha() for recognizing a URL or the end of an Ex command. (closes #11835)

Patch 9.0.1216

Problem: Coverity warns for ignoring return value.  
Solution: Break out of loop if function fails.

Patch 9.0.1217

Problem: Using an object member in a closure doesn't work.  
Solution: Initialize lv\_loop\_depth. (closes #11840)

Patch 9.0.1218

Problem: Completion includes functions that don't work.  
Solution: Skip functions that are not implemented. (Kota Kato, closes #11845)

Patch 9.0.1219

Problem: Handling of FORTIFY\_SOURCE flags doesn't match Fedora usage.  
Solution: Adjust the "sed" patterns. (Zdenek Dohnal, closes #11847)

Patch 9.0.1220

Problem: Termcap/terminfo entries do not indicate where modifiers might appear.  
Solution: Add ";\*" for function keys where modifiers are likely to be used.

Patch 9.0.1221

Problem: Code is indented more than necessary.  
Solution: Use an early return where it makes sense. (Yegappan Lakshmanan, closes #11833)

Patch 9.0.1222

Problem: Terminal tests are flaky on MacOS.  
Solution: Add TermWait() calls. (Yegappan Lakshmanan, closes #11852)

Patch 9.0.1223

Problem: Cannot use setcellwidths() below 0x100.  
Solution: Also accept characters between 0x80 and 0x100. (Ken Takata, closes #11834)

Patch 9.0.1224

Problem: Cannot call a :def function with a number for a float argument.  
Solution: Accept a number as well, convert it to a float.

Patch 9.0.1225

Problem: Reading past the end of a line when formatting text.  
Solution: Check for not going over the end of the line.

Patch 9.0.1226

Problem: Spurious empty line when using text properties and virtual text.  
Solution: Do not set "text\_prop\_follows" when the other text property is not virtual text. (closes #11846)

Patch 9.0.1227

Problem: No cmdline completion for :runtime.  
Solution: Add completion for :runtime. (closes #11853, closes #11447)  
Improve the resulting matches.

Patch 9.0.1228

Problem: Fuzzy menu completion is only tested in the GUI.  
Solution: Make fuzzy menu completion test work without GUI.  
(closes #11861)

Patch 9.0.1229

Problem: Cap'n Proto files are not recognized.  
Solution: Add a pattern and the "capnp" filetype. (Amaan Qureshi,  
closes #11862)

Patch 9.0.1230

Problem: Apache thrift files are not recognized.  
Solution: Add a pattern for thrift files. (Amaan Qureshi, closes #11859)

Patch 9.0.1231

Problem: Completion of :runtime does not handle {where} argument.  
Solution: Parse the {where} argument. (closes #11863)

Patch 9.0.1232

Problem: ColorTable saving and restoring does not work properly.  
Solution: Restore ColorTable[16] usage. (Christopher Plewright,  
closes #11836)

Patch 9.0.1233

Problem: search() loops forever if "skip" is TRUE for all matches.  
Solution: Keep the position of the first match.

Patch 9.0.1234

Problem: The code style has to be checked manually.  
Solution: Add basic code style checks in a test. Fix or avoid uncovered problems.

Patch 9.0.1235

Problem: MS-Windows console: not flushing termguicolors.  
Solution: Flush termguicolors. (Christopher Plewright, closes #11871)

Patch 9.0.1236

Problem: Code in same\_leader() can be simplified.

Solution: Simplify code that is executed only once. (closes #11867)

Patch 9.0.1237

Problem: Code is indented more than necessary.

Solution: Use an early return where it makes sense. (Yegappan Lakshmanan, closes #11858)

Patch 9.0.1238

Problem: :runtime completion can be further improved.

Solution: Also complete the {where} argument values and adjust the completion for that. (closes #11874)

Patch 9.0.1239

Problem: Cannot have a line break before an object member access.

Solution: Check for "." in next line. (closes #11864)

Patch 9.0.1240

Problem: Cannot access a private object member in a lambda defined inside the class.

Solution: Go up the context stack to find the class. (closes #11866)

Patch 9.0.1241

Problem: Coverity warns for not checking function return value.

Solution: Explicitly ignore the return value.

Patch 9.0.1242

Problem: Code for :runtime completion is not consistent.

Solution: Make code for cmdline expansion more consistent. (closes #11875)

Patch 9.0.1243

Problem: :setglobal cannot use script-local function for "expr" option.

Solution: Use the pointer to the option value properly. (closes #11883)

Patch 9.0.1244

Problem: Cursor briefly displayed in a wrong position when pressing Esc in Insert mode after autoindent was used.

Solution: Do not adjust the cursor position for assumed deleted white space if text is following. (closes #11877)

Patch 9.0.1245

Problem: Code is indented more than necessary.

Solution: Use an early return where it makes sense. (Yegappan Lakshmanan, closes #11879)

Patch 9.0.1246

Problem: Code is indented more than necessary.

Solution: Use an early return where it makes sense. (Yegappan Lakshmanan, closes #11887)

Patch 9.0.1247

Problem: Divide by zero with 'smoothscroll' set and a narrow window.

Solution: Bail out when the window is too narrow.

Patch 9.0.1248

Problem: Cannot export an interface. (Ernie Rael)

Solution: Add the EX\_EXPORT flag to :interface. (closes #11884)

Patch 9.0.1249

Problem: Cannot export an abstract class. (Ernie Rael)

Solution: Add the EX\_EXPORT flag to :abstract. (closes #11884)

Patch 9.0.1250

Problem: Cannot use an object method with :defer. (Ernie Rael)

Solution: Find the object method and generate code to call it.  
(closes #11886)

Patch 9.0.1251

Problem: Checking returned value of ga\_grow() is inconsistent.

Solution: Check for FAIL instead of "not OK". (Yegappan Lakshmanan,  
closes #11897)

Patch 9.0.1252

Problem: MS-Windows: scrollbar cropped off on Vim exit.

Solution: Don't call SetConsoleScreenBufferInfoEx when using the alternate  
screen buffer. (Christopher Plewright, closes #11882)

Patch 9.0.1253

Problem: CI adds repository unnecessarily.

Solution: Remove the line from the workflow. (closes #11900)

Patch 9.0.1254

Problem: Calling a method on an interface does not work.

Solution: At runtime figure out what method to call. (closes #11901)

Patch 9.0.1255

Problem: Changing '**virtualedit**' does not have immediate effect.

Solution: Correct how is checked for a changed value. (closes #11878)

Patch 9.0.1256

Problem: NetworkManager connection files are not recognized.

Solution: Add a pattern for NetworkManager connection files. (closes #11893)

Patch 9.0.1257

Problem: Code style is not check in test scripts.

Solution: Add basic code style check for test files.

Patch 9.0.1258

Problem: Code style test fails.

Solution: Adjust test files.

Patch 9.0.1259

Problem: Diffmode test fails.

Solution: Adjust expected result for adjusted indenting.

Patch 9.0.1260

Problem: Coverity warns for possible NULL pointer usage.

Solution: Change the condition.

Patch 9.0.1261

Problem: Elsa files are not recognized.

Solution: Add a pattern for Elsa files. (Amaan Qureshi, closes #11908)

Patch 9.0.1262

Problem: The did\_set\_string\_option function is too long.

Solution: Split off functionality to individual functions. (Yegappan Lakshmanan, Lewis Russell, closes #11904)

Patch 9.0.1263

Problem: KDL files are not recognized.

Solution: Add a pattern for KDL files. (Amaan Qureshi, closes #11898)

Patch 9.0.1264

Problem: Motif: compiler warning for unused argument.

Solution: Add "UNUSED".

Patch 9.0.1265

Problem: Using an interface method may give a compilation error.

Solution: Do not try to compile the body of a method of an interface. (closes #11885)

Patch 9.0.1266

Problem: Error for space before ": type" is inconsistent.

Solution: Give E1059 in more places. (closes #11868)

Patch 9.0.1267

Problem: The did\_set\_string\_option function is too long.

Solution: Further cleanup of handling string options. (Yegappan Lakshmanan, Lewis Russell, closes #11920)

Patch 9.0.1268

Problem: .clangd and .stylelintrc files don't get a filetype.

Solution: Use yaml for .clangd and json for .stylelintrc files. (Mark Skelton, closes #11916)

Patch 9.0.1269

Problem: Channel test often fails on Mac OS.

Solution: Increase the wait time from one to 15 milliseconds. (D. Ben Knoble, closes #11894)

Patch 9.0.1270

Problem: Crash when using search stat in narrow screen.

Solution: Check length of message. (closes #11921)

Patch 9.0.1271

Problem: Using sizeof() and subtract array size is tricky.

Solution: Use offsetof() instead. (closes #11926)

Patch 9.0.1272

Problem: Typo in pattern for filetype detection.

Solution: Fix the typo. (closes #11924)

Patch 9.0.1273

Problem: "lv" may select block with wrong size. (Evgeni Chasnovski)  
Solution: Compute "curswant" in the right line. (closes #11925)

Patch 9.0.1274

Problem: FIRRTL files are not recognized.  
Solution: Add a pattern for FIRRTL files. (Amaan Qureshi, closes #11931)

Patch 9.0.1275

Problem: The code for setting options is too complicated.  
Solution: Refactor the do\_set() function. (Yegappan Lakshmanan, Lewis Russell, closes #11932)

Patch 9.0.1276

Problem: Some mappings with Meta and Shift do not work.  
Solution: Apply the Shift modifier to the key. (issue #11913)

Patch 9.0.1277

Problem: Cursor may move with autocmd in Visual mode.  
Solution: Restore "VIsual\_active" before calling check\_cursor().  
(closes #11939)

Patch 9.0.1278

Problem: go.work.sum files are not recognized.  
Solution: Recognize go.work.sum files as the gosum filetype. (Amaan Qureshi, closes #11940)

Patch 9.0.1279

Problem: Display shows lines scrolled down erroneously. (Yishai Lerner)  
Solution: Do not change "wl\_lnum" at index zero. (closes #11938)

Patch 9.0.1280

Problem: Insufficient testing for what 9.0.1265 fixes.  
Solution: Add a couple of test cases. (issue #11885)

Patch 9.0.1281

Problem: Cadence files are not recognized.  
Solution: Recognize Cadence files. (Janez Podhostnik, closes #11951)

Patch 9.0.1282

Problem: Ron files are not recognized.  
Solution: Recognize Ron files. (Amaan Qureshi, closes #11948)

Patch 9.0.1283

Problem: The code for setting options is too complicated.  
Solution: Refactor the do\_set() function. (Yegappan Lakshmanan, Lewis Russell, closes #11945)

Patch 9.0.1284

Problem: Compiler warnings for uninitialized variables. (Tony Mechelynck)  
Solution: Add variable initializations.

Patch 9.0.1285

Problem: Various small problems.  
Solution: Adjust white space and comments.

Patch 9.0.1286

Problem: Coverity warns for using a NULL pointer.  
Solution: Bail out when "varp" is NULL.

Patch 9.0.1287

Problem: With the Kitty key protocol Esc with NumLock cannot be mapped.  
Solution: Also use K\_ESC when there is a modifier. (closes #11811)

Patch 9.0.1288

Problem: FunC files are not recognized.  
Solution: Recognize FunC files. (Amaan Qureshi, closes #11949)

Patch 9.0.1289

Problem: A newer version of clang can be used for CI.  
Solution: Switch from clang-15 to clang-16. (closes #11577)

Patch 9.0.1290

Problem: **CTRL-N** and **-P** on cmdline don't trigger CmdlineChanged.  
Solution: Jump to cmdline\_changed instead of cmdline\_not\_changed.  
(closes #11956)

Patch 9.0.1291

Problem: Move language files are not recognized.  
Solution: Recognize Move language files. (Amaan Qureshi, closes #11947)

Patch 9.0.1292

Problem: :defer may call the wrong method for an object. (Ernie Rael)  
Solution: When an object is from a class that extends or implements, figure out the method to call at runtime. (closes #11910)

Patch 9.0.1293

Problem: The set\_num\_option() is too long.  
Solution: Move code to separate functions. (Yegappan Lakshmanan, closes #11954)

Patch 9.0.1294

Problem: The set\_bool\_option() function is too long.  
Solution: Move code to separate functions. (Yegappan Lakshmanan, closes #11964)

Patch 9.0.1295

Problem: The option initialization function is too long.  
Solution: Move code to separate functions. (Yegappan Lakshmanan, closes #11966)

Patch 9.0.1296

Problem: Calling an object method with arguments does not work. (Ernie Rael)  
Solution: Take the argument count into account when looking up the object.  
(closes #11911)

Patch 9.0.1297

Problem: Wrong value for \$LC\_CTYPE makes the environ test fail.

Solution: Unset \$LC\_CTYPE when running tests. (closes #11963)

Patch 9.0.1298

Problem: Inserting a register on the command line does not trigger incsearch or update hlsearch.

Solution: Have cmdline\_insert\_reg() return CMDLINE\_CHANGED when appropriate and handle it correctly. (Ken Takata, closes #11960)

Patch 9.0.1299

Problem: Change for triggering incsearch not sufficiently tested.

Solution: Add a test case. Simplify the code. (closes #11971)

Patch 9.0.1300

Problem: **'statusline'** only supports one "%=" item.

Solution: Add support for multiple "%=" items. (TJ DeVries, Yegappan Lakshmanan, closes #11970, closes #11965)

Patch 9.0.1301

Problem: Virtual text below empty line not displayed.

Solution: Adjust flags and computations. (closes #11959)

Patch 9.0.1302

Problem: On a Belgian keyboard **CTRL-]** does not work.

Solution: Translate **CTRL-\$** into **CTRL-]**. (closes #11831)

Patch 9.0.1303

Problem: Motif: scrollbar width/height wrong when maximized.

Solution: Set the width/height when creating the scrollbar. (closes #11946)

Patch 9.0.1304

Problem: "\$" for **'list'** option displayed in wrong position when there are text properties.

Solution: Adjust logic for order of displayed items. (closes #11959)

Patch 9.0.1305

Problem: Cursor in wrong line with virtual text above.

Solution: Count extra line for text property above/below. (closes #11959)

Patch 9.0.1306

Problem: No regression test for solved problem of #11959.

Solution: Add a test, also with **'list'** set. (closes #11959)

Patch 9.0.1307

Problem: Setting **'formatoptions'** with :let doesn't check for errors.

Solution: Pass "errbuf" to set\_string\_option(). (Yegappan Lakshmanan, closes #11974, closes #11972)

Patch 9.0.1308

Problem: The code for setting options is too complicated.

Solution: Refactor the code for setting options. (Yegappan Lakshmanan, closes #11989)

Patch 9.0.1309

Problem: Scrolling two lines with even line count and **'scrolloff'** set.  
Solution: Adjust how the topline is computed. (closes #10545)

Patch 9.0.1310

Problem: **'splitkeep'** test has failures.  
Solution: Adjust expected cursor line position.

Patch 9.0.1311

Problem: Coverity warns for using a NULL pointer.  
Solution: Use "empty\_option" instead of NULL.

Patch 9.0.1312

Problem: Cursor position wrong when splitting window in insert mode.  
Solution: Pass the actual mode to win\_fix\_cursor(). (Luuk van Baal,  
closes #11999,

Patch 9.0.1313

Problem: Some settings use the current codepage instead of **'encoding'**.  
Solution: Adjust how options are initialized. (Ken Takata, closes #11992)

Patch 9.0.1314

Problem: :messages behavior depends on **'fileformat'** of current buffer.  
Solution: Pass the buffer pointer to where it is used. (Mirko Ceroni,  
closes #11995)

Patch 9.0.1315

Problem: Escaping for completion of map command not properly tested.  
Solution: Add a few test cases. (closes #12009)

Patch 9.0.1316

Problem: MS-Windows: vimfiles dir created with admin group.  
Solution: Use ShellExecAsUser to create the vimfiles directory. (Christopher  
Plewright, Ken Takata, closes #12000, closes #11888)

Patch 9.0.1317

Problem: Crash when using an unset object variable.  
Solution: Give an error instead. (closes #12005)

Patch 9.0.1318

Problem: Code style test fails.  
Solution: Remove trailing white space.

Patch 9.0.1319

Problem: PRQL files are not recognized.  
Solution: Add a filetype pattern for PRQL files. (Matthias Queitsch,  
closes #12018)

Patch 9.0.1320

Problem: Checking the type of a null object causes a crash.  
Solution: Don't try to get the class of a null object. (closes #12005)  
Handle error from calling a user function better.

Patch 9.0.1321

Problem: vimscript test fails where using `{expr}` syntax.  
Solution: Only return FCERR\_FAILED in call\_user\_func() for Vim9 script.

Patch 9.0.1322

Problem: Crash when indexing "any" which is an object.  
Solution: Check the index is a number. Do not check the member type of an object. (closes #12019)

Patch 9.0.1323

Problem: Build failure with +eval feature.  
Solution: Add missing part for using funcerror\_T.

Patch 9.0.1324

Problem: "gj" and "gk" do not move correctly over a closed fold.  
Solution: Use the same code as used for "j"/"k" to go to the next/previous line. (Luuk van Baal, closes #12007)

Patch 9.0.1325

Problem: '**colorcolumn**' highlight wrong with virtual text above.  
Solution: Adjust column of '**colorcolumn**' for text property. (closes #12004)

Patch 9.0.1326

Problem: Relative line number not updated with virtual text above.  
Solution: Adjust the row for the line number for virtual text above. (closes #12004)

Patch 9.0.1327

Problem: Cursor in wrong position below line with virtual text below ending in multi-byte character.  
Solution: When checking for last character take care of multi-byte character.

Patch 9.0.1328

Problem: Error when using "none" for GUI color is confusing.  
Solution: Mention that the name should perhaps be "NONE". (closes #1400)

Patch 9.0.1329

Problem: Completion of map includes simplified ones.  
Solution: Do not complete simplified mappings. (closes #12013)

Patch 9.0.1330

Problem: Handling new value of an option has a long "else if" chain.  
Solution: Use a function pointer. (Yegappan Lakshmanan, closes #12015)

Patch 9.0.1331

Problem: Illegal memory access when using :ball in Visual mode.  
Solution: Stop Visual mode when using :ball. (Pavel Mayorov, closes #11923)

Patch 9.0.1332

Problem: Crash when using buffer-local user command in cmdline window. (Karl Yngve Lervåg)  
Solution: Use the right buffer to find the user command. (closes #12030, closes #12029)

Patch 9.0.1333

Problem: When redo'ing twice `<ScriptCmd>` may not get the script ID.  
Solution: When "last\_used\_map" map is not set use "last\_used\_sid".  
(closes #11930)

Patch 9.0.1334

Problem: Using `tt_member` for the class leads to mistakes.  
Solution: Add a separate `tt_class` field.

Patch 9.0.1335

Problem: No test for bad use of spaces in help files.  
Solution: Add checks for use of spaces in help files. Ignore intentional spaces. (Hirohito Higashi, closes #11952)

Patch 9.0.1336

Problem: Functions without arguments are not always declared properly.  
Solution: Use "(void)" instead of "()". (Yegappan Lakshmanan, closes #12031)

Patch 9.0.1337

Problem: Yuck files are not recognized.  
Solution: Add a filetype pattern for yuck files. (Amaan Qureshi, closes #12033)

Patch 9.0.1338

Problem: `:defcompile` and `:disassemble` can't find class method. (Ernie Rael)  
Solution: Make a class name and class.method name work. (closes #11984)

Patch 9.0.1339

Problem: No test for `:disassemble` with class function.  
Solution: Add a test.

Patch 9.0.1340

Problem: Coverity warns for using NULL pointer.  
Solution: Check that `lhs_type` is not NULL.

Patch 9.0.1341

Problem: Build error with `mzscheme` but without GUI.  
Solution: Adjust `#ifdefs`. (Ken Takata, closes #12042) Also fix function argument.

Patch 9.0.1342

Problem: MS-Windows: linking may fail with space in directory name.  
Solution: Add quotes. (closes #12050)

Patch 9.0.1343

Problem: Check for OSC escape sequence doesn't work.  
Solution: Move square bracket to the right place. (Johan Mattsson, closes #12048)

Patch 9.0.1344

Problem: Check for OSC escape sequence doesn't work.  
Solution: Fix typo in index.

Patch 9.0.1345

Problem: Too many "else if" statements for handling options.  
Solution: Add more functions to handle options. (Yegappan Lakshmanan, closes #12051)

Patch 9.0.1346

Problem: Starlark files are not recognized.  
Solution: Add patterns for Starlark files. (Amaan Qureshi, closes #12049)

Patch 9.0.1347

Problem: "gr **CTRL-O**" stays in Insert mode. (Pierre Ganty)  
Solution: Do not set restart\_edit when "cmdchar" is 'v'. (closes #12045)

Patch 9.0.1348

Problem: Un-grammar files are not recognized.  
Solution: Add patterns for Un-grammar files. (Amaan Qureshi, closes #12034)

Patch 9.0.1349

Problem: "gr" with a count fails.  
Solution: Break out of the loop only after using the count.

Patch 9.0.1350

Problem: CPON files are not recognized.  
Solution: Add patterns for CPON files. (Amaan Qureshi, closes #12053)

Patch 9.0.1351

Problem: Dhall files are not recognized.  
Solution: Add patterns for Dhall files. (Amaan Qureshi, closes #12052)

Patch 9.0.1352

Problem: "ignore" files are outdated.  
Solution: Update "ignore" files. (Ken Takata, closes #12056)

Patch 9.0.1353

Problem: Too many "else if" statements to handle option values.  
Solution: Add more functions to handle option value changes. (Yegappan Lakshmanan, closes #12058)

Patch 9.0.1354

Problem: "gr **CTRL-G**" stays in virtual replace mode. (Pierre Ganty)  
Solution: Prepend **CTRL-V** before control characters. (closes #12045)

Patch 9.0.1355

Problem: No error when declaring a class twice. (Ernie Rael)  
Solution: Pass different flags when declaring the class. (closes #12057)

Patch 9.0.1356

Problem: Cannot cancel "gr" with Esc.  
Solution: Make "gr<Esc>" do nothing. (closes #12064)

Patch 9.0.1357

Problem: Using null\_object results in an internal error. (Ernie Rael)  
Solution: Add instructions for pushing an object and class. (closes #12044)

Patch 9.0.1358

Problem: Compilation error with some compilers.  
Solution: Avoid using "class" as member name.

Patch 9.0.1359

Problem: Too many "else if" statements in handling options.  
Solution: Add more functions for handling option changes. (Yegappan Lakshmanan, closes #12060)

Patch 9.0.1360

Problem: Cue files are not recognized.  
Solution: Add patterns for Cue files. (Amaan Qureshi, closes #12067)

Patch 9.0.1361

Problem: extendnew() not sufficiently tested.  
Solution: Add a few more test cases for extendnew(). (closes #12075)

Patch 9.0.1362

Problem: ml\_get error when going to another tab. (Daniel J. Perry)  
Solution: Do not call update\_topline() if "curwin" is invalid.  
(closes #11907)

Patch 9.0.1363

Problem: Crash when :def function has :break in skipped block. (Ernie Rael)  
Solution: Don't generate a jump for a skipped :break. (closes #12077)

Patch 9.0.1364

Problem: Build error with older Mac OS.  
Solution: Adjust #ifdef. (Yee Cheng Chin, closes #12074)

Patch 9.0.1365

Problem: Dead test code.  
Solution: Remove code that depends on Farsi, which has been removed.  
(closes #12084)

Patch 9.0.1366

Problem: Functions for setting options are in random order.  
Solution: Sort functions alphabetically. (Yegappan Lakshmanan, closes #12082)

Patch 9.0.1367

Problem: Divide by zero in zero-width window.  
Solution: Check the width is positive.

Patch 9.0.1368

Problem: Bass files are not recognized.  
Solution: Add patterns for Bass files. (Amaan Qureshi, closes #12088)

Patch 9.0.1369

Problem: Still some "else if" constructs for setting options.  
Solution: Add a few more functions for handling options. (Yegappan Lakshmanan, closes #12090)

Patch 9.0.1370

Problem: Crash when using a NULL object. (Ernie Rael)

Solution: Check for NULL and give an error message. (closes #12083)

Patch 9.0.1371

Problem: Ballooneval interferes with Insert completion.

Solution: Ignore mouse-move events when completing. (closes #12094, closes #12092)

Patch 9.0.1372

Problem: Test for **'toolbariconszize'** may fail.

Solution: Only test **'toolbariconszize'** when it is supported. (James McCoy, closes #12095)

Patch 9.0.1373

Problem: Wrong text displayed when using both **'linebreak'** and **'list'**.

Solution: Only set "c\_extra" to NUL when "p\_extra" is not empty. (Hirohito Higashi, closes #12065)

Patch 9.0.1374

Problem: Function for setting options not used consistently.

Solution: Use a function for **'encoding'** and terminal options. (Yegappan Lakshmanan, closes #12099)

Patch 9.0.1375

Problem: Crash when getting member of obj of unknown class.

Solution: Check for NULL class and give an error message. (Ernie Rael, closes #12096)

Patch 9.0.1376

Problem: Accessing invalid memory with put in Visual block mode.

Solution: Adjust the cursor column if needed.

Patch 9.0.1377

Problem: job\_status() may return "dead" if the process parent changed.

Solution: Call mch\_process\_running() to check if the job is still alive.

Patch 9.0.1378

Problem: Illegal memory access when using virtual editing.

Solution: Make sure "startspaces" is not negative.

Patch 9.0.1379

Problem: Functions for handling options are not ordered.

Solution: Put functions in alphabetical order. (Yegappan Lakshmanan, closes #12101)

Patch 9.0.1380

Problem: **CTRL-X** on 2\*\*64 subtracts two. (James McCoy)

Solution: Correct computation for large number. (closes #12103)

Patch 9.0.1381

Problem: ACCESS\_ names have a conflict with on some systems.

Solution: Rename by prepending VIM\_. (Ola Söder, closes #12105)

Patch 9.0.1382

Problem: Failing test for strptime() doesn't show returned value.

Solution: Use `assert_equal()` instead of `assert_true()`.

Patch 9.0.1383

Problem: `xxd`: combination of little endian and cols fails. (Aapo Rantalainen)

Solution: Round up the space taken by the hex output. (closes #12097)

Patch 9.0.1384

Problem: Setting `HOMEBREW_NO_AUTO_UPDATE` is not needed with Homebrew version 4.

Solution: Remove setting `HOMEBREW_NO_AUTO_UPDATE`. (closes #12008)

Patch 9.0.1385

Problem: `g'Esc` is considered an error.

Solution: Make `g'Esc` silently abandon the command. (closes #12110)

Patch 9.0.1386

Problem: Options test fails with some window width.

Solution: Adjust what text the test checks with. (closes #12111)

Patch 9.0.1387

Problem: Scrollbar test sporadically fails.

Solution: Mark the scrollbar test as flaky. (Christian Brabandt, closes #12113)

Patch 9.0.1388

Problem: Amiga: not all builds use `gethostname()`.

Solution: Use `gethostname()` for all builds except AROS. (Ola Söder, closes #12107)

Patch 9.0.1389

Problem: Amiga: a couple of include files are included twice.

Solution: Remove duplicate includes. (Ola Söder, closes #12106)

Patch 9.0.1390

Problem: `FOR_ALL_` macros are defined in an unexpected file.

Solution: Move `FOR_ALL_` macros to `macros.h`. Add `FOR_ALL_HASHTAB_ITEMS`. (Yegappan Lakshmanan, closes #12109)

Patch 9.0.1391

Problem: `"clear"` macros are not always used.

Solution: Use `ALLOC_ONE`, `VIM_CLEAR`, `CLEAR_POINTER` and `CLEAR_FIELD` in more places. (Yegappan Lakshmanan, closes #12104)

Patch 9.0.1392

Problem: Using `NULL` pointer with nested `:open` command.

Solution: Check that `ccline.cmdbuff` is not `NULL`.

Patch 9.0.1393

Problem: Cairo files are not recognized.

Solution: Add a pattern for Cairo files. (Amaan Qureshi, closes #12118)

Patch 9.0.1394

Problem: Unix Tal files are not recognized.

Solution: Add a pattern for Unx Tal files. (Amaan Qureshi, closes #12117)

Patch 9.0.1395

Problem: Odin files are not recognized.

Solution: Add a pattern for Odin files. (Amaan Qureshi, closes #12122)

Patch 9.0.1396

Problem: sort(list, 'N') does not work in Vim9 script context.

Solution: Convert string to number without giving an error. (closes #12061)

Patch 9.0.1397

Problem: Highlight for popupmenu kind and extra cannot be set.

Solution: Add PmenuKind, PmenuKindSel, PmenuExtra and PmenuExtraSel highlight groups and use them. (Gianmaria Bajo, closes #12114)

Patch 9.0.1398

Problem: Profile test repeats the headers many times.

Solution: Put the headers in script variables.

Patch 9.0.1399

Problem: Highlight test script has a few problems.

Solution: Rewrite the script in Vim9 syntax. (closes #10379)

Patch 9.0.1400

Problem: find\_file\_in\_path() is not reentrant.

Solution: Instead of global variables pass pointers to the functions. (closes #12093)

Patch 9.0.1401

Problem: Condition is always true.

Solution: Remove the condition. (closes #12139)

Patch 9.0.1402

Problem: Crash when using null\_class.

Solution: Give an error when trying to use a null class.

Patch 9.0.1403

Problem: Unused variables and functions.

Solution: Delete items and adjust #ifdefs. (Dominique Pellé, closes #12145)

Patch 9.0.1404

Problem: Compilation error with some compilers.

Solution: Adjust array initialization. (John Marriott)

Patch 9.0.1405

Problem: Missing check for out-of-memory.

Solution: Check for alloc() returning NULL pointer. (closes #12149)

Patch 9.0.1406

Problem: ILE RPG files are not recognized.

Solution: Add patterns for ILE RPG files. (Andreas Louv, issue #12152)

Patch 9.0.1407

Problem: TableGen files are not recognized.

Solution: Add a pattern for TableGen files. (Amaan Qureshi, closes #12156)

Patch 9.0.1408

Problem: QMLdir files are not recognized.

Solution: Add a pattern for QMLdir files. (Amaan Qureshi, closes #12161)

Patch 9.0.1409

Problem: Racket files are recognized as scheme.

Solution: Recognize rackets files separately. (Gabriel Kakizaki, closes #12164, closes #12162)

Patch 9.0.1410

Problem: MacOS: sed fails on .po files.

Solution: Set \$LANG to "C". (Yee Cheng Chin, closes #12153)

Patch 9.0.1411

Problem: Accuracy of profiling is not optimal.

Solution: Use CLOCK\_MONOTONIC if possible. (Ernie Rael, closes #12129)

Patch 9.0.1412

Problem: Pony files are not recognized.

Solution: Add a pattern for Pony files. (Amaan Qureshi, closes #12155)

Patch 9.0.1413

Problem: Compiler warning for unused variable.

Solution: Move variable declaration. (John Marriott)

Patch 9.0.1414

Problem: <M-S-x> in Kitty does not use the Shift modifier.

Solution: Apply the Shift modifier to ASCII letters. (closes #11913)

Patch 9.0.1415

Problem: Crystal files are not recognized.

Solution: Add a pattern for Crystal files. (Amaan Qureshi, closes #12175)

Patch 9.0.1416

Problem: Crash when collection is modified when using filter().

Solution: Lock the list/dict/blob. (Ernie Rael, closes #12183)

Patch 9.0.1417

Problem: ESDL files are not recognized.

Solution: Add a pattern for ESDL files. (Amaan Qureshi, closes #12174)

Patch 9.0.1418

Problem: The included xdiff code is a bit outdated.

Solution: Sync with the latest git xdiff code. (Yee Cheng Chin, closes #12181)

Patch 9.0.1419

Problem: Lean files are not recognized.

Solution: Add a pattern for Lean files. (Amaan Qureshi, closes #12177)

Patch 9.0.1420

Problem: Build failure because SIZE\_MAX is not defined.

Solution: Define SIZE\_MAX when missing. (John Marriott)

Patch 9.0.1421

Problem: Nu files are not recognized.

Solution: Add a pattern for Nu files. (Amaan Qureshi, closes #12172)

Patch 9.0.1422

Problem: Sage files are not recognized.

Solution: Add a pattern for Sage files. (Amaan Qureshi, closes #12176)

Patch 9.0.1423

Problem: WebAssembly Interface Type files are not recognized.

Solution: Add a pattern for WIT files. (Amaan Qureshi, closes #12173)

Patch 9.0.1424

Problem: Unused macros are defined.

Solution: Remove the unused macros.

Patch 9.0.1425

Problem: "wat" and "wast" files are one filetype.

Solution: Add a separate filetype for "wat" files. (Amaan Qureshi, closes #12165)

Patch 9.0.1426

Problem: Indent wrong after "export namespace" in C++.

Solution: Skip over "inline" and "export" in any order. (Virginia Senioria, closes #12134, closes #12133)

Patch 9.0.1427

Problem: Warning for uninitialized variable. (Tony Mechelynck)

Solution: Add #ifdef.

Patch 9.0.1428

Problem: Cursor in wrong position when leaving insert mode.

Solution: Update the w\_valid flags. Position the cursor also when not redrawing. (closes #12137)

Patch 9.0.1429

Problem: Invalid memory access when ending insert mode.

Solution: Check if the insert\_skip value is valid.

Patch 9.0.1430

Problem: Livebook files are not recognized.

Solution: Add a pattern for Livebook files. (Mathias Jean Johansen, closes #12203)

Patch 9.0.1431

Problem: getscriptinfo() loops even when specific SID is given.

Solution: Only loop when needed. Give a clearer error message. (closes #12207)

Patch 9.0.1432

Problem: Completion popup in wrong position with virtual text "above".

Solution: Adjust the column. (closes #12210)

Patch 9.0.1433

Problem: On some systems the Lua library is not found.

Solution: Check if a subdirectory for Lua exists. (closes #4475)

Patch 9.0.1434

Problem: Crash when adding package already in `'runtimepath'`.

Solution: Change order for using `'runtimepath'` entries. (closes #12215)

Patch 9.0.1435

Problem: Scrolling too many lines when `'wrap'` and `'diff'` are set.

Solution: Only scroll by screenlines for `'diff'` when `'wrap'` is not set.  
(closes #12211)

Patch 9.0.1436

Problem: Cannot compare a typed variable with `v:none`.

Solution: Allow for `"x is v:none"` and `"x isnot v:none"`. (issue #12194)

Patch 9.0.1437

Problem: Test fails with different error number.

Solution: Adjust the expected error.

Patch 9.0.1438

Problem: `.fs` files are falsely recognized as forth files.

Solution: Check 100 lines for something that looks like forth. (Johan Kotlinski, closes #12219, closes #11988)

Patch 9.0.1439

Problem: Start Insert mode when accessing a hidden prompt buffer.

Solution: Call `leaving_window()` in `aucmd_restbuf()`. (Thorben Tröbst, closes #12148, closes #12147)

Patch 9.0.1440

Problem: `"rvim"` can execute a shell through `:diffpatch`.

Solution: Disallow the shell `"patch"` command.

Patch 9.0.1441

Problem: MacOS: Python 3 using framework do not set dll name properly.

Solution: Use the framework prefix. (Yee Cheng Chin, closes #12189)

Patch 9.0.1442

Problem: `mapset()` does not restore non-script context.

Solution: Also accept negative sid. (closes #12132)

Patch 9.0.1443

Problem: Ending Insert mode when accessing a hidden prompt buffer.

Solution: Don't stop Insert mode when it was active before. (closes #12237)

Patch 9.0.1444

Problem: Crash when passing NULL to `setcmdline()`. (Andreas Louv)

Solution: Use `tv_get_string()` instead of using `v_string` directly.  
(closes #12231, closes #12227)

Patch 9.0.1445

Problem: opensUSE: configure doesn't find the Motif library. (Tony Mechelynck)  
Solution: Also search in /usr/lib64.

Patch 9.0.1446

Problem: Unnecessary checks for the "skip" flag when skipping.  
Solution: Remove the unnecessary checks. (closes #12254)

Patch 9.0.1447

Problem: Condition is always true.  
Solution: Remove the useless condition. (closes #12253)

Patch 9.0.1448

Problem: Diff test fails on MacOS 13.  
Solution: Install GNU diffutils. (Ozaki Kiichi, closes #12258)

Patch 9.0.1449

Problem: Test for prompt buffer is flaky.  
Solution: Use WaitForAssert() instead of TermWait(). (Ozaki Kiichi, closes #12247)

Patch 9.0.1450

Problem: MacOS: building fails if clock\_gettime() is not available.  
Solution: Add a configure check for clock\_gettime(). (closes #12242)

Patch 9.0.1451

Problem: Unnecessary redrawing when 'showcmdloc' is not "last".  
Solution: Redraw later when "showcmd\_is\_clear" is set. (Luuk van Baal, closes #12260)

Patch 9.0.1452

Problem: Code using EVAL\_CONSTANT is dead, it is never set.  
Solution: Remove EVAL\_CONSTANT. (closes #12252)

Patch 9.0.1453

Problem: Typos in source code and tests.  
Solution: Fix the typos. (Dominique Pellé, closes #12217)

Patch 9.0.1454

Problem: Code indenting is confused by macros.  
Solution: Put semicolon after the macros instead of inside. (Ozaki Kiichi, closes #12257)

Patch 9.0.1455

Problem: C++ 20 modules are not recognized.  
Solution: Add patterns to recognize C++ 20 modules as "cpp". (Ben Jackson, closes #12261)

Patch 9.0.1456

Problem: Shortmess test depends on order of test execution.  
Solution: Clear messages. (closes #12264)

Patch 9.0.1457

Problem: No regression test for what patch 9.0.1333 fixes.

Solution: Extend existing test to cover the fixed problem. (issue #11930)

Patch 9.0.1458

Problem: Buffer overflow when expanding long file name.

Solution: Use a larger buffer and avoid overflowing it. (Yee Cheng Chin, closes #12201)

Patch 9.0.1459

Problem: Typo in name of type.

Solution: Change funcctal\_T to funcctall\_T. (closes #12265)

Patch 9.0.1460

Problem: Insufficient testing for getcmdcomplttype().

Solution: Add a few more test cases. (closes #12268)

Patch 9.0.1461

Problem: Ruler not drawn correctly when using **'rulerformat'**.

Solution: Adjust formatting depending on whether the ruler is drawn in the statusline or the command line. (Sean Dewar, closes #12246)

Patch 9.0.1462

Problem: Recursively calling :defer function if it does :qa.

Solution: Clear the defer entry before calling the function. (closes #12266)

Patch 9.0.1463

Problem: Virtual text truncation only works with Unicode **'encoding'**.

Solution: Convert the ellipsis character to **'encoding'** if needed. (Hirohito Higashi, closes #12233)

Patch 9.0.1464

Problem: Strace filetype detection is expensive.

Solution: Match with a cheap pattern first. (Federico Mengozzi, closes #12220)

Patch 9.0.1465

Problem: Haiku build fails.

Solution: Do not include globals.h and proto.h twice. (Ozaki Kiichi, closes #12273)

Patch 9.0.1466

Problem: Cannot use an object member name as a method argument.

Solution: Do not give an error for using an object member name for a method argument. (Hirohito Higashi, closes #12241, closes #12225)  
Fix line number for other argument error.

Patch 9.0.1467

Problem: Jenkinsfiles are not recognized as groovy.

Solution: Add a pattern for Jenkinsfiles. (closes #12236)

Patch 9.0.1468

Problem: Recursively calling :defer function if it does :qa in a compiled function.

Solution: Clear the defer entry before calling the function. (closes #12271)

Patch 9.0.1469

Problem: Deferred functions not called from autocommands.

Solution: Also go through the funccal\_stack. (closes #12267)

Patch 9.0.1470

Problem: Deferred functions invoked in unexpected order when using :qa and autocommands.

Solution: Call deferred functions for the current funccal before using the stack. (closes #12278)

Patch 9.0.1471

Problem: Warnings for function declarations.

Solution: Add argument types. (Michael Jarvis, closes #12277)

Patch 9.0.1472

Problem: ":drop fname" may change the last used tab page.

Solution: Restore the last used tab page when :drop has changed it. (closes #12087)

Patch 9.0.1473

Problem: CI does not run sound tests.

Solution: Re-enable sound tests. Use "apt-get" instead of "apt". (Ozaki Kiichi, closes #12280)

Patch 9.0.1474

Problem: CI runs with old version of Ubuntu and tools.

Solution: Update CI to more recent versions. (closes #11092)

Patch 9.0.1475

Problem: Busted configuration files are not recognized.

Solution: Recognize busted configuration files as Lua. (Craig MacEachern, closes #12209)

Patch 9.0.1476

Problem: Lines put in non-current window are not displayed. (Marius Gedminas)

Solution: Don't increment the topline when inserting just above it. (closes #12212)

Patch 9.0.1477

Problem: Crash when recovering from corrupted swap file.

Solution: Check for a valid page count. (closes #12275)

Patch 9.0.1478

Problem: Filetypes for \*.v files not detected properly.

Solution: Use the file contents to detect the filetype. (Turiya, closes #12281)

Patch 9.0.1479

Problem: Small source file problems; outdated list of distributed files.

Solution: Small updates to source files and list of distributed files.

Patch 9.0.1480

Problem: Using popup menu may leave text in the command line.

Solution: Clear the command line if the popup menu covered it. (Luuk van Baal, closes #12286)

Patch 9.0.1481

Problem: Decrypting with libsodium may fail if the library changes.

Solution: Add parameters used to the encrypted file header. (Christian Brabandt, closes #12279)

Patch 9.0.1482

Problem: Crash when textprop has a very large "padding" value. (Yegappan Lakshmanan)

Solution: Avoid the "after" count to go negative.

Patch 9.0.1483

Problem: += operator does not work on class member.

Solution: Do not skip as if "this." was used. (Christian Brabandt, closes #12263)

Patch 9.0.1484

Problem: Coverity warns for using invalid array index.

Solution: Add entry for Xchacha, even though it is not used.

Patch 9.0.1485

Problem: no functions for converting from/to UTF-16 index.

Solution: Add UTF-16 flag to existing functions and add strutf16len() and utf16idx(). (Yegappan Lakshmanan, closes #12216)

Patch 9.0.1486

Problem: Parallel make might not work.

Solution: Add missing dependencies. (Samuel Dionne-Riel, closes #12288)

Patch 9.0.1487

Problem: Content-type header for LSP channel not according to spec.

Solution: Use "vscode-jsonrpc" instead of "vim-jsonrpc". (Yegappan Lakshmanan, closes #12295)

Patch 9.0.1488

Problem: xchacha20v2 crypt header is platform dependent.

Solution: Avoid using "size\_t". (Ozaki Kiichi, closes #12296)

Patch 9.0.1489

Problem: Crypt with libsodium is not tested on CI.

Solution: Configure testing with libsodium. (Ozaki Kiichi, closes #12297)

Patch 9.0.1490

Problem: The ModeChanged event may be triggered too often.

Solution: Only trigger ModeChanged when no operator is pending. (closes #12298)

Patch 9.0.1491

Problem: Wrong scrolling with ls=0 and :botright split.

Solution: Add statusline before calling frame\_new\_height(). (closes #12299)

Patch 9.0.1492

Problem: Using uninitialized memory when argument is missing.  
Solution: Check there are sufficient arguments before the base.  
(closes #12302)

Patch 9.0.1493

Problem: Popup menu position wrong in window with toolbar.  
Solution: Take the window toolbar into account when positioning the popup menu. (closes #12308)

Patch 9.0.1494

Problem: Crash when recovering from corrupted swap file.  
Solution: Bail out when the line index looks wrong. (closes #12276)

Patch 9.0.1495

Problem: GTK3: hiding the mouse pointer does not work. (Rory O’Kane)  
Solution: Set alpha level to zero. (Kenny Stauffer, closes #12293,  
closes #3256)

Patch 9.0.1496

Problem: Test restoring register with wrong value.  
Solution: Correct name of variable. (closes #12310)

Patch 9.0.1497

Problem: The ruler percentage can't be localized.  
Solution: Use a string that can be translated. (Emir Sari, closes #12311)

Patch 9.0.1498

Problem: In a terminal window the cursor may jump around. (Kenny Stauffer)  
Solution: Do not move the cursor to the position for terminal-normal mode.  
(closes #12312)

Patch 9.0.1499

Problem: Using uninitialized memory with fuzzy matching.  
Solution: Initialize the arrays used to store match positions.

Patch 9.0.1500

Problem: The falsy operator is not tested properly.  
Solution: Add a few more test cases. (closes #12319)

Patch 9.0.1501

Problem: Crash with nested :try and :throw in catch block.  
Solution: Jump to :endtry before returning from function. (closes #12245)

Patch 9.0.1502

Problem: No test for deleting the end of a long wrapped line.  
Solution: Add a test to check the right text is displayed. (Luuk van Baal,  
closes #12318)

Patch 9.0.1503

Problem: Lua files are not recognized.  
Solution: Add a patter for Lua files. (Amaan Qureshi, closes #12317)

Patch 9.0.1504

Problem: No error when calling remote\_startserver() with an empty string.

Solution: Give an error for an empty string. (Hirohito Higashi, closes #12327)

Patch 9.0.1505

Problem: Error when heredoc content looks like heredoc.

Solution: Handle curly expressions. (closes #12325)

Patch 9.0.1506

Problem: Line number not displayed when using **'smoothscroll'**.

Solution: Adjust condition for showing the line number. (closes #12333)

Patch 9.0.1507

Problem: Assert message is confusing with boolean result. `assert_inrange()` replaces message instead of adding it.

Solution: Don't put quotes around expected boolean value. Append message for `assert_inrange()`. (closes #12342, closes #12341)

Patch 9.0.1508

Problem: Catch does not work when lines are joined with a newline.

Solution: Set `"nextcmd"` appropriately. (closes #12348)

Patch 9.0.1509

Problem: Error message lacks mentioning the erroneous argument.

Solution: Specify the argument that the error is for.

Patch 9.0.1510

Problem: Misleading variable name for error message.

Solution: Change `"name"` to `"number"`. (closes #12345)

Patch 9.0.1511

Problem: Crash when using wrong arg types to `assert_match()`.

Solution: Check for NULL pointer. (closes #12349)

Patch 9.0.1512

Problem: Inserting lines when scrolling with **'smoothscroll'** set.

Solution: Adjust line height computation for `w_skipcol`. (Luuk van Baal, closes #12350)

Patch 9.0.1513

Problem: Text scrolls unnecessarily when splitting and **'splitkeep'** is not `"cursor"`.

Solution: Avoid resetting `w_skipcol`. (Luuk van Baal, closes #12334)

Patch 9.0.1514

Problem: Test waits unnecessarily long before checking screendump.

Solution: Remove `TermWait()` call.

Patch 9.0.1515

Problem: `reverse()` does not work for a `String`.

Solution: Implement `reverse()` for a `String`. (Yegappan Lakshmanan, closes #12179)

Patch 9.0.1516

Problem: Cannot use special keys in `<Cmd>` mapping.

Solution: Do allow for special keys in `<Cmd>` and `<ScriptCmd>` mappings.  
(closes #12326)

Patch 9.0.1517

Problem: MacOS: configure removes `-O2` from `$CFLAGS`.

Solution: Only adjust `$CFLAGS` for `gcc`. (closes #12351)

Patch 9.0.1518

Problem: Search stats not always visible when searching backwards.

Solution: Do not display the top/bot message on top of the search stats.  
(Christian Brabandt, closes #12322, closes #12222)

Patch 9.0.1519

Problem: Global `'filetype'` is set when it is detected from the file content.

Solution: Set the local `'filetype'` option value.

Patch 9.0.1520

Problem: Completion for option name includes all bool options.

Solution: Do not recognize the `"noinv"` prefix. Prefix `"no"` or `"inv"` when appropriate.

Patch 9.0.1521

Problem: Failing redo of command with control characters.

Solution: Use `AppendToRedobuffLit()` for colon commands. (closes #12354)

Patch 9.0.1522

Problem: Some functions give two error messages.

Solution: Do not give a second error message. (closes #12352)

Patch 9.0.1523

Problem: Some error messages are not marked for translation.

Solution: Surround the messages in `_()`. (closes #12356)

Patch 9.0.1524

Problem: Passing `-1` for bool is not always rejected.

Solution: Check for error in a better way. (closes #12358)

Patch 9.0.1525

Problem: `'smoothscroll'` does not always work properly.

Solution: Do not reset `w_skipcol` after it was intentionally set. (Luuk van Baal, closes #12360, closes #12199, closes #12323)

Patch 9.0.1526

Problem: Condition is always true.

Solution: Remove unnecessary condition. (closes #12359)

Patch 9.0.1527

Problem: Crash when using negative value for `term_cols`.

Solution: Check for invalid `term_cols` value. (Kenta Sato, closes #12362)

Patch 9.0.1528

Problem: Libsodium encryption is only used with `"huge"` features, even when manually enabled through `configure`. (Tony Mechelynck)

Solution: Remove the condition on `FEAT_HUGE`.

Patch 9.0.1529

Problem: Code style test doesn't check for space after "if".

Solution: Add a test for space.

Patch 9.0.1530

Problem: Cursor moves to wrong line when 'foldmethod' is "diff". (Rick Howe)

Solution: Adjust logic for scrolling. (Luuk van Baal, closes #12364, closes #12218)

Patch 9.0.1531

Problem: Crash when register contents ends up being invalid.

Solution: Check "y\_array" is not NULL.

Patch 9.0.1532

Problem: Crash when expanding "~" in substitute causes very long text.

Solution: Limit the text length to MAXCOL.

Patch 9.0.1533

Problem: Test for 'smoothscroll' is ineffective.

Solution: Change the order of testing "zb" and "zt". (Luuk van Baal, closes #12366)

Patch 9.0.1534

Problem: Test for expanding "~" in substitute takes too long.

Solution: Disable the test for now.

Patch 9.0.1535

Problem: Test commented out in a wrong way.

Solution: Use legacy script comment character.

Patch 9.0.1536

Problem: CI: sound dummy stopped working.

Solution: Temporarily stop using sound dummy.

Patch 9.0.1537

Problem: Message for opening the cmdline window is not translated.

Solution: Add gettext() and scan the defaults script for text to be translated. (closes #12371)

Patch 9.0.1538

Problem: :wqall does not trigger ExitPre. (Bart Libert)

Solution: Move preparations for :qall to a common function. (closes #12374)

Patch 9.0.1539

Problem: Typst filetype is not recognized.

Solution: Distinguish between sql and typst. (Gaetan Lepage, closes #12363)

Patch 9.0.1540

Problem: reverse() on string doesn't work in compiled function.

Solution: Accept string in argument type check. (Yegappan Lakshmanan, closes #12377)

Patch 9.0.1541

Problem: CI: sound dummy is disabled.

Solution: Make sound dummy work again. (closes #12380)

Patch 9.0.1542

Problem: Line not fully displayed if it doesn't fit in the screen.

Solution: Do not reset `s_skipcol` if not needed. (Luuk van Baal, closes #12376)

Patch 9.0.1543

Problem: Display errors when making topline shorter and `'smoothscroll'` is set.

Solution: Reset `w_skipcol` when the topline becomes shorter than its current value. (Luuk van Baal, closes #12367)

Patch 9.0.1544

Problem: Recent `glibc` marks `sigset()` as a deprecated.

Solution: Use `sigaction()` in `mch_signal()` if possible. (Ozaki Kiichi, closes #12373)

Patch 9.0.1545

Problem: Text not scrolled when cursor moved with `"g0"` and `"h"`.

Solution: Adjust `w_skipcol` when needed. (Luuk van Baal, closes #12387)

Patch 9.0.1546

Problem: Some commands for opening a file don't use `'switchbuf'`.

Solution: Use `'switchbuf'` for more commands. (Yegappan Lakshmanan, closes #12383, closes #12381)

Patch 9.0.1547

Problem: Coveralls workflow on CI is commented out.

Solution: Remove the Coveralls workflow. (closes #12389)

Patch 9.0.1548

Problem: CI: check in `sound-dummy` module may throw an error.

Solution: Check whether `apt-cache` can show the package description. (Christian Brabandt, closes #12390)

Patch 9.0.1549

Problem: `USD` filetype is not recognized.

Solution: Add patterns for `USD` filetype. (Colin Kennedy, closes #12370)

Patch 9.0.1550

Problem: In `cmdline` window `S-Tab` does not select previous completion. (Maxim Kim)

Solution: Add a mapping for `S-Tab`. (closes #12116)

Patch 9.0.1551

Problem: Position of marker for `'smoothscroll'` not computed correctly.

Solution: Take `'list'` and other options into account. (Luuk van Baal, closes #12393)

Patch 9.0.1552

Problem: CI: `sound-dummy` module is not installed.

Solution: Invert using the result of the condition. (closes #12394)

Patch 9.0.1553

Problem: CI: using slightly outdated gcc version.

Solution: Use "brew" to get a more recent gcc version. (closes #12391)

Patch 9.0.1554

Problem: Code for handling 'switchbuf' is repeated.

Solution: Add a function to handle 'switchbuf'. (Yegappan Lakshmanan, closes #12397)

Patch 9.0.1555

Problem: setcharesearch() does not clear last searched char properly.

Solution: Do not accept lastc\_bytelen smaller than one. (closes #12398)

Patch 9.0.1556

Problem: Vim9: error for missing "return" after "throw".

Solution: Set had\_return flag for "throw". (closes #12262)

Patch 9.0.1557

Problem: Test failures for unreachable code.

Solution: Add a test override to ignore unreachable code.

Patch 9.0.1558

Problem: Wrong error for unreachable code after :throw.

Solution: Adjust the error message.

Patch 9.0.1559

Problem: Function argument types not always checked and using v:none may cause an error.

Solution: Check argument types once the function type is known. Do not give an error for using v:none as an argument. (closes #12200)

Patch 9.0.1560

Problem: Win32: When 'encoding' is set \$PATH has duplicate entries.

Solution: Only append the directory if it is not there yet. (Ken Takata, closes #12400, closes #12372)

Patch 9.0.1561

Problem: Display wrong when moving cursor to above the top line and 'smoothscroll' is set.

Solution: Call adjust\_skipcol() in more places and make it work better. (Luuk van Baal, closes #12395)

Patch 9.0.1562

Problem: Mixing package managers is not a good idea.

Solution: Install gcc 13 with apt-get. (closes #12405)

Patch 9.0.1563

Problem: GTK3: window manager resize hints are incomplete.

Solution: Use NULL for second argument of gtk\_window\_set\_geometry\_hints(). (Kenny Stauffer closes #11055)

Patch 9.0.1564

Problem: Display moves up and down with **'incsearch'** and **'smoothscroll'**.  
Solution: Do not check if w\_skipcol changed. (Luuk van Baal, closes #12410, closes #12409)

Patch 9.0.1565

Problem: Json lines files are not recognized.  
Solution: Add a pattern to detect "jsonl" files. (issue #7520)

Patch 9.0.1566

Problem: Motif: GUI scrollbar test fails in 24 lines terminal.  
Solution: Skip the part of the test that fails for now.

Patch 9.0.1567

Problem: Profiler calculation may be wrong on 32 bit builds.  
Solution: Use 64 bit variable if possible. (Isao Sato, closes #12412)

Patch 9.0.1568

Problem: With **'smoothscroll'** cursor may move below botline.  
Solution: Call redraw\_later() if needed, Compute cursor row with adjusted condition. (Luuk van Baal, closes #12415)

Patch 9.0.1569

Problem: Cannot use "this.member" in lambda in class method.  
Solution: Adjust check for reserved keyword. (Hirohito Higashi, closes #12416, closes #12076, closes #12336)

Patch 9.0.1570

Problem: Some tests are slow.  
Solution: Make a few test cases faster.

Patch 9.0.1571

Problem: RedrawingDisabled not used consistently.  
Solution: Avoid RedrawingDisabled going negative. Set RedrawingDisabled in win\_split\_ins(). (closes #11961)

Patch 9.0.1572

Problem: Error messages are not translated.  
Solution: Add \_().

Patch 9.0.1573

Problem: Error for function name has wrong line number.  
Solution: Set the line number before giving the error.

Patch 9.0.1574

Problem: MS-Windows: list of translation input files incomplete.  
Solution: Move the list of files to a common file. (closes #12426)

Patch 9.0.1575

Problem: "file N of M" message is not translated.  
Solution: Make argument count message translatable. (close #12429)

Patch 9.0.1576

Problem: Users may not know what to do with an internal error.  
Solution: Add a translated message with instructions.

Patch 9.0.1577

Problem: MS-Windows: context menu translations may be wrong.  
Solution: Set the encoding before using gettext(). (Ken Takata, closes #12441, closes #12431)

Patch 9.0.1578

Problem: SpellCap highlight not always updated when needed.  
Solution: Handle updating line below closed fold and other situations where only part of the window is redrawn. (Luuk van Baal, closes #12428, closes #12420)

Patch 9.0.1579

Problem: Some error messages are not translated.  
Solution: Add the N\_() marker on messages. (closes #12427)

Patch 9.0.1580

Problem: CI: indent test hangs on FreeBSD.  
Solution: Set **'nomore'** when running the indent tests. (Ozaki Kiichi, closes #12446)

Patch 9.0.1581

Problem: Translation does not work for plural argument.  
Solution: Use PLURAL\_MSG() for errors and with xgettext. (closes #12443)

Patch 9.0.1582

Problem: :stopinsert may not work in a popup close handler. (Ben Jackson)  
Solution: Restore stop\_insert\_mode when appropriate. (closes #12452, closes #12434)

Patch 9.0.1583

Problem: Get E304 when using **'cryptmethod'** "xchacha20v2". (Steve Mynott)  
Solution: Add 4th crypt method to block zero ID check. Avoid syncing a swap file before reading the file. (closes #12433)

Patch 9.0.1584

Problem: Not all meson files are recognized.  
Solution: Add "meson.options". (Liam Beguin, closes #12444)

Patch 9.0.1585

Problem: Weird use of static variables for spell checking.  
Solution: Move the variables to a structure and pass them from win\_update() to win\_line(). (Luuk van Baal, closes #12448)

Patch 9.0.1586

Problem: Checking translations gives an error for using two messages with ngettext() that differ in "%" items.  
Solution: Adjust the check script to tolerate omitting one "%" item.

Patch 9.0.1587

Problem: Corn config files are not recognized.  
Solution: Add a pattern for Corn config files. (Jake Stanger, closes #12449)

Patch 9.0.1588

Problem: Incsearch not triggered when pasting clipboard register on the command line.  
Solution: Also set "literally" when using a clipboard register. (Ken Takata, closes #12460)

Patch 9.0.1589

Problem: Filetype test contains too many special characters.  
Solution: Use Vim9 syntax for a few things.

Patch 9.0.1590

Problem: Filetype test has trailing white space.  
Solution: Remove trailing white space.

Patch 9.0.1591

Problem: Some "gomod" files are not recognized.  
Solution: Check for "go.mod" file name before checking out the contents. (Omar El Halabi, closes #12462)

Patch 9.0.1592

Problem: Not all timer tests are marked as flaky.  
Solution: Set the flaky flag for all timer tests. (closes #12355)

Patch 9.0.1593

Problem: MS-Windows: assert error when compiled with debug mode.  
Solution: Adjust arguments to setvbuf(). (Ken Takata, closes #12467)

Patch 9.0.1594

Problem: Some internal error messages are translated.  
Solution: Consistently do not translate internal error messages. (closes #12459)

Patch 9.0.1595

Problem: Line pointer becomes invalid when using spell checking.  
Solution: Call ml\_get() at the right places. (Luuk van Baal, closes #12456)

Patch 9.0.1596

Problem: :registers command does not work in sandbox.  
Solution: Add flag to the command. (closes #12473)

Patch 9.0.1597

Problem: Cursor ends up below the window after a put.  
Solution: Mark w\_crow and w\_botline invalid when changing the cursor line. (closes #12465)

Patch 9.0.1598

Problem: screenchar(), screenchars() and screenstring() do not work properly when 'encoding' is set to a double-byte encoding.  
Solution: Fix the way the bytes of the characters are obtained. (issue #12469)

Patch 9.0.1599

Problem: Cursor not adjusted when near top or bottom of window and 'splitkeep' is not "cursor".  
Solution: Move boundary checks to outer cursor move functions, inner

functions should only return valid cursor positions. (Luuk van Baal, closes #12480)

Patch 9.0.1600

Problem: screenpos() does not take w\_skipcol into account.

Solution: Subtract w\_skipcol from column. (closes #12486, closes #12476)

Patch 9.0.1601

Problem: Filetype detection fails for \*.conf file without comments. (Dmitrii Tcyganok)

Solution: Use "conf" filetype as a fallback for an empty .conf file. (closes #12487, closes #12483)

Patch 9.0.1602

Problem: Stray character is visible if 'smoothscroll' marker is displayed on top of a double-wide character.

Solution: When overwriting a double-width character with the 'smoothscroll' marker clear the second half. (closes #12469)

Patch 9.0.1603

Problem: Display wrong when scrolling multiple lines with 'smoothscroll' set.

Solution: Redraw when w\_skipcol changed. (closes #12477, closes #12468)

Patch 9.0.1604

Problem: Errors from the codestyle test are a bit confusing.

Solution: Use assert\_report() with a clearer message. Avoid a warning for an existing swap file.

Patch 9.0.1605

Problem: Crash when calling method on super in child constructor. (Israel Chauca Fuentes)

Solution: Clear the type list. (Ernie Rael, closes #12489, closes #12471)

Patch 9.0.1606

Problem: Using freed memory when 'foldcolumn' is set.

Solution: Save extra pointer to free it later. (closes #12492)

Patch 9.0.1607

Problem: screenpos() returns wrong row with diff filler lines.

Solution: Only add filler lines when appropriate. Also don't add the 'smoothscroll' marker when w\_skipcol is zero. (closes #12485, closes #12484)

Patch 9.0.1608

Problem: update\_topline() is called twice.

Solution: Do not call update\_topline() before curs\_columns(). (Luuk van Baal, closes #12495)

Patch 9.0.1609

Problem: Crash when an object indirectly references itself.

Solution: Avoid clearing an object while it is already being cleared. (closes #12494)

Patch 9.0.1610

Problem: Display is wrong when **'smoothscroll'** is set and scrolling multiple lines.

Solution: Redraw with UPD\_NOT\_VALID when "skipcol" is or was set. (closes #12490, closes #12468)

Patch 9.0.1611

Problem: v:maxcol can be changed in a :for loop.

Solution: Check for read-only loop variable. (closes #12470)

Patch 9.0.1612

Problem: "skipcol" not reset when using multi-byte characters.

Solution: Compare with w\_virtcol instead of w\_cursor.col. (closes #12457)

Patch 9.0.1613

Problem: Some make output gets picked up by **'errorformat'**.

Solution: Ignore make output by default. (Gregory Anders, closes #12481)

Patch 9.0.1614

Problem: strlen() called too often for :spellrepl.

Solution: Store the result in a variable. (closes #12497)

Patch 9.0.1615

Problem: URL shortcut files are not recognized.

Solution: Add a pattern for URL shortcut files. (closes #12474)

Patch 9.0.1616

Problem: Quickfix text field is truncated.

Solution: Fix output of text field after pattern field in quickfix buffer. (Shane Harper, closes #12498)

Patch 9.0.1617

Problem: charidx() and utf16idx() result is not consistent with byteidx().

Solution: When the index is equal to the length of the text return the length of the text instead of -1. (Yegappan Lakshmanan, closes #12503)

Patch 9.0.1618

Problem: Trace32 files are not recognized.

Solution: Add patterns for the t32 filetype. (Christoph Sax, closes #12505)

Patch 9.0.1619

Problem: The focus gained/lost escape sequences cause trouble for a terminal where Vim does not expect them.

Solution: Always recognize the codes for focus gained/lost. (closes #12499)

Patch 9.0.1620

Problem: Nix files are not recognized from the hashbang line.

Solution: Add a hashbang check. (issue #12507)

Patch 9.0.1621

Problem: FILETYPE\_FILE is defined to the same value multiple times. Same for a few similar macros.

Solution: Define FILETYPE\_FILE and others in feature.h only

Patch 9.0.1622

Problem: Filetype name t32 is a bit obscure.

Solution: Rename t32 to trace32. (Christoph Sax, closes #12512)

Patch 9.0.1623

Problem: The program to filetype translation is not exported.

Solution: Export Exe2filetype().

Patch 9.0.1624

Problem: Crash when calling object constructor from legacy script. (Israel Chauca Fuentes)

Solution: Pass a pointer for "ufunc". (closes #12502)

Patch 9.0.1625

Problem: "super" is not considered a reserved name.

Solution: Add "super" to the list of reserved names. (closes #12515)

Patch 9.0.1626

Problem: Visual area not shown when using '**showbreak**' and start of line is not visible. (Jaehwang Jung)

Solution: Adjust "fromcol" for the space taken by '**showbreak**'. (closes #12514)

Patch 9.0.1627

Problem: No generic mechanism to test syntax plugins.

Solution: Add a syntax plugin test mechanism, using screendumps. Add a simple test for "c".

Patch 9.0.1628

Problem: Syntax tests fail on FreeBSD.

Solution: Pass the Vim executable path with VIMPROG. (Ken Takata, closes #12535) Adjust the paths.

Patch 9.0.1629

Problem: Having utf16idx() rounding up is inconvenient.

Solution: Make utf16idx() round down. (Yegappan Lakshmanan, closes #12523)

Patch 9.0.1630

Problem: "make clean" at the toplevel fails.

Solution: Clean the indent and syntax directories in a sub-shell. (Ben Jackson, closes #12536, closes #12526)

Patch 9.0.1631

Problem: Passing a wrong variable type to an option gives multiple errors.

Solution: Bail out early on failure. (closes #12504)

Patch 9.0.1632

Problem: Not all cabal config files are recognized.

Solution: Add a couple of patterns. (Marcin Szamotulski, closes #12463)

Patch 9.0.1633

Problem: Duplicate code for converting float to string.

Solution: Use tv\_get\_string(). (closes #12521)

Patch 9.0.1634

Problem: Message is cleared when removing mode message (Gary Johnson).  
Solution: Do not clear the command line after displaying a message.

Patch 9.0.1635

Problem: Error message is cleared when removing mode message.  
Solution: Also reset flags when the message is further down.

Patch 9.0.1636

Problem: Expanding a pattern interferes with command line completion.  
Solution: Set the file index only when appropriate. (closes #12519)

Patch 9.0.1637

Problem: Compiler warning for uninitialized variable.  
Solution: Move the variable to an inner block and initialize it. (Christian Brabandt, closes #12549)

Patch 9.0.1638

Problem: crypt tests hang and cause memory errors  
Solution: Move variable to start of function.

Patch 9.0.1639

Problem: Build failure without the crypt feature.  
Solution: Adjust #ifdefs

Patch 9.0.1640

Problem: Compiler warning for unused variables without the crypt feature.  
Solution: Adjust #ifdefs

Patch 9.0.1641

Problem: The log file does not give information about window sizes.  
Solution: Add a few log messages about obtaining the window size.

Patch 9.0.1642

Problem: Build failure with tiny features.  
Solution: Add #ifdef's.

Patch 9.0.1643

Problem: Filetype detection fails if file name ends in many '~'.  
Solution: Strip multiple '~' at the same time. (closes #12553)

Patch 9.0.1644

Problem: Not all filetype file name matches are tested.  
Solution: Add more file names to test with. (Jonas Strittmatter, closes #12569)

Patch 9.0.1645

Problem: zserio files are not recognized.  
Solution: Add a pattern for zserio files. (Dominique Pellé, closes #12544)

Patch 9.0.1646

Problem: CI: codecov may take a very long time to run.

Solution: Add a timeout. (Philip Heiduck, closes #12559)

Patch 9.0.1647

Problem: Insufficient testing for syntax plugins.

Solution: Add shell file examples. (Charles Campbell) Create a messages file for easier debugging and reporting the test results.

Patch 9.0.1648

Problem: Result of syntax tests is hard to see.

Solution: List the failed tests.

Patch 9.0.1649

Problem: Syntax test failure causes script to abort.

Solution: Fix appending string to list.

Patch 9.0.1650

Problem: MS-Windows: default `'viewdir'` may include read-only directory.

Solution: Use `$HOME` instead of `$VIM` for `'viewdir'` default. (closes #12119)

Patch 9.0.1651

Problem: Unclear why syntax test fails on Mac.

Solution: Temporarily show the whole "messages" file.

Patch 9.0.1652

Problem: Unclear why syntax test fails on Mac.

Solution: Echo `v:errors` when it's not empty.

Patch 9.0.1653

Problem: Amiga: default `'viewdir'` may not work.

Solution: Use "home:" instead of "\$VIM". Add a test. (Christian Brabandt, closes #12576)

Patch 9.0.1654

Problem: MS-Windows: test for default `'viewdir'` fails.

Solution: Escape the pattern.

Patch 9.0.1655

Problem: Syntax test fails when Vim window is not tall enough.

Solution: Make sure each terminal window is closed.

Patch 9.0.1656

Problem: Syntax test fails when detected shell type differs.

Solution: Avoid using `"/bin/sh"`, it depends on the system. Add a check that the shell type detection is correct.

Patch 9.0.1657

Problem: One more syntax test depends on the system.

Solution: Use "dash" instead of "sh".

Patch 9.0.1658

Problem: Autoload files for "zig" are not installed.

Solution: Add install and uninstall rules in the makefile. (Christian Brabandt, closes #12577, closes #12567)

Patch 9.0.1659

Problem: Termdebug: default highlight cleared when changing colorscheme.

Solution: Use a ColorScheme autocommand. (Christian Brabandt, closes #12566, closes #12555)

Patch 9.0.1660

Problem: Error for using matchfuzzy() in Vim9 script returning a list of dicts.

Solution: Make return type of matchfuzzy() list<any>. (Yegappan Lakshmanan, closes #12574)

Patch 9.0.1661

Problem: BUCK files are not recognized.

Solution: Recognize BUCK files as "bzl". (Son Luong Ngoc, closes #12564)

Patch 9.0.1662

Problem: Crash when using a class member twice. (Christian J. Robinson)

Solution: Make a copy of the value.

Patch 9.0.1663

Problem: Termdebug on MS-Windows: some file names are not recognized.

Solution: Do not always change \t and \n. (Christian Brabandt, closes #12565, closes #12560, closes #12550)

Patch 9.0.1664

Problem: Divide by zero when scrolling with 'smoothscroll' set.

Solution: Avoid using a negative width. (closes #12540, closes #12528)

Patch 9.0.1665

Problem: Empty CmdlineEnter autocommand causes errors in Ex mode.

Solution: Save and restore ex\_pressedreturn. (Christian Brabandt, closes # 12581, closes #12578)

Patch 9.0.1666

Problem: Compiler may warn for uninitialized variable.

Solution: Initialize this\_props\_len. (Christian Brabandt, closes #12599)

Patch 9.0.1667

Problem: Regression test doesn't fail when fix is reverted.

Solution: Add "n" to 'cptions' instead of using :winsize. (closes #12587, issue #12528)

Patch 9.0.1668

Problem: PEM files are not recognized.

Solution: Add patterns to match PEM files. (closes #12582)

Patch 9.0.1669

Problem: Crash syncing swapfile in new buffer when using sodium crypt. (James McCoy)

Solution: Add checks for sodium encryption. (Christian Brabandt, closes #12591, closes #12585)

Patch 9.0.1670

Problem: Resetting local option to global value is inconsistent.

Solution: Handle "<" specifically for '**scrolloff**' and '**sidescrolloff**'.  
(closes #12594)

Patch 9.0.1671

Problem: Termdebug: error with more than 99 breakpoints.

Solution: Use a different sign for breakpoint 100 and over. (closes #12589,  
closes #12588)

Patch 9.0.1672

Problem: Tabline highlight wrong after truncated double width label.

Solution: Fill up half a double width character later. (closes #12614)

Patch 9.0.1673

Problem: Cannot produce a status 418 or 503 message.

Solution: Add err\_teapot().

Patch 9.0.1674

Problem: Help for builtin functions is not sorted properly.

Solution: Put err\_teapot() help in the right position.

Patch 9.0.1675

Problem: Test may run into timeout when using valgrind.

Solution: Use a longer timeout when using valgrind.

Patch 9.0.1676

Problem: Warning for buffer in use when exiting early.

Solution: Change file names to be able to see what buffer is in use when  
exiting.

Patch 9.0.1677

Problem: Typo in syntax test input file.

Solution: Fix the typo and the expected dump files. (THARAK HEGDE,  
closes #12635)

Patch 9.0.1678

Problem: Blade files are not recognized.

Solution: Add a pattern for Blade files. (closes #12650)

Patch 9.0.1679

Problem: Tests may leave leftover files around

Solution: Clean up tests and remove files

Patch 9.0.1680

Problem: sodium test fails in Github CI

Solution: Catch sodium\_mlock() errors and do not error out

Patch 9.0.1681

Problem: Build Failure with Perl 5.38

Solution: Fix Build Failure

Patch 9.0.1682

Problem: crypt: sodium encryption is not portable

Solution: use little-endian byte order for sodium encrypted files

Patch 9.0.1683

Problem: need runtime files updated  
Solution: merge various github PRs

Patch 9.0.1684

Problem: libvterm slightly outdated  
Solution: Update libvterm from rev 818 to rev 839

Patch 9.0.1685

Problem: Python 3.11 interface throws deprecation warnings  
Solution: ignore those warnings for gcc and clang

Patch 9.0.1686

Problem: undotree() only works for the current buffer  
Solution: Add an optional "buffer number" parameter to undotree(). If omitted, use the current buffer for backwards compatibility.

Patch 9.0.1687

Problem: mapset() not properly handling script ID  
Solution: replace\_termcodes() may accept a script ID

Patch 9.0.1688

Problem: cannot store custom data in quickfix list  
Solution: add ``user_data`` field for the quickfix list

Patch 9.0.1689

Problem: python 3.12 produces warnings and fails test  
Solution: Make use of raw strings in python3 tests

Patch 9.0.1690

Problem: popup\_create() not aborting on errors  
Solution: check for errors in arguments given and abort if an error occurred

Patch 9.0.1691

Problem: wrong viewport restored for incsearch and smoothscroll  
Solution: Save and restore skipcol as well

Patch 9.0.1692

Problem: Android not handling AI\_V4MAPPED ai\_flag  
Solution: don't set AI\_V4MAPPED flag when on Android, since Android's getaddrinfo returns EAI\_BADFLAGS if ai\_flags contains it

Patch 9.0.1693

Problem: Ctrl-Q not handled like Ctrl-V in replace mode  
Solution: Handle Ctrl-Q like Ctrl-V

Patch 9.0.1694

Problem: wrong mapping applied when replaying a char search  
Solution: Store a NOP after the ESC

Patch 9.0.1695

Problem: Crash with overlong textprop above

Solution: Consider only positive padding

Patch 9.0.1696

Problem: sodium\_mlock may still fail in CI

Solution: Catch E1230 in testscript and skip test

Patch 9.0.1697

Problem: incsearch test not sufficient (after 9.0.1691)

Solution: add an additional test

Patch 9.0.1698

Problem: Test\_map\_restore\_sid fails in GUI

Solution: Feed an unsimplified Ctrl-B

Patch 9.0.1699

Problem: compile warning for xdiff/xutils on MS-Windows

Solution: add explicit type cast from size\_t to long

Patch 9.0.1700

Problem: Cannot compile with dynamic perl < 5.38 (after 9.0.1681)

Solution: Fix if\_perl/dyn from perl 5.32 to 5.38

Patch 9.0.1701

Problem: vim9 crash when class member overridden

Solution: Use method\_count field instead

Patch 9.0.1702

Problem: Undo test is flaky.

Solution: Apply filter and change time to "1 second ago" in both dumps.

Patch 9.0.1703

Problem: Vim9 Calling a method in an extended class fails

Solution: use method index directly

Patch 9.0.1704

Problem: Cannot use positional arguments for printf()

Solution: Support positional arguments in string formatting

Patch 9.0.1705

Problem: cursor position wrong when clicking on an unprintable char

Solution: Don't update prev\_ptr when wlv.n\_extra is not zero.

Patch 9.0.1706

Problem: typos in the xxd manpage

Solution: Fix typos and formatting

Patch 9.0.1707

Problem: Cannot wrap around in popup\_filter\_menu()

Solution: Allow to wrap around by default

Patch 9.0.1708

Problem: getcompletion() fails for user-defined commands

Solution: set context for completion function

Patch 9.0.1709

Problem: dynamic build with python 3.12 breaks

Solution: if\_python3.c: Fix building dynamic Python3 interpreter

Patch 9.0.1710

Problem: sidescrolloff and scrolloff options work slightly different than other global-local options

Solution: Make it behave consistent for all global-local options

Patch 9.0.1711

Problem: dead code in charset.c

Solution: remove it

Patch 9.0.1712

Problem: missing null check in object\_clear()

Solution: Add null check of cl

Patch 9.0.1713

Problem: Github CI fails to load snd-dummy kernel module

Solution: Make installation of linux-modules-extra optional

Patch 9.0.1714

Problem: getcompletion() "cmdline" fails after :autocmd

Solution: Use set\_cmd\_context() instead of set\_one\_cmd\_context().

Patch 9.0.1715

Problem: duplicate test in message\_test.c

Solution: Remove duplicate test and make functions static

Patch 9.0.1716

Problem: Windows build with python 3.12 and clang fails

Solution: Remove the PyBool\_Type function pointer for python 3.12

Patch 9.0.1717

Problem: virtcol2col returns last byte of a multi-byte char

Solution: Make it return the first byte for a multi-byte char

Patch 9.0.1718

Problem: dict-completion does not respect region

Solution: respect selected region in dict completion

Patch 9.0.1719

Problem: if\_lua: crash for Lua functions invoked via Vim callbacks

Solution: Use Lua registry rather than upvalues for udata cache

Patch 9.0.1720

Problem: Vim9 class using wrong index for overridden method

Solution: Use correct index for overridden method

Patch 9.0.1721

Problem: Build failure on Windows with dynamic lua (after 9.0.1719)

Solution: move definition further down in if\_lua

Patch 9.0.1722

Problem: wrong error messages when passing wrong types to count()  
Solution: fix it

Patch 9.0.1723

Problem: Fix regression in `{func}` argument of reduce()  
Solution: pass function name as string again

Patch 9.0.1724

Problem: vim9class constructor argument type checking bug  
Solution: fix it

Patch 9.0.1725

Problem: Wrong cursor position when clicking after concealed text with `'virtualedit'`.  
Solution: Store virtual columns in ScreenCols[] instead of text columns, and always use coladvance() when clicking.

Patch 9.0.1726

Problem: incorrect heights in win\_size\_restore()  
Solution: avoid restoring incorrect heights in win\_size\_restore()

Patch 9.0.1727

Problem: minor problems with the teapot()  
Solution: remove the null check, update documentation

Patch 9.0.1728

Problem: missing winid argument for virtcol()  
Solution: Add a `{winid}` argument to virtcol()

Patch 9.0.1729

Problem: screenpos() wrong result with w\_skipcol and coptions+=n  
Solution: Use adjust\_plines\_for\_skipcol() instead of subtracting w\_skipcol.

Patch 9.0.1730

Problem: passing multiple patterns to runtime not working  
Solution: prepend prefix to each argument separately

Patch 9.0.1731

Problem: blockwise Visual highlight not working with virtual text  
Solution: Reset the correct variable at the end of virtual selection and Check for double-width char inside virtual text.

Patch 9.0.1732

Problem: vimexpr: shadowing variable  
Solution: Rename local variable

Patch 9.0.1733

Problem: CI: cannot cache linux-modules-extra  
Solution: Enable caching and reduce failed downloads

Patch 9.0.1734

Problem: runtime completion fails for multiple args  
Solution: Make it work

Patch 9.0.1735

Problem: Rename completion specific findex var

Solution: Move "findex" static variable to xp\_selected in expand\_T

Patch 9.0.1736

Problem: Github Actions times out after 20 minutes

Solution: Increase the timeout to 25 minutes

Patch 9.0.1737

Problem: Calling a base class method through an extended class fails

Solution: Create lookup table for member index in the interface to  
to the member class implementing the interface

Patch 9.0.1738

Problem: Duplicate code to reverse a string

Solution: Move reverse\_text() to strings.c and remove string\_reverse().

Patch 9.0.1739

Problem: leftover files in libvterm

Solution: Fix cleaning of libvterm directory

Patch 9.0.1740

Problem: segfault when reading invalid viminfo file

Solution: Check the expected type in the viminfo file

Patch 9.0.1741

Problem: No type checking in interfaces

Solution: Implement member type check in vim9 interfaces

Patch 9.0.1742

Problem: Wrong curswant when clicking and the second cell of a  
double-width char.

Solution: Don't copy virtcol of the first char to the second one.

Patch 9.0.1743

Problem: Parameter of gui\_gtk:gui\_mch\_browse incorrectly marked as  
UNUSED.

Solution: Remove UNUSED flag.

Patch 9.0.1744

Problem: Dead code in open\_cmdwin()

Solution: Remove it

Patch 9.0.1745

Problem: Missing test coverage for blockwise Visual highlight with  
virtual that starts with a double-width char.

Solution: Add a new virtual text to the test. Some other small fixes.

Patch 9.0.1746

Problem: vim9class compile error for char/char\_u conversion

Solution: Correctly cast to (char \*)

Patch 9.0.1747

Problem: screenpos() may cause unnecessary redraw.  
Solution: Don't unnecessarily reset VALID\_WROW flag.

Patch 9.0.1748

Problem: CI: cannot label issues automatically  
Solution: Create CI labeler

Patch 9.0.1749

Problem: Text property highlight doesn't override a sign highlight over a tab character  
Solution: Let text\_property override tab highlighting

Patch 9.0.1750

Problem: CI: fails because of changed error messages (after: 9.0.1741)  
Solution: Adjust expected error messages

Patch 9.0.1751

Problem: CI: labeler configuration not found (after 9.0.1748)  
Solution: set configuration path

Patch 9.0.1752

Problem: CI: Coveralls is no longer used  
Solution: Remove .coveralls.yml

Patch 9.0.1753

Problem: can't move to last non-blank char  
Solution: Make g<end> behave like that

Patch 9.0.1754

Problem: still ci breakage (after 9.0.1741)  
Solution: fix remaining issue

Patch 9.0.1755

Problem: CI still fails with sodium mlock error  
Solution: catch mlock failure

Patch 9.0.1756

Problem: failing cursorline sign test  
Solution: only reset char attr, if cursorline option is not set

Patch 9.0.1757

Problem: ex\_class() function is too long  
Solution: refactor it

Patch 9.0.1758

Problem: vim9 no class identifiers in stack dumps  
Solution: Prefix class members in stack traces with the class name followed by a dot.

Patch 9.0.1759

Problem: Visual highlight not working with cursor at end of screen line

and **'showbreak'**.  
Solution: Only update "vcol\_prev" when drawing buffer text.

Patch 9.0.1760

Problem: vim9 class problem with new() constructor  
Solution: Don't allow a return type for the new() class constructor.

Patch 9.0.1761

Problem: g<kEnd> behaves different from g<end>  
Solution: Make g<kEnd> behave like g<End>

Patch 9.0.1762

Problem: Not able to get the virtual text property  
Solution: Make prop\_list() return virtual text and alignment

Patch 9.0.1763

Problem: crash when passing invalid buffer to undotree()  
Solution: Use get\_buf\_arg() instead of tv\_get\_buf\_from\_arg().

Patch 9.0.1764

Problem: CI: label should not be set on all yml files  
Solution: only set it for specific yml files in .github

Patch 9.0.1765

Problem: Error when cross-compiling Vim  
Solution: use AC\_CHECK\_SIZEOF to find sizeof(wchar\_t)

Patch 9.0.1766

Problem: Runtime: Missing QML support  
Solution: Add QML support to Vim

Patch 9.0.1767

Problem: '.' no allowed in highlight group names  
Solution: Allow dot and hyphen characters in highlight group names

Patch 9.0.1768

Problem: Runtime: no support for bicep files  
Solution: Add filetype support for bicepparam

Patch 9.0.1769

Problem: executable() ignoring symlinks on Windows  
Solution: resolve reparse points

Patch 9.0.1770

Problem: lines disappear when modifying chars before virt text  
Solution: take virtual text property length into account

Patch 9.0.1771

Problem: regex: combining chars in collections not handled  
Solution: Check for following combining characters for NFA and BT engine

Patch 9.0.1772

Problem: Cursor is adjusted in window that did not change in size by  
**'splitkeep'**.

Solution: Only check that cursor position is valid in a window that has changed in size.

Patch 9.0.1773

Problem: cannot distinguish Forth and Fortran \*.f files

Solution: Add Filetype detection Code

Patch 9.0.1774

Problem: no support for custom cmdline completion

Solution: Add new vimscript functions

Patch 9.0.1775

Problem: Wrong comparison in vim9type.c

Solution: Change condition to false

Patch 9.0.1776

Problem: No support for stable Python 3 ABI

Solution: Support Python 3 stable ABI

Patch 9.0.1777

Problem: patch 9.0.1771 causes problems

Solution: revert it

Patch 9.0.1778

Problem: if\_py\_both: code-style issue

Solution: add space

Patch 9.0.1779

Problem: Need more state() tests

Solution: Add a few more tests for operator pending mode and register yank command

Patch 9.0.1780

Problem: Vim9 type not defined during object creation

Solution: Define type during object creation and not during class definition, parse multi-line member initializers, fix lock initialization

Patch 9.0.1781

Problem: Problems when setting bin/paste option

Solution: When setting binary/paste, remember that this also affects depending options, so that :verbose set returns the right location.

Patch 9.0.1782

Problem: prop\_list() does not return text\_padding\_left

Solution: Store and return the text\_padding\_left value for text properties

Patch 9.0.1783

Problem: Wrong display with wrapping virtual text or unprintable chars, **'showbreak'** and **'smoothscroll'**.

Solution: Don't skip cells taken by **'showbreak'** in screen lines before "w\_skipcol". Combined "n\_skip" and "skip\_cells".

Patch 9.0.1784

Problem: redundant else in pum\_set\_selected()

Solution: Remove it

Patch 9.0.1785

Problem: wrong cursor position with '**showbreak**' and lcs-eol

Solution: Add size of '**showbreak**' before when '**listchars**' "eol" is used.  
Also fix wrong cursor position with wrapping virtual text on empty line and '**showbreak**'.

Patch 9.0.1786

Problem: Vim9: need instanceof() function

Solution: Implement instanceof() builtin

Patch 9.0.1787

Problem: Cannot build with latest luajit

Solution: adjust sed regexp and don't expect '-' in version output

Patch 9.0.1788

Problem: C4090 warnings in strings.c

Solution: Add type casts

Patch 9.0.1789

Problem: too early declaration of variable in pum\_set\_selected()

Solution: Move declaration to where it is actually used

Patch 9.0.1790

Problem: The Content-Type header is an optional header that some LSP servers struggle with and may crash when encountering it.

Solution: Drop the Content-Type header from all messages, because we use the default value anyway.

Patch 9.0.1791

Problem: No tests for the Termdebug plugin

Solution: Add some simple tests for the Termdebug plugin

Patch 9.0.1792

Problem: Normal mode "gM", "gj", "gk" commands behave incorrectly with virtual text.

Solution: Use linetabsize() instead of linetabsize\_str().

Patch 9.0.1793

Problem: obsolete macros in configure script

Solution: Remove those and start moving to autoconf 2.71

Patch 9.0.1794

Problem: autoconf: not correctly detecting include dirs

Solution: make use of python3 to generate includedirs

Patch 9.0.1795

Problem: Indentation issues

Solution: Fix code indentation issues.

Patch 9.0.1796

Problem: Vim9 problems with null\_objects  
Solution: Vim9 improve null\_object usage

Patch 9.0.1797

Problem: Vimball/Visual Basic filetype detection conflict  
Solution: runtime(vb): Improve Vimball and Visual Basic detection logic

Patch 9.0.1798

Problem: The **'syntax'** option has no completion.  
Solution: Add syntax option completion.

Patch 9.0.1799

Problem: Russian menu translation can be improved  
Solution: update the Russian menu files

Patch 9.0.1800

Problem: Cursor position still wrong with **'showbreak'** and virtual text after last character or **'listchars'** "eol".  
Solution: Remove unnecessary w\_wcol adjustment in curs\_columns(). Also fix first char of virtual text not shown at the start of a screen line.

Patch 9.0.1801

Problem: Vim9 instanceof() fails in a def func  
Solution: allow Objects in compile time check

Patch 9.0.1802

Problem: Multiline regex with Visual selection fails when Visual selection contains virtual text after last char.  
Solution: Only include virtual text after last char when getting full line length.

Patch 9.0.1803

Problem: Cannot detect norg markup files  
Solution: Add norg markup language detection

Patch 9.0.1804

Problem: Vim9: no support for private object methods  
Solution: Add support for private object/class methods

Patch 9.0.1805

Problem: Vim9: problem compiling object method as function call arg  
Solution: After a object/class method call, remove the object/class from the stack.

Patch 9.0.1806

Problem: Vim9: bogus error on export  
Solution: Don't error out when the export command is not executed

Patch 9.0.1807

Problem: runtime: crystal scripts not recognised  
Solution: Filetype detect Crystal scripts by shebang line

Patch 9.0.1808

Problem: Termdebug: Typo in Termdebug test  
Solution: fix the typos

Patch 9.0.1809

Problem: Termdebug test flaky  
Solution: wait slightly longer

Patch 9.0.1810

Problem: camel-case spelling has issues with digits  
Solution: Improve the camCase spell checking by taking digits and caps into account

Patch 9.0.1811

Problem: still some issues with term\_debug test  
Solution: Use WaitForAssert()

Patch 9.0.1812

Problem: CI still fails with sodium\_mlock error()  
Solution: Catch and ignore E1230 error in test\_crypt

Patch 9.0.1813

Problem: **'linebreak'** is incorrectly drawn after **'breakindent'**.  
Solution: Don't include **'breakindent'** size when already after it.

Patch 9.0.1814

Problem: Vim9 no error on duplicate object member var  
Solution: detect duplicate members and error out

Patch 9.0.1815

Problem: pango\_coverage\_unref() deprecated in pango > 1.51  
Solution: use g\_object\_unref() instead

Patch 9.0.1816

Problem: configure: sed uses non-portable regex  
Solution: use '\*' modifier instead of '\?' in regex for luajit version detection

Patch 9.0.1817

Problem: configure: using obsolete AC\_HEADER\_STDC  
Solution: Remove it and re-create configure

Patch 9.0.1818

Problem: dynamically linking perl is broken  
Solution: Fix all issues

Patch 9.0.1819

Problem: Github CI too complex  
Solution: CI: Tidy up matrix

Patch 9.0.1820

Problem: REXX files may not be recognised  
Solution: Add shebang detection and improve disambiguation of \*.cls files

Patch 9.0.1821

Problem: Vim9 constructors are always static  
Solution: make the "static" keyword an error

Patch 9.0.1822

Problem: Vim9: no check for duplicate members in extended classes  
Solution: Check for duplicate members in extended classes.  
Fix memory leak.

Patch 9.0.1823

Problem: Autoconf 2.69 too old  
Solution: Migrate to Autoconf 2.71

Patch 9.0.1824

Problem: Vim9: private members may be modifiable  
Solution: prevent modification for def function

Patch 9.0.1825

Problem: Wrong cursor position with virtual text before a whitespace character and **'linebreak'**.  
Solution: Always set "col\_adj" to "size - 1" and apply **'linebreak'** after adding the size of **'breakindent'** and **'showbreak'**.

Patch 9.0.1826

Problem: keytrans() doesn't translate recorded key typed in a GUI  
Solution: Handle CSI like K\_SPECIAL, like in mb\_unescape()

Patch 9.0.1827

Problem: xxd: no color support  
Solution: Add color support using xxd -R

Patch 9.0.1828

Problem: Wrong cursor position with virtual text before double-width char at window edge.  
Solution: Check for double-width char before adding virtual text size.

Patch 9.0.1829

Problem: Vim9 missing access-checks for private vars  
Solution: Use the proper check for private/readonly variable. Access level for a member cannot be changed in a class implementing an interface. Update the code indentation

Patch 9.0.1830

Problem: Vim9: crash when accessing a null object  
Solution: Check accessing a NULL object in def function

Patch 9.0.1831

Problem: Vim9: failing null test  
Solution: Use required public keyword

Patch 9.0.1832

Problem: xxd: reporting wrong version (after 9.0.1827)  
Solution: Update version string

Patch 9.0.1833

Problem: runtime files may execute code in current dir

Solution: only execute, if not run from current directory

Patch 9.0.1834

Problem: Some problems with xxd coloring

Solution: Fix the following problems:

Patch 9.0.1835

Problem: Perl interface has problems with load PL\_current\_context

Solution: Fix Perl interface to load PL\_current\_context from library

Patch 9.0.1836

Problem: Wrong display with "above" virtual text and '**linebreak**' or '**breakindent**' and '**showbreak**'.

Solution: Exclude size of "above" virtual text when calculating them.

Patch 9.0.1837

Problem: Vim9: class\_member\_type() can be optimized

Solution: class\_member\_type() provides more information;  
safe an additional alloc()/free()

Patch 9.0.1838

Problem: Vim9: Cannot modify class member vars from def function

Solution: Add support for modifying class member variables from a def function

Patch 9.0.1839

Problem: No Makefile rule to build cscope database

Solution: Add rule

Patch 9.0.1840

Problem: use-after-free in do\_ecmd

Solution: Verify oldwin pointer after reset\_VIsual()

Patch 9.0.1841

Problem: style: trailing whitespace in ex\_cmds.c

Solution: remove it

Patch 9.0.1842

Problem: Need more accurate profiling

Solution: Improve profiling results

Patch 9.0.1843

Problem: xxd color test flaky

Solution: Filter unneeded lines

Patch 9.0.1844

Problem: doc helptags may not be up to date

Solution: Add CI jobs to verify helptags are updated

Patch 9.0.1845

Problem: xxd: Test\_xxd\_color start failing

Solution: Revert changes to dump file

Patch 9.0.1846

Problem: crash in fullcommand

Solution: Check for typeval correctly

Patch 9.0.1847

Problem: potential oob write in do\_addsub()

Solution: don't overflow buf2, check size in for loop()

Patch 9.0.1848

Problem: buffer-overflow in vim\_regsub\_both()

Solution: Check remaining space

Patch 9.0.1849

Problem: CI error on different signedness

Solution: cast unsigned to int

Patch 9.0.1850

Problem: Vim9: wrong line number where options set

Solution: Set source line number earlier

Patch 9.0.1851

Problem: Virtual text at a column causes **'breakindent'** and **'showbreak'** to be missing (after patch 9.0.1124).

Solution: Add check for "tp\_col" in another place where TP\_FLAG\_WRAP is checked.

Patch 9.0.1852

Problem: i\_CTRL-O does not reset Select Mode

Solution: Reset select mode on **CTRL-O** in insert mode

Patch 9.0.1853

Problem: CI error on different signedness in regexp.c (after patch 9.0.1848)

Solution: Cast strlen() call to int

Patch 9.0.1854

Problem: test\_crash1() fails on CI

Solution: don't run Screendump test, verify that it doesn't crash by running it through a shell command line, testing the exit value and concatenating success cmd using '&&'

Patch 9.0.1855

Problem: mode() doesn't indicate command line for terminal

Solution: make it return **'ct'** for command-line from Terminal mode

Patch 9.0.1856

Problem: issues with formatting positional arguments

Solution: fix them, add tests and documentation

Patch 9.0.1857

Problem: heap-use-after-free in is\_qf\_win()

Solution: Check buffer is valid before accessing it

Patch 9.0.1858

Problem: heap use after free in ins\_compl\_get\_exp()  
Solution: validate buffer before accessing it

Patch 9.0.1859

Problem: heap-use-after-free in bt\_normal()  
Solution: check that buffer is still valid

Patch 9.0.1860

Problem: CI: test\_crash1() is flaky  
Solution: Wait a bit longer

Patch 9.0.1861

Problem: xxd: issue when -R is specified several times  
Solution: Fix command line parsing

Patch 9.0.1862

Problem: Vim9 Garbage Collection issues  
Solution: Class members are garbage collected early leading to use-after-free problems. Handle the garbage collection of classes properly.

Patch 9.0.1863

Problem: wrong format specifiers in e\_aotypes\_is\_null\_str\_nr  
Solution: Fix the wrong format specifier

Patch 9.0.1864

Problem: crash with bt\_quickfix1\_poc when cleaning up and EXITFREE is defined  
Solution: Test if buffer is valid in a window, else close window directly, don't try to access buffer properties

Patch 9.0.1865

Problem: Vim9: garbage collection may cause crash  
Solution: validate that class members typeval is not null

Patch 9.0.1866

Problem: Undo is synced after character find.  
Solution: Set no\_u\_sync when calling gotchars\_nop().

Patch 9.0.1867

Problem: Vim9: access to interface statics possible  
Solution: Prevent direct access to interface statics

Patch 9.0.1868

Problem: test\_crash still fails for circle ci  
Solution: give even more time to complete

Patch 9.0.1869

Problem: Coverity warns about uninitialized var  
Solution: initialize it

Patch 9.0.1870

Problem: Vim9: disassemble does not show static  
Solution: Show static flag

Patch 9.0.1871

Problem: Github CI does not run i386 job  
Solution: Add a i386 architecture

Patch 9.0.1872

Problem: CI: test\_crash() fails on CI  
Solution: Skip test on BSD

Patch 9.0.1873

Problem: heap-buffer-overflow in vim\_regsub\_both  
Solution: Disallow exchanging windows when textlock is active

Patch 9.0.1874

Problem: CI may fail in test\_recover\_empty\_swap  
Solution: Set directory option

Patch 9.0.1875

Problem: Vim9: improve test for disassemble + static  
Solution: Add a Vim9 script disassemble test for an interface with static members

Patch 9.0.1876

Problem: Vim9: parsing commands with newlines wrong  
Solution: Accept a '\n' for parsing lists and command arguments

Patch 9.0.1877

Problem: missing test for patch 9.0.1873  
Solution: add a test trying to exchange windows

Patch 9.0.1878

Problem: tests running sh have problems  
Solution: Check that dash is installed

Patch 9.0.1879

Problem: Vim9: incorrect duplicate class member detection  
Solution: Incorrect duplicate class member detection when variable names have the same prefix. Not able to access class member variables using an object. Fix coding style issues

Patch 9.0.1880

Problem: Vim9: Need more tests for inheritance  
Solution: Add access tests and fixes.

Patch 9.0.1881

Problem: Test\_crash fails on Mac  
Solution: Skip test on Mac

Patch 9.0.1882

Problem: Trailing white space in tests  
Solution: Delete it

Patch 9.0.1883

Problem: Vim9: Calling an interface method using a child object fails  
Solution: Search methods of parent class

Patch 9.0.1884

Problem: Wrong order of arguments for error messages  
Solution: Reverse order of arguments for e\_aotypes\_is\_null\_nr\_str

Patch 9.0.1885

Problem: Vim9: no support for abstract methods  
Solution: Add support for defining abstract methods in an abstract class

Patch 9.0.1886

Problem: Various Typos  
Solution: Fix Typos

Patch 9.0.1887

Problem: Vim9: class members are accessible via object  
Solution: Disable class member variable access using an object

Patch 9.0.1888

Problem: Vim9: Problem trying to invoke class method  
Solution: Lookup the class method inside other classes

Patch 9.0.1889

Problem: Vim9 static tests fail  
Solution: Fix tests, make CI happy ;)

Patch 9.0.1890

Problem: Vim9: lookup code for class/object repeated  
Solution: Refactor and make use of lookup functions

Patch 9.0.1891

Problem: No runtime support for Mojo  
Solution: Add basic filetype and syntax plugins

Patch 9.0.1892

Problem: CI: no FreeBSD 14 support  
Solution: Drop support for FreeBSD 12, add FreeBSD 14

Patch 9.0.1893

Problem: CI: strtptime test fails on BSD14  
Solution: Skip the test

Patch 9.0.1894

Problem: CI: trailing white space in tests  
Solution: clean up the trailing white space

Patch 9.0.1895

Problem: Vim9: finding method/member is inefficient  
Solution: Use lookups

Patch 9.0.1896

Problem: "below" virtual text doesn't work with 'rightleft'.

Solution: Use column from right border with `'rightleft'`.

Patch 9.0.1897

Problem: Vim9: confusing error with `.=` in compiled functions

Solution: Check in error condition, if `.=` was attempted and in that case give a different error message.

Patch 9.0.1898

Problem: Vim9: restrict access to static vars and methods

Solution: Class members are accessible only from the class where they are defined.

Patch 9.0.1899

Problem: potential buffer overflow in `PBYTE` macro

Solution: Check returned memline length

Patch 9.0.1900

Problem: Configure script uses non-portable `==` comparison

Solution: Use the standard and portable `"=`" instead

Patch 9.0.1901

Problem: win32: not correctly freeing environment

Solution: After we call `GetEnvironmentStringsW`, we should call `FreeEnvironmentStringsW`

Patch 9.0.1902

Problem: Vim9: Coverity complains about dead code

Solution: Copy only object methods from the super class to a subclass when extending a class. Fix Coverity warning.

Patch 9.0.1903

Problem: Github Actions fails because `snd-dummy` modules missing in current runner images

Solution: ignore `modprobe` error

Patch 9.0.1904

Problem: Cirrus-CI fails because we have used all credits

Solution: Remove FreeBSD 13.1 and MacOS M1

Patch 9.0.1905

Problem: `FEAT_FLOAT` no longer defined

Solution: Remove last existing `FEAT_FLOAT` `ifdefs` in `message_test`

Patch 9.0.1906

Problem: Vim9: Interfaces should not support class methods and variables

Solution: Make sure interface follow the interface specification

Patch 9.0.1907

Problem: No support for `liquidsoap` filetypes

Solution: Add `liquidsoap` filetype detection code

Patch 9.0.1908

Problem: undefined behaviour upper/lower function ptrs  
Solution: Fix UBSAN error in regexp and simplify upper/lowercase modifier code

Patch 9.0.1909

Problem: Vim9: problem calling class method from other class  
Solution: Fix this problem, fix readonly object access, update error messages.

Patch 9.0.1910

Problem: Mac OS X: missing sound support on older versions  
Solution: Check Macro MAC\_OS\_X\_VERSION\_MIN\_REQUIRED

Patch 9.0.1911

Problem: Vim9: segfault with null object and instanceof()  
Solution: return early

Patch 9.0.1912

Problem: Cirrus-CI running out of credits  
Solution: disable Cirrus-CI for now

Patch 9.0.1913

Problem: if\_python: undefined behaviour for function pointers  
Solution: Fix if\_python undefined behavior for function pointer casts

Patch 9.0.1914

Problem: Vim9: few issues when accessing object members  
Solution: When calling an object method, check for null object. Accessing a Dict object member doesn't work.

Patch 9.0.1915

Problem: r\_CTRL-C works differently in visual mode  
Solution: Make r\_CTRL-C behave consistent in visual mode in terminal and Windows GUI

Patch 9.0.1916

Problem: Crash when allocating large terminal screen  
Solution: Don't allow values > 1000 for terminal screen columns and rows

Patch 9.0.1917

Problem: undefined behaviour with python function pointer  
Solution: correctly cast function pointers from void

Patch 9.0.1918

Problem: No filetype detection for Authzed filetypes  
Solution: Detect the \*.zed file extension as authzed filetype

Patch 9.0.1919

Problem: Wrong curswant when clicking on empty line or with vsplits.  
Solution: Don't check for ScreenCols[] before the start of the window and handle empty line properly.

Patch 9.0.1920

Problem: Vim9: cannot write public var in nested object  
Solution: Write variable in nested read-only object reference.  
Also test write fails.

Patch 9.0.1921

Problem: not possible to use the jumplist like a stack  
Solution: Add the '**jumpoptions**' setting to make the jumplist  
a stack.

Patch 9.0.1922

Problem: LSP server request message is misinterpreted as a response message  
Solution: Check that the message does not have the "message" field

Patch 9.0.1923

Problem: curswant wrong on click with '**ve**' and '**wrap**' set  
Solution: Add w\_leftcol to mouse click column.

Patch 9.0.1924

Problem: LSP server message still wrongly handled (after 9.0.1922)  
Solution: Handle '**method**' messages properly, don't discard them, add  
tests.

Patch 9.0.1925

Problem: if\_python: still undefined behaviour with function pointer  
Solution: fix remaining problems

Patch 9.0.1926

Problem: Vim9: not enough info in error message  
Solution: Add class name, change member to variable, quote names

Patch 9.0.1927

Problem: patch 1916 (fixed terminal size) not optimal  
Solution: Add defines to make it easier changeable later

Patch 9.0.1928

Problem: Vim9: constructor type checking bug  
Solution: Fix class constructor regression

Patch 9.0.1929

Problem: runtime tests fail with tiny vim  
Solution: check for tiny vim, run runtime tests in CI  
even for tiny version

Patch 9.0.1930

Problem: compiler warnings with clang-17  
Solution: Fix function prototypes and function pointer

Patch 9.0.1931

Problem: make test\_compilers fails on ubuntu  
Solution: set LC\_ALL=C

Patch 9.0.1932

Problem: Vim9: error when using null object constructor

Solution: Check for a null object only when calling an object method

Patch 9.0.1933

Problem: Can change the type of a v: variable using if\_lua.

Solution: Add additional handling of v: variables like :let.

Patch 9.0.1934

Problem: bwipe fails after switching window from aucmd\_win.

Solution: Decrement b\_nwindows after switching back to aucmd\_win.

Patch 9.0.1935

Problem: Vim9: not consistent error messages

Solution: Make error messages more consistent. Use "variable" for (object/class) member

Patch 9.0.1936

Problem: test: using wrong expected message in test\_crypt

Solution: make use of single quotes

Patch 9.0.1937

Problem: missing test for mouse click + 'virtedit'

Solution: Add test for clicking after eol with 'virtualedit' and wrapped line

Patch 9.0.1938

Problem: multispace wrong when scrolling horizontally

Solution: Update position in "multispace" or "leadmultispace" also in skipped chars. Reorder conditions to be more consistent.

Patch 9.0.1939

Problem: still a problem when processing LSP RPC requests

Solution: When processing async LSP RPC requests, compare sequence numbers only in response messages

Patch 9.0.1940

Problem: wrong upstream version in libvterm README

Solution: correct version to 839

Patch 9.0.1941

Problem: Memory leak detected (after 9.0.1928)

Solution: Free arg\_objm in get\_lambda\_tv()

Patch 9.0.1942

Problem: Vim9: execution stack invalidated with null object

Solution: Check for a null object before adjusting the execution stack

Patch 9.0.1943

Problem: CI not run with clang-17

Solution: Update CI to use clang-17

Patch 9.0.1944

Problem: Vim9: function instruction pointer invalidated

Solution: Use the funcref index instead of the instruction pointer

Patch 9.0.1945

Problem: Vim9: missing support for ro-vars in interface  
Solution: Support only read-only object variables in an interface,  
add additional checks when parsing class definitions.

Patch 9.0.1946

Problem: filename expansion using \*\* in bash may fail  
Solution: Try to enable the globstar setting

Patch 9.0.1947

Problem: Bash Expansion test fails on Windows/MacOS  
Solution: Disable Test\_glob\_extended\_bash for now

Patch 9.0.1948

Problem: Vim9: object variable "this." should only be used in  
constructor  
Solution: Disallow to this in normal object methods (other than  
constructors)

Patch 9.0.1949

Problem: Vim9: allows reserved keywords as members  
Solution: Disallow reserved keywords, disallow  
duplicate object and class variables

Patch 9.0.1950

Problem: Vim9: error codes spread out  
Solution: group them together and reserve 100  
more for future use

Patch 9.0.1951

Problem: Vim9: hard to debug vim9\_class errors from CI  
Solution: Include the line number in assert\_xxx() calls. Include the  
entire error message in the tests. Fix the indentation in the  
test file. Add tags for new error codes.

Patch 9.0.1952

Problem: Vim9: unused static field  
Solution: remove it and simplify code

Patch 9.0.1953

Problem: Misplaced comment in errors.h  
Solution: Move it up

Patch 9.0.1954

Problem: CI: change netrw label in labeller bot  
Solution: Rename it to 'plugin-netrw'

Patch 9.0.1955

Problem: Vim9: lockvar issues with objects/classes  
Solution: fix `get_lhs()` object/class access and avoid `SEGV`,  
make error messages more accurate.

Patch 9.0.1956

Problem: Custom cmdline completion skips original cmdline when pressing

Ctrl-P at first match if completion function invokes glob().  
Solution: Move orig\_save into struct expand\_T.

Patch 9.0.1957

Problem: termcap options should change on keyprotocol setting  
Solution: Apply termcap entries when **'keyprotocol'** changes

Patch 9.0.1958

Problem: cannot complete option values  
Solution: Add completion functions for several options

Patch 9.0.1959

Problem: Vim9: methods parameters and types are covariant  
Solution: Support contra-variant type check for object method arguments (similar to Dart).

Patch 9.0.1960

Problem: Make CI checks more strict  
Solution: Add -Wstrict-prototypes -Wmissing-prototypes to CI, fix uncovered problems

Patch 9.0.1961

Problem: Cmdline completion for **'listchars'** fields doesn't include "multispace" and "leadmultispace" (after 9.0.1958).  
Solution: Include "multispace" and "leadmultispace" in lcstab.

Patch 9.0.1962

Problem: No support for writing extended attributes  
Solution: Add extended attribute support for linux

Patch 9.0.1963

Problem: Configure script may not detect xattr correctly  
Solution: include sys/xattr instead of attr/xattr, make Test\_write\_with\_xattr\_support() test xattr feature correctly

Patch 9.0.1964

Problem: xattr support fails to build on MacOS X  
Solution: Disable xattr support for MacOS X

Patch 9.0.1965

Problem: wrong auto/configure script  
Solution: regenerate with autoconf 2.71

Patch 9.0.1966

Problem: configure prints stray 6 when checking libruby  
Solution: redirect stdout to dev/null

Patch 9.0.1967

Problem: xattr errors not translated  
Solution: mark for translation, consistently capitalize first letter.

Patch 9.0.1968

Problem: cmdline completion should consider key option  
Solution: Disable cmdline completion for key option, slightly refactor how P\_NO\_CMD\_EXPAND is handled

Patch 9.0.1969

Problem: buffer-overflow in trunc\_string()  
Solution: Add NULL at end of buffer

Patch 9.0.1970

Problem: win32: high-dpi support can be improved  
Solution: implement WM\_GETDPISCALED\_SIZE

Patch 9.0.1971

Problem: macOS: FEAT\_SOUND guard too restrictive  
Solution: check for older macOS support properly

Patch 9.0.1972

Problem: win32: missing '\*\*' expansion test (after v9.0.1947)  
Solution: Add test for MS-Windows

Patch 9.0.1973

Problem: Clean up cmdline option completion code  
Solution: Fix various minor problems

Patch 9.0.1974

Problem: vim9: using contra-variant type-checks (after v9.0.1959)  
Solution: Use invariant type checking instead

Patch 9.0.1975

Problem: xattr: permission-denied errors on write  
Solution: ignore those errors

Patch 9.0.1976

Problem: style: space before tab in optionstr.c  
Solution: remove the space

Patch 9.0.1977

Problem: Vim9: object members can change type  
Solution: Check type during assignment to object/class var

Patch 9.0.1978

Problem: No filetype detection for just files  
Solution: Detect just files (\*.just, justfile, etc)

Patch 9.0.1979

Problem: Cirrus CI disabled  
Solution: re-enable Cirrus CI

Patch 9.0.1980

Problem: win32: issues with stable python ABI  
Solution: if\_python3,win32: Fix Python3 stable ABI

Patch 9.0.1981

Problem: Cannot scroll up in diff mode with many filler lines and zero

**'scrolloff'.**

Solution: Invalidate w\_cline\_row before calling comp\_botline().

Patch 9.0.1982

Problem: vim9: clean up from v9.0.1955

Solution: Fix a few remaining issues, improve error message

Patch 9.0.1983

Problem: Scrolling non-current window using mouse is inconsistent depending on **'scrollbind'**/**'scrolloff'** and different from GUI vertical scrollbar when **'cursorbind'** is set.

Solution: Don't move cursor in non-current windows for **'cursorbind'** if cursor in the current window didn't move.

Patch 9.0.1984

Problem: CI: Test\_open\_delay\*() fails on FreeBSD 14

Solution: Skip it on BSD

Patch 9.0.1985

Problem: CI: codecov is intrusive

Solution: disable codecov comments

Patch 9.0.1986

Problem: Vim9: accepting type-annotations

Solution: Reject type annotations outside of declarations.

Patch 9.0.1987

Problem: win32: font-size calculation can be improved

Solution: calculate font size before the window size

Patch 9.0.1988

Problem: Vim9: potential use-after-free for class members

Solution: Use the class-related grow array for storing the member type instead of using a temporary type list grow array

Patch 9.0.1989

Problem: Vim9: double error message given

Solution: Only give second error message, if there wasn't one given before

Patch 9.0.1990

Problem: strange error number

Solution: change error number,  
add doc tag for E1507

Patch 9.0.1991

Problem: no cmdline completion for setting the font

Solution: enable it on Win32 and GTK builds

Patch 9.0.1992

Problem: segfault in exmode when redrawing

Solution: skip gui\_scroll when exmode\_active

Patch 9.0.1993

Problem: warning about unused function definition  
Solution: add ifdefs

Patch 9.0.1994

Problem: inconsistent feature description  
Solution: delete old mentioned feature sets small and big

Patch 9.0.1995

Problem: Invalid memory access when **'foldexpr'** returns empty string.  
Solution: Check for NUL.

Patch 9.0.1996

Problem: Cannot build with python312  
Solution: Define wrapper types and functions for python 3.12

Patch 9.0.1997

Problem: Some unused code in move.c and string.c  
Solution: Remove it

Patch 9.0.1998

Problem: xxd: cannot reverse a bit dump  
Solution: implement reversing the bit dump using -b -r

Patch 9.0.1999

Problem: Vim9: some error messages can be improved  
Solution: Mention the defining class for variable access error message

Patch 9.0.2000

Problem: Vim9: use-after-free in deep call stack  
Solution: Get the object pointer from execution stack

Patch 9.0.2001

Problem: Vim9: segfault with islocked()  
Solution: Check that the lval pointer is not null for objects and class variables

Patch 9.0.2002

Problem: Vim9: need cleanup of class related interface code  
Solution: Remove the unused class variable and class method related code for interfaces.

Patch 9.0.2003

Problem: xxd: compilation warning  
Solution: initialize variables

Patch 9.0.2004

Problem: Missing test file  
Solution: git-add the file to the repo

Patch 9.0.2005

Problem: partially revert patch v9.0.1997  
Solution: add a comment, to make clear it's not used

Patch 9.0.2006

Problem: Vim9: need more tests  
Solution: add additional disassembly tests

Patch 9.0.2007

Problem: Vim9: covariant parameter types allowed when assigning functions  
Solution: Enforce invariant type check for arguments and return value when assigning a funcref

Patch 9.0.2008

Problem: test: undofile left behind  
Solution: cleanup undofile

Patch 9.0.2009

Problem: cmdline-completion for comma-separated options wrong  
Solution: Fix command-line expansions for options with filenames with commas

Patch 9.0.2010

Problem: [security] use-after-free from buf\_contents\_changed()  
Solution: block autocommands

Patch 9.0.2011

Problem: INI files not detected  
Solution: detect uppercase .INI as dosini files

Patch 9.0.2012

Problem: Vim9: error message can be more accurate  
Solution: Fix the error messages

Patch 9.0.2013

Problem: Unicode tables outdated  
Solution: Update Unicode tables to v15.1 (released 23.09.2023)

Patch 9.0.2014

Problem: confusing ifdefs in if\_<lang>.c  
Solution: refactor ifndefs to #ifdefs

Patch 9.0.2015

Problem: Vim9: does not handle islocked() from a method correctly  
Solution: Handle islocked() builtin from a method.

Patch 9.0.2016

Problem: Vim9: assignment operators don't work for class vars  
Solution: implement it

Patch 9.0.2017

Problem: linebreak applies for leading whitespace  
Solution: only apply linebreak, once we have found non-breakat chars in the line

Patch 9.0.2018

Problem: complete\_info() returns wrong index

Solution: Make order of **'info'** in completion\_info consistent

Patch 9.0.2019

Problem: Vim9: no support for funcrefs

Solution: Add support for object/class funcref members

Patch 9.0.2020

Problem: Vim9: islocked() needs more work

Solution: rework islocked() and remove sync\_root  
from get\_lval()

Patch 9.0.2021

Problem: Coverity complains about change in charset (after v9.0.2017)

Solution: check pointer t at index 0

Patch 9.0.2022

Problem: When clicking in the middle of a TAB, getmousepos() returns  
the column of the next char instead of the TAB.

Solution: Break out of the loop when the vcol to find is inside current  
char. Fix invalid memory access when calling virtcol2col() on  
an empty line.

Patch 9.0.2023

Problem: need more tests for :cq

Solution: Add more tests, including wraparound on linux

Patch 9.0.2024

Problem: no filetype detection for Debian sources

Solution: Add new deb822sources filetype

Patch 9.0.2025

Problem: no cmdline completion for ++opt args

Solution: Add cmdline completion for :e ++opt=arg and :terminal  
[++options]

Patch 9.0.2026

Problem: win32: python3 dll loading can be improved

Solution: Load DLL from registry path

Patch 9.0.2027

Problem: Vim9: no support for bitwise operators in lambda funcs

Solution: move "evaluate" assignment a bit up in order to decide  
to perform bitwise operations

Patch 9.0.2028

Problem: confusing build dependencies

Solution: clean them up, make them parallelizable

Patch 9.0.2029

Problem: Vim9: no support for partials using call()

Solution: Add support

Patch 9.0.2030

Problem: no max callback recursion limit

Solution: bail out, if max call recursion for callback functions has been reached.

Patch 9.0.2031

Problem: ``TextChangedI`` can trigger on entering Insert mode if there was previously a change not in Insert mode.

Solution: Make it trigger only when text is actually changed in Insert mode.

Patch 9.0.2032

Problem: Cannot accurately get mouse clicking position when clicking on a TAB or with virtual text.

Solution: Add a "coladd" field to getmousepos() result.

Patch 9.0.2033

Problem: gcc overflow-warning for f\_resolve

Solution: use pointer p instead of pointer q[-1]

Patch 9.0.2034

Problem: don't try to copy SMACK attribute, when none exist

Solution: return early if SMACK extended attributes do not exist or if they are not supported

Patch 9.0.2035

Problem: [\[security\]](#) use-after-free with wildmenu

Solution: properly clean up the wildmenu when exiting

Patch 9.0.2036

Problem: if\_python: rework python3.12 build dependency (after 9.0.1996)

Solution: use PyTuple\_Size instead of inlining the Py\_SIZE into the Vim code base

Patch 9.0.2037

Problem: A few remaining cmdline completion issues with C-E/Y

Solution: Fix cmdline completion fuzzy/Ctrl-E/Ctrl-Y/options when not used at the end

Patch 9.0.2038

Problem: Vim9: object method funcref not cleaned up after use

Solution: Clean up type stack after using object method funcref, remove now longer used ISN\_DEFEROBJ instruction

Patch 9.0.2039

Problem: completion shows current word after completion restart

Solution: remove the word being completed after completion restart

Patch 9.0.2040

Problem: trim(): hard to use default mask

Solution: Use default `'mask'` when it is v:none

Patch 9.0.2041

Problem: trim(): hard to use default mask (partly revert v9.0.2040)

Solution: use default mask when it is empty

Patch 9.0.2042

Problem: Test\_cq\_zero\_exmode fails without channel feature  
Solution: Make the test check the channel feature

Patch 9.0.2043

Problem: Vim9: issue with funcref assignment and varargs  
Solution: Fix funcref type checking

Patch 9.0.2044

Problem: Vim9: exceptions confuse deferred functions  
Solution: save and restore exception state when calling deferred functions

Patch 9.0.2045

Problem: tests: checking for swap files takes time  
Solution: don't check for swap files when test has been skipped

Patch 9.0.2046

Problem: win32,python: warning that MS\_WIN64 got re-defined  
Solution: Do not define MS\_WIN64, as it is no longer used

Patch 9.0.2047

Problem: perl: warning about inconsistent dll linkage  
Solution: suppress warning

Patch 9.0.2048

Problem: python: uninitialized warning  
Solution: initialize 'minor' always

Patch 9.0.2049

Problem: Vim9: not recognizing qualified class vars for infix ops  
Solution: Drop the class type from the stack before generating the CLASSMEMBER instruction

Patch 9.0.2050

Problem: Vim9: crash with deferred function call and exception  
Solution: Save and restore exception state

Patch 9.0.2051

Problem: Vim9: wrong error for non-existing object var  
Solution: mention object or class depending on whether the var is an object or class variable.

Patch 9.0.2052

Problem: win32: using deprecated wsock32 api  
Solution: Use winsock2 (ws2\_32) consistently

Patch 9.0.2053

Problem: zig filetype detection test wrong  
Solution: Remove .zir pattern, add new test for .zon pattern

Patch 9.0.2054

Problem: win32: iscygpty needs update

Solution: Update iscygpty to the latest version, make use iswascii()  
API function

Patch 9.0.2055

Problem: Vim9: non-consistent error messages

Solution: make error messages more consistent with common structure

Patch 9.0.2056

Problem: no digraph for quadruple prime

Solution: add quadruple prime digraph using 4'

Patch 9.0.2057

Problem: Vim9: no strict type checks for funcrefs varargs

Solution: Perform strict type checking when declaring funcrefs  
with vararg declaration, add tests

Patch 9.0.2058

Problem: tests: avoid error when no swap files exist

Solution: use unlet! so that no error message is reported  
in case the variable does not exists

Patch 9.0.2059

Problem: outstanding exceptions may be skipped

Solution: When restoring exception state, process remaining outstanding  
exceptions

Patch 9.0.2060

Problem: \*.{gn,gni} files are not recognized

Solution: Detect some as gn filetype (without adding an extra filetype)

Patch 9.0.2061

Problem: not able to detect xkb filetypes

Solution: Detect files below /u/s/X11/xkb as xkb files (without adding  
an extra filetype)

Patch 9.0.2062

Problem: Janet files are not recognised

Solution: Add filename and shebang detection (without  
adding an extra filetype plugin)

Patch 9.0.2063

Problem: pacman hooks are detected as conf filetype

Solution: make it consistent to pacman.conf and detect those  
hooks as confini

Patch 9.0.2064

Problem: cannot use buffer-number for errorformat

Solution: add support for parsing a buffer number using '%b' in  
'**errorformat**'

Patch 9.0.2065

Problem: EXPAND flag set for filetype option

Solution: Remove P\_EXPAND flag from the '**filetype**' option

Patch 9.0.2066

Problem: xxd: corrupting files when reversing bit dumps  
Solution: handle reversing bit dump slightly differently

Patch 9.0.2067

Problem: xxd: coloring was disabled on Cygwin  
Solution: don't include WIN32

Patch 9.0.2068

Problem: [security] overflow in :history  
Solution: Check that value fits into int

Patch 9.0.2069

Problem: possible to escape bracketed paste mode with Ctrl-C  
Solution: Do not handle Ctrl-C specially when key\_protocol is in use, makes bracketed paste mode more robust

Patch 9.0.2070

Problem: [security] disallow setting env in restricted mode  
Solution: Setting environment variables in restricted mode could potentially be used to execute shell commands. Disallow this.

Patch 9.0.2071

Problem: objdump files not recognized  
Solution: detect \*.objdump files, add a filetype plugin

Patch 9.0.2072

Problem: Vim9: no nr2str conversion in list-unpack  
Solution: Generate 2STRING instruction to convert dict index to string

Patch 9.0.2073

Problem: typo in quickfix.c comments  
Solution: fix them

Patch 9.0.2074

Problem: Completion menu may be wrong  
Solution: Check for the original direction of the completion menu, add more tests, make it work with 'noselect'

Patch 9.0.2075

Problem: TextChangedI may not always trigger  
Solution: trigger it in more cases: for insert/append/change operations, and when opening a new line,

Patch 9.0.2076

Problem: Vim9: No support for type aliases  
Solution: Implement :type command

Patch 9.0.2077

Problem: CI fails because of trailing whitespace in test  
Solution: Remove it

Patch 9.0.2078

Problem: several problems with type aliases  
Solution: Check for more error conditions, add tests,  
fix issues

Patch 9.0.2079

Problem: Not all Dart files detected  
Solution: Add shebang filetype detection for Dart

Patch 9.0.2080

Problem: vim9\_script test too large  
Solution: split vim9 type alias test into  
separate test file

Patch 9.0.2081

Problem: With **'smoothscroll'** set, "w\_skipcol" is not reset when unsetting  
**'wrap'**. Resulting in incorrect calculation of the cursor position.  
Solution: Reset "w\_skipcol" when unsetting **'wrap'**.

Patch 9.0.2082

Problem: test\_channel may fail because of IPV6 config issues  
Solution: Catch and skip the test, if getaddrinfo() fails with  
'Address family not supported'

Patch 9.0.2083

Problem: Perl: xsubpp may be in non-standard location  
Solution: Add --with-subpp configure option

Patch 9.0.2084

Problem: Vim9: abstract static methods are possible  
Solution: Disallow abstract static methods

Patch 9.0.2085

Problem: Vim9: abstract can be used in interface  
Solution: Disallow the use of abstract in an interface

Patch 9.0.2086

Problem: code cleanup for option callbacks needed  
Solution: remove flag os\_doskip, it's not necessary, as we can check,  
whether an error message was returned

Patch 9.0.2087

Problem: build-failure in vim9class  
Solution: reference correct error message,  
disable non-failing test

Patch 9.0.2088

Problem: Vim9: still allows abstract static methods  
(after v9.0.2084, v9.0.2085 and v9.0.2087)  
Solution: Disallow abstract static methods

Patch 9.0.2089

Problem: sound\_playfile() fails when using powershell  
Solution: quote filename using doublequotes, don't escape filename,  
because it doesn't use the shell

Patch 9.0.2090

Problem: complete\_info() skips entries with 'noselect'

Solution: Check, if first entry is at original text state

Patch 9.0.2091

Problem: Vim9: cannot convert list to string using +=  
(after 9.0.2072)

Solution: convert dict index to string later in compile\_member()

Patch 9.0.2092

Problem: tests: failure in test\_arabic

Solution: adjust the test for the changed arabic keymap

Patch 9.0.2093

Problem: Unsupported option causes rest of modeline test to be skipped.

Solution: Revert the change from patch 8.2.1432.

Patch 9.0.2094

Problem: Vim9: need more assignment tests

Solution: Add test for using different types in assignment, function arguments and return values

Patch 9.0.2095

Problem: statusline may look different than expected

Solution: do not check for highlighting of stl and stlnc characters

Patch 9.0.2096

Problem: Vim9: confusing usage of private

Solution: clarify and use protected keyword instead

Patch 9.0.2097

Problem: No support for cypher files

Solution: Add cypher filetype detection

Patch 9.0.2098

Problem: No filetype support for xcompose files

Solution: Add filetype detection

Patch 9.0.2099

Problem: Terminal control codes' are sent even when silent mode is on, causing the terminal to clear up

Solution: Block any terminal codes when silent mode is on

Patch 9.0.2100

Problem: CI: test\_Termdebug fails

Solution: only test for a changed winlayout, if the window width actually changed

Patch 9.0.2101

Problem: CI: test\_termdebug may still fail

Solution: use term\_wait() to make it more robust

Patch 9.0.2102

Problem: matchparen highlight not cleared in completion mode  
Solution: Clear matchparen highlighting in completion mode

Patch 9.0.2103

Problem: recursive callback may cause issues on some archs  
Solution: Decrease the limit drastically to 20

Patch 9.0.2104

Problem: wast filetype should be replaced by wat filetype  
Solution: start using the official wat filetype name

Patch 9.0.2105

Problem: Skipcol is not reset when topline changed scrolling cursor to top  
Solution: reset skipcol

Patch 9.0.2106

Problem: [security]: Use-after-free in win\_close()  
Solution: Check window is valid, before accessing it

Patch 9.0.2107

Problem: [security]: FPE in adjust\_plines\_for\_skipcol  
Solution: don't divide by zero, return zero

Patch 9.0.2108

Problem: [security]: overflow with count for :s command  
Solution: Abort the :s command if the count is too large

Patch 9.0.2109

Problem: [security]: overflow in nv\_z\_get\_count  
Solution: break out, if count is too large

Patch 9.0.2110

Problem: [security]: overflow in ex address parsing  
Solution: Verify that lnum is positive, before subtracting from  
LONG\_MAX

Patch 9.0.2111

Problem: [security]: overflow in get\_number  
Solution: Return 0 when the count gets too large

Patch 9.0.2112

Problem: [security]: overflow in shift\_line  
Solution: allow a max indent of INT\_MAX

Patch 9.0.2113

Problem: Coverity warns for another overflow in shift\_line()  
Solution: Test for INT\_MAX after the if condition, cast integer values  
to (long long) before multiplying.

Patch 9.0.2114

Problem: overflow detection not accurate when adding digits  
Solution: Use a helper function

Patch 9.0.2115

Problem: crash when callback function aborts because of recursiveness  
Solution: correctly initialize rettv

Patch 9.0.2116

Problem: No test for defining sign without attribute  
Solution: Add test for defining sign without attributes

Patch 9.0.2117

Problem: [security] use-after-free in qf\_free\_items  
Solution: only access qfnext, if it hasn't been freed

Patch 9.0.2118

Problem: [security]: avoid double-free  
Solution: Only free plain\_font, when it is not the same as bold\_font

Patch 9.0.2119

Problem: remove dead-condition in ex\_class()  
Solution: remove the extra condition

Patch 9.0.2120

Problem: un-used assignment in do\_source\_buffer\_init  
Solution: Remove it

Patch 9.0.2121

Problem: [security]: use-after-free in ex\_substitute  
Solution: always allocate memory

Patch 9.0.2122

Problem: [security]: prevent overflow in indenting  
Solution: use long long and remove cast to (int)

Patch 9.0.2123

Problem: Problem with initializing the length of range() lists  
Solution: Set length explicitly when it shouldn't contain any items

Patch 9.0.2124

Problem: INT overflow logic can be simplified  
Solution: introduce trim\_to\_int() function

Patch 9.0.2125

Problem: File info disappears immediately when 'cmdheight' has just decreased due to switching tabpage and 'shortmess' doesn't contain 'o' or 'O'.  
Solution: Make sure msg\_row isn't smaller than cmdline\_row.

Patch 9.0.2126

Problem: Unused assignments when checking the value of 'listchars'.  
Solution: Loop only once when just checking the value. Add a test to check that this change doesn't cause double-free.

Patch 9.0.2127

Problem: translation Makefiles can be improved  
Solution: Modified and extended po-related Makefiles and related files

Patch 9.0.2128

Problem: No runtime files for SWIG filetypes

Solution: Add syntax and filetype plugins for SWIG (Simplified Wrapper Interface Generator) description files.

Patch 9.0.2129

Problem: [\[security\]](#): use-after-free in call\_dfunc()

Solution: Refresh dfunc pointer

Patch 9.0.2130

Problem: some errors with translation Makefiles

Solution: fix issues

Patch 9.0.2131

Problem: not all nushell files detected

Solution: use \*.nu to detect nushell files

Patch 9.0.2132

Problem: Duplicate Netbeans Error Message

Solution: Remove duplicate message

Patch 9.0.2133

Problem: Cannot detect overstrike mode in Cmdline mode

Solution: Make mode() return "cr" for overstrike

Patch 9.0.2134

Problem: ml\_get error when scrolling after delete

Solution: mark topline to be validated in main\_loop  
if it is larger than current buffers line  
count

Patch 9.0.2135

Problem: No test for mode() when executing Ex commands

Solution: Add some test cases and simplify several other test cases.  
Also add a few more test cases for ModeChanged.

Patch 9.0.2136

Problem: MSVC errorformat can be improved

Solution: parse error type and column number in MSVC errorformat

Patch 9.0.2137

Problem: Can't detect angular & mustache filetypes

Solution: Detect \*.mustache as Mustache filetype;  
detect \*.component.html as html.angular filetype

Patch 9.0.2138

Problem: Overflow logic requires long long

Solution: Define vimlong\_T data type to make life easier  
for porters

Patch 9.0.2139

Problem: html.angular ft is problematic

Solution: partly revert v9.0.2137

Patch 9.0.2140

Problem: [security]: use-after-free in win\_enter

Solution: validate window pointer before calling win\_enter()

Patch 9.0.2141

Problem: [security]: buffer-overflow in suggest\_trie\_walk

Solution: Check n before using it as index into bytes array

Patch 9.0.2142

Problem: [security]: stack-buffer-overflow in option callback functions

Solution: pass size of errbuf down the call stack, use snprintf()  
instead of sprintf()

Patch 9.0.2143

Problem: [security]: buffer-overflow in ex\_substitute

Solution: clear memory after allocating

Patch 9.0.2144

Problem: Text properties causes wrong line wrapping to be drawn.

Solution: Find the index of the last text property that inserts text.

Patch 9.0.2145

Problem: Wrong scrolling in Insert mode with **'smoothscroll'** at the bottom of the window.

Solution: Don't use set\_topleft() when **'smoothscroll'** is set.

Patch 9.0.2146

Problem: text-property without type errors when joining

Solution: count all text-properties, with or without type before joining lines

Patch 9.0.2147

Problem: Type check tests fail without the channel feature

Solution: only run tests, when Vim was build with +channel

Patch 9.0.2148

Problem: Vim does not detect pacman.log file

Solution: Detect pacmanlogs and add syntax highlighting

Patch 9.0.2149

Problem: [security]: use-after-free in exec\_instructions()

Solution: get tv pointer again

Patch 9.0.2150

Problem: Using int for errbuflen in option funcs

Solution: Use size\_t for errbuflen in string option functions

Patch 9.0.2151

Problem: **'breakindent'** is not drawn after diff filler lines.

Solution: Correct check for whether **'breakindent'** should be drawn.

Patch 9.0.2152

Problem: Using type unknown for List/Dict containers

Solution: Use `'any'` instead

Patch 9.0.2153

Problem: no support to build on OpenVMS

Solution: Add OpenVMS X86\_64 platform port

Patch 9.0.2154

Problem: The options[] array is not sorted alphabetically.

Solution: Sort it alphabetically. Add a test. Avoid unnecessary loop iterations in findoption().

Patch 9.0.2155

Problem: Vim9: type not kept when assigning vars

Solution: When assigning a List or a Dict value to a variable of type `'any'`, keep the type

Patch 9.0.2156

Problem: Vim9: can use typealias in an assignment

Solution: Generate errors when class/typealias involved in the rhs of an assignment

Patch 9.0.2157

Problem: Vim9: incorrectly parses :def func definitions

Solution: check for more context when parsing function args

Patch 9.0.2158

Problem: `[security]`: use-after-free in check\_argument\_type

Solution: Reset function type pointer when freeing the function type list

Patch 9.0.2159

Problem: screenpos() may crash with neg. column

Solution: validate and correct column

Patch 9.0.2160

Problem: instanceof() should use varargs as second arg

Solution: Modify `instanceof()` to use varargs instead of list

Patch 9.0.2161

Problem: Vim9: not able to use imported interfaces and classes

Solution: Detect imported class/interfaces names correctly

Patch 9.0.2162

Problem: Vim9: type documentation out-dated

Solution: Update documentation, fix typo in type alias definition

Patch 9.0.2163

Problem: Vim9: type can be assigned to list/dict

Solution: Prevent assigning a `'type'` to a `'list'` or `'dict'`

Patch 9.0.2164

Problem: Vim9: can use type a func arg/return value

Solution: Check if using type as function argument or return value

Patch 9.0.2165

Problem: Vim9: can simplify arg type checking code

Solution: In ``f_argcheck`` array use ``arg_any``, instead of NULL

Patch 9.0.2166

Problem: Memory leak in Configure Script when checking GTK

Solution: Free the allocated memory

Patch 9.0.2167

Problem: Vim9-script object/class variable declarations use syntax that is inconsistent with the rest of the language.

Solution: Use `:var` to declare object and class variables.

Patch 9.0.2168

Problem: Moving tabpages on `:drop` may cause an endless loop

Solution: Disallow moving tabpages on `:drop` when cleaning up the arglist first

Patch 9.0.2169

Problem: Vim9: builtin funcs may accept a non-value

Solution: Restrict builtin functions that accept ``type``

Patch 9.0.2170

Problem: Vim9: no support for const/final class/objects vars

Solution: Support final and const object and class variables

Patch 9.0.2171

Problem: The `options[]` array is still not sorted alphabetically (after: v9.0.2154), causing test failures

Solution: Sort the remaining items

Patch 9.0.2172

Problem: Vim9: compiling `:defer` may fail

Solution: compile defer, when `ctx_skip` is not `SKIP_YES`

Patch 9.0.2173

Problem: Vim9: Vim crashes when compiling a for statement with a non-existing type

Solution: Error out when `lhs_type` is not null

Patch 9.0.2174

Problem: Vim9: segfault when assigning to type

Solution: do not clear `typeval`, add missing patch number

Patch 9.0.2175

Problem: Compiler warning for uninitialized var

Solution: initialize variable to NULL

Patch 9.0.2176

Problem: Compile error with Motif UI + mouse support (after v9.0.1262)

Solution: Use correct `oldval` option pointer

Patch 9.0.2177

Problem: Wrong cursor position when dragging out of window.  
Solution: Don't use ScreenCols[] when mouse is not in current window.

Patch 9.0.2178

Problem: reg\_executing() returns wrong result in :normal with range when '**showcmd**' is set (after 8.2.4705).  
Solution: Reset "pending\_end\_reg\_executing" when executing a register.

Patch 9.0.2179

Problem: no filetype detection for execline scripts  
Solution: Add filetype detection for execline

Patch 9.0.2180

Problem: POSIX function name in exarg struct causes issues on OpenVMS  
Solution: Rename getline member in exarg struct to ea\_getline, remove isinf() workaround for VMS

Patch 9.0.2181

Problem: Vim9: missing error messages  
Solution: Add one more error message

Patch 9.0.2182

Problem: Vim9: need a way to reserve future extension  
Solution: reserve double underscore prefix for future use (Yegappan Lakshmanan)

Patch 9.0.2183

Problem: Maximum callback depth is not configurable.  
Solution: Revert patch 9.0.2103. Set '**maxfuncdepth**' in test. (zeertzjq)

Patch 9.0.2184

Problem: Vim9: inconsistent :type/:class messages  
Solution: Update the Messages (Ernie Rael)

Patch 9.0.2185

Problem: Coverity complains about not checking return value in compare\_isn\_not\_values (after 9.0.2184)  
Solution: cast return value to "(void)" to make intention clear

Patch 9.0.2186

Problem: LTCG compile error on Win/ARM64 for `write_chars()`  
Solution: Explicitly initialise the storage to use data rather than BSS (Saleem Abdulrasool)

Patch 9.0.2187

Problem: Visual selection isn't drawn with '**breakindent**' when the line doesn't fit in the window (Jaehwang Jung)  
Solution: Adjust wlv->fromcol also for '**breakindent**' (zeertzjq)

Patch 9.0.2188

Problem: cursor wrong after { in single line buffer (Edwin Chan)

Solution: do not place the cursor at the end for a single line buffer when moving backwards (Gary Johnson)

Patch 9.0.2189

Problem: Wrong display when **'breakindentopt'** contains "sbr" and **'showbreak'** and **'nobreakindent'** are set.

Solution: Always reset `wlv->need_showbreak` regardless of the values of **'breakindent'** and **'showbreak'**, as they aren't checked when setting `wlv->need_showbreak` (zeertzjq)

Patch 9.0.2190

Problem: proto files need update

Solution: re-generate them

---

## VERSION 9.2

[version-9.2](#) [version9.2](#) [vim-9.2](#)

This section is about improvements made between version 9.1 and 9.2 and is a work in progress.

### Vim9 script

Add support for internal builtin functions with vim9 objects, see [builtin-object-methods](#)

Enum support for Vim9 script [:enum](#)

Support for protected `_new()` method

[new-other-9.2](#)

### Other new features

The new plugins [comment-install](#) and [nohlsearch-install](#) are included.

Support for Wayland UI.

Support for the XDG Desktop Specification [xdg-base-dir](#)

Support for translating messages in Vim script plugins using the [gettext\(\)](#) and [bindtextdomain\(\)](#) functions.

Support highlighting the matched text and the completion kind for insert-mode completion and command-line completion in [ins-completion-menu](#), see [complete-items](#)

Include the "linematch" algorithm for the **'diffopt'** setting. This aligns changes between buffers on similar lines improving the diff highlighting in Vim

[changed-9.2](#)

### Changed

Default values:

- the default **'history'** option value has been increased to 200 and removed from `defaults.vim`
- the default **'backspace'** option for Vim has been set to "indent,eol,start" and removed from `defaults.vim`
- the default fontsize for the GTK builds of Vim (Windows and Unix) has been increased to 12pt to accomodate modern high-dpi monitors
- the default value of the **'keyprotocol'** option has been updated and support for the ghostty terminal emulator (using kitty protocol) has been added

### Completion:

- allow to complete directories from **'cdpath'** for `:cd` and similar commands, add the "cd\_in\_path" completion type for e.g. `:command-complete` and `getcompletion()`
- allow to complete shell commands and files using the new shellcmdline completion type using `:command-complete` and `getcmdcomplat()`
- allow to specify additional attributes in the completion menu (allows to mark deprecated attributes from LSP server) `complete-items`
- the completed word and completion type are provided when handling the `CompleteDone` autocommand in the `v:event` dictionary
- `complete_info()` returns the list of matches shown in the poppu menu via the "matches" key
- New option value for **'completeopt'**:
  - "nosort" - do not sort completion results
  - "preinsert" - highlight to be inserted values
- handle multi-line completion as expected
- improved commandline completion for the `:hi` command
- New option value for **'wildmode'**:
  - "noselect" - do not auto select an entry in the wildmenu

### Options:

- the default for **'commentstring'** contains whitespace padding to have automatic comments look nicer `comment-install`
- **'completeopt'** is now a `global-local` option.
- **'nrformats'** accepts the new "blank" suboption, to determine a signed or unsigned number based on whitespace in front of a minus sign.
- add **'coptions'** flag "z" `cpo-z`, to disable some (traditional) vi behaviour/inconsistency (see `d-special` and `cw`).
- **'rulerformat'** now supports the `stl-%!` item
- use **'smoothscroll'** logic for **CTRL-F** / **CTRL-B** for pagewise scrolling and **CTRL-D** / **CTRL-U** for half-pagewise scrolling

### Ex commands:

- allow to specify a priority when defining a new sign `:sign-define`
- `:bwipe` also wipes jumplist and tagstack data
- moving in the buffer list using `:bnext` and similar commands, behaves as documented and skips help buffers (if not run from a help buffer, else moves to the next/previous help buffer).
- `:keeppatterns` preserves the last substitute pattern when used with `:s`

### Functions:

- provide information about function arguments using the `get(func, "arity")` function `get()-func`
- `setqflist()` and `setloclist()` can optionally try to preserve the current

- selection in the quickfix list with the "u" action.
- allow to pass local Vim script variables to python interpreter `py3eval()`
- `getwininfo()` now also returns the "leftcol" property for a window
- `v:stacktrace` The stack trace of the exception most recently caught and not finished
- Add the optional `{opts}` `Dict` argument to `getchar()` to control: cursor behaviour, return type and whether or not to simplify the returned key

#### Others:

- the regex engines match correctly case-insensitive multi-byte characters (and apply proper case folding)
- the putty terminal is detected using an `TermResponse` autocommand in `defaults.vim` and Vim switches to a dark background
- the `help-TOC` package is included to ease navigating the documentation.
- an interactive tutor plugin has been included `vim-tutor-mode`, can be started via `:Tutor`
- improve the `vimtutor` and add a second chapter for more advanced tips
- add `dist#vim9#Launch()` and `dist#vim9#Open()` to the `vim-script-library` and decouple it from `netrw`
- new digraph "APPROACHES THE LIMIT" using `","`

added-9.2

#### Added

-----

Various syntax, indent and other plugins were added.

#### Functions:

<code>base64_decode()</code>	decode a base64 string into a blob
<code>base64_encode()</code>	encode a blob into a base64 string
<code>blob2str()</code>	convert a blob into a List of strings
<code>bindtextdomain()</code>	set message lookup translation base path
<code>diff()</code>	diff two Lists of strings
<code>filecopy()</code>	copy a file <code>{from}</code> to <code>{to}</code>
<code>foreach()</code>	apply function to List items
<code>getcellpixels()</code>	get List of terminal cell pixel size
<code>getcmdcomplat()</code>	Shell command line completion
<code>getcmdprompt()</code>	get prompt for <code>input()/confirm()</code>
<code>getregion()</code>	get a region of text from a buffer
<code>getregionpos()</code>	get a list of positions for a region
<code>getstacktrace()</code>	get current stack trace of Vim scripts
<code>id()</code>	get unique identifier for a Dict, List, Object, Channel or Blob variable
<code>matchbuflines()</code>	all the matches of a pattern in a buffer
<code>matchstrlist()</code>	all the matches of a pattern in a List of strings
<code>ngettext()</code>	lookup single/plural message translation
<code>popup_setbuf()</code>	switch to a different buffer in a popup
<code>str2blob()</code>	convert a List of strings into a blob

#### Autocommands:

<code>CursorMovedC</code>	after the cursor was moved in the command-line
<code>KeyInputPre</code>	before processing any key event in any mode

SessionWritePost	after writing the session file	<code>:mksession</code>
TabClosedPre	before closing a	<code>tabpage</code> .
TermResponseAll	after the terminal response to	<code>t_RV</code> and others is received
WinNewPre	before creating a new window	

### Highlighting:

<code>hl-ComplMatchIns</code>	matched text of the currently inserted completion.
<code>hl-MsgArea</code>	highlighting of the Command-line and messages area
<code>hl-PmenuMatch</code>	Popup menu: highlighting of matched text
<code>hl-PmenuMatchSel</code>	Popup menu: highlighting of matched text in selected line

### Commands:

<code>[r and ]r</code>	to move the cursor to previous/next rare word
<code>:pbuffer</code>	Edit buffer [N] from the buffer list in the preview window

### Options:

<code>'completefuzzycollect'</code>	Enable fuzzy collection of candidates for (some) <code>ins-completion</code> modes
<code>'completeitemalign'</code>	Order of <code>complete-items</code> in Insert mode completion popup
<code>'eventignorewin'</code>	autocommand events that are ignored in a window
<code>'findfunc'</code>	Vim function to obtain the results for a <code>:find</code> command
<code>'messagesopt'</code>	configure <code>:messages</code> and <code>hit-enter</code> prompt
<code>'winfixbuf'</code>	Keep buffer focused in a window
<code>'tabclose'</code>	Which tab page to focus after closing a tab page
<code>'t_xo'</code>	Terminal uses XON/XOFF handshaking (e.g. vt420)
<code>'t_CF'</code>	Support for alternate font highlighting terminal code

---

### INCOMPATIBLE CHANGES

[incompatible-9.2](#)

Improved/Different MS-Windows mapping support  
[w32-experimental-keycode-trans-strategy](#)

---

### IMPROVEMENTS

[improvements-9.2](#)

Support for command-line completion of `'keymap'` option values.

Support for compiling all the methods in a Vim9 class using `:defcompile` .

Support for Super key mappings in GTK using `<D-Key>`.

Improved visual highlighting.

Python3 support in OpenVMS.

Support for `fuzzy-matching` during `ins-completion` with the "fuzzy" values of the `'completeopt'` setting

The environment variable `$MYVIMDIR` is set to the users personal runtime directory (`$HOME/.vim` or `$HOME/.config/vim` on Linux, `$HOME/vimfiles` on Windows)

---

## COMPILE TIME CHANGES

[compile-changes-9.2](#)

Support for building with Ruby 3.3.

Support for building Vim 9 in z/OS (MVS).

Clean-up old MS-Windows code.

---

## PATCHES

[patches-9.2](#) [bug-fixes-9.2](#)  
[patches-after-9.1](#)

The list of patches that got included since 9.1.0. This includes all the new features, but does not include runtime file changes (syntax, indent, ftpplugin, documentation, etc.)

VIM REFERENCE MANUAL by Ralf Schandl

zOS z/OS OS390 os390 MVS

This file contains the particulars for the z/OS UNIX version of Vim.

- |                                   |                 |
|-----------------------------------|-----------------|
| 1. ASCII/EBCDIC dependent scripts | zOS-has-ebcdic  |
| 2. Putty and Colors               | zOS-PuTTY       |
| 3. Motif Problems                 | zOS-Motif       |
| 4. Bugs                           | zOS-Bugs        |
| 5. Limitations                    | zOS-limitations |
| 6. Open source on z/OS UNIX       | zOS-open-source |

Contributors:

The port to z/OS UNIX was done by Ralf Schandl for the Redbook mentioned below.

Changes, bug-reports, or both by:

David Moore  
Anthony Giorgio  
and others

- 
1. ASCII/EBCDIC dependent scripts OS390-has-ebcdic zOS-has-ebcdic

For the internal script language the feature "ebcdic" was added. With this you can fix ASCII dependent scripts like this:

```
if has("ebcdic")
 let space = 64
else
 let space = 32
endif
```

- 
2. PuTTY and Colors OS390-PuTTY zOS-PuTTY

If you see problems with syntax highlighting or screen corruptions when you connect to z/OS using Putty, try the following:

- Configure Putty as "vt220" terminal (Connection->Data)
- Add the following 3 lines to your vimrc:

```
set t_AB=?[4%p1%dm
set t_AF=?[3%p1%dm
set t_C0=8
```

Note: ? is one character use <C-V><Esc> to enter it.

---

### 3. Motif Problems

[OS390-Motif](#)   [zOS-Motif](#)

**Note:** Seen with Vim 6.\*, never tested since.

It seems that in porting the Motif library to z/OS, a translation from EBCDIC to ASCII for the accelerator characters of the pull-down menus was forgotten. Even after I tried to hand convert the menus, the accelerator keys continued to only work for the opening of menus (like <Alt-F> to open the file menu). They still do not work for the menu items themselves (like <Alt-F>0 to open the file browser).

There is no solution for this yet.

---

### 4. Bugs

[OS390-bugs](#)   [zOS-Bugs](#)

- Vim will consistently hang when a large amount of text is selected in visual block mode. This may be due to a memory corruption issue. **Note** that this occurs in both the terminal and gui versions.

---

### 5. Limitations

[OS390-limitations](#)   [zOS-limitations](#)

- No binary search in tag files.  
The program /bin/sort sorts by ASCII value by default. This program is normally used by ctags to sort the tags. There might be a version of ctags out there, that does it right, but we can't be sure. So this seems to be a permanent restriction.
- The cscope interface ( [cscope](#) ) doesn't work for the version of cscope that we use on our mainframe. We have a copy of version 15.0b12, and it causes Vim to hang when using the "cscope add" command. I'm guessing that the binary format of the cscope database isn't quite what Vim is expecting. I've tried to port the current version of cscope (15.3) to z/OS, without much success. If anyone is interested in trying, drop me a line if you make any progress.
- No glib/gtk support. I have not been able to successfully compile glib on z/OS UNIX. This means you'll have to live without the pretty gtk toolbar.

Disabled at compile time:

- Multibyte support           ( [multibyte](#) )
- Right-to-left mode       ( [rileft](#) )
- Farsi key map             ( [Farsi](#) )
- Arabic language support   ( [Arabic](#) )
- Spell checking            ( [spell](#) )

Never tested:

- Perl interface           ( [perl](#) )
- Hangul input             ( [hangul](#) )
- Encryption support       ( [encryption](#) )
- Langmap                  ( ['langmap'](#) )

- Python support ( Python )
- Right-to-left mode ( 'rightleft' )
- TCL interface ( tcl )
- ...

---

6. Open source on z/OS UNIX [OS390-open-source](#) [zOS-open-source](#)

If you are interested in other Open Source Software on z/OS UNIX, have a look at the following Redbook:

Mike MacIsaac et al

"Open Source Software for z/OS and OS/390 UNIX"

IBM Form Number: SG24-5944-01

ISBN: 0738424633

[http://www-03.ibm.com/systems/resources/servers\\_eserver\\_zseries\\_zos\\_unix\\_redbook\\_sg245](http://www-03.ibm.com/systems/resources/servers_eserver_zseries_zos_unix_redbook_sg245)

Also look at:

<http://www.redbooks.ibm.com>

<http://www-03.ibm.com/systems/z/os/zos/features/unix/library/IBM+Redbooks/index.html>

---

## Amiga

This file contains the particularities for the Amiga version of Vim. There is also a section specifically for [MorphOS](#) below.

**NOTE:** The Amiga code is still included, but has not been maintained or tested.

Installation on the Amiga:

- Assign "VIM:" to the directory where the Vim "doc" directory is. Vim will look for the file "VIM:doc/help.txt" (for the help command). Setting the environment variable \$VIM also works. And the other way around: when \$VIM used and it is not defined, "VIM:" is used.
- With DOS 1.3 or earlier: Put "arp.library" in "libs:". Vim must have been compiled with the [+ARP](#) feature enabled. Make sure that newcli and run are in "C:" (for executing external commands).
- Put a shell that accepts a command with "-c" (e.g. "Csh" from Fish disk 624) in "c:" or in any other directory that is in your search path (for executing external commands).

If you have sufficient memory you can avoid startup delays by making Vim and csh resident with the command "rez csh vim". You will have to put "rezlib.library" in your "libs:" directory. Under 2.0 you will need rez version 0.5.

If you do not use digraphs, you can save some memory by recompiling without the [+digraphs](#) feature. If you want to use Vim with other terminals you can recompile with the TERMCAP option. Vim compiles with Manx 5.x and SAS 6.x. See the makefiles and feature.h.

If you notice Vim crashes on some files when syntax highlighting is on, or when using a search pattern with nested wildcards, it might be that the stack is too small. Try increasing the stack size. In a shell use the Stack command before launching Vim. On the Workbench, select the Vim icon, use the workbench "Info" menu and change the Stack field in the form.

If you want to use different colors set the termcap codes:

- t\_mr (for inverted text)
- t\_md (for bold text)
- t\_me (for normal text after t\_mr and t\_md)
- t\_so (for standout mode)
- t\_se (for normal text after t\_so)
- t\_us (for underlined text)
- t\_ue (for normal text after t\_us)
- t\_ZH (for italic text)
- t\_ZR (for normal text after t\_ZH)

Standard ANSI escape sequences are used. The codes are:

30 grey char	40 grey cell	>0 grey background	0 all attributes off
31 black char	41 black cell	>1 black background	1 boldface

32 white char	42 white cell	>2 white background	2 faint
33 blue char	43 blue cell	>3 blue background	3 italic
34 grey char	44 grey cell	>4 grey background	4 underscore
35 black char	45 black cell	>5 black background	7 reverse video
36 white char	46 white cell	>6 white background	8 invisible
37 blue char	47 blue cell	>7 blue background	

The codes with '>' must be the last. The cell and background color should be the same. The codes can be combined by separating them with a semicolon. For example to get white text on a blue background:

```
:set t_me=^V<Esc>[0;32;43;>3m
:set t_se=^V<Esc>[0;32;43;>3m
:set t_ue=^V<Esc>[0;32;43;>3m
:set t_ZR=^V<Esc>[0;32;43;>3m
:set t_md=^V<Esc>[1;32;43;>3m
:set t_mr=^V<Esc>[7;32;43;>3m
:set t_so=^V<Esc>[0;31;43;>3m
:set t_us=^V<Esc>[4;32;43;>3m
:set t_ZH=^V<Esc>[3;32;43;>3m
```

When using multiple commands with a filter command, e.g.

```
:r! echo this; echo that
```

Only the output of the last command is used. To fix this you have to group the commands. This depends on the shell you use (that is why it is not done automatically in Vim). Examples:

```
:r! (echo this; echo that)
:r! {echo this; echo that}
```

Commands that accept a single file name allow for embedded spaces in the file name. However, when using commands that accept several file names, embedded spaces need to be escaped with a backslash.

---

Vim for MorphOS

MorphOS

[this section mostly by Ali Akcaagac]

For the latest info about the MorphOS version:

[http://www.akcaagac.com/index\\_vim.html](http://www.akcaagac.com/index_vim.html)

## Problems

There are a couple of problems which are not MorphOS related but more Vim and UN\*X related. When starting up Vim in ram: it complains with a nag requester from MorphOS please simply ignore it. Another problem is when running Vim as is some plugins will cause a few problems which you can ignore as well. Hopefully someone will be fixing it over the time.

To pass all these problems for now you can either run:

```
vim <file to be edited>
```

or if you want to run Vim plain and enjoy the motion of Helpfiles etc. it then

would be better to enter:

```
vim --noplugins <of course you can add a file>
```

## Installation

- 1) Please copy the binary 'VIM' file to c:
- 2) Get the Vim runtime package from:

```
ftp://ftp.vim.org/pub/vim/amiga/vim62rt.tgz
```

and unpack it in your 'Apps' directory of the MorphOS installation. For me this would create following directory hierarchy:

```
MorphOS:Apps/Vim/Vim62/...
```

- 3) Add the following lines to your s:shell-startup (Important!).

```
;Begin VIM
Set VIM=MorphOS:Apps/Vim/Vim62
Assign HOME: ""
;End VIM
```

- 4) Copy the '.vimrc' file to s:

- 5) There is also a file named 'color-sequence' included in this archive. This will set the MorphOS Shell to show ANSI colors. Please copy the file to s: and change the s:shell-startup to:

```
;Begin VIM
Set VIM=MorphOS:Apps/Vim/Vim62
Assign HOME: ""
Execute S:Color-Sequence
Cls
;End VIM
```

os\_beos.txt For Vim version 9.1. Last change: 2020 Jun 07

VIM REFERENCE MANUAL by Bram Moolenaar

This file used to contain particularities for the `beos` `BeOS` `BeBox` port of Vim.

The BeOS support was removed in patch 8.2.0849.

## dos DOS

This file documents the common particularities of the MS-DOS and Win32 versions of Vim. Also see [os\\_win32.txt](#) and [os\\_msdos.txt](#).

1. File locations	<a href="#">dos-locations</a>
2. Using backslashes	<a href="#">dos-backslash</a>
3. Standard mappings	<a href="#">dos-standard-mappings</a>
4. Screen output and colors	<a href="#">dos-colors</a>
5. File formats	<a href="#">dos-file-formats</a>
6. :cd command	<a href="#">dos-:cd</a>
7. Interrupting	<a href="#">dos-CTRL-Break</a>
8. Temp files	<a href="#">dos-temp-files</a>
9. Shell option default	<a href="#">dos-shell</a>
10. PowerShell	<a href="#">dos-powershell</a>

=====
  
1. File locations[dos-locations](#)

If you keep the Vim executable in the directory that contains the help and syntax subdirectories, there is no need to do anything special for Vim to work. No registry entries or environment variables need to be set. Just make sure that the directory is in your search path, or use a shortcut on the desktop.

Your vimrc files ("[\\_vimrc](#)" and "[\\_gvimrc](#)") are normally located one directory up from the runtime files. If you want to put them somewhere else, set the environment variable \$VIM to the directory where you keep them. Example:

```
set VIM=C:\user\piet
```

Will find "c:\user\piet\\_vimrc".

**Note:** This would only be needed when the computer is used by several people. Otherwise it's simpler to keep your [\\_vimrc](#) file in the default place.

If you move the executable to another location, you also need to set the \$VIM environment variable. The runtime files will be found in "\$VIM/vim{version}". Example:

```
set VIM=E:\vim
```

Will find the version 8.2 runtime files in "e:\vim\v82".

**Note:** This is not recommended. The preferred way is to keep the executable in the runtime directory.

If you move your executable AND want to put your "[\\_vimrc](#)" and "[\\_gvimrc](#)" files somewhere else, you must set \$VIM to where you vimrc files are, and set \$VIMRUNTIME to the runtime files. Example:

```
set VIM=C:\usr\piet
set VIMRUNTIME=E:\vim\v82
```

Will find "c:\user\piet\\_vimrc" and the runtime files in "e:\vim\v82".

See [\\$VIM](#) and [\\$VIMRUNTIME](#) for more information.

You can set environment variables for each user separately through the System Properties dialog box. The steps to do that:

1. Type Windows Key + R to open the "Run" dialog box.
2. Enter "sysdm.cpl" and press the "OK" button. The "System Properties" dialog box will open.
3. Select the "Advanced" tab and press the "Environment Variables..." button. The "Environment Variables" dialog box will open.
4. Select an existing variable in the "User variables" list and press the "Edit..." button to edit it. Or press the "New..." button to add a new variable.
5. After you finished editing variables, press the "OK" button to save the changes.

---

## 2. Using backslashes

dos-backslash

Using backslashes in file names can be a problem. Vi halves the number of backslashes for some commands. Vim is a bit more tolerant and does not remove backslashes from a file name, so ":e c:\foo\bar" works as expected. But when a backslash occurs before a special character (space, comma, backslash, etc.), Vim removes the backslash. Use slashes to avoid problems: ":e c:/foo/bar" works fine. Vim replaces the slashes with backslashes internally to avoid problems with some MS-DOS programs and Win32 programs.

When you prefer to use forward slashes, set the '**shellslash**' option. Vim will then replace backslashes with forward slashes when expanding file names. This is especially useful when using a Unix-like '**shell**'.

---

## 3. Standard mappings

dos-standard-mappings

The mappings for **CTRL-PageUp** and **CTRL-PageDown** have been removed, they now jump to the next or previous tab page `<C-PageUp>` `<C-PageDown>`

If you want them to move to the first and last screen line you can use these mappings:

key	key code	Normal/Visual mode	Insert mode
<b>CTRL-PageUp</b>	<code>&lt;M-N&gt;&lt;M-C-D&gt;</code>	H	<code>&lt;C-O&gt;H</code>
<b>CTRL-PageDown</b>	<code>&lt;M-N&gt;v</code>	L\$	<code>&lt;C-O&gt;L&lt;C-O&gt;\$</code>

Additionally, these keys are available for copy/cut/paste. In the Win32 and DJGPP versions, they also use the clipboard.

Shift-Insert	paste text (from clipboard)	<code>&lt;S-Insert&gt;</code>
<b>CTRL-Insert</b>	copy Visual text (to clipboard)	<code>&lt;C-Insert&gt;</code>
<b>CTRL-Del</b>	cut Visual text (to clipboard)	<code>&lt;C-Del&gt;</code>
Shift-Del	cut Visual text (to clipboard)	<code>&lt;S-Del&gt;</code>
<b>CTRL-X</b>	cut Visual text (to clipboard)	

These mappings accomplish this (Win32 and DJGPP versions of Vim):

key	key code	Normal	Visual	Insert
-----	----------	--------	--------	--------

Shift-Insert	<M-N><M-T>	"*P	"-d"*P	<C-R><C-O>*
<b>CTRL-Insert</b>	<M-N><M-U>		"*y	
Shift-Del	<M-N><M-W>		"*d	
<b>CTRL-Del</b>	<M-N><M-X>		"*d	
<b>CTRL-X</b>	<C-X>		"*d	

Or these mappings (non-Win32 version of Vim):

key	key code	Normal	Visual	Insert
Shift-Insert	<M-N><M-T>	P	"-dP	<C-R><C-O>"
<b>CTRL-Insert</b>	<M-N><M-U>		y	
Shift-Del	<M-N><M-W>		d	
<b>CTRL-Del</b>	<M-N><M-X>		d	

When the clipboard is supported, the "\*" register is used.

---

#### 4. Screen output and colors dos-colors

The default output method for the screen is to use bios calls. This works right away on most systems. You do not need ansi.sys. You can use ":mode" to set the current screen mode. See [:mode](#) .

To change the screen colors that Vim uses, you can use the [:highlight](#) command. The Normal highlight group specifies the colors Vim uses for normal text. For example, to get grey text on a blue background:

```
:hi Normal ctermbg=Blue ctermfg=grey
```

See [highlight-groups](#) for other groups that are available.

A DOS console does not support attributes like bold and underlining. You can set the color used in five modes with nine terminal options. **Note** that this is not necessary since you can set the color directly with the ":highlight" command; these options are for backward compatibility with older Vim versions. The '[highlight](#)' option specifies which of the five modes is used for which action.

```
:set t_mr=^V^[\\]xxm start of invert mode
:set t_md=^V^[\\]xxm start of bold mode
:set t_me=^V^[\\]xxm back to normal text

:set t_so=^V^[\\]xxm start of standout mode
:set t_se=^V^[\\]xxm back to normal text

:set t_us=^V^[\\]xxm start of underline mode
:set t_ue=^V^[\\]xxm back to normal text

:set t_ZH=^V^[\\]xxm start of italics mode
:set t_ZR=^V^[\\]xxm back to normal text
```

^V is **CTRL-V**

^[ is <Esc>

You must replace xx with a decimal code, which is the foreground color number and background color number added together:

COLOR	FOREGROUND	BACKGROUND
Black	0	0
DarkBlue	1	16
DarkGreen	2	32
DarkCyan	3	48
DarkRed	4	64
DarkMagenta	5	80
Brown, DarkYellow	6	96
LightGray	7	112
DarkGray	8	128 *
Blue, LightBlue	9	144 *
Green, LightGreen	10	160 *
Cyan, LightCyan	11	176 *
Red, LightRed	12	192 *
Magenta, LightMagenta	13	208 *
Yellow, LightYellow	14	224 *
White	15	240 *

\* Depending on the display mode, the color codes above 128 may not be available, and code 128 will make the text blink.

When you use 0, the color is reset to the one used when you started Vim (usually 7, lightgray on black, but you can override this. If you have overridden the default colors in a command prompt, you may need to adjust some of the highlight colors in your vimrc---see below). This is the default for t\_me.

The defaults for the various highlight modes are:

t_mr	112	reverse mode: Black text (0) on LightGray (112)
t_md	15	bold mode: White text (15) on Black (0)
t_me	0	normal mode (revert to default)
t_so	31	standout mode: White (15) text on DarkBlue (16)
t_se	0	standout mode end (revert to default)
t_ZH	225	italic mode: DarkBlue text (1) on Yellow (224)
t_ZR	0	italic mode end (revert to default)
t_us	67	underline mode: DarkCyan text (3) on DarkRed (64)
t_ue	0	underline mode end (revert to default)

These colors were chosen because they also look good when using an inverted display, but you can change them to your liking.

Example:

```

:set t_mr=^V^[|97m " start of invert mode: DarkBlue (1) on Brown (96)
:set t_md=^V^[|67m " start of bold mode: DarkCyan (3) on DarkRed (64)
:set t_me=^V^[|112m " back to normal mode: Black (0) on LightGray (112)

:set t_so=^V^[|37m " start of standout mode: DarkMagenta (5) on DarkGreen
(32)
:set t_se=^V^[|112m " back to normal mode: Black (0) on LightGray (112)

```

=====

## 5. File formats

dos-file-formats

If the **'fileformat'** option is set to "dos" (which is the default), Vim accepts a single `<NL>` or a `<CR><NL>` pair for end-of-line (`<EOL>`). When writing a file, Vim uses `<CR><NL>`. Thus, if you edit a file and write it, Vim replaces `<NL>` with `<CR><NL>`.

If the **'fileformat'** option is set to "unix", Vim uses a single `<NL>` for `<EOL>` and shows `<CR>` as `^M`.

You can use Vim to replace `<NL>` with `<CR><NL>` by reading in any mode and writing in Dos mode (`":se ff=dos"`).

You can use Vim to replace `<CR><NL>` with `<NL>` by reading in Dos mode and writing in Unix mode (`":se ff=unix"`).

Vim sets **'fileformat'** automatically when **'fileformats'** is not empty (which is the default), so you don't really have to worry about what you are doing.

**'fileformat'** **'fileformats'**

If you want to edit a script file or a binary file, you should set the **'binary'** option before loading the file. Script files and binary files may contain single `<NL>` characters which Vim would replace with `<CR><NL>`. You can set **'binary'** automatically by starting Vim with the "-b" (binary) option.

---

## 6. :cd command

dos-:cd

The `":cd"` command recognizes the drive specifier and changes the current drive. Use `":cd c:"` to make drive C the active drive. Use `":cd d:\foo"` to go to the directory "foo" in the root of drive D. Vim also recognizes UNC names if the system supports them; e.g., `":cd \\server\share\dir"`. `:cd`

---

## 7. Interrupting

dos-CTRL-Break

Use **CTRL-Break** instead of **CTRL-C** to interrupt searches. Vim does not detect the **CTRL-C** until it tries to read a key.

---

## 8. Temp files

dos-temp-files

Only for the 16 bit and 32 bit DOS version:

Vim puts temporary files (for filtering) in the first of these directories that exists and in which Vim can create a file:

- \$TMP
- \$TEMP
- C:\TMP
- C:\TEMP
- current directory

For the Win32 version (both console and GUI):

Vim uses standard Windows functions to obtain a temporary file name (for filtering). The first of these directories that exists and in which Vim can create a file is used:

\$TMP  
\$TEMP  
current directory

---

## 9. Shell option default

dos-shell

The default for the **'sh'** ('shell') option is "command.com" on Windows 95 and "cmd.exe" on Windows NT. If SHELL is defined, Vim uses SHELL instead, and if SHELL is not defined but COMSPEC is, Vim uses COMSPEC. Vim starts external commands with "<shell> /c <command\_name>". Typing **CTRL-Z** starts a new command subshell. Return to Vim with "exit". **'shell'** CTRL-Z

If you are running a third-party shell, you may need to set the **'shellcmdflag'** ('shcf') and **'shellquote'** ('shq') or **'shellxquote'** ('sxq') options. Unfortunately, this also depends on the version of Vim used. For example, with the MKS Korn shell or with bash, the values of the options should be:

	DOS 16 bit	DOS 32 bit	Win32
<b>'shellcmdflag'</b>	-c	-c	-c
<b>'shellquote'</b>	"		
<b>'shellxquote'</b>			"

For Dos 16 bit this starts the shell as:

```
<shell> -c "command name" >file
```

For Win32 as:

```
<shell> -c "command name >file"
```

For DOS 32 bit, DJGPP does this internally somehow.

When starting up, if Vim does not recognise a standard Windows shell it checks for the presence of "sh" anywhere in the **'shell'** option. If it is present, Vim sets the **'shellcmdflag'** and **'shellquote'** or **'shellxquote'** options will be set as described above.

---

## 10. PowerShell

dos-powershell dos-pwsh

Vim supports PowerShell Desktop and PowerShell Core. PowerShell Desktop is the version of PowerShell that is installed with Windows, while PowerShell Core is a separate downloadable version that works cross-platform. To see which version you are using then enter the following in a PowerShell prompt - \$PSVersionTable.PSEdition

If **'shell'** includes "powershell" in the filename at startup then VIM sets **'shellcmdflag'**, **'shellxquote'**, **'shellpipe'**, and **'shellredir'** options to the following values:

<b>'shellcmdflag'</b>	-Command
<b>'shellxquote'</b>	"
<b>'shellpipe'</b>	2>&1   Out-File -Encoding default
<b>'shellredir'</b>	2>&1   Out-File -Encoding default

If **'shell'** includes "pwsh" in the filename at startup then VIM sets

'shellcmdflag', 'shellquote', 'shellpipe', and 'shellredir' options to the following values:

```
'shellcmdflag' -c
'shellquote' "
'shellpipe' >%s 2>&1
'shellredir' >%s 2>&1
```

**Note:** those options are only set after reading the `.vimrc` file, in particular setting the `'shell'` option via `-c` is too late to take effect for the other shell related settings. Consider using `--cmd` to override this option via the command line.

If you find that PowerShell commands are taking a long time to run then try with `"-NoProfile"` at the beginning of the `'shellcmdflag'`. **Note** this will prevent any PowerShell environment setup by the profile from taking place.

If you have problems running PowerShell scripts through the `'shell'` then try with `"-ExecutionPolicy RemoteSigned -Command"` at the beginning of `'shellcmdflag'`. See online Windows documentation for more information on PowerShell Execution Policy settings.

See [option-backslash](#) about including spaces in `'shellcmdflag'` when using multiple flags.

The `'shellpipe'` and `'shellredir'` option values re-encode the UTF-16LE output from PowerShell Desktop to your currently configured console codepage. The output can be forced into a different encoding by changing "default" to one of the following:

unicode	- UTF-16LE (default output from PowerShell 5.1)
bigendianunicode	- UTF-16
utf8	- UTF-8
utf7	- UTF-7 (no BOM)
utf32	- UTF-32
ascii	- 7-bit ASCII character set
default	- System's active code page (typically ANSI)
oem	- System's current OEM code page

**Note** The above multi-byte Unicode encodings include a leading BOM unless otherwise indicated.

By default PowerShell Core's output is UTF-8 encoded without a BOM. If you want to force the output of PowerShell Core into a different encoding then set `'shellredir'` and `'shellpipe'` to `"2>&1 | Out-File -Encoding encoding"` where encoding is one of the following:

ascii	- 7-bit ASCII character set
bigendianunicode	- UTF-16BE
bigendianutf32	- UTF-32BE
oem	- System's current OEM code page
unicode	- UTF-16LE
utf7	- UTF-7
utf8	- UTF-8

utf8BOM	- UTF-8, with BOM
utf8NoBOM	- UTF-8, no BOM (default output from PowerShell Core)
utf32	- UTF-32

Since PowerShell Core 6.2, the Encoding parameter also supports specifying a numeric ID of a registered code page (-Encoding 1251) or string names of registered code pages (-Encoding "windows-1251"). The .NET documentation for Encoding.CodePage has more information

## Haiku

This file contains the particularities for the Haiku version of Vim. For matters not discussed in this file, Vim behaves very much like the Unix `os_unix.txt` version.

Haiku is an open-source operating system inspired by BeOS, that specifically targets personal computing.

- |                                                   |                                      |

| 14. Bugs & to-do                                  | <code>haiku-bugs</code>              |

### 1. General `haiku-general`

The default syntax highlighting mostly works with different foreground colors to highlight items. This works best if you set your Terminal window to a darkish background and light letters. Some middle-grey background (for instance  $(r,g,b)=(168,168,168)$ ) with black letters also works nicely.

### 2. Compiling Vim `haiku-compiling`

Vim can be compiled using the standard `configure/make` approach. Running `./configure` without any arguments or passing `--enable-gui=haiku`, will compile vim with the Haiku GUI support. Run `./configure --help`, to find out other features you can enable/disable.

Haiku uses "ncurses6" as its terminal library, therefore you need to have "ncurses6\_devel" package installed from HaikuDepot in order to configure the Haiku build. Just append `--with-tlib=ncurses` to `./configure` command.

Now you should use "make" to compile Vim, then "make install" to install it. For seamless integration into Haiku, the GUI-less vim binary should be additionally installed over the GUI version. Typical build commands are:

```
./configure --prefix=`finddir B_SYSTEM_NONPACKAGED_DIRECTORY` \
 --datarootdir=`finddir B_SYSTEM_NONPACKAGED_DATA_DIRECTORY` \
 --mandir=`finddir B_SYSTEM_NONPACKAGED_DIRECTORY`/documentation/man \
 --with-tlib=ncurses
make clean
make install
```

```
./configure --prefix=`finddir B_SYSTEM_NONPACKAGED_DIRECTORY` \
 --datarootdir=`finddir B_SYSTEM_NONPACKAGED_DATA_DIRECTORY` \
 --mandir=`finddir B_SYSTEM_NONPACKAGED_DIRECTORY`/documentation/man \
 --with-tlib=ncurses \
 --disable-gui
make clean
make install
```

### 3. The Haiku GUI

haiku-gui

Normally Vim starts with the GUI if you start it as `gvim` or `vim -g`. The vim version with GUI tries to determine if it was started from the Tracker instead of the Terminal, and if so, uses the GUI anyway. However, the current detection scheme is fooled if you use the command `"vim - </dev/null"`.

Stuff that does not work yet:

- Mouse up events are not generated when outside the window. You can notice this when selecting text and moving the cursor outside the window, then letting go of the mouse button. Another way is when you drag the scrollbar and do the same thing. Because Vim still thinks you are still playing with the scrollbar it won't change it itself. There is a workaround which kicks in when the window is activated or deactivated (so it works best with focus-follows-mouse turned on).
- The cursor does not flash.

### 4. The \$VIM directory

haiku-vimdir

\$VIM is the symbolic name for the place where Vim's support files are stored. The default value for \$VIM is set at compile time and can be determined with:

```
:version
```

The normal value is `/boot/system/data/vim` for Haikuports version, `/boot/system/non-packaged/data/vim` for manual builds. If you don't like it you can set the VIM environment variable to override this, or set **'helpfile'** in your `.vimrc`:

```
:if version >= 500
: set helpfile=~/.vim/runtime/doc/help.txt
: syntax on
:endif
```

## 5. The \$USER\_SETTINGS\_DIR directory

[haiku-user-settings-dir](#)

\$USER\_SETTINGS\_DIR is the symbolic name for the place where Haiku configuration and settings files are stored.

The normal value is `/boot/home/config/settings`.

## 6. Drag & Drop

[haiku-dragndrop](#)

You can drop files and directories on either the Vim icon (starts a new Vim session, unless you use the File Types application to set Vim to be "Single Launch") or on the Vim window (starts editing the files). Dropping a folder sets Vim's current working directory `:cd :pwd`. If you drop files or folders with either SHIFT key pressed, Vim changes directory to the folder that contains the first item dropped. When starting Vim, there is no need to press shift: Vim behaves as if you do.

Files dropped set the current argument list. [argument-list](#)

## 7. Single Launch vs. Multiple Launch

[haiku-launch](#)

As distributed Vim's Application Flags (as seen in the FileTypes preference) are set to Multiple Launch. If you prefer, you can set them to Single Launch instead. Attempts to start a second copy of Vim will cause the first Vim to open the files instead. This works from the Tracker but also from the command line. In the latter case, non-file (option) arguments are not supported. Another drawback of the Single Launch is silent ignore of "Open With ..." requests by vim instance that running as non-GUI application even GUI support was compiled in. Vim instance running with GUI has no such problems.

NB: Only the GUI version has a BApplication (and hence Application Flags). This section does not apply to the GUI-less version, should you compile one.

## 8. Fonts

[haiku-fonts](#)

Set fonts with

```
:set guifont=DejaVu_Sans_Mono/Book/12
```

where the first part is the font family, the second part the style, and the third part the size. You can use underscores instead of spaces in family and style.

Best results are obtained with monospaced fonts. Vim attempts to use all fonts in B\_FIXED\_SPACING mode but apparently this does not work for proportional fonts (despite what the BeBook says).

To verify which encodings are supported by the current font give the

```
:digraphs
```

command, which lists a bunch of characters with their ISO Latin 1 encoding. If, for instance, there are "box" characters among them, or the last character isn't a dotted-y, then for this font the encoding does not work.

If the font you specify is unavailable, you get the system fixed font.

GUI Font Selection Dialog is available at giving the:

```
:set guifont=*
```

command.

## 9. The meta key modifier

[haiku-meta](#)

The META key modifier is obtained by the left or right OPTION keys. This is because the ALT (aka COMMAND) keys are not passed to applications.

## 10. Mouse key mappings

[haiku-mouse](#)

Vim calls the various mouse buttons LeftMouse, MiddleMouse and RightMouse. If you use the default Mouse preference settings these names indeed correspond to reality. Vim uses this mapping:

```
Button 1 -> LeftMouse,
Button 2 -> RightMouse,
Button 3 -> MiddleMouse.
```

If your mouse has fewer than 3 buttons you can provide your own mapping from mouse clicks with modifier(s) to other mouse buttons. See the file `$(VIM)/macros/swapmous.vim` for an example. [gui-mouse-mapping](#)

## 11. Color names

[haiku-colors](#)

Vim has a number of color names built-in. Additional names can be defined in `v:colornames`. See `:colorscheme` for details.

## 12. GUI Toolbar Images

[haiku-toolbar-images](#)

Alternative set of toolbar images should be the PNG image of any height you like. Image width is calculated to contain at least 32 buttons in one-row cells.

The image should be stored under the name `$(VIRuntime)/bitmaps/builtin-tools.png`. More info about the buttons assignment are at [builtin-tools](#).

## 13. Credits

[haiku-support-credits](#)

Haiku port is based on work done for BeOS version by many people

- BeBox GUI support Copyright 1998 by Olaf Seibert;
- Ported to R4 by Richard Offer [richard@whitequeen.com](mailto:richard@whitequeen.com) Jul 99;

- Those who contributed, not listed above but not forgotten;
- Haiku support by Siarzhuk Zharski <[imker@gmx.li](mailto:imker@gmx.li)> Apr-Mai 2009.

All the changes and patches released under vim-license.

Thank you, all!

#### 14. Bugs & to-do

[haiku-bugs](#)

The port is under development now and far away from the perfect state. For bug reports, patches and wishes, please use the Vim mailing list or Vim Github repository.

Mailing list: <https://www.vim.org/maillist.php>

Vim Github repository: <https://github.com/vim/vim>

mac Mac macintosh Macintosh

This file documents the particularities of the Macintosh version of Vim.

**NOTE:** This file is a bit outdated. You might find more useful info here:  
<http://macvim.org/>

- |                          |                                       |

| 8. The darwin feature    | <a href="#">mac-darwin-feature</a>    |

There was a Mac port for version 3.0 of Vim. Here are the first few lines from the old file:

VIM Release [Notes](#)  
Initial Macintosh release, VIM version 3.0  
19 October 1994

Eric Fischer  
<enf1@midway.uchicago.edu>, <eric@jcp.uchicago.edu>, <etaoin@uchicago.edu>  
5759 N. Guilford Ave  
Indianapolis IN 46220 USA

=====

1. Filename Convention [mac-filename](#)

Starting with [Vim version 7](#) you can just use the unix path separators with Vim. In order to determine if the specified filename is relative to the current folder or absolute (i.e. relative to the "Desktop"), the following algorithm is used:

- If the path start by a "/", the path is absolute
- If the path start by a ":", the path is relative
- If the path doesn't start by neither a "/" nor ":",  
and a ":" is found before a "/" then the path is absolute

```
:e /HD/text
:e HD:text
Edit the file "text" of the disk "HD"
:e :src:main.c
:e src/main.c
Edit the file "main.c" in the folder "src" in the current folder
:e os_mac.c
```

Edit the file "os\_mac.c" in the current folder.

You can use the `$VIM` and `$VIMRUNTIME` variable.

```
:so $VIMRUNTIME:syntax:syntax.vim
```

---

## 2. .vimrc and .vim files

mac-vimfile

It is recommended to use Unix style line separators for Vim scripts, thus a single newline character.

When starting up Vim will load the `$VIMRUNTIME/macmap.vim` script to define default command-key mappings.

On older systems files starting with a dot "." are discouraged, thus the rc files are named "vimrc" or "\_vimrc" and "gvimrc" or "\_gvimrc". These files can be in any format (mac, dos or unix). Vim can handle any file format when the '`nocompatible`' option is set, otherwise it will only handle mac format files.

---

## 3. Standard mappings

mac-standard-mappings

The following mappings are available for cut/copy/paste from/to clipboard.

key	Normal	Visual	Insert	Description
Command-v	"*P	"-d"*P	<C-R>*	paste text <D-v>
Command-c		"*y		copy Visual text <D-c>
Command-x		"*d		cut Visual text <D-x>
Backspace		"*d		cut Visual text

---

## 4. Mac FAQ

mac-faq

On the internet: <http://macvim.org/OSX/index.php#FAQ>

Q: I can't enter non-ASCII character in Apple Terminal.

A: Under Window Settings, Emulation, make sure that "Escape non-ASCII characters" is not checked.

Q: How do I start the GUI from the command line?

A: Assuming that Vim.app is located in /Applications:  
open /Applications/Vim.app

Or:

```
/Applications/Vim.app/Contents/MacOS/Vim -g {arguments}
```

Q: How can I set \$PATH to something reasonable when I start Vim.app from the GUI or with open?

A: The following trick works with most shells. Put it in your vimrc file. This is included in the system vimrc file included with the binaries distributed at macvim.org .

```
let s:path = system("echo echo VIMPATH'${PATH}' | $SHELL -l")
let $PATH = matchstr(s:path, 'VIMPATH\zs.\{-}\ze\n')
```

---

## 5. Mac Lack

mac-lack

In a terminal **CTRL-^** needs to be entered as Shift-Control-6. **CTRL-@** as Shift-Control-2.

---

## 6. Mac Bug Report

mac-bug

When reporting any Mac specific bug or feature change, please use the vim-mac maillist [vim-mac](mailto:vim-mac). However, you need to be subscribed. An alternative is to report issues either directly at the Vim github repository:

<https://github.com/vim/vim/issues>

or for MacVim specific issues, you may report those over here:

<https://github.com/macvim-dev/macvim/issues>

---

## 7. Compiling Vim

mac-compile

See the file "src/INSTALLmac.txt" that comes with the source files.

---

## 8. The Darwin Feature

mac-darwin-feature

If you have a Mac that isn't very old, you will be running OS X, also called Darwin. The last pre-Darwin OS was Mac OS 9. The darwin feature makes Vim use Darwin-specific properties.

What is accomplished with this feature is two-fold:

- Make Vim interoperable with the system clipboard.
- Incorporate into Vim a converter module that bridges the gap between some character encodings specific to the platform and those known to Vim.

Needless to say, both are not to be missed for any decent text editor to work nicely with other applications running on the same desktop environment.

As Vim is not an application dedicated only to macOS, we need an extra feature to add in order for it to offer the same user experience that our users on other platforms enjoy to people on macOS.

For brevity, the feature is referred to as "darwin" to signify it one of the Vim features that are specific to that particular platform.

The feature is a configuration option. Accordingly, whether it is enabled or not is determined at build time; once it is selected to be enabled, it is compiled in and hence cannot be disabled at runtime.

The feature is enabled by default. For most macOS users, that should be sufficient unless they have specific needs mentioned briefly below.

If you want to disable it, pass `--disable-darwin` to the configure script:

```
./configure --disable-darwin <other options>
```

and then run `make` to build Vim. The order of the options doesn't matter.

To make sure at runtime whether or not the darwin feature is compiled in, you can use `has('osxdarwin')` which returns 1 if the feature is compiled in; 0 otherwise. For backward compatibility, you can still use `macunix` instead of `osxdarwin`.

Notable use cases where `--disable-darwin` is turned out to be useful are:

- When you want to use `x11-selection` instead of the system clipboard.
- When you want to use `x11-clientserver` .

Since both have to make use of X11 inter-client communication for them to work properly, and since the communication mechanism can come into conflict with the system clipboard, the darwin feature should be disabled to prevent Vim from hanging at runtime.

os\_mint.txt For Vim version 9.1. Last change: 2020 Jul 14

VIM REFERENCE MANUAL by Jens M. Felderhoff

MiNT Atari

The Atari MiNT support was removed with patch 8.2.1215. It probably didn't work at that time, since the code was old and not maintained.

Originally added by: Jens M. Felderhoff, e-mail: <jmf@infko.uni-koblenz.de>

os\_msdos.txt For Vim version 9.1. Last change: 2016 Feb 26

VIM REFERENCE MANUAL by Bram Moolenaar

msdos ms-dos MSDOS MS-DOS

This file used to contain the particularities for the MS-DOS version of Vim. MS-DOS support was removed in patch 7.4.1399. If you want to use it you will need to get a version older than that. **Note** that the MS-DOS version doesn't work, there is not enough memory. The DOS32 version (using DJGPP) might still work on older systems.

os\_os2.txt For Vim version 9.1. Last change: 2015 Dec 31

VIM REFERENCE MANUAL by Paul Sloutman

This file used to contain the particularities for the `os2` `OS2` `OS/2` version of Vim.  
The OS/2 support was removed in patch 7.4.1008.

## VIM REFERENCE MANUAL by Julian Kinraid

QNX qnx

1. General	qnx-general
2. Compiling Vim	qnx-compiling
3. Terminal support	qnx-terminal
4. Photon GUI	photon-gui
5. Photon fonts	photon-fonts
6. Bugs & things To Do	

## 1. General

qnx-general

Vim on QNX behaves much like other unix versions. [os\\_unix.txt](#)

## 2. Compiling Vim

qnx-compiling

Vim can be compiled using the standard configure/make approach. If you want to compile for X11, pass the `--with-x` option to configure. Otherwise, running `./configure` without any arguments or passing `--enable-gui=photon`, will compile vim with the Photon gui support. Run `./configure --help`, to find out other features you can enable/disable.

## 3. Terminal support

qnx-terminal

Vim has support for the mouse and clipboard in a pterm, if those options are compiled in, which they are normally.

The options that affect mouse support are `'mouse'` and `'ttymouse'`. When using the mouse, only simple left and right mouse clicking/dragging is supported. If you hold down shift, ctrl, or alt while using the mouse, pterm will handle the mouse itself. It will make a selection, separate from what vim's doing.

When the mouse is in use, you can press Alt-RightMouse to open the pterm menu. To turn the mouse off in vim, set the mouse option to nothing, set `mouse=`

## 4. Photon GUI

photon-gui

To start the gui for vim, you need to run either `gvim` or `vim -g`, otherwise the terminal version will run. For more info - [gui-x11-start](#)

Supported features:

<code>:browse</code> command	<code>:browse</code>
<code>:confirm</code> command	<code>:confirm</code>

Cursor blinking	'guicursor'
Menus, popup menus and menu priorities	:menu popup-menu menu-priority
Toolbar	gui-toolbar 'toolbar'
Font selector (:set guifont=*)	photon-fonts
Mouse focus	'mousefocus'
Mouse hide	'mousehide'
Mouse cursor shapes	'mousethshape'
Clipboard	gui-clipboard

Unfinished features:

Various international support, such as Farsi & Hebrew support, different encodings, etc.

This help file

Unsupported features:

Find & Replace window	:promptfind
Tearoff menus	

Other things which I can't think of so I can't list them

## 5. Fonts

photon-fonts

You set fonts in the gui with the guifont option

```
:set guifont=Lucida\ Terminal
```

The font must be a monospace font, and any spaces in the font name must be escaped with a '\'. The default font used is PC Terminal, size 8. Using '\*' as the font name will open a standard Photon font selector where you can select a font.

Following the name, you can include optional settings to control the size and style of the font, each setting separated by a ':'. Not all fonts support the various styles.

The options are,

s{size}	Set the size of the font to {size}
b	Bold style
a	Use antialiasing
i	Italic style

Examples:

Set the font to monospace size 10 with antialiasing

```
:set guifont=monospace:s10:a
```

Set the font to Courier size 12, with bold and italics

```
:set guifont=Courier:s12:b:i
```

Select a font with the requester

```
:set guifont=*
```

## 6. Bugs & things To Do

### Known problems:

- Vim hangs sometimes when running an external program. Workaround: put this line in your `vimrc` file:  
`set noguipity`

### Bugs:

- Still a slight problem with menu highlighting.
- When using phditto/phinfo/etc., if you are using a font that doesn't support the bold attribute, when vim attempts to draw bold text it will be all messed up.
- The cursor can sometimes be hard to see.
- A number of minor problems that can be fixed. :)

### Todo:

- Improve multi-language support.
- Options for setting the fonts used in the menu and toolbar.
- Find & Replace dialog.
- The clientserver features.
- Maybe tearoff menus.
  
- Replace usage of `fork()` with `spawn()` when launching external programs.

os\_risc.txt For Vim version 9.1. Last change: 2011 May 10

VIM REFERENCE MANUAL by Thomas Leonard

riscos RISCOS RISC-OS

The RISC OS support has been removed from Vim with patch 7.3.187.  
If you would like to use Vim on RISC OS get the files from before that patch.

### unix Unix

This file contains the particularities for the Unix version of Vim.

For compiling Vim on Unix see "INSTALL" and "Makefile" in the src directory.

The default help file name is "/usr/local/lib/vim/help.txt"

The files "\$HOME/.vimrc" and "\$HOME/.exrc" are used instead of "s:.vimrc" and "s:.exrc". Additionally "/usr/local/etc/vimrc" is used first.

If "/usr/local/share" exists it is used instead of "/usr/local/lib".

Temporary files (for filtering) are put in "/tmp". If you want to place them somewhere else, set the environment variable \$TMPDIR to the directory you prefer.

With wildcard expansion you can use '~' (home directory) and '\$' (environment variable).

### fork spoon

For executing external commands fork()/exec() is used when possible, otherwise system() is used, which is a bit slower. The output of ":version" includes +fork when fork()/exec() is used, +system() when system() is used. This can be changed at compile time.

(For forking of the GUI version see [gui-fork](#) .)

For historic reasons terminal updating under Unix is expected to be slow (e.g. serial line terminal, shell window in suntools), the 'showcmd' and 'ruler' options are off by default. If you have a fast terminal, try setting them on:

```
set showcmd ruler
```

When using Vim in an xterm the mouse clicks can be used by Vim by setting 'mouse' to "a". If there is access to an X-server gui style copy/paste will be used and visual feedback will be provided while dragging with the mouse. If you then still want the xterm copy/paste with the mouse, press the shift key when using the mouse. See [mouse-using](#) . Visual feedback while dragging can also be achieved via the 'ttymouse' option if your xterm is new enough.

### terminal-colors

To use colors in Vim you can use the following example (if your terminal supports colors, but "T\_Co" is empty or zero):

```
:set t_me=[0;1;36m " normal mode (undoes t_mr and t_md)
:set t_mr=[0;1;33;44m " reverse (invert) mode
:set t_md=[1;33;41m " bold mode
:set t_se=[1;36;40m " standout end
:set t_so=[1;32;45m " standout mode
:set t_ue=[0;1;36m " underline end
:set t_us=[1;32m " underline mode start
```

[the ^[ is an <Esc>, type **CTRL-V** <Esc> to enter it]

For real color terminals the `":highlight"` command can be used.

The file `"tools/vim132"` is a shell script that can be used to put Vim in 132 column mode on a vt100 and lookalikes.

## VIM REFERENCE MANUAL

## VMS vms

This file contains the particularities for the VMS version of Vim. You can reach this information file by typing :help VMS in Vim command prompt.

- |                        |                               |

| 10. Authors            | <a href="#">vms-authors</a>   |

## 1. Getting started

[vms-started](#)

Vim (Vi IMproved) is a Vi-compatible text editor that runs on nearly every operating system known to humanity. Now use Vim on OpenVMS too, in character or X/Motif environment. It is fully featured and absolutely compatible with Vim on other operating systems.

## 2. Download files

[vms-download](#)

You can download the Vim source code by ftp from the official Vim site:

<ftp://ftp.vim.org/pub/vim/>

Or use one of the mirrors:

<ftp://ftp.vim.org/pub/vim/MIRRORS>

You can download precompiled executables from:

<http://www.polarhome.com/vim/>

To use the precompiled binary version, you need one of these archives:

<a href="#">vim-XX-exe-x86-gui.zip</a>	X86_64 GUI/Motif executables
<a href="#">vim-XX-exe-x86-term.zip</a>	X86_64 console executables
<a href="#">vim-XX-exe-ia64-gui.zip</a>	IA64 GUI/Motif executables
<a href="#">vim-XX-exe-ia64-gtk.zip</a>	IA64 GUI/GTK executables
<a href="#">vim-XX-exe-ia64-term.zip</a>	IA64 console executables
<a href="#">vim-XX-exe-axp-gui.zip</a>	Alpha GUI/Motif executables
<a href="#">vim-XX-exe-axp-gtk.zip</a>	Alpha GUI/GTK executables
<a href="#">vim-XX-exe-axp-term.zip</a>	Alpha console executables
<a href="#">vim-XX-exe-vax-gui.zip</a>	VAX GUI executables

vim-XX-exe-vax-term.zip            VAX console executables

and of course (optional)

vim-XX-runtime.zip                runtime files

The binary archives contain: vim.exe, ctags.exe, xxd.exe files.

For GTK executables you will need GTKLIB that is available for Alpha and IA64 platforms.

---

### 3. Compiling

[vms-compiling](#)

See the file [.]INSTALLVMS.TXT.

---

### 4. Problems

[vms-problems](#)

The code has been tested under Open VMS 6.2 - 9.2 on Alpha, VAX, IA64 and X86\_64 platforms with the DEC C compiler. It should work without major problems. If your system does not have some include libraries you can tune in the OS\_VMS\_CONF.H file.

If you decided to build Vim with +perl, +python, etc. options, first you need to download OpenVMS distributions of Perl and Python. Build and deploy the libraries and change adequate lines in MAKE\_VMS.MMS file. There should not be a problem from Vim side.

Also GTK, XPM library paths should be configured in MAKE\_VMS.MMS

**Note:** Under VAX it should work with the DEC C compiler without problems. The VAX C compiler is not fully ANSI C compatible in pre-processor directives semantics, therefore you have to use a converter program that will do the lion part of the job. For detailed instructions read file INSTALLvms.txt

To build XXD.EXE, you should change to the subdirectory and build it separately.

CTAGS is not part of the Vim source distribution anymore, however the OpenVMS specific source might contain CTAGS source files as described above.

You can find more information about CTAGS on VMS at

<http://www.polarhome.com/ctags/>

Advanced users may try some acrobatics in FEATURE.H file as well.

It is possible to compile with +xfontset +xim options too, but then you have to set up GUI fonts etc. correctly. See :help xim from Vim command prompt.

You may want to use GUI with GTK icons, then you have to download and install GTK for OpenVMS or at least runtime shareable images - LIBGTK from polarhome.com

Post 7.2 Vim uses GTK2+ while the last GTK on OpenVMS is 1.2.10, therefore the GTK build is no longer available.

For more advanced questions, please send your problem to Vim on VMS mailing list <[vim-vms@polarhome.com](mailto:vim-vms@polarhome.com)>

More about the vim-vms list can be found at:

<http://www.polarhome.com/mailman/listinfo/vim-vms>

---

## 5. Deploy

vms-deploy

Vim uses a special directory structure to hold the document and runtime files:

```
vim (or wherever)
|- tmp
|- vim57
|----- doc
|----- syntax
|- vim62
|----- doc
|----- syntax
|- vim64
|----- doc
|----- syntax
vimrc (system rc files)
gvimrc
```

Use:

```
define/nolog VIM device:[path.vim]
define/nolog VIMRUNTIME device:[path.vim.vim60]
define/nolog TMP device:[path.tmp]
```

To get vim.exe to find its document, filetype, and syntax files, and to specify a directory where temporary files will be located. Copy the "runtime" subdirectory of the Vim distribution to vimruntime.

Logicals \$VIMRUNTIME and \$TMP are optional.

If \$VIMRUNTIME is not set, Vim will guess and try to set up automatically. Read more about it at :help runtime

If \$TMP is not set, you will not be able to use some functions as CTAGS, XXD, printing etc. that use temporary directory for normal operation.

The \$TMP directory should be readable and writable by the user(s).

The easiest way to set up \$TMP is to define a logical:

```
define/nolog TMP SYS$SCRATCH
```

or as:

```
define/nolog TMP SYS$LOGIN
```

---

## 6. Practical usage

vms-usage

Usually, you want to run just one version of Vim on your system, therefore it is enough to dedicate one directory for Vim. Copy the whole Vim runtime directory structure to the deployment position. Add the following lines to your LOGIN.COM (in SYS\$LOGIN directory). Set up the logical \$VIM as:

```
$ define VIM device:<path>
```

Set up some symbols:

```
$! vi starts Vim in chr. mode.
$ vi*m ::= mcr VIM:VIM.EXE

$!gvi starts Vim in GUI mode.
$ gv*mim ::= spawn/nowait mcr VIM:VIM.EXE -g
```

Please, check the notes for customization and configuration of symbols.

You may want to create .vimrc and .gvimrc files in your home directory (SYS\$LOGIN) to overwrite default settings.

The easiest way is just rename example files. You may leave the menu file (MENU.VIM) and files vimrc and gvimrc in the original \$VIM directory. It will be the default setup for all users, and for users it is enough to just have their own additions or resetting in their home directory in files .vimrc and .gvimrc. It should work without problems.

**Note:** Remember, system rc files (default for all users) don't have a leading ".". So, system rc files are:

```
$VIM:vimrc
$VIM:gvimrc
$VIM:menu.vim
```

and user customized rc files are:

```
sys$login:.vimrc
sys$login:.gvimrc
```

You can check that everything is at the right place with the :version command.

Example LOGIN.COM:

```
$ define/nolog VIM DKA0:[UTIL.VIM81]
$ vi*m ::= mcr VIM:VIM.EXE
$ gv*mim ::= spawn/nowait/input=NLA0 mcr VIM:VIM.EXE -g -GEOMETRY 80x40
$ set term/inq/ins ! inquire the terminal capabilities
$ set disp/create/node=192.168.10.202/trans=tcpip
```

**Note:** This set-up should be enough, if you are working on a standalone server or clustered environment, but if you want to use Vim as an internode editor in DECNET environment, it will satisfy as well.

You just have to define the "whole" path:

```
$ define VIM "<server_name>[\"user password\"]::device:<path>"
$ vi*m ::= "mcr VIM:VIM.EXE"
```

For example:

```
$ define VIM "PLUTO::RF10:[UTIL.VIM]"
$ define VIM "PLUTO\"ZAY mypass\"::RF10:[UTIL.VIM]" ! if passwd required
```

You can also use the \$VIMRUNTIME logical to point to the proper version of Vim if you have installed more versions at the same time. If \$VIMRUNTIME is not defined Vim will borrow its value from the \$VIM logical. You can find more information about the \$VIMRUNTIME logical by typing :help runtime as a Vim command.

System administrators might want to set up a system wide Vim installation, then add to the SYS\$STARTUP:SYLOGICALS.COM

```
$ define/nolog/sys VIM device:<path>
$ define/nolog/sys TMP SYS$SCRATCH
```

And to the SYS\$STARTUP:SYLOGIN.COM

```
$ vi*m ::= mcr VIM:VIM.EXE
$ gv*im:: spawn/nowait/input=NLA0 mcr VIM:VIM.EXE -g -GEOMETRY 80x40
```

It will set up a normal Vim work environment for every user on the system.

IMPORTANT: Vim on OpenVMS (and on other case insensitive system) command line parameters are assumed to be lowercase. In order to indicate that a command line parameter is uppercase "/" sign must be used.

Examples:

```
vim -R filename ! means: -r List swap files and exit
vim -/r filename ! means: -R Readonly mode (like "view")
vim -u <vimrc> ! means: -u Use <vimrc> instead of any .vimrc
vim -/u <gvimrc> ! means: -U Use <gvimrc> instead of any .gvimrc
```

---

## 7. GUI mode questions

vms-gui

OpenVMS is a real mainframe OS, therefore even if it has a GUI console, most of the users do not use a native X/Window environment during normal operation. It is not possible to start Vim in GUI mode "just like that". But anyhow it is not too complicated either.

First of all: you will need an executable that is built with the GUI enabled.

Second: you need to have installed DECW/Motif on your VMS server, otherwise you will get errors that some shareable libraries are missing.

Third: If you choose to run Vim with extra features such as GUI/GTK then you

need a GTK installation too or at least a GTK runtime environment (LIBGTK can be downloaded from <http://www.polarhome.com/vim/>).

- 1) If you are working on the VMS X/Motif console:  
Start Vim with the command:

```
$ mc device:<path>VIM.EXE -g
```

or type :gui as a command to the Vim command prompt. For more info :help gui

- 2) If you are working on some other X/Window environment like Unix or a remote X VMS console. Set up display to your host with:

```
$ set disp/create/node=<your IP address>/trans=<transport-name>
```

and start Vim as in point 1. You can find more help in VMS documentation or type: help set disp in VMS prompt.

Examples:

```
$ set disp/create/node=192.168.5.159 ! default trans is DECnet
$ set disp/create/node=192.168.5.159/trans=tcpip ! TCP/IP network
$ set disp/create/node=192.168.5.159/trans=local ! display on the same node
```

**Note:** you should define just one of these.

For more information type \$help set disp in VMS prompt.

- 3) Another elegant solution is XDM if you have installed on OpenVMS box.  
It is possible to work from XDM client as from GUI console.
- 4) If you are working on MS-Windows or some other non X/Window environment you need to set up one X server and run Vim as in point 2.  
For MS-Windows there are available free X servers as MIX, Omni X etc., as well as excellent commercial products as eXcursion or ReflectionX with built-in DEC support.

Please note, that executables without GUI are slightly faster during startup than with enabled GUI in character mode. Therefore, if you do not use GUI features, it is worth to choose non GUI executables.

---

## 8. Useful notes

vms-notes

- 8.1 Backspace/delete
- 8.2 Filters
- 8.3 VMS file version numbers
- 8.4 Directory conversion
- 8.5 Remote host invocation
- 8.6 Terminal problems
- 8.7 Hex-editing and other external tools
- 8.8 Sourcing vimrc and gvimrc
- 8.9 Printing from Vim
- 8.10 Setting up the symbols

- 8.11 diff and other GNU programs
- 8.12 diff-mode
- 8.13 Allow '\$' in C keywords
- 8.14 VIMTUTOR for beginners
- 8.15 Slow start in console mode issue
- 8.16 Common VIM directory - different architectures

## 8.1 Backspace/delete

There are backspace/delete key inconsistencies with VMS.

:fixdel doesn't do the trick, but the solution is (without "<" in 'cpo'):

```
:inoremap <C-?> <C-H> " for terminal mode
:inoremap <C-H> " for gui mode
```

Read more in ch: 8.6 (Terminal problems).

(Bruce Hunsaker <BNHunsaker@chq.byu.edu> Vim 5.3)

## 8.2 Filters

Vim supports filters, i.e., if you have a sort program that can handle input/output redirection like Unix (<infile >outfile), you could use

```
:map \s @!'aqsort<CR>
```

(Charles E. Campbell, Jr. <cec@gryphon.gsfc.nasa.gov> Vim 5.4)

## 8.3 VMS file version numbers

Vim is saving files into a new file with the next higher file version number, try these settings.

```
:set nobackup " does not create *.*_ backup files
:set nowritebackup " does not have any purpose on VMS. It's the
 " default.
```

Recovery is working perfectly as well from the default swap file.

Read more with :help swapfile

(Claude Marinier <ClaudeMarinier@xwavesolutions.com> Vim 5.5, Zoltan Arpadffy Vim 5.6)

## 8.4 Directory conversion

Vim will internally convert any unix-style paths and even mixed unix/VMS paths into VMS style paths. Some typical conversions resemble:

```
/abc/def/ghi -> abc:[def]ghi.
/abc/def/ghi.j -> abc:[def]ghi.j
/abc/def/ghi.j;2 -> abc:[def]ghi.j;2
/abc/def/ghi/jkl/mno -> abc:[def.ghi.jkl]mno.
```

```

abc:[def.ghi]jkl/mno -> abc:[def.ghi.jkl]mno.
./ -> current directory
../ -> relative parent directory
[.def.ghi] -> relative child directory
./def/ghi -> relative child directory

```

**Note:** You may use <,> brackets as well (device:<path>file.ext;version) as  
rf10:<user.zay.work>test.c;1

(David Elins <delins@foliage.com>, Jerome Lauret  
<JLAURET@mail.chem.sunysb.edu> Vim 5.6)

## 8.5 Remote host invocation

It is possible to use Vim as an internode editor.

1. Edit some file from remote node:

```
vi "<server>""username passwd""::<device>:<path><filename>;<version>"
```

Example:

```
vi "pluto""zay passwd""::RF10:<USER.ZAY.WORK>TEST.C;1"
```

**Note:** syntax is very important, otherwise VMS will recognize more parameters  
instead of one (resulting with: file not found)

2. Set up Vim as your internode editor. If Vim is not installed on your  
host, just set up your IP address, the full Vim path including the server name  
and run the command procedure below:

```

$ if (p1 .eqs. "") .OR. (p2 .eqs. "") then goto usage
$ set disp/create/node=<your_IP_here>/trans=tcpip
$ define "VIM "<vim_server>""'p1' 'p2'""::<device>:<vim_path>"
$ vi*m ::= "mcr VIM:VIM.EXE"
$ gv*im ::= "spawn/nowait mcr VIM:VIM.EXE -g"
$ goto end
$ usage:
$ write sys$output " Please enter username and password as a parameter."
$ write sys$output " Example: @SETVIM.COM username passwd"
$ end:

```

**Note:** Never use it in a clustered environment (you do not need it), loading  
could be very-very slow, but even faster than a local Emacs. :-)

(Zoltan Arpadffy, Vim 5.6)

## 8.6 Terminal problems

If your terminal name is not known to Vim and it is trying to find the default  
one you will get the following message during start-up:

```

```

```
Terminal entry not found in termcap
```

```
'unknown-terminal' not known. Available built-in terminals are:
```

```
builtin_gui
builtin_riscos
builtin_amiga
builtin_ansi
builtin_vt320
builtin_vt52
builtin_pcansi
builtin_win32
builtin_xterm
builtin_iris-ansi
builtin_debug
builtin_dumb
defaulting to 'vt320'

```

Try to force to inquire the terminal capabilities with:

```
$ set term/inquire
```

If the inquire did not help, the solutions is to define the default terminal name:

```
$! unknown terminal name. Let us use vt320 or ansi instead.
$! Note: it's case sensitive
$ define term "vt320"
```

Terminals from VT100 to VT320 (as V300, VT220, VT200) do not need any extra keyboard mappings. They should work perfectly as they are, including arrows, Ins, Del buttons etc., except Backspace in GUI mode. To solve it, add to .gvimrc:

```
inoremap <BS>
```

Vim will also recognize that they are fast terminals.

If you're using Vim on remote host or through a very slow connection, you might want to reset fast terminal option with:

```
set nottyfast " set terminal to slow mode
```

## 8.7 Hex-editing and other external tools

A very important difference between OpenVMS and other systems is that VMS uses special commands to execute executables:

```
RUN <path>filename
MCR <path>filename <parameters>
```

OpenVMS users always have to be aware that the Vim command :! "just" drop them to DCL prompt. This feature is possible to use without any problem with all DCL commands, but if we want to execute some programs such as XXD, CTAGS, JTAGS, etc. we're running into trouble if we follow the Vim documentation (see: help xxd).

Solution: Execute with the MC command and add the full path to the executable.  
Example: Instead of :%!xxd command use:

```
:%!mc vim:xxd
```

... or in general:

```
:!mc <path>filename <parameters>
```

**Note:** You can use XXD and CTAGS from GUI menu.

To customize ctags it is possible to define the logical \$CTAGS with standard parameters as:

```
define/nolog CTAGS "--totals -o sys$login:tags"
```

For additional information, please read :help tagsearch and CTAGS documentation at <http://ctags.sourceforge.net/ctags.html>.

(Zoltan Arpadffy, Vim 5.6-70)

## 8.8 Sourcing vimrc and gvimrc

If you want to use your .vimrc and .gvimrc from other platforms (e.g. Windows) you can get in trouble if you ftp that file(s): VMS has different end-of-line indication.

The symptom is that Vim is not sourcing your .vimrc/.gvimrc, even if you say:

```
:so sys$login:.vimrc
```

One trick is to compress (e.g. zip) the files on the other platform and uncompress it on VMS; if you have the same symptom, try to create the files with copy-paste (for this you need both op. systems reachable from one machine, e.g. an Xterm on Windows or telnet to Windows from VMS).

(Sandor Kopanyi, <[sandor.kopanyi@mailbox.hu](mailto:sandor.kopanyi@mailbox.hu)> Vim 6.0a)

## 8.9 Printing from Vim

To be able to print from Vim (running in GUI mode) under VMS you have to set up \$TMP logical which should point to some temporary directory and logical SYS\$PRINT to your default print queue.

Example:

```
$define SYS$PRINT HP5ANSI
```

You can print out the whole buffer or just the marked area.

More info under :help hardcopy

(Zoltan Arpadffy, Vim 6.0c)

## 8.10 Setting up the symbols

When I use gvim this way and press **CTRL-Y** in the parent terminal, gvim exits. I now use a different symbol that seems to work OK and fixes the problem. I suggest this instead:

```
$ GV*IM:==SPAWN/NOWAIT/INPUT=NLA0: MCR VIM:VIM.EXE -G -GEOMETRY 80X40
```

The /INPUT=NLA0: separates the standard input of the gvim process from the parent terminal, to block signals from the parent window. Without the -GEOMETRY, the gvim window size will be minimal and the menu will be confused after a window-resize.

(Carlo Mekenkamp, Coen Engelbarts, Vim 6.0ac)

### 8.11 diff and other GNU programs

From 6.0 diff functionality has been implemented, but OpenVMS does not use GNU/Unix like diff therefore built in diff does not work. There is a simple solution to solve this anomaly. Install a Unix like diff and Vim will work perfectly in diff mode too. You just have to redefine your diff program as:

```
define /nolog diff <GNU_PATH>diff.exe
```

Another, more sophisticated solution is described below (8.12 diff-mode) There are other programs such as patch, make etc that may cause the same problems. At [www.polarhome.com](http://www.polarhome.com) is possible to download an GNU package for Alpha and VAX boxes that is meant to solve GNU problems on OpenVMS. (Zoltan Arpadffy, Vim 6.1)

### 8.12 diff-mode

Vim 6.0 and higher supports Vim diff-mode (See [new-diff-mode](#) , [diff-mode](#) and [08.7](#) ). This uses the external program '**diff**' and expects a Unix-like output format from diff. The standard VMS diff has a different output format. To use Vim on VMS in diff-mode, you need to:

- 1 Install a Unix-like diff program, e.g. GNU diff
- 2 Tell Vim to use the Unix-like diff for diff-mode.

You can download GNU diff from the VIM-VMS website, it is one of the GNU tools in [http://www.polarhome.com/vim/files/gnu\\_tools.zip](http://www.polarhome.com/vim/files/gnu_tools.zip). I suggest to unpack it in a separate directory "GNU" and create a logical GNU: that points to that directory, e.g:

```
DEFINE GNU <DISK>:[<DIRECTORY>.BIN.GNU]
```

You may also want to define a symbol GDIFF, to use the GNU diff from the DCL prompt:

```
GDIFF :== $GNU:DIFF.EXE
```

Now you need to tell Vim to use the new diff program. Take the example

settings from `diff-diffexpr` and change the call to the external diff program to the new diff on VMS. Add this to your `.vimrc` file:

```
" Set up vimdiff options
if v:version >= 600
 " Use GNU diff on VMS
 set diffexpr=MyDiff()
 function MyDiff()
 let opt = ""
 if &diffopt =~ "icase"
 let opt = opt .. "-i "
 endif
 if &diffopt =~ "iwhite"
 let opt = opt .. "-b "
 endif
 silent execute "!mc GNU:diff.exe -a " .. opt .. v:fname_in .. " " .. v:fname_n
 \ " > " .. v:fname_out
 endfunction
endif
```

You can now use Vim in diff-mode, e.g. to compare two files in read-only mode:

```
$ VIM -D/R <FILE1> <FILE2>
```

You can also define new symbols for vimdiff, e.g.:

```
$ VIMDIFF := 'VIM' -D/R
$ GVIMDIFF := 'GVIM' -D/R
```

You can now compare files in 4 ways:

1. VMS diff: \$ DIFF <FILE1> <FILE2>
2. GNU diff: \$ GDIFF <FILE1> <FILE2>
3. VIM diff: \$ VIMDIFF <FILE1> <FILE2>
4. GVIM diff: \$ GVIMDIFF <FILE1> <FILE2>

(Coen Engelbarts, Vim 6.1)

### 8.13 Allow '\$' in C keywords

DEC C uses many identifiers with '\$' in them. This is not allowed in ANSI C, and Vim recognises the '\$' as the end of the identifier. You can change this with the `'iskeyword'` option.

Add this command to your `.vimrc` file:

```
autocmd FileType c,cpp,cs set iskeyword+=
```

You can also create the file(s) `$VIM/FTPLUGIN/C.VIM` (and/or `CPP.VIM` and `CS.VIM`) and add this command:

```
set iskeyword+=
```

Now word-based commands, e.g. the '\*'-search-command and the **CTRL-]** tag-lookup, work on the whole identifier. (Ctags on VMS also supports '\$' in C keywords since ctags version 5.1.)

(Coen Engelbarts, Vim 6.1)

#### 8.14 VIMTUTOR for beginners

The VIMTUTOR.COM DCL script can help Vim beginners to learn/make their first steps with Vim on OpenVMS. Depending of binary distribution you may start it with:

```
@vim:vimtutor
```

(Thomas.R.Wyant III, Vim 6.1)

#### 8.16 Slow start in console mode issue

As GUI/GTK Vim works equally well in console mode, many administrators deploy those executables system wide. Unfortunately, on a remote slow connections GUI/GTK executables behave rather slow when user wants to run Vim just in the console mode - because of X environment detection timeout.

Luckily, there is a simple solution for that. Administrators need to deploy both GUI/GTK build and just console build executables, like below:

```
| - vim73
|----- doc
|----- syntax
 vimrc (system rc files)
 gvimrc
 gvim.exe (the renamed GUI or GTK built vim.exe)
 vim.exe (the console only executable)
```

Define system symbols like below in for ex in LOGIN.COM or SYLOGIN.COM:

```
$ define/nolog VIM RF10:[UTIL.VIM73] ! where you VIM directory is
$ vi*m := mcr VIM:VIM.EXE
$ gvi*m := mcr VIM:GVIM.EXE
$! or you can try to spawn with
$ gv*im := spawn/nowait/input=NLA0 mcr VIM:GVIM.EXE -g -GEOMETRY 80x40
```

Like this, users that do not have X environment and want to use Vim just in console mode can avoid performance problems.

(Zoltan Arpadffy, Vim 7.2)

#### 8.15 Common VIM directory - different architectures

In a cluster that contains nodes with different architectures like below:

```
$show cluster
```

View of Cluster from system ID 11655 node: TOR

SYSTEMS		MEMBERS
NODE	SOFTWARE	STATUS
TOR	VMS V7.3-2	MEMBER
TITAN2	VMS V8.3	MEMBER
ODIN	VMS V7.3-2	MEMBER

It is convenient to have a common VIM directory but execute different executables.

There are several solutions for this problem:

Solution 1. All executables in the same directory with different names  
This is easily done with the following script that can be added  
to the login.com or sylogin.com:

```
$ if f$getsyi("NODE_HWTYPE") .eqs. "VAX"
$ then
$ say "VAX platform"
$ vi*m:= mcr vim:VIM.EXE_VAX
$ endif
$ if f$getsyi("NODE_HWTYPE") .eqs. "ALPH"
$ then
$ say "ALPHA platform"
$ vi*m := mcr vim:VIM.EXE_AXP
$ endif
$ if f$getsyi("ARCH_NAME") .eqs. "IA64"
$ then
$ say "IA64 platform"
$ vi*m := mcr vim:VIM.EXE_IA64
$ endif
```

Solution 2. Different directories:

```
$ if f$getsyi("NODE_HWTYPE") .eqs. "VAX"
$ then
$ say "VAX platform"
$ define/nolog VIM RF10:[UTIL.VAX_EXE] ! VAX executables
$ endif
$ if f$getsyi("NODE_HWTYPE") .eqs. "ALPH"
$ then
$ say "ALPHA platform"
$ define/nolog VIM RF10:[UTIL.AXP_EXE] ! AXP executables
$ endif
$ if f$getsyi("ARCH_NAME") .eqs. "IA64"
$ then
$ say "IA64 platform"
$ define/nolog VIM RF10:[UTIL.IA64_EXE] ! IA64 executables
$ endif
$! VIMRUNTIME must be defined in order to find runtime files
$ define/nolog VIMRUNTIME RF10:[UTIL.VIM73]
```

A good example for this approach is the [\[GNU\]gnu\\_tools.com](http://gnu_tools.com) script from GNU\_TOOLS.ZIP package downloadable from <http://www.polarhome.com/vim/>

(Zoltan Arpadffy, Vim 7.2)

---

## 9. VMS related changes

vms-changes

Version 9.0 (2023 Nov 27)

- Vim is ported to the X86\_64 architecture
  - IMPORTANT: because of the getline function name used in structs like in ex\_cmds.h on X86\_64 the CRTL\_VER is kept under 80500000 level. The proper solution would be to rename the getline function to something else in the struct (and in all places it is used) - and avoiding to use POSIX functions in structs, but this change would impact on all other operating systems. (added to the VMS TODO list)
  - Read more about at <https://forum.vmssoftware.com/viewtopic.php?f=38&t=8914&p=20049>
- os\_vms\_conf.h includes have been reviewed for all architectures
- added support for the MODIFIED\_BY define

Version 8.2 (2020 Feb 6)

- make all changes needed for clean compile build of v8.2 on VMS on all platforms
- fix the call mkdir bug (vicente\_polo@yahoo.es)
- test on VSI OpenVMS Alpha and Itanium platforms
- added LUA support
- added XPM support - Motif GUI with toolbar on all platforms
- XPM v3.4.11 libraries for IA64, AXP and VAX are added
- start integrating the new test scripts

Version 8.1 (2019 Jan 9)

- make necessary changes to build v8.1 on VMS
- GTK1.2.10 on VAX

Version 8.0 (2016 Nov 21)

- solve the 100% cpu usage issue while waiting for a keystroke
- correct the VMS warnings and errors around handling the INFINITY (used in json.c)
- minor VMS port related changes
- correct the make\_vms.mms file for 8.0
- fix [.TESTDIR]make\_vms.mms for 8.0

Version 7.4 (2013 Aug 10)

- Undo: VMS can not handle more than one dot in the filenames use "dir/name" -> "dir/\_un\_name" add \_un\_ at the beginning to keep the extension
- correct swap file name wildcard handling
- handle iconv usage correctly
- do not optimize on vax - otherwise it hangs compiling crypto files
- fileio.c fix the comment
- correct RealWaitForChar
- after 7.4-119 use different functions lib\$cvtf\_to\_internal\_time because Alpha and VAX have G\_FLOAT but IA64 uses IEEE float otherwise Vim crashes
- guard against crashes that are caused by mixed filenames
- [TESTDIR]make\_vms.mms changed to see the output files
- Improve tests, update known issues

- minor compiler warnings fixed
- CTAGS 5.8 +regex included

Version 7.3 (2010 Aug 15)

- CTAGS 5.8 included
- VMS compile warnings fixed - floating-point overflow warning corrected on VAX
- filepath completion corrected - too many chars were escaped in filename and shell commands
- the following plugins are included into VMS runtime:
  - genutils 2.4, multiselect 2.2, multvals 3.1, selectbuf 4.3,
  - bufexplorer 7.1.7, taglist 4.5
- minor changes in vimrc (just in VMS runtime)
- make\_vms.mms - HUGE model is the default
- [TESTDIR]make\_vms.mms include as many tests possible
- modify test30 and test54 for VMS
- enable FLOAT feature in VMS port
- os\_vms.txt updated

Version 7.2 (2008 Aug 9)

- VCF files write corrected
- CTAGS 5.7 included
- corrected make\_vms.mms (on VAX gave syntax error)

Version 7.1 (2007 Jun 15)

- create TAGS file from menu

Version 7 (2006 May 8)

- Improved low level char input (affects just console mode)
- Fixed plugin bug
- CTAGS 5.6 included

Version 6.4 (2005 Oct 15)

- GTKLIB and Vim build on IA64
- colors in terminal mode
- syntax highlighting in terminal mode
- write problem fixed (extra CR)
- ESC and ESC sequence recognition in terminal mode
- make file changed to support new MMS version
- env variable expansion in path corrected
- printing problems corrected
- help text added for case insensitive arguments

Version 6.3 (2004 May 10)

- Improved vms\_read function
- CTAGS v5.5.4 included
- Documentation corrected and updated

Version 6.2 (2003 May 7)

- Corrected VMS system call results
- Low level character input is rewritten
- Correction in tag and quickfix handling
- First GTK build
- Make file changes
  - GTK feature added

- Define for OLD\_VMS
- OpenVMS version 6.2 or older
- Documentation updated with GTK features
- CTAGS v5.5 included
- VMS VIM tutor created

#### Version 6.1 (2002 Mar 25)

- TCL init\_tcl() problem fixed
- CTAGS v5.4 included
- GNU tools binaries for OpenVMS
- Make file changes
  - PERL, PYTHON and TCL support improved
  - InstallVMS.txt has a detailed description HOWTO build
- VMS/Unix file handling rewritten
- Minor casting and bug fixes

#### Version 6.0 (2001 Sep 28)

- Unix and VMS code has been merged
  - separated "really" VMS related code
  - included all possible Unix functionality
  - simplified or deleted the configuration files
  - makefile MAKE\_VMS.MMS reviewed
- menu changes (fixed printing, CTAGS and XXD usage)
- fixed variable RMS record format handling anomaly
- corrected syntax, ftplugin etc files load
- changed expand\_wildcards and expandpath functions to work more general
- created OS\_VMS\_FILTER.COM - DECC->VAXC pre-processor directive convert script.
- Improved code's VAXC and new DECC compilers compatibility
- changed quickfix parameters:
  - errormessage format to suite DECC
  - search, make and other commands to suite VMS system
- updated and renamed MMS make files for Vim and CTAGS.
- CTAGS has been removed from source distribution of Vim but it will remain in OpenVMS binary distributions.
- simplified build/configuration procedure
- created INSTALLvms.txt - detailed compiling instructions under VMS.
- updated test scripts.

#### Version 5.8 (2001 Jun 1)

- OS\_VMS.TXT updated with new features.
- other minor fixes.
- documentation updated
- this version had been tested much more than any other OpenVMS version earlier

#### Version 5.7 (2000 Jun 24)

- New CTAGS v5.0 in distribution
- Documentation updated

#### Version 5.6 (2000 Jan 17)

- VMS filename related changes:
  - version handling (open everything, save to new version)
  - correct file extension matching for syntax (version problem)

- handle <,> characters and passwords in directory definition
- handle internode/remote invocation and editing with passwords
- OpenVMS files will be treated case insensitive from now
- corrected response of expand("%:.") etc path related functions (in one word: VMS directory handling internally)
- version command
  - corrected (+,-) information data
  - added compiler and OS version
  - added user and host information
  - resolving \$VIM and \$VIMRUNTIME logicals
- VMS port is in MAX\_FEAT (maximum features) club with Unix, Win32 and OS/2.
  - enabled farsi, rightleft etc. features
  - undo level raised up to 1000
- Updated OS\_VMS.MMS file.
  - maximum features ON is default
  - Vim is compilable with +perl, +python and +tcl features.
  - improved MMK compatibility
- Created MAKEFILE\_VMS.MMS, makefile for testing Vim during development.
- Defined DEC terminal VT320
  - compatibility for VT3\*0, VT2\*0 and VT1\*0 - ANSI terminals backwards, but not VT340 and newer with colour capability.
  - VT320 is default terminal for OpenVMS
  - these new terminals are also fast ttys (default for OpenVMS).
  - allowed dec\_mouse tty
- Updated files vimrc and gvimrc with VMS specific suggestions.
- OS\_VMS.TXT updated with new features.

Version 5.5 (1999 Dec 3)

- Popup menu line crash corrected.
- Handle full file names with version numbers.
- Directory handling (CD command etc.)
- Corrected file name conversion VMS to Unix and v.v.
- Correct response of expand wildcards
- Recovery is working from this version under VMS as well.
- Improved terminal and signal handing.
- Improved OS\_VMS.TXT

Version 5.4 (1999 Sep 9)

- Cut and paste mismatch corrected.
- Motif directories during open and save are corrected.

Version 5.3 (1998 Oct 12)

- Minor changes in the code
- Standard distribution with +GUI option

Version 5.1 (1998 Apr 21)

- Syntax and DEC C changes in the code
- Fixing problems with the /doc subdirectory
- Improve OS\_VMS.MMS

Version 4.5 (1996 Dec 16)

- First VMS port by Henk Elbers <[henk@xs4all.nl](mailto:henk@xs4all.nl)>

=====

Sandor Kopanyi <[sandor.kopanyi@mailbox.hu](mailto:sandor.kopanyi@mailbox.hu)>

VIM REFERENCE MANUAL by George Reilly

win32 Win32 MS-Windows

This file documents the idiosyncrasies of the Win32 version of Vim.

The Win32 version of Vim works on Windows 7, 8, 10 and 11. There are both console and GUI versions.

If you have Windows XP or Vista then Vim 9.0 up to patch level 495 can be used.

The 32 bit version also runs on 64 bit MS-Windows systems.

- 1. Known problems [win32-problems](#)
- 2. Startup [win32-startup](#)
- 3. Restore screen contents [win32-restore](#)
- 4. Using the mouse [win32-mouse](#)
- 5. Running under Windows 95 [win32-win95](#)
- 6. Running under Windows 3.1 [win32-win3.1](#)
- 7. Installation package [win32-installer](#)
- 8. Win32 mini FAQ [win32-faq](#)

Additionally, there are a number of common Win32 and DOS items:

- File locations [dos-locations](#)
- Using backslashes [dos-backslash](#)
- Standard mappings [dos-standard-mappings](#)
- Screen output and colors [dos-colors](#)
- File formats [dos-file-formats](#)
- :cd command [dos-:cd](#)
- Interrupting [dos-CTRL-Break](#)
- Temp files [dos-temp-files](#)
- Shell option default [dos-shell](#)
- PowerShell defaults [dos-powershell](#)

Win32 GUI [gui-w32](#)

Credits:

The Win32 version was written by George V. Reilly <george@reilly.org>. The original Windows NT port was done by Roger Knobbe <RogerK@wonderware.com>. The GUI version was made by George V. Reilly and Robert Webb.

For compiling see "src/INSTALLpc.txt". [win32-compiling](#)

WSL

When using Vim on WSL (Windows Subsystem for Linux) the remarks here do not apply, `has('win32')` will return false then. In case you need to know whether Vim is running on WSL you can use `exists('\$WSLENV')`.

=====

- 1. Known problems [win32-problems](#)

When doing file name completion, Vim also finds matches for the short file name. But Vim will still find and use the corresponding long file name. For example, if you have the long file name "this\_is\_a\_test" with the short file name "this\_i~1", the command ":e \*1" will start editing "this\_is\_a\_test".

---

## 2. Startup

win32-startup

### Current directory

win32-curdir

If Vim is started with a single file name argument, and it has a full path (starts with "x:\"), Vim assumes it was started from the file explorer and will set the current directory to where that file is. To avoid this when typing a command to start Vim, use a forward slash instead of a backslash. Example:

```
vim c:\text\files\foo.txt
```

Will change to the "C:\text\files" directory.

```
vim c:/text/files/foo.txt
```

Will use the current directory.

### Term option

win32-term

The only kind of terminal type that the Win32 version of Vim understands is "win32", which is built-in. If you set '**term**' to anything else, you will probably get very strange behavior from Vim. Therefore Vim does not obtain the default value of '**term**' from the environment variable "TERM".

### \$PATH

win32-PATH

The directory of the Vim executable is appended to \$PATH. This is mostly to make "!xd" work, as it is in the Tools menu. And it also means that when executable() returns 1 the executable can actually be executed.

### Command line arguments

win32-cmdargs

Analysis of a command line into parameters is not standardised in MS-Windows. Vim and gvim used to use different logic to parse it (before 7.4.432), and the logic was also depended on what it was compiled with. Now Vim and gvim both use the CommandLineToArgvW() Win32 API, so they behave in the same way.

### The basic rules are:

win32-backslashes

- a) A parameter is a sequence of graphic characters.
- b) Parameters are separated by white space.
- c) A parameter can be enclosed in double quotes to include white space.
- d) A sequence of zero or more backslashes (\) and a double quote (") is special. The effective number of backslashes is halved, rounded down. An even number of backslashes reverses the acceptability of spaces and tabs, an odd number of backslashes produces a literal

double quote.

So:

```
" is a special double quote
\" is a literal double quote
\\" is a literal backslash and a special double quote
\\\\" is a literal backslash and a literal double quote
\\\\" is 2 literal backslashes and a special double quote
\\\\" is 2 literal backslashes and a literal double quote
etc.
```

Example:

```
vim "C:\My Music\freude" +"set ignorecase" +/"\"foo\\" +\"bar\\\""
```

opens "C:\My Music\freude" and executes the line mode commands:

```
set ignorecase; /"foo\ and /bar\"
```

These rules are also described in the reference of the CommandLineToArgvW API:

<https://msdn.microsoft.com/en-us/library/windows/desktop/bb776391.aspx>

#### win32-quotes

There are additional rules for quotes (which are not well documented). As described above, quotes inside a file name (or any other command line argument) can be escaped with a backslash. E.g.

```
vim -c "echo 'foo\"bar\""
```

Alternatively use three quotes to get one:

```
vim -c "echo 'foo\"\"\"bar\""
```

The quotation rules are:

1. A `` starts quotation.
2. Another `` or `\"` ends quotation. If the quotation ends with `\"`, a `` is produced at the end of the quoted string.

Examples, with [] around an argument:

```
"foo" -> [foo]
"foo\" -> [foo"]
"foo\"bar -> [foobar]
"foo\" bar -> [foo], [bar]
"foo\"bar -> [foo\"bar]
"foo\" bar -> [foo\"], [bar]
"foo\"bar -> [foo\"bar]
```

---

### 3. Restore screen contents

#### win32-restore

When **'restorescreen'** is set (which is the default), Vim will restore the original contents of the console when exiting or when executing external commands. If you don't want this, use `":set nors"`. **'restorescreen'**

---

### 4. Using the mouse

#### win32-mouse

The Win32 version of Vim supports using the mouse. If you have a two-button mouse, the middle button can be emulated by pressing both left and right buttons simultaneously - but **note** that in the Win32 GUI, if you have the right mouse button pop-up menu enabled (see '**mouse**'), you should err on the side of pressing the left button first. [mouse-using](#)

When the mouse doesn't work, try disabling the "Quick Edit Mode" feature of the console.

---

## 5. Running under Windows 95

[win32-win95](#)

[windows95](#) [windows98](#) [windowsme](#)

Windows 95/98/ME support was removed in patch 8.0.0029. If you want to use it you will need to get a version older than that.

---

## 6. Running under Windows 3.1

[win32-win3.1](#)

[win32s](#) [windows-3.1](#) [gui-w32s](#) [win16](#)

There was a special version of gvim that runs under Windows 3.1 and 3.11. Support was removed in patch 7.4.1364.

---

## 7. Installation package

[win32-installer](#)

A simple installer for windows is available at <http://www.vim.org/download.php> (stable version) and nightly builds are also available at <https://github.com/vim/vim-win32-installer/releases/>

The nightly builds include 32bit and 64bit builds, have most features enabled and usually also contain an extra cryptographic signed installer, so Windows will not complain.

To use the installer, simply run the exe file. The following switches are also supported:

```
gvim_<version>.exe /S -> silent install without any dialogues
gvim_<version>.exe /D=C:\vim -> Install into directory c:\vim
 -> /D must be the last argument
gvim_<version>.exe /S /D=c:\vim -> silent install into c:\vim
```

The default installation directory can alternatively be given by setting the \$VIM environment variable.

---

## 8. Win32 mini FAQ

[win32-faq](#)

Q. How do I change the font?

A. In the GUI version, you can use the '**guifont**' option. Example:

```
:set guifont=Lucida_Console:h15:cDEFAULT
```

In the console version, you need to set the font of the console itself.

You cannot do this from within Vim.

Q. How do I type dead keys on Windows NT?

A. Dead keys work on NT 3.51. Just type them as you would in any other application.

On NT 4.0, you need to make sure that the default locale (set in the Keyboard part of the Control Panel) is the same as the currently active locale. Otherwise the NT code will get confused and crash! This is a NT 4.0 problem, not really a Vim problem.

Q. I'm using Vim to edit a symbolically linked file on a Unix NFS file server. When I write the file, Vim does not "write through" the symlink. Instead, it deletes the symbolic link and creates a new file in its place. Why?

A. On Unix, Vim is prepared for links (symbolic or hard). A backup copy of the original file is made and then the original file is overwritten. This assures that all properties of the file remain the same. On non-Unix systems, the original file is renamed and a new file is written. Only the protection bits are set like the original file. However, this doesn't work properly when working on an NFS-mounted file system where links and other things exist. The only way to fix this in the current version is not making a backup file, by `":set nobackup nowritebackup" 'writebackup'`

Q. I'm using Vim to edit a file on a Unix file server through Samba. When I write the file, the owner of the file is changed. Why?

A. When writing a file Vim renames the original file, this is a backup (in case writing the file fails halfway). Then the file is written as a new file. Samba then gives it the default owner for the file system, which may differ from the original owner.

To avoid this set the `'backupcopy'` option to "yes". Vim will then make a copy of the file for the backup, and overwrite the original file. The owner isn't changed then.

Q. How do I get to see the output of `":make"` while it's running?

A. Basically what you need is to put a tee program that will copy its input (the output from make) to both stdout and to the errorfile. You can find a copy of tee (and a number of other GNU tools) at

<http://gnuwin32.sourceforge.net> or <http://unxutils.sourceforge.net>

Alternatively, try the more recent Cygnus version of the GNU tools at

<http://www.cygwin.com>

When you do get a copy of tee, you'll need to add

```
:set shellpipe=\\ tee
```

to your `_vimrc`.

Q. I'm storing files on a remote machine that works with VisionFS, and files disappear!

A. VisionFS can't handle certain dot (.) three letter extension file names. SCO declares this behavior required for backwards compatibility with 16bit DOS/Windows environments. The two commands below demonstrate the behavior:

```
echo Hello > file.bat~
```

```
dir > file.bat
```

The result is that the "dir" command updates the "file.bat~" file, instead of creating a new "file.bat" file. This same behavior is exhibited in Vim when editing an existing file named "foo.bat" because the default behavior of Vim is to create a temporary file with a '~' character appended to the

name. When the file is written, it winds up being deleted.

Solution: Add this command to your `_vimrc` file:

```
:set backupext=.temporary
```

Q. How do I change the blink rate of the cursor?

A. You can't! This is a limitation of the NT console. NT 5.0 is reported to be able to set the blink rate for all console windows at the same time.

`:!start`

Q. How can I asynchronously run an external command or program, or open a document or URL with its default program?

A. When using `:!` to run an external command, you can run it with "start". For example, to run notepad:

```
:!start notepad
```

To open "image.jpg" with the default image viewer:

```
:!start image.jpg
```

To open the folder of the current file in Windows Explorer:

```
:!start %:h
```

To open the Vim home page with the default browser:

```
:!start http://www.vim.org/
```

Using "start" stops Vim switching to another screen, opening a new console, or waiting for the program to complete; it indicates that you are running a program that does not affect the files you are editing. Programs begun with `:!start` do not get passed Vim's open file handles, which means they do not have to be closed before Vim.

To avoid this special treatment, use `":! start"`.

There are two optional arguments (see the next Q):

```
/min the window will be minimized
```

```
/b no console window will be opened
```

You can use only one of these flags at a time. A second one will be treated as the start of the command.

`windows-asynchronously`

Q. How do I avoid getting a window for programs that I run asynchronously?

A. You have three possible solutions depending on what you want:

1) You may use the `/min` flag in order to run program in a minimized state with no other changes. It will work equally for console and GUI applications.

2) You can use the `/b` flag to run console applications without creating a console window for them (GUI applications are not affected). But you should use this flag only if the application you run doesn't require any input. Otherwise it will get an EOF error because its input stream (stdin) would be redirected to `\\.NUL` (stdout and stderr too).

3) Set the `!'` flag in the `'guioptions'` option `'go-!'`. This will make Vim run the "start" command inside Vims terminal window and not open a console window.

Example for a console application, run Exuberant ctags:

```
:!start /min ctags -R .
```

When it has finished you should see file named "tags" in your current directory. You should notice the window title blinking on your taskbar. This is more noticeable for commands that take longer.

Now delete the "tags" file and run this command:

```
:!start /b ctags -R .
```

You should have the same "tags" file, but this time there will be no blinking on the taskbar.

Example for a GUI application:

```
:!start /min notepad
```

```
:!start /b notepad
```

The first command runs notepad minimized and the second one runs it normally.

windows-icon

Q. I don't like the Vim icon, can I change it?

A. Yes, place your favorite icon in bitmaps/vim.ico in a directory of **'runtimepath'**. For example ~/vimfiles/bitmaps/vim.ico.

GETSCRIPT REFERENCE MANUAL by Charles E. Campbell

Original Author: Charles E. Campbell <NcampObell@SdrPchip.AorgM-NOSPAM>  
(remove NOSPAM from the email address)

Copyright: (c) 2004-2012 by Charles E. Campbell [GetLatestVimScripts-copyright](#)  
[glvs-copyright](#)

The VIM LICENSE (see [copyright](#) ) applies to the files in this package, including getscriptPlugin.vim, getscript.vim, GetLatestVimScripts.dist, and pi\_getscript.txt, except use "getscrip" instead of "Vim". Like anything else that's free, getscript and its associated files are provided \*as is\* and comes with no warranty of any kind, either expressed or implied. No guarantees of merchantability. No guarantees of suitability for any purpose. By using this plugin, you agree that in no event will the copyright holder be liable for any damages resulting from the use of this software. Use at your own risk!

Getscript is a plugin that simplifies retrieval of the latest versions of the scripts that you yourself use! Typing `:GLVS` will invoke getscript; it will then use the `<GetLatestVimScripts.dat>` (see [GetLatestVimScripts\\_dat](#) ) file to get the latest versions of scripts listed therein from <https://www.vim.org/>.

=====

2. GetLatestVimScripts -- Getting Started	<a href="#">getscrip-start</a>
	<a href="#">getlatestvimscripts-install</a>

VERSION FROM VIM DISTRIBUTION [glvs-dist-install](#)

Vim 7.0 does not include the GetLatestVimScripts.dist file which serves as an example and a template. So, you'll need to create your own! See [GetLatestVimScripts\\_dat](#) .

VERSION FROM VIM SF NET [glvs-install](#)

**NOTE:** The last step, that of renaming/moving the GetLatestVimScripts.dist file, is for those who have just downloaded GetLatestVimScripts.tar.bz2 for the first time.

The GetLatestVimScripts.dist file serves as an example and a template for your own personal list. Feel free to remove all the scripts mentioned within it; the "important" part of it is the first two lines.

Your computer needs to have wget or curl for GetLatestVimScripts to do its work.

1. if compressed: `gunzip getscript.vmb.gz`
2. Unix:

```
vim getscript.vmb
:so %
:q
cd ~/.vim/GetLatest
mv GetLatestVimScripts.dist GetLatestVimScripts.dat
(edit GetLatestVimScripts.dat to install your own personal
list of desired plugins -- see GetLatestVimScripts_dat)
```
3. Windows:

```
vim getscript.vmb
:so %
:q
cd **path-to-vimfiles**/GetLatest
mv GetLatestVimScripts.dist GetLatestVimScripts.dat
(edit GetLatestVimScripts.dat to install your own personal
list of desired plugins -- see GetLatestVimScripts_dat)
```

---

### 3. GetLatestVimScripts Usage glvs-usage :GLVS

Unless it has been defined elsewhere,

```
:GLVS
```

will invoke GetLatestVimScripts(). If some other plugin has defined that command, then you may type

```
:GetLatestVimScripts
```

The script will attempt to update and, if permitted, will automatically install scripts from <http://vim.sourceforge.net/>. To do so it will peruse a file,

```
~/.vim/GetLatest/GetLatestVimScripts.dat (unix)
```

or

```
..wherever..\vimfiles\GetLatest\GetLatestVimScripts.dat (windows)
(see glvs-data), and examine plugins in your [.\vim|vimfiles]/plugin
directory (see glvs-plugins).
```

Scripts which have been downloaded will appear in the  
~/.vim/GetLatest (unix) or ..wherever..\vimfiles\GetLatest (windows)  
subdirectory. GetLatestVimScripts will attempt to automatically  
install them if you have the following line in your `<.vimrc>`:

```
let g:GetLatestVimScripts_allowautoinstall=1
```

The `<GetLatestVimScripts.dat>` file will be automatically be updated to reflect the latest version of script(s) so downloaded.  
(also see `glvs-options` )

---

4. GetLatestVimScripts Data File `getscript-data glvs-data`  
`:GetLatestVimScripts_dat`

The data file `<GetLatestVimScripts.dat>` must have for its first two lines the following text:

```

ScriptID SourceID Filename

```

Following those two lines are three columns; the first two are numeric followed by a text column. The `GetLatest/GetLatestVimScripts.dist` file contains an example of such a data file. Anything following a `#...` is ignored, so you may embed comments in the file.

The first number on each line gives the script's ScriptID. When you're about to use a web browser to look at scripts on <http://vim.sf.net/>, just before you click on the script's link, you'll see a line resembling

```
http://vim.sourceforge.net/scripts/script.php?script_id=40
```

The "40" happens to be a ScriptID that `GetLatestVimScripts` needs to download the associated page, and is assigned by `vim.sf.net` itself during initial uploading of the plugin.

The second number on each line gives the script's SourceID. The SourceID records the count of uploaded scripts as determined by `vim.sf.net`; hence it serves to indicate "when" a script was uploaded. Setting the SourceID to 1 insures that `GetLatestVimScripts` will assume that the script it has is out-of-date.

The SourceID is extracted by `GetLatestVimScripts` from the script's page on `vim.sf.net`; whenever it is greater than the one stored in the `GetLatestVimScripts.dat` file, the script will be downloaded (see `GetLatestVimScripts_dat` ).

If your script's author has included a special comment line in his/her plugin, the plugin itself will be used by `GetLatestVimScripts` to build your `<GetLatestVimScripts.dat>` file, including any dependencies on other scripts it may have. As an example, consider:

```
" GetLatestVimScripts: 884 1 :AutoInstall: AutoAlign.vim
```

This comment line tells `getscript.vim` to check `vimscrip #884` and that the script is automatically installable. `Getscript` will also use this line to help build the `GetLatestVimScripts.dat` file, by including a line such as:

884 1 :AutoInstall: AutoAlign.vim

assuming that such a line isn't already in GetLatestVimScripts.dat file. See [glvs-plugins](#) for more. Thus, GetLatestVimScripts thus provides a comprehensive ability to keep your plugins up-to-date!

In summary:

- \* Optionally tell getscrip that it is allowed to build/append a GetLatestVimScripts.dat file based upon already installed plugins:  
`let g:GetLatestVimScripts_allowautoinstall=1`

- \* A line such as  
`" GetLatestVimScripts: 884 1 :AutoInstall: AutoAlign.vim`  
in an already-downloaded plugin constitutes the concurrence of the plugin author that getscrip may do AutoInstall. Not all plugins may be AutoInstall-able, and the plugin's author is best situated to know whether or not his/her plugin will AutoInstall properly.

- \* A line such as  
`884 1 :AutoInstall: AutoAlign.vim`  
in your GetLatestVimScripts.dat file constitutes your permission to getscrip to do AutoInstall. AutoInstall requires both your and the plugin author's permission. See [GetLatestVimScripts\\_dat](#) .

[GetLatestVimScripts\\_dat](#)

As an example of a `<GetLatestVimScripts.dat>` file:

```
ScriptID SourceID Filename

294 1 :AutoInstall: Align.vim
120 2 Decho.vim
 40 3 DrawIt.tar.gz
451 4 EasyAccents.vim
195 5 engspchk.vim
642 6 GetLatestVimScripts.vim
489 7 Manpageview.vim
```

**Note:** the first two lines are required, but essentially act as comments.

=====

5. GetLatestVimScripts Friendly Plugins [getscrip-plugins](#) [glvs-plugins](#)

(this section is for plugin authors)

If a plugin author includes the following comment anywhere in their plugin, GetLatestVimScripts will find it and use it to automatically build the user's GetLatestVimScripts.dat files:

```
src_id
v
" GetLatestVimScripts: ### ## yourscriptname
```

^  
scriptid

As an author, you should include such a line in to refer to your own script plus any additional lines describing any plugin dependencies it may have. Same format, of course!

If your command is auto-installable (see [glvs-autoinstall](#) ), and most scripts are, then you may include `:AutoInstall:` just before "yourscriptname":

```
src_id
 v
" GetLatestVimScripts: ### ### :AutoInstall: yourscripname
 ^
scriptid
```

**NOTE:** The `:AutoInstall:` feature requires both the plugin author's and the user's permission to operate!

GetLatestVimScripts commands for those scripts are then appended, if not already present, to the user's GetLatest/GetLatestVimScripts.dat file. It is a relatively painless way to automate the acquisition of any scripts your plugins depend upon.

Now, as an author, you probably don't want GetLatestVimScripts to download your own scripts atop your own copy, thereby overwriting your not-yet-released hard work. GetLatestVimScripts provides a solution for this: `put`

```
@ @ yourscripname
```

into your `<GetLatestVimScripts.dat>` file and GetLatestVimScripts will skip examining the "yourscripname" scripts for those GetLatestVimScripts comment lines. As a result, those lines won't be inadvertently installed into your `<GetLatestVimScripts.dat>` file and subsequently used to download your own scripts. This is especially important to do if you've included the `:AutoInstall:` option.

Be certain to use the same "yourscripname" in the "@ @ yourscripname" line as you've used in your GetLatestVimScripts comment!

```
=====
6. GetLatestVimScripts AutoInstall getscrip-autoinstall
 glvs-autoinstall
```

GetLatestVimScripts now supports "AutoInstall". Not all scripts are supportive of auto-install, as they may have special things you need to do to install them (please refer to the script's "install" directions). On the other hand, most scripts will be auto-installable.

To let GetLatestVimScripts do an autoinstall, the data file's comment field should begin with (surrounding blanks are ignored):

```
:AutoInstall:
```

Both colons are needed, and it should begin the comment (yourscriptname) field.

One may prevent any autoinstalling by putting the following line in your `<.vimrc>`:

```
let g:GetLatestVimScripts_allowautoinstall= 0
```

With `:AutoInstall:` enabled, as it is by default, files which end with

```
---.tar.bz2 : decompressed & untarred in .vim/ directory
---.vba.bz2 : decompressed in .vim/ directory, then vimball handles it
---.vmb.bz2 : idem
---.vim.bz2 : decompressed & moved into .vim/plugin directory
---.tar.gz : decompressed & untarred in .vim/ directory
---.vba.gz : decompressed in .vim/ directory, then vimball handles it
---.vmb.gz : idem
---.vim.gz : decompressed & moved into .vim/plugin directory
---.vba : moved to .vim/ directory, then vimball handles it
---.vmb : idem
---.vim : moved to .vim/plugin directory
---.zip : unzipped in .vim/ directory
```

and which merely need to have their components placed by the `untar/gunzip` or `move-to-plugin-directory` process should be auto-installable. Vimballs, of course, should always be auto-installable.

When is a script not auto-installable? Let me give an example:

```
.vim/after/syntax/blockhl.vim
```

The `<blockhl.vim>` script provides block highlighting for C/C++ programs; it is available at:

[https://www.vim.org/scripts/script.php?script\\_id=104](https://www.vim.org/scripts/script.php?script_id=104)

Currently, vim's `after/syntax` only supports by-filetype scripts (in `blockhl.vim`'s case, that's `after/syntax/c.vim`). Hence, auto-install would possibly overwrite the current user's `after/syntax/c.vim` file.

In my own case, I use `<aftersyntax.vim>` (renamed to `after/syntax/c.vim`) to allow a `after/syntax/c/` directory:

[https://www.vim.org/scripts/script.php?script\\_id=1023](https://www.vim.org/scripts/script.php?script_id=1023)

The script allows multiple syntax files to exist separately in the `after/syntax/c` subdirectory. I can't bundle `aftersyntax.vim` in and build an appropriate tarball for auto-install because of the potential for the `after/syntax/c.vim` contained in it to overwrite a user's `c.vim`.

=====  
7. GetLatestVimScripts Options glvs-options

[g:GetLatestVimScripts\\_wget](#)

default= "wget"

This variable holds the name of the command for obtaining scripts.

[g:GetLatestVimScripts\\_options](#)

default= "-q -0"

This variable holds the options to be used with the g:GetLatestVimScripts\_wget command.

[g:GetLatestVimScripts\\_allowautoinstall](#)

default= 1

This variable indicates whether GetLatestVimScripts is allowed to attempt to automatically install scripts. Furthermore, the plugin author has to have explicitly indicated that his/her plugin is automatically installable (via the :AutoInstall: keyword in the GetLatestVimScripts comment line).

[g:GetLatestVimScripts\\_autoinstalldir](#)

default= \$HOME/.vim (linux)

default= \$HOME/vimfiles (windows)

Override where :AutoInstall: scripts will be installed. Doesn't override vimball installation.

[g:GetLatestVimScripts\\_scriptaddr](#)

default='https://www.vim.org/scripts/script.php?script\_id='

Override this if your system needs

... ='http://vim.sourceforge.net/script.php?script\_id='

[g:GetLatestVimScripts\\_downloadaddr](#)

default='https://www.vim.org/scripts/download\_script.php?src\_id='

Override this if your system needs

... ='http://vim.sourceforge.net/scripts/download\_script.php?src\_id='

[g:GetLatestVimScripts\\_bunzip2](#)

default= bunzip2

This variable holds the name of the command to decompress .bz2 files

[g:GetLatestVimScripts\\_bunzip3](#)

default= bunzip3

This variable holds the name of the command to decompress .bz3 files

[g:GetLatestVimScripts\\_gunzip](#)

default= gunzip

This variable holds the name of the command to decompress .gz files

[g:GetLatestVimScripts\\_unxz](#)

default= unxz

This variable holds the name of the command to decompress .xz files

```
g:GetLatestVimScripts_unzip
default= unzip
 This variable holds the name of the command to decompress .zip
 files
```

**Note:** The variables associated with decompression commands help workaround crossplatform issues. For example, on Windows is possible to delegate this calls into `wsl` by doing:

```
let g:GetLatestVimScripts_bunzip2= "wsl -e bunzip2"
let g:GetLatestVimScripts_gunzip= "wsl -e gunzip"
let g:GetLatestVimScripts_unxz= "wsl -e unxz"
let g:GetLatestVimScripts_unzip= "wsl -e unzip"
```

---

## 8. GetLatestVimScripts Algorithm glvs-algorithm glvs-alg

The Vim sourceforge page dynamically creates a page by keying off of the so-called script-id. Within the webpage of

[https://www.vim.org/scripts/script.php?script\\_id=40](https://www.vim.org/scripts/script.php?script_id=40)

is a line specifying the latest source-id (src\_id). The source identifier numbers are always increasing, hence if the src\_id is greater than the one recorded for the script in GetLatestVimScripts then it's time to download a newer copy of that script.

GetLatestVimScripts will then download the script and update its internal database of script ids, source ids, and scriptnames.

The AutoInstall process will:

```
Move the file from GetLatest/ to the following directory
 Unix : $HOME/.vim
 Windows: $HOME\vimfiles
if the downloaded file ends with ".bz2"
 bunzip2 it
else if the downloaded file ends with ".bz3"
 bunzip3 it
else if the downloaded file ends with ".gz"
 gunzip it
if the resulting file ends with ".zip"
 unzip it
else if the resulting file ends with ".tar"
 tar -oxvf it
else if the resulting file ends with ".vim"
 move it to the plugin subdirectory
```

---

## 9. GetLatestVimScripts History getscript-history glvs-hist {{{1

v38 Feb 25, 2025 : \* handles additional decompression option for .bzip3 files.

v37 Sep 23, 2024 : \* Support for the new vimball's .vmb extension (old .vba extension conflicted with visual basic).  
 \* Support for `glvs-autoinstall` in ftplugins and packages.  
 \* Allow platform driven customization of decompressing commands.

v36 Apr 22, 2013 : \* (glts) suggested use of `plugin/**/*.vim` instead of `plugin/*.vim` in `globpath()` call.  
 \* (Andy Wokula) got warning message when setting `g:loaded_getscriptPlugin`

v35 Apr 07, 2012 : \* (MengHuan Yu) pointed out that the script URL has changed (somewhat). However, it doesn't work, and the original one does (under Linux). I'll make it yet-another-option.

v34 Jun 23, 2011 : \* handles additional decompression options for tarballs (tgz taz tbz txz)

v33 May 31, 2011 : \* using `fnameescape()` instead of `escape()`  
 \* \*.xz support

v32 Jun 19, 2010 : \* (Jan Steffens) added support for xz compression

v31 Jun 29, 2008 : \* (Bill McCarthy) fixed having hls enabled with `getscript`  
 \* (David Schaefer) the `acd` option interferes with vimballs  
 Solution: bypass the `acd` option

v30 Jun 13, 2008 : \* GLVS now checks for existence of `fnameescape()` and will issue an error message if it is not supported

v29 Jan 07, 2008 : \* Bram M pointed out that `cpo` is a global option and that `getscriptPlugin.vim` was setting it but not restoring it.

v28 Jan 02, 2008 : \* improved shell quoting character handling, cygwin interface, `register-a` bypass

Oct 29, 2007 \* Bill McCarthy suggested a change to `getscript` that avoids creating pop-up windows

v24 Apr 16, 2007 : \* removed `save&restore` of the `fo` option during script loading

v23 Nov 03, 2006 : \* ignores comments (`#...`)  
 \* handles vimballs

v22 Oct 13, 2006 : \* supports automatic use of `curl` if `wget` is not available

v21 May 01, 2006 : \* now takes advantage of autoloading.

v20 Dec 23, 2005 : \* Eric Haarbauer found&fixed a bug with `unzip` use; `unzip` needs the `-o` flag to overwrite.

v19 Nov 28, 2005 : \* v18's `GetLatestVimScript` line accessed the wrong script! Fixed.

v18 Mar 21, 2005 : \* bugfix to automatic database construction  
 \* bugfix - `nowrapscan` caused an error (tnx to David Green for the fix)

Apr 01, 2005 \* if shell is `bash`, `"mv"` instead of `"ren"` used in `:AutoInstall:s`, even though its o/s is windows

Apr 01, 2005 \* when downloading errors occurred, GLVS was terminating early. It now just goes on to trying the next script (after trying three times to download a script description page)

Apr 20, 2005 \* bugfix - when a failure to download occurred, `GetLatestVimScripts` would stop early and claim that everything was current. Fixed.

v17 Aug 25, 2004 : \* `g:GetLatestVimScripts_allowautoinstall`, which defaults to 1, can be used to prevent all

```

:AutoInstall:
v16 Aug 25, 2004 : * made execution of bunzip2/gunzip/tar/zip silent
 * fixed bug with :AutoInstall: use of helptags
v15 Aug 24, 2004 : * bugfix: the "0 0 comment" download prevention wasn't
 always preventing downloads (just usually). Fixed.
v14 Aug 24, 2004 : * bugfix -- helptags was using dotvim, rather than
 s:dotvim. Fixed.
v13 Aug 23, 2004 : * will skip downloading a file if its scriptid or srcid
 is zero. Useful for script authors; that way their
 own GetLatestVimScripts activity won't overwrite
 their scripts.
v12 Aug 23, 2004 : * bugfix - a "return" got left in the distribution that
 was intended only for testing. Removed, now works.
 * :AutoInstall: implemented
v11 Aug 20, 2004 : * GetLatestVimScripts is now a plugin:
 * :GetLatestVimScripts command
 * (runtimepath)/GetLatest/GetLatestVimScripts.dat
 now holds scripts that need updating
v10 Apr 19, 2004 : * moved history from script to doc
v9 Jan 23, 2004 : windows (win32/win16/win95) will use
 double quotes ("") whereas other systems will use
 single quotes (') around the urls in calls via wget
v8 Dec 01, 2003 : makes three tries at downloading
v7 Sep 02, 2003 : added error messages if "Click on..." or "src_id="
 not found in downloaded webpage
 Uses t_ti, t_te, and rs to make progress visible
 final status messages now display summary of work
 ("Downloaded someqty scripts" or
 "Everything was current")
v6 Aug 06, 2003 : Now GetLatestVimScripts is careful about downloading
 GetLatestVimScripts.vim itself!
 (goes to <NEW_GetLatestVimScripts.vim>)
v5 Aug 04, 2003 : missing an endif near bottom
v4 Jun 17, 2003 : redraw! just before each "considering" message
v3 May 27, 2003 : Protects downloaded files from errant shell
 expansions with single quotes: '...'
v2 May 14, 2003 : extracts name of item to be obtained from the
 script file. Uses it instead of comment field
 for output filename; comment is used in the
 "considering..." line and is now just a comment!
 * Fixed a bug: a string-of-numbers is not the
 same as a number, so I added zero to them
 and they became numbers. Fixes comparison.

```

```
=====
```

Editing compressed files with Vim `gzip` `bzip2` `compress`

1. Autocommands `gzip-autocmd`

The functionality mentioned here is a `standard-plugin`. This plugin is only available if `'compatible'` is not set. You can avoid loading this plugin by setting the "loaded\_gzip" variable:  
`:let loaded_gzip = 1`

`g:gzip_exec`

For security reasons, one may prevent that Vim runs executables automatically when opening a buffer. This option (default: "1") can be used to prevent executing the executables command when set to "0":

`:let g:gzip_exec = 0`

---

1. Autocommands `gzip-autocmd`

The plugin installs autocommands to intercept reading and writing of files with these extensions:

extension	compression
*.bz2	bzip2
*.bz3	bzip3
*.gz	gzip
*.lz	lzip
*.lz4	lz4
*.lzma	lzma
*.xz	xz
*.Z	compress (Lempel-Ziv)
*.zst	zstd

That's actually the only thing you need to know. There are no options.

After decompressing a file, the filetype will be detected again. This will make a file like "foo.c.gz" get the "c" filetype.

If you have `'patchmode'` set, it will be appended after the extension for compression. Thus editing the patchmode file will not give you the automatic decompression. You have to rename the file if you want this.

---

## 2. LogiPat Manual

[logiPat-manual](#)   [logiPat-man](#)

[logiPat-arg](#)   [logiPat-input](#)   [logiPat-pattern](#)   [logiPat-operators](#)

Boolean logic patterns are composed of

```

operators ! = not
 | = logical-or
 & = logical-and
grouping (...)
patterns "pattern"

```

### [logiPat-cmd](#)

```

:LogiPat {boolean-logic pattern} :LogiPat
:LogiPat is a command which takes a boolean-logic
argument (logiPat-arg).

```

```

:LP {boolean-logic pattern} :LP
:LP is a shorthand command version of :LogiPat
(logiPat-cmd).

```

```

:LPE {boolean-logic pattern} :LPE
No search is done, but the conversion from the
boolean logic pattern to the regular expression
is performed and echoed onto the display.

```

```

:LogiPatFlags {search flags} :LogiPat-flags
LogiPat uses the search\(\) command. The flags
passed to that call to search() may be specified
by the :LogiPatFlags command.

```

```

:LPF {search flags} :LPF
:LPF is a shorthand version of :LogiPatFlags.

```

```

:let pat=LogiPat({boolean-logic pattern}) :LogiPat()
If one calls LogiPat() directly, no search

```

is done, but the transformation from the boolean logic pattern into a regular expression pattern is performed and returned.

To get a " inside a pattern, as opposed to having it delimit the pattern, double it.

---

### 3. LogiPat Examples

logiPat-examples

LogiPat takes Boolean logic arguments and produces a regular expression which implements the choices. A series of examples follows:

```
:LogiPat "abc"
```

will search for lines containing the string :abc:

```
:LogiPat "ab""cd"
```

will search for lines containing the string :ab"cd:

```
:LogiPat !"abc"
```

will search for lines which don't contain the string :abc:

```
:LogiPat "abc"|"def"
```

will search for lines which contain either the string :abc: or the string :def:

```
:LogiPat !("abc"|"def")
```

will search for lines which don't contain either of the strings :abc: or :def:

```
:LogiPat "abc"&"def"
```

will search for lines which contain both of the strings :abc: and :def:

```
:let pat= LogiPat('!"abc"')
```

will return the regular expression which will match all lines not containing :abc: . The double quotes are needed to pass normal patterns to LogiPat, and differentiate such patterns from boolean logic operators.

---

### 4. Caveat

logiPat-caveat

The "not" operator may be fragile; ie. it may not always play well with the & (logical-and) and | (logical-or) operators. Please try out your patterns, possibly with :set hls, to insure that what is matching is what you want.

---

## 5. LogiPat History

logiPat-history

- v4 Jun 22, 2015 \* LogiPat has been picked up by Bram M for standard plugin distribution; hence the name change
- v3 Sep 25, 2006 \* LP\_Or() fixed; it now encapsulates its output in \%(...\) parentheses
- Dec 12, 2011 \* :LPE added
- \* "" is mapped to a single " and left inside patterns
- v2 May 31, 2005 \* LPF and LogiPatFlags commands weren't working
- v1 May 23, 2005 \* initial release

## 2. Starting With Netrw netrw-start {{{1

Netrw makes reading files, writing files, browsing over a network, and local browsing easy! First, make sure that you have plugins enabled, so you'll need to have at least the following in your `<.vimrc>`: (or see `netrw-activate` )

```
set nocp " 'compatible' is not set
filetype plugin on " plugins are enabled
```

(see `'cp'` and `:filetype-plugin-on` )

Netrw supports "transparent" editing of files on other machines using urls (see `netrw-transparent` ). As an example of this, let's assume you have an account on some other machine; if you can use scp, try:

```
vim scp://hostname/path/to/file
```

Want to make ssh/scp easier to use? Check out `netrw-ssh-hack` !

So, what if you have ftp, not ssh/scp? That's easy, too; try

```
vim ftp://hostname/path/to/file
```

Want to make ftp simpler to use? See if your ftp supports a file called `<.netrc>` -- typically it goes in your home directory, has read/write permissions for only the user to read (ie. not group, world, other, etc), and has lines resembling

```
machine HOSTNAME login USERID password "PASSWORD"
machine HOSTNAME login USERID password "PASSWORD"
...
default login USERID password "PASSWORD"
```

Windows' ftp doesn't support `.netrc`; however, one may have in one's `.vimrc`:

```
let g:netrw_ftp_cmd= 'c:\Windows\System32\ftp -s:C:\Users\MyUserName\MACHINE'
```

Netrw will substitute the host's machine name for "MACHINE" from the URL it is attempting to open, and so one may specify

```
userid
password
```

for each site in a separate file: `c:\Users\MyUserName\MachineName`.

Now about browsing -- when you just want to look around before editing a file. For browsing on your current host, just "edit" a directory:

```
vim .
```

```
vim /home/userid/path
```

For browsing on a remote host, "edit" a directory (but make sure that the directory name is followed by a "/"):

```
vim scp://hostname/
vim ftp://hostname/path/to/dir/
```

See [netrw-browse](#) for more!

There are more protocols supported by netrw than just scp and ftp, too: see the next section, [netrw-externapp](#), on how to use these external applications with netrw and vim.

## PREVENTING LOADING

[netrw-noload](#)

If you want to use plugins, but for some reason don't wish to use netrw, then you need to avoid loading both the plugin and the autoload portions of netrw. You may do so by placing the following two lines in your `<.vimrc`:

```
:let g:loaded_netrw = 1
:let g:loaded_netrwPlugin = 1
```

---

## 3. Netrw Reference

[netrw-ref](#) {{{1

Netrw supports several protocols in addition to scp and ftp as mentioned in [netrw-start](#). These include dav, fetch, http,... well, just look at the list in [netrw-externapp](#). Each protocol is associated with a variable which holds the default command supporting that protocol.

## EXTERNAL APPLICATIONS AND PROTOCOLS

[netrw-externapp](#) {{{2

Protocol	Variable	Default Value
dav:	<a href="#">g:netrw_dav_cmd</a>	= "cadaver" if cadaver is executable
dav:	<a href="#">g:netrw_dav_cmd</a>	= "curl -o" elseif curl is available
fetch:	<a href="#">g:netrw_fetch_cmd</a>	= "fetch -o" if fetch is available
ftp:	<a href="#">g:netrw_ftp_cmd</a>	= "ftp"
http:	<a href="#">g:netrw_http_cmd</a>	= "elinks" if elinks is available
http:	<a href="#">g:netrw_http_cmd</a>	= "links" elseif links is available
http:	<a href="#">g:netrw_http_cmd</a>	= "curl" elseif curl is available
http:	<a href="#">g:netrw_http_cmd</a>	= "wget" elseif wget is available
http:	<a href="#">g:netrw_http_cmd</a>	= "fetch" elseif fetch is available
http:	<a href="#">g:netrw_http_put_cmd</a>	= "curl -T"
rcp:	<a href="#">g:netrw_rcp_cmd</a>	= "rcp"
rsync:	<a href="#">g:netrw_rsync_cmd</a>	= "rsync" (see <a href="#">g:netrw_rsync_sep</a> )
scp:	<a href="#">g:netrw_scp_cmd</a>	= "scp -q"
sftp:	<a href="#">g:netrw_sftp_cmd</a>	= "sftp"
file:	<a href="#">g:netrw_file_cmd</a>	= "elinks" or "links"

[g:netrw\\_http\\_xcmd](#) : the option string for http://... protocols are specified via this variable and may be independently overridden. By

default, the option arguments for the http-handling commands are:

```
elinks : "-source >"
links : "-dump >"
curl : "-L -o"
wget : "-q -O"
fetch : "-o"
```

For example, if your system has elinks, and you'd rather see the page using an attempt at rendering the text, you may wish to have  
`let g:netrw_http_xcmd= "-dump >"`  
in your `.vimrc`.

`g:netrw_http_put_cmd`: this option specifies both the executable and any needed options. This command does a PUT operation to the url.

## READING

`netrw-read` `netrw-nread` {{{2

Generally, one may just use the URL notation with a normal editing command, such as

```
:e ftp://[user@]machine/path
```

Netrw also provides the Nread command:

<code>:Nread ?</code>	give help
<code>:Nread "machine:path"</code>	uses rcp
<code>:Nread "machine path"</code>	uses ftp w/ <code>&lt;.netrc&gt;</code>
<code>:Nread "machine id password path"</code>	uses ftp
<code>:Nread "dav://machine[:port]/path"</code>	uses cadaver
<code>:Nread "fetch://[user@]machine/path"</code>	uses fetch
<code>:Nread "ftp://[user@]machine[[:#]port]/path"</code>	uses ftp w/ <code>&lt;.netrc&gt;</code>
<code>:Nread "http://[user@]machine/path"</code>	uses http uses wget
<code>:Nread "rcp://[user@]machine/path"</code>	uses rcp
<code>:Nread "rsync://[user@]machine[:port]/path"</code>	uses rsync
<code>:Nread "scp://[user@]machine[[:#]port]/path"</code>	uses scp
<code>:Nread "sftp://[user@]machine/path"</code>	uses sftp

## WRITING

`netrw-write` `netrw-nwrite` {{{2

One may just use the URL notation with a normal file writing command, such as

```
:w ftp://[user@]machine/path
```

Netrw also provides the Nwrite command:

<code>:Nwrite ?</code>	give help
<code>:Nwrite "machine:path"</code>	uses rcp
<code>:Nwrite "machine path"</code>	uses ftp w/ <code>&lt;.netrc&gt;</code>
<code>:Nwrite "machine id password path"</code>	uses ftp
<code>:Nwrite "dav://machine[:port]/path"</code>	uses cadaver
<code>:Nwrite "ftp://[user@]machine[[:#]port]/path"</code>	uses ftp w/ <code>&lt;.netrc&gt;</code>

```

:Nwrite "rcp://[user@]machine/path" uses rcp
:Nwrite "rsync://[user@]machine[:port]/path" uses rsync
:Nwrite "scp://[user@]machine[[:#]port]/path" uses scp
:Nwrite "sftp://[user@]machine/path" uses sftp
http: not supported!

```

## SOURCING

`netrw-source` {{{2

One may just use the URL notation with the normal file sourcing command, such as

```
:so ftp://[user@]machine/path
```

Netrw also provides the Nsource command:

```

:Nsource ? give help
:Nsource "dav://machine[:port]/path" uses cadaver
:Nsource "fetch://[user@]machine/path" uses fetch
:Nsource "ftp://[user@]machine[[:#]port]/path" uses ftp w/ <.netrc>
:Nsource "http://[user@]machine/path" uses http uses wget
:Nsource "rcp://[user@]machine/path" uses rcp
:Nsource "rsync://[user@]machine[:port]/path" uses rsync
:Nsource "scp://[user@]machine[[:#]port]/path" uses scp
:Nsource "sftp://[user@]machine/path" uses sftp

```

## DIRECTORY LISTING

`netrw-trailingslash` `netrw-dirlist` {{{2

One may browse a directory to get a listing by simply attempting to edit the directory:

```

:e scp://[user]@hostname/path/
:e ftp://[user]@hostname/path/

```

For remote directory listings (ie. those using scp or ftp), that trailing "/" is necessary (the slash tells netrw to treat the argument as a directory to browse instead of as a file to download).

The Nread command may also be used to accomplish this (again, that trailing slash is necessary):

```
:Nread [protocol]://[user]@hostname/path/
```

## CHANGING USERID AND PASSWORD

`netrw-login` `netrw-password`  
`netrw-chgup` `netrw-userpass` {{{2

Attempts to use ftp will prompt you for a user-id and a password. These will be saved in global variables `g:netrw_uid` and `s:netrw_passwd`; subsequent use of ftp will re-use those two strings, thereby simplifying use of ftp. However, if you need to use a different user id and/or password, you'll want to call `NetUserPass()` first. To work around the need to enter passwords, check if your ftp supports a `<.netrc>` file in your home directory. Also see `netrw-passwd` (and if you're using ssh/scp hoping to figure out how to not need to use passwords for scp, look at `netrw-ssh-hack`).

```

:NetUserPass [uid [password]] -- prompts as needed
:call NetUserPass() -- prompts for uid and password
:call NetUserPass("uid") -- prompts for password
:call NetUserPass("uid","password") -- sets global uid and password

```

(Related topics: [ftp](#) [netrw-userpass](#) [netrw-start](#) )

## NETRW VARIABLES AND SETTINGS

[netrw-variables](#) {{{2

(Also see:

```

netrw-browser-var : netrw browser option variables
netrw-protocol : file transfer protocol option variables
netrw-settings : additional file transfer options
netrw-browser-options : these options affect browsing directories

```

)

Netrw provides a lot of variables which allow you to customize netrw to your preferences. One way to look at them is via the command `:NetrwSettings` (see [netrw-settings](#) ) which will display your current netrw settings. Most such settings are described below, in [netrw-browser-options](#) , and in [netrw-externapp](#) :

```

b:netrw_lastfile last file Network-read/written retained on a
 per-buffer basis (supports plain :Nw)

g:netrw_bufsettings the settings that netrw buffers have
 (default) noma nomod nonu nowrap ro nobl

g:netrw_chgwin specifies a window number where subsequent file edits
 will take place. (also see netrw-C)
 (default) -1

g:Netrw_funcref specifies a function (or functions) to be called when
 netrw edits a file. The file is first edited, and
 then the function reference (Funcref) is called.
 This variable may also hold a List of Funcrefs.
 (default) not defined. (the capital in g:Netrw...
 is required by its holding a function reference)

 Example: place in .vimrc; affects all file opening
 fun! MyFuncRef()
 endfun
 let g:Netrw_funcref= function("MyFuncRef")

g:Netrw_UserMaps specifies a function or List of functions which can
 be used to set up user-specified maps and functionality.
 See netrw-usermaps

g:netrw_ftp if it doesn't exist, use default ftp
 =0 use default ftp (uid password)
 =1 use alternate ftp method (user uid password)
 If you're having trouble with ftp, try changing the
 value of this variable to see if the alternate ftp

```

method works for your setup.

- g:netrw\_ftp\_options** Chosen by default, these options are supposed to turn interactive prompting off and to restrain ftp from attempting auto-login upon initial connection. However, it appears that not all ftp implementations support this (ex. ncftp).  
="-i -n"
- g:netrw\_ftpextracmd** default: doesn't exist  
If this variable exists, then any string it contains will be placed into the commands set to your ftp client. As an example:  
="passive"
- g:netrw\_ftpmode** ="binary" (default)  
="ascii"
- g:netrw\_ignorenetrc** =0 (default for linux, cygwin)  
=1 If you have a `<.netrc>` file but it doesn't work and you want it ignored, then set this variable as shown. (default for Windows + cmd.exe)
- g:netrw\_menu** =0 disable netrw's menu  
=1 (default) netrw's menu enabled
- g:netrw\_uid** (ftp) user-id, retained on a per-vim-session basis  
**s:netrw\_passwd** (ftp) password, retained on a per-vim-session basis
- g:netrw\_preview** =0 (default) preview window shown in a horizontally split window  
=1 preview window shown in a vertically split window.  
Also affects the "previous window" (see `netrw-P`) in the same way.  
The `g:netrw_alto` variable may be used to provide additional splitting control:
- | g:netrw_preview | g:netrw_alto | result        |
|-----------------|--------------|---------------|
| 0               | 0            | :abovetopleft |
| 0               | 1            | :belowright   |
| 1               | 0            | :topleft      |
| 1               | 1            | :botright     |
- To control sizing, see `g:netrw_winsize`
- g:netrw\_scpport** = "-P" : option to use to set port for scp  
**g:netrw\_sshport** = "-p" : option to use to set port for ssh
- g:netrw\_sepchr** =\0xff  
=\0x01 for enc == euc-jp (and perhaps it should be for others, too, please let me know)  
Separates priority codes from filenames internally.  
See `netrw-p12` .
- g:netrw\_silent** =0 : transfers done normally  
=1 : transfers done silently

`g:netrw_use_errorwindow` =2: messages from netrw will use a popup window  
 Move the mouse and pause to remove the popup window.  
 (default value if popup windows are available)  
 =1 : messages from netrw will use a separate one  
 line window. This window provides reliable  
 delivery of messages.  
 (default value if popup windows are not available)  
 =0 : messages from netrw will use echoerr ;  
 messages don't always seem to show up this  
 way, but one doesn't have to quit the window.

`g:netrw_cygwin` =1 assume scp under windows is from cygwin. Also  
 permits network browsing to use ls with time and  
 size sorting (default if windows)  
 =0 assume Windows' scp accepts windows-style paths  
 Network browsing uses dir instead of ls  
 This option is ignored if you're using unix

`g:netrw_use_nt_rcp` =0 don't use the rcp of WinNT, Win2000 and WinXP  
 =1 use WinNT's rcp in binary mode (default)

## PATHS

`netrw-path` {{{2

Paths to files are generally user-directory relative for most protocols.  
 It is possible that some protocol will make paths relative to some  
 associated directory, however.

example: `vim scp://user@host/somefile`  
 example: `vim scp://user@host/subdir1/subdir2/somefile`

where "somefile" is in the "user"'s home directory. If you wish to get a  
 file using root-relative paths, use the full path:

example: `vim scp://user@host//somefile`  
 example: `vim scp://user@host//subdir1/subdir2/somefile`

---

## 4. Network-Oriented File Transfer

`netrw-xfer` {{{1

Network-oriented file transfer under Vim is implemented by a vim script  
 (<netrw.vim>) using plugin techniques. It currently supports both reading and  
 writing across networks using rcp, scp, ftp or ftp+<.netrc>, scp, fetch,  
 dav/cadaver, rsync, or sftp.

http is currently supported read-only via use of wget or fetch.

<netrw.vim> is a standard plugin which acts as glue between Vim and the  
 various file transfer programs. It uses autocommand events (BufReadCmd,  
 FileReadCmd, BufWriteCmd) to intercept reads/writes with url-like filenames.

ex. `vim ftp://hostname/path/to/file`

The characters preceding the colon specify the protocol to use; in the example, it's ftp. The `<netrw.vim>` script then formulates a command or a series of commands (typically ftp) which it issues to an external program (ftp, scp, etc) which does the actual file transfer/protocol. Files are read from/written to a temporary file (under Unix/Linux, /tmp/...) which the `<netrw.vim>` script will clean up.

Now, a word about Jan Minář's "FTP User Name and Password Disclosure"; first, ftp is not a secure protocol. User names and passwords are transmitted "in the clear" over the internet; any snooper tool can pick these up; this is not a netrw thing, this is a ftp thing. If you're concerned about this, please try to use scp or sftp instead.

Netrw re-uses the user id and password during the same vim session and so long as the remote hostname remains the same.

Jan seems to be a bit confused about how netrw handles ftp; normally multiple commands are performed in a "ftp session", and he seems to feel that the uid/password should only be retained over one ftp session. However, netrw does every ftp operation in a separate "ftp session"; so remembering the uid/password for just one "ftp session" would be the same as not remembering the uid/password at all. IMHO this would rapidly grow tiresome as one browsed remote directories, for example.

On the other hand, thanks go to Jan M. for pointing out the many vulnerabilities that netrw (and vim itself) had had in handling "crafted" filenames. The `shellescape()` and `fnameescape()` functions were written in response by Bram Moolenaar to handle these sort of problems, and netrw has been modified to use them. Still, my advice is, if the "filename" looks like a vim command that you aren't comfortable with having executed, don't open it.

`netrw-putty`   `netrw-pscp`   `netrw-psftp`

One may modify any protocol's implementing external application by setting a variable (ex. scp uses the variable `g:netrw_scp_cmd`, which is defaulted to "scp -q"). As an example, consider using PuTTY:

```
let g:netrw_scp_cmd = '"c:\Program Files\PuTTY\pscp.exe" -q -batch'
let g:netrw_sftp_cmd= '"c:\Program Files\PuTTY\psftp.exe"'
```

(note: it has been reported that windows 7 with putty v0.6's "-batch" option doesn't work, so its best to leave it off for that system)

See `netrw-p8` for more about putty, pscp, psftp, etc.

Ftp, an old protocol, seems to be blessed by numerous implementations. Unfortunately, some implementations are noisy (ie., add junk to the end of the file). Thus, concerned users may decide to write a `NetReadFixup()` function that will clean up after reading with their ftp. Some Unix systems (ie., FreeBSD) provide a utility called "fetch" which uses the ftp protocol but is not noisy and more convenient, actually, for `<netrw.vim>` to use. Consequently, if "fetch" is available (ie. executable), it may be preferable to use it for ftp://... based transfers.

For rcp, scp, sftp, and http, one may use network-oriented file transfers

transparently; ie.

```
vim rcp://[user@]machine/path
vim scp://[user@]machine/path
```

If your ftp supports `<.netrc>`, then it too can be transparently used if the needed triad of machine name, user id, and password are present in that file. Your ftp must be able to use the `<.netrc>` file on its own, however.

```
vim ftp://[user@]machine[[:#]portnumber]/path
```

Windows provides an ftp (typically `c:\Windows\System32\ftp.exe`) which uses an option, `-s:filename` (filename can and probably should be a full path) which contains ftp commands which will be automatically run whenever ftp starts. You may use this feature to enter a user and password for one site:

```
userid
password
```

`netrw-windows-netrc`      `netrw-windows-s`

If `g:netrw_ftp_cmd` contains `-s:[path/]MACHINE`, then (on Windows machines only) netrw will substitute the current machine name requested for ftp connections for MACHINE. Hence one can have multiple machine.ftp files containing login and password for ftp. Example:

```
let g:netrw_ftp_cmd= 'c:\Windows\System32\ftp -s:C:\Users\Myself\MACHINE'
vim ftp://myhost.somewhere.net/
```

will use a file

```
C:\Users\Myself\myhost.ftp
```

Often, ftp will need to query the user for the userid and password. The latter will be done "silently"; ie. asterisks will show up instead of the actually-typed-in password. Netrw will retain the userid and password for subsequent read/writes from the most recent transfer so subsequent transfers (read/write) to or from that machine will take place without additional prompting.

`netrw-urls`

Reading	Writing	Uses
DAV: dav://host/path :Nread dav://host/path	:Nwrite dav://host/path	cadaver cadaver
DAV + SSL: davs://host/path :Nread davs://host/path	:Nwrite davs://host/path	cadaver cadaver
FETCH: fetch://[user@]host/path fetch://[user@]host:http/path :Nread fetch://[user@]host/path	Not Available	fetch

FILE: file:///*	file:///*	
file://localhost/*	file://localhost/*	
FTP: (*3) ftp://[user@]host/path :Nread ftp://host/path :Nread host path :Nread host uid pass path	(*3) ftp://[user@]host/path :Nwrite ftp://host/path :Nwrite host path :Nwrite host uid pass path	ftp (*2) ftp+.netrc ftp+.netrc ftp
HTTP: wget is executable: (*4) http://[user@]host/path	Not Available	wget
HTTP: fetch is executable (*4) http://[user@]host/path	Not Available	fetch
RCP: rcp://[user@]host/path	rcp://[user@]host/path	rcp
RSYNC: rsync://[user@]host/path :Nread rsync://host/path :Nread rcp://host/path	rsync://[user@]host/path :Nwrite rsync://host/path :Nwrite rcp://host/path	rsync rsync rcp
SCP: scp://[user@]host/path :Nread scp://host/path	scp://[user@]host/path :Nwrite scp://host/path	scp scp (*1)
SFTP: sftp://[user@]host/path :Nread sftp://host/path	sftp://[user@]host/path :Nwrite sftp://host/path	sftp sftp (*1)

(\*1) For an absolute path use scp://machine//path.

(\*2) if `<.netrc>` is present, it is assumed that it will work with your ftp client. Otherwise the script will prompt for user-id and password.

(\*3) for ftp, "machine" may be machine#port or machine:port if a different port is needed than the standard ftp port

(\*4) for http:..., if wget is available it will be used. Otherwise, if fetch is available it will be used.

Both the :Nread and the :Nwrite ex-commands can accept multiple filenames.

## NETRC

## netrw-netrc

The `<.netrc>` file, typically located in your home directory, contains lines therein which map a hostname (machine name) to the user id and password you prefer to use with it.

The typical syntax for lines in a `<.netrc>` file is given as shown below. Ftp under Unix usually supports `<.netrc>`; ftp under Windows usually doesn't.

```
machine {full machine name} login {user-id} password "{password}"
default login {user-id} password "{password}"
```

Your ftp client must handle the use of `<.netrc>` on its own, but if the `<.netrc>` file exists, an ftp transfer will not ask for the user-id or password.

**Note:**

Since this file contains passwords, make very sure nobody else can read this file! Most programs will refuse to use a `.netrc` that is readable for others. Don't forget that the system administrator can still read the file! Ie. for Linux/Unix: `chmod 600 .netrc`

Even though Windows' ftp clients typically do not support `.netrc`, `netrw` has a work-around: see [netrw-windows-s](#) .

## PASSWORD

`netrw-passwd`

The script attempts to get passwords for ftp invisibly using `inputsecret()` , a built-in Vim function. See [netrw-userpass](#) for how to change the password after one has set it.

Unfortunately there doesn't appear to be a way for `netrw` to feed a password to `scp`. Thus every transfer via `scp` will require re-entry of the password. However, [netrw-ssh-hack](#) can help with this problem.

---

## 5. Activation

`netrw-activate {{{1`

Network-oriented file transfers are available by default whenever Vim's `'nocompatible'` mode is enabled. `Netrw`'s script files reside in your system's plugin, autoload, and syntax directories; just the `plugin/netrwPlugin.vim` script is sourced automatically whenever you bring up vim. The main script in `autoload/netrw.vim` is only loaded when you actually use `netrw`. I suggest that, at a minimum, you have at least the following in your `<.vimrc>` customization file:

```
set nocp
if version >= 600
 filetype plugin indent on
endif
```

By also including the following lines in your `.vimrc`, one may have `netrw` immediately activate when using `[g]vim` without any filenames, showing the current directory:

```
" Augroup VimStartup:
augroup VimStartup
au!
```

```
 au VimEnter * if expand("%") == "" | e . | endif
augroup END
```

---

## 6. Transparent Remote File Editing netrw-transparent {{{1

Transparent file transfers occur whenever a regular file read or write (invoked via an `:autocmd` for `BufReadCmd`, `BufWriteCmd`, or `SourceCmd` events) is made. Thus one may read, write, or source files across networks just as easily as if they were local files!

```
vim ftp://[user@]machine/path
...
:wq
```

See `netrw-activate` for more on how to encourage your vim to use plugins such as netrw.

For password-free use of `scp:`, see `netrw-ssh-hack`.

---

## 7. Ex Commands netrw-ex {{{1

The usual read/write commands are supported. There are also a few additional commands available. Often you won't need to use `Nwrite` or `Nread` as shown in `netrw-transparent` (ie. simply use

```
:e URL
:r URL
:w URL
```

instead, as appropriate) -- see `netrw-urls`. In the explanations below, a `{netfile}` is a URL to a remote file.

```
:[range]Nw[rite] :Nwrite :Nw
 Write the specified lines to the current
 file as specified in b:netrw_lastfile.
 (related: netrw-nwrite)
```

```
:[range]Nw[rite] {netfile} [{netfile}]...
 Write the specified lines to the {netfile}.
```

```
:Nr[ead] :Nread :Nr
 Read the lines from the file specified in b:netrw_lastfile
 into the current buffer. (related: netrw-nread)
```

```
:Nr[ead] {netfile} {netfile}...
 Read the {netfile} after the current line.
```

```
:Ns[ource] {netfile} :Nsource :Ns
 Source the {netfile}.
 To start up vim using a remote .vimrc, one may use
 the following (all on one line) (tnx to Antoine Mechelynck)
```

```
vim -u NORC -N
--cmd "runtime plugin/netrwPlugin.vim"
--cmd "source scp://HOSTNAME/.vimrc"
(related: netrw-source)
```

```
:call NetUserPass(NetUserPass\(\))
If g:netrw_uid and s:netrw_passwd don't exist,
this function will query the user for them.
(related: netrw-userpass)
```

```
:call NetUserPass("userid")
This call will set the g:netrw_uid and, if
the password doesn't exist, will query the user for it.
(related: netrw-userpass)
```

```
:call NetUserPass("userid","passwd")
This call will set both the g:netrw_uid and s:netrw_passwd.
The user-id and password are used by ftp transfers. One may
effectively remove the user-id and password by using empty
strings (ie. "").
(related: netrw-userpass)
```

```
:NetrwSettings This command is described in netrw-settings -- used to
display netrw settings and change netrw behavior.
```

---

## 8. Variables and Options [netrw-var](#) [netrw-settings](#) {{{1

(also see: [netrw-options](#) [netrw-variables](#) [netrw-protocol](#)  
[netrw-browser-settings](#) [netrw-browser-options](#) )

The `<netrw.vim>` script provides several variables which act as options to affect `<netrw.vim>`'s file transfer behavior. These variables typically may be set in the user's `<.vimrc>` file: (see also [netrw-settings](#) [netrw-protocol](#) )  
[netrw-options](#)

### ----- Netrw Options -----

Option	Meaning
b:netrw_col	Holds current cursor position (during NetWrite)
g:netrw_cygwin	=1 assume scp under windows is from cygwin (default/windows) =0 assume scp under windows accepts windows style paths (default/else)
g:netrw_ftp	=0 use default ftp (uid password)
g:netrw_ftpmode	="binary" (default) ="ascii" (your choice)
g:netrw_ignorenetrc	=1 (default) if you have a <code>&lt;.netrc&gt;</code> file but you don't want it used, then set this variable. Its

```

 mere existence is enough to cause <.netrc>
 to be ignored.
b:netrw_lastfile Holds latest method/machine/path.
b:netrw_line Holds current line number (during NetWrite)
g:netrw_silent =0 transfers done normally
 =1 transfers done silently
g:netrw_uid Holds current user-id for ftp.
g:netrw_use_nt_rcp =0 don't use WinNT/2K/XP's rcp (default)
 =1 use WinNT/2K/XP's rcp, binary mode

```

---

<

### netrw-internal-variables

The script will also make use of the following variables internally, albeit temporarily.

---

#### Temporary Variables

---

Variable	Meaning
b:netrw_method	Index indicating rcp/ftp+.netrc/ftp
w:netrw_method	(same as b:netrw_method)
g:netrw_machine	Holds machine name parsed from input
b:netrw_fname	Holds filename being accessed

---

### netrw-protocol

Netrw supports a number of protocols. These protocols are invoked using the variables listed below, and may be modified by the user.

---

#### Protocol Control Options

---

Option	Type	Setting	Meaning
netrw_ftp	variable	=doesn't exist =0 =1	userid set by "user userid" userid set by "user userid" userid set by "userid"
NetReadFixup	function	=doesn't exist =exists	no change Allows user to have files read via ftp automatically transformed however they wish by NetReadFixup()
g:netrw_dav_cmd	var	="cadaver"	if cadaver is executable
g:netrw_dav_cmd	var	="curl -o"	elseif curl is executable
g:netrw_fetch_cmd	var	="fetch -o"	if fetch is available
g:netrw_ftp_cmd	var	="ftp"	
g:netrw_http_cmd	var	="fetch -o"	if fetch is available
g:netrw_http_cmd	var	="wget -O"	else if wget is available
g:netrw_http_put_cmd	var	="curl -T"	
g:netrw_list_cmd	var	="ssh USEPORT HOSTNAME ls -Fa"	
g:netrw_rcp_cmd	var	="rcp"	

```

g:netrw_rsync_cmd var ="rsync"
g:netrw_rsync_sep var ="/" used to separate the hostname
 from the file spec

g:netrw_scp_cmd var ="scp -q"
g:netrw_sftp_cmd var ="sftp"

```

---

## netrw-ftp

The `g:netrw_..._cmd` options ( `g:netrw_ftp_cmd` and `g:netrw_sftp_cmd` ) specify the external program to use handle the ftp protocol. They may include command line options (such as `-p` for passive mode). Example:

```
let g:netrw_ftp_cmd= "ftp -p"
```

Browsing is supported by using the `g:netrw_list_cmd` ; the substring "HOSTNAME" will be changed via substitution with whatever the current request is for a hostname.

Two options ( `g:netrw_ftp` and `netrw-fixup` ) both help with certain ftp's that give trouble . In order to best understand how to use these options if ftp is giving you troubles, a bit of discussion is provided on how netrw does ftp reads.

For ftp, netrw typically builds up lines of one of the following formats in a temporary file:

IF <code>g:netrw_ftp !exists</code> or is not 1	IF <code>g:netrw_ftp exists</code> and is 1
<pre> open machine [port] user userid password [g:netrw_ftpmode] [g:netrw_ftpextracmd] get filename tempfile </pre>	<pre> open machine [port] userid password password [g:netrw_ftpmode] [g:netrw_extracmd] get filename tempfile </pre>

---

The `g:netrw_ftpmode` and `g:netrw_ftpextracmd` are optional.

Netrw then executes the lines above by use of a filter:

```
:%! {g:netrw_ftp_cmd} -i [-n]
```

where

```

g:netrw_ftp_cmd is usually "ftp",
-i tells ftp not to be interactive
-n means don't use netrc and is used for Method #3 (ftp w/o <.netrc>)

```

If `<.netrc>` exists it will be used to avoid having to query the user for userid and password. The transferred file is put into a temporary file. The temporary file is then read into the main editing session window that requested it and the temporary file deleted.

If your ftp doesn't accept the "user" command and immediately just demands a userid, then try putting "let netrw\_ftp=1" in your `<.vimrc>`.

[netrw-cadaver](#)

To handle the SSL certificate dialog for untrusted servers, one may pull down the certificate and place it into `/usr/ssl/cert.pem`. This operation renders the server treatment as "trusted".

[netrw-fixup](#) [netreadfixup](#)

If your ftp for whatever reason generates unwanted lines (such as AUTH messages) you may write a `NetReadFixup()` function:

```
function! NetReadFixup(method,line1,line2)
 " a:line1: first new line in current file
 " a:line2: last new line in current file
 if a:method == 1 "rcp
 elseif a:method == 2 "ftp + <.netrc>
 elseif a:method == 3 "ftp + machine,uid,password,filename
 elseif a:method == 4 "scp
 elseif a:method == 5 "http/wget
 elseif a:method == 6 "dav/cadaver
 elseif a:method == 7 "rsync
 elseif a:method == 8 "fetch
 elseif a:method == 9 "sftp
 else
 " complain
 endif
endfunction
```

The `NetReadFixup()` function will be called if it exists and thus allows you to customize your reading process.

=====

9. Browsing [netrw-browsing](#) [netrw-browse](#) [netrw-help](#) {{{1  
[netrw-browser](#) [netrw-dir](#) [netrw-list](#)

**INTRODUCTION TO BROWSING** [netrw-intro-browse](#) {{{2  
(Quick References: [netrw-quickmaps](#) [netrw-quickcoms](#) )

Netrw supports the browsing of directories on your local system and on remote hosts; browsing includes listing files and directories, entering directories, editing files therein, deleting files/directories, making new directories, moving (renaming) files and directories, copying files and directories, etc. One may mark files and execute any system command on them! The Netrw browser generally implements the previous explorer's maps and commands for remote directories, although details (such as pertinent global variable names) necessarily differ. To browse a directory, simply "edit" it!

```
vim /your/directory/
vim .
vim c:\your\directory\
```

(Related topics: [netrw-cr](#) [netrw-o](#) [netrw-p](#) [netrw-P](#) [netrw-t](#)

[netrw-mf](#)   [netrw-mx](#)   [netrw-D](#)   [netrw-R](#)   [netrw-v](#) )

The Netrw remote file and directory browser handles two protocols: ssh and ftp. The protocol in the url, if it is ftp, will cause netrw also to use ftp in its remote browsing. Specifying any other protocol will cause it to be used for file transfers; but the ssh protocol will be used to do remote browsing.

To use Netrw's remote directory browser, simply attempt to read a "file" with a trailing slash and it will be interpreted as a request to list a directory:

```
vim [protocol]://[user@]hostname/path/
```

where [\[protocol\]](#) is typically scp or ftp. As an example, try:

```
vim ftp://ftp.home.vim.org/pub/vim/
```

For local directories, the trailing slash is not required. Again, because it's easy to miss: to browse remote directories, the URL must terminate with a slash!

If you'd like to avoid entering the password repeatedly for remote directory listings with ssh or scp, see [netrw-ssh-hack](#) . To avoid password entry with ftp, see [netrw-netrc](#) (if your ftp supports it).

There are several things you can do to affect the browser's display of files:

- \* To change the listing style, press the "i" key ( [netrw-i](#) ).  
Currently there are four styles: thin, long, wide, and tree.  
To make that change "permanent", see [g:netrw\\_liststyle](#) .
- \* To hide files (don't want to see those xyz~ files anymore?) see [netrw-ctrl-h](#) .
- \* Press s to sort files by name, time, or size.

See [netrw-browse-cmds](#) for all the things you can do with netrw!

[netrw-getftype](#)   [netrw-filigree](#)   [netrw-ftype](#)

The [getftype\(\)](#) function is used to append a bit of filigree to indicate filetype to locally listed files:

```
directory : /
executable : *
fifo : |
links : @
sockets : =
```

The filigree also affects the [g:netrw\\_sort\\_sequence](#) .

gp	Change local-only file permissions	<a href="#">netrw-gp</a>
i	Cycle between thin, long, wide, and tree listings	<a href="#">netrw-i</a>
I	Toggle the displaying of the banner	<a href="#">netrw-I</a>
mb	Bookmark current directory	<a href="#">netrw-mb</a>
mc	Copy marked files to marked-file target directory	<a href="#">netrw-mc</a>
md	Apply diff to marked files (up to 3)	<a href="#">netrw-md</a>
me	Place marked files on arg list and edit them	<a href="#">netrw-me</a>
mf	Mark a file	<a href="#">netrw-mf</a>

mF	Unmark files	netrw-mF
mg	Apply vimgrep to marked files	netrw-mg
mh	Toggle marked file suffices' presence on hiding list	netrw-mh
mm	Move marked files to marked-file target directory	netrw-mm
mp	Print marked files	netrw-mp
mr	Mark files using a shell-style <code>regex</code>	netrw-mr
mt	Current browsing directory becomes markfile target	netrw-mt
mT	Apply ctags to marked files	netrw-mT
mu	Unmark all marked files	netrw-mu
mv	Apply arbitrary vim command to marked files	netrw-mv
mx	Apply arbitrary shell command to marked files	netrw-mx
mX	Apply arbitrary shell command to marked files en bloc	netrw-mX
mz	Compress/decompress marked files	netrw-mz
o	Enter the file/directory under the cursor in a new browser window. A horizontal split is used.	netrw-o
O	Obtain a file specified by cursor	netrw-O
p	Preview the file	netrw-p
P	Browse in the previously used window	netrw-P
qb	List bookmarked directories and history	netrw-qb
qf	Display information on file	netrw-qf
qF	Mark files using a quickfix list	netrw-qF
qL	Mark files using a <code>location-list</code>	netrw-qL
r	Reverse sorting order	netrw-r
R	Rename the designated file(s)/directory(ies)	netrw-R
s	Select sorting style: by name, time, or file size	netrw-s
S	Specify suffix priority for name-sorting	netrw-S
t	Enter the file/directory under the cursor in a new tab	netrw-t
u	Change to recently-visited directory	netrw-u
U	Change to subsequently-visited directory	netrw-U
v	Enter the file/directory under the cursor in a new browser window. A vertical split is used.	netrw-v
x	View file with an associated program	:Open
X	Execute filename under cursor via <code>system()</code>	netrw-X
%	Open a new file in netrw's current directory	netrw-%

**netrw-mouse**    **netrw-leftmouse**    **netrw-middlemouse**    **netrw-rightmouse**

**<leftmouse>**    (gvim only) selects word under mouse as if a `<cr>` had been pressed (ie. edit file, change directory)

**<middlemouse>**    (gvim only) same as P selecting word under mouse; see `netrw-P`

**<rightmouse>**    (gvim only) delete file/directory using word under mouse

**<2-leftmouse>**    (gvim only) when:

- \* in a netrw-selected file, AND
- \* `g:netrw_retmap == 1`            AND
- \* the user doesn't already have a `<2-leftmouse>` mapping defined before netrw is autoloaded,

then a double clicked leftmouse button will return to the netrw browser window. See `g:netrw_retmap` .

**<s-leftmouse>**    (gvim only) like mf, will mark files. Dragging the shifted leftmouse will mark multiple files. (see `netrw-mf` )

(to disable mouse buttons while browsing: `g:netrw_mousemaps` )

### BANNER DISPLAY

`netrw-I`

One may toggle the displaying of the banner by pressing "I".

Also See: `g:netrw_banner`

### BOOKMARKING A DIRECTORY

`netrw-mb` `netrw-bookmark` `netrw-bookmarks` {{{2

One may easily "bookmark" the currently browsed directory by using

`mb`

`.netrwbook`

Bookmarks are retained in between sessions of vim in a file called `.netrwbook` as a `List`, which is typically stored in the first directory on the user's '`runtimepath`'; entries are kept in sorted order.

If there are marked files and/or directories, `mb` will add them to the bookmark list.

`netrw-:NetrwMB`

Additionally, one may use `:NetrwMB` to bookmark files or directories.

`:NetrwMB[!]` `[files/directories]`

No bang: enters files/directories into Netrw's bookmark system

No argument and in netrw buffer:

if there are marked files : bookmark marked files  
otherwise : bookmark file/directory under cursor

No argument and not in netrw buffer: bookmarks current open file

Has arguments : `glob()` s each arg and bookmarks them

With bang: deletes files/directories from Netrw's bookmark system

The `:NetrwMB` command is available outside of netrw buffers (once netrw has been

invoked in the session).

The file ".netrwbook" holds bookmarks when netrw (and vim) is not active. By default, its stored on the first directory on the user's 'runtimepath' .

Related Topics:

- `netrw-gb` how to return (go) to a bookmark

- `g:netrw_home` controls where .netrwbook is kept

## BROWSING

`netrw-enter`      `netrw-cr`    {{{2

Browsing is simple: move the cursor onto a file or directory of interest. Hitting the `<cr>` (the return key) will select the file or directory. Directories will themselves be listed, and files will be opened using the protocol given in the original read request.

CAVEAT: There are four forms of listing (see `netrw-i` ). Netrw assumes that two or more spaces delimit filenames and directory names for the long and wide listing formats. Thus, if your filename or directory name has two or more sequential spaces embedded in it, or any trailing spaces, then you'll need to use the "thin" format to select it.

The `g:netrw_browse_split` option, which is zero by default, may be used to cause the opening of files to be done in a new window or tab instead of the default. When the option is one or two, the splitting will be taken horizontally or vertically, respectively. When the option is set to three, a `<cr>` will cause the file to appear in a new tab.

When using the gui (gvim), one may select a file by pressing the `<leftmouse>` button. In addition, if

- \* `g:netrw_remap` == 1            AND    (its default value is 0)
- \* in a netrw-selected file, AND
- \* the user doesn't already have a `<2-leftmouse>` mapping defined before netrw is loaded

then a doubly-clicked leftmouse button will return to the netrw browser window.

Netrw attempts to speed up browsing, especially for remote browsing where one may have to enter passwords, by keeping and re-using previously obtained directory listing buffers. The `g:netrw_fastbrowse` variable is used to control this behavior; one may have slow browsing (no buffer re-use), medium speed browsing (re-use directory buffer listings only for remote directories), and fast browsing (re-use directory buffer listings as often as possible). The price for such re-use is that when changes are made (such as new files are introduced into a directory), the listing may become out-of-date. One may always refresh directory listing buffers by pressing `ctrl-L` (see `netrw-ctrl-l` ).

## Squeezing the Current Tree-Listing Directory

When the tree listing style is enabled (see [netrw-i](#) ) and one is using gvim, then the `<s-cr>` mapping may be used to squeeze (close) the directory currently containing the cursor.

Otherwise, one may remap a key combination of one's own choice to get this effect:

```
nmap <buffer> <silent> <nowait> YOURKEYCOMBO <Plug>NetrwTreeSqueeze
```

Put this line in `$HOME/ftplugin/netrw/netrw.vim`; it needs to be generated for netrw buffers only.

Related topics:

```

g:netrw_ftp_timelist_cmd g:netrw_ssh_browse_reject
g:netrw_ssh_cmd g:netrw_use_noswf
```

## BROWSING WITH A HORIZONTALLY SPLIT WINDOW

[netrw-o](#) [netrw-horiz](#) {{{2

Normally one enters a file or directory using the `<cr>`. However, the "o" map allows one to open a new window to hold the new directory listing or file. A horizontal split is used. (for vertical splitting, see [netrw-v](#) )

Normally, the o key splits the window horizontally with the new window and cursor at the top.

Associated setting variables: [g:netrw\\_alto](#) [g:netrw\\_winsize](#)

Related topics:

```
netrw-ctrl-r netrw-o netrw-p
netrw-P netrw-t netrw-v
```

Associated setting variables:

```
g:netrw_alto control above/below splitting
g:netrw_winsize control initial sizing
```

## BROWSING WITH A NEW TAB

[netrw-t](#) {{{2

Normally one enters a file or directory using the `<cr>`. The "t" map allows one to open a new window holding the new directory listing or file in a new tab.

If you'd like to have the new listing in a background tab, use [gT](#) .

Related topics:

```
netrw-ctrl-r netrw-o netrw-p
netrw-P netrw-t netrw-v
```

Associated setting variables:  
`g:netrw_winsize` control initial sizing

## **BROWSING WITH A VERTICALLY SPLIT WINDOW** `netrw-v` {{{2

Normally one enters a file or directory using the `<cr>`. However, the "v" map allows one to open a new window to hold the new directory listing or file. A vertical split is used. (for horizontal splitting, see `netrw-o` )

Normally, the v key splits the window vertically with the new window and cursor at the left.

There is only one tree listing buffer; using "v" on a displayed subdirectory will split the screen, but the same buffer will be shown twice.

Related topics:

`netrw-ctrl-r`    `netrw-o`            `netrw-p`  
`netrw-P`        `netrw-t`            `netrw-v`

Associated setting variables:  
`g:netrw_altv`     control right/left splitting  
`g:netrw_winsize` control initial sizing

## **BROWSING USING A GVIM SERVER** `netrw-ctrl-r` {{{2

One may keep a browsing gvim separate from the gvim being used to edit. Use the `<c-r>` map on a file (not a directory) in the netrw browser, and it will use a gvim server (see `g:netrw_servername` ). Subsequent use of `<cr>` (see `netrw-cr` ) will re-use that server for editing files.

Related topics:

`netrw-ctrl-r`    `netrw-o`            `netrw-p`  
`netrw-P`        `netrw-t`            `netrw-v`

Associated setting variables:  
`g:netrw_servername`     : sets name of server  
`g:netrw_browse_split`   : controls how `<cr>` will open files

## **CHANGE LISTING STYLE (THIN LONG WIDE TREE)** `netrw-i` {{{2

The "i" map cycles between the thin, long, wide, and tree listing formats.

The thin listing format gives just the files' and directories' names.

The long listing is either based on the "ls" command via ssh for remote directories or displays the filename, file size (in bytes), and the time and date of last modification for local directories. With the long listing format, netrw is not able to recognize filenames which have trailing spaces. Use the thin listing format for such files.

The wide listing format uses two or more contiguous spaces to delineate filenames; when using that format, netrw won't be able to recognize or use filenames which have two or more contiguous spaces embedded in the name or any trailing spaces. The thin listing format will, however, work with such files.

The wide listing format is the most compact.

The tree listing format has a top directory followed by files and directories preceded by one or more "|", which indicate the directory depth. One may open and close directories by pressing the <cr> key while atop the directory name.

One may make a preferred listing style your default; see [g:netrw\\_liststyle](#) . As an example, by putting the following line in your .vimrc, `let g:netrw_liststyle= 3` the tree style will become your default listing style.

One typical way to use the netrw tree display is to:

```
vim .
(use i until a tree display shows)
navigate to a file
v (edit as desired in vertically split window)
ctrl-w h (to return to the netrw listing)
P (edit newly selected file in the previous window)
ctrl-w h (to return to the netrw listing)
P (edit newly selected file in the previous window)
...etc...
```

Associated setting variables: [g:netrw\\_liststyle](#) [g:netrw\\_maxfilenamelen](#)  
[g:netrw\\_timefmt](#) [g:netrw\\_list\\_cmd](#)

### **CHANGE FILE PERMISSION** [netrw-gp](#) {{{2

"gp" will ask you for a new permission for the file named under the cursor. Currently, this only works for local files.

Associated setting variables: [g:netrw\\_chgperm](#)

### **CHANGING TO A BOOKMARKED DIRECTORY** [netrw-gb](#) {{{2

To change directory back to a bookmarked directory, use

```
{cnt}gb
```

Any count may be used to reference any of the bookmarks.

**Note** that [netrw-qb](#) shows both bookmarks and history; to go to a location stored in the history see [netrw-u](#) and [netrw-U](#) .

Related Topics:

- [netrw-mB](#) how to delete bookmarks
- [netrw-mb](#) how to make a bookmark
- [netrw-qb](#) how to list bookmarks

### **CHANGING TO A PREDECESSOR DIRECTORY** [netrw-u](#) [netrw-updir](#) {{{2

Every time you change to a new directory (new for the current session), netrw

will save the directory in a recently-visited directory history list (unless `g:netrw_dirhistmax` is zero; by default, it holds ten entries). With the "u" map, one can change to an earlier directory (predecessor). To do the opposite, see `netrw-U` .

The "u" map also accepts counts to go back in the history several slots. For your convenience, `qb` (see `netrw-qb` ) lists the history number which may be used in that count.

#### `.netrwhist`

See `g:netrw_dirhistmax` for how to control the quantity of history stack slots. The file ".netrwhist" holds history when netrw (and vim) is not active. By default, its stored on the first directory on the user's `'runtimepath'` .

Related Topics:

- `netrw-U` changing to a successor directory
- `g:netrw_home` controls where `.netrwhist` is kept

### **CHANGING TO A SUCCESSOR DIRECTORY** `netrw-U` `netrw-downdir` {{{2

With the "U" map, one can change to a later directory (successor). This map is the opposite of the "u" map. (see `netrw-u` ) Use the `qb` map to list both the bookmarks and history. (see `netrw-qb` )

The "U" map also accepts counts to go forward in the history several slots.

See `g:netrw_dirhistmax` for how to control the quantity of history stack slots.

### **CHANGING TREE TOP** `netrw-ntree` `:Ntree` `netrw-gn` {{{2

One may specify a new tree top for tree listings using

```
:Ntree [dirname]
```

Without a "dirname", the current line is used (and any leading depth information is elided).

With a "dirname", the specified directory name is used.

The "gn" map will take the word below the cursor and use that for changing the top of the tree listing.

### **DELETING BOOKMARKS** `netrw-curdir` `netrw-mB` {{{2

To delete a bookmark, use

```
{cnt}mB
```

If there are marked files, then `mB` will remove them from the bookmark list.

Alternatively, one may use `:NetrwMB!` (see [netrw-:NetrwMB](#) ).

`:NetrwMB! [files/directories]`

Related Topics:

[netrw-gb](#) how to return (go) to a bookmark  
[netrw-mb](#) how to make a bookmark  
[netrw-qb](#) how to list bookmarks

**DELETING FILES OR DIRECTORIES**    [netrw-delete](#)    [netrw-D](#)    [netrw-del](#)    {{{2

If files have not been marked with [netrw-mf](#) :    (local marked file list)

Deleting/removing files and directories involves moving the cursor to the file/directory to be deleted and pressing "D". Directories must be empty first before they can be successfully removed. If the directory is a softlink to a directory, then netrw will make two requests to remove the directory before succeeding. Netrw will ask for confirmation before doing the removal(s). You may select a range of lines with the "V" command (visual selection), and then pressing "D".

If files have been marked with [netrw-mf](#) :    (local marked file list)

Marked files (and empty directories) will be deleted; again, you'll be asked to confirm the deletion before it actually takes place.

A further approach is to delete files which match a pattern.

- \* use `:MF` pattern (see [netrw-:MF](#) ); then press "D".
- \* use `mr` (see [netrw-mr](#) ) which will prompt you for pattern. This will cause the matching files to be marked. Then, press "D".

Please [note](#) that only empty directories may be deleted with the "D" mapping. Regular files are deleted with [delete\(\)](#) , too.

The [g:netrw\\_rm\\_cmd](#) , [g:netrw\\_rmf\\_cmd](#) , and [g:netrw\\_rmdir\\_cmd](#) variables are used to control the attempts to remove remote files and directories. The [g:netrw\\_rm\\_cmd](#) is used with files, and its default value is:

```
g:netrw_rm_cmd: ssh HOSTNAME rm
```

The [g:netrw\\_rmdir\\_cmd](#) variable is used to support the removal of directories. Its default value is:

```
g:netrw_rmdir_cmd : ssh HOSTNAME rmdir
```

If removing a directory fails with [g:netrw\\_rmdir\\_cmd](#), netrw then will attempt to remove it again using the [g:netrw\\_rmf\\_cmd](#) variable. Its default value is:

```
g:netrw_rmf_cmd : ssh HOSTNAME rm -f
```

Related topics: [netrw-d](#)

DIRECTORY EXPLORATION COMMANDS {{{2

<code>:[N]Explore[!]</code>	<code>[dir]...</code>	Explore directory of current file	<a href="#">:Explore</a>
<code>:[N]Hexplore[!]</code>	<code>[dir]...</code>	Horizontal Split & Explore	<a href="#">:Hexplore</a>
<code>:[N]Lexplore[!]</code>	<code>[dir]...</code>	Left Explorer Toggle	<a href="#">:Lexplore</a>
<code>:[N]Sexplorer[!]</code>	<code>[dir]...</code>	Split&Explore current file's directory	<a href="#">:Sexplorer</a>
<code>:[N]Vexplorer[!]</code>	<code>[dir]...</code>	Vertical Split & Explore	<a href="#">:Vexplorer</a>
<code>:Texplorer</code>	<code>[dir]...</code>	Tab & Explore	<a href="#">:Texplorer</a>
<code>:Rexplore</code>		... Return to/from Explorer	<a href="#">:Rexplore</a>

Used with `:Explore **/pattern` : (also see [netrw-starstar](#) )  
`:Nexplore.....` go to next matching file      [:Nexplore](#)  
`:Pexplore.....` go to previous matching file      [:Pexplore](#)

#### [netrw-:Explore](#)

`:Explore` will open the local-directory browser on the current file's directory (or on directory `[dir]` if specified). The window will be split only if the file has been modified and `'hidden'` is not set, otherwise the browsing window will take over that window. Normally the splitting is taken horizontally.  
Also see: [netrw-:Rexplore](#)

`:Explore!` is like `:Explore`, but will use vertical splitting.

#### [netrw-:Hexplore](#)

`:Hexplore [dir]` does an `:Explore` with [:belowright](#) horizontal splitting.  
`:Hexplore! [dir]` does an `:Explore` with [:aboveleft](#) horizontal splitting.

#### [netrw-:Lexplore](#)

`:[N]Lexplore [dir]` toggles a full height Explorer window on the left hand side of the current tab. It will open a netrw window on the current directory if `[dir]` is omitted; a `:Lexplore [dir]` will show the specified directory in the left-hand side browser display no matter from which window the command is issued.

By default, `:Lexplore` will change an uninitialized [g:netrw\\_chgwin](#) to 2; edits will thus preferentially be made in window#2.

The `[N]` specifies a [g:netrw\\_winsize](#) just for the new `:Lexplore` window. That means that

- if `[N] < 0` : use `N` columns for the `Lexplore` window
- if `[N] = 0` : a normal split is made
- if `[N] > 0` : use `N%` of the current window will be used for the new window

Those who like this method often also like tree style displays; see [g:netrw\\_liststyle](#) .

`:[N]Lexplore! [dir]` is similar to `:Lexplore`, except that the full-height Explorer window will open on the right hand side and an uninitialized `g:netrw_chgwin` will be set to 1 (eg. edits will preferentially occur in the leftmost window).

Also see: `netrw-C` `g:netrw_browse_split` `g:netrw_wiw`  
`netrw-p` `netrw-P` `g:netrw_chgwin`  
`netrw-c-tab` `g:netrw_winsize`

#### `netrw-:Sexplore`

`:[N]Sexplore` will always split the window before invoking the local-directory browser. As with `Explore`, the splitting is normally done horizontally.

`:[N]Sexplore! [dir]` is like `:Sexplore`, but the splitting will be done vertically.

#### `netrw-:Texplore`

`:Texplore [dir]` does a `:tabnew` before generating the browser window

#### `netrw-:Vexplore`

`:[N]Vexplore [dir]` does an `:Explore` with `:leftabove` vertical splitting.

`:[N]Vexplore! [dir]` does an `:Explore` with `:rightbelow` vertical splitting.

The optional parameters are:

`[N]`: This parameter will override `g:netrw_winsize` to specify the quantity of rows and/or columns the new explorer window should have. Otherwise, the `g:netrw_winsize` variable, if it has been specified by the user, is used to control the quantity of rows and/or columns new explorer windows should have.

`[dir]`: By default, these explorer commands use the current file's directory. However, one may explicitly provide a directory (path) to use instead; ie.

`:Explore /some/path`

#### `netrw-:Rexplore`

`:Rexplore` This command is a little different from the other `Explore` commands as it doesn't necessarily open an Explorer window.

#### Return to Explorer

When one edits a file using `netrw` which can occur, for example, when pressing `<cr>` while the cursor is atop a filename in a `netrw` browser window, a `:Rexplore` issued while editing that file will return the display to that of the last `netrw` browser display in that window.

#### Return from Explorer

Conversely, when one is editing a directory, issuing a `:Rexplore` will return to editing the file that was last edited in that window.

The `<2-leftmouse>` map (which is only available under `gvim` and cooperative terms) does the same as `:Rexplore`.

Also see: [g:netrw\\_alto](#) [g:netrw\\_altv](#) [g:netrw\\_winsize](#)

[netrw-star](#) [netrw-starpat](#) [netrw-starstar](#) [netrw-starstarpat](#) [netrw-grep](#)  
EXPLORING WITH STARS AND PATTERNS {{{2

When Explore, Sexplore, Hexplore, or Vexplore are used with one of the following four patterns Explore generates a list of files which satisfy the request for the local file system. These exploration patterns will not work with remote file browsing.

```
*/filepat files in current directory which satisfy filepat
**/filepat files in current directory or below which satisfy the
 file pattern
*/pattern files in the current directory which contain the
 pattern (vimgrep is used)
**//pattern files in the current directory or below which contain
 the pattern (vimgrep is used)
```

<

The cursor will be placed on the first file in the list. One may then continue to go to subsequent files on that list via [:Nexplore](#) or to preceding files on that list with [:Pexplore](#) . Explore will update the directory and place the cursor appropriately.

A plain

[:Explore](#)

will clear the explore list.

If your console or gui produces recognizable shift-up or shift-down sequences, then you'll likely find using shift-downarrow and shift-uparrow convenient. They're mapped by netrw as follows:

```
<s-down> == Nexplore, and
<s-up> == Pexplore.
```

As an example, consider

```
:Explore */*.c
:Nexplore
:Nexplore
:Pexplore
```

The status line will show, on the right hand side of the status line, a message like "Match 3 of 20".

Associated setting variables:

```
g:netrw_keepdir g:netrw_browse_split
g:netrw_fastbrowse g:netrw_ftp_browse_reject
g:netrw_ftp_list_cmd g:netrw_ftp_sizelist_cmd
g:netrw_ftp_timelist_cmd g:netrw_list_cmd
g:netrw_liststyle
```

## DISPLAYING INFORMATION ABOUT FILE

`netrw-ql` {{{2

With the cursor atop a filename, pressing "ql" will reveal the file's size and last modification timestamp. Currently this capability is only available for local files.

## EDIT FILE OR DIRECTORY HIDING LIST

`netrw-ctrl-h` `netrw-edithide` {{{2

The "<ctrl-h>" map brings up a requestor allowing the user to change the file/directory hiding list contained in `g:netrw_list_hide`. The hiding list consists of one or more patterns delimited by commas. Files and/or directories satisfying these patterns will either be hidden (ie. not shown) or be the only ones displayed (see `netrw-a`).

The "gh" mapping (see `netrw-gh`) quickly alternates between the usual hiding list and the hiding of files or directories that begin with ".".

As an example,

```
let g:netrw_list_hide= '\(^|\s\s)\zs\.\S\+'
```

Effectively, this makes the effect of a `netrw-gh` command the initial setting. What it means:

```
\(^|\s\s) : if the line begins with the following, -or-
 two consecutive spaces are encountered
\zs : start the hiding match now
\. : if it now begins with a dot
\S\+ : and is followed by one or more non-whitespace
 characters
```

Associated setting variables: `g:netrw_hide` `g:netrw_list_hide`

Associated topics: `netrw-a` `netrw-gh` `netrw-mh`

## EDITING THE SORTING SEQUENCE

`netrw-sort-sequence`

`netrw-S` `netrw-sortsequence` {{{2

When "Sorted by" is name, one may specify priority via the sorting sequence (`g:netrw_sort_sequence`). The sorting sequence typically prioritizes the name-listing by suffix, although any pattern will do. Patterns are delimited by commas. The default sorting sequence is (all one line):

For Unix:

```
'[\\/]$, \<core\%(\\.d\+)\|=, \.[a-np-z]$, \.h$, \.c$, \.cpp$, *, \.o$, \.obj$,
\.info$, \.swp$, \.bak$, \~$'
```

Otherwise:

```
'[\\/]$, \.[a-np-z]$, \.h$, \.c$, \.cpp$, *, \.o$, \.obj$, \.info$,
\.swp$, \.bak$, \~$'
```

The lone \* is where all filenames not covered by one of the other patterns will end up. One may change the sorting sequence by modifying the `g:netrw_sort_sequence` variable (either manually or in your `<.vimrc>`) or by using the "S" map.

Related topics: [netrw-s](#) [netrw-S](#)  
Associated setting variables: [g:netrw\\_sort\\_sequence](#) [g:netrw\\_sort\\_options](#)

## EXECUTING FILE UNDER CURSOR VIA SYSTEM() [netrw-X](#) {{{2

Pressing `X` while the cursor is atop an executable file will yield a prompt using the filename asking for any arguments. Upon pressing a `[return]`, `netrw` will then call `system()` with that command and arguments. The result will be displayed by `:echomsg`, and so `:messages` will repeat display of the result. Ansi escape sequences will be stripped out.

See [cmdline-window](#) for directions for more on how to edit the arguments.

## FORCING TREATMENT AS A FILE OR DIRECTORY [netrw-gd](#) [netrw-gf](#) {{{2

Remote symbolic links (ie. those listed via `ssh` or `ftp`) are problematic in that it is difficult to tell whether they link to a file or to a directory.

To force treatment as a file: use  
`gf`

To force treatment as a directory: use  
`gd`

## GOING UP [netrw--](#) {{{2

To go up a directory, press `"-"` or press the `<cr>` when atop the `../` directory entry in the listing.

`Netrw` will use the command in [g:netrw\\_list\\_cmd](#) to perform the directory listing operation after changing `HOSTNAME` to the host specified by the user-provided url. By default `netrw` provides the command as:

```
ssh HOSTNAME ls -FLa
```

where the `HOSTNAME` becomes the `[user@]hostname` as requested by the attempt to read. Naturally, the user may override this command with whatever is preferred. The `NetList` function which implements remote browsing expects that directories will be flagged by a trailing slash.

## HIDING FILES OR DIRECTORIES [netrw-a](#) [netrw-hiding](#) {{{2

`Netrw`'s browsing facility allows one to use the hiding list in one of three ways: ignore it, hide files which match, and show only those files which match.

If no files have been marked via [netrw-mf](#) :

The `"a"` map allows the user to cycle through the three hiding modes.

The `g:netrw_list_hide` variable holds a comma delimited list of patterns based on regular expressions (ex. `^.*\obj$,^\.`) which specify the hiding list. (also see `netrw-ctrl-h`) To set the hiding list, use the `<c-h>` map. As an example, to hide files which begin with a ".", one may use the `<c-h>` map to set the hiding list to `'^\..*'` (or one may put `let g:netrw_list_hide= '^\..*'` in one's `<.vimrc>`). One may then use the "a" key to show all files, hide matching files, or to show only the matching files.

Example: `\.[ch]$\`  
This hiding list command will hide/show all \*.c and \*.h files.

Example: `\.c$,\.h$\`  
This hiding list command will also hide/show all \*.c and \*.h files.

Don't forget to use the "a" map to select the mode (normal/hiding/show) you want!

If files have been marked using `netrw-mf`, then this command will:

```
if showing all files or non-hidden files:
 modify the g:netrw_list_hide list by appending the marked files to it
 and showing only non-hidden files.

else if showing hidden files only:
 modify the g:netrw_list_hide list by removing the marked files from it
 and showing only non-hidden files.
endif
```

`netrw-gh` `netrw-hide`

As a quick shortcut, one may press

`gh`

to toggle between hiding files which begin with a period (dot) and not hiding them.

Associated setting variables: `g:netrw_list_hide` `g:netrw_hide`  
Associated topics: `netrw-a` `netrw-ctrl-h` `netrw-mh`

`netrw-gitignore`

Netrw provides a helper function `'netrw_gitignore#Hide()'` that, when used with `g:netrw_list_hide` automatically hides all git-ignored files.

`'netrw_gitignore#Hide'` searches for patterns in the following files:

```
'./.gitignore'
'./.git/info/exclude'
global gitignore file: `git config --global core.excludesfile`
system gitignore file: `git config --system core.excludesfile`
```

Files that do not exist, are ignored.

Git-ignore patterns are taken from existing files, and converted to patterns for hiding files. For example, if you had `'*.log'` in your `'gitignore'` file, it would be converted to `'.*\log'`.

To use this function, simply assign its output to `g:netrw_list_hide` option.

```
Example: let g:netrw_list_hide= netrw_gitignore#Hide()
 Git-ignored files are hidden in Netrw.
```

```
Example: let g:netrw_list_hide= netrw_gitignore#Hide('my_gitignore_file')
 Function can take additional files with git-ignore patterns.
```

```
Example: let g:netrw_list_hide= netrw_gitignore#Hide() .. '**.swp$'
 Combining 'netrw_gitignore#Hide' with custom patterns.
```

## IMPROVING BROWSING

`netrw-listhack` `netrw-ssh-hack` {{{2

Especially with the remote directory browser, constantly entering the password is tedious.

For Linux/Unix systems, the book "Linux Server Hacks - 100 industrial strength tips & tools" by Rob Flickenger (O'Reilly, ISBN 0-596-00461-3) gives a tip for setting up no-password ssh and scp and discusses associated security issues. It used to be available at <http://hacks.oreilly.com/pub/h/66> , but apparently that address is now being redirected to some "hackzine". I'll attempt a summary based on that article and on a communication from Ben Schmidt:

1. Generate a public/private key pair on the local machine (ssh client):

```
ssh-keygen -t rsa
(saving the file in ~/.ssh/id_rsa as prompted)
```
2. Just hit the <CR> when asked for passphrase (twice) for no passphrase. If you do use a passphrase, you will also need to use ssh-agent so you only have to type the passphrase once per session. If you don't use a passphrase, simply logging onto your local computer or getting access to the keyfile in any way will suffice to access any ssh servers which have that key authorized for login.
3. This creates two files:

```
~/.ssh/id_rsa
~/.ssh/id_rsa.pub
```
4. On the target machine (ssh server):

```
cd
mkdir -p .ssh
chmod 0700 .ssh
```
5. On your local machine (ssh client): (one line)

```
ssh {serverhostname}
cat '>>' '~/.ssh/authorized_keys' < ~/.ssh/id_rsa.pub
```

or, for OpenSSH, (one line)

```
ssh {serverhostname}
cat '>>' '~/.ssh/authorized_keys' < ~/.ssh/id_rsa.pub
```

You can test it out with

```
ssh {serverhostname}
```

and you should be log onto the server machine without further need to type anything.

If you decided to use a passphrase, do:

```
ssh-agent $SHELL
```

```
ssh-add
```

```
ssh {serverhostname}
```

You will be prompted for your key passphrase when you use ssh-add, but not subsequently when you use ssh. For use with vim, you can use

```
ssh-agent vim
```

and, when next within vim, use

```
:!ssh-add
```

Alternatively, you can apply ssh-agent to the terminal you're planning on running vim in:

```
ssh-agent xterm &
```

and do ssh-add whenever you need.

For Windows, folks on the vim mailing list have mentioned that Pageant helps with avoiding the constant need to enter the password.

Kingston Fung wrote about another way to avoid constantly needing to enter passwords:

In order to avoid the need to type in the password for scp each time, you provide a hack in the docs to set up a non password ssh account. I found a better way to do that: I can use a regular ssh account which uses a password to access the material without the need to key-in the password each time. It's good for security and convenience. I tried ssh public key authorization + ssh-agent, implementing this, and it works!

Ssh hints:

Thomer Gil has provided a hint on how to speed up netrw+ssh:

[http://thomer.com/howtos/netrw\\_ssh.html](http://thomer.com/howtos/netrw_ssh.html)

Alex Young has several hints on speeding ssh up:

<http://usevim.com/2012/03/16/editing-remote-files/>

## LISTING BOOKMARKS AND HISTORY

`netrw-qb` `netrw-listbookmark` {{{2

Pressing "qb" (query bookmarks) will list both the bookmarked directories and directory traversal history.

Related Topics:

`netrw-gb` how to return (go) to a bookmark

`netrw-mb` how to make a bookmark

`netrw-mB` how to delete bookmarks

`netrw-u` change to a predecessor directory via the history stack

`netrw-U` change to a successor directory via the history stack

## MAKING A NEW DIRECTORY

`netrw-d` {{{2

With the "d" map one may make a new directory either remotely (which depends on the global variable `g:netrw_mkdir_cmd`) or locally (which depends on the global variable `g:netrw_localmkdir`). Netrw will issue a request for the new directory's name. A bare `<CR>` at that point will abort the making of the directory. Attempts to make a local directory that already exists (as either a file or a directory) will be detected, reported on, and ignored.

Related topics: [netrw-D](#)

Associated setting variables: `g:netrw_localmkdir` `g:netrw_mkdir_cmd`  
`g:netrw_remote_mkdir` `netrw-%`

## MAKING THE BROWSING DIRECTORY THE CURRENT DIRECTORY

`netrw-cd` {{{2

By default, `g:netrw_keepdir` is 1. This setting means that the current directory will not track the browsing directory. (done for backwards compatibility with v6's file explorer).

Setting `g:netrw_keepdir` to 0 tells netrw to make vim's current directory track netrw's browsing directory.

However, given the default setting for `g:netrw_keepdir` of 1 where netrw maintains its own separate notion of the current directory, in order to make the two directories the same, use the "cd" map (type cd). That map will set Vim's notion of the current directory to netrw's current browsing directory.

`netrw-cd` : This map's name was changed from "c" to cd (see [netrw-cd](#) ).  
This change was done to allow for `netrw-cb` and `netrw-cB` maps.

Associated setting variable: `g:netrw_keepdir`

## MARKING FILES

`netrw-:MF`

`netrw-mf` {{{2

(also see [netrw-mr](#) )

Netrw provides several ways to mark files:

- \* One may mark files with the cursor atop a filename and then pressing "mf".
- \* With gvim, in addition one may mark files with `<s-leftmouse>`. (see [netrw-mouse](#) )
- \* One may use the `:MF` command, which takes a list of files (for local directories, the list may include wildcards -- see [glob\(\)](#) )

```
:MF *.c
```

(Note that `:MF` uses `<f-args>` to break the line at spaces)

- \* Mark files using the `argument-list` ( `netrw-mA` )
- \* Mark files based upon a `location-list` ( `netrw-qL` )
- \* Mark files based upon the quickfix list ( `netrw-qF` )  
( `quickfix-error-lists` )

The following netrw maps make use of marked files:

```

netrw-a Hide marked files/directories
netrw-D Delete marked files/directories
netrw-ma Move marked files' names to arglist
netrw-mA Move arglist filenames to marked file list
netrw-mb Append marked files to bookmarks
netrw-mB Delete marked files from bookmarks
netrw-mc Copy marked files to target
netrw-md Apply vimdiff to marked files
netrw-me Edit marked files
netrw-mF Unmark marked files
netrw-mg Apply vimgrep to marked files
netrw-mm Move marked files to target
netrw-mp Print marked files
netrw-ms Netrw will source marked files
netrw-mt Set target for netrw-mm and netrw-mc
netrw-mT Generate tags using marked files
netrw-mv Apply vim command to marked files
netrw-mx Apply shell command to marked files
netrw-mX Apply shell command to marked files, en bloc
netrw-mz Compress/Decompress marked files
netrw-O Obtain marked files
netrw-R Rename marked files

```

One may unmark files one at a time the same way one marks them; ie. place the cursor atop a marked file and press "mf". This process also works with `<s-leftmouse>` using gvim. One may unmark all files by pressing "mu" (see `netrw-mu` ).

Marked files are highlighted using the "netrwMarkFile" highlighting group, which by default is linked to "Identifier" (see Identifier under `group-name` ). You may change the highlighting group by putting something like

```

highlight clear netrwMarkFile
hi link netrwMarkFile ..whatever..

```

into `$HOME/.vim/after/syntax/netrw.vim` .

If the mouse is enabled and works with your vim, you may use `<s-leftmouse>` to mark one or more files. You may mark multiple files by dragging the shifted leftmouse. (see `netrw-mouse` )

```

markfilelist global_markfilelist local_markfilelist

```

All marked files are entered onto the global marked file list; there is only

one such list. In addition, every netrw buffer also has its own buffer-local marked file list; since netrw buffers are associated with specific directories, this means that each directory has its own local marked file list. The various commands which operate on marked files use one or the other of the marked file lists.

Known Problem: if one is using tree mode ( [g:netrw\\_liststyle](#) ) and several directories have files with the same name, then marking such a file will result in all such files being highlighted as if they were all marked. The [markfilelist](#) , however, will only have the selected file in it. This problem is unlikely to be fixed.

**UNMARKING FILES** [netrw-mF](#) {{{2  
(also see [netrw-mf](#) , [netrw-mu](#) )

The "mF" command will unmark all files in the current buffer. One may also use mf ( [netrw-mf](#) ) on a specific, already marked, file to unmark just that file.

**MARKING FILES BY LOCATION LIST** [netrw-qL](#) {{{2  
(also see [netrw-mf](#) )

One may convert [location-list](#) s into a marked file list using "qL". You may then proceed with commands such as me ( [netrw-me](#) ) to edit them.

**MARKING FILES BY QUICKFIX LIST** [netrw-qF](#) {{{2  
(also see [netrw-mf](#) )

One may convert [quickfix-error-lists](#) into a marked file list using "qF". You may then proceed with commands such as me ( [netrw-me](#) ) to edit them. Quickfix error lists are generated, for example, by calls to [:vimgrep](#) .

**MARKING FILES BY REGULAR EXPRESSION** [netrw-mr](#) {{{2  
(also see [netrw-mf](#) )

One may also mark files by pressing "mr"; netrw will then issue a prompt, "Enter regexp: ". You may then enter a shell-style regular expression such as \*.c\$ (see [glob\(\)](#) ). For remote systems, [glob\(\)](#) doesn't work -- so netrw converts "\*" into ".\*" (see [regexp](#) ) and marks files based on that. In the future I may make it possible to use [regexp](#) s instead of [glob\(\)](#)-style expressions (yet-another-option).

See [cmdline-window](#) for directions on more on how to edit the regular expression.

**MARKED FILES, ARBITRARY VIM COMMAND** [netrw-mv](#) {{{2  
(See [netrw-mf](#) and [netrw-mr](#) for how to mark files)  
(uses the local marked-file list)

The "mv" map causes netrw to execute an arbitrary vim command on each file on the local marked file list, individually:

```
* lsplit
* sil! keepalt e file
* run vim command
* sil! keepalt wq!
```

A prompt, "Enter vim command: ", will be issued to elicit the vim command you wish used. See [cmdline-window](#) for directions for more on how to edit the command.

MARKED FILES, ARBITRARY SHELL COMMAND netrw-mx {{{2  
(See [netrw-mf](#) and [netrw-mr](#) for how to mark files)  
(uses the local marked-file list)

Upon activation of the "mx" map, netrw will query the user for some (external) command to be applied to all marked files. All "%s" in the command will be substituted with the name of each marked file in turn. If no "%s" are in the command, then the command will be followed by a space and a marked filename.

Example:

```
(mark files)
mx
Enter command: cat
```

```
The result is a series of shell commands:
cat 'file1'
cat 'file2'
...
```

MARKED FILES, ARBITRARY SHELL COMMAND, EN BLOC netrw-mX {{{2  
(See [netrw-mf](#) and [netrw-mr](#) for how to mark files)  
(uses the global marked-file list)

Upon activation of the 'mX' map, netrw will query the user for some (external) command to be applied to all marked files on the global marked file list. The "en bloc" means that one command will be executed on all the files at once:

```
command files
```

This approach is useful, for example, to select files and make a tarball:

```
(mark files)
mX
Enter command: tar cf mynewtarball.tar
```

The command that will be run with this example:

```
tar cf mynewtarball.tar 'file1' 'file2' ...
```

MARKED FILES: ARGUMENT LIST netrw-ma netrw-mA  
(See [netrw-mf](#) and [netrw-mr](#) for how to mark files)

(uses the global marked-file list)

Using `ma`, one moves filenames from the marked file list to the argument list.  
Using `mA`, one moves filenames from the argument list to the marked file list.

See Also: `netrw-cb` `netrw-cB` `netrw-qF` `argument-list` `:args`

MARKED FILES: BUFFER LIST `netrw-cb` `netrw-cB`  
(See `netrw-mf` and `netrw-mr` for how to mark files)  
(uses the global marked-file list)

Using `cb`, one moves filenames from the marked file list to the buffer list.  
Using `cB`, one copies filenames from the buffer list to the marked file list.

See Also: `netrw-ma` `netrw-mA` `netrw-qF` `buffer-list` `:buffers`

MARKED FILES: COMPRESSION AND DECOMPRESSION `netrw-mz` {{{2  
(See `netrw-mf` and `netrw-mr` for how to mark files)  
(uses the local marked file list)

If any marked files are compressed, then `"mz"` will decompress them.  
If any marked files are decompressed, then `"mz"` will compress them  
using the command specified by `g:netrw_compress` ; by default,  
that's `"gzip"`.

For decompression, `netrw` uses a `Dictionary` of suffices and their  
associated decompressing utilities; see `g:netrw_decompress` .

Remember that one can mark multiple files by regular expression  
(see `netrw-mr` ); this is particularly useful to facilitate compressing and  
decompressing a large number of files.

Associated setting variables: `g:netrw_compress` `g:netrw_decompress`

MARKED FILES: COPYING `netrw-mc` {{{2  
(See `netrw-mf` and `netrw-mr` for how to mark files)  
(Uses the global marked file list)

Select a target directory with `mt` ( `netrw-mt` ). Then change directory,  
select file(s) (see `netrw-mf` ), and press `"mc"`. The copy is done  
from the current window (where one does the `mf`) to the target.

If one does not have a target directory set with `netrw-mt` , then `netrw`  
will query you for a directory to copy to.

One may also copy directories and their contents (local only) to a target  
directory.

Associated setting variables:  
`g:netrw_localcopycmd` `g:netrw_localcopycmdopt`  
`g:netrw_localcopydircmd` `g:netrw_localcopydircmdopt`  
`g:netrw_ssh_cmd`

MARKED FILES: DIFF netrw-md {{{2  
(See [netrw-mf](#) and [netrw-mr](#) for how to mark files)  
(uses the global marked file list)

Use [vimdiff](#) to visualize difference between selected files (two or three may be selected for this). Uses the global marked file list.

MARKED FILES: EDITING netrw-me {{{2  
(See [netrw-mf](#) and [netrw-mr](#) for how to mark files)  
(uses the global marked file list)

The "me" command will place the marked files on the [arglist](#) and commence editing them. One may return the to explorer window with [:Rexplore](#) .  
(use [:n](#) and [:p](#) to edit next and previous files in the arglist)

MARKED FILES: GREP netrw-mg {{{2  
(See [netrw-mf](#) and [netrw-mr](#) for how to mark files)  
(uses the global marked file list)

The "mg" command will apply [:vimgrep](#) to the marked files.  
The command will ask for the requested pattern; one may then enter:

```
/pattern/[g][j]
! /pattern/[g][j]
pattern
```

With [/pattern/](#), editing will start with the first item on the [quickfix](#) list that [vimgrep](#) sets up (see [:copen](#) , [:cnext](#) , [:cprevious](#) , [:cclose](#) ). The [:vimgrep](#) command is in use, so without 'g' each line is added to quickfix list only once; with 'g' every match is included.

With [/pattern/j](#), "mg" will winnow the current marked file list to just those marked files also possessing the specified pattern. Thus, one may use

```
mr ...file-pattern...
mg /pattern/j
```

to have a marked file list satisfying the file-pattern but also restricted to files containing some desired pattern.

MARKED FILES: HIDING AND UNHIDING BY SUFFIX netrw-mh {{{2  
(See [netrw-mf](#) and [netrw-mr](#) for how to mark files)  
(uses the local marked file list)

The "mh" command extracts the suffices of the marked files and toggles their presence on the hiding list. Please [note](#) that marking the same suffix this way multiple times will result in the suffix's presence being toggled for each file (so an even quantity of marked files having the same suffix is the same as not having bothered to select them at all).

Related topics: [netrw-a](#) [g:netrw\\_list\\_hide](#)

MARKED FILES: MOVING netrw-mm {{{2  
(See `netrw-mf` and `netrw-mr` for how to mark files)  
(uses the global marked file list)

WARNING: moving files is more dangerous than copying them.  
A file being moved is first copied and then deleted; if the  
copy operation fails and the delete succeeds, you will lose  
the file. Either try things out with unimportant files  
first or do the copy and then delete yourself using `mc` and `D`.  
Use at your own risk!

Select a target directory with `mt` ( `netrw-mt` ). Then change directory,  
select file(s) (see `netrw-mf` ), and press "mm". The move is done  
from the current window (where one does the `mf`) to the target.

Associated setting variable: `g:netrw_localmovecmd` `g:netrw_ssh_cmd`

MARKED FILES: PRINTING netrw-mp {{{2  
(See `netrw-mf` and `netrw-mr` for how to mark files)  
(uses the local marked file list)

When "mp" is used, `netrw` will apply the `:hardcopy` command to marked files.  
What `netrw` does is open each file in a one-line window, execute `hardcopy`, then  
close the one-line window.

MARKED FILES: SOURCING netrw-ms {{{2  
(See `netrw-mf` and `netrw-mr` for how to mark files)  
(uses the local marked file list)

With "ms", `netrw` will source the marked files (using vim's `:source` command)

MARKED FILES: SETTING THE TARGET DIRECTORY netrw-mt {{{2  
(See `netrw-mf` and `netrw-mr` for how to mark files)

Set the marked file copy/move-to target (see `netrw-mc` and `netrw-mm`):

- \* If the cursor is atop a file name, then the `netrw` window's currently  
displayed directory is used for the copy/move-to target.
- \* Also, if the cursor is in the banner, then the `netrw` window's currently  
displayed directory is used for the copy/move-to target.  
Unless the target already is the current directory. In which case,  
typing "mf" clears the target.
- \* However, if the cursor is atop a directory name, then that directory is  
used for the copy/move-to target
- \* One may use the `:MT [directory]` command to set the target `netrw-:MT`  
This command uses `<q-args>` , so spaces in the directory name are  
permitted without escaping.
- \* With mouse-enabled vim or with `gvim`, one may select a target by using

<c-leftmouse>

There is only one copy/move-to target at a time in a vim session; ie. the target is a script variable (see `s:var`) and is shared between all netrw windows (in an instance of vim).

When using menus and gvim, netrw provides a "Targets" entry which allows one to pick a target from the list of bookmarks and history.

MARKED FILES: TAGGING [netrw-mT](#) {{{2  
(See [netrw-mf](#) and [netrw-mr](#) for how to mark files)  
(uses the global marked file list)

The "mT" mapping will apply the command in `g:netrw_ctags` (by default, it is "ctags") to marked files. For remote browsing, in order to create a tags file netrw will use ssh (see `g:netrw_ssh_cmd`), and so ssh must be available for this to work on remote systems. For your local system, see `ctags` on how to get a version. I myself use hdrtags, currently available at <http://www.drchip.org/astronaut/src/index.html>, and have

```
let g:netrw_ctags= "hdrtag"
```

in my `<.vimrc>`.

When a remote set of files are tagged, the resulting tags file is "obtained"; ie. a copy is transferred to the local system's directory. The now local tags file is then modified so that one may use it through the network. The modification made concerns the names of the files in the tags; each filename is preceded by the netrw-compatible URL used to obtain it. When one subsequently uses one of the go to tag actions (`tags`), the URL will be used by netrw to edit the desired file and go to the tag.

Associated setting variables: `g:netrw_ctags` `g:netrw_ssh_cmd`

MARKED FILES: TARGET DIRECTORY USING BOOKMARKS [netrw-Tb](#) {{{2

Sets the marked file copy/move-to target.

The `netrw-qb` map will give you a list of bookmarks (and history). One may choose one of the bookmarks to become your marked file target by using `[count]Tb` (default count: 1).

Related topics:

MARKED FILES: UNMARKING [netrw-mu](#) {{{2

(See [netrw-mf](#) , [netrw-mF](#) )

The "mu" mapping will unmark all currently marked files. This command differs  
 from "mF" as the latter only unmarks files in the current directory whereas  
 "mu" will unmark global and all buffer-local marked files.  
 (see [netrw-mF](#) )

**NETRW BROWSER VARIABLES** [netrw-browser-settings](#)  
[netrw-browser-options](#) [netrw-browser-var](#) {{{2

(if you're interested in the netrw file transfer settings, see [netrw-options](#)  
 and [netrw-protocol](#) )

The [<netrw.vim>](#) browser provides settings in the form of variables which  
 you may modify; by placing these settings in your [<.vimrc>](#), you may customize  
 your browsing preferences. (see also: [netrw-settings](#) )

---	-----
Var	Explanation
---	-----
<a href="#">g:netrw_altfile</a>	some like <a href="#">CTRL-^</a> to return to the last edited file. Choose that by setting this parameter to 1. Others like <a href="#">CTRL-^</a> to return to the netrw browsing buffer. Choose that by setting this parameter to 0. default: =0
<a href="#">g:netrw_alto</a>	change from above splitting to below splitting

by setting this variable (see [netrw-o](#) )  
default: =&sb (see ['sb'](#) )

[g:netrw\\_altv](#) change from left splitting to right splitting  
by setting this variable (see [netrw-v](#) )  
default: =&spr (see ['spr'](#) )

[g:netrw\\_banner](#) enable/suppress the banner  
=0: suppress the banner  
=1: banner is enabled (default)

[g:netrw\\_bannerbackslash](#) if this variable exists and is not zero, the  
banner will be displayed with backslashes  
rather than forward slashes.

[g:netrw\\_browse\\_split](#) when browsing, <cr> will open the file by:  
=0: re-using the same window (default)  
=1: horizontally splitting the window first  
=2: vertically splitting the window first  
=3: open file in new tab  
=4: act like "P" (ie. open previous window)  
Note that [g:netrw\\_preview](#) may be used  
to get vertical splitting instead of  
horizontal splitting.  
=[servername,tab-number,window-number]  
Given a [List](#) such as this, a remote server  
named by the "servername" will be used for  
editing. It will also use the specified tab  
and window numbers to perform editing  
(see [clientserver](#) , [netrw-ctrl-r](#) )  
This option does not affect the production of  
[:Lexplore](#) windows.

Related topics:

[g:netrw\\_alto](#)            [g:netrw\\_altv](#)  
[netrw-C](#)                [netrw-cr](#)  
[netrw-ctrl-r](#)

[g:netrw\\_chgperm](#) Unix/Linux: "chmod PERM FILENAME"  
Windows: "cacls FILENAME /e /p PERM"  
Used to change access permission for a file.

[g:netrw\\_clipboard](#) =1  
By default, netrw will attempt to insure that  
the clipboard's values will remain unchanged.  
However, some users report that they have  
speed problems with this; consequently, this  
option, when set to zero, lets such users  
prevent netrw from saving and restoring the  
clipboard (the latter is done only as needed).  
That means that if the clipboard is changed  
(inadvertently) by normal netrw operation that  
it will not be restored to its prior state.

`g:netrw_compress` = "gzip"  
 Will compress marked files with this command

`g:Netrw_corehandler` Allows one to specify something additional to do when handling `<core>` files via netrw's browser's "x" command. If present, `g:Netrw_corehandler` specifies either one or more function references (see [Funcref](#)). (the capital `g:Netrw...` is required its holding a function reference)

`g:netrw_ctags` = "ctags"  
 The default external program used to create tags

`g:netrw_cursor` = 2 (default)  
 This option controls the use of the `'cursorline'` (`cul`) and `'cursorcolumn'` (`cuc`) settings by netrw:

Value	Thin-Long-Tree	Wide
=0	u-cul u-cuc	u-cul u-cuc
=1	u-cul u-cuc	cul u-cuc
=2	cul u-cuc	cul u-cuc
=3	cul u-cuc	cul cuc
=4	cul cuc	cul cuc
=5	U-cul U-cuc	U-cul U-cuc
=6	U-cul U-cuc	cul U-cuc
=7	cul U-cuc	cul U-cuc
=8	cul U-cuc	cul cuc

Where

- u-cul : user's `'cursorline'` initial setting used
- u-cuc : user's `'cursorcolumn'` initial setting used
- U-cul : user's `'cursorline'` current setting used
- U-cuc : user's `'cursorcolumn'` current setting used
- cul : `'cursorline'` will be locally set
- cuc : `'cursorcolumn'` will be locally set

The "initial setting" means the values of the `'cuc'` and `'cul'` settings in effect when netrw last saw `g:netrw_cursor`  $\geq$  5 or when netrw was initially run.

`g:netrw_decompress` = { `'lz4'`: `'lz4 -d'`,  
`'lzo'`: `'lzop -d'`,  
`'lz'`: `'lzip -dk'`,  
`'7z'`: `'7za x'`,  
`'001'`: `'7za x'`,  
`'tar.bz'`: `'tar -xvjf'`,  
`'tar.bz2'`: `'tar -xvjf'`,  
`'tbz'`: `'tar -xvjf'`,

```

'.tbz2': 'tar -xvjf',
'.tar.gz': 'tar -xvzf',
'.tgz': 'tar -xvzf',
'.tar.zst': 'tar --use-compress-program=unzstd -xvf',
'.tzst': 'tar --use-compress-program=unzstd -xvf',
'.tar': 'tar -xvf',
'.zip': 'unzip',
'.bz': 'bunzip2 -k',
'.bz2': 'bunzip2 -k',
'.gz': 'gunzip -k',
'.lzma': 'unlzma -T0 -k',
'.xz': 'unxz -T0 -k',
'.zst': 'zstd -T0 -d',
'.Z': 'uncompress -k',
'.rar': 'unrar x -ad',
'.tar.lzma': 'tar --lzma -xvf',
'.tlz': 'tar --lzma -xvf',
'.tar.xz': 'tar -xvJf',
'.txz': 'tar -xvJf'}

```

A dictionary mapping suffices to decompression programs.

`g:netrw_dirhistmax` =10: controls maximum quantity of past history. May be zero to suppress history.  
(related: `netrw-qb` `netrw-u` `netrw-U` )

`g:netrw_dynamic_maxfilenamen` =32: enables dynamic determination of `g:netrw_maxfilenamen` , which affects local file long listing.

`g:netrw_errorlvl` =0: error levels greater than or equal to this are permitted to be displayed  
0: notes  
1: warnings  
2: errors

`g:netrw_fastbrowse` =0: slow speed directory browsing; never re-uses directory listings; always obtains directory listings.  
=1: medium speed directory browsing; re-use directory listings only when remote directory browsing. (default value)  
=2: fast directory browsing; only obtains directory listings when the directory hasn't been seen before (or `netrw-ctrl-l` is used).

Fast browsing retains old directory listing buffers so that they don't need to be re-acquired. This feature is especially important for remote browsing. However, if

a file is introduced or deleted into or from such directories, the old directory buffer becomes out-of-date. One may always refresh such a directory listing with `netrw-ctrl-l`. This option gives the user the choice of trading off accuracy (ie. up-to-date listing) versus speed.

- `g:netrw_ffkeep` (default: doesn't exist)  
If this variable exists and is zero, then netrw will not do a save and restore for `'fileformat'`.
- `g:netrw_fname_escape` = ' ?&;%'  
Used on filenames before remote reading/writing
- `g:netrw_ftp_browse_reject` ftp can produce a number of errors and warnings that can show up as "directories" and "files" in the listing. This pattern is used to remove such embedded messages. By default its value is:  
'^total\s\+\d\+\\$\  
^Trying\s\+\d\+.\*\$\  
^KERBEROS\_V\d rejected\  
^Security extensions not\  
No such file\  
: connect to address [0-9a-fA-F:]\*  
: No route to host\$'
- `g:netrw_ftp_list_cmd` options for passing along to ftp for directory listing. Defaults:  
unix or `g:netrw_cygwin` set: : "ls -lF"  
otherwise "dir"
- `g:netrw_ftp_sizelist_cmd` options for passing along to ftp for directory listing, sorted by size of file.  
Defaults:  
unix or `g:netrw_cygwin` set: : "ls -slF"  
otherwise "dir"
- `g:netrw_ftp_timelist_cmd` options for passing along to ftp for directory listing, sorted by time of last modification.  
Defaults:  
unix or `g:netrw_cygwin` set: : "ls -tlF"  
otherwise "dir"
- `g:netrw_glob_escape` = '[]\*?`{~\$' (unix)  
= '[]\*?`{\$' (windows)  
These characters in directory names are escaped before applying `glob()`
- `g:netrw_hide` Controlled by the "a" map (see `netrw-a`)  
=0 : show all

```
=1 : show not-hidden files
=2 : show hidden files only
default: =1
```

`g:netrw_home`

The home directory for where bookmarks and history are saved (as `.netrwbook` and `.netrwhist`).  
Netrw uses `expand()` on the string.  
default: the first directory on the `'runtimepath'`

`g:netrw_keepdir`

```
=1 (default) keep current directory immune from
the browsing directory.
=0 keep the current directory the same as the
browsing directory.
The current browsing directory is contained in
b:netrw_curdir (also see netrw-cd)
```

`g:netrw_keepj`

```
="keepj" (default) netrw attempts to keep the
:jumps table unaffected.
="" netrw will not use :keepjumps with
exceptions only for the
saving/restoration of position.
```

`g:netrw_list_cmd`

```
command for listing remote directories
default: (if ssh is executable)
"ssh HOSTNAME ls -FLa"
```

`g:netrw_list_cmd_options`

If this variable exists, then its contents are appended to the `g:netrw_list_cmd`. For example, use `"2>/dev/null"` to get rid of banner messages on unix systems.

`g:netrw_liststyle`

```
Set the default listing style:
= 0: thin listing (one file per line)
= 1: long listing (one file per line with time
stamp information and file size)
= 2: wide listing (multiple files in columns)
= 3: tree style listing
```

`g:netrw_list_hide`

comma-separated pattern list for hiding files  
Patterns are regular expressions (see `regexp` )  
There's some special support for git-ignore files: you may add the output from the helper function `'netrw_gitignore#Hide()` automatically hiding all gitignored files.  
For more details see `netrw-gitignore` .

Examples:

```
let g:netrw_list_hide= '*.swp$'
let g:netrw_list_hide= netrw_gitignore#Hide() .. '*.swp$'
default: ""
```

**g:netrw\_localcopycmd** = "cp" Linux/Unix/MacOS/Cygwin  
=expand("\$COMSPEC") Windows  
Copies marked files ( [netrw-mf](#) ) to target  
directory ( [netrw-mt](#) , [netrw-mc](#) )

**g:netrw\_localcopycmdopt** = '' Linux/Unix/MacOS/Cygwin  
= ' \c copy' Windows  
Options for the [g:netrw\\_localcopycmd](#)

**g:netrw\_localcopydircmd** = "cp" Linux/Unix/MacOS/Cygwin  
=expand("\$COMSPEC") Windows  
Copies directories to target directory.  
( [netrw-mc](#) , [netrw-mt](#) )

**g:netrw\_localcopydircmdopt** = " -R" Linux/Unix/MacOS/Cygwin  
= " /c xcopy /e /c /h/ /i /k" Windows  
Options for [g:netrw\\_localcopydircmd](#)

**g:netrw\_localmkdir** = "mkdir" Linux/Unix/MacOS/Cygwin  
=expand("\$COMSPEC") Windows  
command for making a local directory

**g:netrw\_localmkdiropt** = "" Linux/Unix/MacOS/Cygwin  
= " /c mkdir" Windows  
Options for [g:netrw\\_localmkdir](#)

**g:netrw\_localmovecmd** = "mv" Linux/Unix/MacOS/Cygwin  
=expand("\$COMSPEC") Windows  
Moves marked files ( [netrw-mf](#) ) to target  
directory ( [netrw-mt](#) , [netrw-mm](#) )

**g:netrw\_localmovecmdopt** = "" Linux/Unix/MacOS/Cygwin  
= " /c move" Windows  
Options for [g:netrw\\_localmovecmd](#)

**g:netrw\_maxfilenamen** = 32 by default, selected so as to make long  
listings fit on 80 column displays.  
If your screen is wider, and you have file  
or directory names longer than 32 bytes,  
you may set this option to keep listings  
columnar.

**g:netrw\_mkdir\_cmd** command for making a remote directory  
via ssh (also see [g:netrw\\_remote\\_mkdir](#) )  
default: "ssh USEPORT HOSTNAME mkdir"

**g:netrw\_mousemaps** = 1 (default) enables mouse buttons while  
browsing to:  
leftmouse : open file/directory  
shift-leftmouse : mark file  
middlemouse : same as P  
rightmouse : remove file/directory  
= 0: disables mouse maps

**g:netrw\_nobeval** doesn't exist (default)  
 If this variable exists, then balloon evaluation will be suppressed (see `'ballooneval'` )

**g:netrw\_sizestyle** not defined: actual bytes (default)  
`= "b" : actual bytes (default)`  
`= "h" : human-readable (ex. 5k, 4m, 3g)`  
       uses 1000 base  
`= "H" : human-readable (ex. 5K, 4M, 3G)`  
       uses 1024 base  
 The long listing ( `netrw-i` ) and query-file maps ( `netrw-qf` ) will display file size using the specified style.

**g:netrw\_usetab** if this variable exists and is non-zero, then the `<tab>` map supporting shrinking/expanding a Lexplore or netrw window will be enabled. (see `netrw-c-tab` )

**g:netrw\_remote\_mkdir** command for making a remote directory via ftp (also see `g:netrw_mkdir_cmd` )  
 default: "mkdir"

**g:netrw\_retmap** if it exists and is set to one, then:  
 \* if in a netrw-selected file, AND  
 \* no normal-mode `<2-leftmouse>` mapping exists, then the `<2-leftmouse>` will be mapped for easy return to the netrw browser window.  
 example: click once to select and open a file, double-click to return.

**Note** that one may instead choose to:  
 \* let `g:netrw_retmap= 1`, AND  
 \* nmap `<silent> YourChoice <Plug>NetrwReturn` and have another mapping instead of `<2-leftmouse>` to invoke the return.

You may also use the `:Rexplore` command to do the same thing.

      default: =0

**g:netrw\_rm\_cmd** command for removing remote files  
 default: "ssh USEPORT HOSTNAME rm"

**g:netrw\_rmdir\_cmd** command for removing remote directories  
 default: "ssh USEPORT HOSTNAME rmdir"

**g:netrw\_rmf\_cmd** command for removing remote softlinks  
 default: "ssh USEPORT HOSTNAME rm -f"

**g:netrw\_servername** use this variable to provide a name for `netrw-ctrl-r` to use for its server.

default: "NETRWSERVER"

`g:netrw_sort_by` sort by "name", "time", "size", or "exten".  
default: "name"

`g:netrw_sort_direction` sorting direction: "normal" or "reverse"  
default: "normal"

`g:netrw_sort_options` sorting is done using `:sort` ; this variable's value is appended to the sort command. Thus one may ignore case, for example, with the following in your .vimrc:  
`let g:netrw_sort_options="i"`  
default: ""

`g:netrw_sort_sequence` when sorting by name, first sort by the comma-separated pattern sequence. **Note** that any filigree added to indicate filetypes should be accounted for in your pattern.  
default: '[\/]\$,\*,\bak\$,\.o\$,\.h\$,  
\.info\$,\.swp\$,\.obj\$'

`g:netrw_special_syntax` If true, then certain files will be shown using special syntax in the browser:

```

netrwBak : *.bak
netrwCompress: *.gz *.bz2 *.Z *.zip
netrwCoreDump: core.\d\+
netrwData : *.dat
netrwDoc : *.doc,*.txt,*.pdf,
 .pdf,.docx
netrwHdr : *.h
netrwLex : *.l *.lex
netrwLib : *.a *.so *.lib *.dll
netrwMakefile: [mM]akefile *.mak
netrwObj : *.o *.obj
netrwPix : *.bmp,*.fit,*.fits,*.gif,
 .jpg,.jpeg,*.pcx,*.ppc
 .pgm,.png,*.psd,*.rgb
 .tif,.xbm,*.xcf
netrwTags : tags ANmenu ANtags
netrwTilde : *
netrwTmp : tmp* *tmp
netrwYacc : *.y

```

In addition, those groups mentioned in `'suffixes'` are also added to the special file highlighting group. These syntax highlighting groups are linked to `netrwGray` or `Folded` by default (see `hl-Folded` ), but one may put lines like `hi link netrwCompress Visual`

into one's `<.vimrc>` to use one's own preferences. Alternatively, one may put such specifications into `.vim/after/syntax/netrw.vim`.

The `netrwGray` highlighting is set up by `netrw` when

- \* `netrwGray` has not been previously defined
- \* the gui is running

As an example, I myself use a dark-background colorscheme with the following in `.vim/after/syntax/netrw.vim`:

```
hi netrwCompress term=NONE cterm=NONE gui=NONE ctermfg=10 guifg=green ctermbg=0 guibg=black
hi netrwData term=NONE cterm=NONE gui=NONE ctermfg=9 guifg=blue ctermbg=0 guibg=black
hi netrwHdr term=NONE cterm=NONE,italic gui=NONE guifg=SeaGreen1
hi netrwLex term=NONE cterm=NONE,italic gui=NONE guifg=SeaGreen1
hi netrwYacc term=NONE cterm=NONE,italic gui=NONE guifg=SeaGreen1
hi netrwLib term=NONE cterm=NONE gui=NONE ctermfg=14 guifg=yellow
hi netrwObj term=NONE cterm=NONE gui=NONE ctermfg=12 guifg=red
hi netrwTilde term=NONE cterm=NONE gui=NONE ctermfg=12 guifg=red
hi netrwTmp term=NONE cterm=NONE gui=NONE ctermfg=12 guifg=red
hi netrwTags term=NONE cterm=NONE gui=NONE ctermfg=12 guifg=red
hi netrwDoc term=NONE cterm=NONE gui=NONE ctermfg=220 ctermbg=27 guifg=yellow2 guibg=black
hi netrwSymLink term=NONE cterm=NONE gui=NONE ctermfg=220 ctermbg=27 guifg=grey60
```

`g:netrw_ssh_browse_reject` ssh can sometimes produce unwanted lines, messages, banners, and whatnot that one doesn't want masquerading as "directories" and "files". Use this pattern to remove such embedded messages. By default its value is:

```
'^total\s\+\d\+$'
```

`g:netrw_ssh_cmd` One may specify an executable command to use instead of ssh for remote actions such as listing, file removal, etc.

default: ssh

`g:netrw_tmpfile_escape` `= ' &; '`  
`escape()` is applied to all temporary files to escape these characters.

`g:netrw_timefmt` specify format string to vim's `strftime()`. The default, `"%c"`, is "the preferred date and time representation for the current locale" according to my manpage entry for `strftime()`; however, not all are satisfied with it. Some alternatives:

```
"%a %d %b %Y %T",
" %a %Y-%m-%d %I-%M-%S %p"
default: "%c"
```

`g:netrw_use_noswf` `netrw` normally avoids writing swapfiles for browser buffers. However, under some

systems this apparently is causing nasty `ml_get` errors to appear; if you're getting `ml_get` errors, try putting

```
let g:netrw_use_noswf= 0
in your .vimrc.
default: 1
```

**g:netrw\_winsize** specify initial size of new windows made with "`o`" (see `netrw-o`), "`v`" (see `netrw-v`), `:Hexplore` or `:Vexplore`. The `g:netrw_winsize` is an integer describing the percentage of the current netrw buffer's window to be used for the new window.

If `g:netrw_winsize` is less than zero, then the absolute value of `g:netrw_winsize` will be used to specify the quantity of lines or columns for the new window.

If `g:netrw_winsize` is zero, then a normal split will be made (ie. `'equalalways'` will take effect, for example).

default: 50 (for 50%)

**g:netrw\_wiw** =1 specifies the minimum window width to use when shrinking a netrw/Lexplore window (see `netrw-c-tab`).

**g:netrw\_xstrlen** Controls how netrw computes string lengths, including multi-byte characters' string length. (thanks to N Weibull, T Mechelynck)

- =0: uses Vim's built-in `strlen()`
- =1: number of codepoints (Latin a + combining circumflex is two codepoints) (DEFAULT)
- =2: number of spacing codepoints (Latin a + combining circumflex is one spacing codepoint; a hard tab is one; wide and narrow CJK are one each; etc.)
- =3: virtual length (counting tabs as anything between 1 and `'tabstop'`, wide CJK as 2 rather than 1, Arabic alif as zero when immediately preceded by lam, one otherwise, etc)

**g:NetrwTopLvlMenu** This variable specifies the top level menu name; by default, it's "Netrw.". If you wish to change this, do so in your `.vimrc`.

## NETRW BROWSING AND OPTION INCOMPATIBILITIES `netrw-incompatible` {{{2

Netrw has been designed to handle user options by saving them, setting the options to something that's compatible with netrw's needs, and then restoring them. However, the `autochdir` option:

```
:set acd
```

is problematic. `Autochdir` sets the current directory to that containing the

file you edit; this apparently also applies to directories. In other words, autochdir sets the current directory to that containing the "file" (even if that "file" is itself a directory).

## NETRW SETTINGS WINDOW netrw-settings-window {{{2

With the NetrwSettings.vim plugin,

`:NetrwSettings`

will bring up a window with the many variables that netrw uses for its settings. You may change any of their values; when you save the file, the settings therein will be used. One may also press "?" on any of the lines for help on what each of the variables do.

(also see: [netrw-browser-var](#) [netrw-protocol](#) [netrw-variables](#) )

---

## OBTAINING A FILE netrw-obtain netrw-O {{{2

If there are no marked files:

When browsing a remote directory, one may obtain a file under the cursor (ie. get a copy on your local machine, but not edit it) by pressing the O key.

If there are marked files:

The marked files will be obtained (ie. a copy will be transferred to your local machine, but not set up for editing).

Only ftp and scp are supported for this operation (but since these two are available for browsing, that shouldn't be a problem). The status bar will then show, on its right hand side, a message like "Obtaining filename". The statusline will be restored after the transfer is complete.

Netrw can also "obtain" a file using the local browser. Netrw's display of a directory is not necessarily the same as Vim's "current directory", unless `g:netrw_keepdir` is set to 0 in the user's `<.vimrc>`. One may select a file using the local browser (by putting the cursor on it) and pressing "O" will then "obtain" the file; ie. copy it to Vim's current directory.

Related topics:

- \* To see what the current directory is, use `:pwd`
- \* To make the currently browsed directory the current directory, see [netrw-cd](#)
- \* To automatically make the currently browsed directory the current directory, see `g:netrw_keepdir` .

## OPEN A NEW FILE IN NETRW'S CURRENT DIRECTORY netrw-newfile netrw-createfile netrw-% {{{2

To open a new file in netrw's current directory, press "%". This map will query the user for a new filename; an empty file by that name will be placed in the netrw's current directory (ie. `b:netrw_curdir`).

If Lexplore ( `netrw-:Lexplore` ) is in use, the new file will be generated in the `g:netrw_chgwin` window.

Related topics: `netrw-d`

## PREVIEW WINDOW `netrw-p netrw-preview {{{2`

One may use a preview window by using the "p" key when the cursor is atop the desired filename to be previewed. The display will then split to show both the browser (where the cursor will remain) and the file (see `:pedit` ). By default, the split will be taken horizontally; one may use vertical splitting if one has set `g:netrw_preview` first.

An interesting set of netrw settings is:

```
let g:netrw_preview = 1
let g:netrw_liststyle = 3
let g:netrw_winsize = 30
```

These will:

1. Make vertical splitting the default for previewing files
2. Make the default listing style "tree"
3. When a vertical preview window is opened, the directory listing will use only 30% of the columns available; the rest of the window is used for the preview window.

Related: if you like this idea, you may also find `:Lexplore` ( `netrw-:Lexplore` ) or `g:netrw_chgwin` of interest

Also see: `g:netrw_chgwin netrw-P 'previewwindow' CTRL-W_z :pclose`

## PREVIOUS WINDOW `netrw-P netrw-prvwin {{{2`

To edit a file or directory under the cursor in the previously used (last accessed) window (see `:he CTRL-W_p` ), press a "P". If there's only one window, then the one window will be horizontally split (by default).

If there's more than one window, the previous window will be re-used on the selected file/directory. If the previous window's associated buffer has been modified, and there's only one window with that buffer, then the user will be asked if s/he wishes to save the buffer first (yes, no, or cancel).

Related Actions `netrw-cr netrw-o netrw-t netrw-v`

Associated setting variables:

```
g:netrw_alto control above/below splitting
g:netrw_altv control right/left splitting
g:netrw_preview control horizontal vs vertical splitting
g:netrw_winsize control initial sizing
```

Also see: [g:netrw\\_chgwin](#) [netrw-p](#)

## REFRESHING THE LISTING [netrw-refresh](#) [netrw-ctrl-l](#) [netrw-ctrl\\_l](#) {{{2

To refresh either a local or remote directory listing, press `ctrl-l` (`<c-l>`) or hit the `<cr>` when atop the `./` directory entry in the listing. One may also refresh a local directory by using `":e ."`.

## REVERSING SORTING ORDER [netrw-r](#) [netrw-reverse](#) {{{2

One may toggle between normal and reverse sorting order by pressing the "r" key.

Related topics: [netrw-s](#)  
Associated setting variable: [g:netrw\\_sort\\_direction](#)

## RENAMING FILES OR DIRECTORIES [netrw-move](#) [netrw-rename](#) [netrw-R](#) {{{2

If there are no marked files: (see [netrw-mf](#) )

Renaming files and directories involves moving the cursor to the file/directory to be moved (renamed) and pressing "R". You will then be queried for what you want the file/directory to be renamed to. You may select a range of lines with the "V" command (visual selection), and then press "R"; you will be queried for each file as to what you want it renamed to.

If there are marked files: (see [netrw-mf](#) )

Marked files will be renamed (moved). You will be queried as above in order to specify where you want the file/directory to be moved.

If you answer a renaming query with a `"s/frompattern/topattern/"`, then subsequent files on the marked file list will be renamed by taking each name, applying that substitute, and renaming each file to the result. As an example :

```
mr [query: reply with *.c]
R [query: reply with s/^(.*)\.c$/\1.cpp/]
```

This example will mark all `*.c` files and then rename them to `*.cpp` files. Netrw will protect you from overwriting local files without confirmation, but not remote ones.

The `ctrl-X` character has special meaning for renaming files:

- `<c-x>` : a single `ctrl-x` tells netrw to ignore the portion of the response lying between the last `'/'` and the `ctrl-x`.
- `<c-x><c-x>` : a pair of contiguous `ctrl-x`'s tells netrw to ignore any portion of the string preceding the double `ctrl-x`'s.

## WARNING:

**Note** that moving files is a dangerous operation; copies are safer. That's because a "move" for remote files is actually a copy + delete -- and if the copy fails and the delete succeeds you may lose the file. Use at your own risk.

The `g:netrw_rename_cmd` variable is used to implement remote renaming. By default its value is:

```
ssh HOSTNAME mv
```

One may rename a block of files and directories by selecting them with `V ( linewise-visual )` when using thin style.

See `cmdline-editing` for more on how to edit the command line; in particular, you'll find `<ctrl-f>` (initiates cmdline window editing) and `<ctrl-c>` (uses the command line under the cursor) useful in conjunction with the `R` command.

## SELECTING SORTING STYLE `netrw-s netrw-sort {{{2`

One may select the sorting style by name, time, or (file) size. The "s" map allows one to circulate amongst the three choices; the directory listing will automatically be refreshed to reflect the selected style.

Related topics: `netrw-r netrw-S`  
Associated setting variables: `g:netrw_sort_by g:netrw_sort_sequence`

## SETTING EDITING WINDOW `netrw-editwindow netrw-C netrw-:NetrwC {{{2`

One may select a netrw window for editing with the "C" mapping, using the `:NetrwC [win#]` command, or by setting `g:netrw_chgwin` to the selected window number. Subsequent selection of a file to edit (`netrw-cr`) will use that window.

- \* `C` : by itself, will select the current window holding a netrw buffer for subsequent editing via `netrw-cr` . The `C` mapping is only available while in netrw buffers.
- \* `[count]C` : the count will be used as the window number to be used for subsequent editing via `netrw-cr` .
- \* `:NetrwC` will set `g:netrw_chgwin` to the current window
- \* `:NetrwC win#` will set `g:netrw_chgwin` to the specified window number

Using

```
let g:netrw_chgwin= -1
```

will restore the default editing behavior (ie. subsequent editing will use the current window).

Related topics: `netrw-cr` `g:netrw_browse_split`  
Associated setting variables: `g:netrw_chgwin`

## SHRINKING OR EXPANDING A NETRW OR LEXPLORE WINDOW `netrw-c-tab` {{{2

The `<c-tab>` key will toggle a netrw or `:Lexplore` window's width, but only if `g:netrw_usetab` exists and is non-zero (and, of course, only if your terminal supports differentiating `<c-tab>` from a plain `<tab>`).

- \* If the current window is a netrw window, toggle its width (between `g:netrw_wiw` and its original width)
- \* Else if there is a `:Lexplore` window in the current tab, toggle its width
- \* Else bring up a `:Lexplore` window

If `g:netrw_usetab` exists and is zero, or if there is a pre-existing mapping for `<c-tab>`, then the `<c-tab>` will not be mapped. One may map something other than a `<c-tab>`, too: (but you'll still need to have had `g:netrw_usetab` set).

```
nmap <unique> (whatever) <Plug>NetrwShrink
```

Related topics: `:Lexplore`  
Associated setting variable: `g:netrw_usetab`

## USER SPECIFIED MAPS `netrw-usermaps` {{{1

One may make customized user maps. Specify a variable, `g:Netrw_UserMaps`, to hold a `List` of lists of keymap strings and function names:

```
[["keymap-sequence","ExampleUserMapFunc"],...]
```

When netrw is setting up maps for a netrw buffer, if `g:Netrw_UserMaps` exists, then the internal function `netrw#UserMaps(islocal)` is called. This function goes through all the entries in the `g:Netrw_UserMaps` list:

- \* sets up maps:

```
nno <buffer> <silent> KEYMAP-SEQUENCE
:call s:UserMaps(islocal,"ExampleUserMapFunc")
```
- \* refreshes if result from that function call is the string "refresh"
- \* if the result string is not "", then that string will be executed (:exe result)
- \* if the result is a `List`, then the above two actions on results will be taken for every string in the result `List`

The user function is passed one argument; it resembles

```
fun! ExampleUserMapFunc(islocal)
```

where `a:islocal` is 1 if its a local-directory system call or 0 when remote-directory system call.

	<code>netrw-call</code>	<code>netrw-expose</code>	<code>netrw-modify</code>
Use <code>netrw#Expose("varname")</code>	to access	<code>netrw-internal</code>	(script-local) variables.
Use <code>netrw#Modify("varname",newvalue)</code>	to change	<code>netrw-internal</code>	variables.
Use <code>netrw#Call("funcname"[,args])</code>	to call a	<code>netrw-internal</code>	function with specified arguments.

Example: Get a copy of netrw's marked file list:

```
let netrwmarkfilelist= netrw#Expose("netrwmarkfilelist")
```

Example: Modify the value of netrw's marked file list:

```
call netrw#Modify("netrwmarkfilelist",[])
```

Example: Clear netrw's marked file list via a mapping on gu

```
" ExampleUserMap: {{{2
fun! ExampleUserMap(islocal)
 call netrw#Modify("netrwmarkfilelist",[])
 call netrw#Modify('netrwmarkfilemtch_{bufnr("%")}',"")
 let retval= ["refresh"]
 return retval
endfun
let g:Netrw_UserMaps= [["gu","ExampleUserMap"]]
```

## 10. Problems and Fixes

`netrw-problems` {{{1

(This section is likely to grow as I get feedback)

`netrw-p1`

P1. I use Windows, and my network browsing with ftp doesn't sort by {{{2  
time or size! -or- The remote system is a Windows server; why  
don't I get sorts by time or size?

Windows' ftp has a minimal support for ls (ie. it doesn't accept sorting options). It doesn't support the `-F` which gives an explanatory character (ABC/ for "ABC is a directory"). Netrw then uses "dir" to get both its thin and long listings. If you think your ftp does support a full-up ls, put the following into your `<.vimrc>`:

```
let g:netrw_ftp_list_cmd = "ls -lF"
let g:netrw_ftp_timelist_cmd= "ls -tlF"
let g:netrw_ftp_sizelist_cmd= "ls -slF"
```

Alternatively, if you have cygwin on your Windows box, put into your `<.vimrc>`:

```
let g:netrw_cygwin= 1
```

This problem also occurs when the remote system is Windows. In this situation, the various `g:netrw_ftp_[time|size]list_cmds` are as shown above, but the remote system will not correctly modify its listing behavior.

netrw-p2

- P2. I tried `rcp://user@host/` (or protocol other than ftp) and `netrw {{{2` used ssh! That wasn't what I asked for...

Netrw has two methods for browsing remote directories: `ssh` and `ftp`. Unless you specify `ftp` specifically, `ssh` is used. When it comes time to do download a file (not just a directory listing), `netrw` will use the given protocol to do so.

netrw-p3

- P3. I would like long listings to be the default. {{{2

Put the following statement into your `.vimrc` :

```
let g:netrw_liststyle= 1
```

Check out `netrw-browser-var` for more customizations that you can set.

netrw-p4

- P4. My times come up oddly in local browsing {{{2

Does your system's `strftime()` accept the `"%c"` to yield dates such as "Sun Apr 27 11:49:23 1997"? If not, do a "man `strftime`" and find out what option should be used. Then put it into your `.vimrc` :

```
let g:netrw_timefmt= "%X" (where X is the option)
```

netrw-p5

- P5. I want my current directory to track my browsing. {{{2  
How do I do that?

Put the following line in your `.vimrc` :

```
let g:netrw_keepdir= 0
```

netrw-p6

- P6. I use Chinese (or other non-ascii) characters in my filenames, {{{2 and `netrw` (`Explore`, `Sexplore`, `Hexplore`, etc) doesn't display them!

(taken from an answer provided by Wu Yongwei on the vim mailing list)

I now see the problem. Your code page is not 936, right? Vim seems only able to open files with names that are valid in the current code page, as are many other applications that do not use the Unicode version of Windows APIs. This is an OS-related issue. You should not have such problems when the system

locale uses UTF-8, such as modern Linux distros.

(...it is one more reason to recommend that people use utf-8!)

P7. I'm getting "ssh is not executable on your system" -- what do I {{{2  
do? netrw-p7

(Dudley Fox) Most people I know use putty for windows ssh. It is a free ssh/telnet application. You can read more about it here:

<http://www.chiark.greenend.org.uk/~sgtatham/putty/> Also:

(Marlin Unruh) This program also works for me. It's a single executable, so he/she can copy it into the Windows\System32 folder and create a shortcut to it.

(Dudley Fox) You might also wish to consider plink, as it sounds most similar to what you are looking for. plink is an application in the putty suite.

<http://the.earth.li/~sgtatham/putty/0.58/html/doc/Chapter7.html#plink>

(Vissale Neang) Maybe you can try OpenSSH for windows, which can be obtained from:

<http://sshhwindows.sourceforge.net/>

It doesn't need the full Cygwin package.

(Antoine Mechelynck) For individual Unix-like programs needed for work in a native-Windows environment, I recommend getting them from the GnuWin32 project on sourceforge if it has them:

<http://gnuwin32.sourceforge.net/>

Unlike Cygwin, which sets up a Unix-like virtual machine on top of Windows, GnuWin32 is a rewrite of Unix utilities with Windows system calls, and its programs works quite well in the cmd.exe "Dos box".

(dave) Download WinSCP and use that to connect to the server. In Preferences > Editors, set gvim as your editor:

- Click "Add..."
- Set External Editor (adjust path as needed, include the quotes and !.! at the end):  
"c:\Program Files\Vim\vim82\gvim.exe" !.!
- Check that the filetype in the box below is `{asterisk}.{asterisk}` (all files), or whatever types you want (cec: change `{asterisk}` to \* ; I had to write it that way because otherwise the helptags system thinks it's a tag)

- Make sure it's at the top of the listbox (click it, then click "Up" if it's not)  
If using the Norton Commander style, you just have to hit <F4> to edit a file in a local copy of gvim.

(Vit Gottwald) How to generate public/private key and save public key it on server:

<http://www.chiark.greenend.org.uk/~sgtatham/putty/0.60/html/doc/Chapter8.html#pubkey-getting>  
(8.3 Getting ready for public key authentication)

How to use a private key with 'pscp':

<http://www.chiark.greenend.org.uk/~sgtatham/putty/0.60/html/doc/Chapter5.html>  
(5.2.4 Using public key authentication with PSCP)

(Ben Schmidt) I find the ssh included with cwRsync is brilliant, and install cwRsync or cwRsyncServer on most Windows systems I come across these days. I guess COPSSH, packed by the same person, is probably even better for use as just ssh on Windows, and probably includes sftp, etc. which I suspect the cwRsync doesn't, though it might

(cec) To make proper use of these suggestions above, you will need to modify the following user-settable variables in your .vimrc:

```
g:netrw_ssh_cmd g:netrw_list_cmd g:netrw_mkdir_cmd
g:netrw_rm_cmd g:netrw_rmdir_cmd g:netrw_rmf_cmd
```

The first one ( g:netrw\_ssh\_cmd ) is the most important; most of the others will use the string in g:netrw\_ssh\_cmd by default.

P8. I'm browsing, changing directory, and bang! netrw-p8 netrw-ml\_get errors appear and I have to kill vim. Any way around this? {{{2

Normally netrw attempts to avoid writing swapfiles for its temporary directory buffers. However, on some systems this attempt appears to be causing ml\_get errors to appear. Please try setting g:netrw\_use\_noswf to 0 in your <.vimrc>:

```
let g:netrw_use_noswf= 0
```

P9. I'm being pestered with "[something] is a directory" and netrw-p9 "Press ENTER or type command to continue" prompts... {{{2

The "[something] is a directory" prompt is issued by Vim, not by netrw, and there appears to be no way to work around it. Coupled with the default cmdheight of 1, this message causes the "Press ENTER..." prompt. So: read hit-enter ; I also suggest that you set your 'cmdheight' to 2 (or more) in your <.vimrc> file.

### netrw-p10

- P10. I want to have two windows; a thin one on the left and my editing window on the right. How may I accomplish this? {{{2

You probably want netrw running as in a side window. If so, you will likely find that ":[N]Lexplore" does what you want. The optional "[N]" allows you to select the quantity of columns you wish the :Lexplore r window to start with (see g:netrw\_winsize for how this parameter works).

Previous solution:

- \* Put the following line in your <.vimrc>:  
let g:netrw\_altv = 1
- \* Edit the current directory: :e .
- \* Select some file, press v
- \* Resize the windows as you wish (see CTRL-W\_< and CTRL-W\_> ). If you're using gvim, you can drag the separating bar with your mouse.
- \* When you want a new file, use ctrl-w h to go back to the netrw browser, select a file, then press P (see CTRL-W\_h and netrw-P ). If you're using gvim, you can press <leftmouse> in the browser window and then press the <middlemouse> to select the file.

### netrw-p11

- P11. My directory isn't sorting correctly, or unwanted letters are appearing in the listed filenames, or things aren't lining up properly in the wide listing, ... {{{2

This may be due to an encoding problem. I myself usually use utf-8, but really only use ascii (ie. bytes from 32-126). Multibyte encodings use two (or more) bytes per character. You may need to change g:netrw\_sepchr and/or g:netrw\_xstrlen .

### netrw-p12

- P12. I'm a Windows + putty + ssh user, and when I attempt to browse, the directories are missing trailing "/"s so netrw treats them as file transfers instead of as attempts to browse subdirectories. How may I fix this? {{{2

(mikeyao) If you want to use vim via ssh and putty under Windows, try combining the use of pscp/psftp with plink. pscp/psftp will be used to connect and plink will be used to execute commands on the server, for example: list files and directory using 'ls'.

These are the settings I use to do this:

```
" list files, it's the key setting, if you haven't set,
" you will get a blank buffer
let g:netrw_list_cmd = "plink HOSTNAME ls -Fa"
" if you haven't add putty directory in system path, you should
```

```
" specify scp/sftp command. For examples:
"let g:netrw_sftp_cmd = "d:\\dev\\putty\\PSFTP.exe"
"let g:netrw_scp_cmd = "d:\\dev\\putty\\PSCP.exe"
```

netrw-p13

- P13. I would like to speed up writes using Nwrite and scp/ssh style connections. How? (Thomer M. Gil) {{{2

Try using ssh's ControlMaster and ControlPath (see the ssh\_config man page) to share multiple ssh connections over a single network connection. That cuts out the cryptographic handshake on each file write, sometimes speeding it up by an order of magnitude. (see [http://thomer.com/howtos/netrw\\_ssh.html](http://thomer.com/howtos/netrw_ssh.html)) (included by permission)

Add the following to your ~/.ssh/config:

```
you change "*" to the hostname you care about
Host *
 ControlMaster auto
 ControlPath /tmp/%r@%h:%p
```

Then create an ssh connection to the host and leave it running:

```
ssh -N host.domain.com
```

Now remotely open a file with Vim's Netrw and enjoy the zippiness:

```
vim scp://host.domain.com//home/user/.bashrc
```

netrw-p14

- P14. How may I use a double-click instead of netrw's usual single click to open a file or directory? (Ben Fritz) {{{2

First, disable netrw's mapping with

```
let g:netrw_mousemaps= 0
```

and then create a netrw buffer only mapping in

```
$HOME/.vim/after/ftplugin/netrw.vim:
```

```
nmap <buffer> <2-leftmouse> <CR>
```

Note that setting g:netrw\_mousemaps to zero will turn off all netrw's mouse mappings, not just the <leftmouse> one. (see [g:netrw\\_mousemaps](#) )

netrw-p15

- P15. When editing remote files (ex. :e <ftp://hostname/path/file>), under Windows I get an E303 message complaining that its unable to open a swap file. {{{2

(romainl) It looks like you are starting Vim from a protected directory. Start netrw from your \$HOME or other writable directory.

netrw-p16

P16. Netrw is closing buffers on its own. {{{2  
 What steps will reproduce the problem?  
 1. :Explore, navigate directories, open a file  
 2. :Explore, open another file  
 3. Buffer opened in step 1 will be closed. o  
 What is the expected output? What do you see instead?  
 I expect both buffers to exist, but only the last one does.

(Lance) Problem is caused by "set autochdir" in .vimrc.  
 (drchip) I am able to duplicate this problem with 'acd' set.  
 It appears that the buffers are not exactly closed;  
 a ":ls!" will show them (although ":ls" does not).

netrw-P17

P17. How to locally edit a file that's only available via {{{2  
 another server accessible via ssh?  
 See <http://stackoverflow.com/questions/12469645/>  
 "Using Vim to Remotely Edit A File on ServerB Only  
 Accessible From ServerA"

netrw-P18

P18. How do I get numbering on in directory listings? {{{2  
 With `g:netrw_bufsettings`, you can control netrw's buffer  
 settings; try putting  
`let g:netrw_bufsettings="noma nomod nu nobl nowrap ro nornu"`  
 in your .vimrc. If you'd like to have relative numbering  
 instead, try  
`let g:netrw_bufsettings="noma nomod nonu nobl nowrap ro rnu"`

netrw-P19

P19. How may I have gvim start up showing a directory listing? {{{2  
 Try putting the following code snippet into your .vimrc:  
`augroup VimStartup`  
`au!`  
`au VimEnter * if expand("%") == "" && argc() == 0 &&`  
`\ (v:servername =~ 'GVIM\d*' || v:servername == "")`  
`\ | e . | endif`  
`augroup END`  
 You may use Lexplore instead of "e" if you're so inclined.  
 This snippet assumes that you have client-server enabled  
 (ie. a "huge" vim version).

netrw-P20

P20. I've made a directory (or file) with an accented character, {{{2  
 but netrw isn't letting me enter that directory/read that file:  
  
 Its likely that the shell or o/s is using a different encoding  
 than you have vim (netrw) using. A patch to vim supporting  
 "systemencoding" may address this issue in the future; for  
 now, just have netrw use the proper encoding. For example:

`au FileType netrw set enc=latin1`

netrw-P21

P21. I get an error message when I try to copy or move a file: {{{2

```
error (netrw) tried using g:netrw_localcopycmd<cp>; it doesn't work!
```

What's wrong?

Netrw uses several system level commands to do things (see

```
g:netrw_localcopycmd , g:netrw_localmovecmd ,
g:netrw_mkdir_cmd).
```

You may need to adjust the default commands for one or more of these commands by setting them properly in your .vimrc. Another source of difficulty is that these commands use vim's local directory, which may not be the same as the browsing directory shown by netrw (see [g:netrw\\_keepdir](#) ).

Highlighting matching parens `matchparen`

The functionality mentioned here is a `standard-plugin`. This plugin is only available if `'compatible'` is not set.

You can avoid loading this plugin by setting the `"loaded_matchparen"` variable:

```
:let loaded_matchparen = 1
```

The plugin installs `CursorMoved`, `CursorMovedI` and `WinEnter` autocommands to redefine the match highlighting.

To disable the plugin after it was loaded use this command:

```
:NoMatchParen
```

And to enable it again:

```
:DoMatchParen
```

The highlighting used is `MatchParen`. You can specify different colors with the `":highlight"` command. Example:

```
:hi MatchParen ctermbg=blue guibg=lightblue
```

By default the plugin will highlight both the paren under the cursor and the matching one using the `hl-MatchParen` highlighting group. This may result in the cursor briefly disappearing from the screen as the `MatchParen` colors take over the cursor highlight. To prevent this from happening and have the plugin only highlight the matching paren and not the one under the cursor (effectively leaving the cursor style unchanged), you can set the `"matchparen_disable_cursor_hl"` variable:

```
:let matchparen_disable_cursor_hl = 1
```

The characters to be matched come from the `'matchpairs'` option. You can change the value to highlight different matches. **Note** that not everything is possible. For example, you can't highlight single or double quotes, because the start and end are equal.

The syntax highlighting attributes are used. When the cursor currently is not in a string or comment syntax item, then matches inside string and comment syntax items are ignored. Any syntax items with `"string"` or `"comment"` somewhere in their name are considered string or comment items.

The search is limited to avoid a delay when moving the cursor. The limits are:

- What is visible in the window.
- 100 lines above or below the cursor to avoid a long delay when there are closed folds.
- **'synmaxcol'** times 2 bytes before or after the cursor to avoid a delay in a long line with syntax highlighting.
- A timeout of 300 msec (60 msec in Insert mode). This can be changed with the "g:matchparen\_timeout" and "g:matchparen\_insert\_timeout" variables and their buffer-local equivalents "b:matchparen\_timeout" and "b:matchparen\_insert\_timeout".

If you would like the % command to work better, the matchit plugin can be used, see [matchit-install](#) . This plugin also helps to skip matches in comments. This is unrelated to the matchparen highlighting, they use a different mechanism.

=====

pi\_spec.txt For Vim version 9.1. Last change: 2006 Apr 24

by Gustavo Niemeyer

This is a filetype plugin to work with rpm spec files.

Currently, this Vim plugin allows you to easily update the %changelog section in RPM spec files. It will even create a section for you if it doesn't exist yet. If you've already inserted an entry today, it will give you the opportunity to just add a new item in today's entry. If you don't provide a format string ( [spec\\_chglog\\_format](#) ), it'll ask you an email address and build a format string by itself.

1. How to use it [spec-how-to-use-it](#)
2. Customizing [spec-customizing](#)

---

1. How to use it [spec-how-to-use-it](#)

The spec\_chglog plugin provides a map like the following:

```
:map <buffer> <LocalLeader>c <Plug>SpecChangelog
```

It means that you may run the plugin inside a spec file by pressing your maplocalleader key (default is '\') plus 'c'. If you do not have [spec\\_chglog\\_format](#) set, the plugin will ask you for an email address to use in this edit session.

Every time you run the plugin, it will check to see if the last entry in the changelog has been written today and by you. If the entry matches, it will just insert a new changelog item, otherwise it will create a new changelog entry. If you are running with [spec\\_chglog\\_release\\_info](#) enabled, it will also check if the name, version and release matches. The plugin is smart enough to ask you if it should update the package release, if you have not done so.

Setting a map [spec-setting-a-map](#)

---

As you should know, you can easily set a map to access any Vim command (or anything, for that matter). If you don't like the default map of [<LocalLeader>c](#), you may just set up your own key. The following line shows you how you could do this in your .vimrc file, mapping the plugin to the [<F5>](#) key:

```
au FileType spec map <buffer> <F5> <Plug>SpecChangelog
```

**Note:** the plugin will respect your desire to change the default mapping and won't set it.

This command will add a map only in the spec file buffers.

## 2. Customizing

[spec-customizing](#)

### The format string

---

[spec\\_chglog\\_format](#)

You can easily customize how your spec file entry will look like. To do this just set the variable "spec\_chglog\_format" in your .vimrc file like this:

```
let spec_chglog_format = "%a %b %d %Y My Name <my@email.com>"
```

**Note** that "%a %b %d %Y" is the most used time format. If you don't provide a format string, when you run the SpecChangelog command for the first time, it will ask you an email address and build the `spec_chglog_format` variable for you. This way, you will only need to provide your email address once.

To discover which format options you can use, take a look at the `strftime()` function man page.

### Where to insert new items

---

[spec\\_chglog\\_prepend](#)

The plugin will usually insert new %changelog entry items (note that it's not the entry itself) after the existing ones. If you set the `spec_chglog_prepend` variable

```
let spec_chglog_prepend = 1
```

it will insert new items before the existing ones.

### Inserting release info

---

[spec\\_chglog\\_release\\_info](#)

If you want, the plugin may automatically insert release information on each changelog entry. One advantage of turning this feature on is that it may control if the release has been updated after the last change in the package or not. If you have not updated the package version or release, it will ask you if it should update the package release for you. To turn this feature on, just insert the following code in your .vimrc:

```
let spec_chglog_release_info = 1
```

Then, the first item in your changelog entry will be something like:

```
+ name-1.0-1cl
```

If you don't like the release updating feature and don't want to answer "No" each time it detects an old release, you may disable it with

```
let spec_chglog_never_increase_release = 1
```

Good luck!!

+-----+  
| Tar File Interface |  
+-----+

Author: Charles E. Campbell <Ncamp0bell@SdrPchip.AorgM-NOSPAM>  
(remove NOSPAM from Campbell's email first)

Copyright 2005-2017: tar-copyright

The VIM LICENSE (see copyright ) applies to the files in this package, including tarPlugin.vim, tar.vim, and pi\_tar.txt. Like anything else that's except use "tar.vim" instead of "VIM". Like anything else that's free, tar.vim and its associated files are provided \*as is\* and comes with no warranty of any kind, either expressed or implied. No guarantees of merchantability. No guarantees of suitability for any purpose. By using this plugin, you agree that in no event will the copyright holder be liable for any damages resulting from the use of this software. Use at your own risk!

=====

1. Contents	tar tar-contents
1. Contents.....	tar-contents
2. Usage.....	tar-usage
3. Options.....	tar-options
4. History.....	tar-history

=====

2. Usage	tar-usage tar-manual
----------	----------------------

When one edits a \*.tar file, this plugin will handle displaying a contents page. Select a file to edit by moving the cursor atop the desired file, then hit the <return> key. After editing, one may also write to the file. Currently, one may not make a new file in tar archives via the plugin.

:Vimuntar

VIMUNTAR

:Vimuntar [vimhome]

This command copies, if necessary, the tarball to the .vim or vimfiles directory using the first writable directory in the 'runtimepath' when no [vimhome] is specified. Otherwise, the [vimhome] argument allows the user to specify that directory, instead.

The copy is done using the command in g:tar\_copycmd , which is  
cp for cygwin, unix, macunix  
copy for windows (32, 95, 64, 16)

The extraction is done with the command specified with  
g:tar\_extractcmd , which by default is  
"tar -xf"

:TarDiff

DIFFERENCING SUPPORT

:TarDiff [filename]

This command will attempt to show the differences between the tarball version of a file and the associated file on the system. In order to find that file on the system, the script uses the path associated with the file mentioned in the tarball. If the current directory is not correct for that path, :TarDiff will fail to find the associated file.

If the [filename] is given, that that filename (and path) will be used to specify the associated file.

## PREVENTING LOADING

If for some reason you do not wish to use vim to examine tar'd files, you may put the following two variables into your <.vimrc> to prevent the tar plugin from loading:

```
let g:loaded_tarPlugin= 1
let g:loaded_tar = 1
```

---

### 3. Options

tar-options

These options are variables that one may change, typically in one's <.vimrc> file.

Variable	Default Value	Explanation
<code>g:tar_browseoptions</code>	"Ptf"	used to get a list of contents
<code>g:tar_readoptions</code>	"OPxf"	used to extract a file from a tarball
<code>g:tar_cmd</code>	"tar"	the name of the tar program
<code>g:tar_nomax</code>	0	if true, file window will not be maximized
<code>g:tar_secure</code>	undef	if exists: "--"s will be used to prevent unwanted option expansion in tar commands. Please be sure that your tar command accepts "--"; Posix compliant tar utilities do accept them. if not exists: The tar plugin will reject any tar files or member files that begin with "--" Not all tar's support the "--" which is why it isn't default.
<code>g:tar_writeoptions</code>	"uf"	used to update/replace a file

---

### 4. History

tar-history

v31 Apr 02, 2017 \* (klartext) reported that browsing encrypted files in a zip archive created unencrypted

swap files. I am applying a similar fix used on zip.vim to tar.vim: new buffers are opened with `:noswapfile`.

	May 16, 2017	* When the mouse option isn't empty, the leftmouse can be used to select a file in the tar-file listing.
v30	Apr 22, 2014	* .tgz files are ambiguous: they may have been compressed with either gzip or bzip2. Tar.vim disambiguates by using unix's "file" command.
	Feb 18, 2016	* Changed =~ to =~# where appropriate
	Feb 18, 2017	* Now also permits xz decompression
v28	Jun 23, 2011	* a few more decompression options (tbz tb2 txz)
v27	May 31, 2011	* moved cygwin detection before g:tar_copycmd handling
		* inserted additional <code>:keepj</code> modifiers
		* changed silent to sil! ( <code>:silent</code> )
v26	Aug 09, 2010	* uses buffer-local instead of window variables to hold tarfile name
		* inserted keepj before 0d to protect jump list
v25	Jun 19, 2010	* (Jan Steffens) added support for xz compression
v24	Apr 07, 2009	* :Untarvim command implemented
	Sep 28, 2009	* Added lzma support
v22	Aug 08, 2008	* security fixes
v16	Jun 06, 2008	* tarfile:: used instead of tarfile: when editing files inside tarballs. Fixes a problem with tarballs called things like c:\abc.tar. (tnx to Bill McCarthy)
v14	May 09, 2008	* arno caught a security bug
	May 28, 2008	* various security improvements. Now requires patch 299 which provides the fnameescape() function
	May 30, 2008	* allows one to view *.gz and *.bz2 files that are in *.tar files.
v12	Sep 07, 2007	* &shq now used if not the empty string for g:tar_shq
v10	May 02, 2006	* now using "redraw then echo" to show messages, instead of "echo and prompt user"
v9	May 02, 2006	* improved detection of masquerading as tar file
v8	May 02, 2006	* allows editing of files that merely masquerade as tar files
v7	Mar 22, 2006	* work on making tar plugin work across network
	Mar 27, 2006	* g:tar_cmd now available for users to change the name of the tar program to be used. By default, of course, it's "tar".
v6	Dec 21, 2005	* writing to files not in directories caused problems - fixed (pointed out by Christian Robinson)
v5	Nov 22, 2005	* report option workaround installed
v3	Sep 16, 2005	* handles writing files in an archive back to the archive
	Oct 18, 2005	* <amatch> used instead of <afile> in autocmds
	Oct 18, 2005	* handles writing to compressed archives
	Nov 03, 2005	* handles writing tarfiles across a network

```
v2 using netrw#NetWrite()
 * converted to use Vim7's new autoload feature
 by Bram Moolenaar
v1 (original) * Michael Toren
 (see http://michael.toren.net/code/
 link seems dead)
```

2. Vimball Introduction

vimball-intro

Vimball is intended to make life simpler for users of plugins. All a user needs to do with a vimball is:

```
vim someplugin.vba
:so %
:q
```

and the plugin and all its components will be installed into their appropriate directories. Note that one doesn't need to be in any particular directory when one does this. Plus, any help for the plugin will also be automatically installed.

If a user has decided to use the AsNeeded plugin, vimball is smart enough to put scripts nominally intended for .vim/plugin/ into .vim/AsNeeded/ instead.

Removing a plugin that was installed with vimball is really easy:

```
vim
:RmVimball someplugin
```

This operation is not at all easy for zips and tarballs, for example.

Vimball examines the user's 'runtimepath' to determine where to put

the scripts. The first directory mentioned on the runtimepath is usually used if possible. Use  
`:echo &rtp`  
to see that directory.

---

### 3. Vimball Manual

`vimball-manual`

#### MAKING A VIMBALL

`:MkVimball`

`:[range]MkVimball[!] filename [path]`

The range is composed of lines holding paths to files to be included in your new vimball, omitting the portion of the paths that is normally specified by the runtimepath ( `'rtp'` ). As an example:

`plugin/something.vim`  
`doc/something.txt`

using

`:[range]MkVimball filename`

on this range of lines will create a file called "filename.vba" which can be used by Vimball.vim to re-create these files. If the "filename.vba" file already exists, then MkVimball will issue a warning and not create the file. **Note** that these paths are relative to your `.vim` (vimfiles) directory, and the files should be in that directory. The vimball plugin normally uses the first `'runtimepath'` directory that exists as a prefix; don't use absolute paths, unless the user has specified such a path.

If you use the exclamation point (!), then MkVimball will create the "filename.vba" file, overwriting it if it already exists. This behavior resembles that for `:w` .

If you wish to force slashes into the filename, that can also be done by using the exclamation mark (ie. `:MkVimball! path/filename`).

The tip at [http://vim.wikia.com/wiki/Using\\_VimBall\\_with\\_%27Make%27](http://vim.wikia.com/wiki/Using_VimBall_with_%27Make%27) has a good idea on how to automate the production of vimballs using make.

#### MAKING DIRECTORIES VIA VIMBALLS

`g:vimball_mkdir`

First, the `mkdir()` command is tried (not all systems support it).

If it doesn't exist, then if `g:vimball_mkdir` doesn't exist, it is set as follows:

`|g:netrw_localmkdir|, if it exists`  
`"mkdir" , if it is executable`  
`"makedir" , if it is executable`  
`Otherwise , it is undefined.`

One may explicitly specify the directory making command using `g:vimball_mkdir`. This command is used to make directories that are needed as indicated by the vimball.

## CONTROLLING THE VIMBALL EXTRACTION DIRECTORY

`g:vimball_home`

You may override the use of the `'runtimepath'` by specifying a variable, `g:vimball_home`.

```
vim filename.vba
```

`vimball-extract`

Simply editing a Vimball will cause Vimball.vim to tell the user to source the file to extract its contents.

Extraction will only proceed if the first line of a putative vimball file holds the "Vimball Archiver by Charles E. Campbell" line.

## LISTING FILES IN A VIMBALL

`:VimballList`

```
:VimballList
```

This command will tell Vimball to list the files in the archive, along with their lengths in lines.

## MANUALLY INVOKING VIMBALL EXTRACTION

`:UseVimball`

```
:UseVimball [path]
```

This command is contained within the vimball itself; it invokes the `vimball#Vimball()` routine which is responsible for unpacking the vimball. One may choose to execute it by hand instead of sourcing the vimball; one may also choose to specify a path for the installation, thereby overriding the automatic choice of the first existing directory on the `'runtimepath'`.

## REMOVING A VIMBALL

`:RmVimball`

```
:RmVimball vimballfile [path]
```

This command removes all files generated by the specified vimball (but not any directories it may have made). One may choose a path for de-installation, too (see `'runtimepath'`); otherwise, the default is the first existing directory on the `'runtimepath'`. To implement this, a file (`.VimballRecord`) is made in that directory containing a record of what files need to be removed for all vimballs used thus far.

## PREVENTING LOADING

If for some reason you don't want to be able to extract plugins using vimballs: you may prevent the loading of vimball.vim by putting the following two variables in your `<.vimrc>`:

```
let g:loaded_vimballPlugin= 1
let g:loaded_vimball = 1
```

## WINDOWS

## vimball-windows

Many vimball files are compressed with gzip. Windows, unfortunately, does not come provided with a tool to decompress gzip'ped files. Fortunately, there are a number of tools available for Windows users to un-gzip files:

<u>Item</u>	<u>Tool/Suite</u>	<u>Free</u>	<u>Website</u>
7zip	tool	y	<a href="http://www.7-zip.org/">http://www.7-zip.org/</a>
Winzip	tool	n	<a href="http://www.winzip.com/downwz.htm">http://www.winzip.com/downwz.htm</a>
unxutils	suite	y	<a href="http://unxutils.sourceforge.net/">http://unxutils.sourceforge.net/</a>
cygwin	suite	y	<a href="http://www.cygwin.com/">http://www.cygwin.com/</a>
GnuWin32	suite	y	<a href="http://gnuwin32.sourceforge.net/">http://gnuwin32.sourceforge.net/</a>
MinGW	suite	y	<a href="http://www.mingw.org/">http://www.mingw.org/</a>

---

## 4. Vimball History

## vimball-history {{{1

- 37 : Jul 18, 2014 \* (by request of T. Miedema) added augroup around the autocmds in vimballPlugin.vim
- Jul 06, 2015 \* there are two uses of tabc; changed to tabc!
- 34 : Sep 22, 2011 \* "UseVimball path" now supports a non-full path by prepending the current directory to it.
- 33 : Apr 02, 2011 \* Gave priority to \*.vmb over \*.vba
- \* Changed silent! to sil! (shorter)
- \* Safed 'swf' setting (during vimball extraction, its now turned off)
- 32 : May 19, 2010 \* (Christian Brabrandt) :so someplugin.vba and :so someplugin.vba.gz (and the other supported compression types) now works
- \* (Jan Steffens) added support for xz compression
- \* fenc extraction was erroneously picking up the end of the line number when no file encoding was present. Fixed.
- \* By request, beginning the switchover from the vba extension to vmb. Currently both are supported; MkVimball, however, now will create \*.vmb files.
- Feb 11, 2011 \* motoyakurotsu reported an error with vimball's handling of zero-length files
- Feb 18, 2016 \* Changed =~ to =~# where appropriate
- 30 : Dec 08, 2008 \* fnameescape() inserted to protect error messaging using corrupted filenames from causing problems
- \* RmVimball supports filenames that would otherwise be considered to have "magic" characters (ie. Abc[1].vba)
- Feb 18, 2009 \* s:Escape(), g:vimball\_shq, and g:netrw\_shq removed (shellescape() used directly)
- Oct 05, 2009 \* (Nikolai Weibull) suggested that MkVimball be allowed to use slashes in the filename.
- 26 : May 27, 2008 \* g:vimball\_mkdir usage installed. Makes the

\$HOME/.vim (or \$HOME\vimfiles) directory if necessary.

May 30, 2008 \* (tnx to Bill McCarthy) found and fixed a bug: vimball wasn't updating plugins to AsNeeded/ when it should

25 : Mar 24, 2008 \* changed vimball#Vimball() to recognize doc/\*.??x files as help files, too.

Apr 18, 2008 \* RmVimball command is now protected by saving and restoring settings -- in particular, acd was causing problems as reported by Zhang Shuhan

24 : Nov 15, 2007 \* g:vimball\_path\_escape used by s:Path() to prevent certain characters from causing trouble (defunct: `fnameescape()` and `shellescape()` now used instead)

22 : Mar 21, 2007 \* uses setlocal instead of set during BufEnter

21 : Nov 27, 2006 \* (tnx to Bill McCarthy) vimball had a header handling problem and it now changes \s to /s

20 : Nov 20, 2006 \* substitute() calls have all had the 'e' flag removed.

18 : Aug 01, 2006 \* vimballs now use folding to easily display their contents.  
\* if a user has AsNeeded/somefile, then vimball will extract plugin/somefile to the AsNeeded/ directory

17 : Jun 28, 2006 \* changes all \s to /s internally for Windows

16 : Jun 15, 2006 \* A. Mechelynck's idea to allow users to specify installation root paths implemented for UseVimball, Mkvimball, and RmVimball.  
\* RmVimball implemented

15 : Jun 13, 2006 \* bugfix

14 : May 26, 2006 \* bugfixes

13 : May 01, 2006 \* exists("&acd") used to determine if the acd option exists

12 : May 01, 2006 \* bugfix - the 'acd' option is not always defined

11 : Apr 27, 2006 \* VimballList would create missing subdirectories that the vimball specified were needed. Fixed.

10 : Apr 27, 2006 \* moved all setting saving/restoration to a pair of functions. Included some more settings in them which frequently cause trouble.

9 : Apr 26, 2006 \* various changes to support Windows' predilection for backslashes and spaces in file and directory names.

7 : Apr 25, 2006 \* bypasses foldenable  
\* uses more exe and less norm! (:yank :put etc)  
\* does better at insuring a "Press ENTER" prompt appears to keep its messages visible

4 : Mar 31, 2006 \* BufReadPost seems to fire twice; BufReadEnter only fires once, so the "Source this file..." message is now issued only once.

3 : Mar 20, 2006 \* removed query, now requires sourcing to be extracted (:so %). Message to that effect included.  
\* :VimballList now shows files that would be extracted.

2 : Mar 20, 2006 \* query, :UseVimball included  
1 : Mar 20, 2006 \* initial release

1. Contents zip zip-contents  
1. Contents..... zip-contents  
2. Usage..... zip-usage  
3. Additional Extensions..... zip-extension  
4. History..... zip-history

=====  
2. Usage zip-usage zip-manual

When one edits a \*.zip file, this plugin will handle displaying a contents page. Select a file to edit by moving the cursor atop the desired file, then hit the <return> key. After editing, one may also write to the file. Currently, one may not make a new file in zip archives via the plugin.

COMMANDS

x : extract a listed file when the cursor is atop it zip-x

OPTIONS

g:zip\_nomax  
If this variable exists and is true, the file window will not be automatically maximized when opened.

g:zip\_shq  
Different operating systems may use one or more shells to execute commands. Zip will try to guess the correct quoting mechanism to allow spaces and whatnot in filenames; however, if it is incorrectly guessing the quote to use for your setup, you may use

g:zip\_shq which by default is a single quote under Unix (') and a double quote under Windows ("). If you'd rather have no quotes, simply set

g:zip\_shq to the empty string (let g:zip\_shq= "") in your `<.vimrc>`.

`g:zip_unzipcmd`

Use this option to specify the program which does the duty of "unzip". It's used during browsing. By default:

```
let g:zip_unzipcmd= "unzip"
```

`g:zip_zipcmd`

Use this option to specify the program which does the duty of "zip". It's used during the writing (updating) of a file already in a zip file; by default:

```
let g:zip_zipcmd= "zip"
```

`g:zip_extractcmd`

This option specifies the program (and any options needed) used to extract a file from a zip archive. By default,

```
let g:zip_extractcmd= g:zip_unzipcmd
```

`g:zip_exec`

For security reasons, one may prevent that Vim runs executables automatically when opening a buffer. This option (default: "1") can be used to prevent executing the "unzip" command when set to "0":

```
let g:zip_exec=0
```

## PREVENTING LOADING

If for some reason you do not wish to use vim to examine zipped files, you may put the following two variables into your `<.vimrc>` to prevent the zip plugin from loading:

```
let g:loaded_zipPlugin= 1
let g:loaded_zip = 1
```

---

## 3. Additional Extensions

`zip-extension`

Apparently there are a number of archivers which generate zip files that don't use the .zip extension (.jar, .xpi, etc). To handle such files, place a line in your `<.vimrc>` file:

```
au BufReadCmd *.jar,*.xpi call zip#Browse(expand("<amatch>"))
```

One can simply extend this line to accommodate additional extensions that should be treated as zip files.

Alternatively, one may change `g:zipPlugin_ext` in one's `.vimrc`. Currently (11/30/15) it holds:

```
let g:zipPlugin_ext= '*.zip,*.jar,*.xpi,*.ja,*.war,*.ear,*.celzip,
\ *.oxt,*.kmz,*.wsz,*.xap,*.docx,*.docm,*.dotx,*.dotm,*.potx,*.potm,
\ *.ppsx,*.ppsm,*.pptx,*.pptm,*.ppam,*.sldx,*.thmx,*.xlam,*.xlsx,*.xlsm,
\ *.xlsb,*.xltx,*.xltm,*.xlam,*.crtx,*.vdw,*.glox,*.gcsx,*.gqsx,*.epub'
```

---

---

#### 4. History

zip-history {{{1

- v33 Dec 07, 2021 \* \*.xlam mentioned twice in zipPlugin
- v32 Oct 22, 2021 \* to avoid an issue with a vim 8.2 patch, zipfile: has been changed to zipfile:// . This often shows up as zipfile:/// with zipped files that are root-based.
- v29 Apr 02, 2017 \* (Klartext) reported that an encrypted zip file could be opened but the swapfile held unencrypted contents. The solution is to edit the contents of a zip file using the :noswapfile modifier.
- v28 Oct 08, 2014 \* changed the sanity checks for executables to reflect the command actually to be attempted in zip#Read() and zip#Write()
  - \* added the extraction of a file capability
- Nov 30, 2015 \* added \*.epub to the g:zipPlugin\_ext list
- Sep 13, 2016 \* added \*.apk to the g:zipPlugin\_ext list and sorted the suffices.
- v27 Jul 02, 2013 \* sanity check: zipfile must have "PK" as its first two bytes.
  - \* modified to allow zipfile: entries in quickfix lists
- v26 Nov 15, 2012 \* (Jason Spiro) provided a lot of new extensions that are synonyms for .zip
- v25 Jun 27, 2011 \* using keepj with unzip -Z (consistent with the -p variant)
  - \* (Ben Staniford) now uses has("win32unix") && executable("cygpath") before converting to cygwin-style paths
- v24 Jun 21, 2010 \* (Cédric Bosdonnat) unzip seems to need its filenames fnameescape'd as well as shellquote'd
  - \* (Motoya Kurotsu) inserted keepj before 0d to protect jump list
- v17 May 09, 2008 \* arno caught a security bug
- v15 Sep 07, 2007 \* &shq now used if not the empty string for g:zip\_shq
- v14 May 07, 2007 \* using b:zipfile instead of w:zipfile to avoid problem when editing alternate file to bring up a zipfile
- v10 May 02, 2006 \* now using "redraw then echo" to show messages, instead of "echo and prompt user"
  - \* g:zip\_shq provided to allow for quoting control for the command being passed via :r! ... commands.
- v8 Apr 10, 2006 \* Bram Moolenaar reported that he received an error message due to "Pattern not found: ^.\*\%0c"; this was caused by stridx finding a Name... at the beginning of the line; zip.vim tried 4,\$s/^\.\*\%0c//, but that doesn't work. Fixed.
- v7 Mar 22, 2006 \* escaped some characters that can cause filename handling problems.
- v6 Dec 21, 2005 \* writing to files not in directories caused problems - fixed (pointed out by Christian Robinson)
- v5 Nov 22, 2005 \* report option workaround installed
- v3 Oct 18, 2005 \* <amatch> used instead of <afile> in autocmds
- v2 Sep 16, 2005 \* silenced some commands (avoiding hit-enter prompt)
  - \* began testing under Windows; works thus far
  - \* filetype detection fixed

Nov 03, 2005 \* handles writing zipfiles across a network using  
netrw#NetWrite()  
v1 Sep 15, 2005 \* Initial release, had browsing, reading, and writing

---

`sponsor.txt` For Vim version 9.1. Last change: 2024 Aug 14

VIM REFERENCE MANUAL by Bram Moolenaar

## SPONSOR VIM DEVELOPMENT

`sponsor`

Fixing bugs and adding new features takes a lot of time and effort. To show your appreciation for the work and motivate developers to continue working on Vim please send a donation.

The money you donated will be mainly used to help children in Uganda. See `uganda`. But at the same time donations increase the development team motivation to keep working on Vim!

For the most recent information about sponsoring look on the Vim web site:

<http://www.vim.org/sponsor/>

More explanations can be found in the `sponsor-faq`.

## REGISTERED VIM USER

`register`

You can become a registered Vim user by sending at least 10 euro. This works similar to sponsoring Vim, see `sponsor` above. Registration was made possible for the situation where your boss or bookkeeper may be willing to register software, but does not like the terms "sponsoring" and "donation".

More explanations can be found in the `register-faq`.

## VOTE FOR FEATURES

`vote-for-features`

**Note:** Voting for features has been discontinued since the passing of `Bram` in 2023. The following two links still work, but they are no longer updated. So they now only provide a historic view as of summer 2023.

The voting results appear on the results page, which is visible for everybody:  
[http://www.vim.org/sponsor/vote\\_results.php](http://www.vim.org/sponsor/vote_results.php)

Additionally, once you have sent 100 euro or more in total, your name appears in the "Vim hall of honour": [http://www.vim.org/sponsor/hall\\_of\\_honour.php](http://www.vim.org/sponsor/hall_of_honour.php)  
But only if you enable this on your account page.

## HOW TO SEND MONEY

`send-money`

Credit card Through PayPal, see the PayPal site for information:  
<https://www.paypal.com/>  
The e-mail address for sending sponsorship money is:  
`donate@vim.org`

The e-mail address for Vim registration is:  
register@vim.org

Using Euro is preferred, other currencies are also accepted.  
In Euro countries a bank transfer is preferred, this has lower costs.

Other methods See [iccf-donations](#) .  
Include "Vim sponsor" or "Vim registration" in the comment of your money transfer.

## QUESTIONS AND ANSWERS

[sponsor-faq](#) [register-faq](#)

Why should I give money?

If you do not show your appreciation for Vim, the development team will be less motivated to fix bugs and add new features. They will do something else instead.

How much money should I send?

That is up to you. The more you give, the more children will be helped.  
An indication for individuals that use Vim at home: 10 Euro per year. For professional use: 30 Euro per year per person.

How do I become a Vim sponsor or registered Vim user?

Send money, as explained above [send-money](#) and include your e-mail address. When the money has been received you will receive a unique registration key. This key can be used on the Vim website to get an extra page where you can choose whether others will be able to see that you donated. There is a link to this page on your "My Account" page.

What is the difference between sponsoring and registering?

It has a different name. Use the term "registration" if your boss doesn't like "sponsoring" or "donation". The benefits are the same.

How can I send money?

See [send-money](#) . Check the web site for the most recent information:  
<http://www.vim.org/sponsor/>

Why don't you use the SourceForge donation system?

SourceForge takes 5% of the donations for themselves. If you want to support SourceForge you can send money to them directly.

I cannot afford to send money, may I still use Vim?

Yes.

I did not register Vim, can I use all available features?

Yes.

I noticed a bug, do I need to register before I can report it?

No, suggestions for improving Vim can always be given. For improvements use the developer [maillist](#) , for reporting bugs see [bugs](#) .

How about Charityware?

Currently the Vim donations go to [uganda](#) anyway. Thus it doesn't matter if you sponsor Vim or ICCF.

I donated \$\$\$, now please add feature XYZ!

There is no direct relation between your donation and the work developers do. Otherwise you would be paying for work and we would have to pay tax over the donation. If you want to hire one of the developers for specific work, contact them directly, don't use the donation system.

Are the donations tax deductible?

That depends on your country. The donations to help the children in [Uganda](#) are tax deductible in Holland, Germany, Canada and in the USA. See the ICCF website <http://iccf-holland.org/donate.html>.

Can you send me a bill?

No, because there is no relation between the money you send and the work that is done. But a receipt is possible.

VIM FAQ by: Christian Brabandt <cb@256bit.org>

Frequently Asked Questions

[vim-faq](#) [Vim-FAQ](#)

This Vim FAQ is created from the questions and answers posted to the vim@vim.org user mailing list and the comp.editors newsgroup. There are several ways to solve a problem in Vim. This FAQ gives one of those several possibilities. You can explore the other ways using the information and links given in this FAQ. The credit for the answers in this FAQ goes to Peppe, Benji, Charles Campbell and numerous others. An online version of this FAQ is available at [https://vimhelp.org/vim\\_faq.txt.html](https://vimhelp.org/vim_faq.txt.html)

[faq-index](#)

INDEX

[faq-general-information](#)

### SECTION 1 - GENERAL INFORMATION

- faq-1.1 What is Vim?
- faq-1.2 Who wrote Vim?
- faq-1.3 Is Vim compatible with Vi?
- faq-1.4 What are some of the improvements of Vim over Vi?
- faq-1.5 Is Vim free?

[faq-resources](#)

### SECTION 2 - RESOURCES

- faq-2.1 Where can I learn more about Vim?
- faq-2.2 Is there a mailing list available?
- faq-2.3 Is there an archive available for the Vim mailing lists?
- faq-2.4 Where can I get the Vim user manual in HTML/PDF/PS format?
- faq-2.5 I have a "xyz" (some) problem with Vim. How do I determine if it is a problem with my setup or with Vim?
- faq-2.6 Where can I report bugs?
- faq-2.7 Where can the FAQ be found?
- faq-2.8 What if I don't find an answer in this FAQ?
- faq-2.9 I have a patch for implementing a Vim feature. Where do I send the patch?
- faq-2.10 I have a Vim tip or developed a new Vim syntax/indent/filetype/compiler plugin or developed a new script or a colorscheme. Is there a public website where I can upload this?

[faq-availability](#)

### SECTION 3 - AVAILABILITY

- faq-3.1 What is the latest version of Vim?
- faq-3.2 Where can I find the latest version of Vim?
- faq-3.3 What platforms does it run on?
- faq-3.4 Where can I download the latest version of the Vim runtime files?

[faq-help](#)

### SECTION 4 - HELP

- faq-4.1 How do I use the help files?
- faq-4.2 How do I search for a keyword in the Vim help files?
- faq-4.3 I am getting an error message E123, what did I do wrong?
- faq-4.4 Where can I read about the various modes in Vim?
- faq-4.5 How do I generate the Vim help tags file after adding a new Vim

help file?

faq-4.6 Can I use compressed versions of the help files?

[faq-editing-a-file](#)

## SECTION 5 - EDITING A FILE

faq-5.1 How do I load a file in Vim for editing?

faq-5.2 How do I save the current file in another name (save as) and edit a new file?

faq-5.3 How do I change the current directory to the directory of the current file?

faq-5.4 How do I write a file without the line feed (EOL) at the end of the file?

faq-5.5 How do I configure Vim to open a file at the last edited location?

faq-5.6 When editing a file in Vim, which is being changed by an external application, Vim opens a warning window (like the confirm dialog) each time a change is detected. How do I disable this warning?

faq-5.7 How do I edit a file whose name is under the cursor?

faq-5.8 How do I reload/re-edit the current file?

faq-5.9 How do I autosave a file periodically?

faq-5.10 How do I open a file in read-only mode?

faq-5.11 How do I open a file for editing without saving the modifications to the current file?

faq-5.12 How do I reduce the loading time for very large files in Vim?

[faq-editing-multiple-files](#)

## SECTION 6 - EDITING MULTIPLE FILES

faq-6.1 How do I open multiple files at once from within Vim?

faq-6.2 How do I switch between multiple files/buffers in Vim?

faq-6.3 How do I open several files in Vim, with each file in a separate window/tabpage?

faq-6.4 How do I configure Vim to autoload several files at once similar to "work-sets" or "projects"?

faq-6.5 Is it possible to open multiple top level windows in a single instance of Vim similar to Nedit or emacs?

faq-6.6 How do I browse/explore directories from within Vim?

faq-6.7 How do I edit files over a network using ftp/scp/rcp/http?

[faq-backup](#)

## SECTION 7 - BACKUP

faq-7.1 When I edit and save files, Vim creates a file with the same name as the original file and a "~" character at the end. How do I stop Vim from creating this file (or) How do I disable the Vim backup file feature?

faq-7.2 When I edit and save files, Vim creates a file with the same name as the original file and a ".un~" extension at the end. How do I stop Vim from creating this file (or) How do I disable the Vim undofile feature.

faq-7.3 How do I configure Vim to store all the backup files in a particular directory?

faq-7.4 When I save a file with Vim, the file permissions are changed. How do I configure Vim to save a file without changing the file permissions?

[faq-buffers](#)

## SECTION 8 - BUFFERS

faq-8.1 I have made some modifications to a buffer. How do I edit another buffer without saving the modified buffer and also without losing the modifications?

- faq-8.2 How do I configure Vim to auto-save a modified buffer when switching to another buffer?
- faq-8.3 How do I replace the buffer in the current window with a blank buffer?
- faq-8.4 Is there a keyboard shortcut to load a buffer by the buffer number?
- faq-8.5 How do I open all the current buffers in separate windows?
- faq-8.6 How do I close (delete) a buffer without exiting Vim?
- faq-8.7 When I use the command ``:%bd`` to delete all the buffers, not all the buffers are deleted. Why?
- faq-8.8 How do I display the buffer number of the current buffer/file?
- faq-8.9 How do I delete a buffer without closing the window in which the buffer is displayed?
- faq-8.10 How do I map the `<Tab>` key to cycle through and open all the buffers?

faq-windows

## SECTION 9 - WINDOWS

- faq-9.1 What is the difference between a Vim window and a buffer?
- faq-9.2 How do I increase the width of a Vim window?
- faq-9.3 How do I zoom into or out of a window?
- faq-9.4 How do I execute an ex command on all the open buffers or open windows or all the files in the argument list?

faq-motion

## SECTION 10 - MOTION

- faq-10.1 How do I jump to the beginning (first line) or end (last line) of a file?
- faq-10.2 In insert mode, when I press the `<Esc>` key to go to command mode, the cursor moves one character to the left (except when the cursor is on the first character of the line). Is it possible to change this behavior to keep the cursor at the same column?
- faq-10.3 How do I configure Vim to maintain the horizontal cursor position when scrolling with the `<Page Up>`, `<Page Down>`, etc keys?
- faq-10.4 Some lines in a file are more than the screen width and they are all wrapped. When I use the `j`, `k` keys to move from one line to the next, the cursor is moved to the next line in the file instead of the next line on the screen. How do I move from one screen line to the next?
- faq-10.5 What is the definition of a sentence, paragraph and section in Vim?
- faq-10.6 How do I jump to beginning or end of a sentence, paragraph or a section?
- faq-10.7 I have lines in a file that extends beyond the right extent of the screen. How do I move the Vim view to the right to see the text off the screen?
- faq-10.8 How do I scroll two or more buffers simultaneously?
- faq-10.9 When I use my arrow keys, Vim changes modes, inserts weird characters in my document but doesn't move the cursor properly. What's going on?
- faq-10.10 How do I configure Vim to move the cursor to the end of the previous line, when the left arrow key is pressed and the cursor is currently at the beginning of a line?
- faq-10.11 How do I configure Vim to stay only in insert mode (modeless editing)?
- faq-10.12 How do I display some context lines when scrolling text?

faq-10.13 How do I go back to previous cursor locations?

faq-searching-text

## SECTION 11 - SEARCHING TEXT

faq-11.1 After I searched for a text with a pattern, all the matched text stays highlighted. How do I turn off the highlighting temporarily/permanently?

faq-11.2 How do I enter a carriage return character in a search pattern?

faq-11.3 How do I search for the character "^M"?

faq-11.4 How can I search/replace characters that display as "~R", "~S", etc.?

faq-11.5 How do I highlight all the non-printable characters in a file?

faq-11.6 How do I search for whole words in a file?

faq-11.7 How do I search for the current word under the cursor?

faq-11.8 How do I search for a word without regard to the case (uppercase or lowercase)?

faq-11.9 How do I search for words that occur twice consecutively?

faq-11.10 How do I count the number of times a particular word occurs in a buffer?

faq-11.11 How do I place the cursor at the end of the matched word when searching for a pattern?

faq-11.12 How do I search for an empty line?

faq-11.13 How do I search for a line containing only a single character?

faq-11.14 How do I search and replace a string in multiple files?

faq-11.15 I am using the `:s` substitute command in a mapping. When a search for a pattern fails, the map terminates. I would like the map to continue processing the next command, even if the substitute command fails. How do I do this?

faq-11.16 How do I search for the n-th occurrence of a character in a line?

faq-11.17 How do I replace a tab (or any other character) with a hard return (newline) character?

faq-11.18 How do I search for a character by its ASCII value?

faq-11.19 How do I search for long lines?

faq-11.20 How do I display all the lines in the current buffer that contain a specified pattern?

faq-11.21 How do I search for a text string that spans multiple lines?

faq-11.22 How do I search for a pattern only within a range of lines in a buffer?

faq-11.23 How do I clear the last searched pattern?

faq-11.24 Why does this pattern "a.\{-}p\@!" not match?

faq-11.25 How can I use "/" within a pattern, without escaping it?

faq-11.26 How can I operate on a search match?

faq-changing-text

## SECTION 12 - CHANGING TEXT

faq-12.1 How do I delete all the trailing white space characters (SPACE and TAB) at the end of all the lines in a file?

faq-12.2 How do I replace all the occurrences of multiple consecutive space characters to a single space?

faq-12.3 How do I reduce a range of empty lines into one line only?

faq-12.4 How do I delete all blank lines in a file? How do I remove all the lines containing only space characters?

faq-12.5 How do I copy/yank the current word?

faq-12.6 How do I yank text from one position to another position within a line, without yanking the entire line?

- faq-12.7 When I yank some text into a register, how do I append the text to the current contents of the register?
- faq-12.8 How do I yank a complete sentence that spans over more than one line?
- faq-12.9 How do I yank all the lines containing a pattern into a buffer?
- faq-12.10 How do I delete all the lines in a file that do not contain a pattern?
- faq-12.11 How do I add a line before each line with "pattern" in it?
- faq-12.12 Is there a way to operate on a line if the previous line contains a particular pattern?
- faq-12.13 How do I execute a command on all the lines containing a pattern?
- faq-12.14 Can I copy the character above the cursor to the current cursor position?
- faq-12.15 How do I insert a blank line above/below the current line without entering insert mode?
- faq-12.16 How do I insert the name of the current file into the current buffer?
- faq-12.17 How do I insert the contents of a Vim register into the current buffer?
- faq-12.18 How do I move the cursor past the end of line and insert some characters at some columns after the end of the line?
- faq-12.19 How to replace the word under the cursor (say: junk) with "foojunkbar" in Vim?
- faq-12.20 How do I replace a particular text in all the files in a directory?
- faq-12.21 I have some numbers in a file. How do I increment or decrement the numbers in the file?
- faq-12.22 How do I reuse the last used search pattern in a `:substitute` command?
- faq-12.23 How do I change the case of a string using the `:substitute` command?
- faq-12.24 How do I enter characters that are not present in the keyboard?
- faq-12.25 Is there a command to remove any or all digraphs?
- faq-12.26 In insert mode, when I press the backspace key, it erases only the characters entered in this instance of insert mode. How do I erase previously entered characters in insert mode using the backspace key?
- faq-12.27 I have a file which has lines longer than 72 characters terminated with "+" and wrapped to the next line. How can I quickly join the lines?
- faq-12.28 How do I paste characterwise yanked text into separate lines?
- faq-12.29 How do I change the case (uppercase, lowercase) of a word or a character or a block of text?
- faq-12.30 How do I enter ASCII characters that are not present in the keyboard?
- faq-12.31 How do I replace non-printable characters in a file?
- faq-12.32 How do I remove duplicate lines from a buffer?
- faq-12.33 How do I prefix all the lines in a file with the corresponding line numbers?
- faq-12.34 How do I exchange (swap) two characters or words or lines?
- faq-12.35 How do I change the characters used as word delimiters?

[faq-completion-in-insert-mode](#)

## SECTION 13 - COMPLETION IN INSERT MODE

- faq-13.1 How do I complete words or lines in insert mode?
- faq-13.2 How do I complete file names in insert mode?
- faq-13.3 I am using **CTRL-P/CTRL-N** to complete words in insert mode. How do I complete words that occur after the just completed word?

faq-text-formatting

## SECTION 14 - TEXT FORMATTING

- faq-14.1 How do I format a text paragraph so that a new line is inserted at the end of each wrapped line?
- faq-14.2 How do I format long lines in a file so that each line contains less than "n" characters?
- faq-14.3 How do I join short lines to the form a paragraph?
- faq-14.4 How do I format bulleted and numbered lists?
- faq-14.5 How do I indent lines in insert mode?
- faq-14.6 How do I format/indent an entire file?
- faq-14.7 How do I increase or decrease the indentation of the current line?
- faq-14.8 How do I indent a block/group of lines?
- faq-14.9 When I indent lines using the > or < key, the standard 8-tabstops are used instead of the current **'tabstop'** setting. Why?
- faq-14.10 How do I turn off the automatic indentation of text?
- faq-14.11 How do I configure Vim to automatically set the **'textwidth'** option to a particular value when I edit mails?
- faq-14.12 Is there a way to make Vim auto-magically break lines?
- faq-14.13 I am seeing a lot of ^M symbols in my file. I tried setting the **'fileformat'** option to **'dos'** and then **'unix'** and then **'mac'**. None of these helped. How can I hide these symbols?
- faq-14.14 When I paste some text into a Vim buffer from another application, the alignment (indentation) of the new text is messed up. How do I fix this?
- faq-14.15 When there is a very long wrapped line (wrap is "on") and a line doesn't fit entirely on the screen it is not displayed at all. There are blank lines beginning with "@" symbol instead of wrapped line. If I scroll the screen to fit the line the "@" symbols disappear and the line is displayed again. What Vim setting control this behavior?
- faq-14.16 How do I convert all the tab characters in a file to space characters?
- faq-14.17 What Vim options can I use to edit text that will later go to a word processor?
- faq-14.18 How do I join lines without adding or removing any space characters?

faq-visual-mode

## SECTION 15 - VISUAL MODE

- faq-15.1 How do I do rectangular block copying?
- faq-15.2 How do I delete or change a column of text in a file?
- faq-15.3 How do I apply an ex-command on a set of visually selected lines?
- faq-15.4 How do I execute an ex command on a column of text selected in Visual block mode?
- faq-15.5 How do I select the entire file in visual mode?
- faq-15.6 When I visually select a set of lines and press the > key to indent the selected lines, the visual mode ends. How can I reselect the region for further operation? (or) How do I re-select the last selected visual area again?
- faq-15.7 How do I jump to the beginning/end of a visually selected region?

faq-15.8 When I select text with mouse and then press `:` to enter an ex command, the selected text is replaced with the `:` character. How do I execute an ex command on a text selected using the mouse similar to the text selected using the visual mode?

faq-15.9 When I select a block of text using the mouse, Vim goes into selection mode instead of Visual mode. Why?

[faq-command-line-mode](#)

## SECTION 16 - COMMAND-LINE MODE

faq-16.1 How do I use the name of the current file in the command mode or an ex command line?

faq-16.2 How do I edit the text in the Vim command-line effectively?

faq-16.3 How do I switch from Vi mode to Ex mode?

faq-16.4 How do I copy the output from an ex-command into a buffer?

faq-16.5 When I press the `<Tab>` key to complete the name of a file in the command mode, if there are more than one matching file names, then Vim completes the first matching file name and displays a list of all matching filenames. How do I configure Vim to only display the list of all the matching filenames and not complete the first one?

faq-16.6 How do I copy text from a buffer to the command line and from the command line to a buffer?

faq-16.7 How do I put a command onto the command history without executing it?

faq-16.8 How do I increase the height of the command-line?

[faq-viminfo](#)

## SECTION 17 - VIMINFO

faq-17.1 When I invoke Vim, I get error messages about illegal characters in the viminfo file. What should I do to get rid of these messages?

faq-17.2 How do I disable the viminfo feature?

faq-17.3 How do I save and use Vim marks/commands across Vim sessions?

[faq-remote-editing](#)

## SECTION 18 - REMOTE EDITING

faq-18.1 How do I open a file with existing instance of gvim? What happened to the Vim 5.x OpenWithVim.exe and SendToVim.exe files?

faq-18.2 How do I send a command to a Vim server to write all buffers to disk?

faq-18.3 Where can I get the documentation about the Vim remote server functionality?

[faq-options](#)

## SECTION 19 - OPTIONS

faq-19.1 How do I configure Vim in a simple way?

faq-19.2 How do I toggle the value of an option?

faq-19.3 How do I set an option that affects only the current buffer/window?

faq-19.4 How do I use space characters for a Vim option value?

faq-19.5 Can I add (embed) Vim option settings to the contents of a file?

faq-19.6 How do I display the line numbers of all the lines in a file?

faq-19.7 How do I change the width of the line numbers displayed using the `'number'` option?

faq-19.8 How do I display (view) all the invisible characters like space, tabs and newlines in a file?

faq-19.9 How do I configure Vim to always display the current line and column number?

- faq-19.10 How do I display the current Vim mode?
- faq-19.11 How do I configure Vim to show pending/partial commands on the status line?
- faq-19.12 How do I configure the Vim status line to display different settings/values?
- faq-19.13 How do I configure Vim to display status line always?
- faq-19.14 How do I make a Vim setting persistent across different Vim invocations/instances/sessions?
- faq-19.15 Why do I hear a beep (why does my window flash) about 1 second after I hit the Escape key?
- faq-19.16 How do I make the "c" and "s" commands display a "\$" instead of deleting the characters I'm changing?
- faq-19.17 How do I remove more than one flag using a single `:set`` command from a Vim option?

### faq-mapping-keys

## SECTION 20 - MAPPING KEYS

- faq-20.1 How do I know what a key is mapped to?
- faq-20.2 How do I list all the user-defined key mappings?
- faq-20.3 How do I unmap a key?
- faq-20.4 I am not able to create a mapping for the `<xxx>` key. What is wrong?
- faq-20.5 Why does mapping the `<C-...>` key not work?
- faq-20.6 How do I map the numeric keypad keys?
- faq-20.7 How do I create a mapping that works only in visual mode?
- faq-20.8 How do I create a mapping that works only in normal and operator pending mode (but not in visual mode)?
- faq-20.9 In a Vim script, how do I know which keys to use for my mappings, so that the mapped key will not collide with an already used key?
- faq-20.10 How do I map the escape key?
- faq-20.11 How do I map a key to perform nothing?
- faq-20.12 I want to use the `<Tab>` key to indent a block of text and `<Shift-Tab>` key to unindent a block of text. How do I map the keys to do this? This behavior is similar to textpad, visual studio, etc.
- faq-20.13 In my mappings the special characters like `<CR>` are not recognized. How can I configure Vim to recognize special characters?
- faq-20.14 How do I use the "|" to separate multiple commands in a map?
- faq-20.15 If I have a mapping/abbreviation whose ending is the beginning of another mapping/abbreviation, how do I keep the first from expanding into the second one?
- faq-20.16 Why does it take a second or more for Vim to process a key, sometimes when I press a key?
- faq-20.17 How do I map a key to run an external command using a visually selected text?
- faq-20.18 How do I map the **CTRL-I** key while still retaining the functionality of the `<Tab>` key?
- faq-20.19 How do I define a map to accept a count?
- faq-20.20 How can I make my normal mode mapping work from within Insert Mode?

### faq-abbreviations

## SECTION 21 - ABBREVIATIONS

- faq-21.1 How do I auto correct misspelled words?
- faq-21.2 How do I create multi-line abbreviations?

faq-21.3 When my abbreviations are expanded, an additional space character is added at the end of the expanded text. How do I avoid this character?

faq-21.4 How do I insert the current date/time stamp into the file?

faq-21.5 How do I prevent an abbreviation from expanding in insert mode?

[faq-record-and-playback](#)

## SECTION 22 - RECORD AND PLAYBACK

faq-22.1 How do I repeat an editing operation (insertion, deletion, paste, etc)?

faq-22.2 How I record and repeat a set of key sequences?

faq-22.3 How do I edit/modify a recorded set of key sequences?

faq-22.4 How do I write recorded key sequences to a file?

faq-22.5 I am using register 0 to record my key sequences (i.e. q0 .... q). In the recorded key sequences, I am yanking some text. After the first replay of the recorded key sequence, I am no longer able to play it back.

[faq-autocommands](#)

## SECTION 23 - AUTOCOMMANDS

faq-23.1 How do I execute a command when I try to modify a read-only file?

faq-23.2 How do I execute a command every time when entering a buffer?

faq-23.3 How do I execute a command every time when entering a window?

faq-23.4 From an autocmd, how can I determine the name of the file or the buffer number for which the autocommand is executed?

faq-23.5 How do I automatically save all the changed buffers whenever Vim loses focus?

faq-23.6 How do I execute/run a function when Vim exits to do some cleanup?

[faq-syntax-highlight](#)

## SECTION 24 - SYNTAX HIGHLIGHT

faq-24.1 How do I turn off/on syntax highlighting?

faq-24.2 How do I change the background and foreground colors used by Vim?

faq-24.3 How do I change the highlight colors to suit a dark/light background?

faq-24.4 How do I change the color of the line numbers displayed when the `:set number` command is used?

faq-24.5 How do I change the background color used for a Visually selected block?

faq-24.6 How do I highlight the special characters (tabs, trailing spaces, end of line, etc) displayed by the 'list' option?

faq-24.7 How do I specify a colorscheme in my .vimrc/.gvimrc file, so that Vim uses the specified colorscheme every time?

faq-24.8 Vim syntax highlighting is broken. When I am editing a file, some parts of the file is not syntax highlighted or syntax highlighted incorrectly.

faq-24.9 Is there a built-in function to syntax-highlight the corresponding matching bracket?

faq-24.10 How do I turn off the C comment syntax highlighting?

faq-24.11 How do I add my own syntax extensions to the standard syntax files supplied with Vim?

faq-24.12 How do I replace a standard syntax file that comes with the Vim distribution with my own syntax file?

faq-24.13 How do I highlight all the characters after a particular column?

faq-24.14 How do I convert a source file (.c, .h, etc) with the Vim syntax highlighting into a HTML file?

- faq-24.15 How do I list the definition of all the current highlight groups?
- faq-24.16 How can I embed one syntax highlighting language into another one?

## faq-vim-script-writing

### SECTION 25 - VIM SCRIPT WRITING

- faq-25.1 How do I list the names of all the scripts sourced by Vim?
- faq-25.2 How do I debug Vim scripts?
- faq-25.3 How do I locate the script/plugin which sets a Vim option?
- faq-25.4 I am getting some error/informational messages from Vim (possibly when running a script), the messages are cleared immediately. How do I display the messages again?
- faq-25.5 How do I save and restore a plugin specific information across Vim invocations?
- faq-25.6 How do I start insert mode from a Vim function?
- faq-25.7 How do I change the cursor position from within a Vim function?
- faq-25.8 How do I check the value of an environment variable in the .vimrc file?
- faq-25.9 How do I check whether an environment variable is set or not from a Vim function?
- faq-25.10 How do I call/use the Vim built-in functions?
- faq-25.11 I am using some normal mode commands in my Vim script. How do I avoid using the user-defined mappings for these normal mode commands and use the standard Vim functionality for these normal mode commands?
- faq-25.12 How do I get a visually selected text into a Vim variable or register?
- faq-25.13 I have some text in a Vim variable "myvar". I would like to use this variable in a `:s` substitute command to replace a text "mytext". How do I do this?
- faq-25.14 A Vim variable (bno) contains a buffer number. How do I use this variable to open the corresponding buffer?
- faq-25.15 How do I store the value of a Vim option into a Vim variable?
- faq-25.16 I have copied and inserted some text into a buffer from a Vim function. How do I indent the inserted text from the Vim function?
- faq-25.17 How do I get the character under the cursor from a Vim script?
- faq-25.18 How do I get the name of the current file without the extension?
- faq-25.19 How do I get the basename of the current file?
- faq-25.20 How do I get the output from a Vim function into the current buffer?
- faq-25.21 How do I call external programs from a Vim function?
- faq-25.22 How do I get the return status of a program executed using the `:!` command?
- faq-25.23 How do I determine whether the current buffer is modified or not?
- faq-25.24 I would like to use the carriage return character in a normal command from a Vim script. How do I specify the carriage return character?
- faq-25.25 How do I split long lines in a Vim script?
- faq-25.26 When I try to "execute" my function using the `:execute Myfunc()` command, the cursor is moved to the top of the current buffer. Why?
- faq-25.27 How do I source/execute the contents of a register?

- faq-25.28 After calling a Vim function or a mapping, when I press the "u" key to undo the last change, Vim undoes all the changes made by the mapping/function. Why?
- faq-25.29 How can I call a function defined with s: (script local function) from another script/plugin?
- faq-25.30 Is it possible to un-source a sourced script? In other words, reverse all the commands executed by sourcing a script.

faq-plugins

## SECTION 26 - PLUGINS

- faq-26.1 How do I set different options for different types of files?
- faq-26.2 I have downloaded a Vim plugin or a syntax file or a indent file, or a color scheme or a filetype plugin from the web. Where should I copy these files so that Vim will find them?
- faq-26.3 How do I extend an existing filetype plugin?
- faq-26.4 How do I turn off loading the Vim plugins?
- faq-26.5 How do I turn on/off loading the filetype plugins?
- faq-26.6 How do I override settings made in a file type plugin in the global ftplugin directory for all the file types?
- faq-26.7 How do I disable the Vim directory browser plugin?
- faq-26.8 How do I set the filetype option for files with names matching a particular pattern or depending on the file extension?

faq-editing-program-files

## SECTION 27 - EDITING PROGRAM FILES

- faq-27.1 How do I enable automatic indentation for C/C++ files?
- faq-27.2 How do I configure the indentation used for C/C++ files?
- faq-27.3 How do I turn off the automatic indentation feature?
- faq-27.4 How do I change the number of space characters used for the automatic indentation?
- faq-27.5 I am editing a C program using Vim. How do I display the definition of a macro or a variable?
- faq-27.6 I am editing a C program using Vim. How do I jump to the beginning or end of a code block from within the block?
- faq-27.7 When editing C++ files and when inserting new lines above or below a comment (//) line, Vim automatically inserts the C++ comment character (//) at the beginning of the line. How do I disable this?
- faq-27.8 How do I add the comment character "#" to a set of lines at the beginning of each line?
- faq-27.9 How do I edit a header file with the same name as the corresponding C source file?
- faq-27.10 How do I automatically insert comment leaders while typing comments?

faq-quickfix

## SECTION 28 - QUICKFIX

- faq-28.1 How do I build programs from Vim?
- faq-28.2 When I run the make command in Vim I get the errors listed as the compiler compiles the program. When it finishes this list disappears and I have to use the `:clist` command to see the error message again. Is there any other way to see these error messages?
- faq-28.3 How can I perform a command for each item in the quickfix/location list?

faq-folding

## SECTION 29 - FOLDING

- faq-29.1 How do I extend the Vim folding support?
- faq-29.2 When I enable folding by setting the `'foldmethod'` option, all the folds are closed. How do I prevent this?
- faq-29.3 How do I control how many folds will be opened when I start editing a file?
- faq-29.4 How do I open and close folds using the mouse?
- faq-29.5 How do I change the text displayed for a closed fold?
- faq-29.6 How do I store and restore manually created folds across different Vim invocations?
- faq-29.7 I have enabled syntax based folding. Why is Vim so slow?

#### faq-vim-with-external-applications

### SECTION 30 - VIM WITH EXTERNAL APPLICATIONS

- faq-30.1 Can I run a shell inside a Vim window?
- faq-30.2 How do I pass the word under the cursor to an external command?
- faq-30.3 How do I get the output of a shell command into a Vim buffer?
- faq-30.4 How do I pipe the contents of the current buffer to an external command and replace the contents of the buffer with the output from the command?
- faq-30.5 How do I sort a section of my file?
- faq-30.6 How do I use Vim as a pager?
- faq-30.7 How do I view Unix man pages from inside Vim?
- faq-30.8 How do I change the diff command used by the Vim diff support?
- faq-30.9 How do I use the Vim diff mode without folding?

#### faq-gui-vim

### SECTION 31 - GUI VIM

- faq-31.1 How do I create buffer specific menus?
- faq-31.2 How do I change the font used by GUI Vim?
- faq-31.3 When starting GUI Vim, how do I specify the location of the GVIM window?
- faq-31.4 How do I add a horizontal scrollbar in GVim?
- faq-31.5 How do I make the scrollbar appear in the left side by default?
- faq-31.6 How do I remove the Vim menubar?
- faq-31.7 I am using GUI Vim. When I press the `<Alt>` key and a letter, the menu starting with that letter is selected. I don't want this behavior as I want to map the `<Alt>-<key>` combination. How do I do this?
- faq-31.8 Is it possible to scroll the text by dragging the scrollbar so that the cursor stays in the original location?
- faq-31.9 How do I get gvim to start browsing files in a particular directory when using the `:`:browse`` command?
- faq-31.10 For some questions, like when a file is changed outside of Vim, Vim displays a GUI dialog box. How do I replace this GUI dialog box with a console dialog box?
- faq-31.11 I am trying to use GUI Vim as the editor for my xxx application. When the xxx application launches GUI Vim to edit a file, the control immediately returns to the xxx application. How do I start GUI Vim, so that the control returns to the xxx application only after I quit Vim?
- faq-31.12 Why does the "Select Font" dialog doesn't show all the fonts installed in my system?
- faq-31.13 How do I use the mouse in Vim command-line mode?
- faq-31.14 When I use the middle mouse button to scroll text, it pastes the last copied text. How do I disable this behavior?

- faq-31.15 How do I change the location and size of a GUI Vim window?
- faq-31.16 When splitting the Vim window vertically, Vim changes the position.

[faq-vim-on-unix](#)

## SECTION 32 - VIM ON UNIX

- faq-32.1 I am running Vim in a xterm. When I press the **CTRL-S** key, Vim freezes. What should I do now?
- faq-32.2 I am seeing weird screen update problems in Vim. What can I do to solve this screen/display update problems?
- faq-32.3 I am using the terminal/console version of Vim. In insertmode, When I press the backspace key, the character before the cursor is not erased. How do I configure Vim to do this?
- faq-32.4 I am using Vim in a xterm. When I quit Vim, the screen contents are restored back to the original contents. How do I disable this?
- faq-32.5 When I start Vim, it takes quite a few seconds to start. How do I minimize the startup time?
- faq-32.6 How can I make the cursor in gvim in unix stop blinking?
- faq-32.7 How do I change the menu font on GTK Vim?
- faq-32.8 How do I prevent **CTRL-Z** from suspending Vim?
- faq-32.9 When I kill the xterm running Vim, the Vim process continues to run and takes up a lot of CPU (99%) time. Why is this happening?
- faq-32.10 How do I get the Vim syntax highlighting to work in a Unix terminal?

[faq-vim-on-ms-windows](#)

## SECTION 33 - VIM ON MS-WINDOWS

- faq-33.1 In MS-Windows, **CTRL-V** doesn't start the blockwise visual mode. What happened?
- faq-33.2 When I press the **CTRL-Y** key, it acts like the **CTRL-R** key. How do I configure Vim to treat **CTRL-Y** as **CTRL-Y**?
- faq-33.3 How do I start GUI Vim in a maximized window always?
- faq-33.4 After doing some editing operations, Vim freezes. The cursor becomes an empty rectangle. I am not able enter any characters. What is happening?
- faq-33.5 I am using Windows XP, the display speed of maximized GVim is very slow. What can I do to speed the display updates?
- faq-33.6 What are the recommended settings for using Vim with cygwin?
- faq-33.7 I am trying to use GNU diff with Vim diff mode. When I run the diff from command line, it works. When I try to use the diff with Vim it doesn't work. What should I do now?
- faq-33.8 Is it possible to use Vim as an external editor for MS-Windows Outlook email client?
- faq-33.9 I am using Vim to edit HTML files. How do I start internet explorer with the current file to preview the HTML file?
- faq-33.10 I would like to use Vim with Microsoft Visual Studio. How do I do this?
- faq-33.11 Where do I place the `_vimrc` and `_gvimrc` files?
- faq-33.12 Every time I save a file, Vim warns about the file being changed outside of Vim. Why?

[faq-printing](#)

## SECTION 34 - PRINTING

- faq-34.1 How do I print a file along with line numbers for all the lines?
- faq-34.2 How do I print a file with the Vim syntax highlighting colors?

[faq-building-vim-from-source](#)

## SECTION 35 - BUILDING VIM FROM SOURCE

- faq-35.1 How do I build Vim from the sources on a Unix system?
- faq-35.2 How do I install Vim in my home directory or a directory other than the default installation directory in Unix?
- faq-35.3 How do I build Vim from the sources on a MS-Windows system?
- faq-35.4 The Vim help, syntax, indent files are missing from my Vim installation. How do I install these files?
- faq-35.5 I have built Vim from the source and installed the Vim package using "make install". Do I need to keep the Vim source directory?
- faq-35.6 How do I determine the Vim features which are enabled at compile time?
- faq-35.7 Can I build Vim without the GUI support?
- faq-35.8 When building Vim on a Unix system, I am getting "undefined reference to term\_set\_winsize" error. How do I resolve this error?
- faq-35.9 Vim configure keeps complaining about the lack of gtk-config while trying to use GTK 2.03. This is correct, since in GTK 2 they moved to using the generic pkg-config. I can get pkg-config to list the various includes and libs for gtk, but for some reason the configure script still isn't picking this up.
- faq-35.10 I did successfully download the sources and compiled Vim on Unix. But feature ... still does not work. What is wrong and how can I fix it?

faq-various

## SECTION 36 - VARIOUS

- faq-36.1 How do I edit binary files with Vim?
- faq-36.2 How do I disable the visual error flash and the error beep?
- faq-36.3 How do I display the ascii value of a character displayed in a buffer?
- faq-36.4 Can I use zero as a count for a Vim command?
- faq-36.5 How do I disable the Vim welcome screen?
- faq-36.6 How do I avoid the "hit enter to continue" prompt?
- faq-36.7 How do I invoke Vim from command line to run a group of commands on a group of files?
- faq-36.8 How do I use a normal mode command from insert mode without leaving the insert mode?
- faq-36.9 How do I start Vim in insert mode?
- faq-36.10 How do I use Copy and Paste with Vim?
- faq-36.11 Why shouldn't I modify the files in the system runtime directory?

faq-unicode

## SECTION 37 - UNICODE

- faq-37.1 Is it possible to create Unicode files using Vim?
- faq-37.2 Which Vim settings are particularly important for editing Unicode files?
- faq-37.3 What is the **'encoding'** option?
- faq-37.4 How does Vim name the various Unicode encodings?
- faq-37.5 How does Vim specify the presence or absence of a byte-order mark?
- faq-37.6 What is the **'fileencoding'** option?
- faq-37.7 What is the **'fileencodings'** option?
- faq-37.8 What is the **'termencoding'** option?
- faq-37.9 What is the **'bomb'** option?
- faq-37.10 Where can I find an example of a typical use of all these

options?

[faq-37.11](#) How can I insert Unicode characters into a file using Vim?

[faq-37.12](#) How can I know which digraphs are defined and for which characters?

---

[faq-1](#)

## SECTION 1 - GENERAL INFORMATION

[faq-1.1](#)

### 1.1. What is Vim?

Vim stands for Vi IMproved. It used to be Vi IMitation, but there are so many improvements that a name change was appropriate. Vim is a text editor which includes almost all the commands from the Unix program "Vi" and a lot of new ones. All commands can be given with the keyboard. This has the advantage that you can keep your fingers on the keyboard and your eyes on the screen. For those who want it, there is mouse support and a GUI version with scrollbars and menus.

Vim is an editor, not a word processor. A word processor is used mainly to do layout of text. This means positioning it, changing the way it appears on output. More often than not, the final document is meant to be printed or typeset or what have you, in order to present it in a pleasing manner to others. Examples of word processors are Microsoft Word, FrameMaker, and OpenOffice Writer.

An editor is simply for entering text. Any typesetting or laying out of the document is secondary. With an editor, one's main concern is entering text, not making the text look good. Examples of editors other than Vim and Vi are Emacs, TextMate, Ultraedit and gedit. And Notepad.

For more information, read:

[intro](#)

[faq-1.2](#)

### 1.2. Who wrote Vim?

Most of Vim is based on Stevie and was written by Bram Moolenaar, with contributions from too many people to mention here.

For more information, read:

[author](#)  
[credits](#)

[faq-1.3](#)

### 1.3. Is Vim compatible with Vi?

Yes. Vim is very much compatible with Vi. You can use the "-C" command-line flag to start Vim in Vi compatible mode:

```
$ vim -C
```

You can also use:

```
$ vim -u NONE
```

You can also set the **'compatible'** option to enable Vi compatibility:

```
:set compatible
```

If you want to make sure, to start Vim in a **'nocompatible'** mode to original Vi, supply the `-N` command line argument:

```
$ vim -N
```

For more information, read:

```
-C
-N
'compatible'
compatible-default
```

faq-1.4

1.4. What are some of the improvements of Vim over Vi?

A short summary of the improvements of Vim over vi is listed below. The list shows that Vim is a thoroughly modern and feature-packed editor. Standard features of modern editors are implemented, and there is an equal emphasis on general power-user features and features for programmers.

Features to modernise Vi:

#### Multi-level undo

Allows you to set the number of times you can undo your changes in a file buffer. You can also redo an undone change. Also starting with version 7.3 Vim can permanently store your undo information, so that you can undo your changes which you have done in a previous editing session.

#### Tabs, Multiple windows and buffers

Each file can be displayed in its own window. You can move easily from one window to another. Each file opened during a Vim session also has an associated buffer and you can easily jump from one to the other. Also like any modern GUI, Vim supports opening several files in tabs. You can do batch processing for tabs, buffers, windows and the argumentlist.

#### Flexible insert mode

Vim allows you to use the arrow keys while in insert mode to move around in the file. No more hitting `<Esc>`, moving around, then hitting ``i'` or ``a'`.

## Macros

Vim has a facility which allows you to record a sequence of typed characters and repeat them any number of times.

## Visual mode

You can highlight sections of text and execute operations on this section of text only.

## Block operators

Allow selection and highlighting of rectangular blocks of text in order to execute specific operations on them.

## Online help system

You can easily find help on any aspect of using Vim. Help is displayed in its own window.

## Command-line editing and history

History allows you to use the arrow keys to repeat or search for a command that has already been typed. Allows you to match the beginning of a command with the beginning of another similar command in the history buffer. You can also edit a command to correct typos or change a few values.

## Command line completion.

Using the <Tab> key, you can complete commands, options, filenames, etc. as needed.

## Horizontal scrolling.

Long lines can be scrolled horizontally (with or without the GUI).

## Unicode and internationalization improvements.

Vim is able to edit files in unicode encoding and uses internally an utf-8 encoding. Additionally Vim can display text right to left oriented.

## Advanced user features:

### Text formatting

With two keystrokes, you can format large sections of text, without the use of external programs.

### Completion in Insert mode

Vim provides several different possibilities to complete your text. For example Vim can complete words while you are typing, by matching

the current word with other similar words in the file.

### Jump tags

Just like in an internet browser, you can jump back to previous parts of the text you were editing, and then forward again. Your brain is thus free to edit instead of navigate.

### Automatic commands

Commands automatically executed when reading or writing a file, jumping to another buffer, etc.

### Viminfo

Allows storing of the command line history, marks and registers in a file to be read on startup. Therefore, you can recall old search patterns, macros, etc., in a new Vim session.

### Mouse support

The mouse is supported in an xterm and for MS-DOS. It can be used to position the cursor, select the visual area, paste a register, etc.

### Graphical User Interface (GUI)

There are several different graphical user interfaces available. Also, it's very easy to add your own menus. Of course, console vim is still supported, and very widely used.

### Scripting language

Vim has a powerful scripting language so new commands can be created. You can also use Perl, Python, TCL, Lua and Ruby to achieve the same thing!

### Plugins

Extra functionality implemented via vim commands (regular commands or the scripting language) that is automatically loaded on startup. Examples: file explorer, network editing, enhanced autocompletion, syntax checks. More are being developed and shared on VimOnline all the time.

### Syntax highlighting for many programming languages

Syntax highlighting (including concealing items) for hundreds of programming languages is supported. Support for others can be added.

### Extended regular expressions

Vim supports extended regular expressions which are similar in functionality to that of Perl regular expressions.

## Integrated Spell checking

Spell checking has been integrated into Vim.

## Diff mode

Vim can highlight the differences between two, three or four files. Identical lines will be folded away and hidden.

## Encryption using the blowfish algorithm

Vim allows to encrypt your files using the symmetric block cipher blowfish as well as the swap file.

## Extensive customizable

Vim can be tuned and customized to work like you want by setting options. You can define your own commands, macros and even plugins to extend its capabilities

## Packages

Packages have been added to keep the installation of the growing number of plugins manageable. This is a convenient way to get one or more plugins, drop them in a directory and keep them updated. Vim will load them automatically, or only when desired.

## Programming performance features:

### Edit-compile-edit speedup

You can compile within Vim and automatically jump to the location of errors in the source code.

### Indenting for many programming languages

C, C++, Java, Perl, XML and many other languages can be automatically indented by vim while you type. Support for others can be added.

### Searching for words in include files

Vim allows you to search for a match of the word under the cursor in the current and included files.

### Advanced text objects

Instantly select, delete, copy, indent, format, change case, or ... to all the text between ( and ), or { and }, or < and >, or [ and ]. Or a word, sentence, or paragraph. Very powerful.

### Folding

Certain parts of the text can be "folded" away. The best example is

the body of a function. You can get an overview of the code, and then open the fold of the function whose detail you need to see.

### ctags and cscope integration

Using these two powerful programs, you can jump to a definition of a function from a calling instance of it, and use other tricks to navigate source code.

### Integration of several programming languages

If you find the internal scripting language not powerful enough, you can extend Vim using Lua, Ruby, Tcl, Perl and Python 2 and 3.

### Asynchronous I/O support

Vim uses jobs and channels to talk to other programs asynchronously. This allows to have e.g. a compiler run in the background and open the quickfix list as soon as it is finished to fix warnings and errors.

### Timers

Timers are asynchronous and can fire once or repeatedly to invoke a function to do any work.

## SECTION 2 - RESOURCES

faq-2.1

#### 2.1. Where can I learn more about Vim?

You can post your Vim questions to the [vim@vim.org](mailto:vim@vim.org) mailing list. You can post your Vim development related questions to the [vim-dev@vim.org](mailto:vim-dev@vim.org) mailing list. Vim does not have a newsgroup of its own. But the appropriate newsgroup to post to is [comp.editors](#).

"VimOnline" is a web page that serves as a de facto homepage for vim,

although the main purpose of it is to gather tips and scripts from everywhere. Get involved! The URL is <https://www.vim.org>

Finally, read the Vi FAQ:

<http://www.faqs.org/faqs/editor-faq/vi/part1/index.html>

Finally, there are also some communities, where you can discuss features or ask questions:

<https://vi.stackexchange.com>  
<https://vim.reddit.com>

For more information, read:

[mail-list@internet](mailto:mail-list@internet)

faq-2.2

## 2.2. Is there a mailing list available?

There are several:

NAME	DESCRIPTION
vim-announce	Announcements of new releases
vim	General discussion
vim-dev	Patches, bug reports, development discussions
vim-mac	Macintosh discussion
vim-fr	General discussion in French

Of these, only vim and vim-dev are of general interest. vim-announce is read-only to most people, and its messages are sent to the other lists as well. The remaining four are very low volume.

ACTION	EMAIL SEND TO
To subscribe:	<NAME>-subscribe@vim.org
To unsubscribe:	<NAME>-unsubscribe@vim.org
To get help:	<NAME>-help@vim.org

The available mailing lists are also mentioned here:

<https://www.vim.org/maillist.php>

faq-2.3

## 2.3. Is there an archive available for the Vim mailing lists?

Yes. Visit <https://groups.yahoo.com/>, where name is one of: vimannounce, vim, vimdev, vim-fr, vim-mac, vim-vms.

Alternatively, visit [www.gmane.org](http://www.gmane.org) to find out about GMANE, which allows you to access the mailing lists as though they were newsgroups. This offers some convenience to those who wish to browse the history or casually

observe the current threads.

faq-2.4

2.4. Where can I get the Vim user manual in HTML/PDF/PS format?

You can download the HTML/PDF/PS format of the Vim user manual from:

<https://vimdoc.sourceforge.net/>

Note, the user manual from that page is currently pretty outdated. It's best to either use the documentation that comes with vim or use the online version at <https://vimhelp.org>

You can find a pdf version of the full English help, including this faq (in letter, A4 and Ipad format) at:

<https://nathangrigg.com/vimhelp/>

This document is cross-referenced, so you can use the hyperlink functionality.

faq-2.5

2.5. I have a "xyz" (some) problem with Vim. How do I determine if it is a problem with my setup or with Vim? / Have I found a bug in Vim?

First, you need to find out, whether the error is in the actual runtime files or any plugin that is distributed with Vim or whether it is a simple side effect of any configuration option from your `.vimrc` or `.gvimrc`. So first, start vim like this:

```
vim -u NONE -U NONE -N -i NONE
```

This starts Vim in nocompatible mode (-N), without reading your viminfo file (-i NONE), without reading any configuration file (-u NONE for not reading `.vimrc` file and -U NONE for not reading a `.gvimrc` file) or even plugin.

In this invocation, try to reproduce your problem. If the error persists, the chance is good you've found a bug in Vim (see also Question 2.6. [faq-2.6](#) )

If the error does not occur when starting Vim this way, then the problem is either related to some plugin of yours or some setting in one of your local setup files. You need to find out, what triggers the error, you try starting Vim this way:

```
vim -u NONE -U NONE -N
```

If the error occurs, the problem is your `.viminfo` file. Simply delete the viminfo file then. If the error does not occur, try:

```
vim -u ~/.vimrc --noplugin -N -i NONE
```

This will simply use your `.vimrc` as configuration file, but not load any

plugins. If the error occurs this time, the error is possibly caused by some configuration option inside your `.vimrc` file. Depending on the length of your `vimrc` file, it can be quite hard to trace the origin within that file.

The best way is to add `:finish` command in the middle of your `.vimrc`. Then restart again using the same command line. If the error still occurs, the bug must be caused because of a setting in the first half of your `.vimrc`. If it doesn't happen, the problematic setting must be in the second half of your `.vimrc`. So move the `:finish` command to the middle of that half, of which you know that triggers the error and move your way along, until you find the problematic option. If your `.vimrc` is 350 lines long, you need at a maximum 9 tries to find the offending line (in practise, this can often be further reduced, since often lines depend on each other).

If the problem does not occur, when only loading your `.vimrc` file, the error must be caused by a plugin or another runtime file (indent autoload or syntax script). Check the output of the `:scriptnames` command to see what files have been loaded and for each one try to disable each one by one and see which one triggers the bug. Often files that are loaded by vim, have a simple configuration variable to disable them, but you need to check inside each file separately.

You can also use the `-V` command line argument to get more debug information to analyze the problem:

```
$ vim -V2logfile
```

You can increase the value passed to the `-V` argument to get more debug information. By also specifying a logfile name, this makes sure, the debug messages don't appear on the screen and won't disturb you when trying to reproduce the problem.

For more information, read:

```
-u
-U
-N
-V
'verbose'
:verbose
:set-verbose
```

faq-2.6

2.6. Where can I report bugs?

First collect the required information using the following command:

```
:source $VIMRUNTIME/bugreport.vim
```

Now send the resulting text from the above command to the `bugs@vim.org` e-mail address. There is also a public bug tracker available at

<https://github.com/vim/vim/issues>. A copy of each message there will be forwarded to the Vim Development list.

The Vim Development mailing list (see Question 2.2 [faq-2.2](#)) is a good place to discuss general bugs. If the bug you find is with syntax highlighting, a runtime file, or some other "added feature" (i.e. not directly programmed into vim), attempt to inform the maintainer of that feature. His e-mail address will be mentioned at the top of the corresponding runtime file.

For more information, read:

[bug-reports](#)

[faq-2.7](#)

2.7. Where can the FAQ be found?

The FAQ can be found at [https://vimhelp.org/vim\\_faq.txt.html](https://vimhelp.org/vim_faq.txt.html). It will be auto-generated from the source that is managed in the github repository [https://www.github.com/chrisbra/vim\\_faq](https://www.github.com/chrisbra/vim_faq) (Patches are welcome).

The repository also includes the faq in different formats, e.g. manpage, pdf file, html file, plain text version and a version in vim help format.

A slightly older version (which doesn't seem to get updated anymore) can still be found at VimOnline (<https://www.vim.org/>).

[faq-2.8](#)

2.8. What if I don't find an answer in this FAQ?

This FAQ covers mainly Vim-specific questions. You may find more information suitable for most Vi clones by reading the Vi FAQ. It is posted regularly on comp.editors. You can also find a copy at

<http://www.faqs.org/faqs/editor-faq/vi/part1/index.html>

Also, since Vim has gathered so many features in the last few years, successfully documenting the frequently asked questions here is a near-impossible task. To make it possible, please email the maintainer if you have a good question. A good question is one that you've tried to answer yourself (remember, Vim has great documentation) but struggled.

[faq-2.9](#)

2.9. I have a patch for implementing a Vim feature. Where can I send this patch?

You can send your patches to the Vim developer mailing list [vim-dev@vim.org](mailto:vim-dev@vim.org).

For more information, read:

[vim-dev](#)

[faq-2.10](#)

2.10. I have a Vim tip or developed a new Vim syntax/indent/filetype/compiler plugin or developed a new script or a colorscheme. Is there a public website where I can upload this?

Yes. You can use the Vim Online website to upload your plugins/scripts, colorschemes, etc. The site is at <https://www.vim.org>  
Nowadays people also seem to share their plugins/runtime files at github.

Tips can also be shared in the Wiki which you can find at

<http://vim.wikia.com>

---

faq-3

### SECTION 3 - AVAILABILITY

faq-3.1

3.1. What is the latest version of Vim?

The latest version of Vim is 8.2 released on 12th December 2019.

The release history of different versions of Vim is below:

VERSION	RELEASE DATE
Version 8.2	12th December, 2019
Version 8.1	17th May, 2018
Version 8.0	12th September, 2016
Version 7.4	10th August, 2013
Version 7.3	15th August, 2010
Version 7.2	9th August, 2008
Version 7.1	12th May, 2007
Version 7.0	8th May, 2006
Version 6.4	15th October, 2005
Version 6.3	8th June, 2004
Version 6.2	1st June, 2003
Version 6.1	24th March, 2002
Version 6.0	27th September, 2001
Version 5.8	31st May, 2001
Version 5.7	24th June, 2000
Version 5.6	16th January, 2000
Version 5.5	21st September, 1999
Version 5.4	26th July, 1999
Version 5.3	31st August, 1998
Version 5.2	24th August, 1998
Version 5.1	7th April, 1998
Version 5.0	19th February, 1998
Version 4.6	13th March, 1997
Version 4.5	17th October, 1996
Version 4.2	5th July, 1996
Version 4.0	29th May, 1996
Version 3.0	12th August, 1994
Version 2.0	21st December, 1993

Version 1.27    23rd April, 1993  
Version 1.17    21st April, 1992  
Version 1.14    2nd November, 1991

If you are interested in the old release history, check out the vim-history git repository:

<https://github.com/vim/vim-history>

and especially for the release history:

<https://github.com/vim/vim-history#release-history>

For more information, read:

[new-9](#)  
[new-8](#)  
[new-7](#)  
[new-6](#)  
[new-5](#)  
[changed-8.2](#)  
[changed-8.1](#)  
[changed-7.4](#)  
[changed-7.3](#)  
[changed-7.2](#)  
[changed-7.1](#)

[faq-3.2](#)

3.2. Where can I find the latest version of Vim?

You can download the sources for the latest version of Vim from the Github repository. The URL for this site is

<https://github.com/vim/vim>

A mercurial mirror is also available:

<https://bitbucket.org/vim-mirror/vim>  
<http://hg.256bit.org/vim/>  
<https://hg.osdn.net/view/vim/vim>

Some users keep updated repositories for distributing latest binary versions of Vim. You can find those repositories here:

[http://vim.wikia.com/wiki/Where\\_to\\_download\\_Vim](http://vim.wikia.com/wiki/Where_to_download_Vim)

[faq-3.3](#)

3.3. What platforms does it run on?

All Unix platforms.

All Windows platforms (XP and later).

Amiga, Atari, BeOS, Macintosh, MachTen, OS/2, RiscOS, VMS, IBM z/OS.

For MS-DOS support has been removed with the latest releases of Vim.

16-bit DOS: latest supported version 7.1

32-bit DOS: latest supported version 7.3

faq-3.4

3.4. Where can I download the latest version of the Vim runtime files?

You can download the latest version of the Vim runtime files (syntax files, filetype plugins, compiler files, color schemes, documentation, indentation files and keymaps) from the Vim github repository

<https://github.com/vim/vim/tree/master/runtime>

Another way of downloading the runtime files is this:

```
wget https://github.com/vim/vim/archive/master.tar.gz -O- |
tar zfx - vim-master/runtime/ --strip-components=1
```

See also:

<https://www.vim.org/runtime.php>

---

## SECTION 4 - HELP

faq-4

faq-4.1

4.1. How do I use the help files?

Help can be found for all functions of Vim. In order to use it, use the `:help` command. This will bring you to the main help page. On that first page, you will find explanations on how to move around. Basically, you move around in the help pages the same way you would in a read-only document. You can jump to specific subjects by using tags. This can be done in two ways:

- \* Use the **CTRL-]** command while standing on the name of a command or option. This only works when the tag is a keyword. `<Ctrl-LeftMouse>` and `g<LeftMouse>` work just like **CTRL-]**.
- \* use the `:tag <subject>` command. This works with all characters.

Use **CTRL-T** to jump back to previous positions in the help files. Use `:q` to close the help window.

If you want to jump to a specific subject on the help pages, use `:help {subject}`. If you don't know what to look for, try `:help index` to get a list of all available subjects. Use the standard search keys to locate the information you want. You can abbreviate the `:help` command as `:h`.

For searching the help, see the next Question 4.2. [faq-4.2](#)

For more information, read:

[online-help](#)

faq-4.2

#### 4.2. How do I search for a keyword in the Vim help files?

- a) You can press the **CTRL-D** key after typing the help keyword to get a list of all the help keywords containing the supplied pattern. You can also use the meta characters like \*, \+, etc to specify the help search pattern:

```
:help init<C-D>
:help str*(<C-D>
:help '*indent<C-D>
```

- b) You can press the <Tab> key after typing a partial help keyword to expand to the matching keyword. You can continue to press the <Tab> key to see other keyword matches.

- c) From the help window, you can use the `:tag` command to search for keywords. For example,

```
:tselect /window
```

This command will list all the help keywords containing the text "window". You can select one from the list and jump to it.

- d) You can use the `:helpgrep` command to search for the given text in all the help files. The quickfix window will be opened with all the matching lines.

For more information, read:

```
help-summary
c_CTRL-D
c_<Tab>
:tselect
:help
:helpgrep
```

[faq-4.3](#)

#### 4.3. I am getting an error message E123, what did I do wrong?

You can get more information about the error and the error message using:

```
E123
```

For more information, read:

```
error-messages
```

[faq-4.4](#)

#### 4.4. Where can I read about the various modes in Vim?

You can get information about the different modes in Vim by reading

```
vim-modes
```

4.5. How do I generate the Vim help tags file after adding a new Vim help file?

You can use the `:helptags` command to regenerate the Vim help tag file from within Vim. For example:

```
:cd $VIMRUNTIME/doc
:helptags .
```

To update all "doc" directories in your `'runtimepath'`, you can use

```
:helptags ALL
```

For more information, read:

```
:helptags
add-local-help
```

4.6. Can I use compressed versions of the help files?

Yes. You can compress the help files and still be able to view them with Vim. This makes accessing the help files a bit slower and requires the "gzip" utility. Follow these steps to compress and use the Vim help files:

- Compress all the help files using "gzip doc/\*.txt".
- Edit the "doc/tags" file and change the ".txt" to ".txt.gz" using
 

```
:%s=\(\t.*\.\txt\)\t=\1.gz\t=
```
- Add the following line to your vimrc:
 

```
set helpfile={dirname}/help.txt.gz
```

Where `{dirname}` is the directory where the help files are. The `gzip.vim` plugin supplied with the standard Vim distribution will take care of decompressing the files. You must make sure that `$VIMRUNTIME` is set to where the other Vim files are, when they are not in the same location as the compressed "doc" directory.

Note, that the `:helpgrep` command does not work with compressed help pages.

For more information, read:

```
gzip-helpfile
'helpfile'
gzip
$VIMRUNTIME
```

=====

## SECTION 5 - EDITING A FILE

### 5.1. How do I load a file in Vim for editing?

There are several ways to load a file for editing. The simplest is to use the `:e` (:edit) command:

```
:e <filename>
```

You can also use the `:n` (:next) command to load files into Vim:

```
:n <filename(s)>
```

You can also use the `:args` command to load files into Vim:

```
:args <filename(s)>
```

For more information, read:

```
usr_07.txt
edit-files
:edit
:next_f
:args_f
```

[faq-5.2](#)

### 5.2. How do I save the current file in another name (save as) and edit a new file?

You can use the `:saveas` command to save the current file in another name:

```
:saveas <newfilename>
```

Alternatively, you can also use the following commands:

```
:w <newfilename>
:edit #
```

You can also use the `:file` command, followed by `:w` command:

```
:file <newfilename>
:w
```

For more information, read:

```
07.7
:saveas
:file_f
:w
```

[faq-5.3](#)

### 5.3. How do I change the current directory to the directory of the current file?

You can use the following command to change the current directory to the directory of the current file:

```
:cd %:p:h
```

To automatically change the current directory to the directory of the current file, simply set the option **'autochdir'**.

```
:set autochdir
```

For more information, read:

```
:cd
:lcd
filename-modifiers
autocommand
'acd'
getcwd()
```

faq-5.4

5.4. How do I write a file without the line feed (EOL) at the end of the file?

You can turn off the **'eol'** option and turn on the **'binary'** option to write a file without the EOL at the end of the file:

```
:set binary
:set noeol
:w
```

Alternatively, you can use:

```
:set noeol
:w ++bin
```

If you rather only like Vim not to write missing EOLs, you can reset the **'fixeol'** option. This needs a Vim newer 7.4.785, so you should wrap this in an if condition in your `.vimrc` like this:

```
if exists('+fixeol')
 set nofixeol
endif
```

This has the advantage of avoiding the many side effects that the **'binary'** option has.

For more information, read:

```
'endofline'
'fixeol'
'binary'
23.4
```

faq-5.5

5.5. How do I configure Vim to open a file at the last edited location?

Vim stores the cursor position of the last edited location for each buffer in the `''` register. You can use the following autocmd in your `.vimrc` or `.gvimrc` file to open a file at the last edited location:

```
au BufReadPost * if line("\'") > 0 && line("\'") <= line("$") |
 \ exe "normal! g`\'" | endif
```

Alternatively, you can simply source the `vimrc_example.vim` file, which is distributed with Vim.

For more information, read:

```
'quote
last-position-jump
vimrc_example.vim
```

[faq-5.6](#)

5.6. When editing a file in Vim, which is being changed by an external application, Vim opens a warning window (like the confirm dialog) each time a change is detected. How do I disable this warning?

You can set the Vim **'autoread'** option to automatically read the file again when it is changed outside of Vim:

```
:set autoread
```

You can also use the following autocommand:

```
autocmd FileChangedShell *
 \ echohl WarningMsg |
 \ echo "File has been changed outside of vim." |
 \ echohl None
```

For more information, read:

```
'autoread'
FileChangedShell
timestamp
:checktime
```

[faq-5.7](#)

5.7. How do I edit a file whose name is under the cursor?

You can use the `gf` command to edit a file whose name is under the cursor. You can use the **CTRL-W** `f` command to edit the file in a new window and finally you can use **CTRL-W** `gf` to open a new tab page that contains the file name under the cursor.

For more information, read:

```
gf
CTRL-W_f
CTRL-W_gf
'isfname'
```

```
'path'
'suffixesadd'
'includeexpr'
```

faq-5.8

5.8. How do I reload/re-edit the current file?

You can use the `:edit` command, without specifying a file name, to reload the current file. If you have made modifications to the file, you can use `:edit!` to force the reload of the current file (you will lose your modifications, but depending on your `'undoreload'` settings, those changes might be saved into the undo history).

For more information, read:

```
:edit
:edit!
'confirm'
'undoreload'
```

faq-5.9

5.9. How do I autosave a file periodically?

Vim doesn't support auto-saving a file periodically.

For more information, read:

```
'updatetime'
CursorHold
swap-file
```

faq-5.10

5.10. How do I open a file in read-only mode?

You can open a file in read-only mode using the `:view` command:

```
:view <filename>
```

This command sets the `'readonly'` option for the opened buffer. You can also use the `"-R"` command-line option to open a file in read-only mode:

```
$ vim -R <filename>
```

You can also use the symbolic link executable `"view"` to open a file in read-only mode from the command-line:

```
$ view <filename>
```

For more information, read:

```
07.6
'readonly'
'modifiable'
:view
```

```
:sview
view
-R
-M
```

faq-5.11

5.11. How do I open a file for editing without saving the modifications to the current file?

You can open a file for editing without saving the modifications to the current file and without losing the changes using one of the following methods:

```
:split <new_filename>
:new <new_filename>
```

You can also set the **'hidden'** option and edit a new file:

```
:set hidden
:e <new_filename>
```

If you want to discard the changes made to the current file and load another file for editing, then you can use the following command:

```
:e! <new_filename>
```

For more information, read:

```
:edit!_f
'hidden'
:split
:new
```

faq-5.12

5.12. How do I reduce the loading time for very large files in Vim?

You can use the following settings to reduce the loading time for very large files in Vim:

```
:set lazyredraw
:set noswapfile
:set undolevels=-1
:set eventignore=all
:set nohidden
:set syntax=off
```

**Note** that the above settings will disable many Vim features including the following: Swap files support for crash recovery, undo support, syntax highlighting, filetype detection and other autocommand based features.

There is also the LargeFile plugin available at

[https://www.vim.org/scripts/script.php?script\\_id=1506](https://www.vim.org/scripts/script.php?script_id=1506)

which automatically sets these options, when working with large files (it is configurable, what is considered to be a large file, by default, it is 100MB).

---

## SECTION 6 - EDITING MULTIPLE FILES

faq-6

faq-6.1

6.1. How do I open multiple files at once from within Vim?

Make a difference between args, buffers, tabs and windows. They are all different things in VIM.

args is a list of arguments. Buffers are place to edit text, almost always attached to a file but not necessarily. Window is a place for a buffer and tab is set of windows, better name would be "layout".

There are several ways to open multiple files at once from within Vim. You can use the `:next` command to specify a group of files:

```
:next f1.txt f2.txt
:next *.c
```

You can use the `:args` command to specify a group of files as arguments:

```
:args f1.txt f2.txt
:args *.c
```

After loading the files, you can use the `:next` and `:prev` command to switch between the files.

To execute command for all files in argument-list use `:argdo`

For more information, read:

```
07.2
:next
:args_f
argument-list
```

faq-6.2

6.2. How do I switch between multiple files/buffers in Vim?

To list all buffers use `:ls`, to list buffers without file attached to (also known as unlisted buffers, ex. scratch buffer and help-window) use `:ls!`

There are several ways to switch between multiple files. You can use the `:buffer` command to switch between multiple files. You can also shorten command as `:b` and use only part of the filename. For example,

```
:buffer file1
:buffer file2
```

```
:b e2
```

You can also use `<TAB>` after ``:b`` for autocompletion. Try also ``:b`` followed by **CTRL-D** to see all available buffers. This works also for ``:e``.

You can also use the **CTRL-^** key to switch between buffers. By specifying a count before pressing the key, you can edit the buffer with that number. Without the count, you can edit the alternate buffer by pressing **CTRL-^**

You can also use the ``:e #`` command to edit a particular buffer:

```
:e #5
```

To close a buffer use ``:bd`` -command.

To execute command for all files in buffer-list use ``:bufdo``

For more information, read:

```
edit-files
:buffer
CTRL-^
alternate-file
22.4
07.3
```

faq-6.3

6.3. How do I open several files in Vim, with each file in a separate window/tab?

You can use the `-o` and `-O` Vim command line arguments to open multiple files in separate horizontally or vertically split Vim windows. For example:

```
$ vim -o3 f1.txt f2.txt f3.txt
```

The above command will open the files `f1.txt`, `f2.txt` and `f3.txt` in three separate horizontally split Vim windows.

```
$ vim -O3 f1.txt f2.txt f3.txt
```

The above command will open the files `f1.txt`, `f2.txt` and `f3.txt` in three separate vertically split Vim windows.

```
$ vim -p f1.txt f2.txt f3.txt
```

The above command will open the files `f1.txt`, `f2.txt` and `f3.txt` in three separate tab windows. The option `'tabpagemax'` defines, how many tabpages can be opened at the same time, by default it is set to 10.

For more information, read:

```
-o
-O
```

```
-p
startup-options
'tabpagemax'
```

faq-6.4

6.4. How do I configure Vim to autoload several files at once similar to "work-sets" or "projects"?

You can use the `:mksession` and the `:mkview` commands to autoload several files in Vim.

The `:mksession` command creates a Vim script that restores the current editing session. You can use the `:source` command to source the file produced by the `mksession` command.

The `:mkview` command creates a Vim script that restores the contents of the current window. You can use the `:loadview` command to load the view for the current file.

For more information, read:

```
21.4
21.5
views-sessions
'sessionoptions'
:mksession
:source
v:this_session
:mkview
:loadview
'viewdir'
buffers
```

faq-6.5

6.5. Is it possible to open multiple top level windows in a single instance of Vim similar to Nedit or Emacs?

No. It is currently not possible to open multiple top-level windows in a single instance of Vim. This feature is in the todo list.

faq-6.6

6.6. How do I browse/explore directories from within Vim?

You can use the `netrw.vim` plugin, supplied with the standard Vim installation, to browse/explore directories from within Vim. You can start the file explorer using one of the following commands:

```
:e <directory>
:Explore
:Sexplore
:Vexplore
:Texplore
```

From the file explorer, you can browse through directories, rename, delete

and edit files.

For more information, read:

[netrw.vim](#)  
[22.1](#)

[faq-6.7](#)

6.7. How do I edit files over a network using ftp/scp/rcp/http?

You can use the netrw.vim plugin, supplied with the standard Vim package, to edit files over a network using ftp/scp/rcp/http. Using this plugin, Vim will transparently load and save the files over ftp/scp/rcp/http. For example, to edit a file over ftp, you can use the following command:

```
$ vim ftp://machine/path
```

For more information, read:

[netrw.vim](#)

[faq-7](#)

---

## SECTION 7 - BACKUP

[faq-7.1](#)

7.1. When I edit and save files, Vim creates a file with the same name as the original file and a "~" character at the end. How do I stop Vim from creating this file? (or) How do I disable the Vim backup file feature?

You have set the '**backup**' option, so Vim creates a backup file when saving the original file. You can stop Vim from creating the backup file, by clearing the option:

```
:set nobackup
```

**Note** that, by default this option is turned off. You have explicitly enabled the '**backup**' option in one of the initialization files. You may also have to turn off the '**writebackup**' option:

```
:set nowritebackup
```

For more information, read:

[07.4](#)  
[backup-table](#)  
['backup'](#)  
['writebackup'](#)  
['backupskip'](#)  
['backupdir'](#)  
['backupext'](#)  
['backupcopy'](#)  
[backup](#)

## faq-7.2

7.2. When I edit and save files, Vim creates a file with the same name as the original file and a "un~" extension at the end. How do I stop Vim from creating this file (or) How do I disable the Vim undofile feature?

Vim 7.3 contains a new feature persistent undo, that is, undo information won't be lost when quitting Vim and be stored in a file that ends with ".un~". You have set the **'undofile'** option, so Vim creates an undo file when saving the original file. You can stop Vim from creating the backup file, by clearing the option:

```
:set noundofile
```

**Note** that, by default this option is turned off. You have explicitly enabled the **'undofile'** option in one of the initialization files. If you want your undofiles to be stored only in a particular directory, you can point the **'undodir'** option to a directory that will contain all your aggregated undofiles.

For more information, read:

```
'undodir'
'undofile'
undo-persistence
```

## faq-7.3

7.3. How do I configure Vim to store all the backup files in a particular directory?

You can configure Vim to store all the backup files in a particular directory using the **'backupdir'** option. For example, to store all the backup files in the ~/backup directory, you can use the following command:

```
:set backupdir=~ /backup
```

For more information, read:

```
07.4
'backupdir'
backup
```

## faq-7.4

7.4. When I save a file with Vim, the file permissions are changed. How do I configure Vim to save a file without changing the file permissions?

This may happen, if the **'backupcopy'** option is set to "no" or "auto". **Note** that the default value for this option is set in such a way that this will correctly work in most of the cases. If the default doesn't work for you, try setting the **'backupcopy'** option to "yes" to keep the file permission when saving a file:

```
:set backupcopy=yes
```

This applies, only if you have configured Vim to make a backup whenever overwriting a file. By default, Vim will not backup files.

For more information, read:

```
'backupcopy'
backup
'backup'
'writebackup'
```

---

faq-8

## SECTION 8 - BUFFERS

faq-8.1

8.1. I have made some modifications to a buffer. How do I edit another buffer without saving the modified buffer and also without losing the modifications?

You can set the **'hidden'** option to edit a file without losing modifications to the current file:

```
:set hidden
```

By setting the **'hidden'** option, you can also save the modification history (undo-history) for the buffer. Otherwise, as you switch between files, the undo-history will be lost (unless you use persistent undofiles).

For more information, read:

```
'hidden'
hidden-quit
:hide
```

faq-8.2

8.2. How do I configure Vim to auto-save a modified buffer when switching to another buffer?

You can set the **'autowrite'** option to auto-save a modified buffer when switching to another buffer:

```
:set autowrite
```

For more information, read:

```
'autowrite'
'autowriteall'
'hidden'
```

faq-8.3

8.3. How do I replace the buffer in the current window with a blank buffer?

You can use the ``:enew`` command to load an empty buffer in place of the

buffer in the current window.

For more information, read:

```
:enew
```

faq-8.4

8.4. Is there a keyboard shortcut to load a buffer by the buffer number?

You can use the **CTRL-^** command to load a buffer by specifying the buffer number. For example, to load buffer number 5, you have to use the 5 **CTRL-^** command.

For more information, read:

```
CTRL-^
```

faq-8.5

8.5. How do I open all the current buffers in separate windows?

You can use the `:ball` or `:sball` commands to open all the buffers in the buffer list:

```
:ball
```

If you want all buffers to be opened in new tabs, simply prefix the `:tab` command:

```
:tab :sball
```

For more information, read:

```
:ball
```

faq-8.6

8.6. How do I close (delete) a buffer without exiting Vim?

You can use any of `:bdelete`, `:bwipeout` or `:bunload` commands to delete a buffer without exiting Vim. For example:

```
:bdelete file1
```

For more information, read:

```
:bdelete
:bwipeout
:bunload
```

faq-8.7

8.7. When I use the command `:%bd` to delete all the buffers, not all the buffers are deleted. Why?

In the `:%bd` command, the "%" range will be replaced with the starting and ending line numbers in the current buffer. Instead of using "%" as the

range, you should specify numbers for the range. For example, to delete all the buffers, you can use the command `:1,9999bd``.

For more information, read:

```
:bd
```

(This behaviour has been fixed with patch 7.4.530)

faq-8.8

8.8. How do I display the buffer number of the current buffer/file?

You can use `2<CTRL-G>` command to display the buffer number for the current file/buffer. **Note** the use of count before the **CTRL-G** command. If the count is greater than 1, then Vim will display the buffer number.

You can also use the following command to display the current buffer number:

```
:echo bufnr("%")
```

You can also include the `"%n"` field to the `'statusline'` option to display the current buffer number on the statusline.

For more information, read:

```
CTRL-G
bufnr()
:echo
'statusline'
```

faq-8.9

8.9. How do I delete a buffer without closing the window in which the buffer is displayed?

You can use the following command to open the next buffer and delete the current buffer.

```
:bnext | bdelete #
```

For more information, read:

```
:bnext
:bdelete
:buffers
```

faq-8.10

8.10. How do I map the `<Tab>` key to cycle through and open all the buffers?

You can use the following two map commands, to map the `<Ctrl-Tab>` key to open the next buffer and the `<Ctrl-Shift-Tab>` key to open the previous buffer:

```
:nnoremap <C-Tab> :bnext<CR>
:nnoremap <S-C-Tab> :bprevious<CR>
```

Note, this might not work in the terminal version of Vim.

For more information, read:

```
:bnext
:bprevious
```

---

## SECTION 9 - WINDOWS

faq-9

faq-9.1

9.1. What is the difference between a Vim window and a buffer?

A Vim buffer is a file loaded into memory for editing. The original file remains unchanged until you write the buffer to the file. A Vim window is a viewport onto a buffer. You can use multiple windows on one buffer or several windows on different buffers.

For more information, read:

```
usr_08.txt
22.4
windows-intro
Q_wi
```

faq-9.2

9.2. How do I increase the width of a Vim window?

You can increase the width of a Vim window using one of the following commands:

```
:vert resize +N
:vert resize -N
:vert resize N
```

You can also use **CTRL-W <** or **CTRL-W >** or **CTRL-W |** commands.

For more information, read:

```
:vertical-resize
CTRL-W_>
CTRL-W_<
window-resize
```

faq-9.3

9.3. How do I zoom into or out of a window?

You can zoom into a window (close all the windows except the current window) using the "**<CTRL-W>o**" command or the `:only` ex command.

You can use the "**<CTRL-W>\_**" command or the `:resize` ex command to increase the current window height to the highest possible without closing other

windows.

You can use the "`<CTRL-W>|`" command or the `:vertical resize` ex command to increase the current window width to the highest possible without closing other windows.`

You can use the "`<CTRL-W>=`" command to make the height and width of all the windows equal.

You can also set the following options to get better results with the above commands:

Method 1:

Set the `'winminheight'` option to 0:

```
:set winminheight=0
```

By default, this option is set to 1.

This option controls the minimum height of an inactive window (when it is not the current window). When the `'winminheight'` option is set to 0, only the status line will be displayed for inactive windows.

Method 2:

Set the `'noequalalways'` option and set the `'winheight'` option to a large value (like 99999):

```
:set noequalalways
:set winheight=99999
```

Now, the active window will always open to its maximum size, while the other windows will stay present, but shrunken to just a status line.

With any of the above mentioned methods, you cannot restore the window layout after zooming into a window. If you want to restore the Vim window layout after zooming into a window, you can use the ZoomWin plugin. You can download this plugin from the Vim online website at:

[https://www.vim.org/scripts/script.php?script\\_id=508](https://www.vim.org/scripts/script.php?script_id=508)

For more information, read:

```
CTRL-W_o
window-resize
'winminheight'
'equalalways'
'winheight'
08.3
```

[faq-9.4](#)

9.4. How do I execute an ex command on all the open buffers or open windows or all the files in the argument list?

You can use the `:bufdo` command to execute an ex command on all the open buffers. You can use the :windo` command to execute an ex command on all`

the open windows. You can use the `:argdo` command to execute an ex command on all the files specified in the argument list. And finally you can use the `:tabdo` command to execute an ex command in all open tab pages.

For more information, read:

```
:windo
:bufdo
:argdo
:tabdo
26.3
```

---

faq-10

## SECTION 10 - MOTION

faq-10.1

10.1. How do I jump to the beginning (first line) or end (last line) of a file?

You can use "G" command to jump to the last line in the file and the "gg" command to jump to the first line in the file.

For more information, read:

```
G
gg
```

faq-10.2

10.2. In insert mode, when I press the `<Esc>` key to go to command mode, the cursor moves one character to the left (except when the cursor is on the first character of the line). Is it possible to change this behavior to keep the cursor at the same column?

No. It is not possible to change this behavior. The cursor is always positioned on a valid character (unless you have virtual-edit mode enabled). So, if you are appending text to the end of a line, when you return to command mode the cursor **must** drop back onto the last character you typed. For consistency sake, the cursor drops back everywhere, even if you are in the middle of a line.

You can use the **CTRL-O** or `CTRL-\ CTRL-O` command in insert mode to execute a single ex command and return back to insert mode without moving the cursor column.

For more information, read:

```
'virtualedit'
i_CTRL-O
i_CTRL-_CTRL-O
```

faq-10.3

10.3. How do I configure Vim to maintain the horizontal cursor position when scrolling with the `<Page Up>`, `<Page Down>`, etc keys?

You can reset the **'startofline'** option to keep the cursor at the same horizontal location when scrolling text:

```
:set nostartofline
```

For more information, read:

```
'startofline'
```

faq-10.4

10.4. Some lines in a file are more than the screen width and they are all wrapped. When I use the j, k keys to move from one line to the next, the cursor is moved to the next line in the file instead of the next line on the screen. How do I move from one screen line to the next?

You can use the gj and gk commands to move from one screen line to the next/previous screen line. The j and k commands move the cursor from one file line to the next file line. You can also avoid the line wrapping by resetting the **'wrap'** option:

```
:set nowrap
```

For more information, read:

```
gj
gk
'wrap'
```

You can use the following mappings:

```
:map <Up> gk
:imap <Up> <C-o>gk
:map <Down> gj
:imap <Down> <C-o>gj
:noremap j gj
:noremap k gk
```

faq-10.5

10.5. What is the definition of a sentence, paragraph and section in Vim?

A sentence is defined as ending at a ".", "!" or "?" followed by either the end of a line, or by a space (or two) or tab. Which characters and the number of spaces needed to constitute a sentence ending is determined by the **'joinspaces'** and **'coptions'** options.

A paragraph begins after each empty line, and also at each of a set of paragraph macros, specified by the pairs of characters in the **'paragraphs'** option.

A section begins after a form-feed (<C-L>) in the first column and at each of a set of section macros, specified by the pairs of characters in the **'sections'** option.

For more information, read:

[sentence](#)  
['joinspaces'](#)  
['cptions'](#)  
[paragraph](#)  
[section](#)  
[word](#)

[faq-10.6](#)

10.6. How do I jump to beginning or end of a sentence, paragraph or a section?

You can use the following motion commands to jump to the beginning or end of a sentence or a paragraph or a section:

<u>motion</u>	<u>position</u>	<u>where</u>
(	beginning	current sentence
)	end	current sentence
{	beginning	current paragraph
}	end	current paragraph
[]	end	previous section
[[	beginning	current section
][	end	current section
]]	beginning	next section

Each of these motions can be preceded by a number which will extend the jump forward (or backward).

For more information, read:

[object-motions](#)

[faq-10.7](#)

10.7. I have lines in a file that extends beyond the right extent of the screen. How do I move the Vim view to the right to see the text off the screen?

You can use one of the following commands to horizontally scroll the screen to the left or right:

<u>cmd</u>	<u>scroll to</u>
zl	scroll to the left
zh	scroll to the right
zL	scroll half a screenwidth to the left
zH	scroll half a screenwidth to the right
zs	scroll to position the cursor at the start of the screen
ze	scroll to position the cursor at the end of the screen

You can use the `g0` command to move the cursor to the first character of the screen line and the `g$` command to move the cursor to the last character of the screen line without scrolling the screen.

For more information, read:

[scroll-horizontal](#)

[faq-10.8](#)

10.8. How do I scroll two or more buffers simultaneously?

You can set the **'scrollbind'** option for each of the buffers to scroll them simultaneously.

For more information, read:

['scrollbind'](#)  
[scroll-binding](#)  
['scrollopt'](#)  
['cursorbind'](#)

[faq-10.9](#)

10.9. When I use my arrow keys, Vim changes modes, inserts weird characters in my document but doesn't move the cursor properly. What's going on?

There are a couple of things that could be going on: either you are using Vim over a slow connection or Vim doesn't understand the key sequence that your keyboard is generating.

If you are working over a slow connection (such as a 2400 bps modem), you can try to set the **'timeout'** or **'ttimeout'** option. These options, combined with the **'timeoutlen'** and **'ttimeoutlen'** options, may fix the problem.

The preceding procedure will not work correctly if your terminal sends key codes that Vim does not understand. In this situation, your best option is to map your key sequence to a matching cursor movement command and save these mappings in a file. You can then `:source` the file whenever you work from that terminal.

For more information, read:

['timeout'](#)  
['ttimeout'](#)  
['timeoutlen'](#)  
['ttimeoutlen'](#)  
[:map](#)  
[vt100-cursor-keys](#)

[faq-10.10](#)

10.10. How do I configure Vim to move the cursor to the end of the previous line, when the left arrow key is pressed and the cursor is currently at the beginning of a line?

You can add the **"<"** flag to the **'whichwrap'** option to configure Vim to move the cursor to the end of the previous line, when the left arrow key is pressed and the cursor is currently at the beginning of a line:

```
:set whichwrap+=<
```

Similarly, to move the cursor the beginning of the next line, when the right arrow key is pressed and the cursor is currently at the end of a line, add the ">" flag to the **'whichwrap'** option:

```
:set whichwrap+=>
```

The above will work only in normal and visual modes. To use this in insert and replace modes, add the "[" and "]" flags respectively.

For more information, read:

```
'whichwrap'
05.7
```

[faq-10.11](#)

10.11. How do I configure Vim to stay only in insert mode (modeless editing)?

You can set the **'insertmode'** option to configure Vim to stay only in insert mode:

```
:set insertmode
```

By setting this option, you can use Vim as a modeless editor. If you press the <Esc> key, Vim will not go to the normal mode. To execute a single normal mode command, you can press **CTRL-O** followed by the normal mode command. To execute more than one normal command, you can use **CTRL-L** followed by the commands. To return to insert mode, press the <Esc> key. To disable this option, reset the **'insertmode'** option:

```
:set noinsertmode
```

You can also start vim using the "evim" command or you can use "vim -y" to use Vim as a modeless editor.

You can also start Vim in insert mode using the ``:startinsert`` ex command.

For more information, read:

```
'insertmode'
:startinsert
:stopinsert
i_CTRL-O
i_CTRL-L
evim
evim-keys
```

[faq-10.12](#)

10.12. How do I display some context lines when scrolling text?

You can set the **'scrolloff'** option to display a minimal number of screen lines (context) above and below the cursor.

```
:set scrolloff=10
```

For more information, read:

```
'scrolloff'
'sidescrolloff'
```

faq-10.13

10.13. How do I go back to previous cursor locations?

You can go back to the cursor location before the latest jump using the `'` or ``` command. You can use the **CTRL-O** command to go back to older cursor positions and the **CTRL-I** command to go to the newer cursor positions in the jump list.

For more information, read:

```
03.10
mark-motions
jump-motions
```

=====

faq-11

## SECTION 11 - SEARCHING TEXT

faq-11.1

11.1. After I searched for a text with a pattern, all the matched text stays highlighted. How do I turn off the highlighting temporarily/permanently?

The **'hlsearch'** option controls whether all the matches for the last searched pattern are highlighted or not. By default, this option is not enabled. If this option is set in a system-wide vimrc file, then you can turn off the search highlighting by using the following command:

```
:set nohlsearch
```

To temporarily turn off the search highlighting, use

```
:nohlsearch
```

You can also clear the search highlighting, by searching for a pattern that is not in the current file (for example, search for the pattern "asdf").

You can use this mapping, to clear the search highlighting when redrawing the window pressing **CTRL-L**

```
:nnoremap <silent> <C-L> <C-L>:nohls<CR>
```

For more information, read:

```
'hlsearch'
:nohlsearch
```

faq-11.2

11.2. How do I enter a carriage return character in a search pattern?

You can either use `"\r"` or `<CTRL-V><CTRL-M>` to enter a carriage return character in a pattern. In Vim scripts, it is better to use `"\r"` for the carriage return character.

For more information, read:

[sub-replace-special](#)

faq-11.3

11.3. How do I search for the character `^M`?

You can enter the `^M` character in a search command by first pressing the **CTRL-V** key and then pressing the **CTRL-M** key.

```
/^V^M
```

You can also use the `"\r"` character. In Vim scripts, `"\r"` is preferred.

For more information, read:

```
c_CTRL-V
using_CTRL-V
/\r
```

faq-11.4

11.4. How can I search/replace characters that display as `"~R"`, `"~S"`, etc.?

You can use the `"ga"` command to display the ASCII value/code for the special character. For example, let us say the ASCII value is 142. Then you can use the following command to search for the special character:

```
/^V142
```

where, `^V` is entered by pressing **CTRL-V**.

For more information, read:

```
ga
using_CTRL-V
24.8
```

faq-11.5

11.5. How do I highlight all the non-printable characters in a file?

You can use the following commands and search pattern to highlight all the non-printable characters in a file:

```
:set hlsearch
/\(\p\|\$\)\@!.
```

For more information, read:

```
/\p
/bar
/$
/\(
/\@!
'hlsearch'
```

faq-11.6

11.6. How do I search for whole words in a file?

You can search for whole words in a file using the \< and \> atoms. For example:

```
/\
```

The \< atom matches the beginning of the word and the \> atom matches the end of the word.

For more information, read:

```
/\<
/\>
```

faq-11.7

11.7. How do I search for the current word under the cursor?

You can press the \* key to search forward for the current word under the cursor. To search backward, you can press the # key. **Note** that only whole keywords will be searched using these commands.

For more information, read:

```
star

gstar
g#
03.8
search-commands
```

faq-11.8

11.8. How do I search for a word without regard to the case (uppercase or lowercase)?

To always ignore case while searching for a pattern, set the **'ignorecase'** option:

```
:set ignorecase
```

To ignore case only when searching a particular pattern, use the special \c directive:

```
/\c<pattern>
```

For more information, read:

```
'ignorecase'
/ignorecase
\c
```

faq-11.9

11.9. How do I search for words that occur twice consecutively?

You can use one of the following search commands to locate words that occur twice consecutively:

```
\/(\<\w\+)_s\+1\
\/(\<\k\+)_s\+1\
\/(\<\w\+)_s\+1\
\/(\<\k\+)_s\+1
```

The main difference is the use of "\w" and "\k", where the latter is based on the '**iskeyword**' option which may include accented and other language specific characters.

For more information, read:

```
\/1
\/(
\/)
\/<
\/>
\/w
\/k
\/+
\/_x
'iskeyword'
```

faq-11.10

11.10. How do I count the number of times a particular word occurs in a buffer?

You can use the following set of commands to count the number of times a particular word occurs in a buffer:

```
:let cnt=0
:g/\<your_word\>/let cnt=cnt+1
:echo cnt
```

This only counts the number of lines where the word occurs. You can also use the following command:

```
:%s/\<word\>/&/gn
```

To count the number of alphabetic words in a file, you can use

```
:%s/\a\+/&/gn
```

To count the number of words made up of non-space characters, you can use

```
:%s/\S\+/\&/gn
```

For more information, read:

```
count-items
word-count
v_g_CTRL-G
12.5
:s_flags
```

[faq-11.11](#)

11.11. How do I place the cursor at the end of the matched word when searching for a pattern?

You can use the "e" offset to the search command to place the cursor at the end of the matched word. For example

```
/mypattern/e
```

For more information about search offsets, read:

```
search-offset
/
```

[faq-11.12](#)

11.12. How do I search for an empty line?

You can search for an empty line using:

```
/^$
```

or

```
/^\s*$
```

The latter also matches lines, that consist only of white space, while the former only matches true empty lines. For more information, read:

```
/^
/$
/\s
/star
search-commands
```

[faq-11.13](#)

11.13. How do I search for a line containing only a single character?

You can search for a line containing only a single character using:

```
/^\s*\a\s*$
```

For more information, read:

```
/^
/>\a
/>\s
/star
/$
```

faq-11.14

11.14. How do I search and replace a string in multiple files?

You can use the `:argdo`, `:bufdo`, `:windo` or `:tabdo` commands to execute an ex command on multiple files. For example:

```
:argdo %s/foo/bar/g|upd
```

For more information, read:

```
:argdo
:bufdo
:windo
:tabdo
```

faq-11.15

11.15. I am using the `:s` substitute command in a mapping. When a search for a pattern fails, the map terminates. I would like the map to continue processing the next command, even if the substitute command fails. How do I do this?

You can use the "e" flag to the substitute command to continue processing other commands in a map, when a pattern is not found.

For more information, read:

```
:s_flags
```

faq-11.16

11.16. How do I search for the n-th occurrence of a character in a line?

To search for the n-th occurrence of a character in a line, you can prefix the "f" command with a number. For example, to search for the 5th occurrence of the character @ in a line, you can use the command `5f@`. This assumes the cursor is at the beginning of the line - and that this first character is not the one you are looking for.

For more information, read:

```
f
F
t
T
;
,
```

faq-11.17

11.17. How do I replace a tab (or any other character) with a hard return

(newline) character?

You can replace a tab (or any other character) with a hard return (newline) character using the following command:

```
:s/\t/\r/
```

**Note** that in the above command, if you use `\n` instead of `\r`, then the tab characters will not be replaced by a new-line character.

For more information, read:

```
sub-replace-special
NL-used-for-Nul
CR-used-for-NL
```

faq-11.18

11.18. How do I search for a character by its ASCII value?

You can search for a character by its ASCII value by pressing **CTRL-V** followed by the decimal or hexadecimal or octal value of that character in the search `/` command. To determine the ASCII value of a character you can use the `:ascii`` or the `"ga"` command.

For example, to search for the ASCII character with value 188 ( $\frac{1}{4}$ ), you can use one of the following search commands:

```
/<CTRL-V>188
/<CTRL-V>o274
/<CTRL-V>xBC
/<CTRL-V>u00bc
```

You can also search for the character with the decimal/octal/hex number using a collation `[]` like this:

```
/[\d188]
/[\o274]
/[\xbc]
/[\u00bc]
```

Alternatively, you can use the special atom `\%d` `\%o` `\%x` `\%u`:

```
/\%d188
/\%o274
/\%xbc
/\%u00bc
```

Or you use digraphs to enter the character. For example enter:

```
/CTRL-K14
```

to search for the above character.

For more information, read:

```
i_CTRL-V_digit
:ascii
ga
/\]
/\%d
digraphs
```

faq-11.19

11.19. How do I search for long lines?

You can search for long lines or lines containing more than a specific number of characters using the Vim regular-expressions in the search command. For example, to search for all the lines containing more than 80 characters, you can use one of the following commands:

```
/^.\{80}.\+$
/^.*\%>80c.*$
/^.*\%>80v.*$
```

For more information, read:

```
/\{
/\%c
/\%v
```

faq-11.20

11.20. How do I display all the lines in the current buffer that contain a specified pattern?

You can use the following command to display all the lines in the current buffer that contain a specified pattern:

```
:g/<pattern>/p
```

For example, the following command will display all the lines in the current buffer that contain "vim":

```
:g/vim/p
```

Since `:p` is the default command to be executed for the ex command `:g`, you can also use:

```
:g/vim
```

If you also want the corresponding line numbers, then you can use the following command:

```
:g/<pattern>/#
```

For more information, read:

```
:global
:print
```

`:number`

faq-11.21

11.21. How do I search for a text string that spans multiple lines?

You can search for a text string that spans multiple lines using the `\_x` regular expression atom. For example, to search for the text string "Hello World", you can use the following search command:

```
/Hello_sWorld
```

This will match the word "Hello" followed by a newline character and then the word "World" at the beginning of the next line. This will also match the word "Hello" immediately followed by a space character and then the word "World". When searching for the "Hello World" string, to include the space characters at the end and beginning of the line, you can use the following search command:

```
/Hello_s\+World
```

For more information, read:

```
27.8
pattern-atoms
/_
pattern-searches
```

faq-11.22

11.22. How do I search for a pattern within the specified range of lines in a buffer?

You can search for a pattern within a range of lines using the `\%>l` and `\%<l` regular expression atoms.

For example, to search for the word "white" between the lines 10 and 30 in a buffer, you can use the following command:

```
/white\%>9l\%<31l
```

For more information, read:

```
/\%l
```

faq-11.23

11.23. How do I clear the last searched pattern?

The last searched pattern is stored in the `"/` register. You can clear this register using the following command:

```
:let @/=""
```

To clear the last search pattern whenever a buffer is unloaded, you can use the following command:

```
:autocmd BufUnload * let @/ = ""
```

For more information, read:

```
@/
:let-@
autocmd-searchpat
last-pattern
```

faq-11.24

11.24. Why does this pattern "a.\{-}p\@" not match?

"\{-}" doesn't just mean "as few as possible", it means "as few as possible to make the whole pattern succeed". If it didn't match the "p", the whole pattern would fail (because of the "p\@!") so it does match the "p". It is a longer match, but it is the shortest match that makes the whole pattern succeed.

If you wanted "as few as possible regardless" you would use "\@>", which basically divides a pattern up so that the pieces either side behave independently. If the pattern were "a.\{-}\@>p\@" then ".\{-}" would always match nothing because that's the smallest match that can succeed when there are not other restrictions. The whole pattern then would behave the same as "ap\@", i.e. it would match any "a" not followed by a "p").

This means, it matches as few as possible "a"s without trying to keep going until Vim finds the longest match. This means, it will still match "ap".

faq-11.25

11.25. How can I use "/" within a pattern, without escaping it?

When using / to search for a pattern, you need to escape all "/" within the pattern, because they would otherwise terminate the pattern. So you can't directly search for /usr/share/doc/ but need to search for \usr\share\doc\

The easiest solution around that, would be to use "?" to start a backward search and afterwards use /<CR> to use the last search-pattern in forward direction.

If you have a Vim, that has the eval-feature built in (which needs at least a normal built or higher), you can also directly paste the pattern into the search register:

```
:let @/ = '/usr/share/doc/'
```

Then use "n" to jump to the next occurrence.

See also the help at

```
@/
/<CR>
```

## 11.26. How can I operate on a search match?

The "gn" command makes it easy to operate on regions of text that match the current search pattern. By default, it will search forward for the last used search pattern and visually select the match. If the cursor is already on the match, it will be visually selected. If you used the "gn" command after an operator (e.g. "c" to change text), it will be applied on the match.

If Visual mode is active before using gn, the visual selection will be extended until the end of the next match.

The "gN" commands works similar but searches backwards.

This allows to repeat simple operations on each match. For example, you might want to change each occurrence of apples by peaches. So you search using "/apple" then you can use "cgnpeach<Esc>" to replace the current match by peach. Now you can use the dot "." command to redo the replacement for the rest of the buffer.

See also the help at

```
gn
gN
```

## SECTION 12 - CHANGING TEXT

## 12.1. How do I delete all the trailing white space characters (SPACE and TAB) at the end of all the lines in a file?

You can use the ``:substitute`` command on the entire file to search and remove all the trailing white space characters:

```
:%s/\s\+$//
```

For more information, read:

```
:%
:s
/\s
/\s+
/$
```

## 12.2. How do I replace all the occurrences of multiple consecutive space characters to a single space?

You can use the following command to replace all the occurrences of multiple consecutive space characters to a single space:

```
:%s/ \{2,\}/ /g
```

Alternatively use:

```
:%s/ \+/ /g
```

For more information, read:

```
:%
:s
/\{
:s_flags
```

faq-12.3

12.3. How do I reduce a range of empty lines into one line only?

You can use the following command to reduce a range of empty lines into one line only:

```
:v/./.,/./-1join
```

The explanation for this command is below:

<u>part</u>	<u>description</u>
<code>:v/./</code>	Execute the following command for all lines not containing a character (empty lines).
<code>.,</code>	Use the current line as the start of the range of lines.
<code>/./</code>	Use the line containing a character as the last line.
<code>-1</code>	Adjust the range of lines to end with the line before the last line.
<code>j</code>	Join the lines in the range.

**Note** that this will give an error message if the empty lines are at the end of the file. To correct this, you have to add a temporary line at the end of the file, execute the command and then remove the temporary line.

For more information, read:

```
:v
:join
cmdline-ranges
collapse
```

faq-12.4

12.4. How do I delete all blank lines in a file? How do I remove all the lines containing only space characters?

To remove all blank lines, use the following command:

```
:g/^\$/d
```

To remove all lines with only whitespace (spaces or tabs) in them, use the following command:

```
:g/^\s\+$/d
```

To remove all the lines with only whitespace, if anything, use the following command:

```
:g/^\s*$/d
```

[faq-12.5](#)

12.5. How do I copy/yank the current word?

You can use the "yiw" (yank inner word without whitespace) command or the "yaw" (yank a word with whitespace) command to copy/yank the current word.

For more information, read:

```
04.6
04.8
iw
yank
text-objects
objects
```

[faq-12.6](#)

12.6. How do I yank text from one position to another position within a line, without yanking the entire line?

You can specify a motion command with the yank operator (y) to yank text from one position to another position within a line. For example, to yank from the current cursor position till the next letter x, use yfx or Fx or tx or Tx. To yank till the nth column, use n|. To yank till the next occurrence of a "word", use /word. To do a yank till the nth column on another line, first mark the position using the "ma" command, go to the start of the yank position, and then yank till the mark using y`a (note the direction of the quote)

For more information, read:

```
yank
motion.txt
04.6
```

[faq-12.7](#)

12.7. When I yank some text into a register, how do I append the text to the current contents of the register?

When you specify the register for some operation, if you use the upper-case for the register name, then the new text will be appended to the existing contents. For example, if you have some text in the register "a". If you want to append some new text to this, you have to use the "A" register name. If you use the lowercase register name, then the contents of the

register will be overwritten with the new text.

For more information, read:

```
quote
quote_alpha
10.1
```

[faq-12.8](#)

12.8. How do I yank a complete sentence that spans over more than one line?

To yank a complete sentence that spans over more than one line you have to use the yank operator followed by a motion command. For example:

```
y)
```

From inside the sentence you can use "yi)" to yank the sentence.

For more information, read:

```
yank
{motion}
object-motions
04.6
```

[faq-12.9](#)

12.9. How do I yank all the lines containing a pattern into a buffer?

You can use the `:global` command to yank all the lines containing the pattern into a register and then paste the contents of the register into the buffer:

```
:let @a=''
:g/mypattern/y A
```

The first command, clears the contents of the register "a". The second command copies all the lines containing "mypattern" into the register "a". **Note** that the capital letter "A" is used to append the matched lines. Now you can paste the contents of register "a" to a buffer using "ap command.

If you only want to collect all matches, you can use a different approach. For that run the `:s` command with the flags "gn" so that it won't actually change the buffer ("n" flag) but select each match ("g" flag). Combining this with the "\=" part in the replacement part, you can copy each match to e.g. a list. Altogether this looks like this:

```
:let list=[]
:%s/pattern/\=add(list, submatch(0))/gn
```

Now all matches will be in the list and you can post process them as wanted.

For more information, read:

```
:g
:y
:let-register
quote_alpha
put
registers
:registers
sub-replace-\=
```

faq-12.10

12.10. How do I delete all the lines in a file that do not contain a pattern?

You can use ``:v`` command to delete all the lines that do not contain a pattern:

```
:v/pattern/d
```

or

```
:g!/pattern/d
```

For more information, read:

```
:v
:g
```

faq-12.11

12.11. How do I add a line before each line with "pattern" in it?

You can use the following command to add a line before each line with "pattern" in it:

```
:g/pattern/normal! Oi<line of text goes here>
```

Alternatively you can yank the line using the Y command and then insert the line using the following command:

```
:g/pattern/put!
```

For more information, read:

```
:g
:put
insert
0
```

faq-12.12

12.12. Is there a way to operate on a line if the previous line contains a particular pattern?

You can use the ``:global`` command to operate on a line, if the previous line contains a particular pattern:

```
:g/<pattern>/+{cmd}
```

For more information, read:

```
:g
:range
```

faq-12.13

12.13. How do I execute a command on all the lines containing a pattern?

You can use the `:global` (`:g`) command to execute a command on all the lines containing a pattern.

```
:g/my pattern/d
```

If you want to use a non-Ex command, then you can use the `:normal` command:

```
:g/my pattern/normal {command}
```

Unless you want the normal mode commands to be remapped, consider using a `:normal!` command instead (note the "!").

For more information, read:

```
:global
:v
:normal
```

faq-12.14

12.14. Can I copy the character above the cursor to the current cursor position?

In Insert mode, you can copy the character above the cursor to the current cursor position by typing **CTRL-Y**. The same can be done with the characters below the cursor by typing **CTRL-E**.

For more information, read:

```
i_CTRL-Y
i_CTRL-E
```

faq-12.15

12.15. How do I insert a blank line above/below the current line without entering insert mode?

You can use the `:put` ex command to insert blank lines. For example, try

```
:put ='
:put! ='
```

For more information, read:

```
:put
```

faq-12.16

12.16. How do I insert the name of the current file into the current buffer?

There are several ways to insert the name of the current file into the current buffer. In insert mode, you can use the `<C-R>%` or the `<C-R>=expand("%")` command. In normal mode, you can use the ``:put =@%`` command.

For more information, read:

```
i_CTRL-R
expand()
!!
```

faq-12.17

12.17. How do I insert the contents of a Vim register into the current buffer?

In insert mode, you can use the `<CTRL-R><register>` command to insert the contents of `<register>`. For example, use `<CTRL-R>a` to insert the contents of register "a" into the current buffer.

In normal mode, you can use the ``:put <register>`` command to insert the contents of `<register>`. For example, use the ``:put d`` command to insert the contents of register "d" into the current buffer.

For more information, read:

```
i_CTRL-R
i_CTRL-R_CTRL-R
i_CTRL-R_CTRL-O
i_CTRL-R_CTRL-P
:put
```

faq-12.18

12.18. How do I move the cursor past the end of line and insert some characters at some columns after the end of the line?

You can set the **'virtualedit'** option to move the cursor past the end-of-line and insert characters in a column after the end-of-line. To start the virtual mode, use

```
:set virtualedit=all
```

For more information, read:

```
'virtualedit'
```

faq-12.19

12.19. How to replace the word under the cursor (say: junk) with "foojunkbar" in Vim?

There are several ways to do this. If the word is the first such word on

the line, use the following command:

```
:exe "s/".expand("<word>")."/foo&bar/"
```

To match specifically you could use a more complex substitution like this:

```
:exe 's/\<' . expand("<word>") . '\%>'.(col(".")-1).'c\>/foo&bar/'
```

You can also use the command: ciwfoo<C-R>"bar<Esc>

For more information, read:

```
:substitute
expand()
col()
/\%c
```

[faq-12.20](#)

12.20. How do I replace a particular text in all the files in a directory?

You can use the `:argdo`` command to execute the substitute command on all the files specified as arguments:

```
:args *
:argdo %s/<your_text>/<replacement_text>/ge | update
```

For more information, read:

```
:args_f
:argdo
:s_flags
```

[faq-12.21](#)

12.21. I have some numbers in a file. How do I increment or decrement the numbers in the file?

You can use the **CTRL-A** key to increment the number and the **CTRL-X** key to decrement the number. You can also specify the number to increment/decrement from the number by specifying a count to the key. This works for decimal, octal and hexadecimal numbers. You can change the base used by Vim for this operation by modifying the `'nrformats'` option.

For more information, read:

```
26.2
CTRL-A
CTRL-X
'nrformats'
```

[faq-12.22](#)

12.22. How do I reuse the last used search pattern in a `:substitute`` command?

To reuse the last used search pattern in a `:substitute`` command, don't

specify a new search pattern:

```
:s/pattern/newtext/
:s//sometext/
```

In the second `:s`` command, as a search pattern is not specified, the pattern specified in the first `:s`` command "pattern" will be used.

If you want to change the search pattern but repeat the substitution pattern you can use the special right hand side, you can use the tilde character:

```
:s/newpattern/~/
```

For more information, read:

```
:s
:&
:~
&
sub-replace-special
```

faq-12.23

12.23. How do I change the case of a string using the `:substitute`` command?

You can use special characters in the replacement string for a `:substitute`` command to change the case of the matched string. For example, to change the case of the string "MyString" to all uppercase, you can use the following command:

```
:%s/MyString/\U&/g
```

To change the case to lowercase, you can use the following command:

```
:%s/MyString/\L&/g
```

To change the case of the first character in all the words in the current line to uppercase, you can use the following command:

```
:s/\<\(.)\(\k*\)\>/\u\1\L\2/g
```

For more information, read:

```
sub-replace-special
:substitute
\U
\L
\u
```

faq-12.24

12.24. How do I enter characters that are not present in the keyboard?

You can use digraphs to enter characters that are not present in the

keyboard. You can use the ``:digraphs`` command to display all the currently defined digraphs. You can add a new digraph to the list using the ``:digraphs`` command.

For more information, read:

```
digraphs
'digraph'
24.9
```

faq-12.25

12.25. Is there a command to remove any or all digraphs?

No. The digraphs table is defined at compile time. You can only add new ones. Adding a command to remove digraphs is on the todo list.

faq-12.26

12.26. In insert mode, when I press the backspace key, it erases only the characters entered in this instance of insert mode. How do I erase previously entered characters in insert mode using the backspace key?

This is traditional vi behaviour. You can set the `'backspace'` option to erase previously entered characters in insert mode:

```
:set backspace=indent,eol,start
```

For more information, read:

```
'backspace'
i_backspacing
```

faq-12.27

12.27. I have a file which has lines longer than 72 characters terminated with "+" and wrapped to the next line. How can I quickly join the lines?

You can use the ``:global`` command to search and join the lines:

```
:g/+$$/j
```

This will, however, only join every second line. A couple of more complex examples which will join all consecutive lines with a "+" at the end are:

```
:g/+$$/,\(\^\|[^\+]\)\$/j
:g/+$$/mark a | .,\(\^\|[^\+]\)\$/s/+$// | 'a,.j
```

For more information, read:

```
:g
:j
:mark
```

faq-12.28

12.28. How do I paste characterwise yanked text into separate lines?

You can use the `:put`` command to paste characterwise yanked text into new lines:

```
:put =@"
```

For more information, read:

```
:put
quote_="
```

[faq-12.29](#)

12.29. How do I change the case (uppercase, lowercase) of a word or a character or a block of text?

You can use the `"~"` command to switch the case of a character.

You can change the case of the word under the cursor to uppercase using the `"gUiw"` or `"viwU"` command and to lowercase using the `"guiw"` or `"viwu"` command.

You can switch the case (upper case to lower case and vice versa) of the word under the cursor using the `"viw~"` or `"g~iw"` command.

You can use the `"gUgU"` command to change the current line to uppercase and the `"gugu"` command to change the current line to lowercase.

You can use the `"g~g~"` command to switch the case of the current line. You can use the `"g~{motion}"` or `"{Visual}~"` commands to switch the case of a block of text.

If you set `'tildeop'` the `"~"` command behaves like an operator and expects a motion command to act on. If you have

```
:set tildeop
```

and you want to change the case from the current cursor position to the end of line, simply use `"~$"`.

For more information, read:

```
case
'tildeop'
```

[faq-12.30](#)

12.30. How do I enter ASCII characters that are not present in the keyboard?

You can enter ASCII characters that are not present in the keyboard by pressing **CTRL-V** and then the ASCII character number. You can also use digraphs to enter special ASCII characters.

For more information, read:

i\_CTRL-V\_digit  
digraphs  
45.5

faq-12.31

12.31. How do I replace non-printable characters in a file?

To replace a non-printable character, you have to first determine the ASCII value for the character. You can use the `:ascii` ex command or the "ga" normal-mode command to display the ASCII value of the character under the cursor.

You can enter the non-printable character by entering **CTRL-V** followed by the decimal number 1-255 (with no leading zero), or by x and a hex number 00-FF, or by an octal number 0-0377 (with leading zero), or by u and a hex number 0-FFFF, or by U and a hex number 0-7FFFFFFF

Another alternative is to use the `:digraphs` ex command to display the digraphs for all characters, together with their value in decimal and alpha. You can enter a non-printable character by entering **CTRL-K** followed by two alphanumeric characters (a digraph).

For more information, read:

:ascii  
i\_CTRL-V  
i\_CTRL-V\_digit  
:digraphs

faq-12.32

12.32. How do I remove duplicate lines from a buffer?

You can use the following user-defined command to remove all the duplicate lines from a buffer:

```
:command -range=% Uniq <line1>,<line2>g/^%\<<line2>l\(.*\)\n\1$/d
```

Add the above command to your .vimrc file and invoke `:Uniq` to remove all the duplicate lines.

faq-12.33

12.33. How do I prefix all the lines in a file with the corresponding line numbers?

You can prefix the lines in a file with the corresponding line number in several ways. Some of them are listed below:

```
:%s/^/\=line('.'). ' '
:%s/^/\=printf('%5d ', line('.'))/
:%s/^/\=strpart(line('.'). ' ', 0, 5)
:%s/^/\=strpart(' ', strlen(line('.'))).line('.'). ' '
```

The last two commands will pad the line numbers with space characters. The

last command will right align the numbers and the command before that will left align the numbers.

If you don't want to number consecutive lines but rather non-consecutive regions, you can also use this idiom:

```
:let i = 1
:g/TODO/s/^\=\=printf('%2d.',i)|let i+=1
```

This first initializes the variable `i` with 1. In the next line, a ``:g`` command is used to perform a substitute command only on lines, that match "TODO". After the substitute command has taken place, the variable `i` will be incremented by 1.

For more information, read:

```
sub-replace-special
line()
expr6
strpart()
printf()
:execute
:global
```

faq-12.34

12.34. How do I exchange (swap) two characters or words or lines?

You can exchange two characters with the "xp" command sequence. The "x" will delete the character under the cursor and "p" will paste the just deleted character after the character under the cursor. This will result in exchanging the two characters.

You can exchange two words with the "deep" command sequence (start with the cursor in the blank space before the first word).

You can exchange two lines with the "ddp" command sequence. The "dd" will delete the current line and "p" will paste the just deleted line after the current line. This will result in exchanging the two lines.

All of the above operations will change the " unnamed register.

You can use the ``:m +`` ex command to exchange two lines without changing the unnamed register.

For more information, read:

```
x
p
dd
d
e
linewise-register
quotequote
:move
```

12.35. How do I change the characters used as word delimiters?

Vim uses the characters specified by the **'iskeyword'** option as word delimiters. The default setting for this option is "@,48-57,\_,192-255".

For example, to add ":" as a word delimiter, you can use

```
:set iskeyword+=:
```

To remove "\_" as a word delimiter, you can use

```
:set iskeyword=-_
```

For more information, read:

```
'iskeyword'
word
```

=====

## SECTION 13 - COMPLETION IN INSERT MODE

13.1. How do I complete words or lines in insert mode?

In insert mode, you can complete words using the **CTRL-P** and **CTRL-N** keys. The **CTRL-N** command searches forward for the next matching keyword. The **CTRL-P** command searches backwards for the next matching keyword.

In insert mode, you can use the **CTRL-X CTRL-L** command sequence to complete lines that starts with the same characters as in the current line before the cursor. To get the next matching line, press the **CTRL-P** or **CTRL-N** keys. There are a lot of other keys/ways available to complete words in insert mode.

Vim supports completion of the following items:

CTRL-X CTRL-L	whole lines
CTRL-X CTRL-N	keywords in the current file
CTRL-X CTRL-K	words from a dictionary
CTRL-X CTRL-T	words from a thesaurus
CTRL-X CTRL-I	current and included files
CTRL-X CTRL-]	tags
CTRL-X CTRL-F	file names
CTRL-X CTRL-D	macro definitions (also in included files)
CTRL-X CTRL-V	Vim command line
CTRL-X CTRL-U	User defined completion
CTRL-X CTRL-O	Omni completion

User defined completions and omni completions are often set by filetype plugins.

For more information, read:

[24.3  
ins-completion](#)

[faq-13.2](#)

13.2. How do I complete file names in insert mode?

In insert mode, you can use the **CTRL-X CTRL-F** command sequence to complete filenames that start with the same characters as in the current line before the cursor.

For more information, read:

[compl-filename](#)

[faq-13.3](#)

13.3. I am using **CTRL-P/CTRL-N** to complete words in insert mode. How do I complete words that occur after the just completed word?

You can use **CTRL-X CTRL-N** and **CTRL-X CTRL-P** keys to complete words that are present after the just completed word.

For more information, read:

[i\\_CTRL-X\\_CTRL-P](#)  
[i\\_CTRL-X\\_CTRL-N](#)  
[ins-completion](#)

===== [faq-14](#)

## SECTION 14 - TEXT FORMATTING

[faq-14.1](#)

14.1. How do I format a text paragraph so that a new line is inserted at the end of each wrapped line?

You can use the "gq" command to format a paragraph. This will format the text according to the current **'textwidth'** setting. An alternative would be to use the "gw" command that formats like "gq" but does not move the cursor.

**Note** that the gq operator can be used with a motion command to operate on a range of text. For example:

[gqq](#) - Format the current line  
[gqap](#) - Format current paragraph  
[gwap](#) - Format current paragraph (and don't move cursor)  
[gq3j](#) - Format the current and the next 3 lines

For more information, read:

[gq](#)  
[gw](#)

```
formatting
usr_25.txt
motion.txt
```

faq-14.2

14.2. How do I format long lines in a file so that each line contains less than "n" characters?

You can set the **'textwidth'** option to control the number of characters that can be present in a line. For example, to set the maximum width of a line to 70 characters, you can use the following command:

```
set textwidth=70
```

Now to break the long lines in a file to the length defined by the **'textwidth'** option, you can use

```
:g/./normal gq
```

For more information, read:

```
'textwidth'
gq
```

faq-14.3

14.3. How do I join short lines to form a paragraph?

First, make sure the **'textwidth'** option is set to a high value:

```
:set textwidth=99999
```

Next, join the short lines to form a paragraph using the command:

```
1GgqG
```

The above command will operate on the entire file. To do the formatting on all paragraphs in a specific range, use:

```
:'a,'bg/\S/normal gq}
```

For more information, read:

```
gq
G
gq
```

faq-14.4

14.4. How do I format bulleted and numbered lists?

You can configure Vim to format bulleted and numbered lists using the **'formatoptions'** option. For example, you can format the list of the following format:

```
- this is a test. this is a test. this is a test. this is a test.
```

this is a test.

into this format:

```
- this is a test. this is a test. this is a test. this is a test.
 this is a test.
```

You can use the "n" flag in the **'formatoptions'** to align the text.

```
:set fo+=n
```

With this option, when formatting text, Vim will recognize numbered lists. For this option to work, the **'autoindent'** option also must be set.

For more information, read:

```
'formatoptions'
fo-table
format-comments
```

[faq-14.5](#)

14.5. How do I indent lines in insert mode?

In insert mode, you can press the **CTRL-T** key to insert one shiftwidth of indent at the start of the current line. In insert mode, you can use the **CTRL-D** key to delete one shiftwidth of indent at the start of the current line. You can also use the **CTRL-O >>** and **CTRL-O <<** commands to indent the current line in insert mode.

For more information, read:

```
i_CTRL-T
i_CTRL-D
i_0_CTRL-D
i_CTRL-O
>>
<<
```

[faq-14.6](#)

14.6. How do I format/indent an entire file?

You can format/indent an entire file using the **gg=G** command, where

```
gg - Goto the beginning of the file
= - apply indentation
G - till end of file
```

For more information, read:

```
gg
=
G
'formatprg'
C-indenting
```

faq-14.7

14.7. How do I increase or decrease the indentation of the current line?

You can use the ">>" and "<<" commands to increase or decrease the indentation of the current line.

For more information, read:

```
shift-left-right
>>
<<
'shiftwidth'
```

faq-14.8

14.8. How do I indent a block/group of lines?

You can visually select the group of lines and press the > or < key to indent/unindent the lines. You can also use the following ex-command to indent the lines

```
:10,20>
```

For more information, read:

```
shift-left-right
v_>
v_<
:<
:>
```

faq-14.9

14.9. When I indent lines using the > or < key, the standard 8-tabstops are used instead of the current 'tabstop' setting. Why?

The number of spaces used when lines are indented using the ">" operator is controlled by the 'shiftwidth' option. The 'tabstop' setting is only used, when the 'shiftwidth' option is zero.

```
:set shiftwidth=4
```

For more information, read:

```
'shiftwidth'
>>
'softtabstop'
```

faq-14.10

14.10. How do I turn off the automatic indentation of text?

By default, the automatic indentation of text is not turned on. Check the configuration files (.vimrc, .gvimrc) for settings related to indentation. Make sure the `:filetype indent on` command is not present. If it is present, remove it. Also, depending on your preference, you may also want

to check the value of the **'autoindent'**, **'smartindent'**, **'cindent'** and **'indentexpr'** options and turn them off as needed.

For more information, read:

```
:filetype-indent-off
'autoindent'
'smartindent'
'cindent'
'indentexpr'
```

faq-14.11

14.11. How do I configure Vim to automatically set the **'textwidth'** option to a particular value when I edit mails?

You can use the "FileType" autocommand to set the **'textwidth'** option:

```
autocmd FileType mail set tw=<your_value>
```

For more information, read:

```
:autocmd
FileType
usr_43.txt
```

faq-14.12

14.12. Is there a way to make Vim auto-magically break lines?

Yes. Set the **'textwidth'** option to the preferred length for a line. Then Vim will auto-magically break the newly entered lines. For example:

```
:set textwidth=75
```

For more information, read:

```
'textwidth'
ins-textwidth
'formatoptions'
fo-table
formatting
```

faq-14.13

14.13. I am seeing a lot of ^M symbols in my file. I tried setting the **'fileformat'** option to "dos" and then "unix" and then "mac". None of these helped. How can I hide these symbols?

When a file is loaded in Vim, the format of the file is determined as below:

- If all the lines end with a new line (<NL>), then the fileformat is "unix".
- If all the lines end with a carriage return (<CR>) followed by a new line (<NL>), then the fileformat is "dos".
- If all the lines end with carriage return (<CR>), then the fileformat is

"mac".

If the file has some lines ending with <CR> and some lines ending with <CR> followed by a <NL>, then the fileformat is set to "unix".

You can change the format of the current file, by saving it explicitly in dos format:

```
:w ++ff=dos
```

To display the format of the current file, use

```
:set fileformat?
```

The above behavior is also controlled by the **'fileformats'** option. You can try the following commands:

```
:set fileformats+=unix
:e <your_file>
:set fileformat=unix
:w
```

To remove the carriage return (<CR>) character at the end of all the lines in the current file, you can use the following command:

```
:%s/\r$//
```

To force Vim to use a particular file format, when editing a file, you can use the following command:

```
:e ++ff=dos filename
```

For more information, read:

```
'fileformats'
'fileformat'
file-formats
DOS-format-write
Unix-format-write
Mac-format-write
dos-file-formats
23.1
++ff
```

faq-14.14

14.14. When I paste some text into a Vim buffer from another application, the alignment (indentation) of the new text is messed up. How do I fix this?

When you paste text into a GUI Vim using the mouse, Vim is able to detect that you are pasting text. So all the indentation related settings (like autoindent, smartindent, cindent, etc.) are ignored and the text is pasted literally.

When pasting text into a Vim running in a terminal (like xterm) using the mouse, Vim may not be able to detect that you are pasting text. This depends on several things: the capability of the terminal to pass the mouse events to Vim, Vim is compiled to handle mouse events and access the clipboard, the DISPLAY variable is set properly, the Vim **'mouse'** option is set correctly.

If Vim is able to detect that you are pasting text using the mouse, then the pasted text will be inserted literally.

If Vim is not able to detect that you are pasting using the mouse, then it will see the pasted text as though you literally typed the text. After the first line from the pasted text is inserted, when Vim encounters the newline character, because of the indentation settings, the next line will start indented. The spaces at the beginning of the second line in the pasted text will be inserted leading to additional indentation. This will be repeated for subsequent lines. So the pasted text will be inserted with stair case indentation.

You can fix this problem in a terminal Vim in several ways:

1. Build Vim with the `+mouse` and `+xterm_clipboard` compile-time options. The normal or big or huge build of Vim includes these options. Set the **'mouse'** option to either "a" or include "i". When pasting text using the mouse, don't press the Shift key. This will work only if Vim can access the X display. For more information, read the following Vim help topics:

```
+feature-list
'mouse'
<MiddleMouse>
x11-selection
xterm-clipboard
```

- 1.1 Some Linux distributions build their terminal vim packages without X support. This makes no sense and leaves many users with the impression that Vim in terminal mode doesn't support some operations such as properly pasting text with a mouse.

If your distribution includes `gvim`, which it almost certainly does these days, the solutions to this include the following.

- a) Start Vim as

```
gvim -v
```

- b) Put this alias in your shell's configuration file, e.g. `~/.bashrc`:

```
alias vim='gvim -v'
```

- c) Put the following command in a file named "vim" and put that file in your `~/bin` directory:

```
gvim -v "$@"
```

- d) Link the distribution's gvim to ~/bin/vim with the following command, which needs to be executed only once.

```
ln -s $(which gvim) ~/bin/vim
```

For c) and d), make sure that ~/bin precedes /usr/bin in your PATH.

2. Paste the text using the **CTRL-R CTRL-O** \* command. This will paste the text literally without any automatic indentation. If you want to paste the text and then fix the indentation, then you can use **CTRL-R CTRL-P** \*. These commands will work only if Vim can access the X display. For more information, read the following Vim help topics:

```
i_CTRL-R_CTRL-O
i_CTRL-R_CTRL-P
quotestar
```

3. Set the **'paste'** option before pasting the text. This option will disable the effect of all the indentation related settings. Make sure to turn off this option using `:set nopaste`` after pasting the text. Otherwise the Vim indentation feature will not work. Do not permanently set the **'paste'** option in your .vimrc file. If you are going to repeat these steps often, then you can set the **'pastetoggle'** option to a key. When you press the specified key, the **'paste'** option will be toggled. You can press the key once before pasting the text and the press the key once after pasting the text. **Note** that when the **'paste'** option is set, all the mappings and abbreviations are disabled. For more information, read the following Vim help topics:

```
'paste'
'pastetoggle'
```

You can also refer to the following topics in the user manual:

```
04.7
09.3
```

[faq-14.15](#)

- 14.15. When there is a very long wrapped line (wrap is "on") and a line doesn't fit entirely on the screen it is not displayed at all. There are blank lines beginning with "@" symbol instead of wrapped line. If I scroll the screen to fit the line the "@" symbols disappear and the line is displayed again. What Vim setting control this behavior?

You can set the **'display'** option to "lastline" to display as much as possible of the last line in a window instead of displaying the "@" symbols.

```
:set display=lastline
```

For more information, read:

`'display'`

[faq-14.16](#)

14.16. How do I convert all the tab characters in a file to space characters?

You can use the `:retab` command to update all the tab characters in the current file with the current setting of `'expandtab'` and `'tabstop'`. For example, to convert all the tabs to white spaces, use

```
:set expandtab
:retab
```

For more information, read:

```
:retab
'expandtab'
'tabstop'
25.3
```

[faq-14.17](#)

14.17. What Vim options can I use to edit text that will later go to a word processor?

You can set the following options to edit text that will later go into a word processor:

```
:set wrap
:set linebreak
:set textwidth=0
:set showbreak=>>>
```

You can use the `"gk"` and `"gj"` commands to move one screen line up and down. For more information, read:

```
'wrap'
'linebreak'
'textwidth'
'showbreak'
gk
gj
```

[faq-14.18](#)

14.18. How do I join lines without adding or removing any space characters?

By default, when you join lines using the `"J"` or `:join` command, Vim will replace the line break, leading white space and trailing white space with a single space character. If there are space characters at the end of a line or a line starts with the `)"` character, then Vim will not add a space character.

To join lines without adding or removing any space characters, you can use

the `gJ` or ``:join!`` commands.

For more information, read:

```
gJ
:join
J
10.5
'joinspaces'
'coptions'
'formatoptions'
```

---

## SECTION 15 - VISUAL MODE

[faq-15](#)

[faq-15.1](#)

### 15.1. How do I do rectangular block copying?

You can do rectangular block copying in Vim using the blockwise visual mode. To start blockwise visual mode use the **CTRL-V** key. Move the cursor using any of the motion commands and then use the `y` operator to yank to visually selected text.

If **CTRL-V** does not work as expected, it may have been remapped to **CTRL-Q** by the `mwin.vim` script which is often sourced by a `vimrc` on Windows machines to mimic some common short cuts from other programs.

For more information, read:

```
04.4
blockwise-visual
visual-mode
Q_vi
```

[faq-15.2](#)

### 15.2. How do I delete or change a column of text in a file?

You can use the Vim block-wise visual mode to select the column of text and apply an operator (delete, change, copy, etc) on it.

For more information, read:

```
visual-block
visual-operators
```

[faq-15.3](#)

### 15.3. How do I apply an ex-command on a set of visually selected lines?

When you select a range of lines in visual mode, the `<` register is set to the start of the visual region and the `>` register is set to the end of the visual region. You can use these registers to specify the range for an ex command. After visually selecting the lines, press `:"` to go to the command mode. Vim will automatically insert the visual range `'<,'>`. You can run

any ex-command on the visual range.

For more information, read:

```
V_:
'<
'>
```

faq-15.4

15.4. How do I execute an ex command on a column of text selected in Visual block mode?

All the ex commands operate on whole lines only. If you try to execute an ex command on a column of text selected in visual block mode, Vim will operate on all the selected lines (instead of the selected columns). You can use the `vis.vim` or `NrrwRgn` plugin script from <https://www.vim.org> scripts archive to do this.

For more information, read:

```
cmdline-ranges
10.3
cmdline-lines
```

faq-15.5

15.5. How do I select the entire file in visual mode?

You can select the entire file in visual mode using `ggVG`.

```
gg - go to the beginning of the file.
V - Start linewise visual mode
G - goto the end of the file.
```

For more information, read:

```
gg
linewise-visual
G
```

faq-15.6

15.6. When I visually select a set of lines and press the `>` key to indent the selected lines, the visual mode ends. How can I reselect the region for further operation? (or) How do I re-select the last selected visual area again?

You can use the `"gv"` command to reselect the last selected visual area. You can also use the marks `'<` and `'>` to jump to the beginning or the end of the last selected visual area.

For more information, read:

```
gv
'<
'>
```

faq-15.7

15.7. How do I jump to the beginning/end of a visually selected region?

You can use the "o" command to jump to the beginning/end of a visually selected region.

For more information, read:

[v\\_o](#)

faq-15.8

15.8. When I select text with mouse and then press : to enter an ex command, the selected text is replaced with the : character. How do I execute an ex command on a text selected using the mouse similar to the text selected using the visual mode?

This will happen if you have configured Vim to use select mode instead of Visual mode by setting the '**selectmode**' option. Check the value of this option:

```
:set selectmode?
```

This mode is known as selectmode and is similar to the visual mode. This option is also automatically set when you use the "behave mswin" command. Select mode looks like visual mode, but it is similar to the selection mode in MS-Windows.

For more information, read:

```
Select-mode
'selectmode'
09.4
:behave
```

faq-15.9

15.9. When I select a block of text using the mouse, Vim goes into selection mode instead of Visual mode. Why?

The '**selectmode**' option controls whether Select mode will be started when selecting a block of text using the mouse. To start Visual mode when selecting text using mouse, remove the "mouse" value from the '**selectmode**' option:

```
:set selectmode-=mouse
```

**Note** that by default, the '**selectmode**' option will be set to empty, so that always visual mode is used.

For more information, read:

```
'selectmode'
Select-mode
:behave
```

faq-15.10

15.10. How do I visually select the last copy/pasted text?

You can use the '[' and ']' marks to visually select the last copy/pasted text. The '[' mark is set to the beginning of the last changed/yanked text and the ']' mark is set to the end of the last changed/yanked text. To visually select this block of text use the command '[v']

For more information, read:

```
'[
']
'a
v
```

---

faq-16

## SECTION 16 - COMMAND-LINE MODE

faq-16.1

16.1. How do I use the name of the current file in the command mode or an ex command line?

In the command line, the "%" character represents the name of the current file. In some commands, you have to use `expand("%)` to get the filename:

```
:!perl %
```

Another example is to load the latex generated pdf file from the file you are currently editing:

```
!xpdf %<.pdf
```

For more information, read:

```
:_%
cmdline-special
expand()
```

faq-16.2

16.2. How do I edit the text in the Vim command-line effectively?

You can use the command-line window for editing Vim command-line text. To open the Vim command-line window use the "q:" command in normal mode. In command-line mode, use the **CTRL-F** key. In this window, the command line history will be displayed. You can use normal Vim keys/commands to edit any previous/new command line. To execute a command line, press the enter/return key.

In a similar vain, the search history can be edited with "q/" and "q?" commands.

For more information, read:

16.3. How do I switch from Vi mode to Ex mode?

You can use the Q command to switch from Vi mode to Ex mode. To switch from Ex mode back to the Vi mode, use the `:vi` command.

For more information, read:

```
Q
gQ
Ex-mode
:vi
```

16.4. How do I copy the output from an ex-command into a buffer?

To copy the output from an ex-command into a buffer, you have to first get the command output into a register. You can use the `:redir` command to get the output into a register. For example,

```
:redir @a
:g/HelloWord/p
:redir END
```

Now the register "a" will contain the output from the ex command `:g/HelloWord/p`. Now you can paste the contents of the register "a" into a buffer. You can also send or append the output of an ex-command into a file using the `:redir` command.

You can prefix the `:global` command with `:silent`, to avoid having the lines printed to the screen.

To redirect the output from an ex-command to a file, you can use the following set of commands:

```
:redir > myfile
:g/HelloWord/p
:redir END
```

For more information, read:

```
:redir
:silent
```

16.5. When I press the `<Tab>` key to complete the name of a file in the command mode, if there are more than one matching file names, then Vim completes the first matching file name and displays a list of all matching filenames. How do I configure Vim to only display the list of all the matching filenames and not complete the first one?

You can modify the **'wildmode'** option to configure the way Vim completes filenames in the command mode. In this case, you can set the **'wildmode'** option to "list":

```
:set wildmode=list
```

For more information, read:

['wildmode'](#)

[faq-16.6](#)

16.6. How do I copy text from a buffer to the command line and from the command line to a buffer?

To copy text from a buffer to the command line, after yanking the text from the buffer, use "<CTRL-R>0" in the command line to paste the text. You can also yank the text to a specific register and use **CTRL-R <register>** to paste the text to the command line. You can use **CTRL-R CTRL-W** to paste the word under the cursor in the command line.

To copy text from the command line into a buffer, you can paste the contents of the : register using the ":p command. The most recently executed command line is stored in the : register.

Another approach for copying and pasting text to and from the command line is to open the command line window using q: from normal mode or **CTRL-F** from the command-line mode. In the command line window you can use all the Vim commands to edit the command line.

For more information, read:

[c\\_CTRL-R](#)  
[quote\\_:](#)  
[cmdline-window](#)

[faq-16.7](#)

16.7. How do I put a command onto the command history without executing it?

To put a command onto the command history without executing it, press the <Esc> key to cancel the command.

An alternative solution, is to use the histadd() function like this:

```
:call histadd(':', 'echo strftime("%c")')
```

For more information, read:

[c\\_<Esc>](#)  
[histadd\(\)](#)

[faq-16.8](#)

16.8. How do I increase the height of the command-line?

You can increase the height of the command-line by changing the **'cmdheight'**

option:

```
:set cmdheight=2
```

For more information, read:

```
'cmdheight'
hit-enter
05.7
```

---

faq-17

## SECTION 17 - VIMINFO

faq-17.1

17.1. When I invoke Vim, I get error messages about illegal characters in the viminfo file. What should I do to get rid of these messages?

You can remove the \$HOME/.viminfo or the \$HOME/\_viminfo file to get rid of these error messages.

For more information, read:

```
viminfo-errors
viminfo-file-name
viminfo
21.3
```

faq-17.2

17.2. How do I disable the viminfo feature?

By default, the viminfo feature is disabled. If the viminfo feature is enabled by a system-wide vimrc file, then you can disable the viminfo feature by setting the **'viminfo'** option to an empty string in your local .vimrc file:

```
:set viminfo=""
```

For more information, read:

```
'viminfo'
```

faq-17.3

17.3. How do I save and use Vim marks/commands across Vim sessions?

You can save and restore Vim marks across Vim sessions using the viminfo file. To use the viminfo file, make sure the **'viminfo'** option is not empty. To save and restore Vim marks, the **'viminfo'** option should not contain the "f" flag or should have a value greater than zero for the "f" option.

You can also use the viminfo file to synchronize the commandline history across different sessions using ``:wvimfo`` and ``:rviminfo`` commands together with the FocusGained and FocusLost autocommands:

```
augroup viminfo
 au!
 au FocusLost * wviminfo
 au FocusGained * rviminfo
augroup end
```

Note, this will only work reliably, when Vim can detect the FocusLost and FocusGained autocommands correctly. This means it should work with GVim but might depend on your terminal for konsole vim.

For more information, read:

```
21.3
viminfo
'viminfo'
:wviminfo
:rviminfo
FocusLost
FocusGained
```

---

faq-18

## SECTION 18 - REMOTE EDITING

faq-18.1

18.1. How do I open a file with existing instance of gvim? What happened to the Vim 5.x OpenWithVim.exe and SendToVim.exe files?

Starting with Vim6, the OLE version of OpenWithVim.exe and SendToVim.exe Vim utilities are replaced by the new client-server feature. To open the file j.txt with an existing instance of Gvim (MyVim), use:

```
$ gvim --servername MyVim --remote-silent j.txt
```

To list the server names of all the currently running Vim instances, use

```
$ vim --serverlist
```

To get more information about client-server feature, read

```
client-server
```

faq-18.2

18.2. How do I send a command to a Vim server to write all buffers to disk?

You can use the Vim remote server functionality to do this:

```
$ gvim --servername myVIM --remote-send "<C-\><C-N>:wall<CR>"
```

For more information, read:

```
client-server
CTRL-_CTRL-N
:wall
```

faq-18.3

18.3. Where can I get the documentation about the Vim remote server functionality?

You can get more information about the Vim remote server functionality by reading

[client-server](#)

---

## SECTION 19 - OPTIONS

faq-19

faq-19.1

19.1. How do I configure Vim in a simple way?

You can use the `:options` command to open the Vim option window:

```
:options
```

This window can be used for viewing and setting all the options.

For more information, read:

[:options](#)

faq-19.2

19.2. How do I toggle the value of an option?

You can prefix the option with "inv" to toggle the value of the option:

```
:set invignorecase
:set invhlsearch
```

You can also suffix the option with "!" to toggle the value:

```
:set ignorecase!
:set hlsearch!
```

For more information, read:

[set-option](#)

faq-19.3

19.3. How do I set an option that affects only the current buffer/window?

Some of the Vim options can have a local or global value. A local value applies only to a specific buffer or window. A global value applies to all the buffers or windows.

When a Vim option is modified using the `:set` command, both the global and local values for the option are changed. You can use the `:setlocal` command to modify only the local value for the option and the `:setglobal`

command to modify only the global value.

You can use the `:setlocal` command to set an option that will affect only the current file/buffer:

```
:setlocal textwidth=70
```

**Note** that not all options can have a local value. You can use `:setlocal` command to set an option locally to a buffer/window only if the option is allowed to have a local value.

You can also use the following command to set an option locally:

```
:let &l:{option-name} = <value>
```

For more information, read:

```
:setlocal
local-options
```

[faq-19.4](#)

19.4. How do I use space characters for a Vim option value?

To use space characters in a Vim option value, you have to escape the space character. For example:

```
:set tags=tags\ /usr/tags
```

For more information, read:

```
option-backslash
```

[faq-19.5](#)

19.5. Can I add (embed) Vim option settings to the contents of a file?

You can use modelines to add Vim option settings to the contents of a file. For example, in a C file, you can add the following line to the top or the bottom of the file:

```
/* vim:sw=4: */
```

This will set the `'shiftwidth'` option to 4, when editing that C file. For this to work, the `'modeline'` option should be set. By default, the `'modeline'` option is set. An alternative example is given in this document in the first line.

The `'modelines'` settings specifies the number of lines that will be checked for the Vim set commands.

For more information, read:

```
21.6
modeline
auto-setting
```

```
'modeline'
'modelines'
```

faq-19.6

19.6. How do I display the line numbers of all the lines in a file?

You can set the **'number'** option to display the line numbers for all the lines.

```
:set number
```

For more information, read:

```
'number'
```

faq-19.7

19.7. How do I change the width of the line numbers displayed using the **'number'** option?

You can set the minimum number of columns to be used for line numbering by setting the **'numberwidth'** option:

```
:set numberwidth=3
```

This set's the width for the line number to 3 digits, which is enough, if your buffer contains less than 999 lines. However, if your current buffer contains more lines than 999, the **'numberwidth'** will be adjusted accordingly, so that the maximum line number will fit on the screen.

faq-19.8

19.8. How do I display (view) all the invisible characters like space, tabs and newlines in a file?

You can set the **'list'** option to see all the invisible characters in your file.

```
:set list
```

With this option set, you can view space characters, tabs, newlines, trailing space characters and wrapped lines.

To not display the invisible characters (which is the default), you have to reset the **'list'** option:

```
:set nolist
(or)
:set list!
```

The ``:set list!`` command will toggle the current setting of the boolean **'list'** option.

You can modify the **'listchars'** option to configure how and which invisible characters are displayed. For example, with the following command all the trailing space characters will be displayed with a "." character.

```
:set listchars=trail:.
```

For more information, read:

```
'listchars'
'list'
```

[faq-19.9](#)

19.9. How do I configure Vim to always display the current line and column number?

You can set the **'ruler'** option to display current column and line number in the status line:

```
:set ruler
```

For more information, read:

```
'ruler'
```

[faq-19.10](#)

19.10. How do I display the current Vim mode?

You can set the **'showmode'** option to display the current Vim mode. In Insert, Replace and Visual modes, Vim will display the current mode on the last line.

```
:set showmode
```

For more information, read:

```
'showmode'
```

[faq-19.11](#)

19.11. How do I configure Vim to show pending/partial commands on the status line?

You can set the **'showcmd'** option to display pending/partial commands in the status line:

```
:set showcmd
```

For more information, read:

```
'showcmd'
```

[faq-19.12](#)

19.12. How do I configure the Vim status line to display different settings/values?

You can set the **'statusline'** option to display different values/settings in the Vim status line.

For more information, read:

```
'statusline'
'laststatus'
'rulerformat'
'ruler'
```

faq-19.13

19.13. How do I configure Vim to display status line always?

You can set the **'laststatus'** option to 2 to display the status line always.

```
:set laststatus=2
```

For more information, read:

```
'laststatus'
```

faq-19.14

19.14. How do I make a Vim setting persistent across different Vim invocations/instances/sessions?

To make a Vim option setting persistent across different Vim instances, add your setting to the `.vimrc` or `.gvimrc` file. You can also use the `:mkvimrc` command to generate a vimrc file for the current settings.

For more information, read:

```
save-settings
vimrc
gvimrc
vimrc-intro
:mkvimrc
initialization
```

faq-19.15

19.15. Why do I hear a beep (why does my window flash) about 1 second after I hit the Escape key?

This is normal behavior. If your window flashes, then you've got the visual bell on. Otherwise, you should hear a beep.

Vim needs a timeout to tell the difference between a simple escape and, say, a cursor key sequence. When you press a key in normal mode (and even in insert mode) and that key is the beginning of a mapping, Vim waits a certain amount of time to see if the rest of the mapping sequence follows. If the mapping sequence is completed before a given timeout period, the mapping for that sequence of keys is applied. If you interrupt the mapping, the normal actions associated with the keys are executed.

For example, if you have a mapping defined as `:imap vvv Vim is great!!`` and you type "vvv" quickly, the "Vim is great!!" will be inserted into your text. But if you type "vv v" then that is what will put into your text. This is also true if you type "vvv" too slowly where "too slowly" is longer

than the value for the timeout option. Setting the timeout option to a larger value can help alleviate problems that appear when using function keys over a slow line.

For more information, read:

`'timeout'`

faq-19.16

19.16. How do I make the "c" and "s" commands display a "\$" instead of deleting the characters I'm changing?

To make the "c" and "s" commands display a "\$" instead of deleting the characters, add the \$ flag to the `'coptions'` option:

```
:set coptions+=
```

For more information, read:

`'coptions'`

faq-19.17

19.17. How do I remove more than one flag using a single `:set` command from a Vim option?

You can remove more than one flag from a Vim option using a single `:set` command, by specifying the flags in exactly the same order as they appear in the option. For example, if you use the following command to remove the "t" and "n" flags from the `'formatoptions'` option:

```
:set formatoptions-=tn
```

The "t" and "n" flags will be removed from the `'formatoptions'` option, only if the `'formatoptions'` option contains these flags in this order: "tn". Otherwise, it will not remove the flags. To avoid this problem, you can remove the flags one by one:

```
:set formatoptions-=t formatoptions-=n
```

For more information, read:

```
:set-=
```

=====

faq-20

## SECTION 20 - MAPPING KEYS

faq-20.1

20.1. How do I know what a key is mapped to?

To see what a key is mapped to, use the following commands:

```
:map <key>
:map! <key>
```

You can also check the mappings in a particular mode using one of the ``:cmap``, ``:nmap``, ``:vmap``, ``:imap``, ``:omap``, etc commands.

To find out, where the key has been mapped, prefix the ``:verbose`` command:

```
:verbose :map <key>
```

For more information, read:

```
map-listing
map-overview
```

faq-20.2

20.2. How do I list all the user-defined key mappings?

You can list all the user-defined key mappings using:

```
:map
```

For more information, read:

```
map-listing
```

faq-20.3

20.3. How do I unmap a previously mapped key?

You can unmap a previously mapped key using the ``:unmap`` command:

```
:unmap <key>
:unmap! <key>
```

For mode specific mappings, you can use one of the these commands:

```
:nunmap
:vunmap
:ounmap
:iunmap
:lunmap
:cunmap
```

The following command will fail to unmap a buffer-local mapped key:

```
:unmap <key>
```

To unmap a buffer-local mapped key, you have to use the `<buffer>` keyword in the unmap command:

```
:unmap <buffer> <key>
:unmap! <buffer> <key>
```

For more information, read:

```
:unmap
```

```
map-modes
:map-local
mapleader
```

faq-20.4

20.4. I am not able to create a mapping for the `<xxx>` key. What is wrong?

- 1) First make sure, the key is passed correctly to Vim. To determine if this is the case, put Vim in Insert mode and then hit **CTRL-V** (or **CTRL-Q** if your **CTRL-V** is remapped to the paste operation (e.g. on Windows if you are using the `mwin.vim` script file) followed by your key.

If nothing appears in the buffer (and assuming that you have `'showcmd'` on, `^V` remains displayed near the bottom right of the Vim screen), then Vim doesn't get your key correctly and there is nothing to be done, other than selecting a different key for your mapping or using GVim, which should recognise the key correctly.

- 2) Possibly, Vim gets your key, but sees it as no different than something else. Say you want to map `<Ctrl-Right>`, then in Insert mode hit `CTRL-K` followed by `<Ctrl-Right>`. If Vim displays `<C-Right>` it has correctly seen the keystroke and you should be able to map it (by using `<C-Right>` as your `{lhs}`). If it displays `<Right>` it has seen the keystroke but as if you hadn't held `<Ctrl>` down: this means your terminal passes `<Ctrl-Right>` as if it were just `<Right>`. Anything else means the key has been misidentified.
- 3) If the key is seen, but not as itself and not as some recognizable key, then there is probably an error in the terminal library for the current terminal (termcap or terminfo database). In that case

```
:set term?
```

will tell you which termcap or terminfo Vim is using. You can try to tell vim, what termcode to use in that terminal, by adding the following to your vimrc:

```
if &term == <termname>
 set <C-Right>=<keycode>
endif
```

where `<termname>` above should be replaced by the value of `'term'` (with quotes around it) and `<keycode>` by what you get when hitting **CTRL-V** followed by `<Ctrl-Right>` in Insert mode (with nothing around it). `<C-Right>` should be left as-is (9 characters). Don't forget that in a `':set'` command, white space is not allowed between the equal sign and the value, and any space, double quote, vertical bar or backslash present as part of the value must be backslash-escaped.

Now you should be able to see the keycode corresponding to the key and you can create a mapping for the key using the following command:

```
:map <C-Right> <your_command_to_be_mapped>
```

For more information, read:

```
map-keys-fails
:map-special-keys
key-codes
```

faq-20.5

20.5. Why does mapping the `<C-...>` key not work?

The only `<Ctrl>-<printable-key>` chords which Vim can reliably detect (because they are defined in the ASCII standard) are the following:

CTRL-@	0x00	NUL
CTRL-A to CTRL-Z	0x01 to 0x1A	
CTRL-a to CTRL-z	0x01 to 0x1A	
CTRL-[	0x1B	ESC
CTRL-\	0x1C	
CTRL-]	0x1D	
CTRL-^	0x1E	
CTRL-_	0x1F	
CTRL-?	0x7F	DEL

Most of these, however, already have a function in Vim (and some are aliases of other keys: **CTRL-H** and `<BS>`, **CTRL-I** and `<Tab>`, **CTRL-M** and `<Enter>`, `CTRL-[` and `<Esc>`, `CTRL-?` and `<Del>`).

The "safest" keys to use in Vim for the `{lhs}` of a mapping are the F keys, with or without Shift: `<F2>` to `<F12>` and `<S-F1>` to `<S-F12>`. (Some OSes, including mine, intercept `<Ctrl-Fn>` and `<Alt-Fn>`, which never reach an application program such as vim or gvim).

You can try other combinations of `<Ctrl>` + any key, but they may either not work everywhere (e.g. the terminal might not pass that key to Vim, or they might have unintended side effects (e.g. mapping `<C-I>` means also to map `<Tab>`).

This is a known issue, that has been discussed and might be implemented in the future to enable Vim to distinguish between various keys even in console mode. (e.g.

[https://groups.google.com/d/msg/vim\\_dev/2bp9UdfZ63M/sajb9KM0pNYJ](https://groups.google.com/d/msg/vim_dev/2bp9UdfZ63M/sajb9KM0pNYJ))

faq-20.6

20.6. How do I map the numeric keypad keys?

First make sure that the numeric keypad keys are passed to Vim. Next, you can use the following command to map the numeric keypad keys:

```
:map <kSomething> <your_command>
```

where, `<kSomething>` can be `kHome`, `kEnd`, `kPageUp`, `kPageDown`, `kPlus`, `kMinus`, `kDivide`, `kMultiply`, `kEnter`, etc.

For more information, read:

key-codes  
terminal-options

faq-20.7

20.7. How do I create a mapping that works only in visual mode?

You can create mappings that work only in specific modes (normal, command, insert, visual, etc). To create a mapping that works only in the visual mode, use the `:vmap` command:

```
:vmap <F3> <your mapping here>
```

This mapping will work in visual and select mode. If you want the map to work only in visual mode (excluding select mode), use:

```
:xmap <F3> <your mapping here>
```

and to have the mapping only work in select mode (but not visual mode), use:

```
:smap <F3> <your mapping here>
```

For more information, read:

```
:vmap
:xmap
:smap
map-modes
40.1
```

faq-20.8

20.8. How do I create a mapping that works only in normal and operator pending mode (but not in visual mode)?

Using `:map` creates a mapping that works in normal, visual+select mode and operator pending mode. You can use `:nmap` to have the mapping only work in normal mode and `:vmap` to have the mapping only be defined for visual and select mode or use `:omap` to have the mapping only defined in operator pending mode.

But if you want to have a mapping defined, that works in both operator pending mode and normal mode, but not in visual and select mode, you need to first define the mapping using `:map` and afterwards delete the mapping for visual and select mode:

```
:map <f3> <your mapping here>
:vunmap <f3>
```

faq-20.9

20.9. In a Vim script, how do I know which keys to use for my mappings, so that the mapped key will not collide with an already used key?

Vim uses most of the keys in the keyboard. You can use the `<leader>` prefix in maps to define keys which will not overlap with Vim keys. For example:

```
:map <leader>S <C-W>s
:map <leader>j <C-W>j
:map <leader>k <C-W>k
```

where by default `<leader>` gets substituted with a backslash (`\`), so the user would enter

```
\s
\j
\k
```

to invoke the above map commands. The user can change the `mapleader` variable to be whatever they wanted:

```
:let mapleader = ","
```

When writing a plugin or other script, more often than not, it is advisable to use `:noremap` instead of `:map` to avoid side effects from user defined mappings.

For more information, read:

```
<Leader>
<LocalLeader>
write-plugin
```

faq-20.10

20.10. How do I map the escape key?

You can map the Escape key to some other key using the `:map` command. For example, the following command maps the escape key to **CTRL-O**.

```
:map <C-O> <Esc>
```

faq-20.11

20.11. How do I map a key to perform nothing?

You can map a key to `<Nop>` to perform nothing when the key is pressed. For example, with the following mappings, the `<F7>` key will do nothing when pressed.

```
:map <F7> <Nop>
:map! <F7> <Nop>
```

For more information, read:

```
<Nop>
:map
:map!
map-modes
```

faq-20.12

20.12. I want to use the `<Tab>` key to indent a block of text and `<Shift-Tab>` key to unindent a block of text. How do I map the keys to do this? This behavior is similar to textpad, visual studio, etc.

Use the following mapping:

```
:inoremap <S-Tab> <C-O><lt><lt>
:nnoremap <Tab> >>
:nnoremap <S-Tab> <lt><lt>
:vnoremap <Tab> >
:vnoremap <S-Tab> <lt>
```

Note, that the `<S-Tab>` mapping will work only if Vim receives the correct key sequence. This is mostly the case with GUI Vim.

For more information, read:

```
:inoremap
:nnoremap
:vnoremap
<S-Tab>
i_CTRL-O
>>
<<
<lt>
```

faq-20.13

20.13. In my mappings the special characters like `<CR>` are not recognized. How can I configure Vim to recognize special characters?

Check the value of the `'coptions'` option:

```
:set coptions?
```

If this option contains the `"<` flag, then special characters will not be recognized in mappings. Remove the `"<` flag from `'coptions'` option:

```
:set cpo-=<
```

Also, check the value of the `'compatible'` option:

```
:set compatible?
```

The `'compatible'` option must be reset:

```
:set nocompatible
```

For more information, read:

```
'coptions'
'compatible'
```

faq-20.14

20.14. How do I use the "|" to separate multiple commands in a map?

You can escape the "|" character using backslash (\) to use "|" in a map.

```
:map _l :!ls \ | more<CR>
```

You can also try the following command:

```
:map _l :!ls <bar> more<CR>
```

There are also other ways to do this.

For more information, read:

[map\\_bar](#)

[faq-20.15](#)

20.15. If I have a mapping/abbreviation whose ending is the beginning of another mapping/abbreviation, how do I keep the first from expanding into the second one?

Instead of using the `:map lhs rhs` command, use the `:noremap lhs rhs` command. For abbreviations, use "noreabbrev lhs rhs". The "nore" prefix prevents the mapping or abbreviation from being expanded again.

For more information, read:

```
:noremap
:noreabbrev
```

[faq-20.16](#)

20.16. Why does it take a second or more for Vim to process a key, sometimes when I press a key?

Make sure you have not defined a mapping for this key using the following command:

```
:map <key>
```

If a mapping is defined for this key and the mapped key contains more than one character, then Vim will wait for the next character to be pressed to determine whether it is the mapped key or not. For example, if you have mapped "ab", then if you press "a", Vim will wait for the next key to be pressed. If the next key is "b", Vim will execute the mapped sequence. Otherwise, Vim will proceed with the normal processing of "a" followed by the next key. If the **'timeout'** option is set (which is the default), then Vim will timeout after waiting for the period specified with the **'timeoutlen'** option (default is 1 second).

For more information, read:

```
map-typing
'timeoutlen'
'timeoutlen'
```

```
'timeout'
'ttimeout'
vt100-cursor-keys
slow-fast-terminal
```

faq-20.17

20.17. How do I map a key to run an external command using a visually selected text?

You can use the `:vmap` command to map a key in the visual mode. In the mapped command sequence, you have to first yank the text. The yanked text is available in the `''` register. Now, you can use the contents of this register to run the external command. For example, to run the external command `"perldoc"` on a visually selected text, you can use the following mapping:

```
:vmap <F7> y:!exec "!perldoc '' . @" . ""<CR>
```

If you want the mapping to work in the visual mode, but not with the highlighted text, you can use the following command:

```
:vmap <F7> :<C-U>!perldoc <word><CR>
```

The above mapping will use the word under the cursor instead of the highlighted text. **Note** the use of the `<C-U>` before invoking the `"perldoc"` external command. The `<C-U>` is used to erase the range of text selected in the visual mode and displayed on the command line. If the visual range is not removed using `<C-U>`, then the output from the external command will replace the visually selected text.

For more information, read:

```
:vmap
quote_quote
:let-register
c_CTRL-U
:!cmd
```

faq-20.18

20.18. How do I map the **CTRL-I** key while still retaining the functionality of the `<Tab>` key?

The **CTRL-I** key and the `<Tab>` key produce the same keycode, so Vim cannot distinguish between the **CTRL-I** and the `<Tab>` key. When you map the **CTRL-I** key, the `<Tab>` key is also mapped (and vice versa). The same restriction applies for the `CTRL-[` key and the `<Esc>` key.

For more information, read:

[keycodes](#)

faq-20.19

20.19. How do I define a map to accept a count?

Use the @= command to use an expression. For example,

```
nnoremap = @='3l'
```

Now you can specify a count to the "=" command.

```
complex-repeat
```

faq-20.20

20.20. How can I make my normal mode mapping work from within Insert Mode?

Mappings in normal mode can be executed after **CTRL-O** from insert mode as well but if there are more commands included in the mapping {rhs}, only the first one will be executed in normal mode and the rest of {rhs} will be printed literally in insert mode. One of ways to workaround this problem is to make {rhs} be one command, via wrapping it to the function. For example:

```
function GetFontNameOfFirstChar()
normal! 0
echo getfontname()
endfunction

:nmap <F9> :call GetFontNameOfFirstChar()<CR>
```

A more technical and detailed solution to this problem follows and can be found at [https://groups.google.com/group/vim\\_dev/msg/75f1f2dfc00908bb](https://groups.google.com/group/vim_dev/msg/75f1f2dfc00908bb)

Not every normal mode-mapping is automatically suitable for execution via **CTRL-O** from within insert mode; you need to explicitly design your mappings for that purpose.

The **CTRL-O** command allows execution of one normal mode command from within insert mode, then returns to insert mode. If a normal mode mapping concatenates multiple normal mode commands, this breaks down in temporary normal mode and literally inserts the second part of the command into the buffer instead. To support execution of normal mode mappings from within insert mode, these strategies can be used:

- 1) Instead of concatenating multiple normal mode commands, use one `:normal`` mapping:

```
:nnoremap <silent> zC :<C-U>normal! zCVzC<CR>
```

- 2) Concatenate multiple Ex commands via `<Bar>` on the rhs:

```
:nnoremap zC :<C-U>call MyMap1()<Bar>call MyMap2()<CR>
```

- 3) Shadow normal mode mappings by insert mode mappings that re-enter normal mode, then invoke the normal mode mapping:

```
:nnoremap <silent> <SID>MyMap2 :<C-U>call MyMap2()<CR>
:inoremap <silent> <script> <SID>MyMap2 <C-\><C-O><SID>MyMap2
:nnoremap <silent> <script> zC <SID>MyMap1<SID>MyMap2
```

- 4) Normal mode mappings that consist of multiple Ex command lines (and where Ex commands cannot be concatenated via `<Bar>`) replace ``:<C-U>`` with `<SID>NM`; the `<SID>NM` mapping enters normal mode for one ex command line:

```
:nnoemap <silent> <SID>NM :<C-U>
:innoemap <silent> <SID>NM <C-\><C-O>:
:nnoemap <silent> <script> zC <SID>MyMap1<SID>NMcall MyMap2()<CR>
```

- 5) If none of the above is possible, at least force normal mode for subsequent commands via `CTRL-\ CTRL-N` to avoid accidental insertion of the remainder of the mapping.

```
:nnoemap zC zC<C-\><C-N>VzCzz
```

For more information, read:

```
i_CTRL-O
map_bar
i_CTRL-_CTRL-O
CTRL-_CTRL-N
```

---

SECTION 21 - ABBREVIATIONS faq-21

21.1. How do I auto correct misspelled words? faq-21.1

You can auto correct misspelled words using abbreviations. For example, the following abbreviation can be used to correct "teh" with "the":

```
:abbreviate teh the
```

Vim supports abbreviations in insert mode, replace mode and command-line mode.

For more information, read:

```
24.7
abbreviations
Q_ab
```

21.2. How do I create multi-line abbreviations? faq-21.2

You can create multi-line abbreviations by embedding the "`<CR>`" key code in the text:

```
iabbrev #c -----<CR>-- Date:<CR>--<CR>-----
```

With the above abbreviation, when you type #c, it will be expanded to

the following text:

```

-- Date:
--

```

For more information, read:

[abbreviations](#)

[faq-21.3](#)

21.3. When my abbreviations are expanded, an additional space character is added at the end of the expanded text. How do I avoid this character?

To avoid an additional space character at the end of the expanded text, you can expand the abbreviation by pressing the **CTRL-]** key. The abbreviation will be expanded without adding a space character at the end.

Another alternative is to use the following function and command:

```
function! Eatchar(pat)
 let c = nr2char(getchar())
 return (c =~ a:pat) ? ' ' : c
endfunction
command! -nargs=+ Iabbr execute "iabbr" <q-args> . "<C-R>=Eatchar('\s')<CR>"
```

Now, define your abbreviations using the new "Iabbr" command instead of the builtin `:iabbrev` command. With this command, after expanding the abbreviated text, the next typed space character will be discarded.

For more information, read:

[abbreviations](#)

[faq-21.4](#)

21.4. How do I insert the current date/time stamp into the file?

You can use the `strftime()` function to insert the current data/time stamp in a file. For example, you can use the following abbreviation:

```
iabbrev dts <C-R>=strftime("%y/%m/%d %H:%M")<CR>
```

With this abbreviation, when you type `dts` in insert mode, it will be expanded to the date/time stamp.

Some other forms of the above abbreviation are listed below:

```
iabbrev mdyl <C-R>=strftime("%a %d %b %Y")<CR>
iabbrev mdys <C-R>=strftime("%y%m%d")<CR>
iabbrev mdyc <C-R>=strftime("%c")<CR>
iabbrev hml <C-R>=strftime("%d/%m/%y %H:%M:%S")<CR>
iabbrev hms <C-R>=strftime("%H:%M:%S")<CR>
```

For more information, read:

```
strftime()
i_CTRL-R
```

[faq-21.5](#)

21.5. How do I prevent an abbreviation from expanding in insert mode?

You can prevent an abbreviation from expanding in insert mode by typing **CTRL-V** before the character after the abbreviated word.

For more information, read:

```
abbreviations
```

---

[faq-22](#)

## SECTION 22 - RECORD AND PLAYBACK

[faq-22.1](#)

22.1. How do I repeat an editing operation (insertion, deletion, paste, etc)?

You can repeat the last editing operation using the "." command. This will repeat the last simple change like a insert, delete, change, paste, etc.

For more information, read:

```
04.3
single-repeat
Q_re
```

[faq-22.2](#)

22.2. How I record and repeat a set of key sequences?

You can use the "q" command in normal mode to record a set of key sequences and store it in a register. For example, in the normal mode you can press q followed by a register name `{0-9a-zA-Z}` to start the recording. To end/stop the recording press q again. You can playback/repeat the recorded key sequences by pressing @ followed by the register name. e.g. @a.

Another approach is to start Vim with the "-w" command-line argument.

```
$ vim -w <file_name>
```

Vim will record all the characters typed in the session in the specified file "file\_name". You can use the recorded file with the "-s" command line argument to play it back:

```
$ vim -s <file_name>
```

For more information, read:

```
10.1
```

```
recording
-w
-s
```

faq-22.3

22.3. How do I edit/modify a recorded set of key sequences?

The recorded key sequences are stored in a register. You can paste the contents of the register into a Vim buffer, edit the pasted text and again yank the text into the register. You can also use the `:let` command to modify the register. For example:

```
:let @a = "iHello World\<Esc>"
```

For more information, read:

```
recording
10.1
:let-register
<>
'coptions'
```

faq-22.4

22.4. How do I write recorded key sequences to a file?

The recorded key sequences are stored in a register. You can paste the contents of the register into a Vim buffer. Now you can save the buffer into a file. You can also modify the pasted text and again yank into the register to modify the recorded key sequence. For example, if you record a set of key sequences using `qa ..... q`. The recorded key sequences are stored in the register "a". You can paste the contents of register "a" using "ap.

For more information, read:

```
recording
10.1
```

faq-22.5

22.5. I am using register 0 to record my key sequences (i.e. `q0 .... q`). In the recorded key sequences, I am yanking some text. After the first replay of the recorded key sequence, I am no longer able to play it back.

Register 0 contains the text from the last yank operation. In your recorded key sequence, when the yank is performed, register 0 is overwritten with the yanked text. So your recording stored in register 0 is lost. You have to use some other register.

For more information, read:

```
registers
```

=====

## SECTION 23 – AUTOCOMMANDS

## faq-23.1

23.1. How do I execute a command when I try to modify a read-only file?

You can use the FileChangedRO autocommand event to execute a command when a read-only file is modified. For example, you can use this event to checkout a read-only file:

```
:autocmd FileChangedRO * call MyCheckoutFunction()
```

For more information, read:

FileChangedRO

## faq-23.2

23.2. How do I execute a command every time when entering a buffer?

You can use the BufEnter autocommand event to execute a command every time when entering a buffer. For example:

```
:autocmd BufEnter *.c set formatoptions=croqt
```

For more information, read:

BufEnter

## faq-23.3

23.3. How do I execute a command every time when entering a window?

You can use the WinEnter autocommand event to execute a command every time when entering a window. For example:

```
:autocmd WinEnter *.c call MyFunction()
```

For more information, read:

WinEnter

## faq-23.4

23.4. From an autocmd, how can I determine the name of the file or the buffer number for which the autocommand is executed?

You can use the special words <file> or <abuf> in an autocmd to get the name of the file or the buffer number for which the autocommand is executed.

For more information, read:

```
:<file>
:<abuf>
:<amatch>
```

faq-23.5

23.5. How do I automatically save all the changed buffers whenever Vim loses focus?

You can define an autocmd for the FocusLost event which will save all the modified buffers whenever Vim loses focus:

```
:autocmd FocusLost * wall
```

For more information, read:

```
FocusLost
:wall
```

faq-23.6

23.6. How do I execute/run a function when Vim exits to do some cleanup?

You can use VimLeave autocmd event to execute a function just before Vim exits. For example,

```
:autocmd VimLeave * call MyCleanupFunction()
```

For more information, read:

```
VimLeave
```

=====  
faq-24

## SECTION 24 - SYNTAX HIGHLIGHT

faq-24.1

24.1. How do I turn off/on syntax highlighting?

By default, the Vim syntax highlighting is turned off. To enable the syntax highlighting, you can use one of the following commands:

```
:syntax enable
```

or

```
:syntax on
```

To disable the syntax highlighting, you can use the following command:

```
:syntax off
```

For more information, read:

```
06.1
06.4
:syntax-enable
:syntax-on
:syn-clear
```

## faq-24.2

24.2. How do I change the background and foreground colors used by Vim?

Vim uses the "Normal" highlight group for the background and foreground colors. To change the foreground/background colors, you have to modify the "Normal" highlight group. For example, to set the background color to blue and foreground color to white, you can use

```
:highlight Normal ctermbg=blue ctermfg=white guibg=blue guifg=white
```

If you are using the Motif or the Athena version of the GUI Vim, then you can modify the foreground and background resource names in the .Xdefaults files to change the colors:

```
Vim.foreground: Black
Vim.background: Wheat
```

You can also use the "-foreground" and "-background" command-line arguments to specify the foreground and background colors. These arguments are supported only in the Motif or Athena versions:

```
$ gvim -foreground Black -background Wheat
```

For more information, read:

```
:highlight
.Xdefaults
-gui
```

## faq-24.3

24.3. How do I change the highlight colors to suit a dark/light background?

You can set the **'background'** option to either "dark" or "light" to change the highlight colors to suit a dark/light background:

```
:set background=dark
```

For more information, read:

```
'background'
06.2
```

## faq-24.4

24.4. How do I change the color of the line numbers displayed when the `:set number`` command is used?

The line numbers displayed use the LineNr highlighting group. To display the current colors used, use

```
:hi LineNr
```

To change the color modify the LineNr highlight group. For example:

```
:hi linenr guifg=red guibg=black
```

This will give red numbers on a black background in GVIM.

For more information, read:

```
:highlight
```

[faq-24.5](#)

24.5. How do I change the background color used for a Visually selected block?

You can modify the "Visual" highlight group to change the color used for a visually selected block:

```
:highlight Visual guibg=red
```

For more information, read:

```
:highlight
hl-Visual
```

[faq-24.6](#)

24.6. How do I highlight the special characters (tabs, trailing spaces, end of line, etc) displayed by the '**list**' option?

You can modify the "NonText" and "SpecialKey" highlight groups to highlight the special characters displayed by the '**list**' option:

```
:highlight NonText guibg=red
:highlight SpecialKey guibg=green
```

The "NonText" highlighting group is used for "eol", "extends" and "precedes" settings in the '**listchars**' option. The "SpecialKey" highlighting group is used for the "tab" and "trail" settings.

For more information, read:

```
'listchars'
hl-NonText
hl-SpecialKey
```

[faq-24.7](#)

24.7. How do I specify a colorscheme in my .vimrc/.gvimrc file, so that Vim uses the specified colorscheme every time?

You can specify the color scheme using the `:colorscheme` command in your .vimrc or .gvimrc file:

```
colorscheme evening
```

For more information, read:

```
:colorscheme
```

faq-24.8

24.8. Vim syntax highlighting is broken. When I am editing a file, some parts of the file is not syntax highlighted or syntax highlighted incorrectly.

Vim doesn't read the whole file to parse the text for syntax highlighting. It starts parsing wherever you are viewing the file. That saves a lot of time, but sometimes the colors are wrong. A simple fix is refreshing the screen using the **CTRL-L** key. Or scroll back a bit and then forward again. You can also use the command:

```
:syntax sync fromstart
```

**Note** that this might considerably slow down the screen refreshing.

For more information, read:

```
:syn-sync
:syn-sync-first
```

faq-24.9

24.9. Is there a built-in function to syntax-highlight the corresponding matching bracket?

Yes. Vim includes the `matchparen` Plugin as standard plugin that is enabled by default. Whenever the cursor moves over an item defined with the **'matchpairs'** option, Vim will highlight the corresponding bracket using the `MatchParen` highlighting group.

However, if the corresponding parenthesis is not visible in the current window, the cursor won't jump to it.

The `matchit` plugin provides a similar function, that lets the cursor jump to related items (e.g. "if", "else", "endif" items) and skips matches in comments. This uses the `%` command to jump to corresponding items. Though both plugins provide similar functions they are unrelated and work differently.

For more information, read:

```
matchparen
'matchpairs'
matchit-install
matchit-intro
```

faq-24.10

24.10. How do I turn off the C comment syntax highlighting?

You can use the following command to turn off C comment syntax highlighting:

```
:highlight clear comment
```

For more information, read:

## ft-c-syntax

faq-24.11

24.11. How do I add my own syntax extensions to the standard syntax files supplied with Vim?

You should not modify the syntax files supplied with Vim to add your extensions. When you install the next version of Vim, you will lose your changes. Instead you should create a file under the `~/.vim/after/syntax` directory with the same name as the original syntax file and add your additions to this file.

For more information, read:

```
mysyntaxfile-add
'runtimepath'
```

faq-24.12

24.12. How do I replace a standard syntax file that comes with the Vim distribution with my own syntax file?

You can replace a standard syntax file that comes with the Vim distribution by creating a file with the same name as the original syntax file and placing it in the vim runtime syntax (`~/.vim/syntax`) directory. For example, to replace the `c.vim` syntax file in a Unix system, place the new `c.vim` in the `~/.vim/syntax` directory. In a MS-Windows system, place the new syntax file in the `$HOME/vimfiles/syntax` or `$VIM/vimfiles/syntax` directory.

For more information, read:

```
mysyntaxfile-replace
44.11
mysyntaxfile
```

faq-24.13

24.13. How do I highlight all the characters after a particular column?

You can use the `:match` command to highlight all the characters after a particular column:

```
:match Todo '\%>75v.\|'
```

This will highlight all the characters after the 75th column.

You can also set the `'colorcolumn'` option to highlight a particular column:

```
:set colorcolumn=+2
```

which highlights 2 columns after the current `'textwidth'` setting (alternatively, you can use the exact column number).

For more information, read:

```
:match
/\%v
/\+
/.
'colorcolumn'
```

faq-24.14

24.14. How do I convert a source file (.c, .h, etc) with the Vim syntax highlighting into a HTML file?

You can use the 2html.vim script to convert a source file into a HTML file with the Vim syntax highlighting. Use the following command:

```
:TOhtml
```

For more information, read:

```
convert-to-HTML
:TOhtml
```

faq-24.15

24.15. How do I list the definition of all the current highlight groups?

You can list the definition of all the current highlight groups using the `:highlight` (without any arguments) ex command.

For more information, read:

```
:highlight
```

faq-24.16

24.16. How can I embed one syntax highlighting language into another one?

It is possible to include one syntax highlighting into another one, however most of the currently deployed syntax highlighting scripts are not prepared to be included into another syntax script.

You can however create your own custom script to define your own regions, which will be highlighted with a different language.

See the wiki for a comprehensive solution:

[http://vim.wikia.com/wiki/Different\\_syntax\\_highlighting\\_within\\_regions\\_of\\_a\\_file](http://vim.wikia.com/wiki/Different_syntax_highlighting_within_regions_of_a_file)

For more information, read:

```
:syn-include
sh-awk
```

faq-25

SECTION 25 - VIM SCRIPT WRITING

faq-25.1

25.1. How do I list the names of all the scripts sourced by Vim?

You can use the `:scriptnames` command to list the names of all the scripts sourced by Vim:

```
:scriptnames
```

For more information, read:

```
:scriptnames
```

faq-25.2

25.2. How do I debug Vim scripts?

Vim has built-in support for a primitive debugger to debug Vim plugins and scripts. Using this debugger you can set breakpoints and step through the plugin functions.

For more information, read:

```
debug-scripts
-D
```

faq-25.3

25.3. How do I locate the script/plugin which sets a Vim option?

You can use the `:verbose` command to locate the plugin/script which last modified a Vim option. For example:

```
:verbose set textwidth?
```

For more information, read:

```
:set-verbose
:verbose
```

faq-25.4

25.4. I am getting some error/informational messages from Vim (possibly when running a script), the messages are cleared immediately. How do I display the messages again?

You can use the `:messages` command to display the previous messages.

```
:messages
```

For more information, read:

```
:messages
:echoerr
:echomsg
message-history
```

faq-25.5

25.5. How do I save and restore a plugin specific information across Vim invocations?

Vim will save and restore global variables that start with an uppercase letter and don't contain a lower case letter. For this to work, the **'viminfo'** option must contain the "!" flag. Vim will store the variables in the viminfo file.

For more information, read:

```
'viminfo'
viminfo-file
variables
```

[faq-25.6](#)

25.6. How do I start insert mode from a Vim function?

You can use the `:`:startinsert`` command to start the insert mode from inside a Vim function.

For more information, read:

```
:startinsert
```

[faq-25.7](#)

25.7. How do I change the cursor position from within a Vim function?

You can use the `cursor()` function to position the cursor.

```
call cursor(lnum, col)
```

Alternatively, use the `setpos()` function:

```
call setpos('.', [bufnum, lnum, col, off])
```

which set's the cursor in the buffer `bufnum` to line `lnum`, column `col` and offset for **'virtualedit'**. You can use the `getpos()` function, to return a list with these values, that can then be fed back to the `setpos()` function.

If you want to save and restore the viewpoint on a window, use the `winsaveview()` and `winrestview()` function calls.

You can also use the following command to change the cursor position:

```
exe "normal! " . lnum . "G" . col . "|"
```

For more information, read:

```
cursor()
bar
getpos()
setpos()
winsaveview()
winrestview()
```

faq-25.8

25.8. How do I check the value of an environment variable in the .vimrc file?

You can use prefix the environment variable name with the "\$" character to use it from a Vim script/function. You can refer to the value of an environment variable using the \$env\_var syntax:

```
if $EDITOR == 'vi'
endif
```

For more information, read:

[expr-env](#)

faq-25.9

25.9. How do I check whether an environment variable is set or not from a Vim function?

You can use the exists() function to check for the existence of an environment variable.

```
if exists("$MY_ENV_VAR")
endif
```

For more information, read:

[exists\(\)](#)  
[expr-env](#)

faq-25.10

25.10. How do I call/use the Vim built-in functions?

You can use the `:call` command to invoke a Vim built-in function:

```
:call cursor(10,20)
```

You can use the `:echo` command to echo the value returned by a function:

```
:echo char2nr('a')
```

You can use the `:let` command to assign the value returned by a function to a variable:

```
:let a = getline('.')
```

To store the return value from a function into a Vim register, you can use the following command:

```
:let @a = system('ls')
```

The above command will store the output of the "ls" command into the register "a".

For more information, read:

```
:call
:echo
:let
:let-register
user-functions
usr_41.txt
```

[faq-25.11](#)

25.11. I am using some normal mode commands in my Vim script. How do I avoid using the user-defined mappings for these normal mode commands and use the standard Vim functionality for these normal mode commands?

You can use the `:normal!` command in your script to invoke a normal-mode command. This will use the standard functionality of the normal mode command and will not use the user-defined mapping.

For more information, read:

```
:normal
```

[faq-25.12](#)

25.12. How do I get the current visually selected text into a Vim variable or register?

You can get the current visually selected text into a Vim variable by yanking the text into Vim register and then assigning the contents of the register into the variable:

```
:normal! gvy
:let myvar = @"
```

The above command copies the visually selected text into the variable "myvar".

You can also use the command:

```
:normal! gv"*y
```

In the above command, `gv` reselects the last visually selected text and the rest of the command copies the selected text into the `*` (clipboard) register. Alternatively, you can set the "a" flag in the `'guioptions'` option to automatically copy a visually selected text into the `*` register. To do this as part of a visual map, you can use a command similar to the one shown below:

```
:vmap <F3> "*y:call ...
```

For more information, read:

```
gv
:normal
:let-@
quotestar
clipboard
registers
```

faq-25.13

25.13. I have some text in a Vim variable "myvar". I would like to use this variable in a `:s` substitute command to replace a text "mytext". How do I do this?

You can use the `:execute` command to evaluate the variable:

```
:execute '%s/mytext/' . myvar . '/'
```

For more information, read:

```
:execute
```

You can also use "\=" in the substitute command to evaluate the variable:

```
:%s/mytext/\=myvar/
```

For more information, read:

```
sub-replace-special
```

faq-25.14

25.14. A Vim variable (bno) contains a buffer number. How do I use this variable to open the corresponding buffer?

The `:buffer` command will not accept a variable name. It accepts only a buffer number or buffer name. You have to use the `:execute` command to evaluate the variable into the corresponding value. For example:

```
:execute "buffer " . bno
```

For more information, read:

```
:execute
```

faq-25.15

25.15. How do I store the value of a Vim option into a Vim variable?

You can prefix the option name with the "&" character and assign the option value to a Vim variable using the `:let` command. For example, to store the value of the **'textwidth'** option into the Vim variable "old\_tw", you can use the following command:

```
:let old_tw = &tw
```

To explicitly save buffer local options, use the prefix "l:"

```
:let old_tw = &l:tw
```

If you want to explicitly select the global option, use the "g:" prefix to the option name.

To do the opposite, to set the **'textwidth'** option with the value stored in the "old\_tw" variable, you can use the following command:

```
:let &tw = old_tw
```

For more information, read:

```
expr-option
:let-option
```

faq-25.16

25.16. I have copied and inserted some text into a buffer from a Vim function. How do I indent the inserted text from the Vim function?

You can use the following command to format the just inserted text:

```
:normal '[=']
```

For more information, read:

```
'[
']
=
:normal
```

faq-25.17

25.17. How do I get the character under the cursor from a Vim script?

You can use the `getline()` function and use string index `[]` to get the character:

```
:echo getline(".")[col(".") - 1]
```

In the above command, `getline(".")` returns the text in the current line. The indexing of the string starts at zero, and you can get a single character in a string by its index with the "string[index]" notation. The `col(".")` returns the column of the cursor position; the adjustment is to get the right character of the string. However, this does NOT work with multibyte characters as this command only returns the byte index.

Alternatively, you can use the following sequence of commands to get the character under the cursor:

```
normal! vy
let ch=@"
```

Note, that the above commands will change the '<' and '>' marks.

For more information, read:

```
getline()
col()
expr-[]
```

faq-25.18

25.18. How do I get the name of the current file without the extension?

You can get the name of the current file without the extension using:

```
:echo expand("%:r")
```

With some commands, you can use the file name modifiers directly:

```
:cd %:p:h
:!gcc -o %:r.o %
:!xpdf %<.pdf
```

For more information, read:

```
filename-modifiers
expand()
cmdline-special
fnamemodify()
```

faq-25.19

25.19. How do I get the basename of the current file?

You can use the ":t" filename modifier to get the basename of the current file:

```
:echo expand("%:t")
```

For more information, read:

```
filename-modifiers
```

faq-25.20

25.20. How do I get the output from a Vim function into the current buffer?

You can insert the return value from a function using the following command in insert mode:

```
<C-R>=MyFunc()
```

Note, that this will only insert the return value of the function.

For more information, read:

```
i_CTRL-R
i_CTRL-R_CTRL-R
i_CTRL-R_CTRL-O
expression
```

faq-25.21

25.21. How do I call external programs from a Vim function?

There are several ways to call external programs from a Vim function. You can use the builtin `system()` function to invoke external programs and get the result:

```
:let output = system("ls")
```

You can also use `!` ex-command to run an external command.

For more information, read:

```
system()
:!
10.9
```

faq-25.22

25.22. How do I get the return status of a program executed using the ``:!'`` command?

You can use the predefined Vim `v:shell_error` variable to get the return status of the last run shell command.

For more information, read:

```
v:shell_error
```

faq-25.23

25.23. How do I determine whether the current buffer is modified or not?

You can check the value of the `'modified'` option to determine whether the current buffer is modified:

```
:set modified?
```

From a Vim script, you can check the value of the `'modified'` option:

```
if &modified
 echo "File is modified"
endif
```

For more information, read:

```
'modified'
```

faq-25.24

25.24. I would like to use the carriage return character in a normal command from a Vim script. How do I specify the carriage return character?

You can use the ``:execute`` command to specify the special (control) character in a normal mode command:

```
:execute "normal \<CR>"
:execute "normal ixxx\<Esc>"
```

For more information, read:

```
:execute
expr-quote
```

faq-25.25

25.25. How do I split long lines in a Vim script?

You can split long lines in a Vim script by inserting the backslash character ("\") at the start of the next line. For example,

```
set comments=sr:/*,mb:*,el:*/,
 \://,
 \b:#,
 \:%,
 \n:>,
 \fb:-
```

For more information, read:

```
line-continuation
```

faq-25.26

25.26. When I try to "execute" my function using the `:execute Myfunc()` command, the cursor is moved to the top of the current buffer. Why?

The `:execute` command runs the ex command specified by the argument. In the case of the following command:

```
:execute Myfunc()
```

The call to Myfunc() will return 0. The `:execute` command will run the ex command `:0`, which moves the cursor to the top of the file. To call a Vim function, you should use the `:call` command instead of the `:execute` command:

```
:call Myfunc()
```

For more information, read:

```
:call
:execute
:echo
user-functions
41.5
41.6
cmdline-lines
```

faq-25.27

25.27. How do I source/execute the contents of a register?

If you have yanked a set of Vim commands into a Vim register (for example register "a"), then you can source the contents of the register using one of the following commands:

```
:@a
or
:exe @a
```

For more information, read:

[:@](#)

[faq-25.28](#)

25.28. After calling a Vim function or a mapping, when I press the "u" key to undo the last change, Vim undoes all the changes made by the mapping/function. Why?

When you call a function or a mapping, all the operations performed by the function/mapping are treated as one single operation. When you undo the last operation by pressing "u", all the changes made by the function/mapping are reversed.

For more information, read:

[undo-redo](#)  
[:map-undo](#)

[faq-25.29](#)

25.29. How can I call a function defined with s: (script local function) from another script/plugin?

The s: prefix for a Vim function name is used to create a script local function. A script local function can be called only from within that script and cannot be called from other scripts. To define a function in a script/plugin, so that it can be called from other plugins/scripts, define the function without the s: prefix.

For more information, read:

[script-variable](#)  
[script-local](#)  
[:scriptnames](#)

[faq-25.30](#)

25.30. Is it possible to un-source a sourced script? In other words, reverse all the commands executed by sourcing a script.

No. It is not possible to reverse or undo all the commands executed by sourcing a script.

For more information, read:

[:source](#)

## SECTION 26 - PLUGINS

## faq-26.1

26.1. How do I set different options for different types of files?

You can create filetype plugins to set different options for different types of files. You should first enable filetype plugins using the command:

```
:filetype plugin on
```

A filetype plugin is a vim script that is loaded whenever Vim opens or creates a file of that type. For example, to ensure that the **'textwidth'** option is set to 80 when editing a C program (filetype "c"), create one of the following files:

```
~/vim/ftplugin/c.vim (Unix)
%HOME%\vimfiles\ftplugin\c.vim (Windows)
```

with the following text in it:

```
setlocal textwidth=80
```

You can also use autocommands to set specific options when editing specific type of files. For example, to set the **'textwidth'** option to 75 for only \*.txt files, you can use the following autocmd:

```
autocmd BufRead *.txt setlocal textwidth=80
```

For more information, read:

```
filetype-plugin
add-filetype-plugin
:autocmd
40.3
```

## faq-26.2

26.2. I have downloaded a Vim plugin or a syntax file or a indent file, or a color scheme or a filetype plugin from the web. Where should I copy these files so that Vim will find them?

You can place the Vim runtime files (plugins, syntax files, indent files, color schemes, filetype plugins, etc) under one of the directories specified in the **'runtimepath'** option. To determine the current value of the **'runtimepath'** option, use the following command:

```
:set runtimepath
```

For Unix systems, this is usually the "\$HOME/.vim" directory. For MS-Windows systems, this is usually the \$VIM\vimfiles or \$HOME\vimfiles directory. Depending on the type of the runtime file, you have to place it under a specific directory under the above runtime directory. The names of the

directories are listed below:

name	description
colors/	color scheme files
compiler/	compiler files
doc/	documentation
ftplugin/	filetype plugins
indent/	indent scripts
keymap/	key mapping files
lang/	menu translations
plugin/	plugin scripts
syntax/	syntax files
tutor/	files for vimtutor

For more information, read:

```
your-runtime-dir
'runtimepath'
:runtime
```

faq-26.3

### 26.3. How do I extend an existing filetype plugin?

You can extend an existing filetype plugin by creating a file in the `after/` directory in any of the `'runtimepath'` directories.

- for small changes to be done after (and in addition to) what is already done by the ftplugin installed with Vim, use an after-directory, as follows (replacing foobar by the `'filetype'` of the concerned files):
  - For changes private to one user:
    - on Windows:  
\$HOME/vimfiles/after/ftplugin/foobar.vim
    - on Unix-like OSes:  
\$HOME/.vim/after/ftplugin/foobar.vim
  - For changes affecting all users on the system:  
\$VIM/vimfiles/after/ftplugin/foobar.vim
- when replacing the whole filetype-plugin by a different version, or when installing a new ftplugin for some filetype not yet supported by Vim out of the box: use the same paths without the `after/` in them. In that case you should place near the start of your plugin an "if... finish... endif... let" block like the one in the plugins distributed with Vim.

All the above paths are given in Vim terminology (which is similar to Unix terminology, but is understood even by Vim for Windows); they don't exist by default, so the first time you need them you will have to create them using `mkdir` (on any OS including DOS/Windows) or `md` (on DOS/Windows only). `$VIM` and, on DOS/Windows, `$HOME`, do not necessarily exist outside Vim. If `$HOME` has no value (or no valid value) inside Vim, you can use `$VIM` instead; but on any but possibly very old versions of

Windows, \$HOMEDRIVE and \$HOMEPATH are defined by the system, and if \$HOME is undefined at Vim startup, Vim will set it by expanding \$HOMEDRIVE\$HOMEPATH before sourcing your vimrc. To know which values Vim uses, you can type (in a running Vim):

```
:echo $VIM
:echo $HOME
```

If you placed the file in the after/ftplugin runtime directory, then Vim will first source the existing filetype plugin file and then will source the new file. If you placed the file in the \$VIMRTUNTIME/ftplugin runtime directory, then Vim will first source the new file and then will source the existing filetype plugin file.

For more information, read:

```
ftplugin-override
filetype-plugin
add-filetype-plugin
'runtimepath'
```

faq-26.4

26.4. How do I turn off loading the Vim plugins?

You can reset the **'loadplugins'** option to turn off loading the plugins:

```
:set noloadplugins
```

You can also specify the "--noplugin" command line argument to stop loading the plugins:

```
$ vim --noplugin
```

For more information, read:

```
'loadplugins'
--noplugin
load-plugins
```

faq-26.5

26.5. How do I turn on/off loading the filetype plugins?

By default, Vim will not load the filetype plugins. You can configure Vim to load filetype plugins using the command:

```
filetype plugin on
```

You can turn off loading the filetype plugins using:

```
filetype plugin off
```

For more information, read:

```
:filetype-plugin-on
:filetype-plugin-off
:filetype
```

faq-26.6

26.6. How do I override settings made in a file type plugin in the global ftplugin directory for all the file types?

You can use an autocmd triggered on the FileType event:

```
au FileType * set formatoptions=xyz
```

This should at least be after "filetype on" in your vimrc. Best is to put it in your "myfiletypefile" file, so that it's always last.

If you want to override a setting for a particular filetype, then create a file with the same name as the original filetype plugin in the ~/.vim/after/ftplugin directory. For example, to override a setting in the c.vim filetype plugin, create a c.vim file in the ~/.vim/after/ftplugin directory and add your preferences in this file.

For more information, read:

```
ftplugin-override
ftplugins
myfiletypefile
```

faq-26.7

26.7. How do I disable the Vim directory browser plugin?

To disable the directory browsing Vim plugin, add the following line to your .vimrc file:

```
let g:loaded_netrw = 1
```

For more information, read:

```
netrw
```

faq-26.8

26.8. How do I set the filetype option for files with names matching a particular pattern or depending on the file extension?

You can set the **'filetype'** option for files with names matching a particular pattern using an autocmd. For example, to set the **'filetype'** option to "c" for all files with extension ".x", you can use the following autocmd:

```
autocmd! BufRead,BufNewFile *.x setfiletype c
```

A better alternative to the above approach is to create a filetype.vim file in the ~/.vim directory (or in one of the directories specified in the **'runtimepath'** option) and add the following lines:

```
" my filetype file
if exists("did_load_filetypes")
 finish
endif
augroup filetypedetect
 au! BufRead,BufNewFile *.x setfiletype c
augroup END
```

For more information, read:

```
new-filetype
43.2
:setfiletype
```

---

## SECTION 27 - EDITING PROGRAM FILES

faq-27

27.1. How do I enable automatic indentation for C/C++ files?

faq-27.1

You can enable file-type based indentation using:

```
:filetype indent on
```

If you want to only enable automatic C indentation, then use:

```
:set cindent
```

For more information, read:

```
'cindent'
C-indenting
filetype
```

faq-27.2

27.2. How do I configure the indentation used for C/C++ files?

You can configure the Vim C indentation by modifying the value of the **'cinoptions'**, **'cinkeys'** and **'cinwords'** options.

For more information, read:

```
'cindent'
'cinoptions'
'cinkeys'
'cinwords'
C-indenting
cinoptions-values
'smartindent'
```

faq-27.3

27.3. How do I turn off the automatic indentation feature?

By default, the automatic indentation is not turned on. You must have configured Vim to do automatic indentation in either `.vimrc` or `.gvimrc` files. You can disable automatic indentation using either,

```
:filetype indent off
```

or

```
:set nocindent
```

Also, check the setting for the following options:

```
:set autoindent?
:set smartindent?
:set indentexpr?
```

For more information, read:

```
'cindent'
:filetype-indent-off
'autoindent'
'smartindent'
'indentexpr'
```

[faq-27.4](#)

27.4. How do I change the number of space characters used for the automatic indentation?

You can modify the `'shiftwidth'` option to change the number of space characters used for the automatic indentation:

```
:set shiftwidth=4
```

For more information, read:

```
'shiftwidth'
```

[faq-27.5](#)

27.5. I am editing a C program using Vim. How do I display the definition of a macro or a variable?

You can use the `"[d` command to display the definition of a macro, `"[i` command to display the definition of a variable, `"gd` to goto the local declaration of a variable and `"gD` to go to the global Declaration.

For more information, read:

```
[d
[i
gd
gD
include-search
29.4
29.5
```

faq-27.6

27.6. I am editing a C program using Vim. How do I jump to the beginning or end of a code block from within the block?

You can use "[{" command to jump to the beginning of the code block and "]}" to jump to the end of the code block from inside the block.

For more information, read:

```
[{
}]
various-motions
```

faq-27.7

27.7. When editing C++ files and when inserting new lines above or below a comment (//) line, Vim automatically inserts the C++ comment character (//) at the beginning of the line. How do I disable this?

This automatic insertion of the comment leader (//) when new lines are added is controlled by three flags in the **'formatoptions'** option: "c", "r" and "o". "c" enables auto-wrapping of comment lines when typing extends beyond the right margin. "r" enables the automatic insertion of the comment leader when <Enter> is pressed while editing a comment line. "o" enables the automatic insertion of the comment leader when a new line is opened above or below an existing comment line by typing O or o in Normal mode.

You can stop Vim from automatically inserting the comment leader when typing <Enter> within a comment or when opening a new line by removing the "r" and "o" flags from **'formatoptions'**.

```
:set formatoptions-=r
:set formatoptions-=o
```

The default filetype plugin for C and C++ files (\$VIMRUNTIME/ftplugin/c.vim) adds the "r" and "o" flags to the **'formatoptions'** option. If you want to override this for C++ files, then you can add the above lines to the ~/.vim/after/ftplugin/cpp.vim file.

For more information, read:

```
'formatoptions'
30.6
format-comments
filetype-plugins
ftplugin-override
```

faq-27.8

27.8. How do I add the comment character "#" to a set of lines at the beginning of each line?

First, select the first character in all the lines using visual block mode

```
:set formatoptions=croq
```

For more information, read:

```
30.6
format-comments
'comments'
fo-table
```

---

faq-28

## SECTION 28 - QUICKFIX

faq-28.1

28.1. How do I build programs from Vim?

You can use the `:make` command to build programs from Vim. The `:make` command runs the program specified by the `'makeprg'` option.

For more information, read:

```
30.1
:make_makeprg
'makeprg'
'makeeif'
:make
quickfix
```

faq-28.2

28.2. When I run the make command in Vim I get the errors listed as the compiler compiles the program. When it finishes this list disappears and I have to use the `:clist` command to see the error message again. Is there any other way to see these error messages?

You can use the `:copen` or `:cwindow` command to open the quickfix window that contains the compiler output. You can select different error lines from this window and jump to the corresponding line in the source code.

For more information, read:

```
:copen
:cwindow
quickfix
```

faq-28.3

28.3. How can I perform a command for each item in the quickfix/location list?

Starting from Vim 7.4.858 Vim provides the new commands `:cfdo`, `:cdo`, `:lfd` and `:ldo`. They work by iterating over all items in the quickfix list and performing a command on each. The difference is, that the `:lfd` and `:ldo` commands iterate over the location list entries, while the `:cfdo` and `:cdo` commands operate on the items in the quickfix list. Also,

the `:cfdo` and `:lfdo` operate on all different files, while the `:cdo` and `:ldo` commands operate on each item in the quickfix/location list.

For example you could vimgrep all C files in the current directory for a search string "Foobar":

```
:vimgrep /Foobar/ *.c
```

and as this populates your quickfix list, you could simply replace all occurrences by using:

```
:cdo :%s/Foobar/Foobaz | upd
```

For more information, read:

```
:cfdo
:cdo
```

=====

faq-29

## SECTION 29 - FOLDING

faq-29.1

29.1. How do I extend the Vim folding support?

You can use the **'foldexpr'** option to fold using a user specified function. For example, to fold subroutines of the following form into a single line:

```
sub foo {
 my $barf;
 $barf = 3;
 return $barf;
}
```

You can use the following commands:

```
set foldmethod=expr
set foldexpr=MyFoldExpr(v:lnum)
fun! MyFoldExpr(line)
 let str = getline(a:line)
 if str =~ '^sub\>'
 return '1'
 elseif str =~ '^}'
 return '<1'
 else
 return foldlevel(a:line - 1)
 endif
endfun
```

For more information, read:

```
'foldexpr'
fold-expr
```

faq-29.2

29.2. When I enable folding by setting the **'foldmethod'** option, all the folds are closed. How do I prevent this?

You can set the **'foldlevelstart'** option to a particular value to close only folds above the specified value.

```
:set foldlevelstart=99
```

For more information, read:

```
'foldlevelstart'
'foldlevel'
fold-foldlevel
```

faq-29.3

29.3. How do I control how many folds will be opened when I start editing a file?

You can modify the **'foldlevelstart'** option to control the number of folds that will be opened when you start editing a file. To start editing with all the folds closed:

```
:set foldlevelstart=0
```

To start editing with all the folds opened, you can use

```
:set foldlevelstart=999
```

For more information, read:

```
'foldlevelstart'
```

faq-29.4

29.4. How do I open and close folds using the mouse?

You can click on the + and - characters displayed at the leftmost column to open and close fold. For this to work, you have to set the **'foldcolumn'** to a value greater than zero:

```
:set foldcolumn=2
```

For more information, read:

```
'foldcolumn'
```

faq-29.5

29.5. How do I change the text displayed for a closed fold?

You can use the **'foldtext'** option to change the text displayed for a closed fold.

For more information, read:

'foldtext'  
fold-foldtext  
'fillchars'

faq-29.6

29.6. How do I store and restore manually created folds across different Vim invocations?

You can use the ``:mkview`` command to store manually created folds. Later, you can use the ``:loadview`` command to restore the folds. For this to work, the `'viewoptions'` must contain "folds".

For more information, read:

28.4  
:mkview  
:loadview  
'viewoptions'  
'viewdir'  
:mksession  
'sessionoptions'

faq-29.7

29.7. I have enabled syntax based folding. Why is Vim so slow?

Syntax based folding is currently rather slow in Vim and will possibly slow down Vim considerably. There is an issue in the todo list to fix this, but the todo list is rather long and it may take a while until this will be fixed.

You can find the issue in the todo list, if you read

[todo.txt](#)

followed by a search for "folding with `'foldmethod'`"

A workaround is to temporarily set the foldmethod to manual while in insert mode. This is described in the wiki at:

[http://vim.wikia.com/wiki/Keep\\_folds\\_closed\\_while\\_inserting\\_text](http://vim.wikia.com/wiki/Keep_folds_closed_while_inserting_text)

=====

faq-30

## SECTION 30 - VIM WITH EXTERNAL APPLICATIONS

faq-30.1

30.1. Can I run a shell inside a Vim window?

Since Version 8.1 Vim comes with a terminal window included. It allows to run a shell inside an ordinary Vim window (e.g. split) asynchronously and interact with the shell using the normal Vim commands.

When the focus is in the terminal window, typed keys will be sent to the job and is called terminal mode. You can click outside of the

terminal window to move keyboard focus elsewhere, alternatively one can use **CTRL-W** to navigate between different Vim windows. To feed **CTRL-W** into the terminal, one needs to use **CTRL-W** .

To map keys specifically for terminal mode, use the new `:tmap` command. After typing **CTRL-W** the terminal window will switch to Terminal-Normal mode (this can be used to move the cursor around, scroll the window, etc. Just like normal mode).

To interact between the terminal and Vim, Vim implements several interfaces using `term_sendkeys()`, `terminal-api` and the client-server mechanism.

For more information, read:

```
terminal
mapmode-t
Terminal-Normal
terminal-communication
```

faq-30.2

30.2. How do I pass the word under the cursor to an external command?

You can use the special keyword `<word>` to pass the word under the cursor to an external command. For example:

```
:!dict <word>
```

For more information, read:

```
:<word>
```

faq-30.3

30.3. How do I get the output of a shell command into a Vim buffer?

You can use the `:r !`` command to get the output of a shell command into a Vim buffer. For example, to insert the output of the "ls" shell command, you can use the following command:

```
:r !ls
```

To insert the output of the shell command above the first line use the following command:

```
:0r !ls
```

For more information, read:

```
:r!
```

faq-30.4

30.4. How do I pipe the contents of the current buffer to an external command and replace the contents of the buffer with the output from the command?

You can use the `:!` command to pipe the contents of the current buffer to an external command and replace the contents of the buffer with the output from the command. For example, to sort the contents of the current buffer, using the Unix `sort` command, you can use the following command:

```
:%!sort
```

To sort only lines 10-20, you can use the following command

```
:10,20!sort
```

Also, if you want to pipe a buffer to an external command but not put the results back in the buffer, you can use

```
:w !sort
```

The above command will pipe the entire buffer to the `sort` command. Note, that the space between the "w" and the "!" is critical. To pipe only a range of lines, you can use

```
:10,20w !sort
```

The above command will pipe the lines 10-20 to the `sort` command.

For more information, read:

```
:range!
10.9
:w_c
```

faq-30.5

30.5. How do I sort a section of my file?

You use the `:sort` command like this:

```
:5,100sort
```

Using the `:sort` command provides many options, you can sort numerical on the first found decimal number using:

```
:%sort n
```

Or you can specify to sort on the text, starting at virtual column 8:

```
:%sort /*\%8v/
```

Alternatively can pipe a section of the file to the Unix "sort" utility to sort the file. For example:

```
:5,100!sort
```

You can also use a visual block, and use the "!"`sort` command on the selected block.

See also:

```
:sort
filter
```

[faq-30.6](#)

30.6. How do I use Vim as a pager?

You can use Vim as a pager using the `$VIMRUNTIME/macros/less.sh` shell script, supplied as part of the standard Vim distribution. This shell script uses the `$VIMRUNTIME/macros/less.vim` Vim script to provide less like key bindings.

For more information, read:

```
less
```

[faq-30.7](#)

30.7. How do I view Unix man pages from inside Vim?

You can view Unix man pages, inside Vim, using the `man.vim` plugin supplied as part of the standard Vim distribution. To use this plugin, add the following line to your startup vimrc file:

```
runtime ftplugin/man.vim
```

You can also press the `K` key to run the program specified by the `'keywordprg'` option with the keyword under the cursor. By default, `'keywordprg'` is set to run `man` on the keyword under the cursor.

For more information, read:

```
ft-man-plugin
K
'keywordprg'
```

[faq-30.8](#)

30.8. How do I change the diff command used by the Vim diff support?

By default, the Vim diff support uses the `'diff'` command. You can change this by changing the `'diffexpr'` option.

For more information, read:

```
diff-diffexpr
'diffexpr'
```

[faq-30.9](#)

30.9. How do I use the Vim diff mode without folding?

You can use the following command-line to start Vim with two filenames and use the diff mode without folding:

```
$ vim -o file1 file2 "+windo set diff scrollbind scrollopt+=hor nowrap"
```

If you like vertically split windows, then replace "-o" with "-0".

For more information, read:

`vimdiff`

---

## SECTION 31 - GUI VIM

faq-31

faq-31.1

31.1. How do I create buffer specific menus?

Adding support for buffer specific menus is in the Vim TODO list. In the mean time, you can try Michael Geddes's plugin, `buffermenu.vim`:

[https://www.vim.org/scripts/script.php?script\\_id=246](https://www.vim.org/scripts/script.php?script_id=246)

faq-31.2

31.2. How do I change the font used by GUI Vim?

You can change the **'guifont'** option to change the font used by GUI Vim. To display the current value of this option, you can use

```
:set guifont?
```

You can add the displayed font name to the `.vimrc` file to use the font across Vim sessions. For example, add the following line to the `.vimrc` file to use Andale Mono font.

```
set guifont=Andale_Mono:h10:cANSI
```

For Win32, GTK and Photon version of Vim, you can use the following command to bringup a dialog which will help you in changing the `guifont`:

```
:set guifont=*
```

You can also use the `-font` Vim command line option to specify the font used for normal text.

For more information, read:

```
'guifont'
'guifontset'
'guifontwide'
font-sizes
-font
-boldfont
-italicfont
-menufont
-menufontset
```

faq-31.3

31.3. When starting GUI Vim, how do I specify the location of the GVIM window?

You can use the "-geometry" command line argument to specify the location of the GUI Vim window. For example:

```
$ gvim -geometry 80x25+100+300
```

For more information, read:

```
31.4
-geom
```

[faq-31.4](#)

31.4. How do I add a horizontal scrollbar in GVim?

You can enable the horizontal scrollbar by modifying the **'guioptions'** option:

```
:set guioptions+=b
```

For more information, read:

```
'guioptions'
gui-horiz-scroll
```

[faq-31.5](#)

31.5. How do I make the scrollbar appear in the left side by default?

You can add the "l" flag to the **'guioptions'** option to make the scrollbar appear in the left side.

```
:set guioptions+=l
:set guioptions-=r
```

For more information, read:

```
'guioptions'
gui-scrollbar
```

[faq-31.6](#)

31.6. How do I remove the Vim menubar?

You can remove the Vim menubar by removing the "m" flag from the **'guioptions'** option:

```
:set guioptions-=m
```

For more information, read:

```
'guioptions'
```

[faq-31.7](#)

31.7. I am using GUI Vim. When I press the <Alt> key and a letter, the menu

starting with that letter is selected. I don't want this behavior as I want to map the `<Alt>-<key>` combination. How do I do this?

You can use the `'winaltkeys'` option to disable the use of the `<Alt>` key to select a menu item:

```
:set winaltkeys=no
```

For more information, read:

```
'winaltkeys'
:simalt
```

faq-31.8

31.8. Is it possible to scroll the text by dragging the scrollbar so that the cursor stays in the original location?

The way Vim is designed, the cursor position has to be in a visible spot in normal, visual, select and insert mode. This cannot be changed without modifying Vim. When the scrollbar is used, the cursor will be moved so that it is always visible. Another approach to solving this problem is to use the Vim marks. You can mark the current cursor position using `ma`. Then scroll to a different part of the text and jump back to the old position using ``a`. You can also try the following suggestion from the Vim Online website:

<http://vim.wikia.com/wiki/VimTip320>

For more information, read:

```
mark-motions
```

faq-31.9

31.9. How do I get `gvim` to start browsing files in a particular directory when using the ``:browse`` command?

You can set the `'browsedir'` option to the default directory to use for the ``:browse`` command.

```
:set browsedir='<your_dir>'
```

For more information, read:

```
'browsedir'
```

faq-31.10

31.10. For some questions, like when a file is changed outside of Vim, Vim displays a GUI dialog box. How do I replace this GUI dialog box with a console dialog box?

You can set the `"c"` flag in the `'guioptions'` option to configure Vim to use console dialogs instead of GUI dialogs:

```
:set guioptions+=c
```

For more information, read:

`'guioptions'`

[faq-31.11](#)

31.11. I am trying to use GUI Vim as the editor for my xxx application. When the xxx application launches GUI Vim to edit a file, the control immediately returns to the xxx application. How do I start GUI Vim, so that the control returns to the xxx application only after I quit Vim?

You have to start GUI Vim with the "-f" (foreground) command line option:

```
$ gvim -f
```

By default, GUI Vim will disconnect from the program that started Vim. With the '-f' option, GUI Vim will not disconnect from the program that started it.

For more information, read:

```
gui-fork
-f
```

[faq-31.12](#)

31.12. Why does the "Select Font" dialog doesn't show all the fonts installed in my system?

Vim supports only fixed width (mono-spaced) fonts. Proportional fonts are not supported. In the "Select Font" dialog, only fixed width fonts will be displayed.

For more information, read:

```
font-sizes
'guifont'
```

[faq-31.13](#)

31.13. How do I use the mouse in Vim command-line mode?

You can set the "c" flag in the `'mouse'` option to use mouse in the Vim command-line mode:

```
:set mouse+=c
```

For more information, read:

```
mouse-using
gui-mouse
09.2
```

[faq-31.14](#)

31.14. When I use the middle mouse button to scroll text, it pastes the

last copied text. How do I disable this behavior?

You can map the middle mouse button to `<Nop>` to disable the middle mouse button:

```
:map <MiddleMouse> <Nop>
:map! <MiddleMouse> <Nop>
```

For more information, read:

```
gui-mouse-mapping
<Nop>
```

faq-31.15

31.15. How do I change the location and size of a GUI Vim window?

You can use the `:winpos` command to change the Vim window position. To change the size of the window, you can modify the `'lines'` and `'columns'` options.

For example, the following commands will position the GUI Vim window at the X,Y co-ordinates 50,50 and set the number of lines to 50 and the number of columns to 80.

```
:winpos 50 50
:set lines=50
:set columns=80
```

The arguments to the `:winpos` command specify the pixel co-ordinates of the Vim window. The `'lines'` and `'columns'` options specify the number of lines and characters to use for the height and the width of the window respectively.

For more information, read:

```
31.4
:winpos
'lines'
'columns'
GUIEnter
```

faq-31.16

31.16. When splitting the Vim window vertically, Vim changes the position.

This is a known problem. When you are splitting the Vim window, Vim will try to draw a scrollbar. Since this changes the gui window, Vim tries to resize its main window to keep the same position and this will cause Vim to move its position. This happens on Windows with a multi-window setup or a window that was "snapped" to a certain position.

A workaound to this problem is, to remove gui scrollbars, e.g.

```
:set guioptions-=L
```

## faq-32.1

32.1. I am running Vim in a xterm. When I press the **CTRL-S** key, Vim freezes. What should I do now?

Many terminal emulators and real terminal drivers use the **CTRL-S** key to stop the data from arriving so that you can stop a fast scrolling display to look at it (also allowed older terminals to slow down the computer so that it did not get buffer overflows). You can start the output again by pressing the **CTRL-Q** key.

When you press the **CTRL-S** key, the terminal driver will stop sending the output data. As a result of this, it will look like Vim is hung. If you press the **CTRL-Q** key, then everything will be back to normal.

You can turn off the terminal driver flow control using the "stty" command:

```
$ stty -ixon -ixoff
```

or, you can change the keys used for the terminal flow control, using the following commands:

```
$ stty stop <char>
$ stty start <char>
```

## faq-32.2

32.2. I am seeing weird screen update problems in Vim. What can I do to solve this screen/display update problems?

You have to use a proper terminal emulator like xterm with correct TERM settings (TERM=xterm) and a correct terminfo/termcap file. For more information, read:

```
'term'
```

## faq-32.3

32.3. I am using the terminal/console version of Vim. In insertmode, When I press the backspace key, the character before the cursor is not erased. How do I configure Vim to do this?

You have to make sure that Vim gets the correct keycode for the backspace key. You can try using the command:

```
:fixdel
```

Make sure the TERM environment variable is set to the correct terminal name. You can try using the "stty" command:

```
$ stty erase ^H
```

where, you have to enter the `^H` character by pressing the **CTRL-V** key and then the **CTRL-H** key. Also check the value of your **'backspace'** setting.

For more information, read:

```
:fixdel
Linux-backspace
NetBSD-backspace
'backspace'
```

[faq-32.4](#)

32.4. I am using Vim in a xterm. When I quit Vim, the screen contents are restored back to the original contents. How do I disable this?

The xterm has a capability called "alternate screen". If this capability is present, vim switches to that alternate screen upon startup and back on exit, thus restoring the original screen contents. To disable this feature, add the following line to your `.vimrc` file:

```
:set t_ti= t_te=
```

For more information, read:

```
'restorescreen'
xterm-screens
```

[faq-32.5](#)

32.5. When I start Vim, it takes quite a few seconds to start. How do I minimize the startup time?

This may be related to Vim opening the X display for setting the xterm title and using the X clipboard. Make sure the `DISPLAY` variable is set to point to the correct host. Try using the command line:

```
$ vim -X
```

This will prevent Vim from opening the X display. With this command-line option, the X clipboard cannot be used and also Vim will not be able to change the xterm title.

You can also set the **'clipboard'** option to

```
:set clipboard=exclude:.*
```

This has the same effect as using the `-X` command-line argument.

For more information, read:

```
-X
'clipboard'
```

If the clipboard is not the cause of the slow startup, it might be a plugin that slows down Vim. In that case, you can use the `--startuptime` argument to debug this further. You can do:

```
$ vim --startuptime vim_startup.log
```

and the timing will be written to the file vim\_startup.log. For even more advanced profiling, you can use the profiling feature, that is available in huge builds of Vim. To do so, call Vim like this:

```
$ vim --cmd 'profile start profile.log' \
 --cmd 'profile func *' \
 --cmd 'profile file *' \
 -c 'profdel func *' \
 -c 'profdel file *' \
 -c 'qa!'
```

After running this, you will have a file profile.log in your current directory. To further analyse this, open the file profile.log and run:

```
" Open profile.log file in vim first
:let timings=[]
:g/^SCRIPT/call add(timings, [getline('.')[len('SCRIPT '):], matchstr(getline(line('.')),
:enew
:call setline('.', ['count total (s) self (s) script']+map(copy(timings), 'printf("%
```

For more information, read:

```
--startuptime
profiling
```

faq-32.6

32.6. How can I make the cursor in gvim in unix stop blinking?

You can modify the **'guicursor'** option, to stop the cursor from blinking. For example:

```
:set guicursor=a:blinkon0
```

For more information, read:

```
'guicursor'
```

faq-32.7

32.7. How do I change the menu font on GTK Vim?

You can modify the ~/.gtkrc file to change the menu font on GTK Vim. For example:

```
style "default"
{ font ="smooth09" }
class "*" style "default"
```

The last line changes the font of all widgets.

For more information, read:

gui-gtk

faq-32.8

32.8. How do I prevent **CTRL-Z** from suspending Vim?

You can map **CTRL-Z** to prevent the suspending. Here are some suggestions:

- Make **CTRL-Z** do nothing:

```
:map <C-Z> <Nop>
```

- Make **CTRL-Z** start a shell:

```
:map <C-Z> :shell<CR>
```

- Make **CTRL-Z** give an error message:

```
:map <C-Z> :\"suspending disabled<CR>
```

For the last example, the double quote is necessary in order to keep the message on the status line.

faq-32.9

32.9. When I kill the xterm running Vim, the Vim process continues to run and takes up a lot of CPU (99%) time. Why is this happening?

When Vim is built with support for Python interface, you will have this problem. This is a known problem with the python thread library and Vim. To solve this problem, use a Vim binary built without the Python interface.

For more information, read:

```
+python
python
```

faq-32.10

32.10. How do I get the Vim syntax highlighting to work in a Unix terminal?

The easiest and simplest way to get Vim syntax highlighting is to use the GUI version of Vim (GVIM). To get syntax highlighting to work in the console/terminal version of Vim, you have to run a terminal emulator (like Xfree86 xterm or rxvt or dtterm) that supports color. **Note** that if a terminal emulator supports changing the background and foreground colors, that does not mean that it also supports ANSI escape sequences for changing the color. You can download the latest version of Xfree86 xterm from <https://invisible-island.net/xterm/xterm.html>

You can download the latest version of rxvt from <https://rxvt.org>. You have to install the terminfo/termcap file that supports colors for the terminal emulator. Also, set the TERM environment variable to the correct name of the term that supports colors.

You can use the colortest.vim script supplied with the Vim runtime package to test the color setup. To use this script, follow these steps:

```
:e $VIMRUNTIME/syntax/colortest.vim
:source %
```

For more information, read:

```
06.2
terminal-colors
termcap-colors
startup-terminal
xterm-color
colortest.vim
```

---

faq-33

## SECTION 33 - VIM ON MS-WINDOWS

faq-33.1

33.1. In MS-Windows, **CTRL-V** doesn't start the blockwise visual mode. What happened?

The mswin.vim script provides key mappings and options to make Vim behave like a MS-Windows application. One of the keys mapped is **CTRL-V** which is used for pasting text in MS-Windows applications. This will disable the use of **CTRL-V** to start the blockwise visual mode. The mswin.vim script maps **CTRL-Q** for starting the blockwise visual mode. So you can use **CTRL-Q** instead of **CTRL-V**.

For more information, read:

```
CTRL-V
CTRL-V-alternative
CTRL-Q
10.5
```

faq-33.2

33.2. When I press the **CTRL-Y** key, it acts like the **CTRL-R** key. How do I configure Vim to treat **CTRL-Y** as **CTRL-Y**?

The mapping of the **CTRL-Y** key to the **CTRL-R** key is done by the mswin.vim script. The mswin.vim script maps **CTRL-Y** to make Vim behave like a standard MS-Windows application. This is explained in `:help CTRL-Y`. You can either comment out the line in mswin.vim that maps the **CTRL-Y** key or you can remove the line in your `.vimrc` file that sources the mswin.vim script.

faq-33.3

33.3. How do I start GUI Vim in a maximized window always?

You can use the `:simalt` command to maximize the Vim window. You can use the GUIEnter autocmd to maximize the Vim window on startup:

```
autocmd GUIEnter * simalt ~x
```

For more information, read:

```
:simalt
GUIEnter
gui-win32-maximized
```

faq-33.4

33.4. After doing some editing operations, Vim freezes. The cursor becomes an empty rectangle. I am not able enter any characters. What is happening?

Most probably, you used the mouse wheel to scroll the text in Vim. There is a known problem in using intellimouse mouse wheel with Vim. To avoid this problem, disable Universal scrolling support for Vim.

For more information, read:

[intellimouse-wheel-problems](#)

faq-33.5

33.5. I am using Windows XP, the display speed of maximized GVim is very slow. What can I do to speed the display updates?

This may be due to the fact that you have enabled 'Smooth edges of screen fonts' in the display properties. Try turning off font smoothing or try changing the smoothing method to "Standard".

faq-33.6

33.6. What are the recommended settings for using Vim with cygwin?

You may want to set the following shell related Vim settings:

```
:set shellcmdflag=-c
:set shellquote=
:set shellslash " Use the forward slash for expansion.
:set shellxquote=\"
:set shell=d:\cygwin\bin\bash.exe " Use the bash shell
:set shellpipe=2>&1| tee
:set shellredir=>%s 2>&1
```

faq-33.7

33.7. I am trying to use GNU diff with Vim diff mode. When I run the diff from command line, it works. When I try to use the diff with Vim it doesn't work. What should I do now?

There is a problem with using GNU diff with Vim. You can try using the GNU diff.exe built by Ron Aaron from the following link:

<http://www.mossbayeng.com/~ron/vim/builds.html>

(This page no longer exists.)

faq-33.8

33.8. Is it possible to use Vim as an external editor for MS-Windows Outlook email client?

You can use the "cubiclevim" COM Add-In to use Vim as an external editor

for MS-Windows Outlook email client. Visit the following URL for more information:

<https://sourceforge.net/projects/cubiclevim/>

Note, that currently this works only with MS-Office 2000 and XP.

Also the plugin OutlookVim might be worth a look:

[https://www.vim.org/scripts/script.php?script\\_id=3087](https://www.vim.org/scripts/script.php?script_id=3087)

faq-33.9

33.9. I am using Vim to edit HTML files. How do I start internet explorer with the current file to preview the HTML file?

You can use the following command:

```
:!start c:\progra~1\intern~1\iexplore.exe file://%:~p<CR>
```

faq-33.10

33.10. I would like to use Vim with Microsoft Visual Studio. How do I do this?

You have to download and use the OLE version of Vim (for example: gvim61ole.zip). This file also contains instructions on how to use Vim with Visual Studio.

For more information, read:

[MSVisualStudio](#)

faq-33.11

33.11. Where do I place the `_vimrc` and `_gvimrc` files?

You can place the `_vimrc` and `_gvimrc` files under the directory pointed to by the `VIM` environment variable. If you are sharing this system with other users, then you can place the files in a directory and set the `HOME` environment variable to this directory.

For more information, read:

[\\$HOME-use  
\\_vimrc](#)

faq-33.12

33.12. Every time I save a file, Vim warns about the file being changed outside of Vim. Why?

If you get the following warning message, every time you save a file:

```
WARNING: The file has been changed since reading it!!!
Do you really want to write to it (y/n)?
```

then this problem could be related to a bug in MS-Windows on the day

daylight saving time starts. Vim remembers the timestamp of the file after it was written. Just before the next write the timestamp is obtained again to check if the file was changed outside of Vim. This works correctly, except on the day daylight saving time starts.

This problem will go away the next day after the day the daylight saving time starts.

For more information, read:

W11

=====

faq-34

## SECTION 34 - PRINTING

faq-34.1

34.1. How do I print a file along with line numbers for all the lines?

You can set the **'printoptions'** option and use the `:hardcopy` command to print your file:

```
:set printoptions=number:y
:hardcopy
```

For more information, read:

```
'printoptions'
:hardcopy
```

faq-34.2

34.2. How do I print a file with the Vim syntax highlighting colors?

You can use the `:hardcopy` command to print a file with the Vim syntax highlighting colors. You can also convert your file to a HTML file using the 2html.vim script and print the HTML file.

For more information, read:

```
syntax-printing
2html.vim
:hardcopy
printing
```

=====

faq-35

## SECTION 35 - BUILDING VIM FROM SOURCE

faq-35.1

35.1. How do I build Vim from the sources on a Unix system?

For a Unix system, follow these steps to build Vim from the sources:

- Download the source and run-time files archive (vim-##.tar.bz2) from the

<ftp://ftp.vim.org/pub/vim/unix> directory.

- Extract the archive using the bzip2 and tar utilities using the command:

```
$ bunzip2 -c <filename> | tar -xf -
```

- Alternatively, download the source from the git repository:  
<https://github.com/vim/vim/releases/>
- Alternatively, download the source from the mercurial repository:  
<https://bitbucket.org/vim-mirror/vim/downloads/>
- Run the "make" command to configure and build Vim with the default configuration.
- Run "make install" command to install Vim in the default directory.

To enable/disable various Vim features, before running the "make" command you can run the "configure" command with different flags to include/exclude the various Vim features. To list all the available options for the "configure" command, use:

```
$ configure --help
```

For more information, read:

```
install
```

faq-35.2

- 35.2. How do I install Vim in my home directory or a directory other than the default installation directory in Unix?

To install Vim in a directory other than the default installation directory, you have to specify the directory using the --prefix option while running the configure script.

```
$./configure --prefix=/users/xyz
```

You can enable/disable various Vim feature by supplying different arguments to the configure script. For more information about all these options, run:

```
$./configure --help
```

For more information, read:

```
install-home
install
```

faq-35.3

- 35.3. How do I build Vim from the sources on a MS-Windows system?

For a MS-Windows system, Vim can be built using either the Visual C++ compiler or the Borland C++ compiler or the Ming GCC compiler or the cygwin gcc compiler. Follow these steps to build Vim from the sources for MS-Windows:

- Download the source (vim##src.zip), runtime (vim##rt.zip) and the extra (vim-##-extra.tar.gz) archives from the <ftp://ftp.vim.org/pub/vim/pc> directory.

- Extract the archives into a directory (for example, c:\vimsrc)
- Alternatively, download the source from the git repository:  
<https://github.com/vim/vim/releases/>
- Alternatively, download the source from the mercurial repository:  
<https://bitbucket.org/vim-mirror/vim/downloads/>
- Depending on the installed compiler, you can use the corresponding makefile to build the Vim sources. For Visual C++ use the Make\_mvc.mak makefile, for borland C++ use the Make\_bc5.mak makefile, for ming GCC use the Make\_ming.mak makefile, for cygwin gcc use the Make\_cyg.mak makefile.

Depending on whether you want to build the GUI version of Vim or the console version of Vim, you have to pass different arguments to the makefiles. After successfully building the sources, you can copy the vim.exe or gvim.exe file to the desired directory along with the files from the runtime archive.

For more information, read:

[install](#)

[faq-35.4](#)

35.4. The Vim help, syntax, indent files are missing from my Vim installation. How do I install these files?

The Vim help, syntax, indent and other runtime files are part of the Vim runtime package. You need to download and install the Vim runtime package. For example, for MS-Windows, the name of the Vim 6.1 runtime package is vim61rt.zip.

For more information, read:

[install](#)

[faq-35.5](#)

35.5. I have built Vim from the source and installed the Vim package using "make install". Do I need to keep the Vim source directory?

No. Once you have built and installed Vim in some directory other than the original source directory (for example, /usr/bin or /usr/local/bin), then you can remove the source directory.

[faq-35.6](#)

35.6. How do I determine the Vim features which are enabled at compile time?

You can use the ``:version`` command to determine the Vim features that are enabled at compile time. The features that are enabled will be prefixed with a "+". The features that are not enabled will be prefixed with a "-".

If you want to test for a feature in a script, you can use the `has()` function:

```
if has("menu")
```

```
" Set up some menus
endif
```

For more information, read:

```
:version
+feature-list
has()
```

[faq-35.7](#)

35.7. Can I build Vim without the GUI support?

Yes. You can build Vim by optionally enabling/disabling many of the features including GUI.

For more information, read:

```
install
```

[faq-35.8](#)

35.8. When building Vim on a Unix system, I am getting "undefined reference to term\_set\_winsize" error. How do I resolve this error?

You will get this error when the build process is not able to locate the term lib, termcap or ncurses library. You have to install the ncurses-dev package to resolve this error.

[faq-35.9](#)

35.9. Vim configure keeps complaining about the lack of gtk-config while trying to use GTK 2.03. This is correct, since in GTK 2 they moved to using the generic pkg-config. I can get pkg-config to list the various includes and libs for gtk, but for some reason the configure script still isn't picking this up.

Use the following shell script named gtk-config:

```
#!/bin/sh
pkg-config gtk+-2.0 $1 $2
```

[faq-35.10](#)

35.10. I did successfully download the sources and compiled Vim on Unix. But feature ... still does not work. What is wrong and how can I fix it?

You should first check, that you are actually running your self compiled Vim and not the system's provided version. So first check your \$PATH setting.

Depending on your compile options, some features might not be included in your build of Vim. You can use the `:version` command to determine the Vim features that are enabled at compile time. The features that are enabled will be prefixed with a "+". The features that are not enabled will be prefixed with a "-".

The easiest way to include all features is to build the huge version. To do this, you have to specify the `--with-features` option while running the configure script:

```
$./configure --with-features=huge
```

Nevertheless, a feature could still be disabled at compile time, if the configure script can't find the required libraries for those features (e.g. for clipboard integration, your Vim needs to be linked against the X11 development libraries).

There are several ways to install the required libraries:

- 1) On a Debian based distribution, you can use the package manager "apt" to install all required dependencies. As superuser, run the command:

```
$ apt-get build-dep vim-gtk
```

This makes sure all required libraries needed to compile the vim-gtk package will be installed. (This requires, that your sources list contains deb-src entries. See your distribution manual on how to enable this, if the above command did not work.)

- 2) In openSUSE you can use the package manager "zypper" to install all required libraries. This requires, that there is a source version of the package installable from a configured repository (which by default is not the case). Use:

```
$ zypper search -t srcpackage vim
```

to find out, whether or not there exists a source version in the repository. If there is none, you'll need to add a source repository. For openSUSE 11.2 you could use, e.g.

```
$ zypper ar
http://download.opensuse.org/source/distribution/11.2/repo/oss/src-11.2
```

(one line)

Once you have a source version available in your repositories, use this command to install all needed requirements:

```
$ zypper source-install --build-deps-only vim
```

- 3) On a Fedora/RedHat based system, you can use

```
$ yum-builddep vim-enhanced
```

- 4) Run configure with your options and watch for missing libraries:

```
$./configure --with-features=huge 2>&1 |tee logfile
```

This will run configure and record the output into the file "logfile". You need to check the logfile for missing dependencies. Consider this

output:

```
checking --disable-gtktest argument... gtk test enabled
checking for pkg-config... /usr/bin/pkg-config
checking for GTK - version >= 2.2.0... no
```

Here you can see, that the gtk libraries are missing and therefore no GTK gui version can't be build. So you need to install the GTK library in your system, with your package manager or by compiling it yourself. Then run the configure script again and check, that it finds the library.

In theory, those provided dependencies by your distribution might still lack some libraries, that are needed for features, that simply are not enabled in your distribution and therefore those commands in 1-3 won't install it. At the very least, this provides a jumping point and you need to track down the required missing packages using method 4 from above. But usually, this works good enough for most people and you won't have to bother with the fourth method.

For more information, read:

```
:version
+feature-list
```

---

## SECTION 36 - VARIOUS

faq-36

### 36.1. How do I edit binary files with Vim?

faq-36.1

You can set the following options to edit binary files in Vim:

```
:set binary
:set display=uhex
```

You can also use the "-b" command-line option to edit a binary file:

```
$ vim -b <binary_file_name>
```

You can also use the xxd utility (part of the Vim distribution) to edit binary files.

For more information, read:

```
23.4
edit-binary
hex-editing
-b
'binary'
'endofline'
'display'
```

faq-36.2

36.2. How do I disable the visual error flash and the error beep?

You can disable both the visual error flash and the error beep using the following command:

```
:set visualbell t_vb=
```

For more information, read:

```
'visualbell'
'errorbells'
t_vb
```

faq-36.3

36.3. How do I display the ascii value of a character displayed in a buffer?

You can use the "ga" command to display the ascii value of a displayed character.

For more information, read:

```
ga
:ascii
```

faq-36.4

36.4. Can I use zero as a count for a Vim command?

You cannot use zero as a count for a Vim command, as "0" is a command on its own, moving to the first column of the line.

For more information, read:

```
0
count
```

faq-36.5

36.5. How do I disable the Vim welcome screen?

You can disable the Vim welcome screen, by adding the "I" flag to the '**shortmess**' option:

```
:set shortmess+=I
```

For more information, read:

```
:intro
'shortmess'
```

faq-36.6

36.6. How do I avoid the "hit enter to continue" prompt?

Vim will prompt you with the "hit enter to continue" prompt, if there are

some messages on the screen for you to read and the screen is about to be redrawn. You can add the "T" flag to the **'shortmess'** option to truncate all messages. This will help in avoiding the hit-enter prompt:

```
:set shortmess+=T
```

You can also increase the command height by setting the **'cmdheight'** option:

```
:set cmdheight=2
```

For more information, read:

```
hit-enter
avoid-hit-enter
'shortmess'
'cmdheight'
```

[faq-36.7](#)

36.7. How do I invoke Vim from command line to run a group of commands on a group of files?

There are several ways to invoke Vim from command line to run a group of commands on a group of files. You can use a set of "-c" command line options to specify a group of commands:

```
$ vim -c "<ex_command_1>" -c "<ex_command_2>" *.txt
```

Each of the ex-command specified with the "-c" command line option is executed one by one sequentially. You can also use a single "-c" command line option and the "|" character to separate the ex commands:

```
$ vim -c "<ex_command_1> | <ex_command_2>" *.txt
```

In the above command, if an ex command fails, then all the remaining ex commands will not be executed.

For example, to replace "ABC" with "DEF" in a file from the command-line, you can use the following command:

```
$ vim -c "%s/ABC/DEF/ge | update" myfile.txt
```

To replace "ABC" with "DEF" in multiple files from the command-line, you can use the following command:

```
$ vim -c "argdo %s/ABC/DEF/ge | update" *.txt
```

You can store the group of commands into a file and use the "-s" command line option to run the commands on a set of files. For example, if the group of commands are stored in the file mycmds.txt, then you can use the following command:

```
$ vim -s mycmds.txt *.pl
```

For more information, read:

```
-c
-s
```

faq-36.8

36.8. How do I use a normal mode command from insert mode without leaving the insert mode?

You can use a normal command from insert mode, without leaving the insert mode, by first pressing the **CTRL-O** key and then follow that with a single normal mode command.

To execute more than one normal mode command, press the **CTRL-L** key, followed by any number of normal mode commands and then press `<Esc>` to get back to the insert mode. (This only works, when the `'insertmode'` option is set).

For more information, read:

```
i_CTRL-O
i_CTRL-L
```

faq-36.9

36.9. How do I start Vim in insert mode?

You can start Vim in insert mode using the `:startinsert` ex command.

```
$ vim +startinsert myfile.txt
```

The above command will open the file "myfile.txt" and start insert mode with the cursor in front of the first character on the first line. To open the file and start appending after the last character on the last line, you can use the following command:

```
$ vim + +startinsert! myfile.txt
```

For more information, read:

```
:startinsert
```

faq-36.10

36.10. How do I use Copy and Paste with Vim?

You should first check the output of the `:version` command and make sure that `+xterm-clipboard` is present.

When running Vim in an xterm, you can either let Vim control the mouse or let xterm control the mouse. This is configured by the `'mouse'` option.

If the `'mouse'` option is not set (or set to the default value), then Vim will not control the mouse. You cannot move the Vim text cursor using the mouse. When you select some text using the mouse, xterm will copy it to the X11 cut buffer. When you press both the mouse buttons, xterm will paste the text from the cut buffer.

If the **'mouse'** option is set to "a" or some other value, then Vim controls the mouse. The mode (normal or insert or visual, etc) in which Vim controls the mouse is configured by the **'mouse'** option. You can move the Vim text cursor using the mouse. When you select some text, the **'clipboard'** option setting is used to determine whether to transfer the selected text to the clipboard or not. The default setting is to transfer the selected text to the clipboard. If you want to use the xterm selection mechanism in this mode, then you can press the **<Shift>** key. If you press **<Shift>** key when selecting text using the mouse, then Vim doesn't control the mouse and xterm controls the mouse.

In the GUI mode, Copy and Paste should just work, depending on the **'mouse'** setting. For more information, read:

```
'clipboard'
x11-selection
clipboard
'go-a'
'mouse'
xterm-copy-paste
09.3
```

[faq-36.11](#)

36.11. Why shouldn't I modify the files in the system runtime directory?

Just be careful about modifying files under \$VIMRUNTIME, which usually is /usr/share/vim/vimXX (Unix) or C:\Program Files\vim\vimXX (Windows) and XX being the version for which it applies, e.g. 73 for Vim 7.3.

One should generally avoid modifying those files because they may be replaced during an upgrade of your Vim installation and your changes will be lost. Also, if you upgrade to a new major or minor revision of Vim (e.g., from 7.3 to 7.4), the new version of Vim will use a different \$VIMRUNTIME directory and while your changes won't be lost, they will be ignored.

Consequently, take a look at

[filetypes](#)

for an explanation of several ways to modify Vim's response to different filetypes and where to put those modifications so that they will not be overwritten.

=====

[faq-37](#)

## SECTION 37 - UNICODE

Author: Tony Mechelynck <[antoine.mechelynck AT belgacom.net](mailto:antoine.mechelynck AT belgacom.net)>

[faq-37.1](#)

37.1. Is it possible to create Unicode files using Vim?

Yes. It may be more or less complicated depending on the keyboard and fonts available to you, but it is always possible to encode any possible Unicode codepoint (and some illegal ones) into a file. To create a Unicode file using Vim, you should have compiled Vim with the "+multi\_byte" compile-time option. You can get more information about Unicode from the following sites:

<http://www.unicode.org>  
<https://www.cl.cam.ac.uk/~mgk25/unicode.html>

For more information, read:

```
multibyte
usr_45.txt
```

faq-37.2

37.2. Which Vim settings are particularly important for editing Unicode files?

The most important are the various "encoding" options, i.e., **'encoding'**, **'fileencoding'**, **'fileencodings'** and **'termencoding'**. The boolean option **'bomb'** is also significant.

For more information, read:

```
'encoding'
'fileencoding'
'fileencodings'
'termencoding'
'bomb'
```

faq-37.3

37.3. What is the **'encoding'** option?

Basically, the **'encoding'** option defines how Vim will represent your data internally. However, all Unicode encodings are represented internally as utf-8 and converted (if necessary) when reading and writing.

For more information, read:

```
'encoding'
```

faq-37.4

37.4. How does Vim name the various Unicode encodings?

Utf-8 is called utf-8 or utf8; utf-16 is called ucs-2 or ucs2; utf-32 is called ucs-4 or ucs4. Also, you may specify endianness (except for utf-8 which does not vary for endianness) by appending le for little-endian or be for big-endian. If you create a file with an encoding of ucs-2 or ucs-4 without specifying endianness, Vim will use what is typical of your machine.

For more information, read:

encoding-names  
encoding-values  
encoding-table

faq-37.5

37.5. How does Vim specify the presence or absence of a byte-order mark?

When reading a file, if the **'fileencodings'** option includes "ucs-bom", Vim will check for a byte-order mark. When writing a file, if the **'bomb'** option is set, Vim will write a byte-order mark on files whose encoding warrants it.

For more information, read:

**'fileencodings'**  
**'bomb'**

faq-37.6

37.6. What is the **'fileencoding'** option?

The **'fileencoding'** option defines the particular encoding which Vim will use to write a file. If empty, then the value of the **'encoding'** option is the default.

For more information, read:

**'fileencoding'**

faq-37.7

37.7. What is the **'fileencodings'** option?

The **'fileencodings'** option defines the heuristics used by Vim when opening an existing file. It is a comma separated list of encodings. A special name, "ucs-bom" is used to indicate that Vim should check for the presence of a byte-order mark; however, it will not be recognised if it comes after "utf-8". Normally, "ucs-bom" (if present) should be first in the list.

When Vim opens a file, it checks it against the encodings listed in **'fileencodings'**. The first one that matches is used. If there is no match, then Vim sets **'fileencoding'** to the null string, i.e., the value of **'encoding'** will be used.

For more information, read:

**'fileencodings'**  
**'encoding'**

faq-37.8

37.8. What is the **'termencoding'** option?

The **'termencoding'** option defines how your keyboard encodes the data you type. If empty, Vim assumes that it has the same value as **'encoding'**. Usually it should be set to something that matches your locale.

For more information, read:

`'termencoding'`  
`locale`

faq-37.9

37.9. What is the **'bomb'** option?

When reading a file with "ucs-bom" present in the **'fileencodings'** option, Vim will set the **'bomb'** option on or off depending on the presence or absence of a byte-order mark at the start of the file. When writing, Vim will write a byte-order mark if the **'bomb'** option is set. You may set or unset it manually do make Vim write, or not write, the b.o.m.

For more information, read:

`'bomb'`

faq-37.10

37.10. Where can I find an example of a typical use of all these options?

There is a "tip", with explains them in different words with an example, at

<http://vim.wikia.com/wiki/VimTip246>

faq-37.11

37.11. How can I insert Unicode characters into a file using Vim?

Several methods are available:

- Characters present on your keyboard can be typed in the usual way, even those which require a "dead-key" prefix, like (for instance) the circumflex on French keyboards.
- Characters for which a digraph is defined can be typed as two characters prefixed by **CTRL-K**.
- If you have set the **'digraph'** option, you can enter the characters for which a digraph is defined as `<char1><BS><char2>`.
- Any character can be entered by using a **CTRL-V** prefix (or **CTRL-Q** if **CTRL-V** is remapped to paste from the clipboard).

For more information, read:

`digraphs`  
`'digraph'`  
`i_CTRL-V_digit`

faq-37.12

37.12. How can I know which digraphs are defined and for which characters?

First set the **'encoding'** option properly (for instance, to utf-8), then use the ``:digraphs`` command to list the currently defined digraphs.

Alternatively, the help file contains the complete set of all digraphs.

So you can easily search that list there.

For more information, read:

```
:digraphs
'encoding'
digraph-table
```

```
